Q. I do not think he makes the admission in regard to the amount; but his statement is that Mr. Cassatt's admission was in regard to the Pennsylvania Railroad's transportation, and not with reference to the others.—A. I have shown the collection of these rebates by contracts. I could produce the three contracts. These railroads were under contract to transport certain classes of oil at certain rates. This all happened from 1872 to 1877, or 1879. I have shown you the 22 cents from the pipe line to the car, and the 49 cents was to go for the transportation of oil from Cleveland and common points in the oil country to New York.

AVERAGE COST OF OIL WELLS.

Q. (By Mr. PHILLIPS.) It was stated here² that the cost of drilling a well in 1890, or during the last 10 years, was about \$2,000. You are a large operator in all the fields, and we should like to have your estimate of the cost of drilling wells during that time.—A. Of course, I have drilled a great many wells, running into several thousand, and we always keep track of the expense in our office and the cost of each and every well. We have drilled wells in the lower country, which we call deep territory, that have cost us \$3,000, \$10,000, some as high as \$30,000 each, to drill. When you come up to \$30,000, that, of course, is accounted for by the fact that you sometimes stick your tools or drop something into the hole, or the well may cave in. Then you are obliged to move your derricks. We have always figured that our lower country wells cost us on an average \$3,000. In the upper country we have figured that we could drill our wells for \$2,500. We can not do it for that now. That was when you could get pipe for less than half its present price. The reason why wells are so expensive in the lower country is that you have to put in three lengths of casing. Some of that casing runs down into the earth 1,600 feet, 2,000 feet. I have loaded into a single hole 150 tons of iron. I should say this—without going into a close calculation of it, the question being sprung upon me here at this moment—that the average cost of a well in the oil country under the present condition of things is nearly \$4,000, in my judgment.

Q. (By Mr. FARQUHAR.) On account of the high cost of iron at the present time?—A. I think it was \$4,000 before prices advanced so largely. We can not do it for that now. You can not drill wells at a profit now, at the present price of oil. Iron has gone up 100 per cent and more.

Q. (By Mr. PHILLIPS.) What is your estimate of the average production per

¹ See Mr. Archbold, pp. 514-516.

² See Mr. Boyle, p. 434.

well, taking the wells as a whole, during the period named, from 1890?—A. That I have not in my mind. If you want me to compute that I will look it up, but I can not answer it offhand. That is a mathematical problem.

THE INDEPENDENT PIPE LINE MUST GIVE UP GOING TO NEW YORK AND GO TO PHILADELPHIA INSTEAD.

Q. (By Mr. CLARKE.) What is the present status of the United States Pipe Line in New Jersey? Are you running oil there and carrying it part way by railroad to the seashore?—A. Yes.

Q. Is that question of the right of way under the railroad in litigation?—A. No; it has been settled by the courts.

Q. Settled in your favor?—A. No. We have to take our pipes out. We have got to quit and come to Philadelphia. The right of eminent domain in Pennsylvania gives us the right to come to Philadelphia. We have to throw away our expense of upward of \$150,000 and turn around and come to Philadelphia with our line.

Q. You have to make Philadelphia your seaport?—A. Yes.¹

A PIPE LINE SHOULD BE AUTHORIZED, LIKE A RAILROAD, TO GO ANYWHERE BY PAYING THE DAMAGES.

Q. You say you can not cross certain railroads in the State and can not get to the seaboard there with your pipe lines; what remedy would you suggest for that state of affairs?—A. Well, I would suggest that New Jersey pass a law to let us go. But I want to say to you that I went to New Jersey—but in order to answer that question, in order to have you understand, I should have to refer to some persons I should not like to. They are very high in office; one is in the second highest office in the United States and the next is in the third highest office in the United States.

Q. You think the passage of a free-pipe-line bill by the legislature of New Jersey would give you the right you have long sought?—A. Oh, yes, certainly; because it is only a question of getting through by paying the damages, just as a railroad does. That is what we could not get. I have argued the case long and loud; and my experience there in the State of New Jersey, with the legislature, was one that the public ought to know, but it is so disgraceful I am ashamed to tell it. By the way, I did not answer a question that somebody asked me; I started to refer to this and you got me off the track.

COMMONWEALTH OF PENNSYLVANIA v. JOHN D. ROCKEFELLER ET AL.—THE CAMPBELL CONTRACT.

Q. (By Mr. KENNEDY.) I asked you about the testimony of Mr. Cassatt.—A. Exactly; and in relation to that compact, the Campbell contract. The contract is here in my hands now. But I want to say to this commission that the outcome of the suit brought by Pennsylvania against the Pennsylvania Railroad was this—the indictment No. 26, session of 1879, Commonwealth of Pennsylvania v. John D. Rockefeller et al., court of quarter sessions.²

(Here the witness read the indictment.)

This was a suit brought by the Producers' Protective Association, or rather a complaint made by them to the Commonwealth of Pennsylvania, which brought suit, and out of this grew the indictment. The case was never tried. They attempted to get a change of venue, and they failed in that. A very stubborn fight was made. They claimed that the oil country was prejudiced, and they could not get justice. They appealed to the supreme court of Pennsylvania for relief, and through some process of law they got it. You lawyers know better than I how they may have obtained it; but the case was dragged along in the same old style that I have told you about, and finally, on account of discouragement and lack of funds, and disagreement of the committee upon the matter, Mr. B. B. Campbell, president of the Producers' Protective Association, settled the case, receiving the sum of \$40,000, which was used in defraying the expenses that had been incurred, and receiving the contract that has been referred to. Probably it is not necessary for me to read that contract.

Q. (By Mr. PHILLIPS.) You had better give us the substance of it.—A. You will find, on page 407 of the Bacon committee's report, the exact language of the contract itself. First of all, the provisions in respect to the Campbell admission, and the United Pipe Line, and then the Pennsylvania Railroad Company's admissions. I would state briefly that this contract was presented to the producers to accept, but almost by unanimous vote they rejected the settlement, and there

¹ See pp. 650-655.

² See Mr. Boyle, pp. 427, 428; Mr. Lockwood, p. 889; Mr. Archbold, p. 553.

was a sort of a general breakup over the action of the president of the Producers' Union.

Q. (By Mr. FARQUHAR.) That does not agree with the record.—A. The record is right.

Q. (Reading.) "Resolved, That the general council of Petroleum Producers' Union approved the action of the president in withdrawing the suits against the Standard Oil Company as wise and judicious."—A. I am very glad you corrected me on that. The reason why I said they did not accept it was this: There were only two men who signed the contract, B. B. Campbell and A. N. Perrine. I refused, as did everybody else. B. B. Campbell, being a manufacturer of oil, received the rebates, but there was some question about it. For a long while here was some difficulty between the Pennsylvania and the northern railroads because Mr. Campbell was permitted to go in and ship his oil.

NATURE AND EFFECTS OF THE DIVISION OF TRAFFIC PROVIDED FOR IN THE CONTRACT OF 1884.

You are anxious to get something new, up to date. Now, here is a contract that went into effect in 1884, and was recently brought out in a suit for discrimination for a large sum of money, which is now pending against the Pennsylvania Railroad. The amount sued for is several hundred thousand dollars. Representatives of a large concern in this country purchased oil and shipped it over the Pennsylvania Railroad, and sued for rebates, and they have recently produced the contract of 1884. I understand it is in existence at the present time. If I am mistaken about its being in force, I desire to be corrected, but I understand it is in force at the present time. If you desire to have it read I will get somebody to read it, but it is what I term a nefarious contract.

Q. (By Mr. CLARKE.) Can you answer the question whether that contract provided for rebates?—A. It provides for something that is a great deal worse.

Q. (By Mr. PHILLIPS.) What is that which is worse?—A. It requires that 26 per cent of the shipments of oil shall go over the roads. The pipe lines can carry it all if they want to, with the exception of the residuum. The railroads need not have made this contract, because the residuum has to go in cars anyway. You can not pump it.

Q. (By Mr. CLARKE.) Do you call that nefarious? Do you see anything written in the contract that a certain per cent of the product shall go over the road?—A. Yes.

Q. I would like to have you explain wherein that is wrong?—A. I would like to have it read.

Mr. PHILLIPS. If there is no objection the contract will be read.

A. I confess to you the provisions of this contract have only been communicated through another source, and it has never been given to the public, to my knowledge, until it came out in this suit. It is practically new to me, and, I think, will be new to the world.

"Agreements between the Pennsylvania Railroad Company and the National Transit Company, dated August 22nd, 1884, being two agreements of even date, as follows:

"Memorandum of a traffic agreement, made this twenty-second day of August, 1884, between the Pennsylvania Railroad Company, hereinafter designated the Railroad Company, and the National Transit Company, hereinafter designated the Transit Company, witnesseth:

"That for considerations mutually interchanged, the parties hereto agree, each with the other, as follows:

"First. The Transit Company owns an extended system of local pipes in the oil regions of Pennsylvania and New York, which are grouped into a separate division, known as the United Pipe Lines Division of the National Transit Company. This division will be hereinafter designated as the Transit Company's Local Division.

"The business of this division is to collect oil from producer, store it in tanks, and deliver it, as may be desired, to any through carrier of petroleum, which will transport the same to where it is to be refined or otherwise disposed of.

"The Transit Company also own certain through or trunk line pipes, extending from several points of connection with the aforesaid local pipe division to various refining and terminal points.

"With these latter pipes, which will be hereinafter entitled the Transit Company's Trunk Line Division, it competes in the through carriage of petroleum with all other through carriers, whether pipe or rail.

"The business of its local division is therefore entirely distinct from the business of its through trunk line division.

"It undertakes and agrees that its local division will deliver into cars furnished by the railroad company at any of its regular delivery points and under its regular delivery rules whatever petroleum the owners thereof may desire to have so delivered and as the railroad company may furnish cars to transport, and will make no discrimination either in its local charges for carriage, storage, and other services, or in the use of any of its local facilities, against such oil, but will at all times treat it in the said respects as favorably as it at the same time treats any other petroleum which may be delivered to its own trunk-line division or to any other through carriers.

"Second. The transit company agrees that all petroleum brought to the Atlantic seaboard by all existing carriers, whether rail or pipe, now engaged in transporting such property, or which may hereafter engage in such transportation in conjunction with the transit company's pipe lines, shall be ascertained monthly, and so much of it as shall have been shipped in the refined state shall be reduced to its equivalent in crude oil by considering that one and three-tenths (1 $\frac{3}{10}$) gallons of crude are required to make one (1) gallon of refined oil. It further undertakes and agrees that if of the total so transported the railroad company shall not have moved in its cars twenty-six (26) per centum thereof, the transit company shall cause to be delivered to cars furnished by the railroad company at Milton, Pennsylvania, such quantity of crude petroleum as shall, when added to the amount which has been actually transported by the railroad company to the seaboard in said month, make the total transported by the railroad company in said month equal to said twenty-six (26) per centum.

"The railroad company agrees to furnish the needful cars and facilities, and promptly transport the oil which the transit company agrees in this contract to deliver to it at Milton: *Provided*, That if during any month the railroad company is not able to assign from its oil equipments a sufficient number of cars to the traffic of the transit company to move the proportion of oil herein provided to be delivered at Milton, then during that month the transit company shall only be required to so deliver to the railroad company such quantity of oil as the railroad company shall be able to transport, and shall not be required to make up any deficiency that may occur during said month.

"Efforts shall be made by the transit company to deliver so much during each month, as will probably be necessary to make the total carried by the railroad company equal to said percentage.

"Shortages, if not due to short supply of cars, and such excesses as may be found to have occurred in any month, shall be adjusted in the following month, or as soon afterwards as shall be possible.

"Third. It is agreed that the proportion of petroleum which the transit company is to deliver under the second section of this agreement shall be considered as petroleum transported from Coalgrove, Pennsylvania, via Milton, Pennsylvania, to the Atlantic seaboard, and that the railroad company shall be entitled to one-half of the current through rates thereon.

"It is agreed that whenever the through rates shall be so low that the railroad company shall suspend the movement of oil by its cars, at other points than Milton, the transit company shall during such suspension not be bound to deliver to the railroad company any oil at Milton.

"Fourth. All joint rates for the joint transportation of oil from any delivery point of the local pipe division aforesaid to any refining or terminal point shall be fixed by the railroad company, subject to the advice and concurrence of the transit company.

"It is agreed that said joint through rates shall be uniform to all parties. The railroad company stipulates that it will make no discrimination whatever, either in rates or facilities, against the transit company or against the oil which the said transit company herein covenants to deliver to it.

"It is agreed that the joint through rates to Philadelphia shall always be five cents less per barrel on crude oil, or its refined equivalent, than shall be currently charged to New York Harbor.

"It is agreed that the joint through rates, which shall be so fixed from time to time, shall be as low as shall be currently made between same and similar points by rival carriers of petroleum, and shall not be higher than an approximate mileage proportion of rates current on petroleum produced south of Oil City, nor than rates from Clean and similar points.

"It is also agreed that rates on refined oil and other products of crude oil shall be fixed by the railroad company upon the following basis, viz:

"From railroad stations in the oil regions to which oil is delivered by local pipes the rate to any point east thereof on a barrel of refined oil or other products

shall be one and three-tenths ($1\frac{3}{10}$) times the current rate on a barrel of crude oil to the same point.

"From Pittsburg the rate to any point east thereof on a barrel of refined oil or other products shall be one and three-tenths ($1\frac{3}{10}$) the rate currently charged on crude oil to any such eastern point from rail points south of Oil City: *Provided*, That one and three-tenths times the charges for moving a barrel of crude oil by rail or through pipe from the local pipe to Pittsburg shall first be deducted therefrom.

"From Cleveland and Buffalo the net rate on a barrel of refined oil or other products to any point east thereof shall be not less than is currently charged to the same point from Pittsburg.

"Fifth. Whenever the term barrel is used herein, unless otherwise specified, it means forty-five gallons of crude petroleum, and whenever the term oil is used herein, unless otherwise specified, it means crude petroleum.

"Sixth. The transit company hereby agrees that it will not make any more favorable terms with any other rail line connecting with any of its pipes than the terms which under this agreement are given to the railroad company, or if for any reason it should desire to do so, it hereby agrees to modify this contract so as to give the said 'more favorable terms' to the railroad company.

"Seventh. All existing contracts between the parties hereto shall be deemed to have been accomplished and shall become void and of no effect upon the day this contract goes into operation.

"Eighth. This contract shall take effect as of the first day of August, 1884, and shall continue until terminated under the provisions hereof. It may be terminated after August first, 1889, by either party hereto giving ninety days' written notice to the other of a desire that it shall end, at the expiration of which notice it shall cease and determine.

"In witness whereof the parties hereto have executed this agreement under their corporate seals the day and date above written.

[L. S.]

"THE PENNSYLVANIA RAILROAD COMPANY,

"By FRANK THOMSON,

"Second Vice-President.

"Attest: JOHN C. SIMS, Jr., *Secretary*.

[L. S.]

"THE NATIONAL TRANSIT COMPANY,

"By C. A. GRISCOM, *President*.

"Attest: JOHN BUSHNELL, *Secretary*."

"Memorandum of agreement, made this twenty-second day of August, 1884, between the Pennsylvania Railroad Company, hereinafter designated the railroad company, and the National Transit Company, hereinafter designated the transit company.

"Witnesseth: That for considerations mutually interchanged the parties hereto hereby agree with each other as follows:

"Whereas the parties hereto have made an agreement of even date herewith, in which, among other things, it is stipulated that under certain circumstances the transit company shall deliver certain crude petroleum into cars furnished by the railroad company at Milton, Pa.; and

"Whereas it has been proposed that the railroad company shall contract with the transit company to the effect that the transit company shall transport through its pipe lines the aforesaid crude oil, which, under the other contract aforesaid, it has undertaken to deliver into the cars of the railroad company at Milton.

"Now, therefore, this agreement witnesseth:

"First. The railroad company agrees that instead of delivering said crude oil to said cars at Milton the transit company shall transport the same through its pipes to destination, and the transit company undertakes and agrees to do such transportation. It is mutually agreed that the compensation to the transit company for doing said work shall be as follows, viz:

"Whenever the through rate for transporting a barrel of crude petroleum from Olean to Philadelphia shall be forty cents, the transit company shall receive eight cents per barrel as such compensation for so much of said oil as under the provisions hereof shall be considered as Philadelphia oil.

"For each five cents of increase or diminution in said rates from Olean to Philadelphia the said compensation on Philadelphia oil shall be increased or diminished one cent per barrel.

"*Provided, however,* That the transit company shall not be obliged to accept less than six cents per barrel, and shall not receive more than ten cents per barrel on such Philadelphia oil.

"It is agreed that the said compensation on the oil, which under the provisions hereof is to be deemed New York oil, shall be one cent per barrel greater than it currently shall be on Philadelphia oil.

"Whenever, and from time to time, as the said joint through rates shall be so low that the said minimum compensation to the transit company of six cents per barrel shall be as much or more than the railroad company's share of said joint through rates, this contract may, at the option of either party hereto, be suspended during all or any part of the time such low rates shall prevail. During such suspension the aforesaid other contract shall alone remain in force; but whenever, and from time to time, as said joint through rates shall again be high enough to make the said minimum compensation, under said sliding scale, less than the said share of said joint through rates, this contract shall again resume its force and effect.

"Second. The transit company agrees to account for and pay to the railroad company, on or before the twentieth of each month, the latter's share of the joint rates on joint business via Milton (as provided in said other contract) during the next preceding month, first retaining, however, the proportion of such share which it is hereinbefore agreed the transit company is to have for its services in pumping said oil to the seaboard.

"It is agreed that all such joint business shall be considered as having transported from Coalgrove via Milton, Pa., to the Atlantic seaboard, and that it shall be considered as having gone either to Baltimore, Philadelphia, or New York, or partly to each. The proportion thereof which has constructively gone to New York shall be determined upon the following basis:

"The total amount of oil transported in any month by the railroad company to New York shall be compared with fifty per centum of the total oil which the railroad company is entitled to carry in said month under the aforesaid other agreement. If the amount which has been in such month carried by cars to New York shall be less than fifty per centum then the difference shall be considered as having been moved by the pipe to New York at New York rates, and shall be accounted for accordingly. The remainder of the oil via Milton shall be accounted for at Philadelphia rates.

"This contract shall commence and terminate simultaneously with said other contract.

"Witness the corporate seals of said parties duly attested the day and date above written.

"THE PENNSYLVANIA RAILROAD COMPANY,
By FRANK THOMSON, *President*.

"Attest.
[L. S.]

JOHN C. SIMS, *Secretary*.

"THE NATIONAL TRANSIT COMPANY,
By C. A. GRISCOM, *President*.

"Attest:
[L. S.]

JOHN BUSHNELL, *Secretary*.

The WITNESS. Mr. Chairman and gentlemen, according to this contract, first, the rates must be maintained as established by the pipe lines; that is, the open rate of 45 cents. The contract was made for the purpose of sustaining rates. The outside refineries were compelled before the construction of the United States Pipe Line to ship all their oil by rail to the sea for export. The reason for making this contract and guaranteeing about 26 per cent of the tonnage to the coast was to insure the maintenance of the rate according to its provisions. If 26 per cent of the oil was not shipped over the roads, the Standard Oil Company was obliged to make up that in dollars and cents for the payment of the freight at the toll rates. Now, the point is this: The cost of collecting oil from the well to the railroad or the storage tanks by what we term the gathering lines is from 3 to 5 cents a barrel; say 5 cents.¹ I speak intelligently on that point, because I am a collector of oil by several hundred miles of line belonging to myself. The cost of carrying the oil through to New York, or rather to a point in New Jersey 50 miles from New York, is about the same. We gather oil from the well and deliver it in New York at a cost not exceeding 10 cents a barrel at the present time. Now, if this contract was out of the way the railroads would seek that

¹ See Mr. Lee, p. 284; Mr. Phillips, p. 504; Mr. Archbold, p. 553; Mr. Rogers, pp. 581, 588, 590.

rate, just as they come and seek your freight at the present time, or seek to carry a person or a number of persons to Chicago. But this contract compels them to keep the rate up and compels an outside refiner to pay this enormous rate of freight. The Standard Oil Company deliver all their oil to New York at a cost of not over 10 cents a barrel. By railroad a barrel of oil has to pay 45 cents; and the Standard gets this rate held by guaranteeing 26 per cent of the tonnage to the several railroads which are classed as oil railroads.

THE CONTRACT DID NOT REALLY INCREASE THE BUSINESS OF THE RAILROADS.

Now, then, the by-products of petroleum are just about what this 26 per cent would amount to. Among by-products there are benzine and gasoline and tar. There is about 26 per cent they can not pump through the pipe, because it consists of lubricating oil and tar and such things as benzine, etc. The intent of this is to maintain rates, that there may be no competition between the railroads and the National Transit Company as a carrier. That is what I object to, and that is what the contract says. It is a combination which is illegal.

Q. (By Mr. PHILLIPS.) Do we understand this, Senator, from your testimony, that there is about this amount in by-products, and therefore they do not ship any crude or refined oil by rail in consequence of this contract?—A. No; the railroad would have to have this carrying anyhow.¹ They would have to carry benzine; you can not pump it. You can not pump wax. There is 26 per cent of oil that you can not get through the pipe line if you want to.

THE RAILROADS HAVE RAISED THE RATE.

Q. (By Mr. CLARKE.) As I understand you, you are not finding fault with the percentage or apportionment of this freight, but you are finding fault that the price is too high, and that it is an agreement to maintain rates?—A. No; I am finding fault because they cut off this competition; cut it from me in my products. The railroads have carried this stuff at 8 cents a barrel. I paid for years 33 cents a barrel to carry this stock through. At the present time the rate on these products is 16½ cents a hundred, making 52½ cents a barrel in bulk. The railroads have raised the rates. Then, in barrels, you have to pay for the weight of the barrels; that raises the total to something like 66 cents. That is the rate of freight.

Q. Then you do criticise this partly because the rate is too high?—A. I do on that ground. It has been raised from the original 45-cent agreement.

REASON FOR BELIEVING THE CONTRACT OF 1884 TO BE STILL IN FORCE.

Q. (By Mr. KENNEDY.) That contract was entered into 3 years before the passage of the interstate-commerce law. Have you any evidence that it is still in force?—A. I only know it from the admission of a railroad man who said that it was. He came to my place and invited me to go to a certain point and establish a loading station to ship oil by water to New York. Well, it is the Buffalo, Rochester and Pittsburg Railroad. I went to Rochester and I met the gentleman. I picked out the location for our station and made arrangements with him for the transportation of my oil to the Erie Canal. The station was to be built on their own land, with a nominal rental, which was agreed upon, and the transportation from Bradford was to go that way. He then said: "I would like to have you build a pipe line down at a place called Irvings and bring oil down to the Rochester and Pittsburg Railroad and let me draw it to your factory," all of which I agreed to. He said: "They do not see fit to recognize us as an oil road and I am going to do some of this business." All at once he was recognized as an oil road and he was to get his percentage under this contract. My station was not built, and my pipe line was not built to bring oil to his road. That was 2 years ago; this contract was in existence at that time. Under these circumstances, I believe it to be in existence to-day.

Q. Was that contract made for a term of years? Was any limit named in it?—A. I do not think there was; let us see. I think it is perpetual.

AS TO THE RECORD OF TESTIMONY TAKEN BY A COMMITTEE OF CONGRESS
IN 1872.

Q. (By Mr. FARQUHAR.) In a part of your testimony early this session you read the testimony of Peter H. Watson with respect to the South Improvement Company contract?—A. Yes.²

¹ See settlement on p. 702.

² See p. 618.

Q. You read from a pamphlet here. It, of course, is not official authority for the commission?—A. That was evidence; it is on file.

Q. But we want to know where this evidence came from and who took it.—A. It is in the reports of the Congressional investigation of 1870 and 1871.

Q. This testimony you have read—I want to correct the date of this. This may be important. Your own reporters may have come here to take your testimony here in Washington. They had an interview with the Congressional committee on the 25th—with a committee which was a subcommittee.—A. What year was that?

Q. 1872, at which time a subcommittee was appointed to take testimony, and subpoenas were issued for Watson and Lockhart. Now, of course, if this is simply a printed pamphlet the question is—A. You have your official record here. You have got it in the library—the investigation of Congress. It is here on file, the same as the investigation of 1888.

Q. This was in 1875—1872—1875?—A. It is the same as the investigation in 1888. It should be on file, because it is an investigation by Congress.

Q. (By Mr. PHILLIPS.) Is it in the Hepburn report?—A. No, no; it is 1871. The Hepburn report was in 1879. No, it is one of the first investigations ever instituted.

Q. (By Mr. KENNEDY.) You stated yesterday that you did not know what committee took the testimony.

Q. (By Mr. FARQUHAR.) Your testimony ought to show the commission the official source that it is taken from.—A. If you will give me access to your library here I will find it.

Q. (By Mr. PHILLIPS.) I wish to ask Mr. Boyle for information simply on this line.

Q. (By Mr. FARQUHAR.) This, as presented here, is unofficial.—A. I refer you to the library.

Q. (By Mr. PHILLIPS.) Mr. Boyle will tell you of it.

Mr. BOYLE. I have been searching for that report all through the books. I have not been able to locate it. There were newspapers giving reports at the time of the subcommittee. It was a subcommittee of Congress, of the House, of the spring of 1872, beginning on the last day of March, 1872, and continuing at various dates for two or three years.

Q. (By Mr. FARQUHAR.) The chairman of the committee seems to be well known—C. W. Gilfillin.—A. I think he was in Congress at that time.

Q. That is the identification you make?—A. I make that identification, that it is a Congressional report and was published at that time. At that time I read the testimony and it is familiar to me now. I was going to get it, but I could not. I know it was an investigation of Congress, and I suppose it is on file, just as these books are on file; it should be.

Q. (By Mr. PHILLIPS.) You do not know of your own knowledge that it is true, but if it is found by this commission on file you want it to be considered a part of your evidence?—A. I was in Washington in 1872 myself, and I know the investigation took place, and I know I have a complete copy of it—a paper file of it at home. I was keeping my scrapbook, and I think I can produce the investigation. I think I can produce the book itself. I think I can, and I shall be very glad to do it.

Q. (By Mr. FARQUHAR.) I should like to make a statement from Mr. Gilfillin's own report, whom we know to be of good repute everywhere. It seems that your own people took this matter to the committee of Congress and you had your own reporters. The question is, was it ever reported officially by Congress?—A. Well, does the Congressional committee go into a room without a stenographer?

Q. Sometimes; quite frequently.—A. It is the strangest thing I have heard.

Q. I am not discussing where the testimony came from. I think the origin of the testimony—it would be well for one of the parties to see that it is verified.—A. I rely upon that testimony as being valid, and the investigation can be produced. It is dated from Washington, and I know the investigation took place, and I know Mr. Gilfillin was on the commission. I do not know whether he was here on that day or not.

SCARCITY OF COPIES OF THE TESTIMONY OF 1888.

Q. (By Mr. PHILLIPS.) You said that, on your information and belief, as prescribed by the oath, you believe it to be true?—A. Just exactly as I believe my own testimony to be true. It is very unfortunate that it is not here; and I want to say to you right here that of this testimony of 1888 there were several thousand volumes printed, but I understand there are only 300 of them in circulation

to-day. I could not get one myself until just by good fortune I got one the other day of a friend who had two. Nobody knows how that evidence was spirited away from here, but it is gone.

Q. (By Mr. FARQUHAR.) 1888?—A. Yes. There were only 300 volumes sent out. I sent to Congressman Stone of our district for one.

WHY THE WITNESS, HAVING GOT BOOKS INTO COURT WHICH HE BELIEVES CONTAIN PROOF OF CRIMES, LET THEM GO UNEXAMINED.

Q. (By Mr. RATCHFORD.) I understand from your testimony you make the broad statement that if the books of the railroad companies could be brought into court some of the officials would be sent to prison?—A. If you can send anybody to prison for violating the interstate-commerce act, I say yes. I am not positive whether there is a criminal clause in it or not.

Q. If you wish to modify that statement you can.—A. If there is not a criminal clause I do want to correct it; if there is, I will let it stand. I stick to my statement if that is the law.

Q. Do I also understand, from the previous part of your testimony, that you caused one or more of those companies to produce their books in court?—A. The Pennsylvania Railroad.

Q. In the courts of Clarion County?—A. McKean County.

Q. You state that you produced convicting evidence against them?—A. We did not examine the books at all.

Q. Why?—A. Because the case was settled.

Q. Why did you settle it?—A. I told you yesterday that my partners got tired of fighting it. We had been at it for 3 or 4 years, and they offered us \$35,000, and we settled it. The claim was for \$107,000.

Q. Settled for \$35,000?—A. And costs.¹

Q. If the discriminating practices by railroads and the rebates that were given by railroads are so injurious to the interests you represent, and to all other interests, why did you settle it for \$35,000, or how did you believe yourself justified in settling for any sum?—A. Our association was too poor to carry it on. They could have gone on, and could have extended that suit for 10 years.

Q. And yet you are satisfied, and have been satisfied, that convicting evidence would have been adduced in court had the books been investigated?—A. We got all the evidence we wanted for them to settle upon, and we tried to get the books into court in the early history of the trial; but we could not get an order before the master, in taking this testimony, because he had not the power. When we got them before the McKean County court, the circuit judge having power, we demanded the books and papers. He issued an order and the books came. If my disposition had been followed, even in the depressed circumstances that I was in—if I had had my way about it I would have examined every one of the 3 tons of books. But I had a partner, Mr. Logan, who had lost every dollar in the world in speculation, and he said: "This money will do me good, and I would like to have you let up."

Q. You assign, then, as a cause for settling the trouble, the fact that the association controlled by you was too poor to fight?—A. And the dilatory action of the court.

THE OIL BUSINESS IS MORE PROSPEROUS THAN IT WAS TWO YEARS AGO.

Q. (By Mr. CLARKE.) Are you able to state whether the condition of the oil business generally is more or less prosperous now than it was 2 years ago?—A. Oh, it is more prosperous now, from the fact that all the factories of the country are running, and there is an enormous demand for goods, and the production of oil in New York and Pennsylvania is not adequate to the demand. That is one reason for the advance in the profits of petroleum. Every factory and every spindle is running, and every coal mine and every iron mill, and there is an enormous demand for the goods. We could sell from my factory five times as much as I am making, if I had it, and at good profits.

THE WITNESS HAS RECEIVED NO REBATES SINCE 1872, EXCEPT WHAT HE HAS COLLECTED BY LAW.

Q. (By Mr. FARQUHAR.) Have you frequently in your own business enjoyed rebates?—A. Never. Now, let me modify that. In my business previous to 1872,

¹ See p. 642.

² See p. 635.

in the refinery at Titusville, Pa., rebates were a common thing; but we were young and new in the commercial business, and the fellows in Cleveland and Pittsburg were a little more experienced. We did not seem to make very much money. They were running full tilt with their wells, barrel shops, and everything, and we began to look about to see what was the matter. We went to Pittsburg, and we learned, to our astonishment, that certain concerns were getting 25 cents a barrel. We were large shippers, and we demanded to be granted the same. That was away back in 1870. We were given 25 cents, and then we got on to the fact that some of the refiners were receiving 75 cents back, and some other refiners were receiving 50 cents. The rate at that time was in the neighborhood of \$1.50, and oil could be carried at a profit to-day at 25 cents. From that time to this—no, I am not guilty.

Q. (By Mr. PHILLIPS.) Following that up, have you in recent years received rebates?—A. No.

Q. For how many years?—A. Since 1872, excepting rebates we collected by law.

Q. Not since 1872?—A. I stated here that the president of the Pennsylvania said they were not giving any, but the auditor and bookkeeper admitted it.

MR. LOGAN, OF THE SOUTH IMPROVEMENT COMPANY, WAS NOT THE WITNESS'S PARTNER.

Q. I have been requested to ask Senator Emery a question. Mr. Logan, who was one of the parties to the South Improvement Company, is there, I believe, to-day.—A. Yes.

Q. Now, is that the same Logan that was a partner of yours in Philadelphia in recent years?—A. No; Alfred H. Logan is my partner. The two Logans that were connected with the South Improvement Company, William P. and John P. Logan, are both at the present time living; but Alfred is dead—my old partner.

THE REMEDY: GOVERNMENT OWNERSHIP OF ALL MEANS OF TRANSPORTATION, AND ESPECIALLY OF RAILROADS.

Q. We have been in the habit of asking persons here whether they had any remedial legislation to propose along any lines of the inquiry. Have you anything to propose to the commission in the way of remedial legislation to meet these problems?—A. I will simply state very briefly, because I do not expect to go into an argument on that point. I would simply say this: That I am an absolute believer in the government ownership of all means of transportation, and especially of railroads. I was anxious that when the United States Government had the opportunity of taking in the Central Pacific Railroad it should do it. All the railroads of Germany, excepting two in the south, are owned by the Government, and discrimination is not known; nor is there any dissatisfaction in business. They often go so far in that country as to take the canals; but the canals are free. If the waterways and the railroads can be put under Government control, gentlemen, you will do away with all difficulties that exist to-day, because the prime movers of all this trouble are the railroads. They make the trouble by giving discriminating rates, or giving rates to favored shippers lower than they give to the general public.

THE LAWS WE HAVE WOULD SERVE IF THEY WERE ENFORCED BY ACTUAL IMPRISONMENT OF OFFENDERS.

I know of no better remedy, because you have laws upon the statute books of the United States that would alter the present condition of things if they were enforced. If you would make an example of these men, if there is a criminal clause in the interstate-commerce act, and put them behind the bars, I think that would strike some terror to their souls. I recollect that, owning a large flouring mill in southern Michigan and quite a large amount of land in wheat in North Dakota, I desired to ship some of this most excellent hard wheat down to Three Rivers, Mich., and manufacture it, and I wanted a transit rate. It was given me previous to the interstate-commerce act by the then manager of the road. I went back the next year and he said: "I can not do by you as I did last year, because the criminal clause of the interstate-commerce act is such that if I violate it I am liable to get behind the bars, and I am afraid of them. Therefore I can not make a rate by which you can ship wheat from North Dakota and manufacture it and ship it to the East." Now, I say, Mr. Chairman and gentlemen, that some way has got to be found to cut off the rebate and drawback practices of the railroads. The mass of the people in this country are incensed, and that dissatisfaction reaches to the minds of all classes of men.

THE GOVERNMENT COULD MANAGE THE RAILROADS—EUROPEAN EXAMPLES.

I am firmly of the belief that if the Government would take charge of the railroads as it took charge of the transportation of the mails it could manage and control the railways and waterways in this country as well as it can control the mails. The example of Germany is before you; the example of Norway and Sweden. If I recollect right, 18 years ago the Kingdom of Norway and Sweden did not own a mile of railroad. Poor as those nations are, they saw English capital coming into that country and building railroads north and south up to the great Bessemer mines in the northern part of Sweden, and their own manufacturers were unable to compete, shipping over the same lines of road. Complaint was made to the legislature, and they at once said, "We will own these railroads ourselves," and they bought them from the English capitalists. When I was in Norway and Sweden 3 years ago, while I was there, the Government took the control of them, and they own to-day the principal roads north and south through both of those countries. They have not cared to take the lateral lines east and west, but they make a rate from the common points of these lateral lines to the water front, and they prorate with the lateral lines belonging to the smaller companies. They have brought back into the markets the old manufacturers, and they are to-day a happy people, because the Government has taken hold and made the rates equal to everybody—to the Englishman, to the Frenchman, to the German, and the Yankee, and everybody else. We distribute oil in those countries, and we find no discrimination. Government ownership is my proposition.

THE CORPORATIONS ELECT THE LEGISLATORS—STATE OFFICERS AND UNITED STATES OFFICERS IGNORE COMPLAINTS OF VIOLATIONS OF THE LAW.

You have upon the statute books to-day one of the best laws ever written, known as the Sherman Act, passed in 1890; but the difficulty in this country is that you can not enforce the law, or at least you do not. Complaint of our difficulties was made during the Cleveland administration to the Attorney-General of the United States, and no answer was made by the recipient of the letter. And to the present administration complaint was made more than 8 months ago. The letter was pigeonholed. In the State of Pennsylvania we have asked the aid of the Commonwealth, by application to the governor, since the suit I have mentioned. The letter was pigeonholed. The power of these monopolies and combinations is such that they elect or nominate their own men to serve in the legislatures. They make their own nominations a year ahead of the time, to prepare their candidate; and he is schooled to know their wants first and the people's second. I say that if our courts of the State, our attorney-general of the State, our Attorney-General of the United States would put forth the strong arm of the government, under the laws that exist, they could stop these encroachments upon the rights of the people. I say that if they will not do so you must come to the control of these great transportation lines, which are causing all this trouble, by Government ownership. I have been a traveler in every part of the world that I could reach by water or rail; and I have found this country advertised from China to the islands of the East as being a country whose people are bound hand and foot by corporate power. As I told you yesterday, we came to Congress, as you saw here, in 1872. We came here again and again. We have come to the Attorney-General of the United States a half dozen times without result; and it seems to me that the courts are approached without result also. The settlement of litigation before the courts is delayed. Corporations come when they please and stay away when they please. They defy the courts under the plea that they will incriminate themselves if they give evidence. What are you going to do about it? If the Government would stretch out its arm and take this man and say, "Answer this question or go to prison for contempt of court," he would answer. Now, I say Government ownership of railroads would be my remedy unless we can get Attorneys-General of the United States and of the several States that will enforce laws.

UNFAIR TRADING SHOULD BE PROHIBITED.

Q. Suppose that the Government did own the railroads to-day. Would not these great corporations or trusts still have the power to follow the smaller merchants into the cities and towns and sell oil or any other merchandise very low at given points? And could not these corporations, with their great accumulations of wealth, still prevent the small corporations from doing business and the merchant from selling his goods in various markets?—A. In that case you would want the law I spoke of yesterday—such as, I think, is adopted by Germany—to prohibit unfair trading. You have got to take care of the interests of the common people of this country. If you do not, you are going to have trouble.

WASHINGTON, D. C., November 10, 1899.

TESTIMONY OF MR. ANDREW D. GALL,

Manager of the Gall-Schneider Oil Company, Limited, Montreal, Canada.

The commission met at 2.10 p. m., Mr. Phillips presiding. Mr. Andrew D. Gall was introduced as a witness, and, being duly sworn, testified as follows:

Q. (By Mr. JENKS.) Will you kindly give your full name and address?—A. Andrew D. Gall, Montreal; a British subject.

Q. What is your business?—A. We are engaged in the marketing of petroleum products generally, principally in the Province of Quebec, in Canada.

Q. Do you handle American oils at all?—A. Almost exclusively.

PRODUCTION OF PETROLEUM IN CANADA.

Q. Can you give us an account of the production of crude oil in Canada, giving us the different places of production and something as to its extent?—A. The production of oil in Canada is confined almost exclusively at the present time to western Ontario; that is, the Bothwell, Oil Springs, and Petrolia districts, all of which are in western Ontario. The production of oil is largely in the hands of private individuals. The Standard Oil Company, as a company, does not own a great number of wells, but some of the men formerly in the old Imperial do. I will explain that the Imperial Oil Company to-day in Canada is directly the Standard Oil Company. It was the name of the company in Petrolia before the Standard Oil Company got control of the Canadian market, and has been continued under that style.

Q. You say that the Standard Oil Company has gotten control. Do you mean that the Standard Oil Company bought the stock of that company and continues the company under its old name?—A. Yes, under the name of the Imperial.

Q. (By Mr. SMYTH.) The Standard Oil Company are stockholders now in that company?—A. The Standard Oil Company are stockholders in that company. Mr. Fitzgerald, the former president of the old Imperial, admitted that only a small proportion of the stock was held by Canadians at the present time.

Q. They bought that in open market?—A. Well, I do not know. It was a kind of a deal; I do not know whether you would call it open market or not. There were a number of men who were formerly in the old Imperial who have large producing interests in Canada. These men no doubt control between 20 and 25 per cent of the production. The rest is held by the independents or small producers, pumping from 50 to 500 barrels per month.

Q. (By Mr. JENKS.) If I understand you, then, the Imperial Company, of which the Standard Oil Company owns the controlling interest, controls about 25 per cent only of the production?—A. Of the production, yes.

Q. About how much is the total production of Canada? Can you give us the figures?—A. Yes. The total production of crude oil amounts to about 750,000 to 800,000 barrels per year of 35 imperial gallons each.

CANADIAN OIL WORSE THAN OHIO.

Q. What is the quality of this Canadian oil; is it like Lima oil in Ohio or white sand oil?—A. We have handled a good deal of Ohio oil, and of course it is not to be compared with the Pennsylvania at all; but comparing the Canadian with what we get from Ohio we find that in marketing it at an equal price we can always get a preference for the Ohio product, so that I should be inclined to think that people would prefer the Ohio to the Canadian product.

Q. (By Mr. SMYTH.) You say "we;" do you represent the company?—A. Yes. I might say I am president and managing director of the Gall-Schneider Oil Company, Limited.

Q. Do you produce petroleum—do you have wells?—A. No; we have nothing to do with that whatever—it is only marketing it.

Q. Do you not refine the crude?—A. We have nothing to do with the refining.

Q. You simply buy refined oil?—A. Yes.

Q. (By Mr. JENKS.) You handle also crude oil?—A. No, sir; only refined, lubricating, etc.

¹ See p. 661; Mr. Lee, pp. 275, 278; Mr. Archbold, p. 532; Mr. Emery, p. 624.

REFINING IN CANADA ALL DONE BY THE STANDARD NOW.

Q. About how much oil is refined in Canada, and what proportion of that is controlled by the Standard Oil Company?—A. Well, these figures I am about to give are supposed to be official. They are made by the Department of Agriculture. Up to the present time of course all oil had to be inspected and went through the inland revenue or customs department, and I presume the figures are correct. The quantity of illuminating oil that was produced and sold by oil refiners in Canada in 1896 was 11,207,150 imperial gallons, valued at \$1,251,122; of benzine and naphtha, 719,453 gallons, valued at \$70,733; of gas and fuel oils, 6,788,853 gallons, valued at \$361,618; of lubricating oils and tar, 1,447,455 gallons, valued at \$77,109. The total gallonage for 1896 was 21,176,682, and the total value \$1,792,890. The total gallonage for 1898 was 21,153,192, and the value was \$1,723,293.

Q. Can you tell us about what proportion of this refined product is refined by the Standard Oil Company?—A. To-day every gallon is refined by the Standard Oil Company.

Q. That is, the Standard Oil Company now has control of all refineries in Canada?—A. Complete control.

Q. By complete control you mean they own them all?—A. They own them all.¹ There is one—there is the old Imperial in existence to-day.

Q. How long is it since the Standard Oil Company secured this complete control of the refined product in Canada?—A. That deal was put through in July or August, 1898.

Q. Perhaps you can give us a little fuller statement about it?—A. Well, I do not know exactly how it was done, I am sure. It was simply a deal of the Standard Oil Company, and how they did it I do not know. They bought up all the refineries, and they have demolished all of them except the old Imperial plant. That is running now and there is a plant at Sarnia, a little farther from Petrolia.

Q. How many independent plants were there before?—A. I have them here. Before the trust got control of the business there were 5 refineries in operation and 4 refineries that were not in active operation at that time, although not closed up by any means. As I stated before, all of these, with the exception of the old Imperial Company's works at Petrolia, have been dismantled, and most of the material broken up and sold as scrap or moved to Sarnia. I know about the figures they paid for one concern. That was the John McDonald refinery. He told me that he got \$65,000 for it and that it was not worth \$10,000.²

Q. You spoke of their having removed part of these refineries to Sarnia?—A. They removed part of the material, I believe, in building up their own works at Sarnia.

AMOUNT OF CANADIAN REFINED OIL AND AMOUNT IMPORTED.

Q. Do you know whether the amount refined at the present time is less or greater than the amount refined by the 5 refineries previously?—A. I do not see how it can be greater. The production of crude has been about the same, and I do not see how it can be greater than the production.

Q. You think it probable, however, that they are refining all of the crude oil now. I judge from what you say that possibly this 1 refinery at Petrolia is larger than the others have been at Petrolia, and that the one at Sarnia is a little larger. Have these 2 as much capacity as all the old ones?—A. I guess so; yes.

Q. While there has been a concentration of several into one management, the total output has not been lessened?—A. I do not think it has been lessened. It may have been somewhat increased; some crude having been sold for other purposes before, they may have made some changes which have increased it somewhat.

Q. (By Mr. SMYTH.) I suppose there is as much crude refined as is demanded?—A. No, sir.

Q. There is demand for more refined oil than there is on the market?—A. Much more.

Q. (By Mr. JENKS.) How much of the oil used in Canada is refined there, and how much is imported from the United States?—A. For 1898 the percentage of Canadian was 61.1, and the percentage of imported, which is altogether American—no oil is brought from elsewhere—was 38.9 of the consumption in Canada. In 1881 there was only 6.9 per cent of American and 93.1 of Canadian.

Q. (By Mr. SMYTH.) How do the total quantities compare? The percentages vary; are the total quantities any larger?—A. Much larger. In 1881 the number of gallons of Canadian was 6,406,783, while in 1898 it was 10,796,847 gallons.

¹ See Mr. Archbold, p. 573; Mr. Page, p. 783.

² As to prices paid for plants by the Standard, see Mr. Davis, p. 367.

Q. (By Mr. JENKS.) The Canadian output is also largely on the increase to-day; the demand simply outruns the supply, so you are getting more and more from the United States?—A. Yes.

THE COURSE OF PRICES.

Q. Can you give us some information on the course of prices for the last 8 or 4 years, so that we can see whether the purchase of these companies by the Standard Oil Company has had any effect on them?—A. I have invoices here, dating all the way back to 1892, of the old Imperial Company, which is at the present time the Standard. In September, 1892, they were selling oil for 12½ cents delivered in St. Johns, Quebec.

Q. That is the refined product?—A. Refined, in barrels. The cost of barreling and inspection is estimated to be about 2½, say 2½; then that would mean that you deduct 5 cents from 12½, or 7½ in bulk f. o. b. Petrolia. In 1894 it was delivered in St. Johns for 11 cents; that is, in barrels, freight paid. I might say that the first was July, 1894, and in September, 1894, it was still 11 cents. In April, 1896, it was 14½ cents delivered at St. Johns.

Q. That was before the Standard Oil Company took them in?—A. Previous to that altogether. In September, 1897, it was 13½, delivered in barrels; in May, 1898—that was just a month or two previous to the time they took control of it—it was 12½; to-day it is 17½ cents, delivered in barrels at St. Johns.

Q. (By Mr. CLARKE.) Do you know the prices of crude petroleum between the 11 cent time and the 13 and 17 cent times?—A. I will just give this to you here. I have them from a large producer of petroleum, under date of October 30 last. In January, 1895, the price was \$1.16 per barrel; in June, 1895, it was \$1.53 per barrel; in January, 1896, \$1.72; June, 1896, \$1.70; January, 1897, \$1.50; June, 1897, \$1.40; January, 1898, \$1.40; June, 1898, \$1.40; January, 1899, \$1.40; June, 1899, \$1.45, and the present price is \$1.60. I have the average price for this year, if you wish to have it; I have it here.

CRUDE OIL GOES UP ONE-HALF CENT A GALLON; REFINED, 4 CENTS.

Q. (By Mr. JENKS.) Can you give us the prices of refined oil at the beginning of this year, 1899? What was the price of refined, compared with the price of the crude, at the beginning of this year?—A. Well, I have no invoices that I could show you covering that time, but I have a memorandum here. This is a retail price. Of course, it is pretty hard to go by that. In January of this year it is quoted at 14 cents, and in February 14½.

Q. And the present price from that invoice was 17½?—A. No; I have no invoice to the effect that 17½ cents is the price of oil to-day.

Q. And this decided change in price has been during the latter part of this year? When the price of crude was \$1.45 per barrel the price of refined was down to 14 cents or possibly less?—A. Yes. It is only recently that crude is \$1.60; very recently.

Q. How long is it since refined went up to 17 cents?—A. That is very recently, too.

Q. Then the facts seem to be these: That the price of refined has gone up at about the same time as the price of crude?—A. Nearly so.

Q. You would say it ran up proportionately or nearly so?—A. I am not familiar enough with the refining; I do not know enough about that.

Q. They have simply gone together?—A. Yes.

Q. (By Mr. PHILLIPS.) Has the price of crude in Canada corresponded with the recent great advance in Pennsylvania and Ohio oil within the last 6 months or a year?—A. I do not know just what the prices have been in Pennsylvania or Ohio; but up to June of this year crude was only \$1.45 at Petrolia, and even lower than that.

But you can not give us the price of refined in June?—A. June of this year?

Of this year; that is, the wholesale price?—A. Yes, I have it. In June here; well, the retail price, 18½ cents. These, of course, are 1 cent over the wholesale prices.

Q. Well, that 18½, then, corresponds with \$1.45 and this 17½ with \$1.60. Is it claimed by anyone that this increase in the price of the refined oil is due to the control of the refining by the Standard Oil Company?—A. It is claimed so by everybody or nearly everybody.

Q. And do they make the same claim as to the increase in price of crude; that the Standard Oil Company has put up the price of crude?—A. Well, no. I might say that it pays the Standard Oil Company much better to refine Canadian oil

and force it on the Canadian market than it does to import, because there is an import duty of 5 cents per gallon, and you can readily see it is far better to pay a little more for crude and force the people to use the Canadian product.

FREIGHT DISCRIMINATION BETWEEN AMERICAN AND CANADIAN OIL.

Q. There have been some charges made in the papers for the last few months that there have been freight discriminations in Canada in favor of the Standard Oil Company. Can you give us any information on that subject?—A. The Sun Oil Refining Company, Limited, of Hamilton, Ontario, and ourselves laid a complaint before the railroad committee of the Privy Council regarding this matter sometime in January last. The complaint was heard by the railroad committee in February. At that time we were complaining principally of the discrimination in freight rates on local shipments on Canadian oil as against American. We also complained on the through freight rates from Black Rock, where it enters Canadian territory, to Montreal and other points.¹ So far as that investigation was concerned the railways raised the objection that the railroad committee had no jurisdiction over foreign freight, or at least freight originating in foreign countries, though they decided afterwards that they did have jurisdiction over it. On the local freight rate they threw up their hands and admitted that they were in the wrong. It was a put-up job in the start, and it was about time they admitted it. For instance, I went out and bought a barrel of Canadian oil and shipped it to George L. Meikle Company, of La Shutte. On the Canadian oil I paid 77 cents freight. Taking barrels of 450 pounds, that was at the rate of 17 cents per 100 pounds. On a barrel of American oil I paid \$1.08, a rate of 24 cents per 100 pounds. Here are the original bills of lading signed and receipted. I also shipped a barrel of each kind to St. Johns, Quebec. On the American oil I paid \$1.08 for the barrel, or 24 cents per 100 pounds, and on the Canadian I paid 54 cents, or 12 cents per 100 pounds. A more glaring injustice never existed.

Q. When you delivered this oil to the stations—

A. (Interrupting.) We had to say whether it was American or Canadian.

Q. They simply made up the freight bills accordingly?—A. They made up the freight bills accordingly, and you had to mark on the freight bills whether it was American or Canadian.

Q. What had been the custom before? Had they been shipping at the same rates?—A. Yes; whether American or Canadian it was shipped in the same way at the usual rate of freight.

Q. And this is simply a rating made by these roads?—A. Yes; and we think at the instigation of the trust to prevent us from marketing our goods at local points. Not satisfied with marking up the through rates, they wanted to cripple us further by charging double for American over Canadian.

Q. Why do you think that the Standard Oil Company was back of that?—A. They have got control of the Canadian business, and they were anxious to force people to use Canadian oil by making it impossible to get American oil.

Q. (By Mr. CLARKE.) Were both of these over the Grand Trunk?—A. No, sir; both over the Canadian Pacific.

Q. (By Mr. JENKS.) On what roads were those discriminations made against oil?—A. Both roads.

Q. On any others?—A. We have a number of small railways, but the Grand Trunk and Canadian Pacific railways are really the only roads, you might say, that we shipped by; in fact they are the only roads running into Montreal. There are others running in there, such as the New York Central, Delaware and Hudson, and some others, but they come in over the Grand Trunk tracks or the Canadian Pacific.

THE MICHIGAN CENTRAL LOSES STANDARD BUSINESS.

Q. How about the Michigan Central?—A. They come as far as Hamilton, but not any farther.

Q. Was there any discrimination made to Hamilton and through that part of the territory?—A. I might say the Michigan Central would not go in for increasing these freight rates. You might call it a deal, whatever you like. The exact result—they told our people that the Standard Oil Company trust had taken all their freight away from the Michigan Central. Nothing is billed over the Michigan Central, and the Michigan Central is still giving us a decent freight rate, what it was formerly, previous to October, 1898.²

¹ See Mr. Westgate, pp. 375, 378, 379.

² See Mr. Westgate, p. 379. Compare the case of the Little Rock and Memphis, p. 711.

Q. You think there was a formal agreement between the Grand Trunk and Canadian Pacific to put up the freight on oil, but none of the other roads came into the agreement?—A. No, none of the others came in; no other had anything to say about the matter; they were the only ones that could bring it into Montreal and other points; the only two through lines we have.

Q. You say you are informed by the Michigan Central Company that the Standard Oil Company have taken away their business since this. Did that information come from one of the officials or from some one in authority?—A. It did, although I am not prepared to say who it was from.

SUPPOSED SPECIAL RATES TO THE STANDARD—COMPLAINTS TO THE CANADIAN GOVERNMENT.

Q. Will you explain somewhat further in reference to through freight rates?—A. Of course we were not satisfied with the way the matter was handled in February last, so we made a further complaint to the railroad committee.

Q. Will you be kind enough to read this complaint and put it in evidence so that we can have it exact?—A. I will. I might say I took this matter up with Mr. Blair, minister of railways and canals, and he wrote me on May 15 last as follows:

OFFICE OF THE MINISTER OF RAILWAYS AND CANALS,
Ottawa, May 15, 1899.

GENTLEMEN: I have your favor of May 12 before me, and note its contents. If you have found any good reason to believe, as I infer you have, that the C. P. R. and the G. T. R. are carrying the Standard Oil Company's products at a lower figure than they are proposing to charge you, and if you make such an allegation and ask us to investigate it, the railway committee will summons such witnesses to Ottawa as you may think, or we conclude, will on oath be compelled to acknowledge the facts. We will not permit the C. P. R. or G. T. R., or any other railway, to tell us that it is none of the business of the public to ascertain whether there is discrimination or preference. It is essentially our business to see that it is not permitted. I will have the deputy minister ascertain, beyond this, whether there are any facts in his possession with regard to the tariff, or which he can procure, of which I can acquaint you.

Yours, faithfully,

ANDW. G. BLAIR.

GALL-SCHNEIDER OIL Co., *Montreal.*

The WITNESS (reading statement). Now, this is our complaint:

To the Railway Committee of the Privy Council:

The complaint of the Sun Oil Refining Company, Limited, and the Gall-Schneider Oil Company, Limited, with reference to the tolls charged by the Grand Trunk Railway Company, of Canada, and the Canadian Pacific Railway Company, upon petroleum and its products, humbly sheweth—

Your complainants are companies incorporated under the laws of the Provinces of Ontario and Quebec, respectively, for the manufacture and sale of petroleum and its products, and have their places of business and manufactories at Hamilton and Montreal, respectively.

Your complainants necessarily import from the United States large quantities of petroleum and its products.

According to the uniform classification of freight prescribed by the Governor in Council under the railway act, and now in force, illuminating oil and lubricating oil in wood are classed as fifth class for car lots and third class for less than car lots.

1. The said railway companies under like conditions and circumstances are naming unjust and partial discriminations between different localities.

2. The said railway companies are giving secret special toll rates, rebates, and concessions to the Standard Oil Company and persons and corporations affiliating with them on freight carried over their respective roads.

3. The said railway companies have been since October 1 last, and are at the present time, discriminating with regard to freight rate charges in favor of the Standard Oil Company and others affiliating with them against independent shippers, and all oils shipped by the Standard Oil Company and said other persons and companies from all points in the United States coming into Canada are carried at a less rate of freight than the same class of goods shipped by the independent refiners competing against the Standard Oil Company and said other companies.

4. The said companies are at present and have been since October 1 last charg-

ing 85 cents per 100 pounds from Buffalo and Suspension Bridge to Montreal, as per their tariff issued at Montreal,¹ while they charge only 25 cents per 100 pounds from Sarnia to Montreal on the same class of goods, notwithstanding the fact that the distance from Sarnia to Montreal is 77 miles more than that from Suspension Bridge to Montreal.

5. On all oils shipped from Buffalo and Suspension Bridge to Montreal by the Standard Oil Company and its connections the said railway companies are giving a secret rebate or reduction.

6. Shippers not connected with the Standard Oil Company and its connections are charged on shipments from Suspension Bridge to St. John, New Brunswick, on carload lots, 45 cents per 100, while shippers from Sarnia are charged 80 cents per 100, although the distance from Sarnia is 77 miles greater than from Suspension Bridge to St. John, New Brunswick.

7. On all other points on the international boundary to which shipments of oil are made the same discrimination was made in favor of and rebate given to the Standard Oil Company and companies and persons affiliating with them, against their competitors.

8. By reason of the facts herein complained of, your complainants have sustained loss and are greatly impeded in the transaction of their business.

9. Your complainants therefore submit that an order should be made directing the said railway companies to discontinue those illegal acts, and to refund all overcharges which they have so collected from your said complainants.

And that such further order may be made with reference thereto as to your committee may seem meet and the circumstances of the case may require.

And that for the purpose aforesaid full inquiry into the matters herein complained of may be made.

Dated at Hamilton, June 7, 1899.

THE SUN OIL REFINING COMPANY OF HAMILTON, Limited.

THE GALL-SCHNEIDER OIL COMPANY, Limited,

By

STAUNTON & O'HEIR, *their Solicitors.*

Q. (By Mr. JENKS.) I note that you speak of secret rebates that have been given to the Standard Oil Company. Did you have any positive proof that secret rebates had been given?—A. We hope to be able to establish that fact if we get the right men before the railway committee. I have good reason to believe and do believe that such is the case.

Q. But as yet you have not brought that out?—A. As yet I have not brought that out.

Q. Does the Standard Oil Company ship any American oil into Canada?—A. They do; but very little in comparison with former years.²

Q. Their expectation, apparently, is to supply the Canadian market with the oil there, in which there is the largest profit?—A. Yes; so long as the duty remains as it is.

Q. Have you any reason to think that for the American oil which they do ship into the country they pay any less rate of freight than you do?—A. I certainly do, and I have a good reason to believe so.

Q. The main charge, however, is this, that discrimination is made between American and Canadian oil to the detriment of those people who are dealing in American oil?—A. No; we do not charge that exactly. We charge that the Standard Oil Company and companies connected with them are getting a lower freight rate than we do, or at least than the independent shippers do.

Q. In every way and over all the roads?—A. Well, very nearly; anywhere and everywhere.

Q. (By Mr. FARQUHAR.) You mean on Canadian oil?—A. Any oil. There is nobody else handling Canadian oil except themselves. You can not buy a gallon of oil unless they see fit to sell.

THE STANDARD WILL NOT SELL IN CANADA EXCEPT TO THOSE WHO AGREE TO BUY ONLY FROM THEM.

Q. (By Mr. JENKS.) Do you know whether they refuse to sell Canadian oil to anyone; for instance, have you offered to buy?—A. I have tried to buy, and they refused to sell.

Q. As a matter of fact you can not get any Standard Oil Company products to handle?—A. We can not get any to handle unless we get it from an outsider.

Q. Does this same fact in reference to their refusing their products apply to the Sun Oil Company, of Hamilton?—A. Yes; precisely the same.

¹ See Mr. Westgate, p. 378.

² See p. 660, as to importations by independents; Mr. Page, p. 738.

Q. And all others except those formally recognized as their agents?—A. Yes; those who buy exclusively from them.

Q. Have you any knowledge of that fact, that they insist upon their dealers making an agreement that they will buy only from them?—A. Yes.

Q. You have positive information of that fact?—A. They have asked me two or three different times—sent a man to us, and asked us to buy all our stuff from them and stop this inquiry and all that kind of thing, which, of course, we refused to do.

Q. (By Representative LIVINGSTON.) What inducement did they offer you to do it?—A. Well, they wanted to charge us about twice what the stock is worth, and to cripple us as soon as they could; that was about the inducement, but they did not put it in that form. They offered us no inducement whatever.

IS IT TO 'PROTECT THE CANADIAN INDUSTRY'?

Q. (By Mr. FARQUHAR.) Is there evidently a policy on the part of the Canadian roads to build up Canadian oil as against the American product by making the rates they do?—A. I asked Mr. Bosworth, general freight agent of the Canadian Pacific, and he replied that he wanted to protect the Canadian industry.

Q. Has not that been the plan of your government in making as much discrimination as it could against the American product?—A. In past years it has been; I can not say it has been under the present government.

Q. Is it not of advantage to the Grand Trunk and Canadian Pacific to take the through rate and a short haul on the Canadian lines with the Canadian market in preference to prorating with American lines in competition south of the St. Lawrence?—A. It certainly is not; I can not see where it comes in, because on oils it is only a distance of 75 miles less.

Q. (By Representative LIVINGSTON.) Is it not done as a retaliatory measure entirely?—A. I do not think it is.

Q. (By Mr. FARQUHAR.) Has it not been the policy as announced in the Canadian press, and declared by your ministers, to take care of your products as against anything imported across the line?—A. Well, it was previous to the present administration. I can not say such is the case at the present time.

Q. Do not the two roads there that are backed up by foreign capital, Canadian capital, and subsidized, uniformly make rates to the Canadians to the disadvantage of the Americans?—A. That is what they have done, if you look at it that way.

Q. (By Mr. SMYTH.) Does the Standard Oil Company produce crude petroleum in Canada?—A. Well, men connected with the Standard Oil Company do. The Standard, as a company, owns very little.

RISKS OF STARTING AN INDEPENDENT REFINERY—NOT MUCH RISK TO THE STANDARD.

Q. They are simply refiners, are they, in Canada?—A. Yes.

Q. Can not anyone buy that crude petroleum in Canada?—A. They can; yes.

Q. And they could refine it if they wanted to?—A. If they felt so inclined they could.

Q. Then when you say no one can buy Canadian refined oil except with the permission of the Standard Oil Company, it is because they do not choose to refine it?—A. Anyone who is familiar with the Standard's operations in the past would think twice before he put up a refinery in Sarnia, or anywhere, to refine Canadian oil.

Q. (By Representative LIVINGSTON.) If they did, tell us what the Standard Oil Company would do with them, judging the future by the past?—A. I suppose they would lower the price at certain points and run them out of business as fast as they could. Then there is the uncertainty about the duty. The government, it is expected, will remove the whole or part of that duty, and if they did, a refinery in Canada would not be worth much.

Q. (By Mr. SMYTH.) Then the Standard Oil Company in buying those refineries in Canada have taken a very big risk if they gave \$65,000 for a refinery that was only worth \$10,000?—A. They have made that 10 times over in the last 3 months.

Q. (By Representative LIVINGSTON.) They have the railroads in Canada subsidized or under their control, have they?—A. I think they have.

Q. Then they do not take much risk?—A. I do not think they do.

Q. (By Mr. SMYTH.) They take the risk of the tariff, and you think that no one would invest in the refinery?—A. That is, an outsider. The Standard Oil Com-

pany is a different concern altogether from any private individual. It is not run on what are known as business principles at all; at least, not what might be called honorable.

CRUDE OIL HAS BEEN HIGHER—REFINED WAS NEVER SO HIGH.

Q. Do you consider that the price of crude oil has advanced to \$1.60 as against \$1.40 and \$1.80?—A. Of course, as I said before, I do not know much about the refining part of it, but it strikes me that a difference of 20 cents a barrel does not warrant an advance of 5 or 6 cents a gallon on the refined product.

Q. But it has only been advanced from 14½ cents; that is not 5 or 6 cents a gallon?—A. But in past years crude oil has been a great deal higher than it is; and the price of oil never was known to be as high. I do not remember of oil being as high as it is to-day. In 1896 crude oil was as high as \$1.72, while oil was selling for 14½ cents delivered in Montreal.

Q. Do you think there is any profit in it? Were not business conditions very much depressed in 1896? Is there not very much more margin of profit in all business to-day as compared with 1896?—A. There is for some people, the Standard Oil Company in particular. We do not find it so.

Q. Now, do I understand you that the Standard Oil Company is the sole buyer of crude oil in Canada?—A. They are.

Q. And yet they have advanced the price from \$1.45 to \$1.60?—A. Yes; that is done to encourage production, because they find, as I explained before, that it pays them better to refine Canadian than it does to import the American. They want to increase the production because it pays them much better to do so.

Q. Have they not really bid against themselves in raising the market price from \$1.45 to \$1.60 for crude?—A. They have.

Q. (By Representative LIVINGSTON.) But you say while they have done that they make more money by it?—A. They certainly do.

Q. (By Mr. SMYTH.) At the same time the producer of crude petroleum is getting 15 or 20 cents more per barrel than he got before?—A. But he is getting 12 cents a barrel less than he did in 1896, and the dealer is paying 2½ to 3 cents a gallon more for his refined oil.

Q. That may be, but the business conditions may be very different.—A. Yes; they are. It is the Standard Oil Company that is running the business now; that is the difference.

PRODUCERS VERSUS CONSUMERS.

Q. (By Mr. PHILLIPS.) Do you state that the Standard Oil Company had to put up the price of oil in order to induce development? There are a large number of persons outside of the Standard Oil Company that are engaged in the producing business in Canada.—A. Yes.

Q. Do we understand, then, that they put up the price of oil in order to increase production, because there was a much larger profit in refining Canadian oil than in importing American oil?—A. That is precisely the idea, as I understand it, and as it is generally understood; that they advance the price because it pays them so much better a profit to refine the Canadian product than to import the other, because there is a duty of 5 cents.

Q. (By Mr. SMYTH.) But the effect in the oil-producing regions has been beneficial?—A. Yes.

Q. It has caused more wells to be drilled?—A. Yes. There is a market for much more oil in Canada than is produced there, and they want to benefit by it, I suppose.

Q. But the people are benefiting by it also, are they not?—A. Some of them, I suppose, do, and some do not.

Q. Well, they are producing more oil and getting a higher price for it?—A. I do not know that they are producing more oil. They may be, but, anyway, up to 1898 the production was about even.

Q. (By Representative LIVINGSTON.) How is the consumer faring while that is going on; is he getting his oil for less money and making money by it?—A. No, sir.

Q. What is the ratio between the producer and the consumer as to population, as to numbers?—A. I do not know how many producers there are; there are quite a number of them, but I would not undertake to say.

Q. About 1 to 100?—A. No; not 1 in 10,000.

Q. Then where 1 in 10,000 is making money 9,999 are losing it?—A. Well, they are paying a good deal more for their light.

THE TARIFF ON OIL.

Q. (By Mr. FARQUHAR.) How long has this 5-cent tariff rate been in existence?—A. It used to be 7 and 6, if I remember right, although I am only taking it from memory; I think it was the late Conservative government that reduced it to 5; that would be the last session, in 1896. The present Liberal government said they were going to wipe out all these iniquities. They may be going to do it, but they have not done it yet.

Q. So the remedy lies with the Canadians in establishing a tariff that will admit American oil and bring the Standard's price down?—A. The remedy lies in that and in obliging the railways to carry petroleum products at a reasonable freight rate.

Q. You would say that these Canadian railroads, through establishing these tariff rates, discriminating in favor of Canadian oil, are carrying out the policy of the Canadian government, whether it is Liberal or Tory?—A. No, sir; most decidedly not.

Q. You think not?—A. No, sir; I think they were carrying out the policy of the Standard Oil Trust. I do not think it emanates from any other source.

Q. Then you would say that if they charge that 5-cent rate, and do not lower it to 3 or 2, and allow competition, the Canadian government is really in aid of the Standard Oil Trust?—A. Of course that has been standing for a long time—this duty. If they would remove that it would help us greatly, but while they allow the railways the monopoly of freight rates I do not know where they may put them to.

FREIGHT DISCRIMINATIONS (RESUMED).

Q. (By Mr. JENKS.) Do I understand you to say, in regard to local rates in Canada itself, that the railroads had all been compelled to put back the rate and make it the same on American oil as on Canadian?—A. Yes; they did.

Q. And the only discrimination now that remains against you in the Canadian rates is on the oil that is imported, on which there is a through rate from the United States?—A. Yes. Of course if we can not get through rates on the oil our stuff does not reach a local-rate town, and it doesn't amount to "shucks."

Q. (By Mr. SMYTH.) Have you evidence as to the rates of freight charged the Standard Oil Company from the United States into Canada, as compared with the rates you and other independent dealers in oil have to pay?—A. We have proved nothing yet. The railways say the freight is alike to them and all others, but we don't believe it, and we hope—in fact, we believe—that we can prove that such is not the case when we are given an opportunity to do so.

WAGES.

Q. (By Mr. JENKS.) Have you any information with reference to the rates of wages that are paid by the Standard Oil Company in their refineries as compared with the rates that were paid before?—A. No; I know nothing about that, except that I did hear that their men were complaining in Montreal, at their establishment there, that they had reduced their wages. Beyond that I have no definite knowledge.

Q. (By Mr. FARQUHAR.) Your last answer was hearsay; you know nothing about it?—A. Yes; from the men I know nothing about it.

INDEPENDENT IMPORTERS IN CANADA, AND WHERE THEY BUY.

Q. (By Mr. PHILLIPS.) Do the independents in Canada import more American oil into Canada than the Standard?—A. I do not know. I should not want to say that they import more, but the importations into Canada by independents have been largely increased during the past 15 months.

Q. What refining companies in the United States, independents, export or import their oil?—A. The Sun Oil Company and ours are the chief importers in Canada, and, in fact, the only ones I know of at the present time. We import all our stuff, or nearly all, from the Corn Planter Refining Company, in Warren, and the Warren Refining Company, in Warren, Pa. We also import some from the Craig Oil Company, in Toledo. We have bought a good deal from the Paragon Refining Company, in Toledo, and we have bought some from Scofield, Schurmer & Teagle, in Cleveland, I think.

AMERICAN OIL BETTER THAN CANADIAN, AND PENNSYLVANIA BETTER THAN OHIO.

Q. Is this oil that is bought by you, the independent oil, considered better than the Standard or equal?—A. From what I can learn from the consumers, the oil that we have been selling as American oil, which it was, is considered much better than what the Standard was selling them as Pennsylvania oil. As a matter of fact, I think they had been giving them for years the Ohio product and putting it off as Pennsylvania oil, although I have nothing to prove that by, except that the people have said that they considered what we were giving them far better.

Q. At the same price the citizens of Canada would buy of the independents in preference to the Standard, would they?—A. Every time. There is not 1 instance in 1,000 but they will give us the preference over the Standard.

Q. You speak of importing oil from Toledo, Ohio. That is what is called the Ohio or Lima oil, is it?—A. I think so.

Q. Do you sell that as Ohio oil?—A. Oh, yes.

Q. And you make a difference in price between the Ohio oil and the Pennsylvania oil?—A. Oh, yes.

Q. You sell them for what they are?—A. For what they are. We sold the Ohio oil last fall—that is, about this time last year—at precisely the same price that they were selling Canadian oil at. We were paying those excessive freight rates and 5 cents duty, but we still sold it at precisely the same price that they did, and we did not lose anything by it, although I admit we did not make much.

Q. (By Mr. SMYTH.) The Canadian public would not pay you more for that oil?—A. They would at that time, but they would not sometimes; but we did not want to ask them any more at that time.

Q. Is it not recognized in Canada among the consumers that the American oil is better than the Canadian?—A. It certainly is.

Q. And yet they will not pay more for it?—A. They will; but at that time we were not asking more for it.

Q. (By Mr. JENKS.) What difference do you make in prices between the Pennsylvania product and the Ohio product?—A. Well, generally about a cent or a cent and a half.¹

Q. (By Mr. SMYTH.) Do you sell much Pennsylvania oil?—A. Yes, we sell a lot of it.

Q. The parties you mention that you deal with were mostly Ohio people. Whom do you buy from in Pennsylvania?—A. From the Corn Planter Refining Company and the Warren Refining Company. I might say that the men who are interested in these two companies are also interested in our concern in Montreal, and also in the Sun Oil Refining Company, in Hamilton. Mr. Jameson is a shareholder in our company, and so is Mr. Todd, of the Corn Planter. They are also shareholders in the Sun Oil Company, in Hamilton.

CANADIAN OIL DUTY DISPROPORTIONATELY HIGH.

Q. (By Mr. CLARKE.) You think that the Canadian duties on American oil are disproportionately high; that is, higher than the duties on other products that are imported?—A. Oh, yes. Take, for instance, the oil that we bought in Ohio last year. It was worth about, say, 3 cents a wine gallon, and the duty was 5 cents a gallon on it. Of course, to-day Ohio oil is worth considerably more money, but the duty is still very, very high. I know of nothing in the whole list—there may be some things—but I know of nothing that compares with oil. And Mr. Fielding, in his budget speech last year before the house, said there was nothing he had any apology to offer for but coal oil. He did mention that, and said that he regretted he had not been able to remove any duty from that then. It was the only thing he apologized for, which would go to show that there was nothing else to compare with it.

Q. Have you figured out what the percentages of duty on oil and on other products would be?—A. No, I have not; but the duty generally goes all the way from 10 to 25, 30, and even 40 and 45 per cent; and even if it went to 50, it is still away behind the oil. I do not know of anything that comes anywhere near that.

Q. (By Mr. CONGER.) What is the percentage on the oil, approximately?—A. That would depend largely on the cost. We pay 5 cents a gallon regardless of the cost, unless it is an oil that costs over 25 cents a gallon; then we pay 25 per cent. Of course you know there are no oils sold for 25 cents, or very little, and hence we are not much concerned with that.

¹ As to the relative quality of Pennsylvania and Ohio oil, see Mr. Lee, pp. 275, 278; Mr. Archbold, p. 532; Mr. Emery, p. 324.

Q. (By Representative LIVINGSTON.) What is the price of crude oil in Ohio?—A. I do not know.

Q. What is the price of the crude oil that you buy this side of the line to-day?—A. We do not buy any crude oil; it is the refined only that we buy.

Q. What is the price of the oil you buy?—A. We have bought some for 8, 8½, and 8½, and lately we bought 3 tanks that cost us, if my memory serves me right, 5½.

Q. Then, at 5 cents' tariff, what is the percentage; isn't it over 100 per cent?—A. Well, that is over 100 per cent.

Q. (By Mr. CLARKE.) What was Mr. Fielding's reason for being unwilling to propose a reduction of the duty on coal oil?—A. As nearly as I can remember, he merely said that everything and everybody was prosperous or was prospering, and it was not advisable at that time to disturb any of the other industries, and hence he had not done anything with the coal-oil duty, because it would have been the only one that he would have wanted to touch at that time.

Q. It is a fact, is it not, that the Canadian government derives a considerable revenue from the importations of oil?—A. It does.

Q. And it needs that revenue—depends on it largely for government expenses?

Q. (By Representative LIVINGSTON.) Does the Canadian government want that tax for revenue, or what do they want it for?—A. That particular tax?

Q. Yes.—A. I do not think it needs it; I do not see why it does.

Q. (By Mr. CLARKE.) Do you not think the ministers consider that they need it?—A. From Mr. Fielding's own remarks I should not say that they thought they needed it. He did not say anything about it at that time.

Q. (By Mr. SMYTH.) Do you know how much it amounts to a year to the Canadian government?—A. No; I could not tell you. I suppose you could find out from this [producing book]. In 1898 there were 6,880,734 gallons, at 5 cents a gallon; just what that would amount to I have not figured out.

COST OF OHIO OIL, FREIGHT AND DUTY PAID, AND BARRELED.

Q. This oil that you bought in Ohio, you say, at 5 cents a gallon; what is the freight on it to Montreal?—A. Forty-three cents per 100, at the present time.

Q. How much would that be on a gallon?—A. I figure that it costs us 8½ cents on an imperial gallon.

Q. That would make it cost 13 or 14 cents?—A. It costs us more than that when we count the cost of barreling it. We have to barrel it, of course. After the 1st of October, 1898, they did charge us as high as 46½ cents from Toledo, and previous to that time the rate from Toledo was 29½ cents. We pay 43½ cents from Warren to Montreal; and before the Standard got control of the market we got a rate as low as 28 cents—that was no later than April, 1898—23 cents from Warren. But when you go and ask the railway people anything about it, they simply will not talk to you; they do not throw a man out, but they do the next thing to it; they will not have anything to say about it.

Q. You really could not sell that oil below 17 cents and make a profit on it after paying that high freight and paying the duty?—A. No; we can not sell it at that price to-day.

Q. The freight is double what it was a few years ago?—A. Almost.

Q. Forty-three and 28?—A. Forty-three is what they charge from Toledo now, although they did charge us as high as 46; and from Warren, which was as low as 28—that was in April, 1898—it is very nearly double.

Q. Then, one reason why the price of oil is higher in Canada to-day is the high freight charge?—A. Yes.

Q. And with the duty and the cost there is not very much profit in it at 17 cents?—A. There is no profit in it at 17 cents. We can not sell any Ohio oil at 17 cents. I figured it out. In barrels it costs us 17 cents an imperial gallon; so we can not do anything with it. We can not sell it for less than 18 or over, and make anything on it.

SUPPOSED RAILROAD DISCRIMINATIONS IN FAVOR OF THE STANDARD.

Q. Do you blame the Standard Oil Company for all that increase in the price of refined oil?—A. I do, so far as freight is concerned.

Q. You think they instigate that high freight from Toledo and Warren?—A. Yes. We knew nothing about this, mind you, from the railway companies. They are supposed to give due notice or post a notice in the stations, etc., as regards an advance of freight or any other notice of that kind; but we knew nothing about that. I heard of it first from our people in Warren. They had got

hold of it in some way or other—I do not know how—and I went up and for 10 days I tried to find out from the Canadian Pacific Railway what the freight was going to be, what the increase was going to be, and I could get no satisfaction whatever. It was in the afternoon of September 30, 1898, about half past 3, that they told me what the rate was going to be, and the Standard knew all about it, because their man was running around the office there as though he owned the office. Nobody else could get anything. They would tell you that they had no time; they would not talk to you and they would not listen to you about it. We could not get any information, although they knew all about it.

Q. That is your supposition, that they knew anything about it?—A. Well, I know as nearly as I know anything that they knew about it, because they got a large lot of oil in at that time, before these freight rates came up. Just why they brought that in I could not make out; but they must have known. Any amount of it came in about the 30th of September and along about the 1st of October, which must have been on the way at that time.

Q. You think that the Standard Oil Company pay the same rates from Pennsylvania and Ohio that you do?—A. No; I certainly do not; I do not think anything of the kind. The railways say they do, but I do not believe it.

Q. You think they absolutely pay it and there is a rebate?—A. Yes.

WATER ROUTES.

Q. (By Mr. JENKS.) Is any oil shipped in by water from Toledo?—A. Last year we had a lot of contracts on hand, and we had to fill them in some way. We could not bring in oil by rail to fill them, because the rate from Toledo to Montreal was advanced from 29½ cents to 46½ cents per 100 pounds, on October 1, 1898; and the only notice we had was given to us at half past 3 in the afternoon of September 30, 1898.¹ We brought in a schooner load of 1,500 barrels to fill our contracts. That was about the only barreled oil of any account that came in in that way. The Standard are now bringing in refined oil by water in tank vessels. They have been doing that for the last 3 or 4 months.

Q. (By Mr. CONGER.) Where do they bring that from?—A. I think the American oil is loaded in New York, because it comes up the St. Lawrence River. The Canadian they load at Sarnia, and bring it down through Lake Ontario and the St. Lawrence to Montreal.

LUBRICATING OIL.

Q. (By Mr. PHILLIPS.) Do you handle any lubricating oil in Canada?—A. Yes; that is the greater part of our business. We were forced to handle the lubricating oil almost exclusively, because we could not handle the other after the railways began manipulating the freight rates.

Q. Where do you buy lubricating oil?—A. Nearly altogether from Warren, Pa., from the Warren Refining Company and the Corn Planter.

Q. Is there any lubricating oil made in Canada out of the Canadian oil?—A. Yes.

Q. Can you state the amount?—A. There is quite a lot of lubricating oil made.

Q. Does it make as good a quality as you get from this country?—A. No. Of lubricating oil and tar there was made in 1898 868,957 gallons. That is much less than in 1896. In 1896, you will notice, it was 1,447,455. It has gone back nearly half. That, I think, is due to the fact that they find the American product much better than the Canadian; I do not know of any other reason.

Q. Perhaps they are refining more of the Canadian oil on account of the tariff?—A. Well, I do not know; the tariff was a little less in 1898 than it was—well, in 1896; it would just depend in 1896 on what time that stuff was brought in. There was nearly one-half more used in 1898 of the American than there was previous to that time; and there must have been a great deal more oil consumed in 1898 than there was in 1896, because it was increasing all the time. There are new industries and that kind of thing going on.

FREIGHT RATES RAISED BY CANADIAN ROADS, NOT BY AMERICAN.

Q. (By Mr. FARQUHAR.) Was there any other reason given at that time for the raising of the American freight rates on the roads that were prorating with the Canadian; did they give any business reasons for it?—A. No; the American roads did not increase their freight rates; our own Canadian roads did.

Q. On the through bill they added the Canadian tariff?—A. Yes, or they increased the tariff so much and made it up to what it is at the present time. The rate from Warren to Suspension Bridge is still 8½ cents; it was that before and it

¹ See Mr. Westgate, p. 373.

is yet; but the rate from Suspension Bridge to Montreal is 35 cents, making a through rate of 43½. The American roads remain precisely the same as they were before.¹

SAMPLING COMPETITORS' OIL, AND KNOWING COMPETITORS' BUSINESS.

Q. (By Mr. JENKS.) Have you any further statement that you would like to make on any points that have been omitted?—A. When our tank cars come in, the Standard Oil Company have a habit of sending their man and opening that tank car and taking a sample out of it to see what it contains. I have known this for a long time, but it was only a little while ago that I was able to bring them to time for it. They did it regularly, and I had hard work to catch them. Of course we were not wasting all our time standing along the siding looking after our cars, but I got them one day and I called their attention to it and they said it was a mistake. I had a letter from our foreman at Mile End complaining of the fact; however, that is no matter. They would take a sample down to their office and find out just what we had and deal with us accordingly. As a matter of fact, before I went into this company, before it was organized, we used to buy an occasional car load of American goods. That was before the Standard got control of the Canadian business. There were some American oils that we had to have any way, because they were better. And I remember one day that the Standard Oil Company's man came into the office, and he gave me the numbers of the cars and the number of barrels contained in them and what I paid for them. I knew him very well, and he jokingly said, "I know all about it," and he wanted to sell me the stuff. Well, how he knew it I must confess is beyond me.²

Q. (By Mr. SMYTH.) Do they open your letters?—A. Oh, no. (Laughter.)

Q. (By Mr. KENNEDY.) Are these employees and officials of the Standard Oil Company Canadians or Americans?—A. I do not know; I will give that up, too.

Q. (By Mr. SMYTH.) The opening of your tank cars must be done with the connivance of the officials?—A. No.

Q. (By Mr. KENNEDY.) Do you not know the nationality of the Standard people in Canada?—A. Some of them have been brought from here, and some of them are Irish, and others are Scotch; but whether they are British subjects or otherwise I do not know.

Q. (By Mr. SMYTH.) Do you not think the railroad officials must have known of these cars being opened and samples being taken from them?—A. They did, but, like myself, the agent at Mile End, where my stuff had come in—he knew it was going on, and he never had been able to catch them. When, however, our man found them at it he went and got the agent and brought him out, and showed him the man on the track. Corn Planter was written on the car in letters at least 18 inches long, and he never could have made any mistake about the tank; but they said it was a mistake. He got on the wrong tank. Of course, that was all right, as far as an explanation goes. Then they will persecute a man in every shape, manner, and form. They will send a man or men around to watch where you are delivering oil, and then they will send their salesman right there afterwards, and all such kinds of things.³ They do anything and everything. There is nothing but what the Standard trust will do; I do not care what it is.

Q. (By Mr. CLARKE.) You think, then, that they practically run your railroads and your government?—A. At the present time I will not say that much about the government, because I expect to have these things regulated a little; but they run the railways, that is sure.

Q. (By Mr. SMYTH.) How long have you been in the oil business?—A. About 11 years.

Q. How long since the Standard Oil Company has had the control of Canadian oil?—A. Since the latter part of July or the beginning of August of last year.

Q. (By Mr. FARQUHAR.) Previous to that, were they open competitors there in the refining and sale of oil?—A. Yes. There were 5 separate refineries, different concerns, in active operation at that time, and 4 others that were not active then.

FREIGHT RATES AGAIN.

Take the freight on other lines of goods. The Lake Shore tariff, No. 193, in April, 1895, shows sixth-class articles, carload from, 21½ cents per 100 pounds from Pittsburg to Montreal. In September, 1899, the rate is 19½, showing a decline of

¹As to the policy of the New York Central, see Mr. Westgate, p. 375, 379.

²See Mr. Monnett, p. 316; Mr. Westgate, pp. 367, 368; Mr. Emery, pp. 614, 615; Mr. Archbold, p. 573; Mr. Davis, p. 356.

³See Mr. Clark, pp. 335, 336, 341; Mr. Westgate, p. 386; Mr. Emery, p. 629.

2 cents per 100 pounds. I do not know why it went up on oil. I know why, but there is no reason for it. I offered to guarantee them 400 tank cars a year—made the offer in writing to the Grand Trunk. The reply was this, dated the 5th of July, 1899:

"Freight rates on oil.—Replying to your favor of the 30th ultimo and previous conversation, I have now had an opportunity of discussing this matter with our general traffic manager and beg to advise you that we are not prepared to make any modifications on our present rates for oil.

"Yours, truly,

J. W. LOUD."

They simply will not listen to you at all or give you any satisfaction whatever. These same railroads have been built largely with the people's money. The Canadian Pacific Railway, for that western extension through to Winnipeg and the coast, have got some 20,000,000 acres of land and about \$30,000,000 in money; and the land is worth all the way from \$3 to \$10 an acre to-day in Manitoba and the Northwest. It gives you some idea of whether that road cost them very much or not.

Q. (By Mr. SMYTH.) You do not think this is altogether political action on the part of the Canadian government, influencing the railroads, in the way of retaliation, to keep out American products?—A. I do not think anything of that kind. I have not any such idea at all, and I do not think anybody else in Canada has.

Q. You do not believe the railroads get all the freight they charge?—A. No; I do not. I think part of it goes back to the Standard Oil Trust; that is my opinion.

Q. But you have no proof of that?—A. We have not. Of course there are lots of things we have got that I could have given you more information about if I had come before you later; but we have not proved those facts yet. We are sure enough that we have got information, but it is rather a serious thing to do that unless you know you are right.

Q. (By Mr. FARQUHAR.) As far as you know, then, you have to pay practically the same freight as the Standard?—A. The railways say that.

Q. So far as you know, I say.—A. So far as I know.

CANADIAN RAILROAD LAW—POWERS OF THE RAILWAY COMMITTEE.

Q. (By Mr. SMYTH.) Is there any law in Canada against rebates by railroads?—A. Well, yes; I do not know what it is, but they have laws governing these things; but the trouble is there, as it is elsewhere, it is pretty hard to handle these things and enforce them. You just fancy a concern of no more magnitude than our own tackling the Grand Trunk and the Canadian Pacific on questions of that kind!

Q. (By Mr. FARQUHAR.) You spoke of the railway committee. Do you know what scope and power that committee has?—A. Well, they have, as near as I know, control of all such matters as freight rates, crossings of railways, and passenger rates, and in fact anything of that nature that concerns the general public and the railways.

Q. Are their findings and judgments final?—A. No; I think it is merely a court of inquiry.

Q. Investigation?—A. Yes, and they can order the railway to do so and so; but I do not for a moment think that if we prove all that we have said, the Canadian Pacific Railway or the Grand Trunk either will obey that decision. We should have to go to work then, I suppose, to have it enforced, which would mean a long time, and be of practically no use to us at that time when we got it.

Q. (By Mr. PHILLIPS.) Enforce it through the courts, you mean?—A. Yes, we should have to begin a civil action against them on the strength of the findings of the railway committee, because I do not think they would pay any attention to the railway committee.

COMBINATIONS FEW AND SMALL IN CANADA—SENTIMENT AGAINST THEM.

Q. (By Mr. KENNEDY.) Is there any sentiment in Canada against these large industrial combinations?—A. There is, and the Globe newspaper, which is supposed to be the official organ of the present administration, has been hammering away at industrial combinations, particularly the Standard Oil Trust.

Q. Have you industrial combinations in Canada similar to those in this country and England?—A. Oh, we have not anything of any account. The oil business is a kind of a monopoly, and so is the sugar business; but that is due to the duty, and so on. There are a few of what we might call monopolies or trusts, but they

are very insignificant and small. They do not amount to anything outside of the oil business. It is something new to our people there, that kind of thing, and we have to thank the Standard Oil Company for introducing it.

Q. Are the people disposed to seek redress through legislation?—A. I think that if the present government do not alter things in some way so that the people will not be at the mercy of these trusts, or the oil trust in particular—well, I think that that will be one means of defeating them at the next election. That is about the only thing that is spoken of; this freight discrimination and the duty on oil and binder twine and a few things like that. I might say that the present government said that if it was shown that there was any inclination to a trust, in any manner whatsoever, they would immediately remove the duty on the articles complained of. They committed themselves in that way; so I made a declaration to the effect that there was a combination in the oil business, and it was read before the House at its last session. They were going to consider it, and I suppose they are considering it yet. There was nothing done about it. This is the declaration that I made:

CANADA, PROVINCE OF QUEBEC, DISTRICT OF MONTREAL.

I, Andrew Downie Gall, of the city of Montreal, in the Province of Quebec, oil merchant, do solemnly declare that I am extensively engaged in the wholesale trade of coal oil, burning oil, and other oils in the Dominion of Canada; that all the petroleum oil refineries in Canada, at the present time, are under the control of the Standard Oil Company or Standard Oil Trust through the said company having acquired some outright and a controlling interest in others; that since acquiring the said refineries in Canada the Standard Oil Company, which is operating in Canada under the style of the Imperial Oil Company, Limited, has closed up some refineries, demolished others, and is operating only such as it sees fit; that no petroleum oil from Canadian refineries can be obtained to-day unless it is procured from or through the Standard Oil Company or the Imperial Oil Company, Limited, directly or indirectly; that it is quite apparent, and investigation will establish beyond doubt, that the said Standard Oil Company or the Imperial Oil Company, Limited, has so acquired and controls said refineries for the purpose of forming, and they have thereby formed, a trust or combination to unduly enhance the price of such oil and to unduly promote the advantage of the said company at the expense of the consumers; that the firm of which I am a member, and other firms engaged in the oil business, are compelled to buy in the United States and import therefrom our supplies of oil to supply our customers and the trade.

And I make this solemn declaration conscientiously, believing it to be true and knowing that it is of the same force and effect as if made under oath and by virtue of "The Canada Evidence Act, 1898."

A. D. GALL.

Declared before me at the said city of Montreal this 21st day of March, A. D. 1899.

[SEAL.]

B. A. DUNTON, *Notary Public*.

Testimony closed.

Whereupon, at 3.55 p. m. the commission adjourned until to-morrow morning at 10 o'clock.

WASHINGTON, D. C., November 11, 1899.

TESTIMONY OF GEORGE RICE,

Independent oil producer, Marietta, Ohio.

The commission met at 11.15 a. m., Senator Kyle presiding. At 11.15 a. m. Mr. GEORGE RICE was introduced as a witness, and, being duly sworn, testified as follows:

Q. (By Mr. JENKS.) Will you give us your full name and address?—A. George Rice, Marietta, Ohio.

Q. What is your business?—A. I am a moderate producer of oil at the present time.

PAMPHLET PREPARED BY THE WITNESS.

Q. (By Mr. CLARKE.) Have you prepared, printed, copyrighted, and published a pamphlet which purports to be testimony given, or to be given, before this commission?—A. I have.

Q. Were you under oath when it was prepared?—A. No, sir.

Q. Was it known to any officer of this commission that such a pamphlet was being prepared?—A. Yes; I notified Professor Jenks, and also the secretary, that I was getting up my testimony to be put in pamphlet shape; and I was also directed to send 2 copies here 2 days before the time I should appear, which I did.

Q. Were any questions asked of you or answered by you, in the preparation of this pamphlet, by members of the commission?—A. No, sir. Not any of the members that I know of asked me anything in regard to the preparation of it.

Q. Was any schedule of questions sent you?—A. No; nothing of the kind.

Q. Do you claim any right, then, to issue that pamphlet as in any sense authorized by this commission?—A. No, sir; I do not claim that they have authorized me in any shape or manner to issue this pamphlet. I have published it and copyrighted it on my own responsibility.

Q. Did any member of the commission know or have any notice of the contents, or proposed contents, of that pamphlet before you printed and published it?—A. Not that I know of; no, sir.

Q. You do not claim, therefore, that you have any right to in any way authenticate that by the use of the name of this commission?—A. No, sir; I do not claim any authority from the commission for the use of it.

Q. That is all.—A. I have not been authorized in any manner, shape, or form.

Q. (By Mr. JENKS.) I understand that you have a statement that you are prepared to make of your own accord in reference to the business of the Standard Oil Company. You may make that in your own way, subject to such interruptions as the commission may think desirable.

The WITNESS. My testimony, in the main, is in pamphlet form and I will proceed to read from it. Page No. 3. (the witness read as follows):

"I am a citizen of the United States, born in the State of Vermont. Producer of petroleum for more than 30 years, and a refiner of same for 20 years, but my refinery has been shut down during the past 3 years, owing to the powerful and all-prevailing machinations of the Standard Oil Trust, in criminal collusion and conspiracy with the railroads to destroy my business of 20 years of patient industry, toil, and money in building up, wholly by and through unlawful freight discriminations. I have been driven from pillar to post, from one railway line to another, for 20 years, in the absolutely vain endeavor to get equal and just freight rates with the Standard Oil Trust, so as to be able to run my refinery at anything approaching a profit, but which I have been utterly unable to do. I have had to consequently shut down, with my business absolutely ruined and my refinery idle. This has been a very sad, bitter, and ruinous experience for me to endure, but I have endeavored to the best of my circumstances and ability to combat it the utmost I could for many a long waiting year, expecting relief through the honest and proper execution of our laws, which have as yet, however, never come. But I am still living in hopes, though I may die in despair."

The witness offered, as exhibit, the following:

"MAGNITUDE OF THE PETROLEUM INDUSTRY.

"The magnitude of the petroleum industry of this country may be inferred by its being first in manufacture and fourth in value of our exports.

"Its total production in the United States for 40 years—1859, when discovered, to 1898, inclusive—per Government report, is 886,442,759 barrels of 42 gallons each. There was produced in the past 5 years—1894 to 1898, inclusive—279,129,467 barrels (about one-third of total), or an average of 55,825,898 barrels per annum, 152,947 barrels per day, inclusive of Sundays. The total average annual exports of values past 2 years—1897-98—was 990,399,183 gallons, valued at \$56,804,297. Total value of exports, 1864 to 1898, inclusive, \$1,445,941,156.

"The combined wealth of the railroads and trusts are jointly owned and used by railway and trust officials to absolutely control the internal commerce of this great nation and absorb unto themselves for their own private gain the immense profits to arise from off all producing interests and manufactured products by higher rates of freight through unlawful rebates or freight discriminations, to be increased as they see fit, through compulsory railway tariff exactions, underhand secret tribute and demands, that must absolutely be complied with if shipments are made."

There will be several exhibits in connection with that which I have just presented.

Witness includes exhibits as follows:

"STANDARD OIL TRUST OFFICIALS PRESIDENTS AND DIRECTORS IN ONE-FIFTH TOTAL RAILWAY MILEAGE OF THE UNITED STATES.

"I shall be able to fully prove to this commission a living and prominent example thereof, as embodied in the Standard Oil Trust, which has thus achieved its great wealth and power by dishonest and criminal methods in the unlawful use of our public highways, and through this means have become the largest owners in railway bonds and stocks; and to-day its officials are presidents and directors in one-fifth of the total railway mileage of the United States, all accomplished since 1872. This state of affairs is absolutely startling to contemplate—appalling, indeed, and as monstrous as it is infamous. This could not have been done except through one source, the railroads, whose officials have criminally conspired with Standard Oil officials for the past 27 years to give them their great power and unlawful, ill-gotten wealth.

"In 1887 the interstate commerce act was passed to stop these criminal conspiracies, but with 12 years' trial it has proved absolutely abortive.

"RAILWAY FREIGHT DISCRIMINATION IS THE FATHER AND BREEDER OF TRUSTS.

"I understand Mr. Havemeyer says that 'the tariff is the mother of trusts,' while I assert that railway freight discriminations is the father of them, the breeder of trusts, from which the greatest commercial evil of the present day arises. Although the tariff has its material effect, it is in no wise commensurate with the frightful freight discriminations; prominent example, The Standard Oil Trust.

"Under the tariff it is not questioned but that everyone pays the same duty, which is not the case in the payment of railway freights, for all competitors of the trusts must pay the enforced full tariff rates, jointly made by trust and rail officials, while trust freights are carried for nothing, one-fourth and one-half of the regular established rates, as is easily proved in the case of the Standard Oil Trust. There is no question in my mind but all recent formation of trusts and combinations, and in which Standard officials are largely interested, are based upon and permeated with the same general plans, and investors therein privately advised that necessarily great advantages will accrue and larger dividends be declared on watered stocks through freight discriminations in the concentration of freight.

"The Standard Oil Trust was the first industrial trust organized in this country, the originator and father of them all, from which all the rest have been bred. It is directly responsible for the formation of many subsequent trusts, because at an early date it lent its aid and support in the organization of other trusts, receiving therefrom large sums of money, to the extent of \$250,000 from some of them (Cotton Seed Oil trust) for a copy of the secret unlawful trust agreement,¹ decided illegal by two States (Ohio and New York), consequently all subsequent acts and resolutions changing into corporate form, etc., are regarded illegal.

"MAGNITUDE OF THE STANDARD OIL TRUST.

"The magnitude of the Standard Oil monopoly, as consummated and centered in the Standard Oil Trust, will be seen from the last enforced public utterance, in February, 1898, in which they really do admit having at least 20 corporations in the trust, capitalized at \$102,238,700, of which pipe-line companies represent over one-half—\$52,455,200.² In 1888 they reported 89 corporations in the trust, capitalized at \$47,880,200, or less than one-half of the combined 20, and \$5,000,000 less than the present capitalization of the pipe-line companies.

"At the market price in May of 500, on par of 100, represents a valuation of over half a billion of dollars.

"SINCE THEIR PRETENSE OF A DISSOLUTION, MARCH, 1892, THE STANDARD OIL TRUST HAS PAID OUT IN DIVIDENDS \$170,730,373.

"For the first 10 years of the Standard Oil Trust—1882 to 1892—it paid out in dividends more than double its entire capitalization in 1888. Since their pretense of a dissolution, March 21, 1892, and including September dividends, 1899, they

¹ See Mr. Page, p. 756.

² See Mr. Monnett, p. 301.

have paid 80 quarterly dividends of 3 per cent, or 90 per cent, and paid 77 per cent in specials (none paid previous to December, 1895), or a total of 167 per cent, and on a capitalization of only \$102,238,700 amounts to the sum of \$170,780,279.¹

"There could have been paid much larger dividends if net earnings had not been and were not now being used in the purchase of large blocks of producing properties, paid for out of surplus earnings to the extent of many millions of dollars. While this trust accumulated these immense dividends and extra surplus earnings, there is not an independent refinery in the country which can even pay a small dividend. No new refineries have been built for several years, owing to this monstrous condition of affairs, and no material additions made to the old ones. The independent refiner is simply struggling for an existence, in the hope that an overruling Providence may yet come to the rescue.

"The Standard Oil Trust now owns nine-tenths of all the local gathering pipe lines in the oil-producing regions, consequently purchases 90 per cent of all the crude oil produced, and thus absolutely makes the market price for this great product, dictating to the producer the price he shall take for his oil and to the consumer what he shall pay for the products thereof, and take whatever quality of oil they choose to give. This monopoly governs and controls production by its necessities, increasing the price when more oil is needed and reducing it when less oil is required, so that greater percentage of profits may accrue with less capital used between the lowest-priced crude possible and the highest price for the refined and not materially restrict consumption.

"The Standard Oil Trust dictates to the railway lines the compulsory tariff rates on petroleum its competitors must pay, while its own is carried at nominal figures, as was fully proven in my own experience when in business.

"1872—ATTACK BY THE TRUNK LINES OF RAILWAY ON THE PETROLEUM INDUSTRY, BY WHICH THE STANDARD OIL MONOPOLY WAS CREATED, AND WHICH CAUSED THE FORMATION OF THE STANDARD OIL TRUST, UNDER AND BY VIRTUE OF SEVERAL CONTRACTS MADE BY THESE ROADS WITH THE SOUTH IMPROVEMENT COMPANY, WHICH GAVE TO THEM THE MONOPOLY OF THIS GREAT INDUSTRY THROUGH RAILROAD REBATES OR FREIGHT DISCRIMINATIONS. COMPLETE CONTRACT.

"The origin of the Standard Oil Trust was the Standard Oil Company of Ohio, which was organized January 10, 1870, with a capitalization of \$1,000,000, increased to \$3,500,000 March 13, 1875, at which it now stands. January 2, 1872, was the advent of the Standard Oil monopoly, by the directors of the Standard Oil Company of Ohio organizing a fictitious corporation called the 'South Improvement Company,' with a nominal capital of \$200,000, whose sole aim and object was to make secret rebate contracts with the railroads, as subsequently will be shown, and was exposed in 1879 by the Hepburn investigating committee, of New York; and fortunate it was that these contracts happen to be in writing and are now upon the records to condemn the makers of them from time to eternity. The Standard Oil Company received the grossest discriminations in the form of rebates, not only upon its own shipments, but also a like amount on the shipments of its competitors.² These rebates ranged from 40 cents to \$1.06 per barrel on crude petroleum and from 50 cents to \$1.32 per barrel on refined.³

"JANUARY 1, 1872, THE STANDARD OIL COMPANY ONLY HAD 5 PER CENT OF THE PETROLEUM INDUSTRY AND ITS COMPETITORS 95 PER CENT, WHILE IN 1879 THIS WAS REVERSED.

"At this early date in the oil business its competitors had 95 per cent of the petroleum industry, while the Standard Oil Company had less than 5 per cent, so that the Standard Oil Company received 19 times more rebates per barrel from off the shipments of its competitors than it did from off its own shipments.

"Henry M. Flagler, secretary of the Standard Oil Trust, testified, in April, 1888, before a Congressional committee⁴ (page 288) that in 1870-71, just prior to the making of these unlawful rebate contracts—January 18, 1872—the refining capacity of the Standard Oil Company was 600 barrels a day. The average annual production of petroleum in the years 1870-71, per Government report, was 5,232,989 barrels, or an average of 14,836 barrels a day, showing conclusively by the testimony of one of the highest of Standard officials that the Standard Oil Company had control of less than 5 per cent of this great industry just previous to the signing of these nefarious contracts.

² See Mr. Archbold, p. 579.

³ See the South Improvement Company contract, p. 612. See also Mr. Archbold, pp. 540, 559; Mr. Rice, p. 602, bottom.

⁴ See Fifth Congress, first session, House Reports, vol. 8. See p. 606 of the present volume.

"HENRY M. FLAGLER, SECRETARY OF THE STANDARD OIL TRUST, TESTIFIES THAT WILLIAM G. WARDEN, AN ORIGINAL TRUSTEE OF THE STANDARD OIL TRUST, AND THE LOGANS 'WERE THE GREAT LEADERS IN THE SOUTH IMPROVEMENT POLICY.'

"Mr. Flagler further testifies (pages 289, 290) that William G. Warden and the Logans, who were directors with him in the South Improvement Company, 'were the great leaders in the South Improvement policy' and in the next breath denies it by saying that Payne and himself, 'or anyone connected with the Standard Oil Company, had any confidence in or regard for the scheme known as the South Improvement Company,' and that 'the company never did a dollar's worth of business and never had any existence other than its corporate existence,' while William G. Warden, its secretary, testifies, on March 30, 1872, before a Congressional committee, that its purpose was to refine oil and get 'all the refineries in the country into the company;' also gives the names of its 13 directors, as follows:

"Q. Where did that company intend to refine oil?—A. Their calculation was to get all the refineries in the country into the company.

"Q. Was it the design of the stockholders to include all the oil refineries in this country?—A. Yes, sir; every one of them.

"Q. Can you give us a list of the stockholders in the South Improvement Company?—A. I can give you them from the minutes. They are as follows:

	Shares.
John D. Rockefeller.....	180
William Rockefeller.....	180
H. M. Flagler.....	180
J. A. Bostwick.....	180
W. G. Warden.....	475
O. H. Payne (treasurer).....	180
"Above were original trustees of the Standard Oil trust (1882).	
P. H. Watson.....	100
O. F. Waring.....	475
Richard S. Waring.....	10
Charles Lockhart.....	10
William Frew.....	10
John P. Logan.....	10
W. P. Logan.....	10

Original issue (par value, \$100)..... 2,000

"The original trustees of the trust, as above shown, held 1,375 of the 2,000 shares, or 70 per cent of its capitalization, while the balance of the shares were held by the officials of the Standard Oil Company.

"This proves absolutely and conclusively that ostensibly the South Improvement Company was to control all the refineries in the country, but in reality its only official purpose was to make rebate contracts with the railroads.

"THESE GROSS REBATE CONTRACTS WERE APPROVED BY THE BOARD OF DIRECTORS OF THE SOUTH IMPROVEMENT COMPANY, COMPOSED WHOLLY OF THE OFFICIALS OF THE STANDARD OIL COMPANY.

"Peter H. Watson, its president, testified, on April 5, 1872, before a Congressional committee, as follows (page 67, Rise and Fall of the South Improvement Company):

"Q. Was there any ratification by the company of your contracts with the railroad companies in its formal capacity?—A. Yes, sir. They were approved by the board of directors, as appears in the minutes, and as I am informed, it having been done in a meeting at which I was not present."

"This conclusively establishes the fact, by the testimony of the president of the company, that the above 13 directors of the South Improvement Company approved of these iniquitous contracts by a resolution of its own board of directors, as against the oft-repeated denials of some of these men that they were not in said company or had anything to do with these unpalatable and unsavory contracts; but this clear and indisputable evidence places the responsibility of the inauguration of this villainous and most infamous scheme where it properly belongs—with Standard Oil officials.

"John D. Rockefeller, president of the Standard Oil Trust, on February 27, 1888, testified, before a legislative committee of New York State, relative to trusts (page 419) that he was *not in it*, but Warden above and Flagler below say that he was.

“Had there been, previous to that, a trust company called the South Improvement Company?—A. No, sir.

“Q. There was such a company?—A. I have heard of such a company.

“Q. Were you not in it?—A. I was not.”

“H. M. Flagler, secretary of Standard Oil Trust, 2 months later, April 27, 1888, testifies before the Manufacturers' Committee of Congress (p. 289):

“Q. Do you remember what was called the South Improvement Company?—A. Yes, sir.

“Q. We have had in evidence here some facts relating to it. Who composed that company?—A. I can not recall the names of all the gentlemen who were supposed to be interested in it.

“Q. Tell us to the best of your knowledge.—A. The South Improvement Company was a matter brought to Mr. Rockefeller's and my attention perhaps 6 months before it was known publicly. Perhaps I shall ramble if I undertake to tell you all about it.

“Q. Precisely what I want to know is the names of all whom you knew to be connected with it.—A. William G. Warden, Charles Lockhart, William P. Logan, John Logan, J. D. Rockefeller, William Rockefeller, C. H. Payne, and myself, are the only names I recall.”

“Mr. Scheide, a former prominent official of the Standard Oil Monopoly, testified before the Hepburn Committee (p. 2766), as follows:

“Q. Was the Standard Oil Company and the South Improvement Company the same at that time?—A. The Standard Oil Company was part of the South Improvement Company.

“Q. The South Improvement Company at that time was the larger, comprehending the Standard Oil Company?—A. Yes, sir; it comprehended the Standard Oil Company and a dozen other different firms in Pittsburgh and Cleveland.”

“These most extraordinary contracts were the sole cause of the creation of the Standard Oil Monopoly, and the subsequent formation of the Standard Oil Trust, and the inauguration of subsequent trusts.

“These contracts were signed by the trunk lines of road and Peter H. Watson, representing the Standard Oil Company, within 16 days after the organization of the South Improvement Company.

“It is a significant fact to note that Peter H. Watson, who signed these contracts on behalf of the Standard Oil Company, January 18, 1872, a few months later, July 9, 1872, was elected to the office of president of the Erie Railway Company, one of the trunk lines of this combine, and continued in office for the period of 2 years, until July 14, 1874.

“It is also a further most significant fact to note, that at the time these contracts were signed by the officers of these trunk lines of railway, they were cognizant of the fact they were dealing with a mythical organization, which did not even own a refinery, nor was it in possession of a single oil well.

“It is difficult to conceive of a more malicious scheme to throttle competition, under the forms of law, and, if permitted to continue, sooner or later sounds the knell of liberty.

“BRIEF EXTRACTS FROM THE FREIGHT CONTRACTS.”

“To pay and allow to the party hereto of the first part, on all petroleum and its products, transportation for it over the railroads of the party of the second part and its connections, the following rebates, and on all transported for other parties, drawbacks of like amounts as the rebates from the gross rates, the same to be deducted and retained by the party hereto of the first part (Standard Oil Company),¹ for its own use, from the amounts of freights, payable to the party of the second part.”

“And it is hereby further covenanted and agreed by and between the parties hereto, that the party hereto of the second part (Pennsylvania Railroad Company),² shall at all times cooperate, as far as it legally may, with the party hereto of the first part (Standard Oil Company),³ to maintain the business of the party hereto of the first part against loss or injury by competition, to the end that the party hereto of the first part may keep up a remunerative, and so a full and regular business, and to that end shall lower or raise the gross rates of transportation over its railroads and connections, as far as it legally may, for such times and to such extent as may be necessary to overcome such competition. The rebates and drawbacks to the party of the first part to be varied *pari passu* with the gross rates.”

“The party hereto of the first part (South Improvement Company)⁴ from time to time shall notify the party of the second part, in writing, of the change required.

¹ See pp. 610-616 for the most important parts of the South Improvement Company contract.

² The words in parenthesis are comment by Mr. Rice.

whereupon the party hereto of the second part (Pennsylvania Railroad Company)¹ shall forthwith make a corresponding change of such gross rates.

"It is further mutually agreed by and between the parties hereto that this agreement shall continue and remain in force for the period of not less than 5 years; and shall not then nor thereafter terminate until one of the parties shall have given 12 months' written notice to terminate it."

"South Improvement Company, party of the first part, by Peter H. Watson, president (president of Erie Railway Company 1873 to 1874)."

"Parties of the second part:

"Pennsylvania Railroad Company, J. Edgar Thomson, president, and for the Pennsylvania Company, Philadelphia and Erie Railway Company, Northern Central Railway, Allegheny Valley Railroad, Camden and Amboy Railway.

"The New York Central and Hudson River Railroad Company, William H. Vanderbilt, vice-president, and for the Lake Shore and Michigan Southern Railway Company.

"Erie Railway Company, Jay Gould, president, and for the Atlantic and Great Western Railroad Company."

"(Original contract, Pamphlet B, p. 7, George Rice.)

"Frank Rockefeller, brother of John D., on July 7, 1876, testified before a Congressional committee against his brother (per following extracts), and fully confirmed the results of the disastrous effects of the above contracts by saying that John D. Rockefeller and Henry M. Flagler told him, 'If you don't sell your property to us it will be valueless, because we have got advantages with the railroads' (tactics of Jack Sheppard, Claude Duval):

"Q. Do you know how many refiners there were in Pittsburg prior to this alleged combination?—A. I have been told there were 60 and odd refineries.

"Q. How many are there now?—A. I was told by the same parties that there were now less than 20, and very few doing any business.

"Q. (By Mr. REGAN.) What is the cause of that reduction in the number of refiners?—A. I suppose the main cause has been the fact that they could not make money. I have understood that the same lever was brought to bear upon them as upon the Cleveland refiners. We had in Cleveland at one time about 80 establishments, but the South Improvement was formed and the Cleveland companies were told that if they didn't sell their property to them it would be valueless; that there was a combination of railroad and oil men; that they would buy all they could, and that all they didn't buy would be totally valueless, because they would be unable to compete with the South Improvement Company, and the result was that out of the 80 there were only 4 or 5 that didn't sell.

"Q. From whom was that information received?—A. From the officers of the Standard Oil Company. They made no bones about it at all. They said, "If you don't sell your property to us it will be valueless, because we have got advantages with the railroads."

"Q. Give the names?—A. J. D. Rockefeller, H. M. Flagler, and O. H. Payne.

"Q. (By Mr. Ross.) Mr. Payne is the son of the member of Congress of that name?—A. Yes, sir.

"Q. Have you heard those gentlemen say what you have stated?—A. I have heard Rockefeller and Flagler say so. Other parties have told me that Payne has used the same argument with them.

"Q. What other parties?—A. I won't give you the names now. There are some 20 men in Cleveland who sold out under the fright, and almost any of them will tell you that story.

"Q. Give us the names of some of those that sold out?—A. J. W. Faucett, of Cleveland; W. C. Scofield, Joseph Stanley, John Chritchely. Those are some of them."

"I also refer to the testimony of John Alexander, W. H. Doane, Charles I. Morehouse, and Isaac L. Hewitt, who sold out one-third to one-half of the cost of their refineries (B. 18-19).

"FREIGHT RATES DOUBLED WITHIN 30 DAYS AFTER SIGNING OF THESE CONTRACTS IN ORDER THAT THE REBATES MIGHT NOT BE SO DISPROPORTIONATE TO THE TARIFF CONTRACT RATE.

"On February 26, 1872, 30 days after these iniquitous contracts were made, freight rates on petroleum were doubled, and on oil only (South Improvement pamphlet, p. 5), by which these most extraordinary of rebates would not seem so disproportionate to the tariff rates.

"In this connection it might be well to state that the charter of the South

¹ The words in parenthesis are comment by Mr. Rice.

Improvement Company was repealed by the legislature of Pennsylvania, under the intense excitement and universal indignation aroused against it throughout the oil regions from producers, refiners, and shippers of oil.

"On March 25, 1872, the same lines of railway, under threats of destruction of their properties, entered into an agreement with the independent refiners and producers of oil to give them equal rates and facilities as enjoyed by the Standard Oil Company, as follows:¹

"That all arrangements for the transportation of oil after this date shall be upon a basis of perfect equality to all shippers, producers, and refiners, and that no rebates, drawbacks, or other arrangements of any character shall be made or allowed that will give any party the slightest difference in rates or discrimination of any character whatever. * * * *

"And said rates shall not be liable to any change, either for increase or decrease, without first giving to William Hasson, president of the producers' union at Oil City, at least 90 days' notice in writing of such contemplated change.

"In the distribution of cars for shipments it shall be done without discrimination.

"On the basis as hereinbefore stated, the parties respectively agree to carry out the arrangements in good faith and work for the mutual interests of each other.

"In witness whereof the parties have hereunto affixed their signatures, this 25th day of March, A. D. 1872.

"For the Lake Shore and Michigan Southern Railroad Company, H. F. Clark, president.

"For the Erie Railroad Company, O. H. P. Archer, vice-president.

"For the New York Central and Hudson River Railroad Company, Wm. H. Vanderbilt, vice-president.

"For the Atlantic and Great Western Railroad Company, George B. McClellan, president.

"For the Pennsylvania Railroad Company, Thomas A. Scott, vice-president."

"It is important to note the fact that the above 90-day notice was never given in order that competitive shippers would understand that said agreement was honestly kept in full force and effect.

"Simon Sterne, counsel for the Hepburn committee, says that 'after the South Improvement Company was broken up these same terms and rebates were, without any open contract, substantially continued to the Standard Oil people.'

"George R. Blanchard, then second vice-president of the Erie Railway Company, on October 17, 1879, testified before the Hepburn committee 'that this agreement, although fully considered and agreed upon, lasted less than two weeks.' So that necessarily the same contract transportation rates and rebates continued indefinitely.

"TRUSTEES OF THE STANDARD OIL TRUST TESTIFY IN 1879 THAT THEY CONTROLLED 95 PER CENT OF THE OIL INDUSTRY, WHERE 7 YEARS PREVIOUSLY THEY ONLY CONTROLLED 5 PER CENT.

"In October, 1879, Henry H. Rogers, present trustee (p. 2615), and J. A. Bostwick, a former trustee (p. 2696), testified before the Hepburn committee of New York that the Standard Oil Company at this early date controlled 95 per cent of the entire oil industry of the United States,² when just previous to the making of these rebate contracts the Standard Oil Company only had 5 per cent of it, having acquired, by dishonest and unlawful means, within the brief space of 7 years 90 per cent more of this great industry, transforming and completely changing ownership from the hands of the many into the hands of a minor few, wholly through the connivance and conspiracy combination and acts of Standard and railroad officials.

"Moreover, while the Standard was thus building up its monopoly the railroads were at the same time destroying the value of their own properties, and the nonpayment of dividends and appointment of receivers in many instances were due to these unwise, illogical, and dishonest practices.

"The effect of these contracts was to carry Standard oil free and pay it a large bonus besides. Railroad freights were doubled that greater rebates might follow, while the consumer of petroleum became the victim, and was forced to pay, indirectly, untold millions of rebates in higher-priced oil and of a poorer quality

¹ Cf. p. 640.

² Mr. Blanchard's statement, with the context, is quoted on p. 642, footnote.

³ See the text of Mr. Rogers's and Mr. Bostwick's testimony, pp. 646, 647, footnotes.

through railway tariff exactions for the sole benefit of a few unscrupulous rail and trust officials jointly interested.

"Frank Rockefeller also testifies, July 7, 1876, that such prominent railroad men as William H. Vanderbilt, Amasa Stone, Devereaux, and John Newell, were stockholders in the Standard Oil Company.

"Q. You spoke a while ago of having personal knowledge of certain railroad officials having been stockholders in the Standard Oil Company—how do you know that?—A. I know it from the officers of the Standard Oil Company telling that they were stockholders.

"Q. Who are they?—A. William H. Vanderbilt, the vice-president of the New York Central Company, was at one time a stockholder in the Standard Oil Company; also Amasa Stone, of Cleveland, the general manager of the Lake Shore road, and I have very good reason for believing, though I do not know it, that Mr. Devereaux and Mr. Newell are both stockholders at the present time. Mr. Stone sold his stock some 2 years ago, at or before the time when he quit the railroad. He put his stock on the Cleveland market and sold it, and he is not, I believe, a stockholder to-day."

"And says he thinks that William H. Vanderbilt, Tom Scott, Devereaux, Newell, and other officials of the railroads received rebates.

"Q. (By the CHAIRMAN.) Give us the names of the officials of the railroads that you think received the benefit of this rebate.—A. Understand me. I don't say that they did get it. It is merely my opinion.

"Q. Give me the names of the gentlemen that you think do reap the benefit of that rebate.—A. I think that Mr. Devereaux gets it, and that Mr. Newell gets it, that Tom Scott gets it, and that Mr. Vanderbilt gets it, and other officers of those roads whose names are not in my mind at present."

"Also further testifies that rebates go into a pool and are divided up between the Standard Oil Company and railroad officials.

"Q. What do you mean by the pool—a pool among the railroads or among the oil men?—A. I don't give this as a positive fact, but, as I understand the arrangement, the New York Central, the Erie, the Atlantic and Great Western, the Pennsylvania Railroad, the Cleveland, Columbus and Cincinnati, and the Baltimore and Ohio roads have a pool—are combined for the purpose of shipping oil, and oil only—and in this pool the Baltimore and Ohio gets a certain number of barrels to go over its road, the Lake Shore so many to go over its road, and the Pennsylvania Company so many to go over its road from different points in the country, and on the oil that is shipped over these roads by the pool and the Standard Oil Company there is a rebate or a drawback from the shipment of so much, which is put into this pool, over whichever road the oil may go, and that rebate is divided up between the Standard Oil Company and the railroad officials.

"Q. The railroad officials, do you say?—A. So I understand it. I don't say that of my own knowledge.

"Q. Then it does not go to the railroads themselves?—A. No, sir.

"Q. But to the railroad officials?—A. To the railroad officials."

"It will be quite interesting to figure out in dollars and cents the amount of rebate money per barrel the Standard Oil Company received off the shipments of its competitors under these ironclad rebate contracts, it being made the medium to pay over into a trust pool the following gross competitive rebates, which were to be divided between rail and trust officials:

"REBATES OF \$7.00 TO \$20 PER BARREL TO RAIL AND TRUST OFFICIALS ON COMPETITIVE SHIPMENTS OF CRUDE OIL. THE AVERAGE MARKET PRICE OF CRUDE OIL FOR THIS YEAR WAS \$3.04 PER BARREL.

"On shipments of crude petroleum from any common point, Oil City, Union, Corry, Irvineton, so designated by the contracts, the open public tariff rates from said points to Cleveland and Pittsburg, where Standard Oil refineries are located, was 80 cents a barrel, while the underhand, secret rebate was 40 cents a barrel, so that the Standard Oil Company not only received 40 cents a barrel rebate on each barrel it shipped for its own direct use, while it additionally received from off the shipments of its competitors' a share in 19 times this amount, or \$7.60 per barrel, as against each barrel it shipped, which went into the rebate trust pool, as previously testified to by Frank Rockefeller.

"From said points to Baltimore and Philadelphia the open tariff rate on crude petroleum was \$2.41, to New York \$2.56, and to Boston \$2.71 per barrel, while the rebate to each point was \$1.06 a barrel, so that the Standard Oil Company not only received \$1.06 a barrel rebate on each barrel it shipped for its own use, but additionally received from off the shipments of its competitors a share in 19 times

this amount, or \$26.14 per barrel, as against each and every barrel it shipped, which was also dumped into the rebate trust pool.

REBATES OF \$9.50 TO \$25 PER BARREL TO RAIL AND TRUST OFFICIALS ON COMPETITIVE SHIPMENTS OF REFINED OIL.

"On refined oil, benzine, and other products of the manufacture of petroleum these secret rebates were greater, as the following will show:

"The open, public tariff rate under these contracts, from Cleveland and Pittsburgh to Baltimore and Philadelphia was \$1.85 per barrel; to New York, \$2. From Cleveland to Boston (Pittsburg left out), \$2.15 per barrel, while the rebates from and to all these points was 50 cents a barrel, so that the Standard Oil Company not only received 50 cents a barrel rebate on each barrel it shipped for its own use, but additionally received from off the shipments of its competitors a share in 19 times this amount, \$9.50 per barrel rebate, as against each barrel it shipped, which also went into the rebate trust pool.

"The tariff rates under these contracts from designated common points, such as Oil City, Union, Corry, Irvineton, where competitive refineries were located, was 92 cents per barrel more with less hauls to all seaboard points, as follows:

"To Baltimore and Philadelphia, \$2.77; New York, \$2.92; Boston, \$3.07 per barrel, while the rebates from and to all these points were \$1.32 per barrel, so that the Standard Oil Company not only received \$1.32 per barrel rebate on each barrel it shipped for its own direct use, but in addition thereto it received from off the shipments of its competitors a share in 19 times this amount, or \$25.08 per barrel, as against each and every barrel it shipped, which was also put into this rebate pool to be divided between rail and trust officials. The average market price per barrel of crude petroleum in 1872 was \$3.64, or 8.66 cents per gallon, while the average market price of refined oil for export in the same year was 24.9 cents per gallon, or \$12.45 per barrel, and this is how the Standard Oil monopoly has made oil so cheap to the consumer.

"These most extraordinary revelations seem incredible and beyond belief, but they are the facts as revealed by these contracts, and are plainly the sole cause of the creation of the Standard Oil monopoly, the Standard Oil Trust, and the formation of the present epidemic of trusts.

"Hon. Franklin B. Gowen, former president of the Philadelphia and Reading Railroad Company, had this to say before the Interstate Commission January 17, 1888:

"I remember well, in those halcyon days when Fisk and Gould controlled the Erie Railway and managed the Atlantic and Great Western Railroad, that an oil association made a contract with the railroad company which gave them a rate on oil, based upon the price at tide water, with a guaranty that a fixed rate per barrel profit should be made in handling it. The first year's business over the Atlantic and Western Railroad developed the fact that the hundreds of thousands of barrels transported under this contract brought not 1 cent into the treasury of the railroad for transportation, and that the railroad company had to pay, at the end of the year, 25 cents upon every barrel for the privilege of transporting it in order to make up the guaranty of a fixed profit to the dealer."

"TO TAKE EFFECT OCTOBER 1, 1874.—PLAN BY WHICH A COMBINATION OF RAILWAYS FORCE THE INDEPENDENT PIPE LINES OF THE OIL REGIONS TO SELL OUT TO THE STANDARD OIL MONOPOLY AT THE PRICE OF OLD JUNK, AND ALSO GAVE THEM ADDITIONAL DISCRIMINATIONS IN THE SHIPMENTS OF REFINED OIL, IN GROSS VIOLATION OF THE AGREEMENT OF MARCH 25, 1872.

"After the wholesale destruction of competitive oil refineries by the railroad rebate contracts of 1872, which absolutely gave the Standard Oil Company the monopoly in the manufacture of petroleum and of its rail transportation, achieved so easily and with such great success, that 2 years later (1874) it eagerly sought and again applied to the railroads for help to secure the control and monopoly of the local pipe-line transportation of petroleum in the oil-producing regions, which was easily accomplished by their mutual and trusted friend, J. H. Rutter, general freight agent of the New York Central and Hudson River Railroad Company. He issued a circular, to take effect October 1, 1874, as follows:

"From which shall be refunded 22 cents a barrel only on oil coming from pipes which maintain the agreed rates of pipeage."

"The agreed rates of pipeage could not, of course, be maintained by the independent pipe lines, which had to lower transportation rates in order to offset the exclusive 22-cent rebate advantage given to the Standard Oil Company, by which

¹ See the circular in full, p. 641.

² See Mr. Boyle, p. 424.

they were enabled to bid 23 cents a barrel more for crude oil and not lose anything. The resulting effects were that the old, established pipe lines had to succumb. They could not make money and were forced to sell out their properties at the price of old junk to those joint-interested railroad and Standard Oil conspirators.

"E. G. Patterson, before the Hepburn committee, August 28, 1879, testified as follows:

"A. The effect of it was that whoever was dealing through a pipe line which was receiving that 23-cents drawback from a railroad company, absorbed or crushed out the business of any opposition pipe line, by putting its buyers into the field and bidding the whole or a portion of that drawback, more for the product than those who were buying through another pipe line could, not receiving such a drawback."

"Simon Sterne, in his argument before the Hepburn committee, said as follows:

"After the Rutter circular appeared the independent pipe lines died off like sheep and were all bought up by the Standard Oil Company."

"As early as 1874 the Standard Oil Company was in possession of all tank cars and the terminal facilities of the railroads at the seaboard. (George Rice book, pp. 88, 89, 40.)

"Franklin B. Gowen's argument (p. 18) before the Manufacturers' Committee of Congress (1889) has this to say:

"At this time the American Transfer Company, according to the testimony of its owner, Mr. J. A. Bostwick (p. 386), was a corporation having from 50 to 75 miles of local pipeage, a capital of \$100,000, and no debt. And yet upon this small capital it received from the 3 trunk lines in 1878 the magnificent income of \$3,093,750, or 22½ cents upon the 13,750,000 barrels of oil shipped in that year, equal to a dividend of 3,093 per cent annually."

"1877-1878.—ATTACK BY THE RAIL LINES UPON THE EMPIRE TRANSPORTATION COMPANY, BY WHICH ITS REFINERIES, PIPE LINES, 1,000 TANK CARS, AND 400 RACK CARS WERE FORCED INTO THE HANDS OF THE STANDARD OIL COMPANY AT A RUINOUS PRICE.¹ FREIGHT RATES CUT TO 8 CENTS PER BARREL LESS THAN NOTHING DURING THE FIGHT, AND WHEN ENDED, COMPETITORS OF THE STANDARD OIL COMPANY WERE CHARGED \$1.90 PER BARREL, WHILE STANDARD OIL WAS CARRIED AT 11 CENTS PER BARREL, NET, IN TANK CARS, LUMP SUM, REGARDLESS OF WEIGHT—1,600 PER CENT DISCRIMINATION.

"The transportation tariff rates on refined oil to competitive refineries in 1878 was \$1.90 per barrel to the seaboard. The Standard Oil Company, through its well-trained railroad agent, J. H. Rutter, general freight agent of the New York Central and Hudson River Railroad Company, gave it a special freight rate on petroleum, Cleveland to New York, of \$60 per tank car, lump sum, regardless of weight, or 60 cents a barrel, average rate, from which there was deducted the transportation charge on crude oil from the oil wells to Cleveland and Pittsburg on the basis of 14 barrels of crude, at 85 cents a barrel, or \$4.90, as against 10 barrels of refined from Cleveland and Pittsburg to New York, at 60 cents a barrel, or \$6, leaving \$1.10, net, or only 11 cents a barrel paid by the Standard Oil Company, as against \$1.90 per barrel their competitors had to pay, or 1,600 per cent freight discrimination allowed them by the conspiracy acts of rail officials."

"1879.—ATTACK BY THE RAIL LINES UPON THE TIDE-WATER PIPE COMPANY TO CRUSH AND DESTROY IT IN THE INTEREST OF THE STANDARD OIL COMPANY.—THE TRUNK LINES OF RAILWAY AGAINST THE PHILADELPHIA AND READING RAILROAD COMPANY, BY WHICH RAIL RATES WERE REDUCED TO ONE-SIXTH OF A CENT PER TON PER MILE AND 'BARELY YIELDED THE COST OF THE FUEL FOR THE ENGINES."

"The fight against the Tide-Water Pipe Company⁴ would have succeeded but for the prompt financial support given it by the Philadelphia and Reading Railroad Company, of which Hon. Franklin B. Gowen was president.

"The Tide-Water Pipe Company, first projected seaboard pipe line, had contracted to get its oils to tide water by another and cheaper route to avoid the excessive discriminating freight rates constantly being imposed by the trunk lines of railway in the interest of the Standard Oil Company.

"The Tide-Water Pipe Company laid a 6-inch trunk line of pipe, 110 miles in length, from the Bradford oil regions to Williamsport (a station on the Reading Road), and, by a joint traffic arrangement between the Philadelphia and Reading

¹ Proceedings of the Special Committee on Railroads of the Assembly of the State of New York, 1879, p. 1392.

² See Mr. Archbold, pp. 512, 514; also p. 642, footnote.

³ See p. 718.

⁴ See p. 738; Mr. Boyle, p. 490; Mr. Emery, p. 630.

and the Central Railroad Company of New Jersey, had secured rates to the seaboard which were to be equal to the rates paid by the Standard Oil Company over the trunk line of railway, and on account of the fight freight rates were cut to 15 cents a barrel in favor of the Standard Oil Company, which barely yielded the cost of the fuel for the engines.

"EXTRACT FROM ANNUAL REPORT OF FRANKLIN B. GOWEN, PRESIDENT OF THE PHILADELPHIA AND READING RAILROAD COMPANY, TO THE STOCKHOLDERS.

"Within the last 2 or 3 years certain producers and shippers of oil, in order to reach the few refineries in the neighborhood of New York which yet remained independent of the Standard Oil Company, associated themselves as the Equitable Pipe Line Company, laid a local pipe to connect with a railway terminating at Buffalo, and shipped from the latter place crude petroleum in canal barges, via the Erie Canal, to the waters of New York Bay.

"As this avenue of transportation was closed during the winter, it proved ineffectual as a source of permanent supply, and in order to secure an outlet for the entire year, as well to Philadelphia as to New York, certain gentlemen interested in the Equitable Pipe Line associated themselves into a limited company, as the Tide-Water Pipe Line Company, limited, and, having secured the right of way, laid a 6-inch pipe line a distance of over 100 miles, from the Bradford oil region, in McKean County, Pa., to Williamsport, the terminus of the Catawissa branch of this company, and a contract was entered into between the Tide-Water Pipe Line Company, this company, and the Central Railroad Company of New Jersey for the transportation of the oil to Philadelphia and New York by rail from Williamsport.

"This attempt of the producers of oil to secure an outlet independent of the Standard Oil Company and the trunk lines was at once resented by both interests affected, and from the date of the completion of the pipe line to the present, every effort has been made by some of the companies interested to convert the profitable business of the transportation of oil into a losing one.

"The trunk-line rates on oil by rail have been so reduced as to yield at times but about one-sixth of a cent per ton per mile for its transportation, or about one-quarter of the actual cash cost, and for many months motive power which might have been most profitably employed in hauling remunerative traffic has been occupied with an enormous tonnage of oil which barely yielded the cost of the fuel for the engines."

"I also refer this commission to the report of the Hepburn committee of New York, January 23, 1880, investigating the Standard Oil monopoly, in which those astounding and celebrated rebate contracts of 1872 were exposed. The following are extracts of the report:

"In which these roads agreed to pay said company rebates on shipments to different points, ranging from 40 cents to \$3.07 per barrel."

"The roads transporting the refined oil shall refund to the refiners, as a drawback, the charges paid by them upon the crude oil reaching their refineries by rail; and the roads transporting through crude oil to the Eastern seaboard shall refund to the shippers 22 cents per barrel; both of said drawbacks to be paid only on oil reaching the initial points of rail shipment through pipes, the owners of which maintain agreed rates of pipage." By this agreement the roads carry crude oil from the oil regions to Cleveland and Pittsburgh and then carry the refined oil to the seaboard as cheaply as they would from the mouth of the well. Mr. Vanderbilt explains this (Testimony, p. 1596)."

"In June, 1879, the Tide-Water Pipe Line effected a connection with the seaboard and commenced shipping oil. Opposition, of course, was not to be brooked, and again the Standard called upon the railroads to protect them "against injury by competition," and again the railroads responded. On June 5, at a conference between the 4 trunk lines and the Standard people held at Niagara, the rate on crude oil was made to the Standard over the Erie and Central 20 cents per barrel (from \$1.40).³ The rates to Philadelphia and Baltimore were made the same. (See statement of Messrs. Rutter and Blanchard, exhibits, pp. 621, 622.) This reduction was made on the 5th of June, to take effect as of the 1st of June."

"The Standard got the 'plum;' and as a result it owns exclusively the terminal facilities for handling oil in Philadelphia and Baltimore.

¹ Report of Hepburn Committee, p. 4.

² *Ibid.*, p. 43.

³ "From \$1.40" is comment by Mr. Rice.

⁴ Report of Hepburn Committee, p. 45.

"It owns and controls the terminal facilities for handling oil of the 4 trunk roads. It owns and controls the pipe lines of the producing regions that connect with the railroads. It controls both ends of these roads. It ships 95 per cent of all oil. (Testimony of Bostwick, p. 2696; Rogers, p. 2615; Welch, p. 2675.)

"It dictates terms and rates to the railroads. (Testimony of Mr. Rutter, p. 2549, which is confirmed by Mr. Vanderbilt and Mr. Bostwick.)

"They can use the power here given them, and have used it to crush out opposition.

"This company also owns all the oil cars run on the Central Road.

"It has bought out and frozen out refiners all over the country.

"By means of the superior facilities for transportation which it thus possessed it could overbid in the producing regions and undersell in the markets of the world.

"Resting under the common-law obligation to treat all parties alike, they deliberately undertake to protect a certain company 'against injury by competition.'

"Thus it has gone on buying out and freezing out all opposition until it has absorbed and monopolized this great traffic, this great production, which ran second on the list of exports of our country.

"And yet all the trunk roads have grown into such relations with this oil combination that they were forced to forego all these millions they might have earned and look to the other produce of the country for their revenues.

"They bury their own interests in the interest of the Standard Oil Company and join in this war of rates to protect it 'against injury by competition,' whose business and transactions are of such a character that its members declined giving a history or description of it lest their testimony be used to convict them of a crime. (See testimony of Messrs. Bostwick, Archbold, Rogers, etc.)

"JOSHIAH LOMBARD, R. T. BUSH, GEORGE F. GREGORY, COMPETITIVE OIL REFINERS AT THE SEABOARD, TESTIFY IN 1879 WHAT A. J. CASSATT, NOW PRESIDENT OF THE PENNSYLVANIA RAILROAD COMPANY, AND TOM SCOTT, FORMER PRESIDENT, SAID TO THEM ABOUT THE STANDARD OIL COMPANY.

"Cassatt says to Lombard:

"That the Standard Oil Company was the only party that could keep peace between the trunk lines."

"He said "I can not trust," or, rather, he said "They are the only people that can keep harmony."

"I asked Mr. Cassatt if we shipped as much oil over the Pennsylvania Railroad as the Standard Oil Company whether we should have the same rate of freight. He said "No." I said "Why?" He said because they would not be satisfied.

"We asked him whether the discrimination against us would be larger if the rate of freight were high than it would if the rate of freight were low. He said yes; it would be."

"Also said:

"That if we built a pipe line he would buy it up for old iron in 60 days."

"He said there would be no peace or profit in the business until we made some arrangements with the Standard Oil Company."

"R. T. Bush to Mr. Cassatt:

"Q. That is, you asked Mr. Cassatt?—A. Mr. Cassatt, whether we should have as low a rate of freight as the Standard Oil Company or any other shipper. He said "No." We asked him why. "Well, in the first place, you can't ship as much oil as the Standard Oil Company." "Well, if we could ship as much oil"—I think Mr. Lombard put this question—"would we then have the same rate?" He said "No." "Why?" "Why, you could not keep the road satisfied; it would make trouble; you would not keep the road satisfied; you could not satisfy the roads; you could not satisfy the different trunk lines;" and he remarked, in connection with that, that the Standard Oil Company was the only party that could keep the road harmonized or satisfied."

"Well, you may lay all the pipe lines you like and we will buy them up for old iron."

"To Tom Scott:

"Q. Go back again to the interview with Colonel Scott and tell us more particularly about it.—A. They tried to make us believe and feel, I suppose, that we were getting our due proportion, when for some considerable time previous to this we had not been able to do any business in advance. We could only do business from hand to mouth. We could not sell any refined oil unless we absolutely had the crude oil in our possession in New York, and Mr. Lombard, one of our number, had sold a cargo of crude oil, I think, of 9,000 barrels, and Denslow &

Bush absolutely stopped their refinery for 8 weeks, consequently, in order to let their oil go to Lombard & Ayers to finish their vessel, because they would only get 3 or 4 cars a day; and we stopped our place for 8 weeks to give them our crude oil, all we could give—our proportion—in order to lift them out and get their vessel cleared.

“Q. At the interview between Colonel Scott and Mr. Cassatt and yourself, here at Philadelphia, did you gentlemen propose to build your own cars or provide yourselves with cars?—A. Yes, sir; we told Mr. Scott that if they hadn't sufficient cars on their road we would like to put some on, and he told us flatly that they had just bought out one line and they would not allow another to be put on; that if they hadn't cars enough they would build them.

“Whether we could have—if there was any means by which we could have the same rate of freight as other shippers got, and he said flatly “No;” and we asked him then if we shipped the same amount of oil as the Standard, and he said “No,” and gave the same reasons Mr. Cassatt had in New York.

“Q. Did he give you the information as to the rate of discrimination?—A. No, sir. All the information we got on that point was from Mr. Cassatt, in New York, when he stated that the discrimination would be larger on a high rate of freight than on a low rate of freight, which led us to infer that it was a percentage discrimination. That is all the point that I recollect we ever got as to the amount of the commission.”

“George F. Gregory to Cassatt:

“We asked him if we should have as low a rate of freight—we spoke a good deal of what had been printed in the newspapers in regard to rates, etc., and we asked him if we should have a rate of freight as low as the Standard Oil Company, and he said “No.”

“Mr. Lombard asked him if we could have the same rate of freight that the Standard had if we shipped the same amount of oil. He said “No; you can not.”

“Mr. Cassatt declined to state what the discrimination was. I said to him, “Is it a greater discrimination on a higher rate of freight than it is on a low rate,” and he said “Yes.” He said, “Well, I didn't mean to answer that question; but very well,” he said, “I have answered it.”

“Q. Please to state what you denominate the squeeze.—A. A squeeze or a scarcity of cars; that is what we called it; a difficulty in getting cars in sufficient amount; that is what I mean.

“Q. That is, Green Line cars, you mean, from Mr. Brundred, as agent of the Pennsylvania Railroad?—A. Yes, sir.”

“This ought to be sufficient to briefly summarize how the Standard Oil Company acquired its monopoly of the petroleum industry and still holds it with a bulldog grip, and by its actions considers all competitors as interlopers or outlaws. My pamphlets, here introduced, marked “A,” “B,” and “C,” and Newlin's, marked “D,” will more fully substantiate it. I also refer this committee to my testimony given in 1888 before a Congressional committee, pages 573, 627, 644, 651, 739, 746.”

FAVORITISM IN BUYING LUBRICATING OILS.

Q. (By Mr. JENKS.) Have you a copy with you of this testimony before the Congressional committee?—A. No, sir; I have not. You have that volume. Since I have put these in as exhibits I think I had better put these others in as exhibits now. I also present and submit to this commission Exhibit E, the authorized Official Railway Guide of the United States for September, 1899, which gives, on page 43 and subsequent pages, a list of the 44 unlawful freight associations and freight committees heretofore mentioned by me.

You will also perceive on the front page of said guide an advertisement of the “Galena Oil Company”—Standard Oil Trust—in which this trust advertises its goods as follows:

“Galena oils are used on nineteen-twentieths of the total railway mileage of the United States, Canada, and Mexico, and are being introduced in Europe.”

That is to say, the Standard Oil Trust here admit that they furnish their lubricating oils to 95 per cent of all the railways in the United States, Canada, and Mexico, and portions of Europe. That is to say, this trust furnished 95 per cent of all such oils as are used by the railways mentioned, for no railroad would use trust and competitive oils in conjunction. These oils are taken by the railroads at most extraordinary prices, ranging from 25 to 75 cents a gallon; and here comes in another species of favored freight discriminations.¹

Q. (By Mr. FARQUHAR.) That seems quite a large claim in respect to the Standard Oil Company in the matter of Galena oils. What is the character of the

¹ See Mr. Lee, p. 208; Mr. Davis, p. 383; Mr. Monnett, p. 309; Mr. Archbold, p. 510; Mr. Page, p. 756.

Galena oils in the market among railroad men and among buyers?—A. Well, I know from hearsay that they furnish different grades of lubricating petroleum, running from 25 cents up to cylinder stock. The higher grades of lubricating oils are generally cylinder stock—cylinder goods.

Q. Has it not been a fact that Galena oil has really held the American market for years as one of the best standard oils—best quality of oil?—A. I do not know anything about the quality.

Q. Is it not a fact that the headlight oil is the best oil made in the world?—A. I do not know it to be a fact.

Q. Is not its general use a good reason for thinking that it is so?—A. Well, I suppose they would have to make a pretty good quality of oil to get good prices, but at the same time they get greater prices than any competitor could get, and a competitor could hardly get any chance. I know that on general hearsay. Parties have been told that they could not sell the railroads of the country lubricating oils, because if they did the Standard Oil Company would not give them any freight.

Q. Do you know whether it is the fact or not that the Standard Oil Company paid exorbitant prices for the Galena formula, for the word?—A. No; I do not know.

Q. Have you ever sold oil in competition with the Galena oil anywhere?—A. No; I have sold some, but in a very moderate way. I never manufactured any fancy brands of lubricants at all. I just manufactured ordinary oil—ordinary lubricant—a cheap grade.

Q. (By Mr. JENKS.) You spoke a moment ago about the high prices the Standard Oil Company received from the railroads for lubricating oil. Were you going to support that general statement by the specific prices?—A. No; I can not support that by specific prices, excepting by talking with persons that knew about it who have tried to sell the railroads and have been told. It is only hearsay.

Q. (By Senator KYLE.) What are the figures that are paid for this kind of oil?—A. From 25 cents up to 75 cents a gallon. There are some oils as high as \$1 a gallon.

Q. (By Mr. JENKS.) Your information in reference to high prices is on authority of the Standard's competitors and not on authority of any of the Standard's officials or of railroad officials?—A. No, sir; no, sir.

Mr. JENKS. Continue, please.

DESPEAUX v. PENNSYLVANIA RAILROAD COMPANY, DISCRIMINATIONS 1882 TO 1883

The WITNESS. By permission of Mr. J. W. M. Newlin, of Philadelphia, who was the attorney for some French refineries, I put in this book, marked "D," under the title of *Despeaux v. Pennsylvania Railroad Company*. It is a bill of exceptions in a suit for freight discrimination that occurred in 1882 and 1883; but the cases were tried last year, and William Rockefeller and several Standard Oil Company officials testified in Philadelphia. I did not expect that Mr. Newlin was going to give me the privilege of putting it in. In this exhibit there are several important contracts made with the Standard Oil Trust, including a special contract of August 22, 1884, made by the National Transit Company and the Pennsylvania Company, by which the Standard Oil Trust, through the National Transit Company, was to pay to the Pennsylvania Railroad Company 26 per cent of all the petroleum freights carried from the oil region to the seaboard at tariff rates.¹ I have referred to this in my testimony. I will now read a letter of the counsel covering the substance of the case:²

PHILADELPHIA, PA., November 2, 1899.

DEAR MR. RICE: Referring to your request for information as to the facts developed in the taking of testimony in the cases of *Fenaille & Despeaux v. The Pennsylvania Railroad Company* in the circuit court of the United States for the eastern district of Pennsylvania, and in the case of *Ladenburg, Thalmann & Co. v. the Pennsylvania Railroad Company* in the court of common pleas, No. 4, of Philadelphia County (both of which cases are still pending), I beg to say as follows:

In the *Fenaille & Despeaux* case it was shown that the plaintiff paid local pipeline 20 cents per barrel to Foxburg and other points in that region on crude oil, and that in addition thereto the plaintiff paid to the Pennsylvania Railroad Company 48 cents per barrel for its carriage, all rail, from Foxburg to Communipaw during the years 1881, 1882, and 1883. It was also shown that the Pennsylvania Railroad Company at the same time and between the same points carried crude

¹ For the text of this contract see p. 663.

² See p. 759 for criticism of Mr. Newlin's argument.

oil for the Standard Oil Company of New York at a reduction of 22½ cents per barrel.

It was further shown in the same case that the plaintiff paid 20 cents local pipeage on crude oil to McCalmont and other points in the same region, and that the Pennsylvania Railroad Company then carried it to Communipaw and charged the plaintiff 33 cents per barrel.

At the same time the Pennsylvania Railroad Company was carrying crude oil between the same points for the Standard Oil Company of New York as proven in this way:

On May 6, 1881, the National Transit Company made an agreement with the Pennsylvania Railroad Company concerning the shipments of crude oil to the seaboard under which these reductions in favor of the Standard Oil Company were effected. I have furnished you a copy of this agreement.

It was shown on the trial of the Fenaille & Despeaux Case that at the time named a majority of the stock of the National Transit Company was deposited, with other corporation stock, with the Standard Oil trustees, who also held practically all of the stock of the Standard Oil Company of New York, and that upon the basis of the stockholdings of the trust the Standard Oil Trust certificates were issued.

The agreement between the National Transit Company provides for a division of the through rate on crude oil from the wells to seaboard between the National Transit Company and the Pennsylvania Railroad Company. The clauses of the contract particularly referring to this are paragraphs 4 and 8 thereof.¹

Now, taking Foxburg to Communipaw, the local pipeage being 20 cents and the all-rail carriage 48 cents, or 68 cents, and the evidence showing that the transit company under this agreement delivered large amounts of oil to the railroad company at Foxburg, which oil it was shown by the transit company's secretary, Mr. John Bushnell, belonged to the Standard Oil Company of New York, this particular oil was paid for on the following basis:

Starting with 68 cents as the through rate from the wells to Communipaw, via Foxburg, one-fourth of 68 cents, viz, 17 cents, went to the local pipe line (i. e., the Transit Company) "and one-half of the difference between this one-fourth (i. e., 17 cents) and the said public rate (i. e., 68 cents) shall be considered as due and to be paid to the railroad." The charge is worked out thus:

	Cents.
Local to Foxburg	20
Through to Communipaw (New York)	48
	68
One-fourth to local pipe	17
This leaves balance of	51
One-half of this balance to railroad company is	25½
The amount paid railroad company by Fenaille & Despeaux was	48
Amount paid by Standard to railroad company	25½
Rebate to the Standard Oil Company equals	22½

In other words, while the word "rebate" nowhere occurs in the agreement between the Transit Company and the railroad company, all the railroad company received was the 25½ cents per barrel.

See paragraph 8 of the contract of May 6, 1881.

It is to be observed that this paragraph in terms only applies to cases where the through rate from the exit point of gathering pipe shall be less than 40 cents. This is the only provision in the contract, and in terms would apply to McCalmont and similar shipments, which were 33 cents per barrel. But not only is this the only provision in the contract for the division of the through rate between the transit company and the railroad company,² but, in addition thereto, the officers of both the railroad company and the Transit Company stated in evidence that the railroad company received payment from the Standard Oil Company of New York on the rail shipments from Foxburg to Communipaw under this contract, and received what the contract called for. It was further testified by these officials that what the railroad company got it collected directly from the Standard Oil Company of New York, and that the railroad company received no money from the Transit Company on these shipments.

The evidence was to the same effect as to all-rail shipments between McCalmont and Communipaw, Fenaille & Despeaux paying 20 cents local pipe rate and 33 cents open rail rate to Communipaw, making 53 cents in all.

The evidence further was that the Transit Company furnished to the railroad

¹ For the text of these paragraphs, see p. 760.

² See section 7 of the contract, p. 760, footnote 2.

company crude oil of the Standard Oil Company of New York for carriage between McCalmont and Communipaw, for which the railroad company was paid directly by the Standard Oil Company the amount called for by this agreement of May 6, 1881.

Hence the railroad company charged Fenaille & Despeaux, between McCalmont and Communipaw, New York, 88 cents, and charged the Standard Oil Company 19.875 cents a barrel. This is worked out thus:

	Cents.
Local pipe rate.....	20
Open rate rail McCalmont to Communipaw.....	58
Through rate.....	58
One-fourth to local pipe.....	13.25
Balance.....	89.75
One-half of this balance paid by Standard Oil Company of New York to the railroad company.....	19.87

Under the contract of May 6, 1881, the railroad company was to be guaranteed one-third of the total movement of oil to New York.

Under a subsequent contract between the National Transit Company and the Pennsylvania Railroad Company, dated August 23, 1884, of which I have furnished you a copy, the railroad company was to be guaranteed 26 per cent of the total movement of oil to the Atlantic seaboard, which would include Baltimore, Philadelphia, New York, and Boston.

Prior to 1884 the railroad rates to seaboard, i. e., New York, were from Foxburg 48 cents, and from McCalmont 88 cents.

There was a difference in favor of Philadelphia of 5 cents per barrel.

From 1884 to 1887 the rail rate between Foxburg and similar points and Communipaw was 55 cents per barrel, and between Clarendon and Kane and similar points and Communipaw was 45 cents per barrel. There was a difference in favor of Philadelphia of 5 cents per barrel.

It was in evidence in the case of *Ladenburg, Thalmann & Co. v. The Pennsylvania Railroad Company*, as to shipments made between 1884 and 1887, under the contract of August 23, 1884, between the National Transit Company and the Pennsylvania Railroad Company, that monthly settlements were made between the Transit Company and the railroad company, showing the total movement of oil to seaboard and the amount carried by the Pennsylvania Railroad Company on account of its 26 per cent allowance, and then the deficiency on the 26 per cent (and there was always a deficiency) was settled between the transit company and the railroad company in this way:

I take for illustration the settlement made for the month ending September 30, 1884, as shown by a copy of the settlement certified to be correct by John Bushnell, comptroller of the National Transit Company:¹

Total number of barrels so transported.....	1,574,961
Railroad company's share.....	409,490
Amount carried by railroad.....	825,596
Deficiency.....	83,894

On this deficiency the railroad company was allowed on New York oil, at one-half of the current through rate, 45 cents, equals 22½ cents per barrel, on 43,665 barrels.....	\$9,824.63
Less compensation allowed transit company for pumping the same, at 9 cents.....	3,929.85

Total.....	5,894.78
The railroad company was allowed on Philadelphia oil for 40,229 barrels, at one-half current through rate, 40 cents, equals 20 cents per barrel.....	8,045.80
Less allowed National Transit Company for pumping same, at 8 cents.....	3,216.32

Total.....	4,827.48
Total payment by the National Transit Company to the Pennsylvania Railroad Company for deficiencies for the month ending September 30, 1884.....	10,722.26

In the *Fenaille & Despeaux* there are two cases against the Pennsylvania Railroad Company, one for \$10,778.56 and the other for \$164,220.03. This is exclusive

¹ For explanation, see contract, pp. 655, 656.

of interest and treble damages. In the smaller case the treble damages were remitted in order to allow the plaintiff to call the officers of the defendant company as witnesses.

In the case of *Ladenburg, Thalmann & Co.* against the Pennsylvania Railroad Company the amount claimed is \$172,832.46, with interest, and treble the amount of the claim for damages, also with interest.

Referring generally to the contract of August 22, 1884, that contract was for the purpose of keeping up the freight charges by making the rail rates and pipe rates the same.

You will observe, however, that if the Standard Oil Company of New York, on its shipments, went through the form of paying the full rates, inasmuch as practically all of the stock of the National Transit Company (*viz.* 96 per cent.) belonged to the Standard Oil trust, it all came back again except the actual cost of pumping; and then you will observe that in the case of the railroad company it was only allowed one-half the current rates which were open to the public in the settlement made between it and the National Transit Company for monthly differences, as per the settlement above quoted.

Yours, truly,

JAMES W. M. NEWLIN.

GEORGE RICE, Esq., *Astor House, New York City, N. Y.*

Q. (By Mr. JENKS.) These cases referred to here, I understand, are still pending?—A. Yes.

Q. But they refer back to discrimination between the years 1881 and 1887?—A. 1881, 1882, and 1883, I believe.

Q. But there is no discrimination since 1887 that is charged?—A. I think not; I do not think there is any.

Q. Is this the original or a copy?—A. That is the original signature.

RAILROAD MAGNATES INTERESTED IN STANDARD OIL.

(Reading.) "William H. Vanderbilt, who signed one of the contracts in behalf of the trunk-line combine, was a stockholder in the Standard Oil Company as early as 1875, and it is fair to presume, under these circumstances, that he became one when these contracts were entered into. In 1875 John D. Rockefeller acted as attorney for Vanderbilt and also for Samuel F. Barger, his protégé, to vote an increase of the stock of the Standard Oil Company.

"At same meeting Henry M. Flagler, secretary of said company, acted for the same purpose as attorney for Peter H. Watson, president of the Erie Railway Company, one of the combine. Vanderbilt testified August 27, 1879, before the Hepburn committee of New York, that E. D. Worcester, treasurer of the Lake Shore and secretary of the New York Central, was a director in the United Pipe Lines, the pipe-line branch of the Standard Oil monopoly, and that he held from \$100,000 to \$250,000 of its stock. At the same time Vanderbilt testified as follows:

"Q. You were disgusted with them a long while ago' (meaning Standard officials)?—A. 'I was, because I said if the thing kept on the oil people would own the roads instead of the roads owning them.'

"He also said: 'I don't believe that by any legislative enactment or anything else through any of the States or all of the States you can keep such men as them down.'

"These were strong words for a Vanderbilt to say, and also how prophetic, for William Rockefeller, vice-president of the Standard Oil trust, has just been elected director in the New York Central and Hudson River Railroad Company, to take the place of Cornelius Vanderbilt, lately deceased. Since his advent he has been made a member of the executive committee, and on October 23 the issue of \$15,000,000 additional stock was authorized, and all this within a few weeks only after the death of Cornelius Vanderbilt, the son of the late William H. Vanderbilt, who testified that he did not believe that even 'by any legislative enactment or anything else through any of the States you can keep such men as them down.' He was in truth prophetic, and it has dramatically reached his own family.

"Hugh J. Jewett, recent president of the Erie Railway Company, who died in March, 1898, left by his will to his sons and daughters equal shares of his holdings in the trust certificates of the Standard Oil Trust.

"Clement A. Griscom, for many years a director in the Pennsylvania Railroad Company, testified on April 30, 1888 (p. 395), before a Congressional committee, that he then was president of the National Transit Company, the principal pipe-line company in the Standard Oil trust, with over \$25,000,000 of capital, and had been so connected since its formation in 1881 or 1882.

¹ Proceedings of Hepburn Committee, p. 1598.

² *Ibid.*, p. 1

"This clearly proves my assertion that rebates or freight discriminations created the Standard Oil monopoly, out of which came forth in 1882 the great Standard Oil Trust, the originator of all the other trusts, receiving corresponding rebates on the transportation of general products, the resulting effects of which are that about nine-tenths of the commerce of the country is controlled by a score of men, who dictate and exact from the masses high-tariff transportation rates, while their own goods are carried at nominal figures, which is nothing more or less than the levying of an embargo, or secret indirect heavy confiscation tax upon general production and manufactured products, in the interest of a few men, to the destruction of all private industrial interests, with large depreciation also of personal and realty holdings.

"MY EXPERIENCE.

"In 1876 I commenced the refining of petroleum with a capacity of 500 barrels per week, and later on increased same to 2,000 barrels a week, or 100,000 barrels per annum. In 1879, I became interested in an investigation by the Ohio legislature of freight discriminations, which came to naught and practically had no appreciable effect, although it was proven that independent refineries at Marietta had to pay 50 per cent more freight than did the Standard Oil monopoly. Being thus shut out of the markets to the north, east, and west, I turned my attention to the south, when I was again peremptorily brought up with a short and decisive turn by an attack of the railroads at both ends of the line, through the tireless, smokeless rebate, or freight discriminations, not only upon the manufactured products, but also upon the transportation of crude petroleum to my refinery.

"Outside of rebates or freight discriminations I had no show with the Standard Oil trust, because of their unlawfully acquired monopoly, by which they could temporarily cut only my customers' prices, and below cost, leaving the balance of the town, nine-tenths, uncut. This they can easily do without any appreciable harm to their general trade, and thus effectually wipe out all competition, as fully set forth. Standard Oil prices generally were so high that I could sell my goods 2 to 3 cents a gallon below their prices and make a nice profit, but these savage attacks and cuts upon my customers' goods, and their consequent loss, plainly showed to them their power for evil, and the uselessness to contend against such odds, and they would buy no more of my oil."

Q. (By Mr. RATCHFORD.) A question there, if you please. At the beginning of that paragraph you said that, outside of rebates and freight discriminations, you have no show with the Standard Oil Trust?—A. Yes, I say that. I mean by that their power of monopoly. That is, by their getting this great wealth, they can jump right on to my cars of oil, outside of rebates or freight discriminations. They can clean me out on any one car I may send to any one town.

Q. Is it not a fact that your contention is that the Standard Oil Company has its greatest advantage over you and other independent producers in the matter of rebates and freight discriminations?—A. Certainly, that is the whole thing.

Q. You say that outside of this they have a great advantage over you. Where is it?—A. They get this great power through these rebates and from discriminations. They, for instance, could lose a moderate amount of money in any one town, which would not affect all the rest. That is what I had reference to in that.

"PLEASE TURN ANOTHER SCREW."

(Reading:) "In 1881 a Standard official wrote to J. M. Culp, the general freight agent of the Louisville and Nashville Railroad Company, to turn another screw upon my shipments, which they did in 5 days, exacting from me 50 per cent more freight, which shut me out of the Tennessee markets."

I have the original letter if you would like to see it.

(By several of the COMMISSIONERS.) Yes.

The WITNESS. I think I have a facsimile of it, too. It is a very nice letter to see. Here is the original. I will present this to the chairman, and here is the facsimile of the original.

Q. (By Mr. SMYTH.) This was before the interstate-commerce law?—A. Yes, certainly; but that does not help them out. Rebates were unlawful before the interstate-commerce law, just as unlawful as they are now.

Q. Were the letters Mr. Archbold read regarding rates before 1887?—A. I will come to freight discriminations since 1887 in my own cases.

Q. (By Mr. CLARKE.) Can we not have this letter read?

The WITNESS. I will read it. Chess, Carley & Co., who signed this letter, were a branch of the Standard Oil Company at that time, and they wrote a letter to

¹ See pp. 747, 748; Mr. Page, p. 763.

J. M. Culp, who was general freight agent of the Louisville and Nashville Railroad. This is the original stamp of receipt by the railroad company: "J. M. Culp, General Freight Agent."

Now, before I read the letter I want to say that Wilkinson & Co. were my agents in Tennessee.

CHESS, CARLEY & Co., LOUISVILLE.

J. M. CULP, Esq., G. F. A.

DEAR SIR: Wilkinson & Co., Nashville, received car of oil Monday, 18th, 70 bbl., which we suspect slipped thro' on the usual 5th-class rate—"in fact, we might say," we know it did—paying only \$41.50 freight from here. Charges \$57.40. Please turn another screw.

Yours, truly,

CHESS, CARLEY & Co.

JUNE 16, '81.

That screw was turned on me to the extent of 50 per cent in 5 days.¹

Q. (By Senator KYLE.) That contract he speaks about was the same as charged the Standard Oil Company to that point, was it?—A. Yes; I suppose it was.

Q. (By Mr. JENKS.) \$41.50?—A. Well, let us say \$41.50; I do not know about that, whether the same as charged, \$41.50.

Q. (By Senator KYLE.) You have not an inside rate?—A. No.

Q. (By Mr. FARQUHAR.) Is not \$41.50 the open rate?—A. No; I will tell how it is. The \$41.50 is the rate from Louisville to Nashville and the \$57.40 was the previous rate from Marietta to Louisville.

Q. (By Mr. PHILLIPS.) Then do I understand they added 50 per cent after that?—A. Yes, 50 per cent; the road raised the rates on me, but they did not on the Standard.

Q. (By Mr. FARQUHAR.) Did they make that rate?—A. No, that was the open tariff rate.

Q. It was not a discriminating rate particularly against your product in this matter, but they had made a new rate for all?—A. Why, yes, certainly; the tariff rates are published rates. I paid tariff rates and the Standard paid less rates.

Q. (By Mr. PHILLIPS.) Was there any other competitor considered at that time but yourself?—A. I do not recollect now. I think I was about the only competitor about that time; that is my impression; it was a good many years ago. I do not recollect.

Q. (By Mr. CLARKE.) How do you know that they did not make the same rate to the Standard?—A. I do not know, but it is fair to presume they did not on all past experience. I do not know it certainly. I can not prove it; it is a pretty hard thing to prove rate discriminations.

Q. (By Senator KYLE.) You do not think they intended to turn another screw on themselves?—A. I do not think so.

Q. (By Mr. SMYTH.) I should think that if you could get this letter, you might find out how much the Standard Oil Company paid.—A. I guess one would have a nice time doing that. I would like to see you come here and bring an action in court and get them to show their books.

Q. You had a nice time in getting this letter?—A. Yes, I did.

Q. I thought that if you could get that from the railroad you could find out what the rates were?—A. You can not sue a railroad; you can not get their books.

Q. I was only comparing; it seemed to me that if you could get that letter you could also find out what the rates were?—A. How could I? What good would that do?

Q. That is what I want to know. I do not know how you got this letter.—A. No.

Q. If you are able to get the private correspondence of the railroad company, why are you not able to find out what their private rates are?—A. Some things are impossible, and that is one of them. It is a mighty hard thing to find out rebates.²

Q. The rates must be on the books, you know; it must show in some way.—A. I do not know about that, whether it shows on the books or not.

Q. (By Mr. FARQUHAR.) Of your own knowledge, do you know that other parties had to pay this particular rate the same as you had to?—A. I do not know that, but if they shipped they would; of course they would.

Q. It was well understood that that was the rate made and given out to all shippers?—A. I have always shipped on tariff rates, and, of course, they were public to everybody.

¹ See p. 300

² As to how the letter came into Mr. Rice's hands, see Mr. Page, p. 785.

THE CLEVELAND AND MARIETTA RAILWAY CASE.¹

(Reading:) "Phineas Pease, receiver of the Cleveland and Marietta Railroad Company, under the jurisdiction of a United States court, suddenly doubles its crude petroleum freights on me, without previous notification or warning, from 17½ cents a barrel to 35, in the carriage of same 25 miles from the oil-producing fields of Macksburg to Marietta, Ohio, where my refinery was located, while at the same time he makes a rate to the Standard Oil Trust of 10 cents a barrel, or 250 per cent of a discrimination against my shipments."

Q. (By Mr. SMYTH.) What proof have you of that?—A. You will see it right along as I come to it; there is plenty of it.

(Reading:) "Not satisfied with that, the trust demanded of the receiver, in addition thereto, under threat to remove its business from his road, that the 25 cents per barrel so paid by Mr. Rice in excess of tariff rates be paid over to the Standard Oil Trust for the privilege of the road having its business to do, and it was so paid. In other words, Mr. Rice was compelled not only to pay his own freight, but the freight of his rival in the business, and 15 cents per barrel to his rival besides, for the privilege of living and doing business."

"To be sure of its victim and secure the spoils, the Standard Oil Trust pay the local railroad freight agent at Marietta \$25 per month to collect and turn over to the trust this enforced freight contribution, which he did."

The WITNESS. I will put in as exhibits extracts from two letters to prove both statements.

Pease to Rapello, February 25, 1885.

"But Mr. O'Day compelled Mr. Terry to make a 35-cent rate on all other oil going to Marietta, and that we should make the rebate of 25 cents per barrel on all oil shipped by other parties, and that the rebate should be paid over to them (the Standard Oil Company), thus giving us 10 cents per barrel for all oil shipped to Marietta, and the rebate of 25 cents per barrel going to the Standard Oil Company, making that company, say, \$25 per day clear money on Mr. George Rice's oil alone."

"In order to save the oil trade along our line, and especially to save the Standard Oil trade, which would amount to 7 times as much as Mr. Rice's, Mr. Terry verbally agreed to the arrangement, which, upon his report to me, I reluctantly acquiesced in, feeling that I could not afford to lose the shipment of 700 barrels of oil per day from the Standard Oil Company. But when Mr. Terry issued instructions that on and after February 23 the rate of oil would be 35 cents per barrel to Marietta, Mr. George Rice, who has a refinery in Marietta, very naturally called on me yesterday and notified me that he would not submit to the advance, because the business would not justify it, and that the move was made by the Standard Oil Company to crush him out. (Too true.) Mr. Rice said: 'I am willing to continue the 17½-cent rate which I have been paying from December to this date.'"

"Now, the question naturally presents itself to my mind, if Mr. George Rice should see fit to prosecute the case on the ground of unjust discrimination, would the receiver be held, as the manager of this property, for violation of law? While I am determined to use all honorable means to secure traffic for the company, I am not willing to do an illegal act (if this can be called illegal), and lay this company liable for damages. Mr. Terry is able to explain all minor questions relative to this matter."

"Hoping for your careful consideration of this matter and an early reply, I remain, sir, truly yours,

"P. PEASE,
"Receiver and General Manager."

Rapello to Pease, March 2, 1885.

"That company also owns the pipes through which oil is conveyed from the wells, owned by individuals, to your railroad, except those pipes leading from the wells of Mr. George Rice, which pipes are his own."

"The company has or can acquire facilities for storing all its oil until such time as it can lay pipes to Marietta and thus deprive your company of the carriage of all its oil. The amount of oil shipped by Mr. Rice is comparatively small; say a quantity sufficient to yield \$300 per month for freight."

"The Standard Oil Company threatens to store, and afterwards pipe, all oil

¹ See Mr. Lockwood, pp. 390, 401; Mr. Archbold, pp. 556-559.

under its control, unless you make the following arrangement, viz: You shall make a uniform rate of 35 cents per barrel for all persons excepting the Standard Oil Company; you shall charge them 10 cents per barrel for oil, and also pay them 25 cents per barrel out of the 35 cents collected from other shippers. * * *

"You may agree to carry all such oil of the Standard Oil Company or of others delivered to your road through their pipes at 10 cents per barrel. You may also charge all other shippers 35 cents per barrel freight, even though they deliver oil to your road through their own pipes; and this, I gather from your letter and from Mr. Terry, would include Mr. Rice.

"You are at liberty, also, to arrange for the payment of a freight by the Standard Oil Company, calculated upon the following basis, viz: Such company to be charged an amount equal to 10 cents per barrel, less an amount equivalent to 25 cents per barrel upon all oil shipped by Rice, the agreement between you and the company thus being that the charge to be paid by them is a certain sum ascertained by such a calculation. If it is impracticable so to arrange the business that the Standard Oil Company shall, in effect, collect the 25 cents per barrel from those persons using the company's pipes from the wells to the railroad without its passing into your hands, you may properly also deduct from the price to be paid by the company an amount equal to 25 cents per barrel upon the oil shipped by such persons.

"Provided your accounts, bills, vouchers, etc., are consistent with the real arrangement actually made, you will incur no personal responsibility by carrying out such an arrangement as I suggest.

"It is possible that, by a proper application to the court, some person may prevent you in future from permitting any discrimination. Even if Mr. Rice should compel you, subsequently, to refund to him the excess charged over the Standard Oil Company, the result would not be a loss to your road, taking into consideration the receipts from the Standard Oil Company, if I understand correctly the figures. There is no theory, however, in my opinion, under the decisions of the courts relating to this subject, upon which, for the purpose, an action could be successfully maintained in this instance.

"Yours, truly,

EDWARD S. RAPELLO."

Now, I will read Judge Baxter's decision [reading]: United States Judge John Baxter delivers the following opinion of the court in *Handy et al. v. Cleveland and Marietta Railway Company et al.* (Federal Reporter, vol. 31, p. 692. Circuit court, southern district of Ohio, E. D., 1887):

"It appears that the Standard Oil Company and George Rice were competitors in the business of refining oil; that each obtained supplies in the neighborhood of Macksburg, a station of said railroad, from whence the same was carried to Marietta or Cleveland, and that for this service both were equally dependent on the railroad, then in the hands of the receiver.

"It further appears that the Standard Oil Company desired to 'crush' Rice and his business, and that, under a threat of building a pipe for the conveyance of its oil, and withdrawing its patronage from the receiver, O'Day, one of its agents, 'compelled Terry,' who was acting for and in behalf of the receiver, to carry its oil at 10 cents per barrel and charge Rice 35 cents per barrel for a like service, and pay it 25 cents out of each 35 cents thus exacted from Rice, 'making,' in the judgment of the receiver, '\$25 per day clear money' for it 'on Rice's oil alone.'

"But it is due to the receiver to say that, notwithstanding his admitted 'reluctant acquiescence' in the contract made by Terry on his behalf, and the indorsement thereof by Rapello, and the further conceded fact that he charged the Standard Oil Company 10 cents and Rice 35 cents per barrel, as aforesaid, he denies that he ever paid to the Standard Oil Company any part of the money ever received from Rice. We will therefore, for the present, accept his affirmation touching this matter as true."

In a parenthesis I have stated here "Subsequent proceedings proved the statement of the receiver in this respect was false." [Reading:] "But why should Rice be required to pay 250 per cent more for the carriage of his oil than was exacted from his competitor? The answer is that thereby the receiver could increase his earnings. This pretense is not true. But, suppose it was, would that fact justify, or even mitigate, the injustice done to Rice? May a receiver of a court, in the management of a railroad, thus discriminate between parties having equal claims upon him, because thereby he can accumulate money for the litigants? It has been repeatedly adjudged that he can not legally do so. Railroads are constructed for the common and equal benefit of all persons wishing to avail themselves

¹ See p. 558.

of the facilities which they afford. While the legal title thereof is in the corporation of individuals owning them and to that extent private property, they are, by the law and consent of the owners, dedicated to the public use. By its charter and the general contemporaneous laws of the State, which constitute the contract between the public and the railroad company, the State, in consideration of the undertaking of the corporators to build, equip, keep in repair, and operate said road for the public accommodation, authorized it to demand reasonable compensation, from everyone availing himself of its facilities, for the services rendered. But this franchise carried with it other and correlative obligations. Among these is the obligation to carry for every person offering business, under like circumstances, at the same rate. All unjust discriminations are in violation of the sound public policy and are forbidden by law."

This was before the interstate-commerce act.

(Continuing reading:) "We have had frequent occasions to enunciate and enforce this doctrine in the past few years. If it were not so the managers of railroads, in collusion with others in command of large capital, could control the business of the country, at least to the extent that the business was dependent on railroad transportation for its success, and make and unmake the fortunes of men at will.

"The idea is justly abhorrent to all fair minds. No such dangerous power can be tolerated. Except in the mode of using them, every citizen has the same right to demand the services of railroads on equal terms that they have to the use of a public highway or the Government mails; and hence, when in the vicissitudes of business a railroad corporation becomes insolvent, and is seized by a court, and placed in the hands of a receiver to be by him operated pending the litigation and until the rights of the litigants can be judicially ascertained and declared, the court is as much bound to protect the public interests therein as it is to protect and enforce the rights of mortgagors and mortgagees. But after the receiver has performed all obligations due the public and to every member of it—that is to say, after carrying passengers and freight offered for a reasonable compensation, not exceeding the maximum authorized by law, if such maximum rates shall have been prescribed, upon equal terms to all—he may make for the litigants as much money as the road thus managed is capable of earning. But all attempts to accumulate money for the benefit of the corporators or their creditors by making one shipper pay tribute to his rival in business at the rate of \$25 per day or any greater or less sum, thereby enriching one and impoverishing another, is a gross, illegal, and inexcusable abuse of a public trust that calls for the severest reprehension.

"The discrimination complained of in this case is so wanton and oppressive it could hardly have been accepted by an honest man, having due regard for the rights of others, or conceded by a just and competent receiver, who comprehended the nature and responsibility of his office; and a judge who would tolerate such a wrong or retain a receiver capable of perpetrating it ought to be impeached and degraded from his position.

"A good deal more might be said in condemnation of the unparalleled wrong complained of, but we forbear. The receiver will be removed.

"The matter will be referred to a master to ascertain and report the amount that has been as aforesaid unlawfully exacted by the receiver from Rice, which sum, when ascertained, will be repaid to him. The master will also inquire and report whether any part of the money collected by the receiver from Rice has been paid to the Standard Oil Company, and if so, how much, to the end that if any such payments have been made suit may be instituted for its recovery."

Q. (By Mr. JENKS.) This is the formal decision of the court?—A. Simply.

Q. (By Senator KYLE.) What was the outcome of that matter?—A. The court appointed a master commissioner, who is the present elected governor of Ohio, George K. Nash. The court appointed him a master commissioner to investigate this matter, and he found these to be the facts of the case as I have stated them here.

Q. (By Mr. JENKS.) Did you collect the money paid over?—A. Yes. It was not very much. I got on to it right quick, so it did not injure me much. As soon as they doubled the rate of freight on me I thought there was something wrong. I immediately went to Cambridge, to the headquarters of the road, in person, to see the receiver, and asked him why my freight rates had been doubled. He pretended to know scarcely anything about it. He says: "That is a matter that belongs to the freight agent. I understand there has been an advance; I understand it is necessary that the road should have more revenue." That is the substance of the interview; but he gave me to understand that the rates were going to remain. He did not give me any good reason why they were advanced, but I, of course, thought there was something up, and I went back and got up a

correspondence with him to put him down on paper to see where he would land, whether he would make any evasions or give me some reasons by which I could find out what the trouble was. He made some replies that were not to the point, and I had counsel at Marietta write to Judge Baxter, who had charge of this road of which Phineas Pease was receiver, asking if a private hearing could not be had before him in chambers upon what these letters showed. He granted the request at once. I went down to Cincinnati with my attorney, and the local attorney of the road went down, and he owned up the whole business right there before Judge Baxter, although this thing had all passed through the hands of ex-Judge Rapello, of New York City, who was then the leading counsel of the road. That is the way it came out.

Q. (By Mr. FARQUHAR.) Do you know whether it was customary in those days, before the interstate-commerce law was passed, for the receivers usually, under instructions from the courts, to get all out of a road it was possible to get for the benefit of the stockholders?—A. I do not know anything of that kind. I do not think, though, that any receiver of a road should charge any less to a big shipper than to a small shipper, because it violates the law, the common law of the land, which no road had a right to do even before the interstate-commerce law, as Judge Baxter here says. It was just as bad before 1887; it was unlawful. As I understand it, the only additional thing that was put into the interstate-commerce act was the penalty clause, by which every shipper and every carrier is subject to a penalty of \$5,000 and two years in the penitentiary for each and every offense. And what good has it done? They discriminate every day just as much as they ever did. It has had no effect whatever, and I can show it as I go along here by my own cases before the Interstate Commerce Commission.

Q. Has it not been a fact that there were some very great discriminations made by receivers in giving rates?—A. I do not know that.

Q. As against all competing roads, and the court itself would sustain them in working for the benefit of stockholders, to get all the revenue it was possible to get out of it?—A. No; I do not think that any honest judge would ever decide that a railroad could discriminate in favor of a large shipper against the small shipper.

Q. Is it not a fact that in some cases receivers have discriminated and cut rates on their road?—A. Right there in my own case they did; and here are Receivers Cowen and Murray admitting it themselves, when they wrote the letter to the Interstate Commerce Commission, December, 1898, that they were giving rebates; criminally doing it.

Q. (By Mr. RATCHFORD.) Is it not a fact that the managers of railways generally follow that practice, discriminating in rates to all large shippers and giving them inside prices?—A. Why, certainly.

Q. That is your observation, is it?—A. Yes, certainly.

Q. That being the case, does it not follow that receivers necessarily have to resort to the same practice in order to compete?—A. Well, I do not think that receivers of a railroad ought to violate the law. No man ought to; but in particular, receivers of a road; it does not make any difference how it strikes the road.

Q. Do you recognize their inability to compete in case they do not resort to the same practice?—A. Very likely they do; but the receiver is specially appointed by the court, and it is supposed that the courts do not want to sanction any unlawful act. I mean to say there is a greater obligation on receivers of a railroad not to discriminate, because they are appointed by the court and are under the jurisdiction of the court. Supposing the railroad does lose freight—that is no reason; they must obey the law. That is the trouble with this country—our laws are not obeyed nor enforced.

THE STANDARD GOES INTO THE GROCERY BUSINESS.

(Reading:) "Threats and intimidations, highwayman tactics, used by the Chess Carley Company (Standard Oil) on my agents, that 'competition will not be confined to coal oil or any one article.' Also 'that the Standard Oil Company had authorized him to spend \$10,000 to break up any concern that bought oil from anyone else.'"

Now I refer to one of my exhibits, B, p. 84, for that.¹

Q. (By Mr. JENKS.) Perhaps you can state in a word what the substance of this is and then put it in as an exhibit; it will save you some time?—A. Well, it is

¹ The exhibit referred to is a printed book of some 275 pages, written and copyrighted by Mr. Rice. The title page is as follows: "Standard Oil Company, first decade, 1872 to 1882; profits, \$455,414,155. Standard Oil Trust, second decade, 1882 to 1892; profits, \$945,493,677. Total profits, \$1,400,907,832 in twenty years."

merely that the Chess Carley Company wrote my agents, Wilkinson & Co., at Nashville, threatening letters, of which I have copies in my exhibits. They had tried to buy them out, and made threats that if they did not come to time they would not only cut the prices of oil, but all the general goods that they sold; that was the substance of it, but I have it all here.

Q. I understand from what you have said elsewhere that they did, as a matter of fact, set up a separate grocery store?—A. Oh, no, not at that point; that was at another place; that was in Mississippi.

Q. But that was this same company that did subsequently set up a grocery store?—A. Yes.

Q. In order to drive the rivals out?—A. That is right; this same company.

(Reading:) "Rust-proof oats, meats, sugar, coffee used as weapons by the Standard Oil Monopoly to kill off competition.

"R. M. Fraser, general freight agent of the Marietta and Cincinnati Railroad, wires a Standard official as follows: '_____, at Marietta, is inquiring for rates of freight on oil to Chillicothe. Don't you control that field?' Colonel Thompson (he was a Standard official) to Mr. Fraser: 'Yes, that is our meat.' (B 85)"

Q. (By Mr. SMYTH.) Will you give us the date of that telegram?—A. I do not know whether I have the date. I refer to B 85.¹ I do not know whether there is a date to it or not; but it is all true, all the same.

Q. (By Mr. FARQUHAR.) This occurred in 1881, did it not?—A. I guess along in there. I calculated that all these things where there were not dates would come along about in chronological order.

Q. Did you get the name that you had left blank in the copy of the telegram?—A. Well, no; I did not get the name. It came over by wire, and a friend of mine, hearing it going over the wire, gave it to me. He was a telegraph operator himself.

(Reading:) "Standard Oil also establishes a grocery house at Columbus, Miss., and sells groceries at cost in order to force merchants to buy their oil. (B 86)."

There is quite an extensive account in connection with that.

Q. (By Senator KYLE.) How prevalent is that custom with the Standard Oil Company?—A. It is not so prevalent now, because they are establishing their agencies all over the United States—separate agencies—and they do not have to go into that kind of work.¹

Q. Threats are made and have been made—they resort to threats?—A. Oh, yes; there is no trouble about that.

RATES DOUBLED FOR MR. RICE, UNCHANGED FOR THE STANDARD.

(Reading:) "The Standard Oil Trust makes contract with a merchant of New Orleans to pay him the sum of \$48,000 not to handle my oils (B 118), and while I was down there to reestablish another agency I was apprised by wire that my rates to Memphis and New Orleans were doubled without previous warning."

That was to discourage me from establishing another agency; but I did it, all the same. I went on and got another man to take hold, and when I got back to Cincinnati I stopped off to find out what this meant. I called upon the general freight agent of the road, and he said that the connecting line was all the trouble. You know the initial line makes the rate, and Mr. Fraser was the general freight agent of the initial line out of Marietta, but he made the excuse that the connecting line caused the trouble. I did not get any satisfaction, and I said that I would like to see the president of the road, Mr. Orland Smith. I said, "Mr. Smith, why has my freight rate been doubled all at once without any warning?" He did not seem to know anything about it, but I guess he did. He called Mr. Fraser in and said, "What is this trouble with Mr. Rice about these rates?" Mr. Fraser said: "The connecting lines have been writing us and writing us that they must have their freight rates advanced; they could not see any other way to do." Well, what do you suppose they did? After two or three months' correspondence they restored my rate, but in the following year they put up a job on me that stood, by which on July 15, 1886, they set up a rate on my shipments, on all of my shipments—they were about all from Marietta—from 48 to 162 per cent. They never raised the rates on the Standard Oil Company 1 cent, which had a big refinery at Parkersburg, 12 miles from Marietta. The tariff rates from both points were exactly equal. On subsequent investigation I got the attorney-general of Ohio to bring an action, and I bore all the expenses of it, to forfeit the charters of the Cincinnati, Baltimore and Washington Railroad and the Queen and Crescent Road for these accursed discriminations. I spent a lot of money and it took a lot of time, and I got a verdict from the supreme court after a while saying that they should

¹ See Mr. Page, p. 764.

² The telegrams appear, without date, in the witness's "Exhibit B," p. 85.

not do it any more; and it did not amount to anything. They continued to do it right along under my nose. And it shut up 19 agencies out of 24 and shut me out of 89 towns in 73 in 5 months; that is what it did. And these men here, Orland Smith and R. M. Fraser, are responsible for this collusion to ruin my business.

Q. (By Mr. FARQUHAR.) What year was this thing in?—A. In 1886.

Q. (By Mr. SMYTH.) Were the published rates the same from Parkersburg as from Marietta?—A. Yes.

Q. You believe that the Standard Oil Company received a rebate?—A. I proved 48 to 162 per cent. I went into court and proved it before a referee. There were 2 suits to forfeit the charters, and the court said they could not do this any more. It was a very fine, sweet verdict. Of course, it had no effect.

Q. (By Mr. JENKS.) In connection with the statement that the Standard Oil Trust made a contract with a merchant of New Orleans to pay him the sum of \$48,000 not to handle the oil, in the exhibit that is given, you set out the contract in full?—A. Yes.

Q. You are perfectly certain as to the trustworthiness of this?—A. Yes, of course; because I got the facts right from the party, Mr. Ong. I got the contract; without a question these are genuine contracts.

Q. Mr. Ong gave you the contracts?—A. Oh, yes; they are absolute facts. They are the contracts without a question. These are the genuine contracts.¹

(Reading:) "October 15, 1886, a friend of mine writes me from Cleveland as to inside rates given to the Standard Oil Trust as follows: 'They say that they only get so many tons of freight and so many dollars and cents in payment of so much tonnage. Can't tell whether in barrels or tank cars.'"

(Reading:) "The general freight agent of the Little Rock and Memphis Railroad Company wrote me on November 17, 1890, as follows: 'We are hauling your oil. This, of course, we expect, as common carriers, to be compelled to do. It is a fact, nevertheless, that on account of handling your oil the Standard Oil Company will not route any of their freight over our lines. As a consequence, we have none of their tanks.'"

That is very nice.

(Reading:) "By the power and fear of the Standard Oil Trust I have paid 5 cents a barrel more for crude oil than the regular established market price of the trust for additional stock to run my refinery."

TANK-CAR DISCRIMINATIONS.

"Can't purchase tank cars except for cash, because of my 'supposed controversy' with the Standard Oil Company."

OFFICE OF THE MILTON CAR WORKS,
Milton, Pa., December 6, 1887.

GEORGE RICE, Esq., Marietta, Ohio.

MY DEAR SIR: We have just wired you as follows: "Our financial friends decline to advance the money. We can not build them except for cash," which we confirm.

¹The contract, as printed in the witness's "Exhibit B," p. 118, is as follows:

"The Chess Carley Company, of Louisville, Ky., as the first party to this agreement (and a branch of the Standard Oil Trust), hereby agrees to pay to Richard M. Ong, of New Orleans, La., as second part, the sum of \$48,000 in sixty equal payments, consisting of one payment each month during the five years of this contract, commencing with the month of May, 1886 A. D.

"This said amount of \$48,000 is in full payment for the purchase by the Chess Carley Company of the entire profits of the business of R. M. Ong in naphtha, gasoline, and refined petroleum for illuminating purposes. R. M. Ong hereby sells to the Chess Carley Company the profits of this branch of his business during the said period of five years, and will make no charge for conducting said business except for drayage when actually incurred for full drayload from warehouse or depot.

"R. M. Ong agrees to sell no petroleum for illuminating purposes, or naphtha, which is not supplied by the Chess Carley Company, and shall be privileged to sell at same prices with the Chess Carley Company to the same class of trade. The invoices of each month will be payable on the 10th day of the following month less the rebates or commission allowed to wholesale dealers by the consent of the Chess Carley Company. And the said Ong shall have the right to deduct the allowance for each month of the said amount of \$800 from the amount of invoices for the same month.

"R. M. Ong agrees to conduct this branch of his business in the best manner possible to promote the interests of the first party, and under the general directions of the first party, and save all the margins possible in receiving and distributing said products, and will make no charge for storage in his warehouse. R. M. Ong will sell at same prices charged by the Chess Carley Company for same class of trade.

"CHESS CARLEY COMPANY,
"By F. D. CARLEY, President.
"R. M. ONG.

"NEW ORLEANS, LA., February 28, 1886."

²See Mr. Page, p. 766.

Our Mr. Dickerman returned this morning and, after using every exertion, failed to negotiate the deferred payments on your cars. Our financial friends state that they have declined to do this mainly on account of some supposed controversy which they claim you have had with the Standard Oil Company and various railroads in the West. They feared you could not use these cars to advantage if the railroads should be hostile to your interests.

We regret this very much as we have been to considerable trouble and expense in making arrangements to build the cars, and are now seriously disappointed at the refusal of the parties to take the deferred payments, as they had partially promised to do.

We should be very much pleased to build these cars for you if you can negotiate the notes with your friends and pay us the cash.

Please let us hear from you at your earliest convenience concerning your ability to raise the money.

Yours, very respectfully,

MURRAY, DOUGAL & Co., LIMITED.

You see there was a discrimination in the carriage of oil in barrels as against tank cars of about 25 per cent; and if anybody could afford to buy tank cars—rolling stock for the railroad—of course, shippers ought to furnish railroads all the cars they want and then let them charge what they please—so I saw that it was necessary to get hold of some cars. The way it is generally done is, a person goes and contracts for tank cars and pays down 20 or 25 per cent, and then pays the balance in installments in 4 or 5 years; and they hold the title to the cars.

Q. (By Mr. FARQUHAR.) Yet this is a business letter from Murray, Dougal & Co.; that if you would furnish the cash they would build the cars?—A. Yes, but the trouble was that that would take just so much money out of my business, and, of course, cramp me so much that I could not afford to do it.

Q. You went into the building of tank cars afterwards?—A. Yes, I got 10 cars afterwards, later on—got the Pennsylvania Works to build them for me and paid 20 or 25 per cent down, and the balance in 5 years.

Q. Do you think it was an advantage to the Standard Oil Trust to have the tank cars built?—A. Well, that might be, if everybody got the same rate, if the railroad would furnish the same tank cars; but they did not furnish the tank cars. The Standard Oil Company in the early days bought up all the tank cars from the railroads, and no doubt with the understanding that they must not build any more tank cars.¹ The railroads have not furnished tank cars to the shippers, who thought they ought to do it, and they had to put box cars on, just as the Pennsylvania road did for years and years; and after the interstate act went into effect, the Standard got them to charge for the weight of the wooden package.

Q. You made quite a contention there, did you not, for a long time against the tank cars?—A. Why, certainly. It is all right enough if the roads would only furnish that means of carrying, but they will not do it; and they know that the independent refiners of small means can not afford to buy tank cars. Why should they not do this? It is the duty of the railroad to furnish all the cars that are necessary. It is only a freeze out; that is all.¹

Q. That is the question we are reaching now. You know the private-car system of the United States to-day; they are used in transportation, refrigerator cars, and everything of that kind, furnished by private corporations. Was it not a positive advantage to have tank cars in the transportation of oil?—A. No, I do not think it was. I think it was the greatest possible evil in petroleum transportation, for the reason that the railroads carried tank cars of oil for the Standard Oil Company at a lump sum tank-car rate. I proved that before the Interstate Commerce Commission, between barrel rates and tank-car rates; that I paid four times as much to Birmingham, Ala.

Q. Where they were able to furnish tank cars, did not the railroads try to discourage the barrel?—A. I can not answer. Why should they?

Q. I can not say that. Was it not a condition while you were shipping?—A. Yes, they did. I will say that they did it for the purpose of freezing out the refiners; I will answer that, "Yes." They did it certainly, because they wanted to discourage the smaller ones; because the railroads and the trusts all work hand in hand together; each one owns the stock and bonds of the other, and they are all working in collusion and in conspiracy to freeze out all competition.

Q. Did any railroads ever propose that you should put on your cars and they would pull them for so much a mile; did they ever refuse you at all?—A. Yes. I have had railroads that refused; I forget what the lines were.

Q. Some roads did not?—A. Why, certainly; I will tell you something about the tank-car business. In 1878, J. H. Rutter, the general freight agent of the New York Central and Hudson River Railroad, in an investigation before the Hepburn

¹ See Mr. Page, p. 765.

committee of the New York legislature, put in a special tariff sheet of rates for the Standard Oil Company, and in that tariff was a particular special rate on tank cars of \$60 per tank car, lump sum, from Cleveland to New York, which would be 60 cents a barrel. The outside rate was \$1.90 a barrel to all competitors. They also got a reduction off that 60 cents for the carriage of crude oil from the oil regions to the refineries at Cleveland, 35 cents per barrel of crude. Fourteen barrels of crude at 35 cents were allowed for 10 barrels of refined shipped from Cleveland to New York. That made \$4.90 drawback. The freight on 10 barrels, at 60 cents a barrel, would be \$6; \$6 less \$4.90 drawback is \$1.10, for transporting 10 barrels of oil from Cleveland to New York. That is 11 cents a barrel as against \$1.90, or 1,600 per cent discrimination.¹

Q. (By Mr. SMYTH.) Do you know any railroad in this country that owns tank cars?—A. I think the Pennsylvania Railroad has a lot of tank cars, or did have; but in the early days it was almost impossible for a competitor to get the use of them; the Standard Oil Trust had practically the exclusive use of them.

Q. Is it not the custom in all oil refineries, both in petroleum and cotton-seed oil, that the tank cars are owned by the refiners?—A. Yes; to a certain extent I think the cotton-seed oil refiners are owning their own cars.

Q. And the railroad companies do not furnish any cars?—A. I think not.

Q. (By Mr. RATCHFORD.) You are aware that the representatives of the Standard Oil Company have stated before this commission that no such thing as rebates were given them?—A. (Interrupting:) Since the interstate-commerce act?

Q. Yes.—A. Yes; I will come to that.

Q. And the claims that you have just mentioned, referring to the rate from Cleveland to New York, you should support by the strongest possible testimony that you can present. Proof is what we want.—A. Well, I am going to give it to you as I go along. I am going to give you plenty of proof as to freight discrimination since the interstate-commerce law went into effect. I was coming to that; I have not got to that yet.

(Reading:) "I have for years vainly sought Government protection through Congress and the Interstate Commerce Commission, and get it not; also through State legislatures, and get it not; through the courts, and get it not. Soon there will be trouble in this land if such nefarious work does not cease, for anarchy will be supreme. The railways and the trusts are run conjointly on a fraudulent, dishonest, and destructive basis. The channels of trade and transportation are no longer open free to the people at large. Our greatest criminals and corruptionists are at the head of these mighty and all-powerful institutions, who also use their vast resources to corrupt our politics. They have no fear of the law, because of the fabulous fortunes so easily and quickly obtained, from which they expect to buy immunity.

"It is quite evident our Government is a failure, because of nonenforcement of our laws against this piratical crew who infest our inland commerce under the secret cover of unlawful rebates and commissions and thus rob the people out of hundreds of millions of dollars.

"The trusts are worse than the pirates of the seas, for they sailed in the open; and, though they gave no quarter, they did their work under their own pirate flag, and not under the livery of the law.

"I have had a number of applications from unknown correspondents to take hold of new oil developments in different States, and have invariably replied that it would be useless, that however prolific an oil field might be, it would be made unprofitable and no money in it, as against the power of the Standard Oil monopoly over the rail lines of this country."

Whereupon at 1 p. m. the commission took a recess until 2 o'clock p. m.

The commission met at 2.15 p. m., Chairman Kyle presiding. GEORGE RICE again on the stand and examination resumed.

Q. (By Senator KYLE.) You may proceed.—A. (Reading.)

"JOHN D. ARCHBOLD AND HENRY H. ROGERS, TRUSTEES OF THE STANDARD OIL TRUST, TESTIFY BEFORE THIS COMMISSION, SEPTEMBER 8 AND 9, THAT THIS TRUST HAS NOT RECEIVED DISCRIMINATING FREIGHT RATES SINCE THE INTERSTATE-COMMERCE ACT TOOK EFFECT, APRIL 5, 1887."

"In 1886 I entered complaints with the attorney-general of Ohio to forfeit the charters of the Cincinnati, Washington and Baltimore, and Cincinnati, New Orleans and Texas Pacific railways for gross oil freight discriminations. The petitions were filed December 23, 1886, and depositions filed November 23, 1887.

¹ See p. 666.

² See pp. 526, 527.

The referee made his report July 8, 1889, and the supreme court rendered its decision March 4, 1890. I proved that the Cincinnati, Washington and Baltimore Railroad Company, the initial line out of Marietta, and governing connecting lines, issued an order to take effect July 15, 1886, by which freight rates were not only advanced, but that my shipments were discriminated against by this road in favor of the Standard Oil Trust from 43 to 163 per cent.

"That the Cincinnati, New Orleans and Texas Pacific had so discriminated from 29 to 212 per cent. That the Louisville and Nashville Railroad Company had so discriminated from 35 to 260 per cent. That the St. Louis, Iron Mountain and Southern Railway had so discriminated from 48 to 191 per cent, which continued at least to March 4, 1890, and probably much longer, regardless of the order of the commission (see pp. 582, 583, 584, 585, Congressional investigation 1888). These unlawful freight discriminations had the effect to close up 19 out of 24 of my agencies, and shut me out of 39 towns in 73 within 5 months.

"The supreme court of Ohio, after this abundant and most extraordinary proof before them, ignored the people's sacred right of eminent domain, and simply decided that these roads be ousted from charging less rates per 100 pounds on tank-car shipments, as compared with barreled oil, which decision proved ineffective."

This suit was to forfeit their charters for these discriminations.

DISCRIMINATIONS AT LEAST UP TO 1888.

"In November, 1887, before the Interstate Commerce Commission, I proved the following gross freight discriminations, which were exclusively in favor of the Standard Oil Trust and for no one else. The cases were decided February 23, 1888, and the several defendant rail lines pretended to acquiesce in the verdict by simply changing their mode of rating.

"The following outrageous and most extraordinary of freight discriminations, exclusively in favor of the Standard Oil Trust, was proved by me and existed at least up to April 1, 1888, that we know of, and from my subsequent complaints and proofs it is exceedingly doubtful if the decision of the commission had any appreciable effect on the railroads."

Now, I have put in exhibits which show discrimination to the extent of 333 per cent. There is a lot of them, and I just merely mention that fact; the exhibits show that the highest discrimination was 333 per cent.

"The above gross freight discriminations continued for at least 1 year of the interstate-commerce act, regardless of the penalty of \$5,000 fine and 2 years in the penitentiary for each and every offense.

"On May 28, 1888, the Missouri Pacific Railroad, regardless of this decision, were still carrying tank cars by the lump sum. This same road (1888) in the State of Arkansas were carrying petroleum in iron barrels for the Standard Oil Trust at 284 per cent discrimination in their favor.

"In 1889 I made several general complaints to the commission of general violations of the interstate-commerce act by the Southwestern lines of railroads, reaching to the Pacific coast, of which the Cincinnati, Washington and Baltimore Railroad Company was the initial line out of Marietta, where my oil refinery was located, and at my request the commission issued notices to 151 contiguous lines as parties thereto to appear and be heard if they so desired. The substance of these complaints was embodied in these notices, as follows:

"It appearing to the commission in the above cases that in addition to the question of reasonableness of rates, the following other questions are also raised, namely:

"1. The question of the like classification of barrel and tank oils, and of the right of the railroad companies to charge for the weight of the barrel package in addition to the weight of the contents.

"2. The question of discrimination arising from the returning of empty tank cars free of charge, and also of the paying a mileage rate on such empty tank cars.

"3. The question of whether railroad companies are not obliged to furnish tank cars as well as cars of other description for oil transportation.

"4. The question of the proper classification of cotton-seed oil and turpentine as compared with petroleum and its products.

"5. The question of discrimination in favor of petroleum and its products when carried in tank cars, resulting in giving a low rate on cotton-seed oil or turpentine, or either, when carried as back loading in such tank cars.

"6. The question of the duty of railroad companies to furnish shippers with tank cars in cases where the traffic of their lines can profitably or properly be carried in such tank cars and is large enough to justify the expenditure.

"7. Long and short haul."

"The four separate cases were tried together in December, 1889, and thoroughly done by that astute and experienced lawyer in railroad matters, Franklin B. Gowen, for many years the president of the Philadelphia and Reading Railroad Company. The cases were duly argued, and a partial but insignificant decision rendered, but not until 2 years had elapsed, when the commissioners decided that 'All the cases are held open for additional evidence,' which so thoroughly disgusted me after having spent so much time and money thereon, that I then determined to proceed no further, and abandoned the apparently hopeless pursuit of combined and confederated iniquity, and resolved to have nothing further to do with any future proceedings before the Interstate Commerce Commission. I fully and clearly proved the following facts:

"That the Trans-Continental Association, composed of 21 lines of road, had advanced freight rates in 1889 over 1887, when my first complaints were brought,

to the extent of 88 per cent, which was unreasonable. Also proved that these lines carried cotton-seed oil, worth 4 times as much as petroleum, at 26 cents less per 100 pounds. That the Trans-Missouri Freight Association charged 25 cents per 100 pounds more for carrying petroleum than cotton-seed oil.

"That the Southern Railway and Steamship Association, of which the Louisville and Nashville Railroad Company was a member, advanced freight rates in 1890 over 1887 from 10 to 121 per cent, which was clearly unreasonable. Also proved that the Chicago, Rock Island and Pacific Railroad charged 25 cents more per 100 pounds for carrying petroleum than cotton-seed oil.

'UP TO MARCH 15, 1890, THE STANDARD OIL TRUST GOT 1½ PER CENT OF ITS SHIPMENTS CARRIED FREE BY A REBATE REDUCTION OF 62 GALLONS ON EACH TANK CAR.

"I also proved that the Standard Oil Trust had an exclusive secret rebate reduction on quantity shipped, in place of a money rebate, of 62 gallons deduction on each and every tank car, or 1½ per cent of its shipments carried free."

No one else got that at all; no one else got that rebate or that reduction.¹

Q. Is that supposed to be on tank cars as compared with barrel shipments? Is that the reason that they themselves gave?—A. I think the only reason I heard for it was for wind in the dome of the car, or something of that kind. There was no good valid reason for it.

Q. The question is this, what reason did they pretend that there was for it?—A. I do not know. I never knew what their pretended reason was; there was no good reason.

Q. When this matter was brought to their attention, both the Standard Oil Company and the railroad company presumably assigned some reason for it?—A. I do not know what they did assign, probably leakage or something or other. There was no sense in it, anyhow.

(Reading:) "This continued until March 15, 1890, when it was changed to 42 gallons reduction, and continued to September 1, 1892.

"Also proved that shippers of oil in barrels should be charged only for the oil shipped, and not for the barrel, to offset the return of empty tank cars that can't bring back other freight (except in extreme cases), while a box car can. Besides a tank car weighs 3,500 pounds more than a box car of same capacity."

Why, up to 1888 the Pennsylvania Railroad carried oil in barrels, including the package, for the same rate as so many gallons in a tank car; and about a year after the interstate-commerce act took effect they changed it so that the independent shipper would have to pay for the weight of the package.¹

Q. (By Mr. RATCHFORD.) What reason do you assign for the change in the rate on shipments in tank cars as compared with the rate for barrels?—A. I think it was done at the instigation of the Standard Oil Trust.

Q. Did the Standard Oil Trust at the time of the change have control of all the tank cars?—A. Principally. Almost absolutely.

Q. Principally?—A. Of course there were more or less outside refiners that had a moderate amount of cars, but not very many.

Q. Then you believe that the reduced rate of shipment in tank cars is not due to the advantage that results to the company from the transportation of oil in tank cars, but rather is a favor for those who control the tank cars?—A. Yes.

TANK CARS NOT AN ADVANTAGE TO THE RAILROADS.²

Q. (By Mr. FARQUHAR.) But is not the tank car really an advantage in handling the oil?—A. To whom?

Q. To the railroad companies, an advantage to all that handle oil?—A. No, sir. I have got the very best evidence from the Pennsylvania Railroad, if you will let me read this.

(Reading:) "John S. Wilson, general freight agent of the Pennsylvania Railroad Company (the highest authority we have), testifies before the Interstate Commission on January 23, 1888, that he would rather carry powder than oil in tank cars, and that the shipment in barrels is preferable. Hear him:

"I think, altogether, it is the most undesirable business we do, the carriage of oil in tank cars. There is no stopping it when it once starts. We had a smash up at New Brunswick. We came in collision there with a line of tank cars, the oil got on fire, and I think it ran two squares, got into a sewer, ran burning a square or two more, ran on the canal, which was then frozen over, followed the

¹ See Mr. Page, p. 766.

² See Mr. Page, pp. 765, 767, 769.

ice a square or two beyond, and beside our own direct losses, we have already paid nearly \$500,000 for the destruction there. I regard it as worse than powder to carry. The bridge at New Brunswick was burned down, which cost us \$200,000 or \$300,000, besides nearly \$500,000 paid out for outside destruction.

"We might run for 10 years and by good luck have no serious accident. Whereas, on the other hand, we might strike another case like that at New Brunswick and lose more money than we would make on carrying oil for 10 years. I would rather carry anything else than oil in tanks.

"The movement in barrels I have always considered preferable for two reasons. First, we load barrels in a car that will carry a return cargo. There are no back loads for a tank car. For stock and box cars we can load back and get an increased earning for the round trip. Secondly, if there comes a collision or fire, the packages being separate we are enabled to save some of the tonnage. There is no hope of saving the contents of a tank car if it once gets on fire. Barrels you can sometimes scatter and roll off and break them up."

This gentleman did not stay long with this railroad company after that evidence was given.

Q. (By Mr. FARQUHAR.) Well, independent of the gentleman's opinion on that, the railroads have adopted the tank car instead of the barrel for their shippers.

A. Yes; and principally under the control of the Standard Oil Trust.

Q. And independent also of the barrel transportation and the tank transportation, the railroads put tanks in the sixth-class classification and barrels in the fifth class. How do you account for that as a practical business proposition?

A. I think that tariff was made by the Standard Oil Trust. I think they make up the petroleum tariffs in the United States. They make up the oil tariffs at 26 Broadway and give them out to the railroads to carry it as they say, or else they do not get any freight.²

Q. (By Mr. RATCHFORD.) Is not there an advantage in carrying and in loading and unloading tank cars as compared with the barrels?—A. Yes; if your cars arrived at a point where you could gravitate it out, or if you had a short hose attached to them—a short hose into a pipe to which you could put a pump, you could suck it out; and, of course, a tank car carries more oil and saves the weight of the barrel; they carry a larger weight.

Q. In every case it is either taken out by gravity or pumped out?—A. Yes.

Q. (By Mr. FARQUHAR.) In nearly all cases it is gravity, is it not?—A. I do not know about that, either. At the refinery at Bayonne, owned by the Columbia Oil Company, I think they take all the oil out by pump; I am quite sure they do; their works, I know, are right down on almost level ground and they could not take it out by gravity.

Q. (By Mr. RATCHFORD.) Do the railroad companies load the oil, or the producer?—A. The producer.

Q. And the railroad or shipping company unloads it?—A. The receiver of the oil unloads it, and the producer or owner of the oil loads it; so that the road has nothing to do with it. It is the same with barreled oil. The refinery loads its barrels into the car and the road has nothing to do with it; and so with unloading. There is no difference in that respect.³

(Reading:) "I proved that the intermediate rate on petroleum, via the transcontinental lines, in 1889 was \$1.90 per 100 pounds. The wooden-barrel shipper was required to pay on 85 pounds additional weight, which would amount to \$1.61 per barrel more, in gross violation of sections 3 and 4 of the act. The average market price of crude oil in 1889 was 94 cents.

"I proved that there was a charge of \$95 per tank car by the transcontinental lines, to return empties from Pacific coast to Missouri River."

This is all since the interstate-commerce act went into effect.

(Reading:) "Thomas M. Kimball, general traffic manager of the Union Pacific, testified, June 23, 1887, before the Pacific Railway Commission (p. 1134), that his road carried the empty tank cars of the Standard Oil Company free, same as the other roads.

"(Page 1132:) 'Q. What was the rate allowed to the Standard Oil Company?—

A. All sorts of rates, according to point of delivery, and the liveliness of competition at that point; 5 per cent, 10 per cent, 15 per cent, and up to 80 per cent.'

"So this great line, and a Government road, enters the arena to assist the Standard Oil Trust to throttle competition as against the rights of the people who have built the road.

¹ See Mr. Westgate, pp. 377, 378.

² See Mr. Page, p. 767; Mr. Westgate, pp. 373-379; Mr. Gall, pp. 375-377, 382-385.

³ See Mr. Page, p. 767.

"I proved that refined oils in bulk were being carried at 6 per cent less than actual weight, or 6 per cent of refined oil carried free for the Standard Oil Trust. Their various lubricants, residuum, etc., carried at 10 to 15 per cent less weight, according to gravity."¹

DISCRIMINATION BY EXCLUSIVE "STOP-OVER" PRIVILEGES.

"I also proved that the several associated lines of railway constituting the Southern Railway and Steamship Association pool, the Southwestern Traffic Association pool, and the Trans-Continental Association pool were grossly violating the third and fourth sections of the act, long and short haul, to the extent of 56 to 225 per cent, which inured to this extent, in favor of the Standard Oil Trust, by prepayment of its freight at the low car lot, terminal rate, with privilege to stop all such cars at high rate intermediate points.

"I paid out over \$1,200 in subpoenas in those cases by an imperative rule adopted by the commission, which was not required in my first cases.

"It is fair to assume, because of failure of the commission to properly decide these cases, that the same discriminations not only have continued, but they have even gotten worse, for on May 2, 1890 (B 161) the St. Louis, Arkansas and Texas Railway (applicable to all Southwestern lines) issued a special oil tariff sheet for exclusive benefit of the Standard Oil Trust"—

That I know, and I could not get it.

(Reading:) "By which this trust could stop off full loaded tank cars at high rate intermediate points and divide same up into less than car lots, to be distributed at several stations, by canning same, which should have paid 3 times the terminal rate. This was an exclusive tank car tariff sheet, not applicable to barreled oil in box cars, for the independent refiner who could not afford to purchase rolling stock tank cars.

"Per letter of the commission, July 12, 1897, these special and most extraordinary of freight discriminations yet continue, and are exclusively in favor of the Standard Oil Trust on petroleum shipments.

"As to what lines allow stop-over privileges, it is understood that all the lines named on the Southwestern Traffic Association tariffs as parties thereto participate in the stop-over privileges provided for therein."

That is a quotation from the Interstate Commerce Commission.

TANK-CAR DISCRIMINATIONS.

(Reading:) "The tank car has been the greatest medium for the Standard Oil Trust to receive rebates by carloads being carried at a lump sum rate regardless of weight, inconceivably low as compared to tariff rates by the 100 pounds.

"The railroads won't furnish tank cars, and if an independent refiner is able to buy a few, thus decreasing his working capital, he is confronted by these present special railroad instructions inserted in the tariff sheets."

To show you how the railroads put every possible obstacle in the way to freeze out and keep out competitors, this is what they put in. (Reading:) "The 'Southwestern Bureau,' of which the Missouri, Kansas and Texas Pacific is a member, owned by the Standard Oil Trust officials, has this to say at the present time: 'Oil tanks.—Carload, petroleum storage tanks for petroleum and its products, intended for permanent oil stations—'"

Intended for permanent oil stations, mind you, gentlemen.

(Reading:) "'Shall be transported at actual weight at the oil rate, when filled with oil that pays the bureau line's oil rate.'"²

That is as much as to say that the railroads have a right to say whether a station that I might put up is going to be a permanent one. But if I wanted to put up one it would be practically impossible to get the right of way or a place to put it up, for I was 2 years waiting and trying to get that; or if you did get it and you put your plant up, it was in the discretion of the railroad to say whether that was going to be a permanent thing. Anybody would know that it would not be permanent, because you can't live. The railroad would discriminate and you could not survive. It would not be any good whatever. I have another one right here.

(Reading:) "Central Freight Association.—Tank gauge handbook No. 4 says, applicable to all roads in the United States at present time: 'Petroleum and its products in tank cars will be delivered only when consigned to parties at points at which they have proper unloading and storage facilities, and when shipments

¹ See Mr. Page, pp. 731, 732.

² See *George Rice v. St. L. & S. R. Co.*, 5 Interstate Commerce Commission Reports, 660. The commission there states that Mr. Rice did not appear at the hearing, though duly notified thereof, nor offer any proof of discrimination between shippers. The stop-over privilege complained of seems to have been abolished on July 25, 1896, as to petroleum, though continued till December 5, 1896, on sundry other commodities.

³ See Mr. Page, p. 709.

in tank cars are sent to parties who have not such facilities the shipments will be returned to shippers at their risk and expense."¹

Just think of it. It is all left with the railroad to say whether you can have any show or not, and they do not give you any show and don't propose to do it either.

(Reading:) "On May 6, 1891, the Southern Pacific Company issued an exclusive special oil tariff"—

Here is something very important.

(Reading:) "With these exclusive advantages in favor of the Standard Oil Trust, being the exclusive owner of a peculiar box tank car combination, patented, of two upright iron tanks set inside a box car that thus avoids paying \$105 a tank car for return of empty cylinders from Pacific coast to Missouri River. This special oil tariff, governing all transcontinental lines, allowed this trust 27 cents per 100 pounds lower rates for petroleum transported in these special patent cars, as against the regular rates. This is discriminatory against the independent tank and barrel shipper by \$105 a tank car, and \$1.08 per barrel when shipped in barrels."

"The present highest intermediate rate on petroleum in less than car lots, Chicago to Pacific coast over transcontinental lines, is \$2.70 per 100 pounds, or \$10.80 per barrel of 400 pounds to the independent barrel shipper, while the Standard Oil Trust, by prepayment of its freight at the car lot terminal rate of 734 cents per 100 pounds on 320 pounds, or \$2.51 per barrel, gets an advantage of 330 per cent over its competitors in freight discrimination."

TEMPORARY REDUCTIONS FOR THE PROFIT OF THE STANDARD.

"Another method of freight discrimination in favor of the Standard Oil Trust on the transcontinental lines, per tariff of 1888, was to reduce rates temporarily one-half and then raise them again 50 per cent, so the trust, on exclusive secret information, could stock up on the low prices, while its competitors always had to pay the high tariff rates. (B 191.)"

Now, I will just read some telegrams that passed between Mr. Stubbs, of the Southern Pacific, in which he agrees to allow the Standard Oil Trust to stock up with petroleum products at low prices. This is here to show how it is done all at the pleasure of the Standard. This is from the Paint, Oil, and Drug Review of January 25, 1893, and I know all about it, because one of the men that is interested came to see me about it and showed me some of these telegrams.¹

[From the Paint, Oil, and Drug Review, January 25, 1893.]

HOW IT IS DONE—ALL AT THE PLEASURE OF THE STANDARD.

How completely the Standard Oil Company has its grip on the railroads is best evidenced by producing copies of telegrams that passed between the freight agents of the transcontinental lines, the Standard Oil Company at San Francisco, and the Standard Oil Trust at New York. Now, at the pleasure of the unscrupulous monopoly, it was enabled to stock up during low freight, and an interesting game of seesaw was played on weak competitors. In all cases freights were to be advanced and lowered upon notice from the Standard. A baser trade conspiracy never went into print. It follows:

[Copy of telegram.]

SAN FRANCISCO, November 14, 1888.

J. C. STUBBS,

General Traffic Manager Southern Pacific Company, St. Louis:

Tilford says regarding raising and lowering oil rates during the year, as talked before leaving, he thinks it better if you could, without giving particulars to Transcontinental Association lines, get consent to leave oil rates in hands of committee without explaining exactly why, but if your judgment approves you might give full particulars to 2 or 3 longest lines.

W. SPROULE,

Asst. Genl. Frt. Agt. Southern Pac. Co.

[Copy of telegram.]

SAN FRANCISCO, November 14, 1888.

W. SPROULE, *San Francisco:*

Say to Tilford that association will probably consent to following agreement: Oil rate from Cleveland to be \$1; at this rate he can stock up; after doing so he to

¹ See Mr. Page, p. 709.

notify Chairman Leeds, who, after giving necessary notice, will advance rate to \$1.25, and continue that rate until such time as Tilford notifies him of reduced stock, when he will again reduce it to \$1 to enable him to stock up.

J. C. STUBBS.

[Copy of telegram.]

SAN FRANCISCO, November 15, 1888.

J. C. STUBBS, *St. Louis*:

Tilford received your message, and in reply says he can not afford to pay \$1—that is too much, owing to water competition—but will agree to pay for petroleum and its products 85 cents from Cleveland, and if roads hard up might possibly raise the rate to 87½ cents. Tilford says this offer of his is provided association will agree to advance rate to \$1.25, and reduce it from time to time as he may desire, as outlined in your message of yesterday. Please answer. Tilford says please do not advance present linseed or lead rates, as it would interfere with negotiations that he has now under way with Whittier, Fuller & Co.

W. SPROULE.

[Translation of message to W. A. Bissell, general freight agent Atlantic and Pacific Railroad.]

SAN FRANCISCO, November 15, 1888.

W. A. BISSELL, *St. Louis*:

Tilford's proposition to the association through Stubbs is that he will pay 85 cents on petroleum and its products from Cleveland; possibly, if roads hard up, he might increase this to 87½, provided association will advance freight to \$1.25 when he gives it notice. He would stock up at the low rate, then notify the association when to advance, the advance or decline to be made at certain seasons of the year in accordance with his supply on hand. Do not let Stubbs know of this telegram.

W. SPROULE.

[Copy of telegram.]

ST. LOUIS, November 16, 1888.

W. SPROULE, *San Francisco*:

All rates will be advanced. Would advise that he accept proposition, otherwise sure rate will be made \$1 without any conditions; clipper competition will be cared for.

J. C. STUBBS.

[Copy of telegram.]

SAN FRANCISCO, November 19, 1888.

W. H. TILFORD,

Trustee Standard Oil Trust, 26 Broadway, New York:

J. C. Stubbs telegraphs as follows under date of 14th instant: "Transcontinental Association will probably consent following arrangement: Oil rate from Cleveland to be \$1; at that rate Standard Oil Company, San Francisco, can stock up. After doing so Standard Oil Company can notify Chairman Leeds, who, after giving necessary notice, will advance freight rate \$1.25 and continue that rate until such time as Standard Oil Company notifies him of reduced stocks, when he will again reduce it to \$1 to enable Standard Oil Company to stock up." I telegraphed J. C. Stubbs as follows: "Can not afford to pay \$1; that is too much, owing to water competition, but will agree to pay for petroleum and its products 87½ cents, provided Transcontinental Association will agree to advance rate to \$1.25 and reduce it from time to time as outlined in Stubbs's message; adding request Transcontinental Association not to advance linseed or lead rates." Under date of 16th instant, J. C. Stubbs telegraphs as follows: "All rates will be advanced. Would advise that Standard Oil Company accept proposition; otherwise sure rate will be made \$1 without any conditions. Clipper competition will be taken care of." What do you advise me to say to him? Advise me by wire at once.

E. A. TILFORD,
President Standard Oil Company of Iowa.

[Copy.]

SAN FRANCISCO, November 20, 1888.

J. C. STUBBS,

Care Southern Hotel, St. Louis:

Your telegram, 16th, through Sproule, received. I will raise my offer to 90 cents for petroleum and its products from Cleveland, association agreeing to conditions stated in your telegram to Sproule, 14th. This is the highest rate we have ever paid. This rate I believe would be a permanent thing and not stimulate clipper shipments or private clipper charters; therefore in long run would prove mutually more beneficial than \$1. Will you advocate 90 cents? I think with your vote for this rate, and you personally putting it before association, it would go through. We will have to ship quite a number of cars during high rate owing to special orders coming in. This should be taken into consideration when I ask that 90 cents be adopted. Please answer.

E. A. TILFORD.

[Copy of telegram.]

SAN FRANCISCO, November 21, 1888.

W. H. TILFORD,

26 Broadway, New York:

Dispatches received. Since telegraphing you yesterday, I received telegram from A. T. and S. F. R. R., St. Louis, intimating that Transcontinental Association would accept something less than \$1 from us. Therefore, I will telegraph J. C. Stubbs, care of Southern Hotel, St. Louis, as follows: "I will raise my offer to 90 cents on petroleum and its products from Cleveland, Transcontinental Association agreeing on conditions stated in his telegram, 14th. This is highest rate we ever paid. This rate, I believe, would be permanent thing and would not encourage heavy clipper shipments; therefore in long run would prove mutually more beneficial than \$1. Will you advocate 90 cents? I think with your vote for this rate and you personally putting it before association it would go through. We will have to ship quite a number of cars during high rate, owing to special orders coming in for points where we have no warehouses. This should be taken into consideration when I ask that 90 cents be adopted." I request J. C. Stubbs please answer. I do not know whether my telegram reached J. C. Stubbs, owing to his being in New York City. When you see J. C. Stubbs, say I telegraphed him as above, care Southern Hotel, St. Louis. In your talk advocate 90 cents as outlined above. Do not intimate to Stubbs that I have received any communication from A. T. and S. F. R. R. people, St. Louis. Telegraph me the result of your interview with Stubbs. Pay charges on Union Tank Line patent car referred to and send expense bill to me.

E. A. TILFORD.

[Copy—Subject: New T. C. A. rates.]

STANDARD OIL COMPANY,
San Francisco, November 21, 1888.

W. H. TILFORD, Esq., 26 Broadway, New York:

After telegraphing you yesterday afternoon saying that I would telegraph J. C. Stubbs as outlined in your message of yesterday, I received word, through A. T. & S. F. office here, from W. A. Bissell, general freight agent of the Atlantic and Pacific Railroad, who is now in St. Louis, that he thought the association would accept something less than \$1 from us if our offer was properly put before them, consequently I telegraphed J. C. Stubbs, as per my translated copy of message to you herewith attached. I was not aware that Mr. Stubbs was in New York and sent my message to the Southern Hotel, St. Louis; therefore I requested in my message to you that when you meet Mr. Stubbs you say that I telegraphed him, care Southern Hotel, St. Louis; and also outline to him the substance of my message, incorporating further along in my telegram that in your interview with Mr. S., please advocate the 90-cent rate.

I will advise you as soon as I hear definitely when the new rates of freight that the Transcontinental Association are agreeing on now will take effect. I heard to-day, through the A. T. & S. F. office here, that Mr. Bissell had telegraphed from St. Louis that he thought the new traffic would go into effect on or about the 15th or 20th of next month. Please treat this confidentially, but, as I state before, as soon as I find out definitely regarding the new rates I will duly advise you.

Yours, truly,

E. A. TILFORD.

[Copy.]

NEW YORK, November 28, 1888.

E. A. TILFORD, *San Francisco*:

General meeting adjourned to meet at Chicago, Monday morning. Will take up matter then. Will do best I can. Probably can make it 95, which your brother Hunt says you can stand. If you have to address me, care Pacific Hotel, Chicago.

J. C. STUBBS.

[Copy.—Subject: Rates on oil from Cleveland to the Pacific coast.]

STANDARD OIL COMPANY,
San Francisco, November 28, 1888.

W. H. TILFORD, Esq., 26 Broadway, New York.

DEAR SIR: I beg herewith to hand you copy of my translated dispatch to you of even date, which explains itself.

From Mr. Stubbs's dispatch you will see that he seems to think that you have already agreed that I will stand 95 cents on oil from Cleveland to the Pacific coast. In your dispatch to me of a few days ago you stated you talked with Mr. Stubbs about 90-cent rate, suggesting, however, further along in your message that Mr. Stubbs should telegraph that he could get the 95-cent rate adopted, that I had better accept the same. From your message I would imagine that you simply talked the 90-cent rate, without committing yourself to Mr. Stubbs about a 95; hence my reason for asking you the question as to whether you had agreed to the 95, in my message of to-day.

Yours truly,

E. A. TILFORD.

[Copy.—Subject: Error in translation of message.]

STANDARD OIL COMPANY,
San Francisco, November 24, 1888.

W. H. TILFORD, Esq.,

Vice-President Standard Oil Company, 26 Broadway, New York.

DEAR SIR: I am just in receipt of your message of even date saying that you translated my message wrong, reading the rate that I had offered the transcontinental lines 95 cents, instead of 90-cents.

I think whoever translated my message in your office should be disciplined, for the error will prove, I am afraid, quite expensive to us here. I am afraid now the damage is done and I will be unable to secure a lower rate than 95 with the Transcontinental Association lines. I am fully convinced, however, if you had talked 90 cents to Mr. Stubbs when you saw him I could have had this rate put in effect. I will, however, as you suggest, telegraph Mr. Stubbs to-night, care Grand Pacific Hotel, stating that when you mentioned 95 cents to him, that the same was based on an error in translating my cipher message, and that I still hope he will advocate the 90-cent rate.

Yours truly,

E. A. TILFORD.

[Copy of telegram.]

CHICAGO, November 26, 1888.

E. A. TILFORD, *San Francisco*:

I told Hunt your dispatch to me read 90, and he must be in error. He afterwards confirmed my view, and at the same time expressed himself as willing to compromise on 95.

J. C. STUBBS.

[Copy...Subject: Oil rate.]

[Personal.]

SAN FRANCISCO, November 26, 1888.

W. H. TILFORD, Esq.,

Vice-President Standard Oil Company, 26 Broadway, New York.

DEAR SIR: I am just in receipt of the following message from Mr. Stubbs:

"CHICAGO, November 26, 1888.

"E. A. TILFORD, *San Francisco*:

"I told Hunt your dispatch to me read 90, and he must be in error. He afterwards confirmed my view; at the same time expressed himself as willing to compromise on 95."

I telegraphed Mr. Stubbs as I wrote you I would on the 24th instant, and the above message from him is in reply to my telegram. Mr. Stubbs's statement as to you agreeing to compromise on 95 cents does not exactly tally with what you wired me under date of the 24th instant. (Please see your telegram of that date.) Will you please write me (for curiosity sake) what are the facts as to your interview with J. C. S. Of course I understand before my letter can reach you, and you can reply, the 90 or 95 cents rate will be selected; but as I would like to know for my own satisfaction, hence my requesting you to write me. I will make up some sort of a message to-night to send Mr. Stubbs in reply to his of above date, but, as I state in my letter of the 24th instant, I believe now that nothing will be accepted but 95 cents.

Yours, truly,

E. A. TILFORD.

[Copy of telegram.]

SAN FRANCISCO, *November 26, 1888.*

J. C. STUBBS,

Care Grand Pacific Hotel, Chicago.

To quote Pinafore, Hunt evidently got those babies or rates mixed up. Lines had better give 90 a trial. If later on there's possibility advancing, you know I am always willing. Whittier has large lot clipper oil now arriving and it will be hard for us to meet this competition even if our rate made 90.

E. A. TILFORD.

[Copy.—Subject; Freight rates.]

[Personal.]

STANDARD OIL COMPANY,
San Francisco, November 28, 1888.

W. H. TILFORD, Esq., *26 Broadway, New York.*

DEAR SIR: I am just in receipt of your day message of even date, saying that Standard Oil Company, Cleveland, and Standard Oil Company, Pittsburg, would probably fill all of my orders by Saturday night, December 22, and that the new rate of \$1.25 per 100 should go into effect 24th proximo, etc.; contents of the same carefully noted.

I have not heard anything this week from the transcontinental roads which are now holding forth at Chicago, as to when they will be ready with their new tariffs. I wrote you some few days ago that the Atchison, Topeka and Santa Fé people telegraphed me from St. Louis that they did not believe the new tariff would go into effect before the 15th proximo. It looks to me now as though this tariff would not be put into effect before December 20 to January 1, 1889. I am, however, in communication with the agents of the different lines, who are now at Chicago, and just as soon as I learn definitely as to the date when the new tariffs will go into effect, I will promptly telegraph you. If I find out definitely that they will be ready with their tariffs before December 22, I will arrange to have the present oil rates remain in effect until the 24th proximo, as you suggest. I wish, however, you would impress upon Standard Oil Company, Cleveland, and Standard Oil Company, Pittsburg, the necessity of filling out all our orders at an early date as possible.

Yours truly,

E. A. TILFORD.

[Copy.]

[Personal.]

OFFICE GENERAL FREIGHT AGENT,
SOUTHERN PACIFIC COMPANY,
San Francisco, December 3, 1888.

E. A. TILFORD,

President, Standard Oil Company, City.

DEAR SIR: I have advices from Chicago that arrangements for coal-oil rates have been closed, and the new rates thereunder will probably go into effect January 1. From Cleveland and Pittsburg 90 cents per 100 pounds, and from New York \$1 per 100 pounds. The basis of operation of these rates, looking to the conserving of your interests, is intended to be communicated in recent advices from Chicago, of which you are informed.

Yours, truly,

WM. SPROULE.

[Copy of telegram.]

SAN FRANCISCO, *December 4, 1888.*W. H. TILFORD, *26 Broadway, New York:*

J. C. Stubbs telegraphs as follows from Chicago: "Oil freight rates have been closed. New freight rates thereunder probably effective January 1. From Cleveland and Pittsburg 90, from New York \$1." This message from J. C. Stubbs means 90 for us to stock up with, with \$1.25 in effect whenever we want. See my letter of this date.

E. A. TILFORD.

[Copy—Subject: Freight rates.]

[Personal.]

STANDARD OIL COMPANY,
San Francisco, December 4, 1888.

W. H. TILFORD, Esq.,

Vice-President, Standard Oil Company, 26 Broadway, New York.

DEAR SIR: I will telegraph you this afternoon as per translated copy of message herewith attached, which is self-explanatory.

I herewith hand you a copy of a letter I have just received from Mr. Sproule, assistant general freight agent of the Southern Pacific Company, this city. This letter I interpret to mean the 90-cent rate is for us to stock up from time to time, and that the \$1.25 per 100 rate will be in effect whenever we may desire. This \$1.25 rate is what Mr. Sproule refers to in the latter portion of his letter, as my offer of 90 cents to Mr. Stubbs was on condition that he has the rate of \$1.25 put in effect when we might ask him. This letter also reads as if the 90-cent rate and \$1 rate was to be put in effect January 1. No doubt Mr. Stubbs was unaware that we were stocked up at the present rate of 82½.

The Transcontinental Association adjourned at Chicago yesterday, and I understand that Mr. Stubbs is now on his way home. I will see him on his arrival here, and if Chairman Leeds, of the Transcontinental Association, has been notified to put the 90-cent rate in effect January 1, I will have the same corrected by wire and the \$1.25 rate put in. As soon as Mr. Stubbs reaches home I will telegraph you whether it is intended that the 90-cent rate should be put in effect January 1 or the \$1.25.

Yours, truly,

E. A. TILFORD.

(Inclosed 2.)

[Copy—Subject: Transcontinental Association freight rates from Chicago. U. P. cut to Denver.]

[Personal.]

STANDARD OIL COMPANY,
San Francisco, December 5, 1888.

W. H. TILFORD, Esq.,

Vice-President Standard Oil Company, 26 Broadway, New York.

DEAR SIR: I am just in receipt of your 2 dispatches of yesterday bearing on the subject at the head of this letter—contents of the same carefully noted. I herewith hand you translated copy of my reply, which is self-explanatory. I hardly think the newspaper reports that the Transcontinental Association will allow differentials in favor of Chicago to such an extent that the local rate from Lima and the oil regions to Chicago, added to the rate from that point, would be less than the through rate from Cleveland to the Pacific coast on petroleum and its products.

My telegram and letters to you of yesterday in which I inclose you a copy of the letter from Mr. William Sproule, assistant general freight agent of the Southern Pacific Company, of this city, giving the substance of the telegram that he had received from Mr. Stubbs at Chicago, names the rates on petroleum from Cleveland, Pittsburg, and New York.

I expect (without knowing) that the rates from the oil regions and Lima will be the same as from Cleveland and Pittsburg to the Pacific coast. Just as soon as I see Mr. Stubbs I will advise you what other points—other than Cleveland and Pittsburg—the 90-cent rate will apply. If there is any truth in the newspaper report which you refer to, about the local rate added to the Chicago making a less rate than the through, I will have the same duly corrected without delay and promptly notify you.

I will not telegraph the Union Pacific people regarding the cut rate into Denver, as your second dispatch states the rates will be restored on Saturday night next.

Yours, truly,

E. A. TILFORD.

[Copy of telegram sent to J. C. Stubbs through William Sproule.]

SAN FRANCISCO, December 6, 1888.

J. C. STUBBS, *Chicago*:

If it is not already agreed upon that the \$1.25 rate is to go into effect January 1, on petroleum and its products from Cleveland and Pittsburg to the Pacific coast, will you kindly telegraph Chairman Leeds to put this rate in effect on the day mentioned. Please answer.

E. A. TILFORD.

[Copy of telegram.]

SAN FRANCISCO, December 6, 1888.

W. H. TILFORD, *26 Broadway, New York*:

J. C. Stubbs reaches Windsor Hotel, New York, to-morrow morning. I have telegraphed him, if it is not already agreed upon, to arrange to have \$1.25 rate put in effect January 1, requesting answer. I telegraphed this to J. C. Stubbs fearing might be some misunderstanding and 90 rate put in. Dispatch received. I have telegraphed Union Pacific Railway.

E. A. TILFORD.

[Copy—Subject: Freight rate.]

[Personal.]

STANDARD OIL COMPANY,
San Francisco, December 6, 1888.

W. H. TILFORD, Esq.,

Vice-President Standard Oil Company, 26 Broadway, New York.

DEAR SIR: I will telegraph you this afternoon as per translated copy of my message herewith attached. I telegraphed Mr. Stubbs to-day through his office here (Southern Pacific Company) as follows: "If it is not already agreed upon that the \$1.25 rate is to go into effect January 1 on petroleum and its products from Cleveland and Pittsburg to Pacific coast, will you kindly telegraph Chairman Leeds to put this rate into effect on the date mentioned. Please answer." I wrote you on the 4th instant, subject, "Freight rates," giving particulars as to the freight situation up to that date. Kindly see my letter of above date. I was a little bit fearful there might be some misunderstanding and the 90-cent rate put into effect January 1 instead of the \$1.25; hence my reason for telegraphing Mr. Stubbs to-day, as outlined above. When I wrote you on the 4th instant I was under the impression that Mr. Stubbs was on his way to San Francisco, but to-day I learn that he will reach New York to-morrow. I will duly advise you of the reply that I receive from Mr. Stubbs in answer to my to-day's telegram. My reason for telegraphing you Mr. Stubbs is in New York was thinking possibly that you might wish to see him and discuss our freight situation, and in order to have you do so intelligently I desire to keep you posted as to what was passed between Mr. Stubbs and myself by telegraph. Up to date I have repeated to you in substance everything that has passed between Mr. Stubbs and myself since the Transcontinental Association has had their last meeting East.

Yours, truly,

E. A. TILFORD.

[Copy.]

[Personal.]

SOUTHERN PACIFIC COMPANY,
OFFICE OF GENERAL FREIGHT AGENT,
San Francisco, December 8, 1888.

Mr. E. A. TILFORD,

President Standard Oil Company, City.

DEAR SIR: I beg to inform you that I am in receipt of advice that on January 1 the rate on petroleum oil and its products will be to \$1.25 per 100 pounds on car-load shipments from agreed Eastern points.

Yours, truly,

WM. SPROULE.

[Copy of telegram.]

W. H. TILFORD, *26 Broadway, New York.*

J. C. Stubbs telegraphs me that oil rate will be \$1.25 January 1.

E. A. TILFORD.

[Copy.]

[Personal.]

STANDARD OIL COMPANY,
San Francisco, December 8, 1888.W. H. TILFORD, Esq.,
Vice-President Standard Oil Company, 26 Broadway, New York.

DEAR SIR: I will telegraph you this afternoon as per translated copy of my message herewith attached, which is self-explanatory.

I wrote you on the 6th instant, subject, "Freight rate." In my letter of above date I give you verbatim my telegram that I sent to Mr. Stubbs in New York. I herewith hand you copy of a letter that I have received from Mr. William Sproule, assistant general freight agent Southern Pacific Company, this city. This letter of Mr. Sproule's is quoting in substance a telegram from Mr. Stubbs in answer to my message to him of the 6th instant.

I think we have managed this freight business pretty well from this long distance, especially when you think that we have secured the 90 cents rate with which to stock upon from time to time, and after some misunderstanding as to a compromise.

Yours, truly,

E. A. TILFORD.

[Copy—Subject: Correspondence with Mr. Stubbs.]

[Personal.]

STANDARD OIL COMPANY,
San Francisco, December 8, 1888.W. H. TILFORD, Esq.,
Vice-President Standard Oil Company, 26 Broadway, New York.

DEAR SIR: In looking over my telegrams and letters to Mr. Stubbs, regarding the petroleum and its products rate, also my correspondence to you on this subject, I find on the 27th ultimo I wrote you, subject, "oil rate" (please refer to this letter), wherein I quoted a dispatch that I had received from Mr. Stubbs. I also stated in this letter that I would make up some sort of message to send to Mr. Stubbs in answer to his from Chicago, November 26. I do not think that I sent you a copy of the message referred to, which telegram was as follows:

"NOVEMBER 26, 1888.

"J. C. STUBBS,

"Care Grand Pacific Hotel, Chicago:

"To quote Pinafore, Hunt evidently got those babies, or rates, mixed up. Lines had better give 90 a trial. If later on there's possibility advancing, you know I am always willing. Whittier has large lot Clipper oil and it will be hard for us to meet this competition even if our rate made 90."

As this freight-rate question is now settled, and I want you to know just exactly what has passed between Mr. Stubbs and myself, I believe with the above dispatch you now have the full data up to date on this subject.

Yours, truly,

E. A. TILFORD.

[Copy of telegram.]

SAN FRANCISCO, December 11, 1888.

W. H. TILFORD, 26 Broadway, New York:

Assistant general freight agent Union Pacific Railway just arrived here. He says practically rates from Chicago 99 per cent of New York rate. This answers your telegram, 4th. Lead rate will be January 1, \$1.06 from St. Louis; linseed 90 from Missouri River. We have stocks both sufficient to last next 4 months.

E. A. TILFORD.

This is since the interstate-commerce act and shows that the roads allow the Standard Oil Trust to stock up on low rates without the general public knowing anything about it.

Q. (By Mr. PHILLIPS.) How do you explain that, in view of the letters that were read by Mr. Archbold before this commission stating that there had not been discriminating rates given since the interstate-commerce law went into effect?—A. I do not believe those letters at all. My experience with railroad men has been such that I have a very low opinion of them.

HOW WERE THESE TELEGRAMS OBTAINED?

Q. (By Mr. JENKS.) Do you know where this paper secured copies of these telegrams?—A. This Mr. Bissell came to the Interstate Commerce Commission and also corresponded with me. Mr. Bissell wanted me to go in with him to prose-

cute this matter before the Interstate Commission, and I would not be surprised if the Interstate Commerce Commission had got copies of all these.

Q. But you do not know where the paper itself secured the copies?—A. At Chicago; that is a Chicago paper.

Q. Where did they get copies of these telegrams?—A. I think they got them from Bissell himself.

Q. Who is Mr. Bissell, and how did he get them?—A. He is one of the officers of this railroad; W. A. Bissell, St. Louis. He was general freight agent of the Atlantic and Pacific Railroad, one of the through lines. I think Bissell was discharged, and it strikes me he became an employee of the Standard Oil Company afterwards; that is my impression. I am not positive about that, but he was the man that exposed all this.

Q. Of course these telegrams are of a private character between officials of the Standard Oil Company, and it is quite singular that they should fall into the hands of Mr. Bissell.—A. Mr. Bissell was discharged, either discharged from the railroad or the Standard Oil Company, or he left them; that is the way they got out.

Q. So you think there is no question at all as to the trustworthiness of these?—A. No question, not at all; and I would not be surprised if the copies of these were with the Interstate Commerce Commission, because I know he corresponded with them.

“COMMISSIONS” ON FREIGHT.

Now, they have got up a new phrase; that is, comparatively new; within 5 or 10 years maybe, but since the general rebate exposures came out. They have adopted the new phrase “commission,” a per cent off. The railroads say they can pay whatever commission they please; that is, they can pay 10, 25, or 50 per cent on a shipment, you know, and then go on the stand and say they are not paying rebates. They have adopted that name “commission” instead of rebate; a new order of things, that is all, to whip the devil around the stump.

Q. (By Senator KYLE.) Paying commissions for freight?—A. Yes; for instance, if you are shipping \$50,000 or \$100,000 worth of goods in a certain length of time they will take off 50 or 75 per cent instead of making a rebate.

Q. Paid as a bonus to get trade?—A. Yes. Here is the point: These large shippers send an agent to a railroad and say to them, “Now, I think I can get that man’s business, amounting to so much, provided you can pay him a certain commission.” Well, “How much do you want?” That is finally arranged about the per cent; it is done through this intermediary, may be, although I do not know that the Standard Oil Trust has to do anything of that kind. I think they go direct to the headquarters of the road and make their own commission. Their own men are officers and trustees and fix all that easy enough.¹

Q. (By Mr. CLARKE.) Have you any correspondence or documents of any kind to prove that use of the word “commission”?—A. No; I do not know that I have. I have not any at hand here.

Q. How do you know, then, that is their present method?—A. I know that from general information that I have had on the subject.

Q. (By Mr. SMYTH.) Have you ever asked for a commission?—A. No, sir.

Q. It has never been refused you?—A. I have never asked for it, and of course it has never been refused.

Q. Do you suppose it would be refused?—A. Why, certainly. They would say at once, we are not giving rebates, are not giving any discriminations or giving commissions to anybody.

Q. Do you think that is done in other lines of business than the oil business?—A. Oh, yes; only I think the discriminations in the oil business are much greater. I think that almost all these trusts and combinations are formed upon these lines; and then they go to a railroad and say, “We have got so much freight to carry. What will you take it for? and if you do not want it we will give it to some other railroad.” They will fix up a rate and say, “We will give you so much freight within a certain length of time.” These large shippers figure all these things out. They know just what a road can take freight for and make a small margin.

Q. You have no proof of that?—A. No; I have no proof of that.

Q. But you think it is so?—A. I do. I should say with all these gross freight discriminations that I have exposed here they would do almost anything to accomplish their end, when it is right against the law. It is \$5,000 fine and 2 years in the penitentiary for each and every offense of freight discrimination, but what

¹ See Mr. Page, pp. 768-770.

does it amount to? It does not amount to anything. It doesn't deter any of these men from freight discrimination, not a bit.

Q. Do you mean us to understand that it is owing to the hostility of the Standard Oil Company to you personally that these commissions are not granted to you? Do you think they are granted in other lines of business?—A. Oh, yes; certainly they are; and the letters of Receivers Cowen and Murray are the best evidence I know of. They themselves say and admit in that letter to the Interstate Commission that they themselves are criminally violating the interstate-commerce law, and after January, 1899, "we are going to observe tariff rates;" and they say further, "If we find any of our neighbors violating the law we will complain to you and we hope you will use your best efforts to compel them to come to time." They write a letter and admit that they are criminally violating the law, and they are the receivers of a railroad under protection of the United States court. My idea of it is that they thought that the other roads were giving a bigger commission and better rebates than they, and they were not getting their share, and they just thought they would come out and expose them.

Q. Your complaint is that they would not give you any?—A. My complaint is against freight discrimination; that the small shipper can not do any business to-day because of rebates and freight discriminations. It is the greatest evil of the day, and it is in gross violation of the law. We have plenty of laws but they are not executed; one man stops the whole business. The Federal antitrust act has all the elements in it to protect the people, but it is not enforced. It is not worth that [snapping his fingers].

THE ATTORNEY-GENERAL SAID NOT TO ENFORCE THE LAW.

Q. (By Representative LIVINGSTON.) Please explain why the antitrust act is not executed.—A. Because the Attorney-General does not enforce it as he ought to enforce it.

Q. Can it not be enforced in the States independent of the Attorney-General?—A. No. The act says that it must be done through the Attorney-General of the United States and his deputies. You know he has about 75 deputies under him. I will just read section 4:

"SEC. 4. The several circuit courts of the United States are hereby invested with jurisdiction to prevent and restrain violations of this act; and it shall be the duty of the several district attorneys of the United States, in their respective districts, under the direction of the Attorney-General, to institute proceedings in equity to prevent and restrain such violations. Such proceedings may be by way of petition setting forth the case and praying that such violation shall be enjoined or otherwise prohibited. When the parties complained of shall have been duly notified of such petition the court shall proceed, as soon as may be, to the hearing and determination of the case; and pending such petition and before final decree, the court may at any time make such temporary restraining order or prohibition as shall be deemed just in the premises."

Q. Has there been any effort made in your State to enforce that by any one of those solicitors?—A. I do not know. I have had correspondence with the Attorney-General of the United States myself in regard to proceedings against the Standard Oil Trust, but he doesn't act. I wrote him a year ago.

Q. Have you that correspondence?—A. No, I haven't it with me; but that is the great trouble with the whole business. If this antitrust act which was passed had been immediately enforced, I do not think there would have been this epidemic of trusts we have to-day, because they can enjoin and prohibit and confiscate their goods. I will just read that part of it:

"SEC. 6. Any property owned under any contract or by any combination or pursuant to any conspiracy (and being the subject thereof) mentioned in section 1 of this act, and being in the course of transportation from one State to another or to a foreign country, shall be forfeited to the United States and may be seized and condemned by like proceedings as those provided by law for the forfeiture, seizure, and condemnation of property imported into the United States contrary to law."

They can enjoin. Suppose all these 75 attorneys were under orders from the Attorney-General of the United States to proceed against everyone, it would make a great difference. But of course it would not amount to anything unless you get some of them in state prison—fines with them don't amount to anything.

Q. (By Mr. JENKS.) Do I understand you to say that in your correspondence with the Attorney-General the Attorney-General declined to enforce the law?—A. He made excuses from one thing to another; that he hadn't the time to look into it, and the Assistant Attorney-General had gone to Europe and hadn't got back.

¹ For the letter referred to, see p. 637. See also Mr. Page, p. 770.

Senator KYLE. I think it would be better to have a copy of the correspondence furnished, if you can furnish it, inasmuch as an implication has been made that he in a sense has put you off.

Q. (By Mr. JENKS.) Will you be kind enough to furnish the commission a copy of the correspondence with the Attorney-General?—A. Yes, I can.

Mr. JENKS. If you please.¹

THE INTERSTATE COMMERCE COMMISSION DOES NOT DECIDE.

Q. (By Representative LIVINGSTON.) You said awhile ago that discriminations on this transcontinental line were prevalent and constant. Have you made any effort with the Interstate Commerce Commission to have that stopped?—A. I have in a few of my own cases here. Eight or 10 years ago I made complaint—and the cases have all been held up and have been decided, partially decided—and they do not amount to anything. I have brought suits against the transcontinental lines, with notifications to 150 lines that they should appear and answer; and I proved all these gross freight discriminations, and I believe they are going on just as much to-day as ever.²

Q. What does the Interstate Commission say about it?—A. They do not decide my cases; they do not decide this gross freight discrimination.

Q. Do they give you any reason why they do not decide them? Have you any correspondence here that will show that?—A. Yes, here is the decision of this case.

Q. (By Mr. PHILLIPS.) When was that decision rendered?—A. April 9, 1892. They were brought in March, 1889, and April 26, 1889. They did not decide them until April 9, 1892, and then they only partially decided them, and left them all open for additional evidence.

Q. (By Representative LIVINGSTON.) Additional evidence on which side?—A. And of course it so disgusted me that I would not have anything more to do with it; I would not take any more evidence. I had spent a lot of money, and I had a first-class lawyer, one of the finest in the United States, and a railroad man, to see to the cases, and proved all that I charged, and then they hung them up.

CONDITION OF INDEPENDENT REFINERS.

Q. (By Mr. SMYTH.) You are a producer of oil as well as a refiner?—A. No, I have not refined any oil since May, 1896.

Q. Does this persecution on the part of the Standard Oil Company apply to your business as a producer of oil?—A. No, I do not suppose it does, because I get the same price per barrel as anybody else.

Q. They buy your crude oil?—A. Yes.

Q. It is only your business as a refiner?—A. Yes.

Q. Have you been forced to discontinue your business of refining?—A. Yes, I have been forced to discontinue refining owing to freight discrimination.

Q. And your refinery is idle?—A. Yes, idle and rotting down. I have not run it since 1896. It is useless for anybody to try to build a new refinery against these odds. That would be suicidal. Even if I had \$1,000,000 or \$5,000,000 I would not "buck" against them.

Q. (By Representative LIVINGSTON.) Did they offer to buy your refinery?—A. At one time we had some negotiations, but not latterly.

Q. Why did not you sell to them?—A. Well, they did not want to pay me what I thought it was worth, and I did not sell to them.

Q. You either had to take what they offered or quit?—A. Yes; and since that time they have been charging me as a blackmailer because I did not take what they thought it was worth.

Q. (By Mr. SMYTH.) But there is no obstacle in your way as a producer of oil?—A. No.

Q. (By Mr. KENNEDY.) Are there any refineries in Ohio independent of the Standard Oil Company?—A. Yes; Scofield, Shurmer & Teagle have one at Cleveland.

Q. Do they refine the Lima oil?—A. I do not know that; I am not sure about that.

Q. Do you know whether they are doing business at a profit or not?—A. No; I do not.

Q. How long have they been in business?—A. They have been in business a good many years; I do not know whether they were doing it at a profit, but on general principles I think there is hardly any refinery making money.

Q. They have a large refinery?—A. Yes; pretty good size.

¹ Filed with the Commission.

² See p. 715.

GOVERNMENT OWNERSHIP OF RAILROADS THE ONLY REMEDY FOR FREIGHT DISCRIMINATION.

Q. (By Representative LIVINGSTON.) What is your opinion and the opinion of others similarly situated with yourself as to the real reason why these things are not attended to? You seem to think the authority is broad enough.—A. Yes; I do. The whole trouble is because the officials whose duty it is to execute the law don't do it.

Q. Why do they not do it?—A. That is what is the matter—why don't they do it? That I can not answer.

Q. Is it political, pecuniary, or what is the trouble?—A. I think the trusts and combinations have their powerful influences.

Q. Do you mean in a pecuniary or political way, or both?—A. I think they have it politically.

Q. (By Mr. FARQUHAR.) Do you not think there is a remedy in the Sherman antitrust act for all of these troubles that have come upon you?—A. Yes; certainly I do.

Q. You think the law is sufficient?—A. Certainly. All the trusts and combinations could have been destroyed if the Sherman Act had been executed in its earlier days.

Q. (By Mr. A. L. HARRIS.) You know the Knight case was decided many years ago?—A. That was before the Sherman Act.

Q. (By Representative LIVINGSTON.) Do you mean to say that you have no new suggestions or recommendations to give to the commission by which we can amend that law or bring into life a new law by which these trusts and combinations can be controlled?—A. I do not think any amendment to any law that you have got will do any good; I believe in Government ownership of railroads. I do not believe there is any other way that you can get out of that trouble. We have had 12 years' trial of the interstate-commerce act and 9 years of the Federal anti-trust act, and have not reached it.

Q. (By Mr. PHILLIPS.) Provided the Government did own the railroads and there was absolutely no discrimination in freights, could you refine and market oil in this country?—A. I think I could, but I can not do it now. Of course I could not do it so well as I could before this epidemic of combinations came on several years ago, before these mammoth combinations got up. Now they come in and cut prices right where you sell and freeze you out.

Q. If I understand you, any large combination can follow up the small operator and get the markets?—A. Yes.

Q. And absolutely destroy him?—A. Yes.

Q. If there was absolutely no discrimination?—A. Yes, they could do even that without any discrimination and do it by these ill-gotten gains that they have secured in the past.

ONLY DIRECT LEGAL ACTION CAN DESTROY THE COMBINATIONS.

Q. (By Representative LIVINGSTON.) Then ownership of railroads would do no good unless the other remedy came with it?—A. What?

Q. The destruction of the combinations?—A. Yes, that would help, you know, to destroy them. Of course, I do not see any other way of destroying these combinations, excepting that the attorneys-general of the various States forfeit their charters.

Q. (By Mr. CLARKE.) Do we have any power against combinations of foreign countries?—A. I do not know why we have not.

Q. Would you repeal the protective tariff?—A. I would repeal the protective tariff wherever it affects any trust or combination.

Q. Well, suppose a trust or combination was formed in a foreign country upon some article or line of merchandise that gives them an opportunity to operate against similar productions in this country as strongly as any combination does here. Wouldn't you need a protective tariff to protect you against that?—A. I believe in a protective tariff to a certain extent, to the protection of home industries.

Q. (By Representative LIVINGSTON.) Provided it is an individual industry?—A. Yes, I say to protect the individual more than the trust. The trouble is that the trusts and combinations are getting all the protection, and the people and smaller fellows do not seem to get it.

(Reading:) "The Chicago, Rock Island and Pacific Railway, in which two trustees of the Standard Oil Trust, Henry M. Flagler and Benjamin Brewster, were directors, issued on June 13, 1891, a 'special tariff,' including all connecting lines,

in which petroleum and its products from Whiting, Ind., are made at Chicago rates as follows:

"Current Chicago rates as published in various issues of this company."

(No doubt practically in effect to-day without a published tariff.)

"The Standard Oil Trust have at Whiting, Ind., suburb of Chicago, on the Lake Shore, the largest petroleum refining plant in the world.

"FREIGHT DISCRIMINATION OF 110 PER CENT IN 1897, IN FAVOR OF THE STANDARD OIL TRUST."

Now, here is something in 1897; that is pretty late discrimination. Mr. Archbold says you have not had any since 1887. This is up to 1897.

(Reading:) "In 1897 the New York, New Haven and Hartford Railroad Company, in which William Rockefeller is a director, discriminated in freight rates in favor of the Standard Oil Trust to the extent of 110 per cent, by which 2 cars of naphtha, containing 100,986 pounds, was carried at 48,000 pounds, or 2 carloads for one, applicable to all Standard shipments, this being accidentally discovered."¹

Q. (By Mr. JENKS.) Where was that proved?—A. Why, it was before the Interstate Commerce Commission, and I have got here letters from Mr. Coburn in regard to it, the Liberty Oil Company.

Q. What did the Interstate Commerce Commission decide?—A. They have not made any decision yet. I have extracts of the testimony—I do not know but I had better read them—published in the Springfield Republican of March 13, 1898, of different officers of the railroad in regard to it.

Q. Perhaps you had better file this with us so that we will have it on file here?—A. I will read a letter here.

Q. You might read the letter and we will take references to the Interstate Commerce hearing?—A. This is a letter from the Liberty Oil Company, which refers to some of the matters.

(Reading:)

"CHELSEA, MASS., December 15, 1897.

"Mr. GEORGE RICE, Astor House, New York, N. Y.

"DEAR SIR: Your esteemed favor of the 14th instant at hand, and your kind feeling toward us in our fight with the Standard Oil Company we certainly appreciate. We are still having a very hard fight with the Standard Oil people here in our tank wagon business, but up to the present time we 'hold the fort.'"

But I was going to say right here that I have seen the original waybills of these; Mr. Marchand of the Interstate Commerce Commission showed me the original waybills showing this.

Q. (By Senator KYLE.) The ones referred to in this case?—A. Yes.

(Reading:)

"In regard to the underbilling of Standard Oil Company freight, the paid freight bill of which we hold, will say for your personal use that the whole matter with all papers is now in the hands of Mr. Marchand, agent of the Interstate Commerce Commission, who leaves here to-day for Washington, and everything looks fair now that we shall be able to procure a criminal indictment against the Standard Oil Company in this case. Both Mr. Prouty and Mr. Marchand of the commission feel confident that they have a sure case, and we shall push it for all it is worth.

"When anything new occurs in this matter I will, both at your own request and at the request of Mr. H. D. Lloyd, keep you posted.

"Thanking you for the interest you have manifested in our welfare, we are,
Most respectfully, yours,

"LIBERTY OIL COMPANY,
C. M. COBURN, Manager."

(Reading:) "This is a fine exposé of what legalized pooling would mean, for this road was a member of the Joint Tariff Association, which comprised all railroad lines east of Chicago—strongest railroad pool ever organized—by which they dictated the rate terms to all the lines west of Chicago on which they would be permitted to get their traffic to the seaboard.

"Another fine feature about this pool was that they excluded petroleum from the regular classified rate-making power, and made it subject to special contract.

"On December 14, 1882, the Produce Exchange of New York established, by resolution, and not changed, a gravity weight in the sale of refined oils of 44

¹ See Mr. Page, pp. 770-775; Mr. Westgate, p. 373; Mr. Archbold, p. 550.

degrees, which actually weighs 6.7 pounds per gallon. The railroads to-day have an established weight of 6.4 pounds per gallon, by which the refined oils of the Standard Oil Trust are now carried free, to the extent of 4.68 per cent, through underweight."¹

Q. That applies also to the oil of all their competitors?—A. Why, certainly; of course it does; but their having a large amount more makes it greatly to their advantage, and on their lubricating oils, that are carried at 64, it is 15 per cent.

Q. (By Mr. SMYTH.) That statement that you make at the top of the page about the 2 cars of naphtha—was it proved that that was the custom? Was there more than 1 case or was only 1 case proved?—A. They would not be apt to prove more than 1 case; that was the only case that came up. There was not, as I understand, any further proof of any other cases. There would not be; this only got out accidentally, you know. You never can find out anything of this kind except it comes out accidentally. It is fair to presume that all their shipments over this line were on this same basis. No question about that whatever.

Q. (By Mr. JENKS.) Do you know what defense they put in?—A. Mr. Howard Page, the agent of the Standard Oil Company, went over to Boston and said that it was a clerical error, and it was corrected. They would do that. Of course they are very nice men and they would probably do that every time. They probably carried a thousand cars there that same way.

(Reading:) "This also applies to paraffin and lubricating oils, fuel oil, and residuum, which are carried at 17 per cent less than actual weight. The Standard Oil Trust own over 8,000 tank cars, which are paid for every 3 years,² through the allowed mileage rate of three-quarters of a cent a mile each way, another form of freight discrimination, for the railroads pay to them three-quarters of a cent a mile to haul back a dead weight empty tank car that is not applicable to general freight like a box car."

Just think of that.

Q. (By Mr. FARQUHAR.) That applies to all owners of tank cars?—A. Yes; but they have got most of the tank cars.

Q. Does it not also apply to the private cars of meat companies?—A. Why, yes, of course; it applies to all. But a box car can bring back other freight.

(Reading:) "Receivers Cowen and Murray, of the Baltimore and Ohio Railroad Company, on December 20, 1898, admit that within the territory north of the Ohio River and east of the Mississippi secret rates, drawbacks, rebates, and other devices were then in vogue."³

If you would like to have it read I will read it.

Q. (By Mr. FARQUHAR.) We have had this fully in the testimony by Mr. Cowen himself. He explains his own letter in the transportation part of it.—A. I would like to call your attention to a very important thing.

(Reading:) "Section 6 of the interstate-commerce act provides that all original tariff sheets 'shall also state separately the terminal charges and any rules or regulations which in anywise change, affect, or determine any part or the aggregate of such aforesaid rates and fares and charges.'"

Now, let us see about that.

(Reading:) "The railroads in gross violation of this section issue and file with the commission general rate tariff sheets for public use, and then side track these by the issuance of innumerable supplements, special oil tariffs, special circulars, commodity rates, etc., that are often and indiscriminately filed as a substitute to change, cancel, and amend the original tariffs, and to such an extent is this done that in reality there is no head or tail left of it—very little of the body—but it stands inviolate for public use."

Now, that is one of the grossest misuses, you know, of the Interstate Commerce Commission by the railroads. Here they come and file a general tariff, and the act says here that the general tariff shall state everything that affects the rates, and they do not pay any attention to that and the Interstate Commerce Commission do not enforce it. And why do they not enforce it I should like to know?

Q. (By Mr. KENNEDY.) Do they not say themselves that they have no power to enforce it?—A. No power to do that? It is very queer. They can enforce that, I think. I think it is a very flimsy excuse about this no power.

Q. Have not the Interstate Commerce Commission year after year asked to have their power enlarged so that they could enforce their findings?—A. Oh, yes; I have understood that, but they have plenty of power to do a good deal more than they do, and they don't do it. I say that is one thing. I say here (reading):

"The query is, Why is it that for 12 years the Interstate Commerce Commission have neglected their duty and not corrected this gross evasion of the law, and

¹ See Mr. Page, p. 766.

² See Mr. Page, p. 778.

³ See copy of their letter, p. 687. See also Mr. Page, p. 770.

allowed such special tariffs to be filed, and why is it that all general tariffs omit this wise provision of the law, and why is it that railroads do not comply with the law in any of its essentials, nor are forced thereto?"

What is the reason they don't do it? Because we have not got any kind of a country here that enforces its laws.

(Reading:) "Charles Francis Adams, president of the Union Pacific Railroad, had this to say, December 15, 1888, before the Commercial Club of Boston:

"The dishonest methods of rate cutting, the secret systems of rebates, the indirect and hidden payments made to influence the course of traffic resorted to or devised during the last 2 years I do not hesitate to say are unprecedented in the whole bad record of the past."

"The above charges included 8 months' experience of the interstate-commerce act, which was, and is to-day, utterly ignored with no effect on lawless railroad freebooters.

"In 1894 an expert accountant discovered that \$7,000,000 in rebates had been paid by the Atchison, Topeka and Santa Fe Railroad Company, of which no doubt the Standard Oil Trust got the lion's share."

"These discriminations are not now confined to oil, but extend to and cover nine-tenths of the commerce of the country, meat and manufactured products, as well as the products of the soil and mines, which articles to-day are controlled by the great trusts and combines, and this control has been secured only through unlawful rebates. These combinations having thus obtained the absolute control of the railroads, turn about and dictate the rates of freight these railroads shall charge, and thus dictate what their competitors shall pay.

"I am reliably informed that there is not a railroad leading out of Chicago but has a representative buyer that purchases all the grain shipped over its lines. On this grain 10 to 15 cents a bushel rebate is paid to the buyer, who divides the same with the railroad officials, all of which comes out of the farmer.

"The State exercises its rights of eminent domain to give the right of way to the railroads; the people thus part with their property to these corporations on the faith that they shall exercise the franchises thus granted honestly and with an equal hand.

"It is a burning shame that these rights and franchises, the gifts of the State, should be administered by railroad magnates to the impoverishment and slavery of the people.

"Free and open transportation and untrammelled opportunities of doing business are virtually closed and sealed.

"The farmer complains of extortion, but is blinded by the secrecy in which it is planned.

"The amount of these fraudulent rebates would pay the interest on his home-
stead mortgage, earn him a living, and make his life contented and happy.

"These discriminations in rates and fraudulent rebates of freight to favored combinations and officials are the crying evil of the day.

"Our laws are overridden, our courts are condemned, and our whole social structure is debauched."

Q. (By Mr. JENKS.) You have already explained to us the rest?—A. I will put in the following as an exhibit:

"THE INTERSTATE COMMERCE ACT PROVIDES A PENALTY ON CARRIERS AND SHIPPERS, OF \$5,000 FINE AND 2 YEARS IN THE PENITENTIARY, FOR EACH AND EVERY OFFENSE, BUT IT HAS NO DETERRENT EFFECT TO STOP REBATES.

"The interstate commerce act provided a penalty on carrier officials, and by amendment, on the shippers, of \$5,000 fine and 2 years in the penitentiary for each and every offense, and with such stringent measures no deterrent effect is had on rail or trust officials. The same old unbroken line of freight discriminations for 27 years in the form of 'secret rates, drawbacks, rebates, and other devices,' have continued to exist up to date without a break, and for the reason that not a violator of the act has yet been sent to the penitentiary to atone for his misdeeds.

"IT IS QUITE EVIDENT FROM THE FOLLOWING FACTS THAT THE STANDARD OIL TRUST HAS ONLY MADE CRUDE PETROLEUM CHEAP TO THE PRODUCER WHILE IT MAKES THE PRODUCTS THEREOF IN COMPARISON HIGH PRICED TO THE CONSUMER.

"It is ridiculously absurd to say that the Standard Oil Trust has made oil cheap, and all that is necessary to refute such false assertions is to refer to a pamphlet issued by Solicitor Dodd in 1888, in which he broadly asserts that overpro-

duction was the cause of making crude petroleum cheap, but in subsequent speeches he couples the products thereof with it.

"Petroleum products are as much higher than they should be as the overcharges or freight discriminations this monopoly receives; for all freights are purposely advanced and made that much higher in order that greater discriminations may follow, which the consumer is forced to pay in higher-priced oil. To-day, and for many years back, this monopoly has charged producers of oil in the oil-producing regions 20 cents a barrel for local pipage not costing 5 cents, or 4 times more than it costs, and when crude oil sells at 50 cents a barrel this charge is 40 per cent of its market value. This is the how of it that this monopoly makes crude oil so cheap to the producer. The Standard Oil Trust admits cost of local pipage of 5 cents a barrel. (B, 102.)"

"To-day, and for many years back, in conspiracy with the railroads, it has charged the same pipage rates to the seaboard as the railroads charge, and to-day this conspiracy charge is 10 times more than the pipage cost—that is to say, the present rail rate from the oil regions to the seaboard is 16½ cents per 100 pounds, and on 320 pounds in bulk to the barrel equals 52.8 cents per barrel, while the pipage does not cost to exceed 5 cents a barrel¹—and this is another way this monopoly has of making crude oil cheap to the producer and high to the consumer.

"Mr. F. B. Thurber seems to be an outside champion for this monopoly, and says it has made oil cheap, because in 1871 the average price of refined oil for export was 25.7 cents per gallon, while in 1898 it only averaged 5.7 cents per gallon, and gives the following reasons therefor:

"This great decline in the price of oil is attributed partly to the increase in production, but more largely to improvements in manufacture and transportation, which were only attainable through the aggregation of capital in this industry."

This man has no experience whatever in the oil business, but he is the champion of the Standard Oil Trust. They put him forward here as an outside man.

Q. (By Mr. CLARKE.) Do you dispute his statement that it was only attainable through the aggregation of capital in this industry?—A. Yes; I do dispute it.

(Reading:) "Why is it that Mr. Thurber does not enlighten us and give the reason why refined oil for export was reduced 35 cents a gallon, or \$17.50 per barrel, from 61½ cents, average price in 1861, to 26½ cents, average in 1870? I presume his reasoning would be that the Almighty did that, while the Standard Oil monopoly engineered all the balance without His aid or assistance.

"Why is it that Eastern home dealers and consumers of refined oil, just previous to the entering of home competition at the seaboard, April, 1896, had to pay more than twice as much for their oil as foreign consumers for export? The price per gallon, in bulk, to retail dealers was 9½ cents a gallon, and for export 4½ cents a gallon, with crude oil \$1.20 per barrel, and this is how Standard oil is made so cheap.

"Why is it that Mr. Thurber does not enlighten this committee and give the reason why in 1892 refined oils were selling in several of the States, like Texas, Utah, and Idaho, at 4 times the price of export oil for foreign consumption? In Wyoming and Nebraska it was 3 times as much, and in Arkansas, Alabama, Florida, Georgia, Mississippi, Missouri, North Dakota, South Carolina, South Dakota, Tennessee, and Washington double the export price."²

This is all fully explained, gentlemen, in my exhibits here, B 171, etc.: and my own experience in finding out all over the United States, by sending out special circulars in 1892, shows those facts to be absolute, and the details are in my exhibits full and complete.

(Reading:) "The Pennsylvania Railroad Company up to August 28, 1898, carried same number of gallons of refined oil in a barrel (including the package) at same price as bulk oil in tank cars to offset the return dead weight of the return tank car, when by the power of the Standard Oil Trust and under the interstate-commerce act, 25 per cent more freight has been charged since that time. The rate of freight in 1887 was 52 cents a barrel, or 13 cents per 100 pounds. To-day it is 16½ cents, or 27 per cent higher.

¹ Mr. Rice's reference is to a paragraph of the contract of October 9, 1883 (see p. 738), for division of business between the National Transit Company and the United Pipe Lines, parties of the first part, and the Tidewater Pipe Company, party of the second part. The paragraph in question, as given by Mr. Rice, is as follows: "If in any calendar month either party shall gather more than its said percentage of said aggregate of crude petroleum gathered, as gathering is herein defined, it shall pay to the other party on the quantity gathered in excess of its said percentage an amount per barrel equal to three-fourths of the then current full rate per barrel charged for collecting and delivering crude petroleum in the oil-producing regions, commonly called local pipage." The local pipage is 20 cents a barrel, and the sum to be retained by the gathering company, as payment for the service, on the excess over its agreed proportion, is, therefore, 5 cents a barrel.

² See Mr. Phillips, p. 594; Mr. Emery, pp. 666, 667; Mr. Rogers, pp. 561, 568.

³ See Mr. Page, p. 791.

"To-day it costs 35 per cent more to ship the same number of gallons of oil in a barrel than it does by bulk in a tank car, because the railroads will not furnish the tank cars in which to ship it. The competitive independent refiner who can not afford to purchase tank cars is subject to this very important discrimination and can not compete, and he can not help himself. This is the how of it, that the Standard Oil monopoly makes oil so cheap to the consumer. In the case of export it had to sell its oils at a fair living price, owing to Russian competition, while to general consumers in America, for want of competition, it charges fabulous prices, double, treble, and four times as much, owing wholly to the power of this monopoly to dictate to the railroads the high tariff rates their competitors must pay, while their own goods are carried at nominal figures through the grossest of the gross rebates or freight discriminations. The absurdity of Thurber's reasoning may be further illustrated when I state that the cost of refining petroleum from 1871 to 1880 did not exceed 1 cent a gallon, and from 1880 to 1890 not over half a cent, and from 1890 to the present time it has not cost this monopoly to exceed one-quarter of a cent a gallon, and to the average independent refiner about one-eighth more,¹ so that improvements in manufacture cut no figure, while the monopolistic and most extraordinary charges for pipe transportation could only be maintained through the power of the railroads. Mr. Thurber would manifestly have been more correct if he had stated that the price of petroleum products had been greatly advanced by the Standard Oil monopoly through the methods stated by me, and that its unlawful aggregation of capital, so necessary to the business, was thus acquired. Mr. Thurber on November 24, 1882, testified before a legislative committee of New York State as follows:

"The Standard Oil Company is an example. Here is a corporation which, according to testimony recently given in Pennsylvania, began in 1872 with \$1,000,000 capital, which was subsequently increased to \$3,500,000, and on this latter capitalization it paid dividends in 1880 amounting to \$10,321,812, and it practically controls and fixes the value to the consumer on a staple ranking third in the list of our nation's exports."

This is only on one corporation.

[Reading:] "Through its speculative manipulation it has within a few weeks more than doubled the price of crude oil; and its profits thereby are variously estimated at from \$20,000,000 to \$40,000,000."

COST OF REFINED OIL, FREIGHT PAID, 2½ CENTS.

"The market price of crude oil for the past 10 years—1889 to 1898, inclusive—has only averaged 1½ cents a gallon, while the local pipeage does not cost to exceed 5 cents a barrel, or one-eighth of a cent a gallon. It does not cost to exceed this amount to pipe same to the seaboard, or an eighth of a cent a gallon more. It can be refined for one-quarter of a cent a gallon, making a total average cost of 2½ cents per gallon for the past 10 years of refined oil at the seaboard, which is also applicable to interior refineries, to which, if we add one-half cent a gallon as a fair average freight paid by the Standard Oil Trust, makes the cost 2½ cents a gallon delivered to all interior cities and towns; so that one can form some conception when he buys oil of the immense percentage of profits thus to accrue, which can be turned over every 60 days, and conclusively shows how philanthropic this trust is in comparison with the prices the consumer is forced to pay. The process of refining oil is very simple, easy as making steam, similar distillation.

"Another method the Standard Oil Trust has of making illuminating oils cheap to the consumer is that where they have no regular established agency they give a secret rebate to certain private dealers who have been selling competitive oils, ranging from 25 cents to \$1.50 per barrel, according to the opposing strength of the opponent, to thereafter maintain the regular established card-list price made by the trust.

"THE STANDARD OIL TRUST RECEIVES 72 PER CENT ADDITIONAL PROFITS IN THE SALE OF PETROLEUM PRODUCTS MANUFACTURED FROM LIMA CRUDE THAN FROM THOSE OF THE BEST GRADE CRUDE.

"On September 15, 1895, the Produce Exchange of New York, through the power of the Standard Oil Trust, passed a resolution making the manufactured products from inferior Lima crude petroleum, known as sulphur oil, a good delivery, on a parity with the manufactured products from best grade crude. The average annual market price of this inferior grade crude for past five years—1894 to 1898, inclusive—was 59 cents per barrel as against \$1.01½ for the best grade, or the latter 72 per cent higher. Thus it is that the Standard Oil Trust received 72 per cent

¹ See Mr. Lee, p. 276; Mr. Westgate, p. 371.

more profit in the sale of manufactured Lima crude products than from those of the higher-priced crude, which could not be done except through the power of this monopoly to enforce and exact equal price for both classes of goods, and this is another instance of this great trust making petroleum products from inferior grade crude so cheap to the consumer. For the past 5 years—1894 to 1898, inclusive—the total production of petroleum was 279,129,467 barrels, of which Ohio produced 85,306,684 barrels and Indiana 20,608,798 of this inferior grade of crude petroleum, or 88 per cent.

"The last Government report for 1898 has this to say about this inferior grade of crude:

"The product is characterized by the presence of sulphur compounds, which make it of less value for refining purposes than the eastern Pennsylvania product."

"The refined product from this poor grade crude is adulterated with the products made from the best grade crude, and the results are easily seen by a white film on the lamp chimney that obstructs the light, requires constant attention to turn up the wick to get more light, smokes the lamp, and has an offensive smell. In view of Archbold's laudatory remarks on this particular oil¹ it will be quite refreshing to refer to a caution circular, issued in 1890 by one of the trust corporations, denouncing said oil. (B, 166)."

This is a very interesting circular, giving what they think about that oil (B 166). It tells what the Standard thought of these oils.

Q. (By Mr. FARQUHAR.) Have they not, under 2 new processes, eliminated the sulphur and a great many other various ingredients from the Lima oil?—A. Partially; but the product from the Lima oil is not near as good as the other oil.

Q. But there has been a great improvement since 1890, since they issued this circular?—A. Oh, yes, there has been a great improvement. They have improved the manufacture of it to some extent. I will put in as an exhibit to show violations of the interstate-commerce law.

(Reading:)

"NONCOMPLIANCE AND NONENFORCEMENT OF THE INTERSTATE-COMMERCE ACT PRODUCES EXISTING GROSS DISCRIMINATING FREIGHT RATES, AS TO PERSONS AND PLACES, AND TO THE EXTENT OF 211 PER CENT IN VIOLATION OF SECTIONS 3 AND 4 OF THE ACT.

"The commission constantly receives and places on file without protest thousands of rate tariff sheets that plainly and unequivocally show upon their face gross violations of that all-important section of the act, the fourth section, which says that it shall be unlawful for any common carrier to charge or receive more for a short than for a long haul over the same line in the same direction." To-day there exists 211 per cent more traffic rate charge on the short intermediate haul over the long haul, as the following figures show, from statements made to me by the secretary of the commission, July, September, and October, 1899.

"On the shipment of petroleum and its products in car lots over the transcontinental lines, comprising 21 lines of railroad, as merged into that unlawful and changed combination now known as the 'Transcontinental Freight Bureau,' the following 2 railroads in the pool are cited as samples of the gross violations of the interstate-commerce act as they exist to-day by this association of railways: Chicago to San Francisco, 2,357 miles, via Union Pacific, present tariff rate is 78½ cents per hundredweight, while the highest intermediate rate to Humboldt, Nev., 1,962 miles, is \$1.75 per hundredweight, or 122 per cent overcharge for 325 miles less haul, with a proportionate overcharge on 84 per cent of the total shipments. Ten years ago the intermediate rate overcharge was 56 per cent, now double. From Chicago to San Francisco, via Atchison, Topeka and Santa Fe, 2,662 miles, present tariff rate is 78½ cents per hundredweight, while the highest intermediate rate to Bagdad, 2,017 miles, is also \$1.75 per hundredweight, or 122 per cent overcharge for 635 miles less haul, with a proportionate overcharge on 76 per cent of total shipments. Ten years ago the intermediate overcharge was 116 per cent. Present fifth-class commodity rates, via transcontinental lines, Chicago to San Francisco, is \$1.65 per hundredweight, while the highest intermediate rate is \$1.85, or only 12 per cent overcharge. Petroleum products belong to fifth class, but made special. The Standard Oil Trust has at Whiting, Ind., on the lake shore, suburb of Chicago, the largest refining plant in the world, which is connected

¹ See Mr. Archbold, p. 532. See also Mr. Lee, pp. 275, 278; Mr. Emery, pp. 624, 625; Mr. Gall, pp. 672, 681.

² The reference is to a circular, signed with the name of the Waters-Pierce Oil Company, in which the following occurs among other statements of like tenor: "Illuminating oil produced from Ohio crude is so inferior in burning qualities, and offensive in odor, that it can not readily be sold where known."

³ See Eleventh Annual Report of Interstate Commerce Commission, pp. 37-48.

by Chicago's belt line with railways to all points in the United States. The southwestern lines, comprising the 'Southwestern Bureau,' composed of 10 prominent lines of railway, combined with 2 prominent steamship lines—the New York and Texas Steamship Company and Cromwell Steamship Company—are engaged in an unlawful combination to fix rail and water rates, in violation of the Federal antitrust act, while they grossly violate the interstate-commerce act as to persons and places, and to this extent as samples: From St. Louis to Galveston, Tex., 870 miles, via St. Louis, Iron Mountain and Southern Railway, present tariff rate is 83½ cents per hundredweight, while the highest intermediate rate to Aldine, Tex., 807 miles, is 55 cents per hundredweight, or 64 per cent overcharge for 63 miles less haul, with a proportionate overcharge on 92 per cent of total shipments. From St. Louis to Fort Scott, 388 miles, via the Missouri, Kansas and Texas, owned by Standard officials, of which John D. and William Rockefeller and Joel F. Freeman, former treasurer of the Standard Oil Trust, are directors, present tariff rate is 22½ cents per hundredweight, while to Parsons, 49 miles farther, it is raised to 30, or 36 per cent higher; continues same to Wagoner, 101 miles farther. At South McAllester, 78 miles from Wagoner, the rate is raised to 55, or 80 per cent more. This rate continues to Atoka, 44 miles from South McAllester, while at Coalgate, 48 miles from Atoka, the rate is again raised to 60, or 9 per cent more, while to Denison, 8 miles from Atoka, it is reduced 8 per cent, or to 55, which rate is maintained to Letitia, 1,088 miles, while the rate to Houston, 1,105 miles, is 33½ cents, or 64 per cent overcharge for 17 miles less haul, with a proportionate overcharge on 98 per cent of total shipments.

"THE LONG AND SHORT HAUL CLAUSE OF THE ACT NOT VIOLATED IN THE SHIPMENT OF GENERAL COMMODITIES IN 5 DIFFERENT CLASSES.

"It is a very significant fact to note that in the transportation of general commodity goods in 5 different classes, St. Louis to Galveston, as promulgated by the pooled 'Southwestern Bureau' of 10 prominent rail lines and two ocean steamship lines, there is no difference between terminal and intermediate rates. This is in compliance with the law, while in the case of petroleum shipments the railroads adopt the flimsy excuse of water competition and grossly violate the act to the extent of 64 per cent.

"St. Louis to Mobile, by the Mobile and Ohio Railroad, distance 644 miles, present tariff rate is 35 cents per hundredweight, while the highest intermediate rate to Eight Mile Station, 636 miles, is 57 cents, or 63 per cent overcharge for 8 miles less haul, with a proportionate overcharge on 98 per cent of total shipments. From Memphis to New Orleans, via the Yazoo and Mississippi Valley Railroad, 445 miles, present tariff rate is 17 cents per hundredweight, while the highest intermediate rate to Norwood, La., 339 miles, is 38, or 94 per cent overcharge for 126 miles less haul, with a proportionate overcharge on 73 per cent of total shipments. From Cincinnati to New Orleans, by the Queen and Crescent route, 836 miles, present tariff rate is 22½ cents per hundredweight, while the highest intermediate rate to Poplarville, Miss., 756 miles, is 44½, or 97 per cent overcharge for 70 miles less haul, with a proportionate overcharge on 91 per cent of total shipments. These same rates have been continuous for the past 10 years.

"From Cincinnati to Vicksburg, same line, 770 miles, present tariff rate is 22½ cents per hundredweight, as against an intermediate rate of 45½ to Brandon, Miss., 711 miles, or double—100 per cent more for 59 miles less haul, with a proportionate overcharge on 92 per cent of total shipments.

"From Louisville to Mobile, 670 miles, via Louisville and Nashville Railroad Company, present tariff rate is 18 cents per hundredweight, as against an intermediate class rate of 56 to Flomaton, 609 miles, or 211 per cent overcharge for 61 miles less haul, with a proportionate overcharge on 90 per cent of total shipments, with no change in rates since the partial decision of April, 1892, except in one instance, although directed by the commission to revise and correct these general overcharges. In 1889 the highest intermediate overcharge was 146 per cent, now 211, or 65 per cent higher.

"From Cairo to New Orleans, 550 miles, via Illinois Central, present tariff rate is 29 cents per 100 pounds, as against an intermediate rate of 41 to Mauchac, Miss., 518 miles, or 49 per cent overcharge for 37 miles less haul, with a proportionate overcharge on 93 per cent of total shipments.

"From Louisville to New Orleans, same line, 847 miles, present tariff rate is 18 cents per 100 pounds, as against an intermediate rate of 35 to Sauve, La., 843 miles, or 94 per cent overcharge on 5 miles less haul, with a proportionate overcharge on 99 per cent of total shipments.

"Louisville to Memphis, same line, 392 miles, present tariff rate is 12 cents per hundredweight, as against an intermediate rate of 34 to Lucy, 379 miles, or an

overcharge of 188 per cent for 18 miles less haul, with a proportionate overcharge on 96 per cent of total shipments.

"It must be conceded that the lesser terminal rates must be paying ones or there would be no object in the roads allowing such shipments. The Interstate Commerce Commission hold that established tariff rates must be remunerative. Thus it is that the inhabitants of the regions through which these lines of railway run are forced by railway tariff exactions to pay 42 to 211 per cent more for the products they buy than they should pay.

"By prepayment of freight at the low-car terminal rate the Standard Oil Trust is allowed to stop off its cars at high-rate intermediate points and thus receive an advantage of 43 to 211 per cent over their competitors. It also has the extra privilege to divide up full-loaded tank cars into less than car lots that should have paid 3 times the terminal rate, although, as an owner of tank cars, I was denied this privilege.

"Common carriers, under section 4 of the act, are not allowed to violate the long and short haul clause of the act without permission from the commission. From December 17, 1895, to August 4, 1896, I made complaint to the commission that it was their duty, under section 12 of the act, to proceed against violators of section 4 of the act (long and short haul). They would not act, but said that I might. Knowing from the answer that my action would be futile, I did not act any further in the matter.

"The State exercises its right of eminent domain to give the right of way to the railroads. The people thus part with their property to these corporations on the faith that they shall exercise the franchises thus granted honestly and with an equal hand.

"It is a burning shame that these rights and franchises, the gifts of the State, should be administered by railroad magnates to the impoverishment and slavery of the people.

"The United States Supreme Court, on March 30, 1896, Social Circle Case, fully upheld the statutes and decided that in this case railroads could not charge more for a short than for a long haul over the same line in the same direction. This decision has had no deterrent effect whatever on present railroad violators, as the evidence here plainly shows."

I will also put in here as an exhibit. (Reading:)

"CLEMENT A. GRISCOM, PRESIDENT OF THE NATIONAL TRANSIT COMPANY (STANDARD OIL TRUST), AND AS A DIRECTOR IN THE PENNSYLVANIA RAILROAD COMPANY, MAKES CONSPIRACY AGREEMENT FOR AND ON BEHALF OF ALL TRUNK LINES TO THE SEABOARD AND OF THE TIDE WATER PIPE COMPANY, SUPPOSED COMPETING PIPE LINE, FOR MAINTENANCE OF PIPE WITH RAIL RATES, 10 TIMES ABOVE PIPEAGE COST EXISTING TO-DAY.

"On October 9, 1883, to take effect October 1, the National Transit Company, for and on behalf of the Standard Oil Trust, made an agreement with The Tide Water Pipe Company by which it allowed them 11½ per cent of the total pipe-line transportation of petroleum to the seaboard. It also guaranteed them \$500,000 per annum profits for 15 years, or \$7,500,000. Within 3 months after contract was made refined oils advanced 87½ cents per barrel, crude oil 1½ cents. This contract gave these pipe lines 74 cents a barrel advantage over rail rates (B 97), but what followed? On August 23, 1884, the Pennsylvania Railroad Company, for and on behalf of the National Transit Company and as representing the Tide Water Pipe Company, entered into a conspiracy agreement with all existing pipe lines to the seaboard for the maintenance of equal pipe-line rates with rail rates in the transportation of petroleum and its products from the oil regions to the seaboard, which agreement is in practical effect to-day, with or without a contract, as rail and pipeage rates are the same. The Standard Oil Trust ostensibly guaranteed 26 per cent of all such traffic to the sea, or, in the language of the agreement, 'all petroleum

* Mr. Rice's estimate, here referred to, runs as follows:

"The competitive shipper of oil is compelled to pay freight, from the oil regions to the seaboard..... 86c. per bbl.
"He is also compelled to pay the 'Trust' for local pipeage..... 26c. per bbl.

Total..... 86c. per bbl.
"It will be seen that clause A of pipeage contract admits the cost of local pipeage to be 50c. per bbl.
"The 'Trust' admits the cost of pipeage to the seaboard to be..... 7c. per bbl.
"In this way the 'Trust' secures an advantage over its competitors in the transportation of oil to the seaboard, through the aid and connivance of the trunk lines of railroad, of..... 74c. per bbl."

For explanation of the freight rate, 86 cents, see Mr. Emery, p. 637. For the agreement of the National Transit Company (Standard) to transport oil to New York for 7 cents and to Philadelphia for 4, see p. 638. For the same company's contract implying that the cost of local pipeage is about 5 cents, see p. 724, footnote. See also Mr. Lee, p. 284; Mr. Phillips, p. 594; Mr. Emery, p. 638; Mr. Rogers, pp. 551, 552.

brought to the Atlantic seaboard by all existing carriers, railroads and pipe lines combined, establishing much higher joint pipe and rail tariff rates than should be, a complete and perfect monopoly 'in restraint of trade' of all petroleum transportation to the seacoast, for eastern home consumption and for export, at 10 times pipage cost, in violation of the Federal antitrust act and of the interstate commerce act. (D 154.)

"This guaranty in reality guarantied but little. It, however, blinded the eyes of the innocent dupes—unsuspecting railroad directors and stockholders. This 26 per cent was largely covered in the transportation of the by-products of petroleum that could not be piped, such as benzine, naphtha, and gasoline, lubricating paraffin oils, residuum, etc., besides accounting for and including in the guaranty competitive shipments. This kind of an agreement is easily accounted for when made by joint interested parties in the trust certificates of the Standard Oil Trust. This is another peculiar method that this joint conspiracy combine has of making crude oil cheap to the producer and the products thereof high to the consumer.

"Franklin B. Gowen says in regard to this contract as follows:

"By which it will be proved that the rate on oil prior to the making of that contract was one-half of what it was before the recent advance, of which we complain, was made.

"Our allegation about that contract, gone into in this testimony, although it was not admitted, is this:

"The National Transit Company secured a pipe line to tide water. They then became a transporter of oil.

"It was important for them to maintain a high rate on the transportation of that oil, because they made a great deal of profit out of it.

"They could not maintain a high rate on the transportation of oil if that rate was cut under by the railroad company, and we allege, and will endeavor to prove in this case,

"That within 2 years prior to the making of this contract the rate on the Pennsylvania Railroad Company for oil was one-third of what it now is.

"If that had been continued the pipe line could not have made one-third as much money as they do now—could not have made one-fifth as much money as they do now—because the cost would have been the same.

"They then entered into a contract with the Pennsylvania Railroad Company for a division of the rate, and agreed to make equal rates. It became to the interest of both parties to get high rates.

"The consequence of which is that this contract provides that the National Transit Company shall pay practically several hundred thousand dollars a year as a bonus, over and above fair earnings of the railroad, in consideration of the railroad's maintaining a high price on oil.

"Of course, if the National Transit Company could make people using their pipes, or using the railroads, pay 52 cents a barrel for having the crude oil transported, when it only cost them about 5 cents, as we say, to do the business, they would have an advantage of 47 cents per barrel over any competitor at tide water, and, with a view of maintaining such advantage, they entered into this contract with the Pennsylvania Railroad, which contract, as we allege, guarantied to the Pennsylvania Railroad Company 26 per cent of the entire oil business transacted by the railroads and the 2 pipe lines.

"They then both agreed to maintain equal rates." (B, 146.)

I will read the heading on page 61. (Reading:)

"Railroads allow Standard Oil Trust to lay its pipes in the road's right of way, in consideration of the road having only the pipe to transport, thereby losing all its former oil freight."

The following was offered by the witness as an exhibit:

"Dan O'Day, general manager of the pipe-line system of the Standard Oil Trust, testified before a Congressional committee, 1888 (p. 282), that the Chicago and Atlantic Railroad allowed this trust to lay its pipes from the Lima oil fields to Chicago in the roadbed's right of way, for the profit it received in the transportation of the pipe, its material, and construction.

"After the road granted these most extraordinary of privileges (1888) and after the pipe line was constructed and the trust's mammoth refining plant at Whiting, Ind., suburb of Chicago, was finished, freight rates from the Lima oil fields to several points of delivery in the various States were raised from 20 to 87 per cent." (Philet B, pp. 167, 168 G. B.)

The present freight rate, Lima to Chicago, is 10 cents per 100 pounds, or 40 cents a barrel, 8 times its pipage cost.

¹ See the contract, pp. 668-686.

² See Mr. Monnett, p. 306; Mr. Westgate, p. 576; Mr. Page, pp. 777, 778.

"THE UNITED STATES PIPE LINE COMPANY HAS _____ [G FOR 7 YEARS TO GET ITS TWO PIPE LINES, CRUDE AND REFINED, FROM _____ REGIONS TO NEW YORK BAY, THROUGH THE STATE OF NEW JERSEY, AND NOW MUST ABANDON IT, BECAUSE OF JOINT OPPOSITION OF THE RAILROADS AND OF THE STANDARD OIL TRUST.

"For 7 years the United States Pipe Line Company has endeavored to get its 2 pipe lines, crude and refined oil, through the State of New Jersey to the seaboard at New York, but has been obstinately opposed by the rail lines and the Standard Oil Trust from crossing under railroad tracks, although the owner of the fee right, while the roads have an easement only. New Jersey courts have finally decided that this can not be done. Resulting consequence is that this company's pipe lines are being taken up, Philadelphia made the terminus, and the oil will be barged to New York.¹ But the Standard Oil Trust have had no trouble, and even her pipe lines lie in the road beds of many railroads.

"Lewis Emery, jr., of Bradford, Pa., producer, refiner, and transporter of petroleum, has this to say, October 5, 1899, to a correspondent:

"We are very large manufacturers of oil and oil products, and feel the discrimination in rates over the railroads very severely indeed, so much so that we are obliged to market 70 per cent of our products in Europe."

An exhibit will show the favor of railroads to exporters. (Reading:)

"ON AUGUST 1, 1899, 50 PER CENT MORE IS CHARGED BY THE RAILROADS TO CARRY GRAIN FROM CHICAGO TO NEW YORK FOR DOMESTIC USE THAN EXPORT FOR FOREIGN CONSUMPTION. WITHIN 3 MONTHS, BY NOVEMBER 1, 1899, DOMESTIC RATES HAVE BEEN RAISED 80 PER CENT AND EXPORT 80, WITH REBATE ON EXPORT QUANTITY SHIPPED."

"The tariff sheets on file with the Interstate Commission to take effect August 1, 1899, show that in shipments of grain, Chicago to New York, the export rate was 11 cents per 100 pounds, while the domestic rate was 17 cents, or 50 per cent higher to eastern home manufacturers and consumers. The present rate on export, November 1, 1899, is 20 cents per 100, as against 22 domestic, or only 10 per cent of a difference. Within 3 months, August 1 to November 1, 1899, domestic rates have been raised 80 per cent, while export rates have advanced 80 per cent, and the difference between domestic and export rates has been reduced 40 per cent within this 3 months. But this apparent advance in export rates will easily be wiped out in a rebate on quantity shipped, as a substitute for a moneyed rebate, as follows:

"Hon. Franklin B. Gowen, president of the Philadelphia and Reading Railroad Company, stated this before the Interstate Commerce Commission, January 17, 1888:

"Mr. Colston. What kind of a train is that?

"Mr. Gowen. It is a long train of loaded cars which, though visible to the sight and susceptible of identification by all the other senses, makes no impression upon the manifests of the corporation, and leaves no trace upon the treasury of the company. This gentleman to whom I allude, in search of statistics, was struck with the fact that in one certain year the amount of grain which left Boston, New York, Philadelphia, Baltimore, and Portland in vessels for Europe, was much greater than the aggregate amount transported over the railways from the West to those points in the same period, and yet he knew that a large amount of grain transported from the West to the East is used for home consumption and does not enter into foreign commerce at all; and the only reason that he could give for this anomaly in statistical information was supplied by the report of ghost trains as a favored method of transportation by some celebrated shippers who were then supplying the European demand for our cereals."

"Also said:

"What is a railway? A public highway—nothing else. Just like the rivers. The rivers are public highways. Nobody in this country, the Standard Oil Trust or other inferior character, attempts to put a tourniquet upon them. When the first public roads were made in this country they were turnpike or wagon roads; but they were public highways. No company attempted to make a different charge for toll to one man as against another for the like vehicle. When the railroad companies were organized they took the private property of the citizen, under the right of eminent domain, because the property was taken for a public highway in trust for the uses of the public; and the first railway companies in this country were organized simply with the right to maintain a public highway and to charge a toll for its use. It was expected that the transporters should furnish their own cars and their own locomotives or horses, because originally the service

¹ See Mr. Lee, p. 287; Mr. Phillips, p. 593; Mr. Emery, pp. 650-655, 662; Mr. Archbold, p. 539; Mr. Boyle, p. 433.

on railways was done by horses. Railroads are simply advanced and improved avenues of transportation; but, with reference to the rights of the community to equality of rates, they preserve throughout the same features as the rivers and turnpikes. Now, why should there be any difference now existing? God made the rivers, and man laid the rails, I suppose our friends will say, and hence the Standard Oil Company deserves to have the monopoly of low rates.

"The gross receipts of the railroads of this country, in round numbers, are \$300,000,000 per annum, and I verily and honestly believe that \$100,000,000 annually are taken out of the pockets of the people of this country by unjust railway discriminations and turned over to this privileged class—and this is equal to a tax of \$2 per head paid by the people for the sake of building up the new aristocracy of wealth that in this free country arrogate to themselves the position of the nobility of the older countries. And who compose this privileged class and constitute this new order of nobility? Not men of intellect, or genius, or learning, or even of honest thrift, or patient industry. By no means. Cold, calculating men, who, by open bribery and naked rascality, secure the favor of railroad officials, until they wring \$100,000,000 annually from the mass of the people and the overburdened industry of the country. These are our privileged classes; these are the men whose patents of nobility are inscribed upon the records of a railway company—attested by the broad seal of the corporation and countersigned by a general freight agent—and when people from other lands visit this country and ask to see our great men we do not say, 'This is a man of great intellect and genius and learning, or of long descent, of kindly character, and great charity; but we say, Behold the new gods, whom we now worship! Behold him whom the railroads delight to honor, and the limits of whose wealth we are only permitted to conjecture!'

"It is utterly impossible that there can be any success attending a monopoly of natural products without the aid of unjust discrimination of railroad companies. And only when such unjust discrimination ceases will all people be placed on terms of equality.

"Let us suppose that in France but one corporation handled 80 per cent of the wine grown in the country. The grape grows all over the country. You see train loads of wine in France as frequently as you see train loads of oil in America. The price of wine enters largely into and affects the social and financial condition of the French people, just as the price of oil affects the interests of the people of this country who produce it. I venture to say that if any such thing existed in France as one corporation controlling 80 per cent of the wine manufacture and traffic of the country there would be a French revolution within 24 hours of the discovery of the existence of such a monopoly.

"The system of illegal and unjust railroad rebates or freight discriminations, more than any other social evil, has been the source of that unequal distribution of wealth which to-day confronts the country with a menace greater than threatened by any other social wrong or inequality. That the Standard Oil Trust owes its control of the oil trade of the country entirely through unjust and illegal discrimination in charges of railroad freights. That nearly all of its great wealth and power have been thus dishonestly and illegally obtained. That it is far the most conspicuous example among the many instances of the great fortunes made by the favoritism of railway officials."

The Standard Oil monopoly is the originator of the system of devices for rebates in the form of commissions, arbitraries, billing underweight, blind billing, dockage, lighterage, terminal charges, special-style tank cars, overloading, billing to intermediate points at the low terminal rate, stopping cars in transit and delivering small lots at carload rates, 'ghost trains' on which no freight is paid, commissions or rebates on all competitors' shipments, shipping out from its agencies to surrounding territory and paying no freight thereon, that to-day permeates all the arteries of commerce exclusively in favor of the trusts, effectually wiping out and closing up all competitive industries.

Q. (By Mr. KENNEDY.) Will you tell us something about these ghost trains—what they are? That is something new to me.—A. That is what Mr. Gowen explains at the beginning of the quotation that I have just put in.¹

(Reading.) "These freight discriminations in favor of one great trust, the Standard Oil trust, have enabled that concern to build, free of cost, thousands of miles of gathering pipe lines in the oil-producing regions, thousands of huge iron storage tanks, several trunk lines of pipe from the oil regions to the seaboard, thousands of tank cars, and tens of thousands of stationary plants (represented by local agencies located in all parts of the Union), which stand as a menace and

¹ See p. 740. See also Mr. Page, p. 735.

a threat to all competitors who dare enter their sacred domain in competition with them.

"Whoever interferes with the natural laws which govern or ought to govern commerce is a public enemy. No other nation under the sun would tolerate for an instant such a destructive element within its borders. In monarchical Germany Baron H., in one short month, was tried, convicted, and sentenced to imprisonment for receiving a rebate from a railroad. In England the owner of the Bass breweries was found to be receiving a rebate, and in 24 hours it was stopped by the railroad commission. What a contrast, my countrymen, does our land present.

"The time to guard against corruption and tyranny,' says Thomas Jefferson, 'is before they have got hold of us.'

"That the Germans appreciate this wisdom is shown by the attitude of the German Government toward the Standard Oil Company. When some member of the Reichstag, alarmed by the apparition of the original and greatest 'octopus,' asked what the Government proposed to do, Count Posadowsky, minister of the interior, showed that the most vigorous and effective campaign possible had already been opened. 'And,' he added 'the Government will oppose abuses on the part of the Standard Oil Company immediately and ruthlessly.'

"The American, Philadelphia, February 12, 1898, has the following:

"It is often remarked that it is impossible to make something out of nothing. This is indeed regarded as a truism. But when we look at the growth of the Standard Oil trust we are inclined to doubt our senses. Self-evident it is, indeed, that we can not create something out of nothing, but something very akin to this have the men behind the Standard Oil trust succeeded in doing. They have not, indeed, accomplished the impossible, but they have found something better than the alchemist's equation, something more important in the accumulation of wealth without labor than the possession of the philosopher's stone. The alchemists sought to turn base metal into gold and failed; the unscrupulous men who organized the Standard Oil Company sought to turn dishonesty into gold and they succeeded. They have not, indeed, discovered the undiscoverable art of making something out of nothing, but they have succeeded in getting property without creating it, in enjoying wealth without earning it.'

"The New York Sun, in its financial article of September 4, 1899, has this to say:

"The Standard Oil monopoly has sustained itself by getting possession of all the available crude petroleum wells in the country, and by not raising the price of the refined oil so high as to make other illuminants more desirable it has shut out competition from that quarter."

I thought it well enough to read that because it comes from a strong monopoly paper.

(Reading:) "Benjamin F. Butler says this: 'The Parliament of Great Britain undertook to put a tax of a penny a box on friction matches, which would have increased the revenue about \$500,000. The people of England revolted to such an extent that the government dare not press it. The match was needed to light the petroleum lamp. What would be said in Great Britain if their government would allow a corporation to put a tax of 500 per cent on the means of lighting the poor man's house and the rich man's palace in England?

"Under that government it would not be borne, not an hour after it was known. Shall it be said that under a republican form of government, where the people are represented in making the laws, such a monopoly shall obtain, by which men can make fortunes such as were never dreamed of since the days of the plundering of the world by the proconsuls of Rome?'

"To the great credit of the United States Supreme Court, they have taken a broad and liberal view of the Sherman antitrust act, and decided that it 'applies to and covers common carriers by railroad,' which adds vital importance to the act, and, in brief, decided as follows: While the statute prohibits all combinations in the form of trusts or otherwise, the limitation is not confined to that form alone. All combinations which are in restraint of trade or commerce are prohibited, whether in the form of trusts or in any form whatever.

"SINCE THE FEDERAL ANTITRUST ACT TOOK EFFECT, 1890, THERE HAVE BEEN CONSOLIDATED 946 RAILROADS, AGGREGATING 69,000 MILES, OR ONE-THIRD OF TOTAL.

"On October 7, President M. H. Vreeland, of the Metropolitan Railway Company, had this to say:

"Probably in no industry in the world has consolidation been more active in the last 10 years than in railroads. In fact, railroad history of that period is one continuous record of combinations, amalgamations, mergings, leaseings, or what-

ever terms lawyers please to give to one and the same thing. In the 9 years since 1890, 946 railroads, aggregating 68,000 miles, have been consolidated.'

"Just think of it; 946 different railroads consolidated into a mammoth railroad trust, one-third of total railway mileage, within 9 years (passage of the antitrust act), forming part and parcel of 44 separate and distinct unlawful associations of rail and water lines combined, acting in entire unison with the other lines for the maintenance of railroad rates, which puts into the hands of a few leading men an unlimited and mighty power of control over transportation rates, which power they have extended to the creation of many industrial manufacturing trusts, by which the price of the products thereof will be entirely regulated by these men through high tariff transportation rates, that greater rebates shall accrue to them from off their own and competitive shipments, which completely annihilates competition, destroys competitive industries, and the incentive to embark in new enterprises. In other words, the conspiracy combine of rail and trust officials now dictates to the former competitor the amount of salary he will receive to help them conduct and carry out their unlawful designs.

"THE RAILROADS AND INDUSTRIAL TRUSTS ARE CAPITALIZED AT \$18,818,554,081.

"The aggregate capitalization of the railroads per last official report of the Interstate Commerce Commission is \$10,818,554,081. The single State of New Jersey has given life to 15,000 concerns with a capitalization of \$8,000,000,000. For the fiscal year ending October 1, 2,000 corporations were chartered in this State, capitalized at \$3,500,000,000. Here is a joint railroad and industrial trust company, capitalized at \$18,818,554,081, working exclusively in the interest of each other. Conservative authorities estimate that one-half of this amount is fictitious, or 'watered,' on which rail and trust officials have enforced, and will continue to enforce, from off the producer of the soil and mine and from off the consumer and user of general products, through railway tariff exactions, sufficient revenue to pay liberal dividends upon fraudulent issues, representative waste paper, merely vignettes and nothing else. Ruinous freight charges will be levied upon all competitive goods outside the combinations in order to freeze them out, while Armour will receive rebates on his beef, Havemeyer on his sugar, Morgan on his coal, and Rockefeller on oil and iron, while the dealer outside the trusts must ship at higher prices, without rebates and without favor. Under the liberal laws of New Jersey alone these 15,000 trusts and corporations are operating in every section of America, and this State has richly earned the sobriquet of 'The cradle of monopolies.' With all this vast wealth centered in one State, how easy it is to elect and manage all the necessary political power for the control of all needed legislation.

"How easy for this combination of railroad and trust officials to so increase and temporarily reduce transportation rates, and thus materially affect net earnings of the railways and of the trusts, by which they get a clutch on their adversaries in stock gambling operations, and without risk, in the purchase or selling of stocks short, according to their well-matured plans and conspiracies."

(Reading:)

"THERE ARE TO-DAY AT LEAST 44 UNLAWFUL RAILROAD TRAFFIC ASSOCIATIONS AND WATER LINES COMBINED, ACTING IN ENTIRE UNISON TO INCREASE AND MAINTAIN FREIGHT CHARGES AND DISCRIMINATE IN FAVOR OF THE TRUSTS ON ALL RAIL AND WATER TRANSPORTATION RATES, IN VIOLATION OF THE INTERSTATE-COMMERCE ACT AND OF THE FEDERAL ANTITRUST ACT."

I will put in as exhibits the following:

"By the Official Railway Guide of September, 1899, there exist to-day 44 separate and distinct illegal combinations, composed of joint railroad, lake, and ocean steamship lines, thus precluding excuse for water competition.

"These several pooled traffic associations and freight committees (latter new term) represent all the principal railroads and water lines in the United States, and some of the Canadian railways, working unitedly and in unison for the unlawful maintenance of joint freight rates, both rail and water, which is in the 'restraint of trade' as forbidden by the Federal antitrust act and confirmed by the Supreme Court.

"Section 5 of the interstate-commerce act reads as follows:

"That it shall be unlawful for any common carrier subject to the provisions of this act to enter into any contract, agreement, or combination with any other common carrier or carriers for the pooling of freights of different and competing railroads, or to divide between them the aggregate or net proceeds of the earnings of such railroads, or any portion thereof; and in any case of an agreement for the pooling of freights as aforesaid, each day of its continuance shall be deemed a separate offense."

"The names of these combinations are changed as often as the Supreme Court renders a decision against any one of them applicable to all, but the roads will not submit to the act nor to court decisions.

"The following steamship lines represent the Association of Lake Lines:

"Western Transit Company, owned by New York Central and Hudson River Railroad Company, transports freight to and from Buffalo and Chicago, touching at Erie, Cleveland, Detroit, and Milwaukee.

"Union Steamboat Company, owned by Erie Railway Company, carries freight to and from Buffalo and Chicago, touching at Detroit and Milwaukee.

"Erie and Western Transportation Company (Anchor Line), owned by Pennsylvania Railroad Company, carries freight to and from Buffalo, Erie, Chicago, Milwaukee, and Lake Superior ports, and delivers freight to all railroads.

"Northern Steamship Company, owned by Great Northern Railway, carries passengers and freight to and from Buffalo, Cleveland, Detroit, Duluth, and Lake Superior ports, and delivers freight to all railroads.

"Lake Erie Transportation Company, owned by Wabash Railroad. Its steamers run between Buffalo and Toledo and deliver freight to all railroad lines.

"Lehigh Valley Transportation Company, owned by the Lehigh Valley Railroad, and its steamers run between Buffalo and Chicago.

"Minneapolis, St. Paul and Buffalo Steamship Company, owned by the Minneapolis, St. Paul and Sault Ste. Marie Railroad Company, which is controlled by the Canadian Pacific Railway Company, carries freight between Gladstone and Buffalo and delivers same to all railroad lines.

"Cleveland and Buffalo Transit Company; Detroit and Cleveland Navigation Company; Lackawanna Transportation Company; Port Huron and Washburn Line; Lackawanna Green Bay Line; Wilson Transit Company; Union Transit Company; Fleming Line.

"In addition, the following water lines are combined with railroad associations and freight committees:

"Plant System of steamers, operating 1,283 miles of water lines; New York and Baltimore Transportation Line; Baltimore, Chesapeake and Richmond Steamboat Company; Merchants and Miners' Importation Company; Detroit and Cleveland Navigation Company; New York and Texas Steamship Company; Old Dominion Steamship Company; Cromwell Steamship Company; Atlantic Coast Line; Ocean Steamship Company; Red River Line.

"This Official Railway Guide also contains the Canadian Freight Association, composed of all the railways and principal water lines of Canada, which are in collusive alliance with our unlawful pooling railway combinations, as represented in said association by the following American lines, such as the New York Central and Hudson River, Michigan Central, Delaware and Hudson, Boston and Maine, Central Vermont, Maine Central, Great Northern, Northern Pacific and Manitoba, which roads are linked with Canada's water ways, such as the St. Lawrence Steamboat Company, Lake Ontario Steamship Company, Merchants' Line of Steamers, Northwest Transportation Company, Bay of Quinte Line of Steamers, Bay of Quinte Railway and Navigation Company, forming a gigantic trust and pool of rail and water lines of America and Canada to increase and maintain, without competition, unlawful transportation rates in the United States, which is in 'restraint of trade,' in violation of the Federal antitrust act, and also in violation of the interstate-commerce act.

"The following are the water lines in the above association:

"The Clyde, New England and Southern lines, Portland Steamship Company, Goodrich Transportation Company, Lake Michigan and Lake Superior Transportation Company, Northern Michigan Transportation Company.

"October 1, 1889, the Transcontinental Association, composed of 21 lines of railroad, including the Canadian Pacific Railway, made an agreement with the Pacific Mail Company to pay them \$900,000 per annum for the privilege to fix all freight and passenger rates, both steamship and rail, both ways, between New York and San Francisco, 'and that no through freight or passengers shall be taken except at prices fixed by the party of the first part (Transcontinental Association), or by its consent.' (B 194.) No question of doubt, a similar arrangement is in practical effect to-day.

"November 28, 1890, this same association agreed with the Canadian Pacific Railway Company to pay them \$500,000 per annum 'to maintain the rates and rules of the Transcontinental Association as in force on the direct United States lines.' Benjamin Brewster and Henry M. Flagler, then trustees of the Standard Oil Trust, were also directors in the Chicago, Rock Island and Pacific Railroad, one of the roads in the combine, while Oliver H. Payne, former treasurer of the Standard Oil Trust, was a director in the Pacific Mail Company. (B 196.)

"Judge Willis, of St. Paul, Minn., in addressing the new grand jury on January 9, 1897, has this to say:

"The government of this State is divided into 3 departments—the legislative, executive, and judicial. All of these departments are proximately connected with the common people. To the legislature any qualified elector may be chosen. In the executive department the same rule of eligibility exists. In the judicial department none but men learned in the law can be selected for the judiciary itself; but in order to link that department closely to the people it has been provided that grand juries should be summoned from time to time, and that to them should be committed the duty and prerogative of scanning the conduct of all members of society and making such accusations as would correct the evils in society which amount in their enormity to crimes. Consequently you have the whole field of society before you.

"You must bear in mind that when criminality rears its head and becomes dangerous to society it does so because the people themselves, represented in the grand juries, fail to execute with vigor the judicial department of the government. As grand jurors you are officials of the judicial department of the State government. A weighty responsibility rests upon you.

"The literature of our day, both transitory and permanent, is filled with denunciations of those enormous aggregations of capital which threaten to destroy not only the symmetry of our social conditions, but the essential nature of those social conditions. We hear much of trusts and of combinations, of railway pools, and of associations which are detrimental to the public benefit. Now, if the grand jury retains the vigor and essential patriotism which constituted the fathers of the Republic, all these abuses will be annihilated.

"It is a mere idle performance for the people to claim patriotism when they themselves countenance and tolerate the most flagrant abuses.

"It is indeed a performance of questionable propriety to stand in the market place or upon the public rostrum and bewail the existence of abuses and the oppressions of financial and commercial tyrants instead of setting the judicial machinery known as the grand jury in operation for the correction of these abuses and for the dethronement of the tyrants. A grand jury should realize its power; should comprehend its functions; should, like Siegfried in Wagner's great drama, take up the sword and proceed to fight the dragon."

"Section 5370, Revised Statutes of the United States, reads as follows:

"Every person who, upon the high seas, or in any open roadstead, or in any haven or basin, or bay, or in any river where the sea ebbs and flows, commits the crime of robbery in or upon any vessel, or upon any ship's company of any vessel, or the lading thereof, is a pirate, and shall suffer death."

"THE ONLY EFFECTUAL REMEDY TO CURE EXISTING COMMERCIAL EVILS IS GOVERNMENT OWNERSHIP OF RAILROADS, PURCHASED ON THE CREDIT OF THE PEOPLE, BOND ISSUES.

"With 12 years' patient trial of the interstate-commerce act and 9 years of the Federal antitrust act this seems to be the only effectual remedy left, for gross freight discriminations and rebates continue to date, and we have not only an epidemic, but a plethora of trusts.

"Why should not the people own the railroads instead of being owned and controlled by an autocratic, arbitrary few, and get from these bandit chiefs and robber barons their properties back, their several rights of eminent domain, the basis of the railways, which were parted with only in trust for the public use for guaranteed equality in transportation rates and privileges, and now so ignored and ruthlessly disregarded, and by which these men dictate the terms and levy their tributary exactions as they see fit on the entire commerce of this country through these high-rate, ironclad tariff sheets, which must be complied with or no one can ship?

"If the railroads were purchased at their actual appraised worth, for value received, with all the barnacles scraped off—all fictitious and watered stocks—with the created Government bonds of the people, or consols with no time limit of payment, same as Great Britain, bearing 3 or 2½ per cent interest, present railroad freights could be reduced at least one-half and passenger rates not to exceed 1 cent a mile, and easily pay interest and all expenses, and set aside the necessary surplus for bond liquidation, if so desired, so that the greatest good shall accrue to the greatest number."

And you can get rid of this political bngbear, centralization, and all that. Just disfranchise the railroad employees. There are only about 800,000 of them, and there are 1,000,000 men to-day that do not vote. Then you would get rid of all the political end of it.

Q. (By Mr. KENNEDY.) Are you in favor of disfranchising the 800,000 employees of the railroads of this country?—A. Yes; in order to take the question out of political power or influence.

Q. You would be in favor of disfranchising those 800,000 workmen?—A. Certainly I would; yes, of course. There would be plenty of voters left.

Q. (By Senator KYLE.) Do you not think that this proposed remedy would be absolutely impracticable?—A. Why, if that is the best remedy, I think it is practicable. You can get plenty of men to take the position, and that will take it out of politics.

Q. (By Mr. KENNEDY.) Do you think that they could get plenty of men to-day who would be willing to be disfranchised?—A. Why certainly; why not?

Q. Do you know any man in the United States that would be in favor of it?—A. I should say there would; why not? The greatest good for the greatest number, you know. What harm is there in it?

Q. They are citizens of this country?—A. How are the citizens of this District right here? They can't vote; the residents of this town can't vote.

(Reading:) "If the money already spent and to be spent in our more than useless foreign war had been expended in the purchase of the railways for the relief of 70,000,000 of our own oppressed home subjects instead of foreigners, how much better it would have been. Under such a condition every citizen would be put on perfect footing as to equal transportation rates and privileges, with much higher prices to the producer, without increase in price to the consumer, for all the necessities of life, because rebates and freight discriminations would be eliminated. The value of personal and realty holdings would also thus be greatly enhanced, and then there would actually come an era of that real, genuine prosperity so much desired by the American people, and not be exclusively monopolized in the interest of the selfish minor few. It is a deplorable and dangerous situation.

"IF THE PEOPLE CAN NOT GET JUSTICE AND ARE NOT SOON RELIEVED OF THE BURDENS AND CONSPIRACY OPPRESSIONS IMPOSED BY THE RAILROADS AND THE TRUSTS, IN GROSS VIOLATION OF THE LAWS OF THE LAND, MATTERS MAY ASSUME AN UGLY SHAPE.

"A century ago the American colonies, goaded to despair by long-continued injuries, insults, and exactions, broke the fetters that had bound them for many years, and, appealing to the Supreme Judge of the world for the rectitude of their intentions, 'assumed amongst the powers of the earth the separate and equal station to which the laws of nature and of nature's God entitled them.' In that renowned Declaration of Independence our forefathers asserted 'that when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off their oppressors and to provide new guards for future security.'

"The last resort is for the people to retake into their own hands the power that has been delegated and abused. Vigilance committees have more than once had a purifying influence. There may be conditions which will again render them a necessity. There is a limit to human forbearance. Has that limit yet been reached?

"I am free to assert that unless some drastic measures are soon taken to do justice for the people the end will come in an ugly shape. The colossal fortunes that have been piled up as a result of the advantages enjoyed by the few and denied to the many represent just that much money coined from the blood sweat of the masses. I do not believe any system will be permitted to exist which allows one man to accumulate a fortune of \$400,000,000 to \$500,000,000, while millions of his fellow-creatures are suffering for the bare necessities of life.

"Every great wrong upon the people can be traced back to the greed and selfishness of the men who have cornered the resources of the earth, who keep the 'corner' intact by reason of an illicit power bestowed upon them by corrupt officials, who for the time being constituted the state. These criminal monopolies would be impossible if officials who administer the laws performed their sworn duty to the people. But they persistently refuse to do this. Men may impoverish themselves in an effort to secure rights which the constitution gives to them, but for want of an official execution those rights are denied them. This is a condition wholly incompatible with the principles upon which our Government is founded, and should not continue. The people will soon throw off the yoke if relief does not soon come. They have a right to life and some of its enjoyments. They have the former, but only because it is necessary to the furtherance of the ends of the selfish rich. As to the enjoyments of life, look for them in the pov-

erty of the common people and find them not. The people of this country are its sovereigns, and it is not only a crime, but a monstrous crime, to rob them so flagrantly and with so much persistence.

"The voice of genius has sent a trumpet blast in response to the cry of the oppressed. The dawn of emancipation should be near at hand. There is a rebellious spirit stirring within the people which may burst into a whirlwind of wrath.

"The man with the hoe," whose terrible aspect Professor Markham has so powerfully portrayed, may yet hoe his row, throw off his burden, and deliver his fellow-man from the toils of the downtrodden and oppressed."

Q. (By Mr. KENNEDY.) Do you expect or hope for any deliverance from "The man with the hoe?"—A. Their vote is just as good as anybody else's, and it is the vote that is going to regulate it.

Q. Do you expect intelligent deliverance from any evils from such a source as that?—A. Do you not think that there are a great many men with a hoe that have as good intelligence as anybody?

Q. Not the one that is pictured by Professor Markham.—A. Well, I do not know about that.

Q. (By Senator KYLE.) Have you any further statement that you desire to make?—A. Mr. Archbold reads a letter from J. M. Culp, traffic manager of the Southern Railway Company, in which he emphatically denies that the Southern Railway Company has at any time given to the Standard Oil Company or any of its representatives "any lower rates of freight in the carriage of shipments made by that company over our rails, either by direct tariff, refund, or otherwise, than to any other shippers of similar commodities." I am unable to give a specific case of freight discrimination over this line in favor of the Standard Oil Trust, but will answer Culp's specific denial in a more general and comprehensive form by reference to the letter of Receivers Cowen and Murray, in which they say that "within the territory north of the Ohio River and east of the Mississippi" the railroad carriers are making "illegal concessions through secret rates, drawbacks, rebates, and other devices."

The Southern Railway Company is connected with and is a member of the following unlawful freight associations: The Louisville Freight Committee, the Southeastern Freight Association, the Southeastern Mississippi Valley Association, the Virginia Freight Traffic Association; the Southern Iron Committee, and the Baltimore Freight Committee.

Through the Louisville Freight Committee and the Baltimore Freight Committee the Southern Railway Company is pooled with rail lines that cover the territory north of the Ohio and east of the Mississippi, such as the Pennsylvania Railroad Company, the Baltimore and Ohio Railroad Company, the Chesapeake and Ohio, the Big Four, the Illinois Central, and others. Cowen and Murray say that these lines of road were, in December last, granting secret rates, drawbacks, rebates, etc. Then it stands to reason that the Southern Railway Company followed suit. If any kind of rebates in any shape or form are given, you can rest assured that the Standard Oil Trust gets the lion's share, as fully exposed by me.

"PLEASE TURN ANOTHER SCREW."

This seems to me an opportune time to show this commission the original letter written by the Chess Carley Company—but I recall I have already shown you that.

Q. (By Mr. FARQUHAR.) In the investigation by the Bacon committee of Congress, in 1888, when that question was put, and you were present and gave testimony at the same time, Mr. Gowen presented this letter of the Chess Carley Company to Mr. Culp, and Mr. Culp, under oath, gave testimony, as found in this volume here; and they also furnished, at the same time, the tariff that was published and in effect at that time, showing that there was no discrimination against you in any way whatever, and that there were equal rates all around the board.—A. At that time; at that particular time?

Q. At that particular time; at the time you gave testimony here in respect to this letter written by Hathaway?—A. He testified that there were no discriminations?

Q. There was not any discrimination at all; the testimony showed the published sheet of the regular rate, and the road made an explanation of what was called "putting the screw on."—A. Very lame; very lame explanation.

Q. But still it is sworn evidence; it is here?—A. Why, here are lots of letters.

Q. Well, here is the letter here in evidence, too.—A. Oh, yes; that is all right; that is all right.

¹Fiftieth Congress, first session, House Reports, vol. 9, p. 534. See an extract in the present volume, p. 764.

Q. And there was the man subjected to cross-examination at that time, and that stands out in entire antagonism to your evidence here to-day?—A. Well, the people can believe Mr. Culp against me if they want to; that is all.

Q. Well, what is the commission to do? That is the question. Here is the Congressional evidence before us; what are we to do? There ought to be a reference to this testimony here in the records in some way. I want to ask you another question, too; and that is in respect to the testimony that you heard at the same time offered by Mr. Carley himself, in his vindication of this thing, that he had never got a rate at that time discriminating in any way whatever, which is also sworn testimony of a reputable witness outside.—A. Who is a reputable witness? Do you call Carley a reputable witness?

Q. Well, you can not call him otherwise; the Congressional committee took it.—A. They can if they want to. I do not believe it.

Q. It is given in the Bacon report.—A. I would not believe either one of those men; that is my experience with them, you know; I would not believe either one of them.

Q. I merely desired to call your attention to it.—A. That is all right.

Q. Because many of the exhibits are in sworn testimony.—A. The people can take what they believe of that, and believe what they are a mind to. I am telling the truth absolutely, without the shadow of a doubt, by solid experience. There is not any question in regard to it whatever. There is not any question that they raised the rates on me 50 per cent within 5 days. I have had men tell me that they would shoot such a man as that. There is not language strong enough to express a man's disgust at the execution of our laws. How any man can excuse such men or have any belief in them I can't understand, that will do such outrageous things.

Q. (By Mr. CLARKE.) Do you recommend shooting as a remedy?—A. I think it will come to something of that kind if you can not get relief. What did our colonists do over in Boston? They threw the tea overboard, did they not, because of oppression? We are just as much oppressed to-day as they were, and more so.

UNLAWFUL ASSOCIATIONS.

The Baltimore and Ohio Railroad Company are members of the following unlawful associations. I want to say this because the Cowen and Murray letter has been put in here, and Mr. Cowen has been here on the witness stand and explained it; and I want to show that they are members of what I call unlawful associations in keeping up rates. The Baltimore and Ohio Railroad Company, by the official railway guide which I put in here, the best evidence in the world, are members of the Chicago Freight Committee, the Chicago Railroad Association, Eastern Railroad Association, Middle States Freight Association, Trunk Line Association, Western Pennsylvania and Eastern Ohio Railway Traffic Association, Wheeling Freight Committee, Baltimore Freight Committee, General Managers' Association of Chicago, Mansfield Freight Committee, Middle States Lumber Association, Ohio Coal Traffic Association, Sandusky Freight Committee.

I want to say right here that about every time a decision is rendered by the Supreme Court of the United States against any one of these associations, the others change their names immediately; they are not incorporated, and they can change them very easy, so they can get rid of all their past unlawful acts.

RELATIONS BETWEEN RAILROADS AND THE STANDARD.

In the late reorganization of the Baltimore and Ohio Railroad Company within the last few months, Henry Clay Pierce, of St. Louis, president of the Waters-Pierce Oil Company, Standard Oil Trust, is made a director.

Q. (By Mr. FARQUHAR.) Do you think that it is well enough for these persons that are large owners of stock, I mean Standard Oil stock and all that, to make investments in all these other things; is it not natural for business men to do that?—A. It looks rather suspicious, you know, when you come to see all these men going into railroads, these big shippers; it looks very suspicious. Mr. Archbold falsely asserts when he states that pipage rates were included in the rail rates on the Cleveland and Marietta Railroad.¹ The absolute truth is that this railroad charged me 35 cents a barrel on my petroleum shipments, while it only charged the Standard Oil Trust 10 cents a barrel; confirmed by the receivers of the railroad, its counselor, Ex-Judge Rapallo, and by the decision of Judge Baxter. This difference or overcharge on my shipments was taken from the treasury of the railroad and paid over to the Standard Oil Trust.

¹ See pp. 704, 705.

² See Mr. Archbold, pp. 556-559; Mr. Rice, pp. 706-711.

Phineas Pease, the receiver of this railroad, allowed the Standard Oil Trust to lay its pipe lines, not only in the roadbed's right of way, but also across passenger bridges, to assist it to convey crude oil from the Macksburg oil fields to Parkersburg, W. Va., 35 miles, where the trust had a large refining plant, and by this means deprived the road of Standard Oil transportation. In 1885 when I wanted to simply cross once with my pipe line under the tracks of this same road, which I had the legal right to do, in order to reach the Muskingum River and thence barge my oil to Marietta, I was confronted by a telegram from Pease to desist from laying my pipe thereunder. I did not obey. A competing pipe line from Parkersburg tried to reach the Macksburg oil fields, and was prevented from so doing by this same railroad. But the Standard Oil Trust could get everything they wanted; no objection at all.

In November, 1887, 7 or 8 months after the interstate commerce act took effect, I proved before the Interstate Commerce Commission that I was then paying more than 4 times as much freight as the Standard Oil Trust on shipments of oil to Birmingham, Ala., where I had an agency. I paid 59 cents per 100 pounds on 400 pounds to the barrel, which was \$2.36; the Standard Oil Company only paid 16½ cents per 100 on 315 pounds of bulk oil, which amounted to 52 cents and 9 mills, as against my \$2.36. The discrimination was 346 per cent.

ACCUSATIONS AGAINST THE WITNESS.

I want to say just a little in reply to what Mr. Archbold said about me here: (Reading from a paper:) "In reply to Mr. Lockwood, Mr. Archbold dealt at length with the Matthews and Rice cases, which Mr. Lockwood had instanced to show, as he claimed, that the Standard Oil Company controlled the courts. Mr. Archbold claimed in effect that these suits had been brought to compel purchase. He asserted that in the Rice case Rice had tried to induce him to buy his plant at Marietta, Ohio, for \$500,000, when it was not worth \$25,000, and had agreed to see that prosecution in certain cases was stopped in case the deal was made, claiming that he had sufficient influence to accomplish this result. He expressed the opinion that Rice was employed as an agitator by the enemies of the Standard Company.¹ Mr. Rice was present in the room, and it is understood will reply later."

I want to say right here that no man in this country has ever put up a dollar to aid me in any fight I have had with the Standard Oil Trust or railroads of this country. The statement is false.

Q. (By Mr. A. L. HARRIS.) Did you ever offer to sell out for \$500,000? A.—I did. I will explain that. They offered me \$350,000 in 1882; and negotiations were started again, in 1886 or 1887, about the time I was trying to get some Standard Oil Trust certificates, which I owned, transferred to my name. They refused to make the transfer. I want to read these extracts just a little bit before I do anything else. This is another account of Mr. Archbold's testimony.

"He dwelt particularly on the claim that Mr. Rice had been discriminated against by the railroads in the matter of rates, and that the Standard Oil Company had made the railroads divide with them the charge they had collected from Mr. Rice. Mr. Archbold admitted that their agent had received something like \$350 in this way, but said the money had been refunded to the railroad on the advice of their lawyer.

"Mr. Archbold charged Mr. Rice with running his business not for the legitimate profits in it, but for the purpose of selling out to the Standard people at an immense profit."

Mr. Archbold also read to this commission certain extracts from the testimony I gave last February at the Ohio investigation, with the avowed purpose of showing that I am a blackmailer.² The ground of this accusation is that I asked less for my refining plant at an early date than subsequently, when I had increased the capacity of my plant to 5 times what it was at the time the lesser prices were given, and I had not included my producing properties. Now, just think of it, gentlemen; and Mr. Boyle reiterates it in his testimony.

In March last at the Ohio investigation they engineered a scheme to put Archbold forward to denounce me with great vehemence as a blackmailer, in order to divert public attention from the real questions at issue, and commenced at once their vicious attack on me at the fourth question. This charge of blackmail is only a continuation of their oft-recited and only stock in trade against me for 18 years. In 1881, in their red-lettered pamphlet entitled "Black death," issued by the Standard Oil monopoly, a facsimile of mine, they charged me on the upper marginal part, page 2, with blackmail, and have kept up this tirade of abuse ever

¹ See p. 550.

² See pp. 551, 552.

since, for the avowed purpose of prejudicing the public mind against me. Why is it that they still keep it up, not only through trust officials direct, but through their special mouth organ, the Oil City Derrick, although my refinery has not been running for 8½ years to interfere with their high-priced oil? On page 3 they admit my oil refinery alone to be worth \$50,000 in 1881. It is fair to presume that they would have paid me double this price at that early date, when so willing to state its worth publicly. How silly and ridiculous it is for these hundred-million millionaires to charge me with blackmail, when they have robbed the stockholders of the railroads by dishonest and unlawful means, through freight discriminations, out of hundreds of millions of dollars, which has been paid by the public in higher-priced oils, and of a poorer quality. I will read from my evidence given at New York on March 21 last:

"Before J. Edgar Mills, New York.—The Buckeye Pipe Line Company.

"MARCH 21, 1899, 10 a. m.

"Hearing resumed.

"Redirect examination by the ATTORNEY-GENERAL:

"Q. Mr. Rice, there is another branch of the case, of the Buckeye Pipe-Line case, that I will call your attention to briefly. There is a cause of action charging that the defendant company assisted the Standard Oil Company of Ohio in evading the decree, known as the decree of March 2, 1892, and, perhaps, anticipating your evidence now rather as rebuttal evidence from what has taken place in the contempt proceedings, I will call your attention to that part of the testimony, and will introduce it here at this time, in which it is said the charge of contempt was a case of blackmail on your part, if I understand the import of Mr. Archbold's testimony, and to that most particularly where he says that your plant was only worth \$25,000. Will you now state for the court the history of that attempted settlement and the amount that was offered for your plant actually, and what it is worth? I refer to the proposition that was made. Give the history of that entire proposition.

"Mr. KLINE. I note an objection to the question not only as leading and suggestive, but as irrelevant and incompetent.

"A. The charge that Mr. Archbold has made against me as being a blackmailer because of any interest that I may have taken in the proceedings against the Standard Oil Company of Ohio, or in these proceedings, is a malicious statement and false; there is not a word of truth in it whatsoever in that regard, in that respect. In 1882 Mr. F. B. Squire, the present secretary of the Standard Oil Company of Ohio, came to me at Asbury Park, where I was stopping with my wife, and offered me \$250,000 for my oil properties, including the producing properties and the refining plant.¹ This I testified to before Judge O'Brien, of this city, in 1888, in proceedings that I brought against the trustees of the Standard Oil Trust to get transferred an original trust certificate standing in another man's name into my name. Mr. Archbold was present at the proceedings and heard what I testified to and made no objections, nor was it denied. He at the same time went onto the stand and testified that my plant was not worth to exceed \$25,000 or \$30,000. He also produced an expert to say that it was not worth over \$25,000. At this same time that I testified and at which Mr. Archbold was present—in the early spring of 1887, some 4 or 5 months previous to the proposition to which he alluded and which I will subsequently allude to—I offered my plant to him through Mr. Orris, to Mr. Archbold, for the sum of \$125,000, and \$25,000 a year for 5 years. In 1886 it is true that I did submit a proposition to him to take for my producing properties and refining plant—the whole oil business that I had—the sum of \$250,000, and \$50,000 a year for 5 years. He considered the proposition and wrote me two letters, of which I would like to submit here the copies of them, because they are very short.

"Mr. KLINE. I note an objection to the copies.

"Q. Have you the means of getting the originals?—A. I have not the originals in my possession, but I will swear that these are copies.

"Q. Will you read the copies into the records?

"Mr. KLINE. I note an objection.

"A. (Reading from paper): '26 Broadway, New York, November 17, 1896. George Rice, Marietta, Ohio. Dear Sir: I write to advise you that I have not lost sight of our recent interview, but there has been unavoidable delay in

¹ See Mr. Page, pp. 735, 736; Mr. Rice's affidavit, p. 738.

gathering information which we desire on the subject. We now expect to have this information in a week or so, and will then again communicate with you. Believe me, very truly, yours, John D. Archbold." The second letter: Dated, 'Standard Oil Trust, 26 Broadway, New York, December 13, 1886. George Rice, Marietta, Ohio. Dear Sir: We have given further consideration to the subject of our recent interview and are prepared, if you so desire, to discuss it further with you. Awaiting your advice as to your wish in the matter, and, if favorable, the designation of a time when you will meet with us here, I remain, truly yours, John D. Archbold."

I never replied to the letter or never called upon them.

Q. (By Mr. PHILLIPS.) What was the price fixed or talked of at that time?—A. \$250,000 and \$50,000 a year for 5 years. Now, here is another. (Reading:)

"Q. There is another term that you use that I don't quite understand. I wish you would be kind enough to elucidate it more clearly. What do you mean by a refinery and a producing plant? What is the difference? What does your property include that you say you were offered \$250,000 for?—A. The proposition I made to Mr. Archbold and to Mr. Squires both, was to include all the producing properties that I had, which was some 200 acres of fee-simple oil land and from 150 to 200 barrels per day production, and also to include all the machinery and everything attached thereto used in the production, and also to include my refining plant and everything connected therewith, tank cars and pipe lines and so on, and the good will of the business.

"Q. Where was that 200 acres of oil-producing land that you say you owned in fee simple located? In the oil district?—A. Yes, sir.

"Q. Already developed?—A. Yes, sir.

"Q. And has it been oil territory ever since?—A. Yes, sir."

That is the end of the quotation. Now, I will make some of my own remarks. My property was fully worth the amount I asked. The mercantile agency of R. G. Dun & Co. for several years made a rating of \$1,000,000 on this same property. It seems ridiculous to answer all these statements, but as the charges have been made, under all the circumstances, I have done it. In 1884-85, and part of 1886, my business had largely increased by my persistent efforts, which was not agreeable to the Standard Oil Trust; so they invoked the aid of Orland Smith, president, and R. M. Fraser, freight agent, of the Cincinnati, Washington and Baltimore Railroad Company, the initial line out of Marietta, so to advance my petroleum freights as to ruin my business, so that this noble and philanthropic trust could easily buy it up for old junk. To the disgrace of these 2 men they readily assented to the nefarious demand, and on July 15, 1886, they did advance my freight rates from 43 to 162 per cent, and did not advance rates at all to the Standard Oil Trust. This had the effect to close up 19 out of 24 of my agencies, and shut me out of 89 towns in 73, within the brief space of 5 months. From that time on my profits were very much lessened by these unlawful freight discriminations, and by the constant attacks and savage cuts made by the Standard Oil Trust upon my customers' goods I was forced to yield and quit the oil-refining business in May, 1896, and my refinery has been idle since—rotting down. I will also read some extracts from the Ohio investigation, but, before doing so, will state that my testimony in said case has been very materially changed by two very important alterations, and of the same particular figure twice repeated, by which it now appears in the official printed evidence that the negotiation for the sale of my properties was conducted in 1897, the very month that the Ohio contempt proceedings were brought, instead of the year 1887, as I testified. I also testified that the capacity of my refinery was 100,000 barrels per annum, which has been changed to 10,000.

I am reading now from the record of the Ohio investigation of the Standard Oil Trust.

Q. (By Mr. FARQUHAR.) Is it not strange, don't you think, that Attorney-General Monnett would have those changes made? Could it have been on purpose?—A. I am saying that they have been changed; I am not charging any one. "I will go back to 1897," cross-examination of me by Mr. Elliott, counsel for the Standard Oil Company, page 885. "I will go back to 1897"—it should be '87. If I said '97 it was a mistake. (Reading:)

"Q. I will go back to 1897. Did you say to Mr. Archbold in an interview, 'I believe it is better for the Standard Oil people to make a deal with me, and that by so doing parties will be deterred from encouraging a line of action against the Standard Oil Company, which I understand that others are about to do?'

"A. No, sir; I do not recall anything of the kind. I wish to explain right here when those suits were enforced in regard to the transfer of my 5 shares" —

This is very important. (Witness resuming reading:)

"Of trust certificates; they tried to produce evidence, the Standard Oil people did, and it came forth in the trial of the transfer of these 5 shares of trust certificates in my own name. They brought forward 2 men for that purpose that proposed to swear that I had demanded from the Standard Oil Trust people a large amount of money, and they were the only ones that could settle this matter, and Mr. Bartlett, my counsel—this was indicated to him that such kind of evidence was coming out—and he particularly questioned me before I went on the stand, before the matter came up, to know whether this could be true what he had heard. And I said, if they brought up any matter of that character it certainly would be a lie; it would not be true; could not see how they could back it up. He was considerably nervous over it, and I was myself. I did not know but what they had adopted some kind of a plan to smirch my character, and when it came up Mr. Bartlett objected to any of this testimony going in, and the judge said: 'Mr. Bartlett, we will allow this to go in, and if they do not connect Mr. Rice with this matter it will all be thrown out.' They went on and brought up 2 agents, one I have known in the oil business, Hill was his name, and I forget the other man's name; and they went on the stand and testified that they had letters that were written pro and con with the Standard officials in which they said to them they could arrange a settlement between Mr. Rice and themselves; that they had the whole thing in their hand. I never knew a thing about it. I never heard a word about it, and they admitted that they had no conversation with me. They had taken up their report and it was written on Standard Oil paper, making those threats, and those letters were used against me before the chairman of the committee in Congress to poison his mind against me. There was nothing in them. They were gotten up by these men themselves, and to show the truth of it the judge threw out that testimony and would not allow it to go in. It was all a concocted story to smirch my character; that is what is the matter."

Now, I want to read you the letter and correspondence that passed. I want to say right here, I think this correspondence was engineered for the purpose of being used afterwards, as Solicitor Dodd did use it. Here are letters—without my knowledge parties wrote letters under the head of the Standard Oil Trust, and I never knew a thing about it. It was let in temporarily while the case was on with the understanding that if they did not connect me with it it would be thrown out. It was thrown out, but Mr. Dodd used it against me before the Congressional committee of 1898. Now, this is a letter which was written, that I did not know anything about, and I think it was concocted for the purpose by this man Hill.

Q. (By Senator KYLE.) Who is Hill?—A. Edgar P. Hill, Nassau street, New York.

Q. A man whom you knew?—A. I knew him once in the oil business. He directs this letter to Mr. Cuthbert, an official of the Standard Oil Company. He says:

"EDGAR P. HILL,

"ATTORNEY AND COUNSELOR AT LAW,

"93 Nassau street, New York, March 20, 1888.

"MY DEAR CUTHBERT: I am going to write you a very plain letter in regard to the matter of Rice and the Standard Oil Company. In my judgment the company is making a great mistake in not getting Rice out of their way. I know what I am writing about, and the necessity of Mr. Brewster's being put in possession of such facts as I shall give you some account is urgent. Can you consistently and properly, through Mr. Bushnell, have them reach Mr. Brewster? If you can without prejudice to your interest, I hope you will do so. If you can not, say so plainly, and reply to this letter as soon as you possibly can. I shall not call on Mr. Dodd again unless he sends for me. I don't think he appreciates the situation. But to the facts, of which you will see something in the papers before you are many days older.

"First. Mr. Rice owns certain shares of the Standard Oil Company stock. An alternative mandamus has or will be soon issued commanding the company to transfer that stock to George Rice, or show cause why it is not done. If the company transfers the stock, Mr. Rice will prove to be a more troublesome customer than he is now, unless he is settled with at once. If the company refuse to transfer the stock, they will be compelled to, and then its trouble will be greater. The company can not resist the court if it refuses.

"Second. Rice has been summoned before the Interstate Commerce Commission, and will be before that commission to-morrow, or very soon, to answer interrogatories already framed, the answers to which will be troublesome to the company, to speak within bounds. Those interrogatories had best remain unanswered.

"Third. Legal proceedings are about to be commenced against 2 of the railroads having large contracts in the past, and at present, with the Standard Oil Company in violation of the interstate-commerce law for a forfeiture of their charters.

"Fourth. A law has been framed and will soon be introduced in Congress giving Mr. Rice the authority to bring suits in any State against railroads that have made contracts with the Standard Oil Company discriminating against Rice and to his prejudice.

"Fifth. It is useless for the company to try to make a settlement with Rice through other parties. It must be done with me or not at all. There are other matters I could call attention to, but this is sufficient for the present. I write as I have to you for the sole purpose of having these facts brought to the notice of Mr. Brewster and for no other purpose. Could I have an interview with him I am sure it would be to the advantage of the company. Again, let me say that I do not want you to be prejudiced in the least in this matter, and unless you can see your way clearly to do this don't do it, but return this letter to me and that will be the end of it, so far as you are concerned. Please do not delay your answer.

"Sincerely, yours,

EDGAR P. HILL."

"EDGAR P. HILL,
ATTORNEY AND COUNSELOR AT LAW,
"93 Nassau st., New York, March 29, 1888.

"MY DEAR CUTHBERT: I have your letter of the 26th instant, for which you have my thanks. I am very glad indeed that you sent my letter to Mr. B. and I infer that he or Mr. Brewster has it now, as you do not mention its having been returned to you. I shall be fully engaged to-day and to-morrow in another matter, and as soon as that is off my hands I shall ask Mr. Brewster for an interview, and I am confident that good will come to the company from it. I desire to have you understand that I am not acting and will not act in this matter in any spirit of hostility to the company, but, on the contrary, I desire to bring about a settlement between the company and Rice, and nothing else. I am the only person who has the handling of this matter, and the Standard Oil Company is simply wasting valuable time in trying to reach Rice through someone else. That this has been done I am sure, but it has had and will not have the least encouragement. I shall endeavor to make myself understood by Mr. Brewster, and am not without hope of causing him to see matters as they are, and not as they are represented to be by others in whom he places confidence. Mr. Dodd hinted at blackmail on the part of Rice, but that is absurd on its face, as I only ask to be heard fairly in an endeavor to settle a matter between these parties now, and which will be more difficult the longer it is delayed. I can settle the matter in less than a week if a fair and accommodating spirit is shown on the other side. I am well pleased with the situation, and again thank you for the kind assistance you have rendered me.

"Sincerely, yours,

EDGAR P. HILL."

Now, then, Mr. Dodd a few months later writes a letter to the Hon. Henry Bacon, chairman of the Committee on Manufactures, giving him the substance of these letters. He says:

"To Hon. HENRY BACON,

"Committee on Manufactures:

"We offer the correspondence on behalf of George Rice with persons connected with Standard Oil Company, to show that he threatened to give troublesome evidence before this committee, unless settlement was made with him, and parol evidence to show that the price demanded for settlement was \$550,000.

"Yours,

"S. C. T. DODD,
"Solicitor Standard Oil Trust.

"JULY 12, 1888."

These letters and all the evidence pertaining thereto had been thrown out by the court, and he used it afterwards.

Q. (By Mr. PHILLIPS.) Did Mr. Dodd know that it had been thrown out?—A. Certainly he knew; no question about it. You know it is ridiculous and outrageous to have to answer all that, but the charges have been made against me, and I think I ought to answer them here.

Q. (By Mr. JENKS.) You never yourself had any communication with Mr. Hill at all?—A. No, sir, not a particle.

Q. (By Mr. FARQUHAR.) Was Hill a broker in New York?—A. No, sir; a lawyer. Now, gentlemen, here is a pamphlet that is issued by the great Standard Oil Trust. I issued a pamphlet called "Black Death."¹ It was in the papers a good deal at the time. That is my original pamphlet, and the Standard Oil Trust issued that kind of a pamphlet with all the vacant places filled up with that scurrilous stuff against me. It is in exact size, same print, same paper, and everything, with the margins filled with a lot of scurrilous matter printed in red ink, and I think it might be well to read it, which will not take long, to show what kind of people they are.

Q. (By Senator KYLE.) Did you attack them in your pamphlet?—A. Yes, certainly.

Q. This is in the shape of a rebuttal?—A. Yes; I suppose so. Now, they have admitted this, you know, in a suit I had. They have admitted this pamphlet with all this stuff. They say: "If the Standard Oil Company pay George Rice \$250,000 for his refinery, worth \$50,000, can they sell oil any cheaper, or serve the public any better than they do now?" But on the front part they say: "Common sense pricks this hullabaloo." "Such missionaries as George Rice work mostly for George Rice." "Buy the best and cheapest goods of the agents of the Standard Oil Company." "The black border on the first page means blackmail by George Rice." This is issued by the great Standard Oil Trust, a great philanthropic institution, which is worth several hundred million dollars, you know, and they say at the bottom of the second page: "Buy the 'Standard' goods." "If George Rice's goods are no better than his pamphlet, you don't want them." "His pamphlet boiled down simply means 'sour grapes.'"

[Other similar quotations in pamphlet.]

They acknowledged this as their property; that they published it.

It is generally known in the oil region that the Oil City Derrick is the organ of the Standard Oil Trust, because they do not publish anything against them. It is all against anybody that attacks the Standard Oil Trust.

Q. (By Mr. PHILLIPS.) Is it the habit of the Oil City Derrick to attack independent producers?—A. Yes.

Q. Producers engaged in opposition refineries?—A. Yes; that is what it does. It attacks everybody that is in opposition to the Standard Oil Trust.

Q. Did you ever know of its attacking any member of the Standard Trust?—A. I never did. I never knew of its attacking anybody in the Standard Oil Trust or that has anything to do with the Standard Oil Trust. It is known as an organ under the Standard Oil Trust throughout the oil region.

Q. You have made sufficient reply to all these matters?—A. I suppose I have. I wanted to reply to these things. I don't like this business, but these things have to be answered.

Q. Do you know what the dividends of the Standard Oil Company have been since its organization?—A. Why, say \$170,000,000 since 1892, and the 10 years previous would be \$100,000,000—about \$270,000,000.

Q. What is the capital stock sold at?—A. It sold in May at 500 on a par of 100.

Q. What would that make the total?—A. Half a billion of dollars.

Q. Do you know anything about the surplus?—A. No; I do not. They do not make a statement to anybody.

GOVERNMENT OWNERSHIP OF RAILROADS.

Q. (By Mr. CLARKE.) I would like to ask Mr. Rice if he has any further remedy to recommend to this commission than Government ownership of railroads?—A. I do not believe I have, Mr. Clarke. The experience of the past 12 years of the interstate-commerce law shows that the penalty clause of \$5,000 and 2 years in the penitentiary for each and every offense is absolutely without effect. I think more drastic measures must be used; and I do not see how freight discrimination can be remedied except by Government ownership of railroads.

Q. In your pamphlet you make some allusions to the ease with which certain people can control legislation, especially in the State of New Jersey?—A. Yes; I think that by the centralizing of trusts and combinations in one State, it is much easier to control that State in the way of legislation.

Q. Do you not recognize that there would be great danger that if railroads were owned and controlled by the Government there would be great abuses, political abuses incident to it?—A. No; I do not; for this reason, that I do not

¹ Pamphlet entitled "Black Death," by George Rice.

know of any instances now of any particular account that any department of the Government is run dishonestly. That is to say, every man is getting his equal just deserts. That is the way I understand it. You do not hear of any complaints that the Government is being robbed, excepting, of course, occasionally; now and then. In a general way the departments of the Government are run honestly, fairly, and squarely.

Q. We have heard from you several times to-day that you do not think the Government officials are performing their duty?—A. I do not.

Q. Would they be any more likely to do it if they had control of the railroads?—A. Yes; they would. If they did not do their duty quite so well, they would have no freight discrimination, which I can tell you would be of great advantage to the people of the country; but as I understand it all Government employees do their duty generally.

Q. Do you not think that discriminations can be provided against effectively without Government ownership of railroads?—A. No; I do not know how it can be. They pay no attention to this severe penalty clause, and as everything shows, discriminations are about as bad to-day as ever; but of course they are more covered up, and you do not get on to the worst of it. There was an expert that was employed on the books of the Atchison, Topeka and Santa Fe when that \$7,000,000 of rebates was discovered 5 years ago. This railroad expert told a friend of mine—this expert who was put on the books—that he was just getting into the “meat” of it, and discovering this discrimination, and he had got on to it through a certain key, of a pencil mark on the books, which turned out to be the secret. He was just getting into it, when he was shut off, after he had discovered rebates to the extent of \$7,000,000; and he said he thought more could have been discovered if he had had time to work it out. That was told to me by friends on whom I can rely—that the expert told him, and I have no doubt that it is so.

Have I said enough in regard to the existence of the Standard Oil Trust? I pretend to say that the Standard Oil Trust is growing stronger all the time, and that said trust is not dissolved by any means; simply passing resolutions to dissolve it does not dissolve it by any means. I did not know whether I made that plain enough.

Mr. A. L. HARRIS. I think so.

WASHINGTON, D. C., Wednesday, December 13, 1899.

TESTIMONY OF MR. HOWARD PAGE,

Vice-president of the Union Tank Line Company.

The commission met at 10.45 a. m., Chairman Kyle presiding.

Mr. Howard Page, of New York City, vice-president of the Union Tank Line Company, was introduced and, being duly sworn, testified as follows:

Q. (By Senator KYLE.) State your full name, address, and business.—A. Howard Page, New York City. I am vice-president of the Union Tank Line Company, which is a company that owns the cars in which the Standard Oil Company makes its shipments over the various railroads of the United States. I began in the business with Chess, Carley & Co. in 1878, and continued with that firm until it became the corporation of the Chess-Carley Company, which was in 1881. The Chess-Carley Company was succeeded by the Standard Oil Company of Kentucky, about 1886. Chess, Carley & Co. and the Chess-Carley Company were under the direct control and management of Mr. F. D. Carley, who was the resident partner and manager at Louisville.

Q. (By Mr. JENKS.) At what time did you go into the employ of the Standard Oil Company?—A. The Standard Oil Company of Kentucky was formed about 1886. I was with that company until I came to New York, in 1889, to take a position with the Standard Oil Company of New York. I have been with that company and the Union Tank Line Company since that time.

Q. Have you been immediately connected with the transportation business ever since coming to New York?—A. I have, and prior to that time I was in charge of the traffic matters of the Standard Oil Company of Kentucky, and also of the Chess-Carley Company, when I was in Louisville, and was also familiar with that part of the business when I was with Chess, Carley & Co.

Q. And in New York with the Standard Oil Company, you were especially in charge of their transportation business?—A. As vice-president of the Union Tank Line

Company, which, as I have stated, is the company that owns all the tank cars in which the Standard Oil Company makes its shipments throughout the United States, I was familiar and am familiar with the transportation business of the company throughout the United States.

Q. How long have you held your present position as vice-president of the Union Tank Line Company?—A. Since the formation of the company in 1891.

Q. I understand that you have a general statement that you wish to make?—A. I have a memorandum or answer that I wish to offer to the allegations and charges made by Mr. Rice before the commission in regard to transportation and freight arrangements, which he alleges that we have as against himself and other shippers. I have gone in detail into his testimony and will now answer the points which I have picked out.

Mr. A. L. HARRIS. Mr. Chairman, I do not know but there is a possibility of saving time. As I understand it, there is nothing that the commission desires before the time of the interstate commerce law. I think it is conceded that there were rebates and discriminations previous to that time. Mr. Archbold, when he was on the stand, said that there had been nothing since that time; Mr. Rice claims there has. Will it not be enough if Mr. Page answers the charges made by Mr. Rice regarding discriminations since 1887?

The WITNESS. I would say, in answer to that, that there are some charges relating to the time before the interstate commerce law, which Mr. Rice has made and reiterated and advertised so frequently that they have come to be believed, and which I think I can answer very satisfactorily, and which we should like to have the opportunity of answering.

Mr. A. L. HARRIS. There is one particularly that you have in mind, I think, that we have no objection to, and that is "putting another screw on." You may make any answer in regard to that.

The WITNESS. That is the principal one, and it will not take as much time to answer it, Mr. Harris, as we have taken now.

Mr. A. L. HARRIS. I wanted to prevent covering the entire ground previous to 1887, when there is no dispute particularly between the Standard Oil Company and Mr. Rice. It is conceded that there were a number of favors granted. But since that time, as I understand, the Standard Oil Company claims to have lived strictly up to the law.

The WITNESS. Absolutely.

Mr. PHILLIPS. I think, in opposition to my friend Mr. Harris, that it is entirely competent for the witness to go over the whole ground covered by Mr. Rice. Mr. Rice stated facts; and he has a right, it seems to me, and it is proper, that he should cover the ground covered by Mr. Rice without regard to dates. Of course, what has transpired since the interstate commerce law was enacted is more important to this commission; but if Mr. Rice has made any statements in regard to discriminations before that time, I think the witness should have the privilege and the unlimited privilege of replying to such statements.

Senator KYLE. It strikes me, gentlemen, that inasmuch as Mr. Archbold admits discriminations prior to 1887—

The WITNESS (interrupting). Admits that we got as low rates as we could prior to 1887.

Q. That there were rebates given prior to that time?—A. Yes.

Senator KYLE. That there is no issue except as to some special discriminations against Mr. Rice that he complained about, and as to this Chess-Carley business in Kentucky.

The WITNESS. That is all; and as I was there at the time and was familiar with it, I think it is only fair to the company that I should be allowed to make a statement.

NO PAYMENT FOR A COPY OF TRUST AGREEMENT.

Mr. Rice charges that the cotton-seed oil trust paid the Standard Oil Company \$250,000 for a copy of its trust agreement.¹ We deny this absolutely as to any amount; in other words, we did not receive a dollar.

ALLEGED FAVORITISM IN THE PURCHASE OF LUBRICATING OILS.

Mr. Rice claims that the railroads paid the Galena Oil Company very high prices for its oils, and this forms a kind of freight discrimination in favor of the Standard Oil Company.² Mr. Archbold denied it,³ and I deny it again. The facts are that the

¹ See p. 688.

² See pp. 689, 700; see also Mr. Lee, p. 268; Mr. Davis, p. 359; Mr. Monnett, p. 309.

³ See p. 516.

trade secured by the Galena Oil Company is because of the superior and uniform quality of its oils as compared with the ordinary oils on the market. As to the prices paid for the Galena oils as compared with others, the Galena Oil Company sells its oils to railroads under an agreement by which the Galena Oil Company always guarantees that the cost shall not exceed the cost of oils that the railroad has used before, and generally guarantees a reduction. This guarantee is in the form of a certain cost per train mile for the different equipments which the railroad runs over its rails. That is, the cost per train mile of engines, freight cars, and passenger cars is found from the railroad's own books, and then the Galena Oil Company guarantees that railroad, after finding the cost of the use of the other oils, that the cost of using Galena oils will be less, and never more, than by using the other oils.

Q. (By Mr. CLARKE.) You refer to lubricating oils entirely?—A. Lubricating oils entirely, and signal oils.

Q. Signal oils.—A. The result of this has been that there has been a great saving in the cost of the lubrication of railroads, and a growing trade to the Galena Oil Company. This saving is produced by the fact that the Galena oil will do more work for the same money than any other oils, and experience has shown that that result has been obtained, and the guarantee is made good. And as regards the amount of money that the railroads pay to the Galena Oil Company for the use of its oils as compared with the cost of the ordinary oils on the market, it is shown to be less.

Q. (By Mr. FARQUHAR.) Has it not been customary for the last thirty years to demand these tests of all persons that present oils for railroad use? Has it not been the custom of the oil trade for thirty years to do as the Galena does?—A. I do not think any other company has gone into it as a science as the Galena Company has done.

Q. Not as to uniformity?—A. Nor do I know that they have ever guaranteed the cost of a train mile for a year or a series of years, as the Galena company does. It is immaterial to a railroad whether a gallon of oil costs 10 cents or 5 cents, if the 10-cent oil will do work for 3 miles that the 5-cent oil will only do for 1 mile. That is simply the result of the use of the Galena oils. The Galena oils, although they have but one price, and a uniform price, and a higher price than the cheaper grades of oil, will do more work, and the railroad will pay less money in a year by the use of those oils than they pay by the use of the cheaper oils; and they are so guaranteed.

Q. (By Mr. SMYTH.) Has that fact ever been demonstrated?—A. Absolutely. The demonstration is proved just by what Mr. Rice claims—that the result has been that 95 per cent—I do not say it is 95 per cent, but I do say the Galena Oil Company has secured the large and growing trade with the railroads; and it could not have done so had not the oils been superior and the results been obtained that they have shown.

Q. You say this large trade with the railroads is due to the superiority of that oil and not to influence brought to bear by the Standard Oil Company?—A. Absolutely; the superiority of the oils and the economy that they have given to the lines themselves.

Q. (By Mr. JENKS.) You make the general statement, then, that in no case does the Standard Oil Company receive a higher cost of lubrication from any of the railroads than would be paid to other companies for bad oils?—A. Per mile?

Q. Per mile.—A. Absolutely.

Q. You do not deny that the Galena Oil Company does receive more per gallon than might be given to some of the other companies?—A. For the cheaper grades of oil.

Q. But in no case do they receive more for the same grade of oil than would be given to the other companies?—A. I have tried to make myself clear on that. The guaranty of the Galena Oil Company is to the effect that by using their oils the cost per train mile of the various equipments of the railroads is guaranteed to be no more, and is generally guaranteed to be less, than with the use of other oils.

Q. That applies generally to all the railroads to which it is sold?—A. Yes; absolutely to all the railroads.

GALENA COMPANY'S PRICES UNIFORM—ITS BUSINESS MULTIPLIED BY 10 IN ELEVEN YEARS.

Q. (By Mr. SMYTH.) Do I understand you to say that there is a uniform price for this oil?—A. The price is the same to every railroad in the United States.

Q. Regardless of quantity?—A. Regardless of quantity. Of course one railroad may use very much more oil than another, but the price per gallon is the same to all railroads all over the United States. The guaranty is not the same, because in running over one railroad, for instance, like the Northern Pacific, or the transcontinental

line, the cost is necessarily greater than in running over a railroad like the Pennsylvania or the New York Central; but the guaranty is that the cost, whatever it has been, over the road with which they make the contract, shall not be greater, and generally that it shall be less, than the former cost in the use of the particular oils.

Q. (By Mr. PHILLIPS.) Do you claim that there is no refiner or person engaged in the manufacture of lubricating oil that can make oil equal to the Galena oil?—A. I can not answer that; I can only say what the result of the Galena Company's oil and its business has been.

Q. Yes; but you spoke of their guaranteeing a superior quality of oil?—A. I did not say guaranteeing a superior quality; I said they guaranteed their cost.

Q. And above the cheaper oils?—A. Yes.

Q. The inference would be probably that all others made inferior or cheaper oils than the Galena.—A. I did not say.

Q. You did not say it in so many words.—A. I said that the result of the use of the Galena oils had been a saving to the railroads in the cost, and that they were justified in guaranteeing that cost by the fact that the Galena oils did better work for the same money than the cheaper grades of oil that were offered on the market.

Q. Did or did not the monopoly of the lubricating-oil business, so far as the railroads are concerned, grow up during the time when the rebate system was in vogue everywhere?—A. Absolutely not. For 10 years back, during which time the Standard Oil Company has not received a dollar in rebates, the trade of the Galena Oil Company has grown tremendously, and I would say is probably ten times to-day what it was at the date of the passage of the interstate-commerce law.

Q. Did they not get this monopoly of the lubricating business of the country prior to the interstate-commerce act, though it has grown largely since? The railroads have increased by thousands and tens of thousands of miles since that day.—A. I should think I had already answered that by saying that to-day the trade of the Galena Oil Company is ten times what it was 10 years ago, and in the last 10 years we have not received a dollar of rebates; therefore, prior to the interstate-commerce law, when we did receive lower rates of freight than the tariff, as all other shippers did, the trade of the Galena Oil Company was only one-tenth of what it is to-day.

Q. But still it was practically a monopoly of that business at that date?—A. It was not. If they only had one-tenth of the business they have to-day, they can not have had a monopoly at that time.

Q. Did they not use your oil and other oils? Has not the use of lubricating oil been growing all the time? Was there or was there not any considerable amount of oil furnished by independent or outside people to railroads prior to the interstate-commerce act?—A. They sold the railroads then and they sell them now.

Q. No considerable amount to the railroads prior to that?—A. Oh, yes; as far as my knowledge goes, they did, and they try to now and they do now.

Q. (By Mr. FARQUHAR.) Is it not a fact that the Galena Company, before it ever came into the Standard, established a lubricating business?—A. Yes.

Q. Is it not generally known and understood that the Galena is the best lubricant ever made in this country? Is it not the general reputation among railroad men and all others?—A. Its success has certainly proved that.

GALENA COMPANY HAS NOT SOUGHT MANUFACTURING TRADE.

Q. (By Senator KYLE.) How does it commend itself to enterprises outside of railroad companies?—A. The Galena Oil Company has made a specialty of the railroad and steamship trade; it does not try to sell the manufacturing and machine trade.

Q. It does not refuse to sell?—A. No; it does sell, and has also a large and growing trade abroad.

Q. Do not these other private corporations discover the merits of the Galena oil, and if it is cheaper, would they not find this merit out?—A. They use those oils, but as I say, the Galena Company has made a specialty of the railroad and steamship business, and while that does still hold, and it is only too glad to sell the mills, it has not made a special branch of the business in that direction.

Q. I want to get the comparative merits of the Galena oil. If private enterprises are still using other brands outside of the Galena, there must be some merit in those, because all those institutions are determined to get and use the very best oil in their business. Economy dictates that.—A. But the Galena oil is an oil that is compounded and made especially for the requirements of the railroads. The oil that is required for an engine and for the axles of a freight train is not necessarily the kind of oil that is required in machinery.

The other companies, then, are not catering for that sort of trade; they are not doing that kind of oil?—(No answer.)

OIL SOLD ON LONG CONTRACTS—PRICES ABSOLUTELY UNIFORM.

Q. (By Mr. JENKS.) Where you do sell this Galena oil to mills, how do the prices quoted to the mills compare with the prices quoted to the railroads?—A. Absolutely the same.

Q. Not lower?—A. Absolutely the same; not lower.

Q. At what time did the Galena Oil Company go into the Standard Oil Company?—A. I do not know.

Q. Does this fact that the Galena oils are sold to the railroads mostly on contract for a year explain the statement that has been made here at different times, that when independent dealers attempted to sell oil to local railroad officials, they were referred invariably to the higher officers of the railroad company? Your own officials also have testified that they had no knowledge of the price of oils to railroads because they themselves, the local managers, did not deal with the local officers.¹—A. That is generally true, I believe, of the supplies used on railroads. The purchasing agent or local division agent of a railroad is not the man that buys for a large system of roads any article that is used to any large extent, and naturally the local man would not know the price of a contract, that would probably be made by the general manager for a series of years, covering the entire lubrication of a railroad.

Q. (By Mr. FARQUHAR.) All those articles are generally bought by contract by the year?—A. The contracts are generally for from three to five years, simply because the results and the economies can not always be demonstrated in one year.

Q. (By Senator KYLE.) They have no schedule prices on those?—A. They have an absolute schedule price per gallon.

Q. For from three to five years?—A. From three to five years; and they guarantee the cost per train mile of the various equipments run, based on the cost that has been shown before by that same railroad in the use of the ordinary oil.

Q. And that price is quoted to all consumers?—A. Yes.

Q. Whether railroads or not?—A. Yes.

Q. And yet nobody knows it because it is referred to the head officers of the road or of the company?—A. I do not think that is a fair inference. What Mr. Jenks said was that the local man of the railroad does not always know what the prices are that the railroad is paying to the Galena Oil Company for the oils. That is not saying that the Galena Company does not quote these prices to the customer that wants the oil.

Q. They make the same prices to a railroad for a 5-year contract that they would for a barrel of oil to a private consumer?—A. I know that the price is the same for a barrel of oil on every railroad as outside.

Q. (By Mr. SMYTH.) Can you give the price of the oil per barrel?—A. I do not know, Mr. Smyth. I know it has a large trade and a growing trade.

DESPEAUX V. PENNSYLVANIA RAILROAD COMPANY.

In regard to Mr. Newlin's letter to George Rice, alleging freight discriminations by the Pennsylvania Railroad in favor of the Standard Oil Company, as compared with other shippers.² I beg to hand you a letter from Solicitor Dodd, addressed to the commission, attached to which are some letters from the attorneys of the railroad in reference to that matter. I will say briefly that Mr. Newlin's deductions, as presented in his letter to Mr. Rice, were the same as argued by him before the United States court at Philadelphia, and the court dismissed the case. The facts in the case, boiled down, are simply that the Standard Oil Company paid exactly the same rate of freight as all other shippers over the Pennsylvania Railroad from and to the various points named in Mr. Newlin's letter, but on such oil as was carried partly by pipe line and partly by railroad, the pipe line was allowed a share of the through rate the same as the railroad would allow any other connection. The pipe line is a common carrier under the laws of Pennsylvania, and on all oil that is gathered in the oil fields and piped toward the seaboard and delivered to the Pennsylvania Railroad as it was at Hamilton, the rate was the same as the through railroad rate, and the pipe line got a share of that rate for its haul as the Pennsylvania Railroad got a share for its haul. The legal and the full explanation is in this letter from Mr. Dodd and the attorneys of the Pennsylvania Railroad, which I shall present as an exhibit.

¹ See Mr. Mathews p. 505, bottom.

² See p. 700.

I.

NEW YORK, December 7, 1890.

THE UNITED STATES INDUSTRIAL COMMISSION.

DEAR SIRS: James W. M. Newlin, in his letter to George Rice, which was given in evidence before the United States Industrial Commission, made two specific allegations:

First. That during the years 1881, 1882, and 1883, Fennaille & Despeaux paid the Pennsylvania Railroad Company 48 cents per barrel for carriage of oil, all rail, from Foxburg to Communipaw, and at the same time, between the same points, the railroad company carried oil for the Standard Oil Company at a reduction of 22½ cents per barrel.

Second. That the Pennsylvania Railroad Company carried oil from McCalmont and other points to Communipaw, charging Fennaille & Despeaux 33 cents per barrel, and at the same time, between the same points, carried oil for the Standard Oil Company of New York for 19.875 cents per barrel.

He further claims that these facts were proven in the case of Fennaille & Despeaux v. The Pennsylvania Railroad Company.

We desire to make the most specific denial of these statements:

First. That it is not true that oil was so carried for the Standard Oil Company; and

Second. It is not true that any evidence of such fact was given in the case of Fennaille & Despeaux v. Pennsylvania Railroad Company or any other case, nor was any evidence given, written or oral, from which any sane man could infer such a state of facts. On the contrary, the evidence given was positive that at the dates mentioned the Standard Oil Company paid the same rates on freight as other shippers and received no drawbacks or preferences.

Mr. Newlin, after stating these facts were proven in said case, refers to the specific evidence, which was an agreement between the Pennsylvania Railroad Company and the National Transit Company, dated May 6, 1881. I presume a copy of this agreement was handed to the commission, and it is only necessary to say that the most astute and suspicious mind could not distort the language of that agreement into a support of the allegations which Mr. Newlin bases upon it, and Mr. Newlin should have been more cautious in making such allegation, as he had already been heard in the United States court at Philadelphia on his construction of this agreement, and after argument the case was dismissed by the court for want of any proof of discrimination.

Mr. Newlin claims the discrimination lurks in sections 4 and 8 of the said agreement. The agreement was a joint traffic agreement in regard to oil carried partly by pipe line and partly by rail, the through pipe line at that time having been completed to a point near Milton, Pa. The fourth section is as follows:

"The through rates from the discharging points of the gathering pipes in the region to the destination of the oil, whether the same shall be shipped entirely by rail or by trunk pipe and rail, shall be fixed by the trunk-line railroad companies, provided they can agree upon the same, and the transit company agrees to accept thereof as the share due to its through pipes,¹ the proportions hereinafter fixed. The through pipe lines include only such lines as receive oil from the local or gathering pipes and do not include any part of said local or gathering pipes."

By this section the railroad companies were authorized to make the through rate, and a distinction was drawn which has always been maintained between the local and gathering lines and the through pipe lines. With the local or gathering pipe lines and their charges for gathering oil, the railroad had no connection, except in the single event provided for in section 8. Charges for oil carried by the through lines to Milton and thence by rail were prorated between the pipe lines and railway as provided in section 7.²

Section 8 is as follows:

"Whenever the through rate from the exit point of gathering pipe shall be less than forty (40) cents per barrel, the local or gathering pipe shall be considered as entitled to a rate equivalent to only one-fourth ($\frac{1}{4}$) of the rate which shall be formed by the addition of the said through rate to the public rate which the local pipe charges,

¹ In the transcript of the evidence in Despeaux v. The Pennsylvania Railroad Company, submitted to the commission by Mr. George Rice as his Exhibit D, this clause reads, "the share due through its pipes." Otherwise the section as there given agrees with this text.

² Section 7 is given in Mr. Rice's Exhibit D as follows: "The through rate from the exit point of gathering pipe to the seaboard on oil delivered at Milton, as hereinbefore described, shall be divided as follows: Rates to Philadelphia shall be prorated upon the basis of the all-rail distance from Olean to Philadelphia via Emporium, Milton, and Harrisburg. Rates to New York shall be so divided that the railroad company shall receive thereon the same as it shall currently receive on oil to Philadelphia, with the current difference from Philadelphia to New York added. Of the said through rates to Baltimore the railroad company shall receive the same from Milton to Baltimore as it shall at the same time receive from Milton to Philadelphia on oil destined to the last-named point."

and one-half (½) of the difference between this one-fourth and the said public rate shall be considered as due and to be paid to the railroad company, but this difference shall never be such as to make the local pipe receive less than ten (10) cents per barrel."¹

The obvious intention of this so-called dangerous section is to take from the pipe line a certain portion of its charges and give it to the railroad when the through rate is less than 40 cents.

Referring to Mr. Newlin's figures, the first relates to a rate in excess of 40 cents, and he certainly could see, if he has eyes, that section 8 has no reference to such a case. The second table of Mr. Newlin's figures relates to a rate less than 40 cents, and if it referred to carrying oil by pipe line to Milton, or any point on the through lines, and thence by rail to seaboard, it would come within section 8, but it does not so refer. If the Standard had oil carried by rail from Foxburg or McCalmont, it was not affected by this agreement; if it had oil carried by pipe line to Milton and thence by rail to seaboard and the total through rate was 33 cents, it paid the railroads 33 cents and the railroads adjusted the charges with the pipe line company under section 8.

Further, Mr. Newlin's figures are based on a total misreading of section 8. This misreading consists in confounding "through rate from exit point of gathering pipe" and the "public rate which the local pipe charges."

In Mr. Newlin's first figures the through rate from exit point of gathering pipe is 48 cents. The public rate which the local pipe line charges is 20 cents. One-fourth of the sum of these rates is 17 cents.

Mr. Newlin says one-half of the difference between this 17 and 68 cents is the amount the Standard paid to the railway company for freight. The contract does not say so. It says one-half of the difference between this 17 cents and the "said public rate" shall be paid to the railroad. Referring back to see what "public rate" has been mentioned we find it is "the public rate which the local pipe charges." There is no other reference to "public rate" in the section.

The figures which Mr. Newlin injects instead of the "said public rate" are made up of the through rate from exit point of gathering pipe and the public rate which the local pipe line charges, or 68 cents, while "said public rate" is 20 cents, and one-half of the difference between 17 and 20 is 1½. Therefore, if he had made his figures correctly, he would have shown that the Standard only paid 1½ cents per barrel freight while others were paying 48 cents. But such a *reductio ad absurdum* would have defeated his purpose.

Pursuing the investigation further, it will be found on Mr. Newlin's theory that "one-half of the difference between this one-fourth and the said public rate" fixed the amount the Standard paid for its freight. If the railroad charged others 60 cents per barrel, the Standard would pay nothing. But if others paid 33 cents per barrel, the Standard would pay 3.37½ cents, and the lower the rates to others the higher to the Standard.

All this is absurd, and the absurdity consists in the misreading and misapplication of the section. It has no reference whatever to the freight rates the Standard shall pay. They were fixed by the railroad without discrimination. When others paid 48 cents the Standard paid 48 cents, and when others paid 33 cents the Standard paid 33 cents, but if the oil went part of the way to seaboard by pipe line, under this agreement, the pipe line was paid a pro rata proportion for its share of the transportation. To compensate the railroad for a low rate of freight, the pipe line company agreed to take something from the pipe rate which the local pipe line charged and pay it to the railroad. This only applied when the rate was less than 40 cents, and would increase as the railroad rate diminished below this point, but was "never to be such as to make the local pipe receive less than 10 cents per barrel."

Admit for argument that the Standard and the pipe line are essentially the same, and what is the result? The Standard received from the railroad company a pro rata amount for its share of the transportation by pipe line, and to recompense the railway company for an exceedingly low rate for through freight, agreed to pay to the railroad company a portion of its local pipe-line earnings. It may have been a rebate to the railroad; it certainly was not a rebate to the Standard.

Coming next to the agreement of August 22, 1884,² which superseded the agreement of May 6, 1881, a case of payment to the railroad company is much more clearly shown. The pipe line was then completed to seaboard. It could not have reached that point without the consent of the railway company, as no free pipe-line law then existed in the State of New Jersey. It was still necessary to have a traffic contract with the railroad and to deliver oil to the railroad at different points on the

¹This section appears in the same words in Mr. Rice's Exhibit D.

²For the text of this agreement, see p. 663. For discussion of it, see Mr. Emery, pp. 663, 666, 667; Mr. Rice, pp. 788, 789.

through line, that point being Milton, as before, for oil destined for Philadelphia. In addition to agreeing to pro rata rates for oil carried partly by pipe and partly by rail, it was further agreed that if the railroad company did not move 26 per cent of the oil, the Transit Company should pay it the deficiency.

Settlements were made with the railroad company, and one of the settlements is referred to in Mr. Newlin's letter, that of September 30, 1884, which shows a payment to the railroad company for such deficiency, amounting to \$10,722.22.

Many such settlements were put in evidence, all of them showing monthly payments of large amount to the railroad company. None of these were payments for freight, but payments to the railroad company for the deficiency in the amount it carried as specified in the agreement.

Attempting to distort a payment of this kind to the railroad company as a discrimination in favor of the Standard Oil Company ceases to be absurd—it is malicious.

S. C. T. DODD.

Law offices of Geo. Tucker Bispham, A. H. Winterstein, John Hampton Barnes. Sharswood Brinton, Girard Building, Broad and Chestnut streets, Philadelphia. Despeaux v. P. R. R.

NOVEMBER 29, 1899.

S. C. T. DODD, Esq.,

Standard Oil Company, 26 Broadway, New York.

DEAR SIR: I did not find Mr. Sellers in when I called to-day, and am now writing without consultation with him. I will, however, supplement this letter by any suggestions which Mr. Sellers may have to make.

Mr. Newlin's claim, to which you refer, is based not upon any oral testimony given at the trial, but entirely upon his construction of the fourth and eighth paragraphs of the agreement of May 6, 1881. This agreement was between the National Transit Company and the railroad company, and it was in our view of the matter simply a traffic agreement between two transporting companies. Mr. Newlin's position, however, was that the National Transit Company was in reality the Standard Oil Company, which owned a large controlling interest in its stock, and his argument is based upon that assumption, and his contention is that any diminution or abatement of the charges of the railroad company under this contract inured to the advantage of the Standard Oil Company and was to be treated as if it were an allowance or rebate to the latter company.

He arrives at the figures which you give in your letter in this manner:

He considers the fourth and eighth paragraphs in the agreement together, and he contends that the provisions as to through rate contained in the latter paragraph, when read in connection with the former, are applicable to through rates, whether the same are greater or less than 40 cents per barrel from Foxburg to Communipaw. Assuming this to be so, Mr. Newlin's calculation is as follows:

The eighth paragraph provides:

"Whenever the through rate from the exit point of gathering pipe shall be less than 40 cents per barrel, the local or gathering pipe shall be considered as entitled to a rate equivalent to only one-fourth of the rate which shall be formed by the addition of the said through rate to the public rate which the local pipe charges, and one-half of the difference between this one-fourth and the said public rate shall be considered as due and to be paid to the railroad company, but this difference shall never be such as to make the local pipe receive less than 10 cents per barrel."

The through rate by rail was 48 cents.

The public rate of the local or gathering pipe was 20 cents.

The calculation, therefore, would be thus: 48 plus 20 equals 68; one-fourth of 68 equals 17; one-half of 51 equals 25½; 48 minus 25½ equals 22½.

The above calculation is the basis on which Mr. Newlin's allegation, in his letter to Mr. Rice, to which you refer, is based.

The 19.875 cents per barrel is arrived at by Mr. Newlin in this way, the calculation being at the rate of 33 cents per barrel from McCalmont to Communipaw on the same principle as above. Thus: 33 plus 20 equals 53; one-fourth of 53 equals 13.25; one-half of 39.75 equals 19.875.

This is the way in which he gets his figures showing, as he says, that the Standard Oil Company was charged that amount only for transportation.

In addition to the obvious replies that the arrangement was a traffic arrangement, and that such an agreement can not be construed as a rebate to a shipper simply because that shipper happens to be a stockholder, and even a controlling stockholder, in one of the transportation companies, there are other answers based upon the language itself of paragraphs 4 and 8. The assumption that the provision in paragraph 8, when the rate is less than 40 cents, shall be applicable to paragraph 4, which

refers to a rate above 40 cents, would seem to be without warrant. Moreover, the "one-half of the difference between this one-fourth and the said public rate" refers to the difference between the said one-fourth (made up of the through rate by rail to the public rate by local pipe charges) and the rate of local pipe charge—that is, 20 cents. In other words, instead of taking one-half of 51 (see above calculation), there should be taken one-half of 3, being 20 less 17, or 1½.

Whether I am right in this last calculation or not, it is nevertheless true, as I have stated above, that there was no evidence whatever, oral or written, which was introduced at the trial, which justifies Mr. Newlin's assertion; but that assertion rests altogether upon his forced construction of the fourth and eighth paragraphs of the agreement of 1881, which I have endeavored to explain.

If the foregoing is not sufficiently clear to you, let me know and I will endeavor to make it plain.

Truly, yours,

GEO. TUCKER BISPHAM.

Attached thereto is the following:

Law offices of Geo. Tucker Bispham, A. H. Wintersteen, John Hampton Barnes, Shanswood Brinton, Girard Building, Broad and Chestnut streets, Philadelphia. *Despeaux v. P. R. R.*

DECEMBER 6, 1899.

S. C. T. DODD, Esq.,

26 Broadway, New York.

DEAR SIR: I have your favor of the 5th instant.

After the plaintiff closed his evidence a motion for a nonsuit was made and fully argued by Mr. Sellers and myself on the part of the defendant and by Mr. Newlin for the plaintiff. The motion for a nonsuit was granted. Mr. Newlin made a motion to take it off, and this was subsequently argued and the motion denied. The nonsuit therefore stands. Mr. Newlin has taken an appeal to the circuit court of appeals, but there has been some difficulty about settling a bill of exceptions. When this is finally adjusted I will advise you. Meanwhile the above will give you the present condition of affairs.

Truly, yours,

GEO. TUCKER BISPHAM.

Q. (By Mr. JENKS.) Have these pipe-line and railway companies changed their rates on oil since 1884?¹—A. You go back too far for me. I can say that the rate for oil of the Pennsylvania Railroad Company, both for pipe and rail, is the same as it was when I came to New York nearly ten years ago.

Q. A copy of the contract was furnished by Mr. Archbold, and fixed the dates pretty definitely; but you say the rates have not changed for ten years?—A. For ten years.

"PLEASE TURN ANOTHER SCREW."

Regarding the letter from Chess, Carley & Co. to J. M. Culp, general freight agent of the Louisville and Nashville Railroad, June 16, 1881, in which the expression was used: "Please turn another screw."² The firm of Chess, Carley & Co. was a partnership in which the Standard Oil Company of Cleveland had an interest. This was before the formation of the Standard Oil Trust, which was formed in 1882, and the firm of Chess, Carley & Co., as I have testified, was a partnership in which Mr. F. D. Carley was the resident partner and manager. The Standard Oil Company of Ohio had an interest in the Chess-Carley business, but absolutely no control or direction of that company's affairs.³ I was in the office, and the only boss we knew was Mr. F. D. Carley. I should like to refer, in regard to Mr. Carley's control of that business, to his testimony taken before the Bacon committee in 1888. On page 526 of that committee's report⁴ Mr. Carley testified as follows (reading):

"Q. Were you a member of the firm of Chess, Carley & Co.?—A. Yes, sir.

"Q. At what time?—A. Through its whole history.

"Q. Over what years does that extend?—A. I do not remember exactly, but I think somewhere about 1869 or 1870 we formed that firm.

"Q. When did you terminate it?—A. When we formed the Chess-Carley Company.

"Q. When was that?—A. Four or five years ago. I was president of it until its dissolution.

"Q. State whether or not it was dissolved when it sold its property to the Standard Oil Company.—A. Yes, sir.

¹ See Mr. Emery, p. 667.

² See Mr. Rice, pp. 704, 705, 747, 748.

³ Compare the case of the Vacuum Oil Company, p. 554.

⁴ Fiftieth Congress, first session, House reports, Vol.

"Q. Are you connected with the Standard Oil Company?—A. No, sir.

"Q. You occupy no position under it?—A. No, sir.

"Q. Where did you reside during the time you were a member of the firm of Chess, Carley & Co. and the Chess-Carley Company?—A. Louisville, Ky.

"Q. Had you charge of that business?—A. Yes, sir; I was sole and exclusive manager of the Chess, Carley & Co. and of the Chess-Carley Company."

The party who wrote this letter (and without the knowledge of Mr. Carley) was a Mr. Hathaway, who had formerly been in the Louisville and Nashville Railroad employ. His explanation of this letter was that when errors occurred in the Louisville and Nashville Railroad office there was an expression used, "that the machinery of the office was loose," and it should be corrected or tightened up by turning a screw. In the case referred to, the shipment of a car of oil by Rice to Nashville was billed at less than the regular tariff rate which other shippers were paying, and Hathaway simply called their attention to the error and used the expression referred to. By reference to page 530 in the book of testimony taken before the Committee on Manufactures, in 1888, it will be seen that Mr. F. D. Carley testified as follows (reading):

"This much I know about this letter that Hathaway wrote. He would say to me, 'Mr. Carley, there is another carload gone through to Wilkerson,' or to whoever it might be. I said, 'I do not think it is right on the part of the road. Can not you get them to stop it? I mentioned it to them before. They said it was the fault of the clerk; that it was clerical.'"

Now, on page 524 of the same book, Mr. J. M. Culp, who is the gentleman to whom the letter was addressed, and who was general freight agent of the Louisville and Nashville road, and who is now traffic manager of the Southern Railway here, testified as follows (reading):

"I desire to say, with regard to that letter, or rather with regard to the rate charged on the shipment referred to in that letter, that it was less than the proper rate. It was less than any rate that we had with Chess, Carley & Co., or I believe ever have had. It was a fifth-class rate. Our rate on oil from Louisville to Nashville was higher than fifth class, and I presume the desire of Chess, Carley & Co. was to have at least as high a rate as was charged on their shipments charged on this. Had that letter come to me—had I seen the letter—I would have simply understood it that it meant that we should require our agents to charge at least as high a rate as was charged on the shipments of Chess, Carley & Co."

That is the explanation of it, and, in my opinion, a very reasonable one. The facts are, as Mr. Culp has testified, and as I recollect the occurrence, that the rate charged on that shipment was less than we were paying at that time and less than we ever paid, even prior to the interstate commerce law.

CHESSE, CARLEY & CO.'S GROCERY STORE.

Mr. Rice alleges that the Standard Oil Company established grocery stores in the South.¹ This was before the Standard Oil Company had any control or direction in Chess, Carley & Co.'s business, as that business was entirely under the control of Mr. F. D. Carley. And the establishment of that grocery store, as referred to by Mr. Rice, was during the time of Chess, Carley & Co.

Q. (By Mr. JENKS.) Such a grocery was established by Chess, Carley & Co. for the purpose alleged by Mr. Rice?—A. There was such a store.

Q. (By Mr. SMYTH.) Was there only one?—A. Only one.

Q. (By Mr. JENKS.) Was it established for the purpose of driving out a competitor in the oil business?—A. I did not say that. I say that Chess, Carley & Co. established that store to sell groceries and oil, the same as there were stores established selling oil and groceries.

Q. Did Chess, Carley & Co. have stores elsewhere for the purpose of selling groceries and oil?—A. No; it only had that grocery store. Probably the profits of that were not sufficient to justify any extension.

Q. (By Mr. SMYTH.) Where was that store?—A. Columbus, Miss.; but the Standard Oil Company had no more to do with it than that stenographer.

Q. (By Senator KYLE.) Have the Standard Oil Company ever indulged in such a practice?—A. It has not, to my knowledge, in any way or at any place.

Q. Prior to the interstate commerce act or since?—A. Not to my knowledge.

Q. Have they ever made any threats in that direction through their agents?—A. Not to my knowledge.

Q. You do not know, then?—A. I do not.

¹ See pp. 709, 710.

TANK CARS.

J. McDougall declining to build tank cars for Rice on credit,¹ the Standard Company never directly or indirectly had anything to do with it and never had any knowledge of it until it was seen in Mr. Rice's testimony.

The charge that the Standard Oil Company bought up tank cars from railroads, in order to keep them from other shippers,² is positively denied.

As to railroads owning tank cars,³ I would say that the tank car is a special car, used for the transportation principally of petroleum, and it would be a burden upon the railroads if they were required to invest their capital in tank cars. The ownership of the car would not insure transportation of oil, and if every railroad were required to have a sufficient tank-car equipment to do the oil business that at times moves over its rails it would mean the building of many more tank cars than the business would require. For instance, say it would require 200 tank cars, costing \$150,000, to transport oil between Chicago and St. Paul and Minneapolis. There are five lines competing for this business, and if each railroad was required to own 200 cars there would be four times as many tank cars as the business would require. Take as another example the McDonald field, which was a producing field and is now. At one time it produced oil to the extent of 60,000 to 80,000 barrels a day. It has run down now to 5,000 barrels. If the Pennsylvania road and the Lake Erie and Western, which are the two railroads which touch that field, had been required to furnish tank cars to move the oil produced in the McDonald field when it was producing 60,000 to 80,000 barrels a day those roads would be in rather bad shape with their tank cars now, when there is only 5,000 barrels to move from there. A tank car is just like a Pullman car; you might just as well require a railroad to own all the Pullman cars that are necessary to go over its road as to require the railroad company to own all the tank cars that may at times go over its rails.

Q. (By Mr. KENNEDY.) Can you state which is the cheaper system for the railroads to employ in the transporting of oil—the tank car or barrels?—A. I would like to say now the tank car, by all means. But Mr. Rice referred especially to that in his evidence,⁴ and I will touch that later on.⁵ If you will allow me to proceed in the regular order of his testimony, I think it is better to go right through it.

TANK CARS FAVORED AS AGAINST BARRELS.

Mr. Rice alleged great discriminations in favor of the Standard Oil Company as against himself for a year or so after the passage of the law.⁶ I would say that he refers to the published tariffs of various railroads, that were published and printed and open for all on the Louisville and Nashville Railroad and other railroads which at that time made lower rates on oil in tank cars than on oil in carloads in barrels. These were published tariffs and open to everybody, and Mr. Rice and other shippers shipped in tank cars as well as the Standard Oil Company, and the Standard Oil Company shipped oil in barrels in carloads the same as Mr. Rice and other shippers. It was simply a tariff rate in which the railroads made a difference between the tank-car rate and the barrel box-car rate, and it was open to all; there was no discrimination between parties at all. It was a discrimination, or difference rather, between two modes of shipment.

Q. (By Mr. JENKS.) At that time had there been any ruling upon the relative rates for tank cars and barrel shipments by the Interstate Commerce Commission?—A. There had not been; but in 1888 Judge Cooley, of the Interstate Commerce Commission, ordered that the rates per hundred pounds on oil in tank cars as well as on oil in barrels in carloads, including the weight of the barrels, should be made the same, and the railroads adjusted their tariffs according to that, and the tariffs remain on that basis to-day.

Q. At the time Mr. Rice claims he was discriminated against in this way was he, as a matter of fact, shipping oil in tank cars?—A. He had a few tank cars, and other oil shippers had tank cars; and as far as the higher rates on oil in barrels are concerned, the Standard Oil Company was shipping more in barrels than all the others put together.

Q. How about the relative amounts in barrels and in tank cars shipped at that time over these roads?—A. At that time I would say that, as I recall the evidence which was given at that time in this book, our carload shipments were in excess of our tank-car shipments.

Q. Your barrel shipments?—A. Our barrel shipments were in excess of our tank-car shipments.

¹ See pp. 711, 712..

² See p. 712.

³ See p. 712.

⁴ See pp. 716, 717.

⁵ See pp. 767, 769.

⁶ See pp. 714, 715.

Q. Over those roads on which you said the discriminations were made?—A. Over those roads the shipments—prior to those shipments the rates were made on barreled oil and tank cars; the tariffs were published, and they simply pursued that same system of making rates, and it was open to everybody that had both methods of shipment.

Q. And other shippers than the Standard Oil Company had both modes of shipment which they were using?—A. Absolutely.

“OUTAGE” OF 62 GALLONS ON TANK-CAR SHIPMENTS.

Mr. Rice refers to outage of 62 gallons and then 42 gallons which was made on all tank-car shipments.¹ This was an allowance for the average loss between the full shell capacity of the tank car, which tank car was loaded at the loading point, and the amount that was taken by actual measurement to be received in the tank car at destination. This allowance was made to all tank-car shippers alike and was reasonable, as the actual loss was in excess of the allowance. The allowance, however, was discontinued in the summer of 1892 and has never been reinstated. The principle of that allowance was simply that the railroad ought not to charge on a quantity greater than it delivered, and as the actual result and experience had shown that there was a loss between the amount of oil put into the tank car at the refinery and the amount delivered at the point of destination, an allowance was made, which was very small, at that time 62 gallons, and at another time 42 gallons; but this, as I say, since 1892 has been done away with completely.

ESTIMATED AVERAGE WEIGHT OF PETROLEUM PRODUCTS.

Mr. Rice refers to the relative charge made by railroads between oil in tank cars and oil in barrels in carloads.² The railroads receive a very much larger percentage of live weight on oil in tank cars than on oil in barrels. Railroads charge and collect freight on tank-car shipments at full shell capacity of the tank car, no matter whether that tank car is loaded to its full capacity or not. The average capacity of the Union Tank Line Company's cars to-day is 140 barrels, and it is on that basis that the railroads charge and collect their freight.

Q. (By Mr. SMYTH.) You do not weigh the cars?—A. The weight of the petroleum in tank cars is taken on the basis of the full shell capacity of the tank, based on an average weight of 6.4 pounds to the gallon.³ The reason for that is that some products of petroleum, such as naphtha, weigh from 5½ to 5¾ pounds to the gallon; refined oil weighs 6½; lubricating oil weighs from 7¼ to 7½ pounds to the gallon; and the average weight of 6.4 pounds represents the actual average weight of the various products of petroleum as they are manufactured and as they are shipped throughout the United States; and the reason the railroads have made such a rule is to prevent misrepresentation and the cost that would be involved in weighing every tank car. You can see that it would be a very difficult matter for a railroad to get the actual weight of tank-car shipments, because those tank cars are first loaded at the refinery and not in the railroad yard, as ordinary freight is, and then pulled out by the railroad. They could only weigh, therefore, the full tank car with the weight of the car added to it, and that car is probably destined to some point away beyond that railroad that receives it on its rails. So the custom has been ever since I have had any knowledge of the business to have one average weight which applies to all products alike and applies to all shipments alike.

Q. The average is both as to weight and capacity?—A. No; the average is as to weight. The capacity of the tank car varies, and the capacity is shown by the various tank-car owners to the railroads, and they publish it at large to the world in the form of every tank-gauge handbook, which shows the actual number, owner, and capacity of every tank car that is used over the various lines in the United States to-day.

Q. (By Senator KYLE.) And the average charge is, as you state, 6.4 pounds to the gallon?—A. To the gallon.

Q. For the full tank capacity?—A. Full shell capacity of the car.

Q. (By Mr. SMYTH.) Do all the large refining concerns own tank cars?—A. Very largely. I will show you the tank-car ownership in the United States in a few moments. The same rule applies, I might say, where oil is shipped in barrels. There is an average weight of 400 pounds applied to the various products of petroleum. Some weigh less and some more, but 400 pounds is the accepted weight on railroads on all petroleum products.

¹ See p. 716.

² See pp. 716, 717.

³ See Mr. Rice, pp. 781, 782.

TANK CARS RETURNED FREE.

Q. (By Mr. CLARKE.) Those which you have referred to are for freight one way, I suppose?—A. The freight rate is charged, of course, only on the freight that is hauled.

Q. (By Mr. SMYTH.) Does the car come back empty?—A. The car comes back empty; the tank car as well as the box car, very largely, simply because the box car when loaded with oil is unfit for use for sundry merchandise. You will find that every large oil-carrying railroad in the United States has the box cars marked "oil," meaning that they can be used only for oil. I do not mean to say they are never used for any other freight, but they are set aside for that purpose.

Q. (By Senator KYLE.) Is there any charge for these return tanks?—A. No charge.

Q. Has there ever been a charge for return tanks?—A. No, sir; not in my recollection.

Q. Have they ever charged the independent companies outside of the Standard Oil Company for the return of these tanks?—A. No, sir. They charge the Standard Oil Company the same rate. I mean to say that since the passage of the interstate-commerce law there has been no charge on the return of what is known as regular tank cars, the cylinder tank car, within the United States, excepting to one section.¹

Q. (By Mr. SMYTH.) There is no freight charged on empty coal cars, is there?—A. No, sir.

ADVANTAGES OF TANK CARS.

I digress from this question as to the relative charge. I have stated that the average capacity of the Union Tank Line car to-day is 140 barrels. The minimum weight required by railroads in the shipment of oil in barrels is 60 barrels, and not 1 per cent of the carloads of oil in barrels in the United States run over 60 barrels, from the fact that even loading 60 barrels in an ordinary box car requires putting them up on top of the lower tier. This is an expense to the owner and to the railroad, and it also causes leakage from the rolling of the barrels on top. The result is that carloads of oil shipped in barrels in box cars average 60 barrels as against the average capacity of tank cars of 140 barrels. Therefore one tank car holds twice as much as a box car when loaded with oil, and the railroads receive their pay accordingly.

Q. It takes less cars?—A. Necessarily. It means one car instead of two for the same freight. It means carrying two cars for one; all expense of handling, and the cost of two cars.

Q. (By Senator KYLE.) And the expense of unloading is less?—A. Yes; in the tank car. It is universally loaded by the shipper and unloaded by the consignee. In the box car it is generally loaded by the shipper and very often unloaded by the railroad in their depot.² The tank car never is.

Q. (By Mr. JENKS.) Is the freight rate the same per barrel, whether in barrels or in tank cars?—A. It is the same rate per 100 pounds. In barrels, the weight of the barrels is charged for.

Q. So, when shipped in barrels freight is charged on 400 pounds?—A. Yes.

Q. When in tank cars it is 300 pounds for the same amount of oil?—A. Yes.

Q. That makes shipping by tank cheaper than by barrel?—A. Absolutely; but the barrel is an article of merchandise. When the oil is sold in barrels, the value of that barrel is added to it. There is no ground why the railroad should, on an article of merchandise, which the barrel is, receive no pay for the shipment. Admitting the pay on the weight of the barrel, the railroad then only gets half as much revenue on the oil in barrels as on tank cars of oil.

TARIFFS NOT MADE UP AT NO. 26 BROADWAY.

Mr. Rice charges that railroad tariffs were issued from No. 26 Broadway.³ I deny positively that we have ever made or promulgated any railroad tariff by any Standard Oil Company interest, and I am positive that no railroad tariff was ever promulgated by any Standard Oil Company interest.

Mr. PHILLIPS. I will ask Colonel Clarke to take the chair, as I expect to ask some questions in a short time. I shall be obliged to you, Colonel, if you will take the chair.

Q. (By Mr. JENKS.) You say that no oil tariff has been made or promulgated by any of the Standard Oil Companies. I suppose when that statement was made it was not intended to be taken literally. Would you go so far as to say that the Standard Oil Company, or the Standard Oil officials, did not reason with railroad

¹ See p. 769; Mr. Rice, pp. 717, 719.

² See p. 717.

officials in order to get them to agree upon what they considered to be a fair and just rate of freight on oil?—A. I certainly do not wish to be understood that myself or possibly others of our representatives have not seen railroads in regard to tariffs on the shipments. We do have intercourse with railroad officials, as every large shipper probably does, but that we have ever issued— Mr. Rice's intent certainly was to give the idea that we simply named a rate and sent it to the railroads to accept. It is not true.

RATES NOT ARRANGED TO FAVOR STANDARD OIL SHIPPING POINTS.

Q. Is it a fact, as has been frequently stated, that over lines of railroad where the Standard Oil Company has very large shipments the rates on oil are frequently made, relatively speaking, lower than over other roads where the business rivals of the Standard Oil Company have large shipments and where the Standard Oil Company's interests are relatively small, and that this difference in rates to the advantage of the Standard Oil Company is brought about by the influence of the Standard Oil Company officials?—A. That is absolutely not true, sir. In the first place I do not know any railroad on which competitors of the Standard Oil Company ship that we do not ship on ourselves; and the oil rates of the United States from the various oil shipping points are on a basis. In other words, the same rates apply from all of the Pennsylvania oil fields, both East and West, and the same is true of the Lima field; and while we may not be located at the very point some competitor is, he has the same rate from his shipping point in that field that we have from our shipping point in the same field.

Q. Your main distributing points are, I suppose, ordinarily different from those of your chief competitors. Would you be able to secure rates from your main distributing points which would affect your business favorably and not affect your rivals in the same way? Is that frequently true?—A. I do not think it is, sir. I can only say that we get exactly the same rate from the same point and to the same point that every other shipper pays from and to that point.

STANDARD MEN CONNECTED WITH RAILROADS DO NOT GET SPECIAL RATES FOR THE STANDARD.

Q. (By Mr. KENNEDY.) Are the Standard Oil Company officials or stockholders ever in a position, as railroad officials, where they can give favors to the Standard Oil Company in its shipments?—A. I am glad you asked that question, sir. I do not think it, but I know. Mr. Rice wishes to give that impression,¹ and I can say in reply that since I have had any knowledge of railroad rates on the Standard Oil Company's business, no official of the Standard Oil Company who is connected with railroads has ever made a rate or arrangement for the Standard Oil Company, nor have any of those gentlemen who are connected and have interests with railroads ever asked me to give any undue or unreasonable, or in fact any, share of the Standard Oil Company business over such a railroad. In other words, the Standard Oil Company's business stands on its own merits; and as I before said, none of these gentlemen who may or may not have interests in these various railroads have ever made a rate or made an arrangement for Standard Oil Company business. That business is done by me, or by the proper party in whose territory or district the question may arise.

Q. Should you be sure to know whether that was so or not?—A. I should know. If any of the gentlemen who have large railroad interests, as alleged, made a tariff or arrangement with a railroad for our business, I certainly should know of it. I should be advised of it, as I am the proper department that has a record of those rates, and should have to know, necessarily.

Q. (By Mr. SMYTH.) Do we understand that shipments of the Standard Oil Company have not been influenced toward certain lines by the fact that the officers of the Standard Oil Company were reputed to be large owners of the stock in those lines?—A. In no way, sir; and you can readily see that if the Standard Oil Company's business was run on the basis of favoring the individual interests of the different stockholders of the Standard Oil Company, the company's business itself would necessarily suffer.

Q. (By Mr. A. L. HARRIS.) It is true that officers of the Standard Oil Company have offices in different railroads?—A. It is true that Mr. William Rockefeller, for

¹See Mr. Westgate, pp. 573-576; Mr. Gall, pp. 675-677, 682-685. See also the testimony of Mr. W. M. Kidd and Mr. George L. Winlock, pp. 772-776, footnote.

²See p. 727.

instance, is a director in some of the railroads. He probably also is a bondholder in the United States, but there is no connection between such interests and the interests of the Standard Oil Company, or the business of the Standard Oil Company.

ALLEGED TANK-CAR DISCRIMINATIONS.

Q. (By Mr. CLARKE.) We will proceed.

The Witness. Mr. Rice refers to a rule of the Southwestern bureau in regard to charging on the weight of a tank, when that tank is intended for storage, at the same rate as on the oil contained in the tank.¹ If, as Rice alleges, the Standard Oil Company owns nearly all the substations of the country, this rule is hard on the Standard Oil Company. If the railroads wished to discriminate in favor of the Standard Oil Company, they would carry the weight of the tank free the same as they do the regular tank car. Do you understand? Here is a tank that is intended to be used as a storage tank at some substation. It is loaded with oil and sent to that station. The railroad rule referred to charges the same rate per hundred pounds on the weight of the tank as on the oil contained in the tank. Now, ordinarily on the tank car there is no charge for the weight of the tank. If they wanted to favor us, all they would have to do would be to treat that tank containing the oil as they do the ordinary tank car.

Q. (By Mr. PHILLIPS.) There is one question I want to ask. That is in regard to shipping oil by barrel and by tank car. Has it not been testified that it is much more dangerous to ship oil in tank cars than in barrels, in case of collision and fire?²—A. It may have been so testified, sir. Different men have their different opinions; but the answer to that is that the tank car is growing in favor, not only in the shipping of petroleum, but in shipping all other liquid products, which are open to the same objection. I think the economy in shipping in tank cars over shipping in barrels, which is being shown by the enormous growth in the use of tank cars for a great many liquids, proves that the tank car is a better method for shipping. And the Central Freight Association rule to which he refers is entirely proper, as it is intended to prevent the unloading of bulk petroleum in railroad yards or depots without proper facilities, as such unloading would increase the danger of loss by fire. The rule simply means that they will not allow a tank car to be held in the depot or in the yard of a railroad to be unloaded by improper means into a tank wagon or into barrels, as leakage or accident might result, to the large loss of the surrounding property, and they simply require that proper facilities should be at the point where the tank car is shipped to.³

The Southern Pacific tariff: The rule referred to⁴ was submitted to the Interstate Commerce Commission, who did not order it stopped when they decided the transcontinental case of 1890.

Q. (By Mr. JENKS.) Will you be kind enough to state the rule?—A. That rule was simply the rule by which the transcontinental lines charged for returning the cylinder car, and did not charge for returning what is known as the box-tank car. The box-tank car is a car which has a tank in each end and loading space between. There are other shippers besides the Standard Oil Company that ship and own these cars, and the Standard Oil Company ship both these cars and cylinder cars to the transcontinental points, and they pay exactly the same rates on cylinder cars as other shippers and get their box cars returned free the same as other shippers.

TEMPORARY REDUCTION FOR THE PROFIT OF THE STANDARD.

Regarding alleged correspondence from the Standard Oil Company's San Francisco office,⁵ I know nothing about this correspondence and can not verify it. It would be fair to say, however, that I have full knowledge on all rates paid in California, and I can say positively we pay the tariff rates in force at the time of shipments, wherever made; Mr. Rice's charge there was that the rates were put up at one season and put down at another from Chicago and other Eastern points to the transcontinental points. I can say, and the Interstate Commerce Commission can affirm, that the rates on petroleum and its products from Chicago and other Eastern points to California and other transcontinental points have not been changed since March 2, 1891. The rates have absolutely been the same for nearly nine years.

"COMMISSIONS" ON FREIGHT.

Regarding commissions on freight business, and charges that the Standard Oil Company make their own commission:⁶ It is absolutely false, and I state unqualifiedly that the Standard Oil Company has never received, either directly or indirectly, a

¹ See p. 718.

² See pp. 377, 378; Mr. Rice, pp. 716, 717.

³ See p. 718, bottom.

⁴ See p. 719.

⁵ See pp. 719-726.

⁶ See p. 727.

101

commission from any railroad in any form since the passage of the interstate-commerce law.

Q. (By Mr. PHILLIPS.) Should you be in a position to know absolutely if it received any?—A. I should, sir.

Q. In regard to all railroads and all transportation?—A. I should, sir.

Q. And in regard to divisions and local freights in certain sections, and so on, would it bar others than the Standard Oil Company from entering those sections? You would be in position to know all about that, should you, either directly or indirectly?—A. I did not catch the last part of your question. I should know if the Standard Oil Company received any benefits throughout the United States, and I would unqualifiedly say they have not.

AS TO LOCAL RATES FAVORABLE TO THE STANDARD.

Q. I think it has been testified before this commission that in certain sections of the country, while they may have a through rate of freight up to a certain division of the United States, local rates are made so that independent refiners can not enter those portions, and in that way, indirectly, the Standard Oil Company has an advantage, which would be similar, and perhaps superior, to a rebate or a drawback?—A. If you mean, sir, because we have refineries at the Atlantic seaboard to supply New England and at Chicago to supply the West, as compared with the man who has his refinery in the oil regions and tries to supply both the West and New England, I admit we have advantages; but I say we pay the same rate of freight from the same shipping point to the same destination as every other shipper does.¹

Q. And there are no local rates, as far as your knowledge goes, that would interfere with the independents entering that subdivision?—A. Whatever the local rate is from any point to any point we pay the same as any other shipper pays from that point to that point.

Mr. CLARKE. You may proceed.

RECEIVERS COWEN AND MURRAY'S LETTER.

THE WITNESS. In regard to the letter from Receivers Cowen and Murray to the Interstate Commerce Commission, in which they admit paying rebates since the passage of the interstate-commerce law,² and which Mr. Rice assumed means paying us large rebates, I would say positively that since the passage of the interstate-commerce law the Baltimore and Ohio Railroad has not paid us one dollar in rebates, or in any way made any concession from their tariff rates. Mr. Archbold filed with this commission a letter from the Baltimore and Ohio Railroad dated August 21, 1899, confirming this statement.

Q. (By Mr. KENNEDY.) Would you say that an inspection of the books of the Baltimore and Ohio Railroad Company would not show that rebates or discriminations or commissions or anything of the kind had been paid to the Standard Oil Company since the passage of the interstate-commerce law?—A. I would; absolutely, sir.

Q. (By Mr. SMYTH.) You know Mr. Rice stated that rebates were not paid, but that commissions were given to persons to secure the business of the Standard Oil Company and others? You deny that?—A. Previously I denied that we received commissions in any form from any railroads. That applies particularly to the Baltimore and Ohio, and any other railroad you wish to point out.

UNDERBILLING OF TANK CARS.

Regarding alleged underweighing of tank-car shipments from Boston to Newport, R. I.: For most of the years 1896 and 1897 we were making occasional shipments of naphtha in tank cars from Boston to the Newport Gas Company. The shipments altogether amounted to some fifteen or twenty tank cars during the entire period. On three or four of the cars the New York, New Haven and Hartford Railroad, through clerical error, billed these cars at less than their actual weight. This resulted in an undercharge. As soon as it was discovered, the balance due was paid.

The railroads transporting these shipments, as well as all railroads of the United States, had the actual capacity of all these cars, and the error occurred through no fault of the Standard Oil Company.

I shall hand as an exhibit Tank Gauge Book No. 4, which is the fourth book which has been published by the Central Freight Association, giving the capacity of all

¹ See p. 768, footnote 1.

² See pp. 728, 732.

tank cars of the Union Tank Line Company. The same publication has been in the hands of the railroads for the past ten or fifteen years.¹ This book contains the number and the capacity of the tank cars referred to by Mr. Rice. We furnished this information to the railroads, and we submit that it is not likely that, having furnished the actual capacity of the cars to the railroads, we would go to these same railroads on interstate shipments and show a less rate, because it would simply mean that we would know that we were violating the law and furnishing evidence to prove that we had.

The Interstate Commerce Commission, through Commissioner Prouty, investigated this charge at Boston, March 12, 1898, and after the investigation dropped it, as it was clearly shown by testimony taken there that the mistakes were simply clerical errors. I wish to offer a sworn statement of Vice-President Hall (now president) of the New York, New Haven and Hartford Railroad, which was given in answer to the request of the Interstate Commerce Commission in regard to this very matter, in which he gives the detail of the shipments for the two years. I read from his answer that the mistakes occurred "through error of this (railroad) company's agent and without misrepresentation or fault on the part of the shipper."²

¹ As to the actual use of this book in certain railroad offices, see the testimony of Mr. W. M. Kidder Mr. George L. Keyes, and Mr. George L. Winlock, pp. 772-775, footnote.

² The copy of Mr. Hall's statement submitted to the commission is as follows:

[The New York, New Haven and Hartford Railroad Company, President's Office.]

The Honorable INTERSTATE COMMERCE COMMISSION,

Washington, D. C.

NEW HAVEN, CONN., January 25, 1898.

GENTLEMEN: In the matter of alleged irregularities in the transportation of petroleum and its products from East Boston, Mass., to Newport, R. I. (docket No. 523), and in obedience to the order of your board made January 11, 1898, this company makes answer to the inquiries contained in said order as follows:

1. There are, and since April 6, 1896, there have been, no joint through rates or arrangements for through waybilling between the New York, New Haven and Hartford Railroad Company and the Boston and Albany Railroad Company from East Boston, Mass., to Newport, R. I. All shipments of petroleum and its products since said last-mentioned date have been subject to the local rates of the respective companies.

2. Between April 6, 1896, and December 1, 1897, there were the following shipments of petroleum and its products from East Boston to Newport by way of the Boston and Albany Railroad and the railroad of this company, to wit:

(a) On the 18th day of June, 1896, this company received from the Boston and Albany Railroad Company at Boston three U. T. L. cars, Nos. 7610, 8369, and 1829, consigned to the Newport Gaslight Company, containing naphtha, weight 72,000 pounds, which this company rebilled from Boston to Newport at its rate of 10 cents per 100 pounds; total charges, \$72. Said weight was that given in the waybill of the Boston and Albany Railroad Company as delivered to this company, and accepted through error of this company's agent and without any misrepresentation or fault on the part of the shipper. It was subsequently found that the weight should have been 143,180 pounds and a correction thereof was made. Its charge of 10 cents per 100 pounds on the difference, amounting to \$71.18, was collected.

(b) On the 28th day of July, 1896, this company received from the Boston and Albany Railroad Company at Boston two U. T. L. cars, Nos. 1205 and 7915, consigned to the Newport Gaslight Company, containing naphtha, weight 101,580 pounds, which this company rebilled from Boston to Newport at its rate of 10 cents per 100 pounds; total charge, \$101.58.

(c) On the 2d day of September, 1896, this company received from the Boston and Albany Railroad Company one U. T. L. car, No. 1823, consigned to the Newport Gaslight Company, containing oil, weight 50,800 pounds, which this company rebilled from Boston to Newport at its rate of 10 cents per 100 pounds; total charge, \$50.80.

(d) On the 8d day of September, 1896, this company received from the Boston and Albany Railroad Company at Boston one U. T. L. car, No. 2059, consigned to the Newport Gaslight Company, containing naphtha, weight 50,190 pounds. This was by some error rebilled from Boston to Newport at the rate of 14 cents per 100 pounds; total charges, \$70.26. It being subsequently found that upon this shipment there was an overcharge, it was thereafter adjusted to the proper rate of 10 cents per 100 pounds and the excess refunded.

(e) On the 16th day of October, 1896, this company received from the Boston and Albany Railroad Company at Boston two U. T. L. cars, Nos. 4531 and 7802, consigned to the Newport Gaslight Company, containing oil, weight 89,470 pounds, which this company rebilled from Boston to Newport at its rate of 10 cents per 100 pounds; total charge, \$89.47.

(f) On the 19th day of October, 1896, this company received from the Boston and Albany Railroad Company at Boston one U. T. L. car, No. 3869, consigned to the Newport Gaslight Company, containing naphtha, weight 42,490 pounds, which this company rebilled from Boston to Newport at its rate of 10 cents per 100 pounds; total charges, \$42.49.

(g) On the 10th day of February, 1897, this company received from the Boston and Albany Railroad Company at Boston two U. T. L. cars, Nos. 1329 and 7936, consigned to the Newport Gaslight Company, containing naphtha, weight 48,000 pounds, which this company rebilled from Boston to Newport at its rate of 10 cents per 100 pounds, total charges, \$48. Said weight was that given in the waybill of the Boston and Albany Railroad Company as delivered to this company and accepted through error of this company's agent and without any misrepresentation or fault on the part of the shipper. It was subsequently found that the weight should have been 101,613 pounds, and a correction thereof was made. Its charge of 10 cents per 100 pounds on the difference, amounting to \$53.61, was collected.

(h) On the 19th day of May, 1897, this company received from the Boston and Albany Railroad Company at Boston two U. T. L. cars, Nos. 7915 and 1286, consigned to the Newport Gaslight Company, containing naphtha, weight 48,000 pounds, which this company rebilled from Boston to Newport at its rate of 10 cents per 100 pounds; total charges, \$48. Said weight was that given in the waybill of the Boston and Albany Railroad Company as delivered to this company and accepted through error of

I refer now particularly to the two cars which Mr. Rice refers to; two cars containing 100,986 pounds which were carried at 48,000 pounds.¹

Q. (By Mr. JENKS.) Was this the same case investigated by Mr. Prouty?—A. Yes. Vice-President Hall, who now is president of the New Haven Road, says this in his sworn answer: "(h) On the 18th day of May, 1897, this company received from the Boston and Albany Railroad Company at Boston two U. T. L. cars, Nos. 7915 and 1286, consigned to the Newport Gaslight Company, containing naphtha, weight 48,000 pounds, which this company rebilled from Boston to Newport at its rate of 10 cents per 100 pounds; total charges, \$48. Said weight was that given in the waybill of the Boston and Albany Railroad Company as delivered to this company and accepted through error of this company's agent and without any misrepresentation or fault on the part of the shipper. It was subsequently found that the weight should have been 100,986 pounds, and correction thereof was made. Its charge of 10 cents per 100 pounds on the difference, amounting to \$52.98, was collected."

I also offer in connection with that case the testimony taken before Commissioner Prouty at the hearing in Boston March 12, 1898, and I would like to read from Mr. Winlock's testimony at that time.² Mr. Winlock was general agent of the Ne

this company's agent and without any misrepresentation or fault on the part of the shipper. It was subsequently found that the weight should have been 100,986 pounds, and correction thereof was made. Its charge of 10 cents per 100 pounds on the difference, amounting to \$52.98, was collected.

(i) On the 22d day of July, 1897, this company received from the Boston and Albany Railroad Company at Boston two U. T. L. cars, Nos. 1286 and 7544, consigned to the Newport Gas Company, containing oil, weight 100,540 pounds, which this company rebilled from Boston to Newport at its rate of 10 cents per 100 pounds; total charge, \$100.54.

8. Annexed hereto are copies of the original waybills and Boston and Albany Railroad vouchers connected with each of the above-specified shipments.

All of which is respectfully submitted.

THE NEW YORK, NEW HAVEN AND HARTFORD RAILROAD COMPANY,
By JOHN M. HALL, Vice-President.

STATE OF CONNECTICUT, City and County of New Haven, ss:

John M. Hall, being duly sworn, says that he is the vice-president of the New York, New Haven and Hartford Railroad Company, above named, and that the foregoing answer is true as he verily believes.

Subscribed and sworn to before me this 25th day of January, 1898.

JOHN M. HALL.

AVERY CLARK, Notary Public.

¹ See p. 731.

² The following are further extracts from stenographer's notes of the testimony taken at this hearing, a copy of which, verified by the affidavit of Mr. Walter Rogers, the stenographer, was submitted to the Industrial Commission by Mr. Page. The hearing was held before Mr. Charles A. Prouty, Interstate Commerce Commissioner. Mr. J. F. Marchand appeared for the Interstate Commerce Commission; Mr. Samuel Hoar for the Boston and Albany Railroad; Mr. G. L. Winlock for the New York, New Haven and Hartford Railroad, and Messrs. Hyde & Baxter for the Standard Oil Company.

Testimony of Mr. W. M. Kidder, agent of the Boston and Albany Railroad at East Boston:

Q. (By Mr. MARCHAND.) Mr. Kidder, just explain the method of billing freight for the Standard Oil Company out of East Boston.

"Mr. HYDE. We should like to have that restricted to interstate shipments, if you please.

"Q. (By Mr. MARCHAND.) Is it customary to incorporate in your waybill the weights of cars received from the Standard Oil Company for shipment of naphtha over the New York, New Haven and Hartford Road?

"Mr. HYDE. Just a moment. We should like to have the question restricted to these shipments, if you please. I understand that is the matter in investigation, Mr. Commissioner.

"The COMMISSIONER. Yes; but I think you may ask him, Mr. Marchand, what his custom is as to similar shipments, for the purpose of showing what he did with reference to these particular shipments was in accordance with the ordinary methods of business.

"Mr. HYDE. So far as it refers to interstate matters.

"Q. (By Mr. MARCHAND.) Is it customary to incorporate in the waybill the weight of the cars of naphtha for the Standard Oil Company?—A. Yes, sir.

"Q. What is your source of information as to weight?—A. Well, the receipts received from the Standard Oil Company give no weights. My waybill clerk inserted the weights of 24,000 pounds for each tank car.

"Q. In the absence of any weight reported by your yard master, from whom, as I understand, you obtain the memorandum of shipment, how do you obtain the weights?—A. As I say, without the weight my billing clerks put in the minimum tank-car weight, which is 24,000 pounds.

"Q. Is it customary to ship tank cars of naphtha upon the minimum weight?—A. Yes, sir.

"Q. Under what circumstances do you do that?—A. Do that every time where there is no weight shown on the receipt. You know we don't weigh these cars at East Boston at all.

"Q. What do you charge to the Standard Oil Company for transporting these tank cars to Boston for reshipment?—A. Six dollars per tank.

"Q. When you want to ascertain the weight or capacity of a car, how do you go about it? I have reference to tank cars.—A. Tank cars?

"Q. Yes.—A. Well, the only way to do it would be to weigh them empty and weigh them loaded.

"Haven't you, or hasn't your company—haven't you, I will put it—in your possession a book published

Haven Road at Boston, and testified that he had full charge of rates from Boston to all points on the New Haven road.

Mr. Winlock says: "I have nothing to say except what Mr. Page has said, so far as the relations between the New Haven road and the Standard Oil Company are concerned, is absolutely true. There is no arrangement of any kind between the Standard Oil Company and the New Haven road by which they can get any better rates, whether it is by a rebate, or by underbilling, or by anything of that kind, than what everybody else gets. Our rates are published, and posted for everybody. These undercharges in weight were errors of our local agents in accepting them as such. They should have investigated the matter more than they did. Instead of blindly taking the weights given by the Boston and Albany Railroad vouchers, they should have taken some means, as they did in nearly every other case, to get at the proper weights. The tariffs to Newport were based on actual weight, and instead of taking this constructive tonnage of the Boston and Albany road, which they used for purposes of their own, they should have taken, as I said, some means of ascertaining the weights in every case. The other cases were errors of theirs."

Q. (By Mr. JENKS.) I see in the testimony that the weights are taken from the Boston and Albany. I understand your shipping point is East Boston?—A. It is.

Q. And the Boston and Albany road takes the oil from East Boston to where it delivers to the New Haven and Hartford?—A. Yes.

Q. Is it true, as has been stated, that when oil is delivered to the Boston and Albany road by your people the billing is done by your people directly, and that you furnish the weights to the Boston and Albany?—A. It is not true, sir, as was shown in this late testimony. I will explain it: Our works are located at East Boston on the Boston and Albany road. The Boston and Albany road have to switch any car from Boston to East Boston, where the cars are delivered to the New Haven road. That switching charge, as I recall it, is \$6 per car; either \$4 or \$6 per car. The Boston and Albany road, like many other roads, wishes to show its tonnage, whether the rates are per car or per hundred pounds; and where the rate is per car, as in this instance, it probably uses 24,000 pounds, which is the usual carload weight; it is the minimum carload weight. They simply put in 24,000 pounds. The testimony shows, and I swear now, that we did not give the Boston and Albany road 24,000 pounds as the weight of those cars, nor did we give them any weight. We did notify, not only directly, but through this book, the actual weight of all those cars, and it was simply an error of the New Haven road, as shown in the testimony, and as offered by Vice-President Hall, that the New Haven road took in error the constructive weight of the Boston and Albany in their bill, instead of taking the actual weight, which they had in their power to get, and should have got.

Q. It is usually the custom of the Boston and Albany in their shipping, to put in the minimum weight, 24,000 pounds?—A. It seems to be so in this case. I can not say what the general custom is, but it is the custom. There is nothing exceptional in the Boston and Albany having a switching rate for switching; it is no more than any other railroad does.

Q. As to the regular custom of the Boston and Albany in shipping to points in Massachusetts, you would swear somewhat positively that their shipping rates are based on the full car rates? I am not speaking of interstate traffic.—A. I say this: that, as far as the Boston and Albany rates are concerned, whether within the State of

by the Central Freight Association, known as Capacities of Tank Cars Used in the Transportation of Petroleum and its Products?—A. No; I never remember of seeing such a book.

"Mr. MARCHANT. I wish to offer this book in evidence.

"The COMMISSIONER. Mark that. (Book marked 'Exhibit 3, W. W. C.')

"The COMMISSIONER. The witness is shown Exhibit No. 3, being entitled 'Tank Gauge Hand Book No. 3.'

"The WITNESS. No, sir; I never saw that book before.

"Q. Did you ever see a book like it?—A. No, sir.

"Q. Do you know of any other book which contains the capacities of tank cars which are used by railroads?—A. I do not.

"Q. Then, Mr. Kidder, if you wanted to arrive at the weight of a car loaded—a tank car loaded—you would weigh it first empty, and then weigh it after it was filled?—A. Yes, sir; that is the only correct way that I know of of doing it.

"Q. Now, when you deliver tank cars to the New York, New Haven and Hartford road what do you furnish the New Haven road with?—A. I don't know, sir; I can't tell you.

"Q. Who does know?—A. Our Boston office; we only bill the cars, you know, to Boston.

"Q. (By the COMMISSIONER.) Mr. Kidder, the Standard Oil Company has a large storage capacity for petroleum in East Boston, has it?—A. Yes, sir; I don't know the capacity.

"Q. I suppose you receive from time to time tank cars loaded there for transportation to points on the line of the Boston and Albany Railroad?—A. Yes, sir.

* * * * *

"Q. What I want to know, if you have any knowledge of this sort, is what the method would be if the Standard Oil people desire to ship a tank of oil from East Boston to some point upon your line to

Massachusetts or without the State, we pay exactly the same rates as anyone else pays from Boston to the same destination.¹ Now, I can not recall and I do not know every local rate on every railroad in the United States, but I do know that we pay the same rate of freight from the same point to the same point as every other shipper.

Q. Whether it be local, within the State, or interstate?—A. Yes.

Q. (By Mr. A. L. HARRIS.) Who determines the weight and contents of the tank car as listed in your book?—A. The capacity of the tank car is first found in the case of the Union Tank Line Company by measurement, and that is confirmed by water

which there was a rate by the hundred pounds, and not an arbitrary rate, as it was in this case. Would that be waybilled directly from East Boston, or would it be sent over to Boston and waybilled?—A. It would be waybilled from East Boston.

Q. When you receive that car from the Standard Oil Company what do you sign, if anything?—A. The same kind of a receipt is signed.

Q. Would that receipt, as far as you know, state the weight of that tank?—A. No, sir; it would not.

Q. How would you know what the weight was?—A. We would bill it at the standard minimum weight of a tank car.

Q. Bill it at 24,000 pounds?—A. Yes.

Q. And that is ordinarily done with the Standard Oil Company, is it, to local points?—A. Yes, sir.

[Testimony of Mr. George L. Keyes.]

Mr. Keyes was employed in the freight department of the New York, New Haven and Hartford road at Boston.

Q. (By Mr. MARCHAND.) Have you in use in your office a book issued by the Central Freight Association giving the capacities of tank cars?—A. No, sir.

Q. Have you any publication showing the weights of tank cars and capacities?—A. No, sir.

Q. How do you arrive at the weights?—A. We have taken the weights rendered on the papers from the connecting line."

[Testimony of Mr. W. F. Davis.]

Mr. Davis was billing clerk at the Park Square station, Boston, of the New York, New Haven and Hartford Road.

Q. (By the COMMISSIONER.) Mr. Davis, how long have you been a billing clerk in the Providence office?—A. About 6 years.

Q. How many billing clerks are employed there?—A. There are 6 employed there now.

Q. During the last 6 years have you billed out at one time and another a good many of these tank cars?—A. Quite a number.

Q. What do you mean by quite a number?—A. Perhaps one a week.

Q. During that time have you ordinarily sent them along on this voucher of the Boston and Albany of 24,000 pounds?—A. Unless I received other instructions.

Q. How often have you received other instructions?—A. I couldn't say as to that.

Q. Well, give us the same idea, approximately, as to how often you received other instructions as you have given as to the number of cars you sent out?—A. In almost every case.

Q. You say you have received other instructions in almost every case.—A. Yes, sir.

Q. How do you happen to receive those instructions?—A. By a letter.

Q. And by a letter from whom?—A. From the Standard Oil Company.

Q. So that the Standard Oil Company had been accustomed to instruct you as to the weight at which those tank cars should be billed?—A. Yes, sir.

Q. And the Standard Oil Company must have known unless they did instruct you you would have billed the car at 24,000 pounds?—A. I don't know about that.

Q. What did they instruct you for?—A. If they wanted a car prepaid they would instruct us to prepay the freight.

Q. This particular car was prepaid, wasn't it?—A. Yes, sir.

Q. You say the Standard Oil Company have usually written your office a letter instructing you and giving you the weight of the car?—A. Yes, sir.

Q. Now, can you tell us about what part of the instances which you have billed out you received instructions of that kind?—A. In almost every case.

Q. And that came to you without solicitation or of application to the Standard Oil Company?—A. Yes, sir.

Q. It was done by them of their own motion?—A. Yes, sir."

[Testimony of Mr. George L. Winlock.]

Mr. Winlock was assistant general freight agent of the New York, New Haven and Hartford road.

Q. Haven't you in your office a publication which designates the capacity of tank cars?—A. Yes, sir.

Q. How long have you had such a publication?—A. Since about the middle of February, I should judge.

Q. Had you no compiled information with respect to capacities of tank cars prior to February, 1898?—A. No, sir."

(The witness is reading a series of letters from the Standard Oil Company, giving information as to the weights of tank-car shipments.)

Q. (By Mr. HYDE.) And the next one in point of time?

Mr. PAGE. Will the Commissioner please note that this next one is one of these undercharge shipments?

"A. The next one is:

"FEBRUARY 9, 1897.

"Mr. A. H. POSTER:

"You will receive from the Boston and Albany road, U. T. L. cars 1829 and 7986, consigned to the Newport Gaslight Company, of Newport, R. I. The weights of these cars are as follows: 1829, 50,272

¹ See testimony of Mr. W. M. Kidder, at the top of the footnote above, on this page.

gauge, and the Central Freight Association have a bureau of inspectors who go around and test the capacity of those cars.

Q. Each car is numbered?—Each car is numbered and each car's capacity in gallons is given, and its equivalent capacity in pounds, based on the average weight of 6.4 pounds per gallon.

Q. (By Mr. CLARKE.) What paper or vouchers passes from the Boston and Albany Railroad Company to the New York, New Haven and Hartford Railroad Company in that case?—A. Simply a bill of lading that that car which they received at East Boston and which they delivered to the New Haven road at Boston was destined for the Newport Gas Light Company at Newport.

Q. Do the Boston and Albany haul this freight over its line from Albany to Boston at a lower measurement or at a higher measurement?—A. This shipment originated at East Boston on the line of the Boston and Albany road.

Q. Over the road that used to be called the Freight Railroad from East Boston to Boston?—A. I do not know the name of the road, but the switching charge is from Boston to East Boston.

Mr. CLARKE. I will explain to the commission that it is a railroad some 4 or 5 miles long. It is rather more than an ordinary switch. This used to pass around through Cambridge and connect with the main line of the Albany road, and then ran back into Boston to connect with the New York, New Haven and Hartford.

REGION SUPPLIED WITH OIL FROM BOSTON.

Q. (By Mr. JENKS.) You spoke of this shipment originating at East Boston. Do you have East Boston for the main distributing point for all New England?—A. For a section of New England.

pounds; 7986, 51,341 pounds. Kindly bill these cars freight prepaid and send us bill in duplicate at once to this office for collection.'

"That, as Mr. Page says, is one of the cars which appears on the statement as undercharged by us.

* * * * *

Q. (By the COMMISSIONER.) You have said, Mr. Winlock, that you understood that your agents billed these tank cars at their actual weight?—A. In case of interstate shipments.

Q. That, taken all in all, is what your instructions amounted to?—A. Yes, sir.

Q. Do you have a different rule where the shipment is to a point within the State?—A. I am not prepared to answer that question.

Q. I don't ask what the rule is; I ask whether you have a different rule; because, if you have one rule in one case and another rule in another case, the Standard Oil Company ought to see certainly that you have sufficient knowledge on which to make this claim.—A. I have not prepared myself, Mr. Chairman, in regard to State shipments whatever.

Q. Do you mean by that that you don't know whether you have a different rule?—A. No, sir.

Q. Or do you mean that you don't want to state?—A. I have not looked it up. I should have to look it up before I made any such statement as that.

Q. If your instructions were the same in reference to your intrastate and interstate shipments, you know that, don't you? You know I am not asking what the rule is, but I am simply asking whether, in point of fact, you have one rule for shipments in the State and another rule for shipments which are destined to points outside the State.—A. As I recollect it, we have not; but I should want to make sure of it before I answered that question.

Q. So you can not tell?—A. I can not tell; no, sir.

Q. You are the man who would know about that rule, if there was any?—A. I have already said that I think it is the same. I am not absolutely positive of the different rates which apply on intrastate business.

Q. I am not talking about rates; I am talking about a rule as to the billing of these cars, and my question is this: When you bill a tank car to an interstate point—a point without the State of Massachusetts—do you bill it at its actual weight; and when you bill a car to a point in the State of Massachusetts, do you bill it at a weight of 24,000 pounds?—A. That is a question that I could not answer.

Q. Do you mean to say that you have no knowledge about it?—A. No, sir.

Q. You mean you don't want to answer that question?—A. I mean that I don't want to answer that question.

Q. (By Mr. HYDE.) One question I should ask you, Mr. Winlock. Having received the letter of February 9, giving the weights and the numbers of cars, the waybill which you made out, or which was made out in your office by a clerk, was simply an error?—A. Yes. This letter is not addressed to my office; it is addressed to Mr. Porter. I understand that Mr. Porter's clerk overlooked that letter in billing.

Q. (By Mr. MARCHAND.) Will you allow me to look at that letter?—A. Certainly.

Mr. PAGE. Mr. Commissioner, may I ask the witness one question in regard to what the commissioner just asked him?

"The COMMISSIONER. Certainly.

Q. (By Mr. PAGE.) You have no understanding with the Standard Oil Company, or any instructions from your superiors, by which you are to bill cars within the State at less than the actual rate?—A. None whatever.

"The COMMISSIONER. Not the actual rate?

Q. At less than the actual weight. You have no understanding with us by which you should bill cars at 24,000 pounds within the State because of our interstate shipments, have you, or for any reason?—A. We have no instructions from you.

Q. Or understanding with us?—A. We have no understanding with you at all, Mr. Page, of any kind.

* * * * *

Q. In other words, Mr. Winlock, the rates that you may name us within the State have no connection or no bearing in regard to interstate business?—A. None whatever."

Q. What section? How much is covered from your central distributing point?—A. Well, I can not say. Of course, it is for Boston particularly, and I know we make shipments from there up to Portland, and I know we make shipments from there down into Massachusetts and Connecticut.

Q. Down as far as New Haven?—A. Almost. I mean as far as New Haven. It depends upon what we may have in the Boston tanks, and what the order may be for. You know there are many grades of petroleum, and we do not carry everything required at that point or at every shipping point.

Q. Do you suppose that your ordinary shipments of petroleum for lighting purposes, at New Haven, for example, would come from East Boston?—A. No; I do not think that we ship to New Haven from East Boston.

Q. You would to Providence and Newport, probably?—A. Newport. In these cases it depends upon the stock and depends upon the situation. I can not answer as to the exact territory that may be supplied from any station, but it would supply the territory as far as its location and its stock was able to do so.

Q. How do you supply your shipping station at East Boston?—A. We supply partly by rail shipments and partly by steamer shipments from New York and Philadelphia.

Q. From your refineries at Bayonne?—A. From seaboard refineries, whatever one it may be.

WHY ARE THROUGH RATES REFUSED ON PETROLEUM PRODUCTS?

Q. The statement has been made here by some of the independent refiners that in their attempts to ship oil into New England from the West they had found that, although there were through rates on the regular tariff sheets for almost all kinds of goods, there were no through rates for petroleum on the New York, New Haven and Hartford. They stated that in shipping corn, or almost anything else, to Newport or Providence, they would get through rates the same as the Boston rates; but that on petroleum no such through rates were given at all; they had to give the local rate, and this local rate, added to the regular rate from the West, made a rate to New Haven or Newport or Providence very much higher than to Boston.

Now, the statement was made here that that applies not only to New Haven, but generally, and that the shippers of petroleum in the West are placed at a decided disadvantage on that account. Can you give any reasonable explanation why the railroads should make a special exception of petroleum as to the furnishing of through rates?—A. Why, I can say this—that I do not know anything about the corn rates at all.

Q. As to what is the general rate?—A. I mean to say that there are many commodities which the railroads make rates on, on the basis of through rates and local rates, whereas they may be applying through rates on other commodities. I do not know anything exceptional in the matter of oil in New England as compared with corn in the West. I do know that we ship from the oil regions to New England to some extent, and we pay exactly the same rates as the other fellow pays.

Q. Can you mention some of the New England points you supply from the West or from regions of the West?—A. I can not. I can say we do make shipments to New England as well as Boston. I know also we have made shipments from Cleveland, and also as far as Lima, and wherever we have made those we pay the same rates as other people do.

Q. Is it your rule to make shipments from Cleveland, Lima, or other Western points to the territory of the New Haven road?—A. Yes; we have.

Q. The general fact that you have a distributing point at Boston, from which you can supply this territory that is supplied by the New York and New Haven road, and that they can not furnish through tariffs from the West, would seem to some of your competitors, at any rate, to give you some decided advantage, although no illegal advantage, over them?—A. We do not deny that by having our refineries at the Atlantic seaboard and supplying New England from those refineries we have an advantage over the man who has to take the oil from Cleveland or the oil region, but we claim no fair adjustment of rates can be made that will put that man on an equality with us in that situation.

Q. Would you say further that the Standard Oil Company officials have not represented the matter to the New Haven road in such a way that they have succeeded in getting the New Haven road to refuse to make through rates on petroleum, while it does make through rates, and those equivalent to Boston rates, on a proportion of other goods that are shipped?—A. I think that Mr. Condit Prouty answered that question by saying that the New Haven road in charging rates

trary rates on oil from Boston as well as from the Hudson River were receiving more money themselves than they would if they applied the through rate, and for selfish reasons they got the most money they could out of the traffic.

Q. (By Mr. SMYTH.) Is it not a fact that those rates apply to a great many other commodities besides oil; that a larger rate is charged for the shorter distance?—A. As I say, Mr. Smyth, I do not know much about other traffic. I can say specifically in regard to the difference in the rate of corn and oil that I do not know the reasons for it. I can say in a general way that I do not believe the railroads make rates that will injure the business or prosperity of the road. The prosperity of a road depends upon the prosperity of the patrons, and if the railroad makes any rates that are going to prevent shipping over their road, it seems to me they are doing what a reasonable man would not do; and my experience is that the railroads are represented by as high an order of intelligence in this country as any class that I know of.

Q. You have no reason to believe that oil is the only commodity that is charged a higher rate for the shorter distance?—A. Absolutely none.

Q. I mean to that point?—A. No, sir. I only know, however, about oil.

MR. WILLIAM ROCKEFELLER DOES NOT INFLUENCE TARIFFS ON THE NEW YORK, NEW HAVEN AND HARTFORD.

Q. (By Mr. JENKS.) It has been intimated by Mr. Rice¹ and others that this special refusal to give through rates on petroleum by the New York and New Haven road was presumably brought about by the fact that Mr. William Rockefeller was a director of the road, or by some other special influence brought to bear in favor of the Standard Oil Company to check these shippers of the West?—A. I will say, as far as the New Haven road is concerned, and Mr. William Rockefeller, that absolutely I do not know of any arrangement, or any tariff, or any change in tariff, that Mr. William Rockefeller has ever suggested or influenced on the part of the New Haven road or any other road. I do not believe that Mr. Rockefeller knows who the traffic manager for his road is to-day, or would know him if he was in this room.

LOW RATES FROM THE STANDARD'S WORKS AT WHITING.²

Q. (By Mr. KENNEDY.) I see that your testimony has been so far in rebuttal of Mr. Rice; there was another witness before the commission who made a statement that I should like to hear you say something about. He is the gentleman to whom you have just alluded, an interstate-commerce commissioner. He made a statement before the commission which seemed to show that the Standard Oil Company had an advantage in shipping from its Whiting works down the Mississippi Valley to New Orleans over the independent shippers or refiners of Cleveland, Ohio. I do not know just what the figures were, but they struck me at the time, if true, as indicating that the Standard Oil Company did have an advantage in the rates that were made, a great advantage, over the refiners of Cleveland. As traffic manager of this tank-line association, do you know anything about those rates?—A. I know what the rates are from Cleveland and from Lima to New Orleans. They are based on the local rate to the Ohio River plus the rate from the Ohio River to New Orleans. The rate thus figures out, as I recall, less than half a cent a ton a mile. The haul from Cleveland to New Orleans is over 1,000 miles and has a low rate. As to the rate from Whiting to New Orleans we have an advantage. Whiting is some 400 or 500 miles nearer New Orleans than Cleveland. The rate from Whiting—

Q. (Interrupting.) Not that much nearer.—A. Well, I do not know that it is, but it is appreciably nearer. And the rate from Cleveland to Whiting plus the rate from Whiting to New Orleans is higher than the rate from Cleveland to the Ohio River plus the rate from the Ohio River to New Orleans. In other words, I mean to say that we are paying a higher rate in proportion from Whiting to New Orleans when you consider the haul from Cleveland to Whiting.

Q. (By Mr. JENKS.) The rate from Whiting, as you say, is considerably lower than from Cleveland. Do you know whether the rate from Whiting on other similar products, like linseed oil, for example, is lower than the rate from Cleveland to New Orleans?—A. I do not know what the rates are on linseed oil either from Whiting or from Cleveland.

Q. Statements have been made to this effect—I do not mean to say that these figures are exact, but approximately exact—that on linseed oil the rate from Cleveland to New Orleans would be possibly 28 cents, and from Chicago it would be somewhat less, say 25, but that on petroleum the difference would be as great as from 31 to 26 cents,

¹ See p. 731; Mr. Westgate, p. 274.

² See Mr. Kennard, p. 266; Mr. Westgate, p. 276; Mr. Rice, pp. 730, 731, 732.

showing that there would be a considerable advantage to petroleum as compared with a somewhat similar product, like linseed oil?—A. I can not testify on that; but you can not pick out any two commodities and say that because there is a difference on one between two points the same difference should apply to the other. The reasons governing commodities are very often different in the matter of their manufacture, of the territory that they go over, and the cost in getting them up to that point, and various and sundry reasons, which are good reasons from the railroad standpoint; and as they have the authority we accept them as good reasons.

Q. (By Mr. CLARKE.) Are linseed-oil shipments made in tank cars? (No answer.)

Q. (By Mr. FARQUHAR.) Is there a large shipment of linseed oil from Whiting?—A. Without being an expert on linseed oil, let me call your attention to the difference. Linseed oil is grown very largely in the West. At Chicago linseed oil is nearer the point of production than it is at Cleveland. Now, there may be very good reasons why the rate from Chicago to New Orleans on linseed oil might be higher than it is from Cleveland, simply because the traffic may stand more.

Q. The natural distributing point for linseed oil is east of Cleveland rather than west of it?—A. The natural distributing point is west of Cleveland rather than east, because the oil is grown in the West.

Q. Would not the same reasons hold good for Buffalo the same as Cleveland?—A. Yes.

Q. Now, does this commission understand you to say that the position of the Standard Oil Company on the seaboard, having an inside line of distribution, is an advantage that you get over all competitors, and that that one is just the one that you have?—A. I do not understand what you mean by the inside advantage.

Q. By the shorter line of distribution—geographical distribution.—A. At the seaboard for the East and at Chicago for the West, as I have said, we have an advantage over the man who is shipping at some interior point.

Q. And the Standard would have the advantage over all competitors on an even tariff?—A. No.

Q. On an even tariff for all from the same point?—A. Yes. I say we are on an even tariff for all. We ship from Cleveland where our competitor is, and we ship from the oil region where our competitor is; yet we have competitors on the Atlantic seaboard that pay the same rate as we do. We endeavor to supply each point from our nearest refinery.

Q. (By Mr. CLARKE.) Do you know why your company located their refinery at Whiting?—A. Because it was nearer the great West, which is a large consumer of oil.

HAVE OBEYED THE INTERSTATE-COMMERCE LAW.

Mr. Farquhar, I do not know whether you were here when I made the explanation in regard to the Newport case.

Q. (By Mr. FARQUHAR.) I do not care; I will take the record as it came on that.—A. But I will call your attention to the fact that the Standard Oil Company has shipped thousands of carloads of freight to all points in the United States, over nearly every railroad line in the country, and the freight bills for its cars pass through the hands of numberless employees both of the railroads and the shippers who have such large and diversified interests throughout the United States, and it would have been impossible to keep such rebates secret had any such been granted, especially since Mr. Rice and others like him have been on the constant lookout for something tangible by which to prove their oft-repeated allegations that the Standard Oil Company has been violating the interstate-commerce law. That law has been in effect for more than 12 years, and at the end of this period the best case that the opponents of the Standard Oil Company can produce is that involving a clerical error in the billing of three or four cars shipped from Boston to Newport; and I would like to see somebody else equal that record.

EARNINGS OF UNION TANK LINE COMPANY ONLY 4½ PER CENT.

Mr. Rice makes the statement that the mileage paid the Union Tank Line Company of three-fourths of a cent a mile pays back the investment every three years.¹ I would say that since the formation of the Union Tank Line Company, August 1, 1891, that company has never paid a dividend, and that the earnings of that company for the 8 years, 1891 to 1898, inclusive, have shown an average yearly return on the capital invested of 4½ per cent per annum. This return has been figured without charging anything off for depreciation, although according to master car builders'

¹ See p. 732.

rules (on which railroads base their settlements between each other) a depreciation of 6 per cent per year is deducted in case one railroad destroys another railroad's cars. The three-fourths of a cent mileage paid the Union Tank Line Company is exactly the same as is paid all other tank-car owners, and there are in the United States between 170 and 180 individuals and companies, entirely outside of the Standard Oil Company, owning an aggregate of 7,420 tank cars, while the Union Tank Line Company's equipment November 1, 1899, was 5,851 cars.

I offer a statement giving the names and ownership, made up from the very best records we have, of the owners of cars outside of the Union Tank Line Company, showing an aggregate ownership of nearly 2,000 cars more than the Union Tank Line Company has.

(Following is a copy of the exhibit offered by the witness:)

Statement showing number of tank cars and owners of same, other than Union Tank Line Company, based upon best obtainable published information as of November 1, 1899.

Q. (By Mr. KENNEDY.) Do these tank-line companies, outside of the tank line you are speaking for, carry oil for the Standard Oil Company?—A. The Standard Oil Company ship, as far as they can, in Union Tank Line cars. They do use outside cars when they can not get the Union tank cars, and need them.

Q. Now, the testimony is that the Standard Oil Company do pretty nearly 90 per cent of the business in the United States, and it would look a little curious that they could do that business with 40 per cent of the tank-line cars of the country, unless they were using the cars of some other company to some extent.—A. The explanation of that is that the tank cars used by other individuals are not confined to the use of petroleum, but their tank cars receive exactly the same mileage basis as is paid to the Union Tank Line Company; and that company, I say, as vice-president of it, has shown an average earning of $4\frac{1}{2}$ per cent per annum, charging off nothing for depreciation. It ought to be borne in mind in connection with the Union Tank Line that, owing to the fact that during the summer the consumption of petroleum is small, a large part of the equipment of the Union Tank Line Company is idle, and during that time is earning nothing whatever; and at other times the volume of the business requires the whole number of cars owned.

Q. (By Mr. JENKS.) What did you say is the number of cars owned by the Union Tank Line Company?—A. Five thousand eight hundred and fifty-one, November 1.

SEVEN MILLION DOLLARS REBATES FROM ATCHISON, TOPEKA AND SANTA FE RAILROAD;
NONE TO THE STANDARD.

Regarding the statement that in 1894 an expert accountant discovered that \$7,000,000 in rebates had been paid by the Atchison, Topeka and Santa Fe Railroad,¹ I would say that the Standard Oil Company did not receive one dollar of this money.

WHY THE UNION TANK LINE COMPANY CONTINUES TO DO BUSINESS WITHOUT PROFIT—
WHY A SEPARATE ORGANIZATION.

Q. (By Mr. CONGER.) I should like to return for a moment to this matter of tank cars. The statement made would indicate that that was very far from being a profitable business. As I understand, it has been continued by this company for a period

¹ See p. 738.

of years, and I would like to ask upon what theory you are able to induce the stockholders to continue their investments and make additional investments from time to time as would seem to be necessary.—A. The answer is simple: the tank car is a necessary facility in the economical distribution of petroleum and its products. It is one of the means by which we are enabled to ship oil cheaply and supply it cheaply. For that reason the investment, as you see, in the Union Tank Line Company is a proper one, for the Union Tank Line Company is the necessary arm of the petroleum business.

Q. The owners of the Union Tank Line Company, to a large extent, are the same as the owners of the Standard Oil Company?—A. You see—

Q. (By Mr. FARQUHAR, interrupting.) Is it not of just the same character as horses and vans and other things that are used in distribution? You can not expect a profit out of it, but it is an incident and a condition that you can not escape from in distribution.—A. It has been one of the most necessary parts of the business in distributing economically the products of petroleum.

Q. (By Mr. CONGER.) If you regard it in the same light as you do horses and freight wagons, why is the business conducted by an independent company—by the company called the Union Tank Line Company—and not by the Standard Oil Company itself?—A. The Union Tank Line Company is simply a corporation that owns tank cars.

Q. What is the purpose or advantage of the separate organization?—A. I am not a lawyer.

Q. You do not need to be a lawyer to answer a question like that, if you choose to answer it; it is a business question, not a question of law.—A. I do not refuse to answer it. The Union Tank Line Company has been formed to own and run these cars over the various railroads of the United States for the transportation of oil.

Q. You have testified that there is no profit in it at all?—A. I do.

Q. What I am trying to get at is why it is continued as a separate organization instead of by the Standard Oil Company itself directly?—A. Well, if it is profitable or unprofitable, it would make no difference whether it was conducted in the name of the Union Tank Line Company or in the name of the Standard Oil Company; but it was formed under the name of the Union Tank Line Company, and I say it is a necessary adjunct in the distribution of petroleum, and it is therefore continued although it is not profitable.

Q. (By Mr. SMYTH.) I suppose the stock of the tank line company can be bought independently of the stock of the Standard Oil Company?—A. I do not know.

Q. I mean it is listed for sale?—A. It is a separate company.

Q. If a man becomes a stockholder in the Union Tank Line Company, does he necessarily become a stockholder in the Standard Oil Company?—A. No; I do not understand he does.

Q. (By Mr. KENNEDY.) In what State is the Union Tank Line Company incorporated?—A. In New Jersey.

Q. Does the Interstate Commerce Commission exercise control over it like any other interstate transportation company?—A. Why, I never heard that the Interstate Commerce Commission had control of private car lines. No; this is a car line.

Q. (By Mr. SMYTH.) It does not make rates?—A. It has no rate or payment like a railroad.

Q. (By Mr. KENNEDY.) It does not come under the control, then, in any way of the Interstate Commerce Commission?—A. No; no more than the dressed-beef cars or Pullman cars or refrigerator cars or any other private cars.

Q. (By Mr. FARQUHAR.) In the building and running of your tank steamships, is that done by a separate department of the Standard Oil, or is it the Standard Oil itself?—A. I do not know enough to answer you in regard to that.

Q. (By Mr. JENKS.) The Union Tank Line Company has nothing to do with foreign shipments?—A. No; nothing whatever.

Q. (By Mr. CONGER.) Referring to the number of stockholders in this organization, do you know whether they are many or few, three, four, or five, or several hundred?—A. Of what organization?

Q. The Union Tank Line Company.—A. I think there are a great many; I do not know. I have never kept the books; the secretary could say how many stockholders there are, but I do not know.

Q. Do you know, or would you care to testify as to the salaries that are paid the officers of the company? The point I am getting at is this, that if such an organization is continued and continues in business when that business is so unprofitable as you testify, it seems to me that there must be some other way than through the distribution of dividends to make it profitable to its officers or stockholders.—A. I

think I have made that clear, that the tank car is a necessary adjunct in the petroleum business.

Q. Well that is——. —A. (Interrupting.) And is necessary in enabling the Standard Oil Company to distribute the products of petroleum economically throughout the United States; and by economically distributing, it has increased its business—the Standard Oil Company's. Now, that the tank-car line itself only shows, as I have testified, a return on the investment of 4½ per cent is no reason why it should be discontinued if it is necessary:

By Mr. BOYLE. May I consult with the witness?

By Mr. CLARKE. What is the pleasure of the commission?

By Mr. FARQUHAR. There is no objection at all.

(Mr. Boyle consults with witness.)

Q. (By Mr. CONGER.) How long has this Union Tank Line Company been in business or in operation?—A. Since 1891, when the company was formed.

Q. The point I was getting at is the advantage that the Standard Oil Company gets by having this Union Tank Line Company continue in business. Does the Union Tank Line Company do it simply through philanthropic or generous motives toward the Standard Oil Company?—A. I have testified that my knowledge and belief is that the present owners of the Union Tank Line Company and the Standard Oil Company are the same. Now, those owners think that the tank car is necessary in the conduct of the general business, and therefore continue in the use of those cars under the name of the Union Tank Line Company.

Q. Well, that puts a little different light on it; I understood you to say that they were not the same in all respects?—A. You misunderstood me; I said that they were different corporations.

Q. Now, then, do you know of any reasons why the officials or officers of the Standard Oil Company should prefer to operate this as an independent company instead of by the Standard direct?—A. I do not.

Q. (By Mr. JENKS.) When you speak of the Standard Oil Company are you thinking of one company or the several Standard Oil Companies?—A. I am speaking of the company, as it is generally known, as one company.

Q. Is this company that you are speaking of in that way technically and legally one company, or is it several—twenty-five different companies?—A. I do not know that I am competent to answer as to that. There has been recently formed, as you know, the Standard Oil Company of New Jersey, which, as I understand—I had rather cancel that answer. I do not know; that is all.

Q. You had intimated some little time ago that there were probably some legal reasons which you yourself did not know about, for having this Union Tank Line Company organized as a separate corporation. Perhaps in the same way there are some legal reasons why the Standard Oil Company, which we speak of sometimes as one, was organized as several different companies. I had thought it possible that as long as the Union Tank Line Company was serving so many different companies it might be a convenient matter legally for it to have its separate organization, and I did not know but you had—— —A. (Interrupting.) I am very much obliged for the suggestion. I have no doubt that that is the reason: that the Union Tank Line Company, as a separate corporation running its cars all over the United States, is in a better position to do so than if those cars were owned by the Standard Oil Company that was doing the manufacturing or the marketing business.

Q. You also had suggested that it was largely a matter of bookkeeping between all these different companies?—A. Well, I did not mean to convey any such idea. I did mean to say this, and that is all I can say about it, that the Union Tank Line Company is a separate corporation, and serves all these companies in furnishing tank cars for shipment.

Q. (By Mr. KENNEDY.) Have the tank cars that the Union Line owns been provided with air brakes and couplers in compliance with the interstate-commerce law?—A. They have.

Q. Consequently they are an instrumentality of interstate commerce?—A. The cars are used in interstate commerce, yes, and would be subject to the general order requiring cars used in interstate commerce to be equipped with air brakes and couplers.

Q. I asked you those questions because you said in reply to a question of mine a little while ago that you did not know that a company like that was subject to the Interstate Commerce Commission.—A. As I understand that, you refer to requiring cars used in interstate traffic to be equipped with safety appliances, and that is not a part of that law.

Q. It is put under the Interstate Commerce Commission's supervision.—A. It is? Then to that extent they are.

THE TANK LINE'S ONLY INCOME IS ITS MILEAGE—IT PAYS NO COMMISSIONS.

Q. (By Mr. SMYTH.) But they are not under the jurisdiction of the Interstate Commerce Commission in reference to fixing rates, because on those cars the railroads fix the rates.—A. We simply carry the oil and receive the mileage, the same as the railroads pay all other tank-car-line owners.

Q. (By Mr. FARQUHAR.) Does not your company stand in the same relation as the other private cars in this country?—A. Exactly.

Q. Paying exactly the same as the other cars do?—A. Exactly.

Q. (By Mr. CONGER.) I would like to inquire if the witness can tell whether the Union Tank Line Company pays commissions to the Standard Oil Company for freight carried?—A. They do not. They get nothing from the Standard Oil Company; the only thing that the tank-line company gets is the mileage they receive from the railroads when they run their cars over the line.

Q. I think you misunderstood my question. Does the tank line company pay a of its earnings to the Standard Oil Company as a commission for getting its business?—A. Not one dollar.

Q. Would you care to state the salaries paid to the officers of this tank-line company; are they large?—A. I should say they are small. I should prefer not to say what my salary is or what the others are, but I would say they are not exorbitant. am not afraid of its making too large a showing for the Union Tank Line Company; but I think they are small.

Q. The point is this: I think it has been testified to before this commission that in the opinion of several very prominent and highly respectable railroad men this rate of three-quarters of a cent a mile ought to be profitable for the owners of the cars, and the testimony that you have given here this morning seems to me remarkable; I have been trying to get at the disposition of the earnings of this company.—A. If a car was continued in constant use throughout the year on long trips, it might be; but I tell you honestly that my statement that 4½ per cent is the average earning on the investment of the Union Tank Line Company is the exact truth, without any manipulation of the books to make a salary or a big earning. We have been, for instance, in the last 2 years at an expense of \$125 on each car for these automatic brakes, air brakes, and the automatic couplers; and that \$125 on each car does not bring us back 1 cent.

Q. Oh, that is probably true; in addition you testified that in your opinion there are conditions surrounding the use of these tank cars that would make the business of owning and operating them less profitable than the owning and operating of cars in use the year around?—A. Yes.

Q. (By Mr. A. L. HARRIS.) What allowance is made by the Standard Oil Company to the Union Tank Line Company for hauling its oil?—A. Nothing at all. The Union Tank Line Company gets its pay and its only pay from the railroads over whose lines the car travels.

Q. That is all the pay it gets?—A. It pays none of its earnings to the Standard Oil Company, nor does the Standard Oil Company pay any of its earnings to the Union Tank Line.

Q. (By Representative LORIMER.) The majority of the stock, I understand, of the Union Tank Line Company is owned by the principal owners of the Standard Oil Company; is that correct?—A. I do not know in detail. I believe, and I have stated, that the owners of the Union Tank Line Company and the owners of the Standard Oil Company are the same.

Q. What this commission seems to be trying to get at is why a corporation of that sort should be organized and run without a profit. Now, it seems to me that for some reason of their own, the large owners of this company have organized the Union Tank Line Company for the purpose of running that company in the interest of the Standard Oil Company, and they get their profits by way of dividends on the Standard Oil Company's stock; is not really that the relation?—A. I have testified that I believe the owners of the two properties are the same, and that those gentlemen think that the ownership and the running of the tank cars is a necessary adjunct to their general business, and therefore they continue it.

Q. You probably are not in position to testify that they intend to earn that profit without making the profit directly out of that company, but to get their profits out of the other company?—A. I can not say what their intentions are; I only know the result of the running of the Union Tank Line Company.

Q. Of course, there does not seem to be anything in connection with the Union Tank Line that is worth hedging about?—A. There is not. The inference that Mr. Rice tried to draw and the statement that he made to the commission was that this mileage returned to us the cost of the car every 3 years. I say to you that for 8

years that company has shown an average earning of 4½ per cent. Mr. Rice evidently intended to convey the impression that that mileage was unfair and unreasonable and intended as a freight discrimination on the Standard Oil Company's shipments; and I give you the results of the operations of that company to deny Mr. Rice's allegation.

Q. Do you know whether or not any of this stock is held by persons other than those who own Standard Oil Company stock?—A. Yes, I do.

Q. You know that it is held by others?—A. Yes.

Whereupon, at 1 p. m., the commission took a recess until 2 o'clock p. m.

The commission met at 2.10 p. m., pursuant to recess, Commissioner Clarke presiding.

(By Mr. CLARKE.) The commission will be in order and the examination of Mr. Page will be resumed.

Mr. Howard Page again on the stand and examination resumed.

HOW MR. RICE GOT THE "TURN ANOTHER SCREW" LETTER.

Q. (By Mr. SMYTH.) Mr. Chairman, I should like to ask Mr. Page a question. He has testified in reference to the Chess-Carley "turn another screw" letter to Mr. Culp, who was at that time general manager of the Louisville and Nashville Railroad and is now traffic manager of the Southern. I want to ask Mr. Page if he knows how Mr. Rice came into the possession of that original letter, written by Mr. Carley to Mr. Culp?—A. My information and belief is that Mr. Rice, in making some shipments after the time of the shipment which was referred to in that letter, was charged the regular tariff rate, which all other shippers were paying and which was more than he paid on that shipment. He made a claim on the later shipment, claiming the same rate as had been paid on the shipment which Chess, Carley & Co. complained of. The claim was sent, as I understand, in the regular way to the railroads, and, as is customary with railroads, the billing of the car and the correspondence in connection with the shipment were all gathered together in one folder, and attached to this folder was this letter written by Mr. Hathaway. That letter was attached to the papers and the claim when it was returned to Mr. Rice with the claim refused. He got that letter in that way. It showed that the railroad people did not construe it in any such way as Mr. Rice has tried to put it, because if they had they certainly would not have sent it broadcast and attached it to the papers and sent them back to Mr. Rice.

Q. Mr. Culp, I believe, testified that he never had seen the letter personally?—A. He testified in the proceedings before the Bacon committee in 1888 that he had never seen the letter, and if he had he would have understood it as has been explained, that it was simply calling attention to an error, and that Mr. Hathaway used the same expression that was current in the Louisville and Nashville office when an error occurred, that the machinery was loose and ought to be tightened up.

Q. There was apparently no intent on the part of the Louisville and Nashville officials to suppress the letter or destroy it; it was handled in the ordinary course with the papers in that case?—A. Exactly. And I might further add that Chess, Carley & Co.'s offices in Louisville at the time that letter was written were at the corner of Fourth and Main streets, and the office of Mr. Culp was on the corner of Second and Main streets, two squares away; and I think if it had ever been intended that an order was to be given to the Louisville and Nashville road to advance rates in any such way as Mr. Rice has tried to show, a letter would not have been written that had to go only two squares. It would have been attempted in some other way.

(By Mr. CLARKE.) Mr. Page, you may resume where you left off.

'GHOST TRAINS.'

Mr. Rice refers to ghost trains as a means of discrimination in favor of the Standard Oil Company.¹ I wish to say that the Standard Oil Company has never shipped a pound of freight on such a train, even if there has ever been such a train in existence, which we doubt.

NEGOTIATIONS FOR SALE OF MR. RICE'S PROPERTY.

Mr. Rice states that Mr. F. B. Squire, of the Standard Oil Company of Ohio, made him an offer of \$250,000 for his oil properties.² I beg to offer an affidavit from Mr. Squire denying this, and affirming that Mr. Rice offered him his oil properties at one time for \$24,000, and several years afterwards Mr. Rice again offered to sell his oil

¹ See pp. 740, 741.

² See p. 750, and Mr. Archbold, p. 558.

properties and stop prosecutions, etc., for the sum of \$250,000; and offered to give Mr. Squire \$50,000 of this sum if he could bring about this sale. In other words, Mr. Rice offered to pay a part of the money that he was to receive from the Standard Oil Company to an employee of the Standard Oil Company if that employee could bring about the sale of the property to the Standard Oil Company.

(By Mr. FARQUHAR.) Had you not better read that affidavit?

Witness read the affidavit as follows:¹

"STATE OF OHIO, *County of Cuyahoga*, ss:

"On this 1st day of December, 1899, personally appeared before me, F. B. Squire, who, being duly sworn, deposeth and saith that in the fall of 1876 I lived on Forty-second street, New York City, and while there I was introduced to Mrs. George Rice, who stated that her husband wanted to sell his oil property, consisting of production of crude oil, storage tanks for same, pipe lines, and refinery. The result of the conversation was a 30 days' option, which she secured for me to present to the Standard Oil people for \$24,000 for the entire property. I presented the proposal to the Standard people, but it was promptly declined, they claiming it was only worth half the money. I so advised Mrs. Rice. She stated that the Standard Oil Company would be sorry.

"I met Mr. Rice several times after this, and he kept urging the matter. In the summer of 1881 or 1882 he invited me to meet him and his wife at Asbury Park. I did so. They there made me an offer to sell the property, stop all prosecutions, and be friendly with the Standard Oil Company for \$250,000—\$50,000 to go to me for my good office if I could bring it about. I reported the result to Mr. Archbold, including the offer to me, and it was immediately declined. I advised Mr. Rice, who called at my office the next day, and he stated that the company would regret this act. Immediately after this Mr. Rice published the pamphlet called 'Black Death.'

"F. B. SQUIRE.

"Sworn and subscribed before me the date aforesaid.

"[SEAL.]

F. W. LOTHMAN,
"Notary Public."

Q. (By Mr. FARQUHAR.) Is there any way of impeaching the credibility of the man who makes this affidavit?—(No answer.)

Q. (By Mr. SMYTH.) Is he still in the employ of the Standard Oil Company?—A. Yes.

Q. What position does he occupy?—A. He is one of the officers of the Standard Oil Company of Ohio; whether vice-president or treasurer, I do not recall; but he is an officer of the Standard Oil Company of Ohio.

Q. Occupying a position of trust and responsibility?—A. Yes.

Q. He lives in Ohio?—A. Yes.

Q. (By Mr. A. L. HARRIS.) Of the former Standard Oil Company of Ohio; have you a Standard Oil Company in Ohio now?—A. Yes.

Q. Of Ohio?—A. Of Ohio.

Q. Organized under the laws of Ohio?—A. Yes.

Q. Doing business in Ohio?—A. Yes.

Q. As such?—A. Yes; he is the man Mr. Rice refers to as having made such an offer.

Q. (By Mr. CLARKE.) Did Mr. Rice increase the capacity of his refinery and the value of his property between the times of those two propositions?—A. I do not know.

NO FREIGHT CONCESSIONS IN VIOLATION OF THE INTERSTATE-COMMERCE LAW.

In the foregoing I have tried to pick out and deny positively the different allegations made by Mr. Rice in regard to freight discriminations by various devices, which railroads, both prior to and since the passage of the interstate-commerce law, have given to the Standard Oil Company against himself and other oil shippers. I would say that since July, 1889, as vice-president of the Union Tank Line Company, I know the facts regarding the freight business of the Standard Oil Company, rates, shipments, etc., with the various railroads of the United States. I wish to deny positively that during that time we have received any rebates or concessions from tariff rates contrary to either the letter or spirit of the interstate-commerce law. While from Mr. Rice's testimony one might assume that the oil tonnage of the United States was about the only tonnage transported, yet the total consumption of oil in tons in the United States is less than one-half of 1 per cent of the total tonnage moved

¹Original affidavit filed with the commission. See Mr. Rice's affidavit in rebuttal, p. 798.

by the railroads of the United States, and it is absurd to either argue or conclude that so small a percentage of the traffic moved by the railroads of the United States should be of such controlling influence over railroads and their officials as is so often alleged by Mr. Rice.

I wish to present a letter to Mr. Moseley, secretary of the Interstate Commerce Commission, dated December 1, and his reply of December 6, 1899, in which he refers to the statistics compiled by the Interstate Commerce Commission for the year ending June 30, 1898, showing that the tons carried by the railroads of the United States were 879,006,307 tons. The total consumption of petroleum produced in the calendar year 1898, from the very best sources that can be obtained, was a little less than 24,000,000 barrels; 24,000,000 barrels is equivalent to about 4,000,000 tons, and 4,000,000 tons is less than one-half of 1 per cent of the total tonnage carried by the railroads.

"DECEMBER 1, 1899.

"E. A. MOSELEY, Esq.,

"Secretary, Interstate Commerce Commission, Washington, D. C.

"DEAR SIR: In the advance copy of your twelfth annual report, dated January 11, 1899, you give the earnings of the railways of the United States. On page 79 of this report you say that you have returns of 720 lines, representing 97 per cent of the operated mileage in the United States. You then show that of the earnings there was \$874,865,487 received from freight service.

"Have you any tonnage figures showing the number of tons carried by the railroads which earned this \$874,000,000? If so, I would be very much obliged if you would advise me of the number of tons (2,000 pounds to the ton) at your early convenience.

"Yours, truly,

"HOWARD PAGE."

"INTERSTATE COMMERCE COMMISSION,

"OFFICE OF THE SECRETARY,

"Washington, December 6, 1899.

"MR. HOWARD PAGE,

"26 Broadway, New York, N. Y.

"DEAR SIR: I beg to acknowledge the receipt of your letter of the 1st instant, requesting certain tonnage information bearing upon the freight earnings of railways as shown in the advance copy of the Twelfth Annual Report of the Interstate Commerce Commission. In reply, I would say that we have not the exact tonnage figures referred to, as such data are not compiled for the preliminary report.

"On page 67 of the advance copy of the 'Statistics of Railways in the United States' for the year ending June 30, 1898, tons carried as reported are shown as 879,006,307; tons carried 1 mile, 114,077,576,305.

"A copy of the volume referred to is sent you under a separate cover, page 67 of which is attached hereto.

Very respectfully,

EDW. A. MOSELEY, Secretary.

Mr. Archbold filed here with you letters from about 20 of the principal railroads of the United States, in which, without exception, they stated that since the passage of the interstate commerce law, no concessions or allowances from tariff rates had been made to the Standard Oil Company in any manner or form. It is impossible to believe that men of the character of President Callaway, of the New York Central; President Newman, of the Lake Shore; President Mellen, of the Northern Pacific; Mr. A. J. Earling, vice-president then and now president of the St. Paul Road; President Burt, of the Union Pacific; and the chief traffic officials of lines like the Burlington, Pennsylvania, Baltimore and Ohio, Cleveland, Cincinnati, Chicago and St. Louis, Atchison, Topeka and Santa Fe, Southern Pacific, Louisville and Nashville, Boston and Maine, and other railroads whose letters were presented, would all unanimously state that we had obeyed the law, both in letter and spirit, if the facts were to the contrary.¹

We might be asked why (in view of the known fact that some of the railroads, since the passage of the interstate commerce law, have paid rebates to large shippers) we have not received same. We have not done so because, in the first place, it was against the law,² and secondly, because we knew from past experience that if we received cut railroad rates other oil shippers would receive the same, and we felt, as we now feel, that from a business standpoint alone it has been, and is now, to our interest to have tariff rates maintained.

¹ See Mr. Emery, pp. 634, 642, 643.

² See the decision of Judge Baxter, p. 707, bottom; p. 708, top.

The Standard Oil Company does not need any freight advantages to maintain its business, and all it wants is to be required to pay the same rates as other oil shippers from and to the same points.

THE STANDARD'S ADVANTAGE IN HAVING MANY DISTRIBUTING POINTS—THE CONSUMER GETS THE BENEFIT.

In reference to Interstate Commerce Commissioner Prouty's remarks in regard to the Standard Oil Company, when Mr. Prouty appeared before the Commission early in October, which testimony I heard: Commissioner Prouty's arguments seem to be to the effect that the Standard Oil Company had advantages, by reason of having its refineries and distributing plants at Chicago and the Atlantic seaboard, as well as at Lima, Buffalo, and other middle-State points, as compared with a refiner who had his works only at Cleveland or in the Pennsylvania oil regions. We admit that by having refineries and distributing plants at Chicago for the West; at Buffalo, Lima, and Parkersburg for the middle States and the South, and at the Atlantic seaboard for the East and New England, we have decided advantages over a refiner who has his works only at one point, and who tries to compete with us in selling oil throughout the country. We claim, however, that such an advantage is a fair one, and can not be overcome by any fair or reasonable adjustment of freight rates. We further claim that by having our refineries and distributing plants located at various points throughout the country, we can and do distribute more cheaply and sell the oil at a less cost to the consumer, and it is more to the interests of the country at large for the consumer of oil to get it at a low cost than it is to try to fix freight rates on any basis that will permit one manufacturer at one point to distribute his products throughout the United States.

That, gentlemen, closes all that I have prepared. I am perfectly open and glad to answer any questions you gentlemen have.

ADVANCE IN CANADIAN FREIGHT RATES.

Q. (By Mr. JENKS.) We had some testimony here a little time ago with reference to the freight rates on American oils from the United States into Canada, in which it was said that very lately there had been a very decided increase in the freights on American oil going into Canada. This was thought to be much to the disadvantage of those who had to ship oil from the United States into Canada;¹ can you explain to us that matter of freight rates?—A. I can say that I know there was an advance in freight rates from Detroit and Toledo and Buffalo and other frontier points on oil from the United States into Canada. I can further add that we pay those advanced rates, and that we ship 80 per cent of the oil that is exported from the United States into Canada. We therefore pay four times as much as all the balance of the oil shippers together.

Q. What proportion of your sales in Canada are shipped from the United States, and what proportion are sales from the Canadian product? I understand that the Standard Oil Company owns practically all of the Canadian refineries.²—A. I do not so understand it, and I do not know the relative shipments from the United States compared with the consumption of oil manufactured in Canada. I do know, though, that shipments from the United States into Canada have increased in the last year; in fact, since that advance in rates as compared to the old situation.³

Q. Do you know what proportion of the refining industry of Canada is owned by the Standard Oil Company?—A. No; I do not; I do not know that the Standard Oil Company owns any interests in Canada.

PENDING SUITS FOR ALLEGED FREIGHT DISCRIMINATION—CHARGES ON OIL IN BARRELS.

Q. We have had some evidence with reference to suits that were brought against the railroads by independent refiners in western Pennsylvania, in which they claimed that the railroads had been dealing unfairly with them in the charging of freight rates—suits that are still pending;⁴ can you tell us anything with reference to those suits?—A. I do know that several years ago—I do not recall how many—the Interstate Commerce Commission decided that the weight of the barrel, when loaded with oil, should be carried by the railroad free. In other words, they should not charge for

¹ See Mr. Westgate, pp. 378, 379; Mr. Gall, pp. 675-677, 680, 682-685.

² See Mr. Gall, p. 678; Mr. Archbold, p. 573.

³ See Mr. Gall, pp. 677, 680.

⁴ See Mr. Lee, p. 287; Mr. Westgate, pp. 379, 380; Mr. Archbold, p. 516.

the barrel when it contained oil. An order was entered to that effect, which the railroads declined to obey. The Interstate Commerce Commission have since that time gotten some evidence from the plaintiffs in that case as to the volume of their shipments in barrels within a certain period, and fixed the amount of damages which they claim the railroads should pay back to those shippers of oil in barrels. The railroads also declined to pay that, and that case is now, I believe, before the United States Court in Pittsburgh and is still pending. I would say in connection with it that at the time when the shipments were made in barrels by these plaintiffs and the rate of freight was charged on the weight of the wood, the Standard Oil Company was making shipments of oil in barrels and paying for the weight of the wood. In other words, there was no difference in the rule or the rate that was applied on the shipments of the plaintiffs and upon the shipments of the Standard Oil Company.

Q. Was this custom of the roads one that was brought about in any way, to your knowledge, by the action of the Standard Oil Company officials?—A. No.

Q. What was it?—A. In the first decision of the Interstate Commerce Commission in regard to the relative rates that should be charged on oil in barrels and oil in tank cars, the commission decided, by Judge Cooley, that the rate per 100 pounds in carloads, on oil in tank cars or on oil in barrels, including the weight of the barrels, should be alike. The railroads adopted that order. Then on the second case, after Judge Cooley had left the bench, some other commissioner decided that the barrel should be carried free; and that the railroads declined to follow.

Q. The commission practically reversed its own decision?—A. They tried to reverse their own decision before the United States circuit court at Pittsburgh.

Q. I say, practically reversed its former decisions?—A. Yes.

Q. But it was under the first decision that the charges were made?—A. Under the first decision that the charges were made.

THE MOST OF THE STANDARD'S OIL IS FINALLY DISTRIBUTED IN BARRELS.

Q. Do you recall what proportion of the shipments of the Standard Oil Company at that time, before the second decision was rendered, was in tank cars, and what in barrels?—A. Your question involves the whole country; and I should say that the shipments, as a whole, of the Standard Oil Company in barrels exceed the shipments of the Standard Oil Company in bulk in tank cars; you must bear in mind that when the Standard Oil Company ships its oil in tank cars to a distributing station, it is barreled there to a very large extent, and it goes out in barrels, and it is a part of the barrel sales of oil. I think I am correct in that statement, and it is the best that I can give; that is all.

Q. That is so at the present time?—A. It is true still.

Q. (By Mr. CLARKE.) Therefore, very much of the oil which is shipped is shipped part way in tanks and the rest of the way in barrels?—A. It is; when it comes to local country points on the line of a railroad. The rule that the commission made there, if applied to oil, would naturally apply to every other package that might be put around any other commodity that was susceptible of any other mode of shipment.

Q. (By Mr. SMYTH.) Lubricating oil, I suppose, is shipped in barrels, is it not?—A. It is shipped in tank cars to some extent—yes.

SO FAR AS THE WITNESS'S EXPERIENCE GOES, THE STANDARD NEVER DICTATED FREIGHT RATES TO BE CHARGED TO OTHER SHIPPERS.

Q. (By Mr. PHILLIPS.) You admit, Mr. Page, that the Standard Oil Company did receive large rebates before the passage of the interstate commerce act?—A. I admit that.

Q. From your knowledge and belief and information?—A. My knowledge and belief and actual experience, Mr. Phillips, was that prior to the interstate commerce law we got as low rates as we could.

Q. That amounted to very considerable worth to the Standard Oil Company during that period, no doubt?—A. It meant that we got lower than tariff rates, the same as all other shippers; not only shippers of oil, but all other people. We could get them and did get them. I can add this, that as far as my own experience goes, prior to the interstate commerce law, when we secured lower than tariff rates, it never was in any instance a part of an agreement what the railroads should charge. Any other oil shipper could get as low a rate as we could, or lower, if the railroad saw fit to give it. We attended simply to our own business.

Q. (By Mr. A. L. HARRIS.) That was the universal rule of the Standard Oil Company?—A. Which?

Q. Not to interfere with the rates of anyone else?—A. I can only speak in that regard, so far as my own knowledge goes; and so far as my own knowledge goes it is true.

Q. You do not know anything about the rule which seemed to have prevailed in what is known as the Marietta and Cleveland Railroad, do you?—A. I have no knowledge of that, sir. I believe that case has been fully explained,¹ and prior to the interstate-commerce law my residence and knowledge was confined to the business of the Standard Oil Company in Louisville—in Kentucky.

Q. The only reason that I asked that question was that you made your answer broad.—A. I answered from my own knowledge.

Q. (By Mr. SMYTH.) Do you know of any other oil company besides the Standard Oil Company that received rebates prior to the interstate law?—A. I do, sir.

Q. You think, then, that it was the general custom, as far as your knowledge goes?—A. I know it; and in some cases we found where they had a lower rate than we had.

WHERE OTHER SHIPPERS GOT LOWER RATES THAN THE STANDARD.

Q. You believe, then, that it was the general custom prior to the passage of the interstate-commerce law?—A. That every shipper and others got the lowest rates they could from the railroads.

Q. (By Mr. PHILLIPS.) Can you name any of those companies who received it? I am not doubting the truth of your statement.—A. I know it was shown in some other cases that Scofield, Shurmer & Teagle, of Cleveland, had some lower rates than the tariff. It has been ten years, Mr. Phillips, and I do not know that I can recall the names, but I recall very distinctly that in one instance it was shown that some large shippers of oil from Memphis to Nashville, out on the roads leading from there, had special rates as against—had lower rates than we were paying from the same points to the same points. We found it out because people were selling oil cheaper than we were at the same points.

DOES NOT BELIEVE THE STANDARD EVER RECEIVED A SHARE OF THE RATE PAID BY OTHERS

Q. Do you know of any instance where there was a higher rate charged to the independent refiners than to the Standard, and that was divided between the Standard and the railroads? Is there any such testimony?—A. I do not know of any instance. I will say no; I do not know of any case. In fact, I do not believe there ever was a case where the Standard Oil received from the railroad a share of the rate that was paid by independent shippers. I know it was not so in the territory which I had anything to do with, and it has never been so since I have been in New York.

DOES NOT KNOW.

Q. You are connected with the transportation and know something about the pipeline business also of the Standard Oil Company?—A. No, sir; I know very little about pipe-line matters.

Q. Do you know whether the Standard Oil Company ever placed a premium on oil in special fields where there were independent pipe lines, and by this means caused them to suspend business, or bought them out?—A. I know nothing whatever as to any prices paid for crude oil.

Q. Or about the pipe-line business in that regard?—A. No, sir; I do not.

Q. Do you or do you not know whether the Standard Oil Company opposed, after having their pipe line to the seaboard, the passage of the free-pipe-line law in Pennsylvania or in New Jersey?—A. I know nothing whatever about it, sir.

Q. Do you know whether the Standard Oil Company opposed, directly or indirectly, the United States Pipe Line in securing the right of way through the State of New Jersey?—A. I know nothing whatever about it.

Q. You do not know about that?—A. No, sir; I am not connected with the pipeline department in any way.

Q. When independent companies shipped abroad did the Standard Oil Company ever obstruct ocean transportation in any way or obstruct them in getting ocean and steamship service?—A. Not to my knowledge, in any way.

Q. Have you knowledge or information as to the installation plants or receiving tanks in Germany or other countries?—A. I have not, sir.

Q. Have you any information in regard to the agents who transferred and sold the Standard oil in foreign countries—Standard agencies abroad?—A. I know there are some Standard agencies abroad; yes.

¹ See Mr. Archbold, pp. 556-559; Mr. Rice, pp. 706-709

Q. Have you any information in regard to this: to a man in Germany, or who was in Germany, recently deceased, by the name of Poth, who handled oil of the independent companies in Germany?—**A.** Never heard the name before, sir.

Q. You have no knowledge, then, of their purchasing all these installation plants abroad, almost wholly in Germany?—**A.** I have no knowledge.

EXPORTS—PRICES HIGHER ABROAD.

Q. (By Mr. KENNEDY.) Have you knowledge of the relative value and prices of oil exported?—**A.** I only know in a general way that the exports of petroleum products produced by the Standard Oil Company are in excess of their wells within the United States. In other words, a large share of the Standard Oil Company's business is outside of the United States.

In regard to the relative prices, I would say that the consumer of oil in the United States gets his oil for very much less than the consumer of that same oil abroad, and that is due principally to the fact that we have facilities within the United States for cheaply distributing the oil to the consumer that the company has not got on the other side. Mr. Rice refers to the price of oil at New York for export as compared with the price of oil in Montana and Idaho,¹ and tries to convey the idea that we sell our oil abroad for less money than to the consumer within the United States. I submit that the price of export oil at New York is the price for cargoes at the mouth of the refinery, whereas the price of oil in Montana and Idaho must necessarily include expenses of distribution. The freight goes from Chicago, for instance, out to those Western States, and comparing the price to the consumer of a barrel of oil out in the mountain districts of Idaho and Montana with the cargo price of export oil at New York is manifestly unfair.

Q. Have you any knowledge of the Standard Oil Company selling oil in the German market below the point of profit for the purpose of driving other dealers out of that market and of their being curbed in that practice by the German Government?—**A.** I have no such knowledge, sir.

RUSSIAN OIL.

I have heard, and I believe, that the German Government issued an order within the last year or so requiring the railroads of Germany, which are under governmental control, to burn exclusively Russian oil and not American.

Q. (By Mr. SMYTH.) Is it not a fact that the great competition you have in England is with the Russian oil, which is backed by the Rothschilds?—**A.** The Russian field is a great competitor of the American petroleum field. The production of oil in Russia is, I believe, to-day equal to that of the United States, and at times has been in excess of it. In fact, I have known of reports of one well in Russia that has produced as much as 100,000 barrels per day, which is as much as the entire Pennsylvania oil field in certain sections, and the price, I do know, of Russian crude oil is very much lower than the price of American crude oil.

Q. (By Mr. A. L. HARRIS.) What about its quality?—**A.** Its quality is not so good as the Pennsylvania oil. It is more like the Ohio crude.

Q. (By Mr. PHILLIPS.) Do you know whether the Russian oil is extensively sold now in Germany?—**A.** It is sold in Germany, and it is sold in Italy, and it is sold in England.

Q. Is it sold to any great extent in Germany?—**A.** To as great an extent as they can sell it, sir.

OCEAN TRANSPORTATION—FOREIGN MARKETS AND AGENCIES.

Q. (By Mr. FARQUHAR.) Does the Standard Oil Company own its own ocean lines for transportation of oil to Europe?—**A.** I am not very familiar with that part of it, Mr. Farquhar; but I know in a general way that they do own or have an interest in certain bulk tank ships and also some schooners. The tank ships are used for the transportation of the bulk oil from the United States to certain points in Europe where there are tank facilities for receiving it, and the ships are used for the shipment of case oil to the far East.

Q. Can you tell the commission how many countries in the world the Standard Oil Company sells its oil to?—**A.** I think it would be easier to name those that we do not, or that we do not try to. I think we sell, sir, all over the world; as far as we can.

Q. Will you kindly state the means of transportation for the Asiatic trade? Is that by steamer or sail?—A. By sail, usually, and against very severe competition of the Russians. They have tank steamers by which they transport tank oil from Batoum to India, and even to China and Japan.

Q. The statement has been made that the Standard has sold oil in foreign markets—in Asiatic countries—where they have had a return of only one-third of the price of the oil in the market itself; do you know anything about that?—A. I do not know as to that, sir.

Q. You know nothing about the price of oil and competition of other oils used in Asiatic countries?—A. I only know we have shipped oil there, and still do, as against Russian competition. As to what the prices are there, I do not know; but I do know, from information and belief, as I have before stated, that the consumer of oil abroad pays very much more for his oil than the consumer within the United States.

Q. (By Mr. SMYTH.) Testimony has been given here that the Standard Oil Company has over 360 agencies throughout the world, every one of which is in charge of an American citizen.¹ Do you think that is correct?—A. I do not know. I do know that we have many agencies, but how many I do not know. I do know in a general way that we send Americans to take charge of those departments, but how many there are I can not say.

Q. (By Mr. PHILLIPS.) Do they exert a very considerable influence on our consuls abroad?—A. I have no knowledge of it, sir.

THE STANDARD WOULD MAKE PRICES TO KEEP THE TRADE.

Q. You spoke some time ago of the advantage the Standard Oil Company has over others by having refineries at many different points in the United States in the lessening of freights, etc. There are quite a number of the independents that have such advantage, too, in localities; that have advantages, perhaps, over the Standard Oil Company in certain localities. Is it or is it not, has it or has it not been, the practice of the Standard Oil Company where independent oil was being distributed to ship their oil in and sell it lower than the usual price or make it unprofitable for others? Do you know of any such instance as that?—A. I can only say in a general way, Mr. Phillips, that we doubtless ship the oil from the nearest point and try to sell it.

Q. Do you know or do you not know that when the independent refineries recently began to distribute oil in New York the Standard dropped prices very greatly so as to make it unprofitable?—A. I do not know that, sir.

Q. Or Philadelphia?—A. I do not know it.

Q. (By Mr. JENKS.) You said a moment ago that of course———A. (Interrupting.) It goes without saying that we are in the business and we try to keep our trade, and we make prices that will also keep it.

Q. So, speaking generally, you would presume it was true that competitive prices are lower than where you have no competition?—A. To a reasonable degree, yes; but I will say that the object and the success of the Standard Oil Company has been due to the fact that their effort is continually to reduce the cost of manufacturing and distributing of oil; and we sell it as cheaply as we can, based on that cost, to the consumer, and thereby increase the volume of our business by cheapening the cost to the consumer.

STATEMENTS FURNISHED TO THE COMMISSION.

Q. (By Mr. PHILLIPS.) I am informed that the independent companies have recently made a statement of their business affairs to this commission through Professor Jenks. Would you be willing to advise the Standard Oil Company to make such a statement of their business?—A. I do not know what kind of a statement the independent people have made, and I would not take it upon myself to do so. I think it would be rather impertinent for me, as a subordinate, to advise the officials in charge of the Standard Oil Company matters what kind of a report they should make.

THE TEXAS OIL FIELD.

Q. (By Mr. KENNEDY.) I should like to ask you something about the new Texas oil field. Does the Standard Oil Company own that field, and where is the product refined, and to what part of the country is it shipped?—A. I do not know that the Standard Oil Company owns that field. I know there is a refinery at Corsicana, Tex.

Q. A Standard refinery?—A. It is not known in any way as the Standard Oil Company, and I do not know that it is.

¹ See Mr. Archbold, p. 538.

Q. (By Mr. A. L. HARRIS.) I understood the witness to say that he knew of no instance in which the Standard Oil Company had interfered in any way or concerned themselves in any way with what other companies might get in the way of rebates, etc. Is that true?—A. I said that no arrangement prior to the interstate commerce law, through which we got lower than tariff rates, was predicated in any way upon what that same railroad should give in the way of rates or rebates to other oil shippers.

Q. Do you know anything about the case of Handy and another, trustee, against the Cleveland and Marietta Railroad Company?—A. I do not.

Q. Would you care to have the syllabus of that case read so as to get it in evidence?—A. As I have no knowledge of it, Mr. Harris, I do not know what my testimony would be worth on the subject.

Q. It would be merely to show that your statement in regard to the action of the Standard Oil Company against other companies was probably not entirely correct?—A. I, of course, can speak and only can speak of my own knowledge, and my knowledge in the time prior to the passage of the interstate commerce law was confined to the Louisville business and south.

Q. You desire to have your testimony limited to your own knowledge, and not to be broader than your own knowledge?—A. I supposed that went without saying.

Q. I would like, for the benefit of the commission, to read the syllabus:

“[Circuit Court, S. D. Ohio, E. D., 1887.]

“1. RAILROAD COMPANIES—RECEIVERS—DISCRIMINATIONS.

“The receiver of an insolvent railroad company can not unjustly discriminate in the charges imposed upon rival shippers over his road in order to increase his revenues, and, if guilty of discrimination, may be removed by the court therefor.

“2. NAME—REMOVAL.

“The Standard Oil Company having threatened to store its oil until it could lay a line of pipes to Marietta, unless the receiver of a railroad company should give it a special rate, the receiver agreed to carry its oil at 10 cents per barrel, to charge rival shippers 35 cents per barrel, and to pay 25 cents per barrel of the sum collected from rival shippers to the Standard Oil Company. *Held* to be such gross and wanton discrimination on the part of the receiver as to require his removal.”¹

This is on page 575, Trust Proceedings of 1888.

(Testimony closed.)

SUPPLEMENTARY EVIDENCE.

AFFIDAVIT OF GEORGE RICE IN REBUTTAL OF HOWARD PAGE.

City, County, and State of New York, ss:

On this 2d day of January, 1900, personally appeared before me George Rice, of Marietta, Ohio, who, being duly sworn, doth depose and say:

That he has read the affidavit of one F. B. Squire, the secretary of the Standard Oil Company of Ohio, which was presented to your commission by Howard Page December 13, 1899. In answer thereto I most positively and unequivocally deny that in 1876, or at any other time, I offered or included my producing properties and pipe lines in the proposed sale of my oil properties for the sum of \$24,000.

The real truth of the matter is that in the year 1876 Mrs. Rice and myself were boarding in New York at the same place with said Squire, and Mrs. Rice was acquainted with a Mrs. Waring, who was also an acquaintance of said Squire. That in some conversation with Mrs. Waring the matter of the oil business came up between them, and subsequently the said Squire spoke to deponent about his oil interests, and said he possibly could sell some of it to the Standard Oil Company, if he was so disposed to part with it. That the result of several conversations was that deponent informed Squire that if he or the Standard Oil Company desired to purchase my refining plant (which was only a small part of my entire oil properties

¹ See Mr. Rice, pp. 706-708; Mr. Archbold, pp. 556-559.

and interests in the oil or petroleum business) he or it could have the same for \$20,000, as my wife was very desirous that I should get out of the refining business, and it was finally offered to Squire for that sum, which was not accepted.

In the summer of 1882 I was stopping with my wife at Asbury Park, where Squire, on his own solicitation, came to see me, and he then and there offered me \$250,000 for my entire oil properties, including production, pipe lines, storage tanks, and refinery plant. I never offered the said Squire the sum of \$50,000 commission or any other sum to make said sale; nor did he suggest it or demand it, or any other sum whatever, nor did I say to him that the company would regret their act if they did not purchase from me, nor was I ever aware that said Squire had an office, except by hearsay, at Cleveland, Ohio. As this latter alleged interview occurred in the summer of 1882, as I testified before your commission, and as my pamphlet, *Black Death*, was published on December 15, 1881, it is superfluous to swear to it, that, because said proposition was not accepted by said Standard Oil Company, I immediately published said pamphlet as retaliatory against said company.

I further solemnly deny, as stated by said Squire, that I several times thereafter urged the matter further with him in any manner whatever.

I also further most solemnly and emphatically deny that either Mrs. Rice or myself ever said to said Squire, or to any other person or persons whomsoever, that the Standard Oil Company would be sorry, or any similar words or of like effect.

On November 13, 1889, before Justice Morgan J. O'Brien, at a special term of the supreme court of New York City, I testified as follows:

"I made that offer of \$250,000 to Mr. Squire, who represented the Standard Oil Company—the Standard Oil Trust—in some capacity; his name is F. B. Squire, I think; I don't know when I made that offer to him; some four or five years ago; I can't recollect just the time; I was stopping at Asbury Park with my wife, and he came there as their representative, I suppose, and made that offer to me. I don't know how long my price remained at \$250,000."

I had previously made this same offer to Mr. Squire, and he came down there to buy said properties at a less price, and finally offered me the sum of \$250,000 therefor, which I rejected.

When I testified to above, John D. Archbold, a trustee of the Standard Oil Trust; was present and heard said testimony, and when he followed me on the stand he did not allude to or in any manner contradict my said testimony; moreover, at this time Mr. Archbold testified as follows:

"I know Mr. George Rice, the plaintiff. I remember an interview with him in the month of October, 1886, in which he proposed to dispose of this property and all his future time of service or absence from service, and that conversation is fresh in my recollection.

"After the ordinary commonplaces we came to a discussion of the property question as owned by him, and he expressed his willingness to dispose of the property and business—the refinery property, I should say.

"There was no reference made at that interview, nor at any time in my conversation with Mr. Rice, to the producing property, and I never heard of it until now. He gave me a rough description of the refinery which I might know of, and told me of the volume of business which he had done the preceding year and which he was capable of doing, and came to the point of fixing his price."

This deponent further says that he incorporates herein the above portion of the aforesaid testimony of Archbold's as a corroboration of this affidavit, and a contradiction of the affidavit of said Squire, that my producing properties and pipe lines were all to be included in the original offer for the insignificant sum of \$24,000, while Archbold in 1889 swears, "I never heard of it."

GEO. RICE.

Sworn to before me this 2d day of January, 1900.

J. WILLIAM HILL,
Commissioner of Deeds, New York City.

JOHN D. ROCKEFELLER.

Answers to interrogatories.

1. Q. What was the first combination in which you were interested of different establishments in the oil industry?—A. The first combination of different establishments in the oil industry in which I was interested was the union of William Rockefeller & Co., Rockefeller & Andrews, Rockefeller & Co., S. V. Harkness, and H. M. Flagler, about the year 1867.

2. Q. What were the causes leading to its formation?—A. The cause leading to its formation was the desire to unite our skill and capital in order to carry on a business of some magnitude and importance in place of the small business that each separately had theretofore carried on. As time elapsed and the possibilities of the business became apparent, we found further capital to be necessary, obtained the required persons and capital, and organized the Standard Oil Company with a capital of \$1,000,000. Later we found more capital could be utilized and found persons with capital to interest themselves with us, and increased our capital to \$3,500,000. As the business grew, and markets were obtained at home and abroad, more persons and capital were added to the business, and new corporate agencies were obtained or organized, the object being always the same, to extend our business by furnishing the best and cheapest products.

3. Q. Did the Standard Oil Company or other affiliated interests at any time before 1887 receive from the railroads rebates on freight shipped, or other special advantages?—A. The Standard Oil Company of Ohio, of which I was president, did receive rebates from the railroads prior to 1880, but received no special advantages for which it did not give full compensation. The reason for rebates was that such was the railroads' method of business. A public rate was made and collected by the railway companies, but so far as my knowledge extends, was never really retained in full, a portion of it was repaid to the shippers as a rebate. By this method the real rate of freight which any shipper paid was not known by his competitors nor by other railway companies, the amount being in all cases a matter of bargain with the carrying company. Each shipper made the best bargain he could, but whether he was doing better than his competitor was only a matter of conjecture. Much depended upon whether the shipper had the advantage of competition of carriers. The Standard Oil Company of Ohio, being situated at Cleveland, had the advantage of different carrying lines, as well as of water transportation in the summer, and taking advantage of those facilities made the best bargains possible for its freights. All other companies did the same, their success depending largely upon whether they had the choice of more than one route. The Standard sought also to offer advantages to the railways for the purpose of lessening rates of freight. It offered freights in large quantity, carloads and train loads. It furnished loading facilities and discharging facilities. It exempted railways from liability for fire. For these services it obtained contracts for special allowances on freights. These never exceeded, to the best of my present recollections, 10 per cent. But in almost every instance it was discovered subsequently that our competitors had been obtaining as good, and, in some instances, better rates of freight than ourselves.

4. Q. If so, in what years were these advantages largest, and from what roads were they received?—A. To the best of my recollection the greatest rebates were paid from 1877 to 1879. During that time we had an agreement for a special 10 per cent commission. I think that agreement was made with the Pennsylvania, the Erie, and the New York Central roads. Large rebates were also paid during the summer of 1878, amounting I believe to 64 cents on refined oil to equalize eastern shipments by rail with shipments by Erie Canal.¹ But these rebates were paid to all who shipped by rail. They were not discriminatory rates. I am not now sure whether any other road than the Pennsylvania collected the full amount and paid these rebates. The Erie and New York Central made the same reductions in rates to meet canal shipments, but my impression is that the Erie at least did not collect the higher rate from shippers and rebate it as did the Pennsylvania.

5. Q. About what percentage of the profits of the Standard Oil Company came from special advantages given by the railroads when these were greatest?—A. No percentage of the profits of the Standard Oil Company came from advantages given by railroads at any time. Whatever advantage it received in its constant efforts to reduce rates of freight was deducted from the price of oil. The advantages to the Standard from low freight rates consisted solely in the increased volume of its business arising from the low price of its products.

6. Q. Did the Standard Oil Company or any of its affiliated companies ever receive, under any name whatever, any income from any railroad for oil shipped over those roads by any of its competitors? If so, give particulars.—A. I know of no such instance. It seems that some arrangement of that nature was entered into by one of our agents in Ohio, being the same case which has been testified to by George Rice.² When notice of this agreement was brought to the officers of the company for which it was made it was promptly repudiated, and the money received, some small amount, I think under \$300, was refunded. And this was done not because of any action in court or judicial opinion, but promptly as soon as reported, and before we had any knowledge of judicial proceedings.

7. Q. Has the Standard Oil Company received any financial favors from any railroad since 1887?—A. To my knowledge, none whatever.

¹ See Mr. Lockwood, pp. 386, 387.

² See Mr. Rice, pp. 706-709; Mr. Archbold, p. 556-559.

8. Q. Has the ownership of stock in railroad companies by officers of the Standard Oil Company given the Standard advantages with those railroads over its competitors? If so, give particulars.—A. It has not. Stockholders and officers of the Standard have invested in stock of railway companies. But in no instance have they done so for the purpose of influencing the policy of the railway companies, nor to the best of my knowledge and belief has any attempt ever been made through such ownership to influence any railway in favor of the Standard.

9. Q. To what advantages, or favors, or methods of management do you ascribe chiefly the success of the Standard Oil Company?—A. I ascribe the success of the Standard to its consistent policy to make the volume of its business large through the merits and cheapness of its products. It has spared no expense in finding, securing, and utilizing the best and cheapest methods of manufacture. It has sought for the best superintendents and workmen and paid the best wages. It has not hesitated to sacrifice old machinery and old plants for new and better ones. It has placed its manufacturing at the points where they could supply markets at the least expense. It has not only sought markets for its principal products, but for all possible by-products, sparing no expense in introducing them to the public. It has not hesitated to invest millions of dollars in methods for cheapening the gathering and distribution of oils by pipe lines, special cars, tank steamers, and tank wagons. It has erected tank stations at every important railroad station to cheapen the storage and delivery of its products. It has spared no expense in forcing its products into the markets of the world among people civilized and uncivilized. It has had faith in American oil, and has brought together millions of money for the purpose of making it what it is, and holding its markets against the competition of Russia and all the many countries which are producers of oil and competitors against American oil.

10. Q. What are, in your judgment, the chief advantages from industrial combinations—(a) financially to stockholders; (b) to the public?—A. All the advantages which can be derived from a cooperation of persons and aggregation of capital. Much that one man can not do alone two can do together, and once admit the fact that cooperation, or, what is the same thing, combination, is necessary on a small scale, the limit depends solely upon the necessities of business. Two persons in partnership may be a sufficiently large combination for a small business, but if the business grows or can be made to grow, more persons and more capital must be taken in. The business may grow so large that a partnership ceases to be a proper instrumentality for its purposes, and then a corporation becomes a necessity. In most countries, as in England, this form of industrial combination is sufficient for a business coextensive with the parent country, but it is not so in this country. Our Federal form of government, making every corporation created by a State foreign to every other State, renders it necessary for persons doing business through corporate agency to organize corporations in some or many of the different States in which their business is located. Instead of doing business through the agency of one corporation they must do business through the agencies of several corporations. If the business is extended to foreign countries, and Americans are not to-day satisfied with home markets alone, it will be found helpful and possibly necessary to organize corporations in such countries, for Europeans are prejudiced against foreign corporations as are the people of many of our States. These different corporations thus become cooperating agencies in the same business and are held together by common ownership of their stocks.

It is too late to argue about advantages of industrial combinations. They are a necessity. And if Americans are to have the privilege of extending their business in all the States of the Union, and into foreign countries as well, they are a necessity on a large scale, and require the agency of more than one corporation. Their chief advantages are:

- 1) Command of necessary capital.
- 2) Extension of limits of business.
- 3) Increase of number of persons interested in the business.
- 4) Economy in the business.
- 5) Improvements and economies which are derived from knowledge of many interested persons of wide experience.
- 6) Power to give the public improved products at less prices and still make a profit for stockholders.
- 7) Permanent work and good wages for laborers.

I speak from my experience in the business with which I have been intimately connected for about 40 years. Our first combination was a partnership and afterwards a corporation in Ohio. That was sufficient for a local refining business. But dependent solely upon local business we should have failed years ago. We were forced to extend our markets and to seek for export trade. This latter made the

seaboard cities a necessary place of business, and we soon discovered that manufacturing for export could be more economically carried on at the seaboard, hence refineries at Brooklyn, at Bayonne, at Philadelphia, and necessary corporations in New York, New Jersey, and Pennsylvania.

We soon discovered as the business grew that the primary method of transporting oil in barrels could not last. The package often cost more than the contents, and the forests of the country were not sufficient to supply the necessary material for an extended length of time. Hence we devoted attention to other methods of transportation, adopted the pipe-line system, and found capital for pipe-line construction equal to the necessities of the business.

To operate pipe lines required franchises from the States in which they were located, and consequently corporations in those States, just as railroads running through different States, are forced to operate under separate State charters. To perfect the pipe-line system of transportation required in the neighborhood of fifty millions of capital. This could not be obtained or maintained without industrial combination. The entire oil business is dependent upon this pipe-line system. Without it every well would shut down and every foreign market would be closed to us.

The pipe-line system required other improvements, such as tank cars upon railways, and finally the tank steamer. Capital had to be furnished for them and corporations created to own and operate them.

Every step taken was necessary in the business if it was to be properly developed, and only through such successive steps and by such an industrial combination is America to-day enabled to utilize the bounty which its land pours forth, and to furnish the world with the best and cheapest light ever known, receiving in return therefor from foreign lands nearly \$50,000,000 per year, most of which is distributed in payment of American labor.

I have given a picture rather than a detail of the growth of one industrial combination. It is a pioneer, and its work has been of incalculable value. There are other American products besides oil for which the markets of the world can be opened, and legislators will be blind to our best industrial interests if they unduly hinder by legislation the combination of persons and capital requisite for the attainment of so desirable an end.

11. Q. What are the chief disadvantages or dangers to the public arising from them?—A. The dangers are that the power conferred by combination may be abused; that combinations may be formed for speculation in stocks rather than for conducting business, and that for this purpose prices may be temporarily raised instead of being lowered. These abuses are possible to a greater or less extent in all combinations, large or small, but this fact is no more of an argument against combinations than the fact that steam may explode is an argument against steam. Steam is necessary and can be made comparatively safe. Combination is necessary and its abuses can be minimized; otherwise our legislators must acknowledge their incapacity to deal with the most important instrument of industry. Hitherto most legislative attempts have been an effort not to control but to destroy; hence their futility.

12. Q. What legislation, if any, would you suggest regarding industrial combinations?—A. First. Federal legislation under which corporations may be created and regulated, if that be possible. Second. In lieu thereof, State legislation as nearly uniform as possible encouraging combinations of persons and capital for the purpose of carrying on industries, but permitting State supervision, not of a character to hamper industries, but sufficient to prevent frauds upon the public.

JOHN D. ROCKEFELLER.

STATE OF NEW YORK, *County of New York*, ss:

I swear that these statements made by me of my own knowledge are true, and that all other statements I believe to be true.

JOHN D. ROCKEFELLER.

Sworn and subscribed to before me this 30th day of December, 1899.

S. MARSHALL BUSSELLE,
Notary Public, No. 190

INFORMATION FURNISHED BY MR. S. C. T. DODD.

S. C. T. Dodd, solicitor of the Standard Oil Company, furnishes the following additional facts in reply to schedule of questions:

Q. What patents, machines, or processes of any kind formerly used exclusively by one plant are now used by all adapted to use them?—A. The following is no doubt an incomplete, but as full as we can now supply, list of patents, by patent numbers, belonging to the various companies in 1882, the use of which was open to all. The subject of the patent is given when known: 9406, 104747, 145898, 146946, seaming machine; 146947, seaming machine; 148748, machine for stamping and bending sheet metal; 149516, sheet metal seaming machine; 150352, soldering-iron heater; 150606, apparatus for the distribution of liquid fuel; 150607, can-seaming machine; 150887, machine for uniting tinned plates by heat and pressure; 151155, apparatus for uniting tinned plates; 151619, apparatus for heating soldering irons; 152862; 154077; 154877; 155320; 158117; 158119; 165362, soldering apparatus; 167356, apparatus for facilitating the filling, etc., of cans; 169372, liquid-fuel burners; 171164, oil-can nozzles; 177553, apparatus for facilitating the conveyance and delivery of boxes; 179135, box-nailing machines; 182470, apparatus for facilitating the examination and packing of cans; 185777, machines for nailing boxes; 191172, sheet metal can machines; 192278, feeding mechanisms for nailing machines; 194168; 203073; 224843; 227823; 227824; 227825; 227826; 227829; 228553; 228554; 230962; 234423; 234803; 234424; 236499; 239981; 240176; 240331; 240332; 240333; 240923; 240936; 240937; 239618; 3365, design for can; 7609; 23735, seaming machine; 23736, corrugating sheet metal; 24472, powder kegs; 38974, sheet-metal can; 39616, soldering cans; 40661, sheet-metal can; 42355, tin cans; 43326, cans for paint and fruit; 43371, sheet-metal cans; 43079, molding sheet metal; 81692, sheet-metal can; 82481, bending tops and bottoms; 82766, sheet-metal cans; 86571, sheet-metal cans; 87692, seaming machine; 87704, soldering machine; 88410, soldering machine; 89431, soldering machine; 91248, machine for metal cans; 192448, sheet-metal cans; 87485, improvement in the manufacture of lubricating oils from petroleum; 87658, improved process of preparing petroleum to be used in lubricating wool; 68974, improvement in stills for refining and distilling oils; 85810; 86535; 137157; 5570; 6871; 7095, improvement in burning heavy hydrocarbon oils; 7996, improvement in manufacturing of hydro-carbon oils; 7155; 8373; 8374; 43157; 50935; 66594; 79661; 113795; 124917; 148075, piston balance-valve for steam engines; 163710, helical-cone suction fans; 181814, apparatus for purifying paraffin; 182169, apparatus for the separation of petroleum products; 183909, balanced slide valves; 191279, steam valves; 191430, metallic cartridges; 200310; 211761; 212562; 217063; 229962; 223549; 229297; 255861, method and apparatus for gluing barrels; 237130, horizontal hoop-driving machine; 219228, improvement in barrel-trussing machines; 4920; 5053; 5652; 7321; 7322; 9017; 37798; 42671; 44258; 47082; 50780; 58021; 68426; 77959, license under Cheesebrough patent; 99500, 174506, process for determining the grade of lubricating oils; 212914; 2960; 4366; 4367; 4375; 32568; 53539; 120539.

Q. What by-products, if any, are available to your organization which could not profitably be made by separate plants?—A. All products are made by separate plants, but most of them were at one time protected by patents, the use of which became available to all plants.

Q. Has there been under the organization any specialization of the plants, further than at time of the organization, giving to each the work for which it is best adapted? Give details, if any.—A. Some of the corporations whose stocks were taken into the original trust were abandoned because of location or ill adaptation for the desired work. Others were organized at more convenient locations and with superior plants. Those manufacturing oil for export are located at tide water, while those for domestic trade are located at central shipping points in the interior.

Q. Have any plants or offices of the organization been closed, shut down, suspended, dismantled, or sold out? If so, give list, with disposition made of each.—A. No plants or offices of the organization have been closed or sold out. But in the eighteen years all plants of companies have been made new and more effective, and plants have been abandoned at one place because of more effective plants erected in a more suitable place. I am unable to give the particulars of the changes for eighteen years; suffice it to say that almost nothing now remains of plants of eighteen years ago.

Q. Are your prices, in fact, the same throughout the United States, allowing for cost of transportation?—A. Yes.

Q. Are they, in fact, the same in the United States as in foreign countries, allowing for cost of transportation?—A. Somewhat lower in United States.

Q. Have your agents ever authority to make, or have they ever in fact made, lower prices or rebates in special sections of the country?—A. No authority.

Q. Have they done so for the purpose of meeting competition or otherwise?—A. No doubt prices have been cut to meet lower prices made by competitors.

Q. What dividends have you declared? Give complete list, with dates.—A. Dividends were paid quarterly and have aggregated per annum as follows:

	Per cent.		Per cent.
1882	5.25	1891	-- 12
1883	6	1892	-- 12.21
1884	6	1893	-- 12
1885	10.50	1894	-- 12
1886	10	1895	-- 17
1887	10	1896	-- 31
1888	11.50	1897	-- 33
1889	12	1898	-- 30
1890	12		

Q. Give list of stock dividends, with dates.—A. May, 1887, 20 per cent.

Q. What was the total amount of net profit, or loss, during your last business year?—A. Profit, 30 per cent.

Q. What distinctions, if any, are made in the distribution of profits between the former owners of closed or dismantled plants and others?—A. None.

Q. What sums have been added in enlargement or improvement of plant? Specify the use. Give particulars, with dates.—A. In 1882 the property of the various companies was estimated to aggregate \$75,000,000, for which amount trust certificates were issued. In 1892 they were estimated to aggregate \$121,631,312. This increase was partly from profits, partly from additional capital invested. Possibly 50 per cent of the addition was profit. No estimate has since been made, but the addition of profits to capital was in about the same proportion until 1896, since which time profits have been divided. The improvements are in the way of greater efficiency in method and in facilities for enlarged output.

Q. What has been allowed for annual depreciation?—A. An average of 5.77 per cent.

Q. What disposition has been made of plants closed or dismantled since the formation of the organization? List, with particulars for each.—A. All that was useful of closed or dismantled plants was used in construction of new plants; all else was sold as junk. No data are within my knowledge or control from which particulars can be given.

Q. Give any further particulars which show the work of the organization and its effects.—A. About the year 1872 the condition of the refined-oil business was disastrous, and failures were of constant occurrence. Leading refiners began to combine for the purpose of making the business successful. The combination was by means of purchase of stocks and interests of various companies, and, until 1882, the combination was solely by stock ownership in the hands of a limited number of individuals, who controlled the corporations as agencies in a common business. In 1882 these owners, whose names appear in Exhibit A,¹ entered into the trust agreement. The companies whose stock they owned, in whole or in part, appear in the same agreement. They were not then competing companies. The individuals named as trustees controlled them by virtue of absolute ownership of a majority of their stocks. When the trust was dissolved, in 1892, the same fact existed. The individuals then trustees continued to control the companies by virtue of absolute ownership of a majority of their stocks. Consequently the corporations named have been, many of them since 1872, separate agencies carrying on business as a unit for the individuals who are their common stockholders. What they have accomplished in that time may be thus briefly summarized:

1. They have cheapened transportation, both local and to the seaboard, by perfecting and extending the pipe-line system;² by constructing and supplying cars by which oil is shipped in bulk;³ by building tanks for storage of oil in bulk; by purchasing and perfecting terminal facilities for receiving, handling, and reshipping oils; by purchasing and building steamers and lighters for river and harbor service; by building wharves, docks, and warehouses for foreign shipments; by purchasing and building

¹Agreement, p. —.

ocean steamers for carrying oil in bulk, and by employing in foreign countries the same special methods for storing and transporting oils in bulk, by which means alone the markets of Europe are to-day held for American oil against Russian competition.

2. By uniting the capital, skill, and acts, and the various processes and patents of a number of persons, as well as their secret processes, and by building up manufactories on a more extensive and perfect scale, with improved machinery and appliances, and by locating them in the centers of the trade they were intended to reach, the manufacture of oil has been much cheapened and improved.

By spending large sums in the investigation of methods of utilizing Ohio and Indiana oils,¹ and by purchase of various patents, they have succeeded in making a superior article of illuminating oil out of what for some years seemed an almost worthless product.

3. By uniting with the business of transporting and refining businesses necessarily collateral thereto, to wit, the manufacture of barrels, tin cans, boxes for inclosing cans, paints, glue, sulphuric acid, etc., and by union of capital and skill, obtaining the best machinery and manufacturing on a large scale, they have cheapened these products.

4. They have obtained and utilized the best scientific skill in investigating and experimenting upon the obtaining of new and useful products from petroleum, and have cheapened illuminating oil and otherwise benefited mankind by the utilization of these by-products.

5. They have used their united capital in opening up the markets of the world for American petroleum, and have held those markets against the fiercest foreign competition. This was rendered possible only by the employment of millions of capital, in the cheapening of transportation at home, across the ocean, and in foreign lands, and by the best and cheapest methods of manufacture.

The proofs of these propositions will be found in the statistics of petroleum, showing its production, prices of crude and refined, consumption at home, and amount exported to foreign markets. While the Standard does not produce, refine, and market all the oil, it has been the leader in the business, and competitors have succeeded by uniting their capital, skill, and acts and following the same methods.

It may be asked whether all this could have been accomplished without combination. It could if one man could have commanded the necessary capital and employed the proper means and persons. But that was manifestly impossible. It could have been accomplished by one corporation instead of many, but no charter could be obtained authorizing a corporation at once to produce, manufacture, transport by pipe line, car, and steamer, and deal in oils, and also to manufacture packages, acids, etc. The theory of the combination was that a corporation created by and largely doing business in a State should take its charter from that State. Until charters can be granted by the Federal Government the agency of different corporations will be required in any business like that of American petroleum, which seeks all the markets of the world.

THE SUGAR COMBINATIONS (RESUMED).

BOSTON, MASS., *July 18, 1899.*

TESTIMONY OF EDWIN F. ATKINS.

At a meeting of the subcommission on manufactures and general business, held in Boston, Mass., July 18, 1899, Chairman Smyth presiding, Mr. Edwin F. Atkins appeared at 10.45 a. m., and being sworn, testified concerning the sugar industry.

Q. (By Mr. SMYTH.) What is your address?—A. Thirty-five Broad street, Boston.

Q. And your business?—A. Manufacturer and importer of sugar.

Q. (By Mr. FARQUHAR.) How long have you been in the business?—A. I have been in business since 1867—in general business—and always more or less connected with sugar. When we were refining sugars we imported from all over the world.

Q. Have you a refinery now?—A. No; we put our refinery in the American Sugar Company at the time the combination was formed, and since that time I have had no active interest in the management of any refinery.

Q. (By Mr. SMYTH.) If you have any preliminary statement that you would like to make to the commission—

RESULTS OF THE WAR WITH SPAIN.

A. The developments from the Spanish-American war, and the peace that followed it, have been such as to entirely upset the foreign sugar business in the way of imports. Since the duties bore equally on foreign sugars imported into the United States from all parts of the world, except the Sandwich Islands, the tariff made little difference in the foreign selling price. After this war started the first thing done was to annex the island of Hawaii. While the Sandwich Islands sugars had come in free of duty for many years past there had not been a very rapid increase, through the fear in those islands that the treaty might be canceled. Since the annexation of the islands they have begun to use every effort to develop every acre of land that can possibly be brought into the cultivation of sugar, and the consequence is that I look for further material development of the sugar industry in the Sandwich Islands. The second effect of the war was that on Porto Rico. Undoubtedly Porto Rico will be annexed to the United States, probably by the coming Congress, and the sugars from Porto Rico will be admitted into the United States free of duty.

Q. (By Mr. FARQUHAR.) Do you mean by "annexation" a Territorial condition or a colonial condition?—A. I do not believe that it can be anything except a Territorial condition. I do not believe that we can find any way of carrying on colonies. I think that island as well as the Sandwich Islands must come in as Territories for a period of years, the same as our Western Territories.

THE PRESENT TARIFF ON SUGAR.

Now, the present tariff assesses a duty upon raw sugar, 96 test, of \$1.68½ a hundred pounds—1.68 cents a pound. That bill was framed largely in the interest of the people in the United States who wanted to raise beet sugar. It went through Congress because it was at the same time an easy way to collect revenue, and the country was at that time in need of revenue, so they put on this high rate of duty. The rate as assessed under the Dingley law was, then, about equivalent to 85 per cent ad valorem on foreign sugars. That was the protection which the beet-sugar manufacturer expected to get, and one-eighth cent per pound on refined sugars, as the beet-sugar factories were making, practically, granulated sugar.

I have some tables here, prepared 2 weeks ago, before I had any idea of coming before this commission, giving the value of sugar abroad, on a basis of 4½ cents, duty paid, in New York on the 1st of July. Though they were made up quite recently, the market has since changed; but the proportions hold the same. I have taken Germany, Cuba, Java, English colonies, Porto Rico, and Hawaii. Of course there are many other sources of supply, but these are the largest.

The United States has framed treaties with the British colonies, Barbados, Trinidad, British Guiana, and Jamaica, subject to ratification by the United States Senate, under the power, conferred upon the President in the Dingley bill, of

making treaties with foreign countries and rebating duties in the United States to an extent not exceeding 20 per cent, we receiving reciprocal advantages. The power of the President in that matter, under the Dingley Act, expires on the 24th of July, current month. I have made due allowance for the difference of freight rates between places where business becomes coastwise and those countries from which sugars can be brought under flags of all nations. Our business with the Sandwich Islands has become coastwise, and although Porto Rico is not annexed and our duties are enforced against its products, the President and the War Department declared the business of Porto Rico coastwise.

I take first the duties under the tariff. In the case of Germany they are \$1.685 per 100 pounds plus the countervailing duty of 25.9 cents; Cuba, \$1.685, without any countervailing duty; Java, \$1.685, without countervailing duty; English colonies, after ratification of the treaties, \$1.348, no countervailing duty; Porto Rico, no duty at all; Hawaii, no duty at all. Now, the freights from Germany are about 8 cents a hundred; from Cuba, 10 cents; from Java, 30 cents; from the English colonies, 10 cents; from Porto Rico, 18 cents; from Hawaii, 27 cents. Then I have figured the insurance from these various countries—the marine insurance—laid down in New York. In the case of Germany, I have deducted from the charge the bounty paid by Germany, which is 25.9 cents per 100 pounds. That leaves the free-on-board value on the basis of 96 test. Of course the sugars coming in from various countries are of various grades and values, but all hold to the relative value of 96 test.

Q. (By Mr. SMYTH.) It is the standard?—A. Yes; and the markets rise and fall from that basis.

FOREIGN VALUES OF SUGAR CORRESPONDING WITH 4½ CENTS IN NEW YORK.

The estimated price, free-on-board values, United States currency, on a basis of 96 test, in the various countries which are our principal sources of supply, calculated from the New York value, July 1, 1899, of 4½ cents for 96 centrifugal sugar, would be as follows: In Germany, \$2.71 per hundred; in Cuba, \$2.69; Java, \$2.46; English colonies, \$3.02; Porto Rico, \$4.28; Hawaii, \$4.14.

The refiner in New York or Boston is buying from all these countries. He bids in Cuba at \$2.69, or Porto Rico at \$4.28, or Hawaii, \$4.14—or the same price laid down here in New York or Boston duty paid.

TABLE 1.—*Estimated free on board values, United States currency, on the basis of 96° test, in the various countries constituting our principal sources of supply, calculated from the New York value, July 1, 1899, of 4½ cents for 96° centrifugal sugar.*

CUBA CAN NOT COMPETE UNDER OUR PRESENT TARIFF ARRANGEMENTS.

The consequence is that if Cuba is made an independent nation Cuba is commercially ruined by our tariff. It is impossible for that island to compete under the conditions of our present tariff; no duty on sugar from some countries, a reduced duty on sugar from other countries, and no duty on sugar produced in the United States.

CONSUMPTION IN THE UNITED STATES AND SOURCES OF SUPPLY.

As to consumption and supply in 1898 we have the following curious results: The consumption of the United States was 2,047,000 tons. Now the sources of supply: Of domestic cane we produced in Louisiana and Texas during that year 235,000 tons, and of domestic beet sugars 33,000 tons; that is, 268,000 tons of domestic sugar, of course protected to the extent of the existing tariff. We received free from Hawaii and Porto Rico during the same year 295,000. The crops of Trinidad, Barbados, Jamaica, and British Guiana, which will have special advantages, I suppose, of 20 per cent under the new treaties, produced 227,000 tons in the same year. Of the remaining sources of supply we have Cuba, which produced 300,000 tons; Java, 695,000 tons; the Philippines export 60,000 tons (though the trade was upset by the war); Egypt, 90,000 tons; Santo Domingo and other West Indies, 70,000 tons; Brazil, 165,000 tons; all this is subject to the full rate of duty of \$1.685 on the hundred pounds. We have the immense sum of 2,170,000 tons. In addition to that is the surplus crop of Europe, 500,000 tons.

TABLE 2.—Consumption and supply.

	Tons.
Consumption of sugar, United States, 1898	2,047,000
Sources of supply on basis of crops of 1898-99:	
Domestic cane	235,000
Domestic beet	33,000
Total (protected by present tariff)	268,000
Free foreign sugar:	
Hawaiian Islands	240,000
Porto Rico	55,000
Total (no duty)	295,000
To have advantage under reciprocity treaties:	
Trinidad	50,000
Barbados	45,000
Jamaica	27,000
British Guiana	105,000
Total (supposed duty 1.35 cents)	227,000
Subject to full duty:	
Cuba	300,000
Java	695,000
Philippines export	60,000
Egypt	90,000
Santo Domingo and other West Indies	70,000
Brazil	165,000
Total (duty 1.685 cents)	1,380,000
	2,170,000
Excess of European beet sugars over requirements of Continent and Great Britain on basis of crops of 1898-99, about	500,000

The present United States tariff will, in case of the annexation of Porto Rico and ratification of the reciprocity treaties as agreed upon, have the effect of taxing the consumer and granting a bounty to the producers, as follows, the figures being made up on the basis of last year's crops:

The domestic production of 268,000 tons has the benefit of the full duty of \$1.685, equal to \$34.74 per ton, or \$10,114,320. Of course these domestic sugars will add the duty to the price of foreign sugars, and the producer gets the full benefit of the protection. The duty on the Sandwich Islands' 240,000 tons, on an average of 95 test, including all grades, would amount to \$36.96 per ton, or \$8,870,400. Porto Rico, with a crop of 55,000 tons, on an estimated average test of 89, would get the benefit of a duty equal to \$32.35 per ton, or \$1,773,750. Trinidad, Barbados, and Jamaica, with their crops of 122,000 tons, on an average test of 89, the duty would amount to \$32.25 a ton at the full rate, or \$3,934,500, and 20 per cent rebate on that amount would be \$786,900. British Guiana, with 105,000 tons and an average test of 96, the duty under the present rates would amount to \$37.74 per ton, or

\$3,962,700, and the rebate of 20 per cent would give \$792,540. The sum total of that which may be considered a tax on the consumer for the benefit of the producer is \$22,337,910.

TABLE 3.

Domestic production, 268,000 tons; estimated average, 96 test; duty at 1.685 cents per pound = \$37.74 per ton.....	\$10,114,320
Sandwich Islands, 240,000 tons; estimated average, 95 test; duty at 1.65 cents per pound = \$36.96 per ton.....	8,870,400
Porto Rico, 55,000 tons; estimated average, 89 test; duty at 1.44 cents per pound = \$32.25 per ton.....	1,773,750
Trinidad, Barbados, and Jamaica, 122,000 tons; estimated average, 89 test; duty at 1.44 cents = \$32.25 per ton, \$3,984,500; supposed 20 per cent rebate.....	786,900
British Guiana (Demarara), 105,000 tons; estimated average, 96 test; duty 1.685 cents = \$37.74 per ton, \$3,962,700; supposed 20 per cent rebate.....	792,540
Charged consumer for benefit of producer.....	22,337,910

CUBA RUINED IF OUR TARIFF DISCRIMINATES AGAINST HER SUGAR.

Now, you can see that Cuba, for which we went to war, if it is to be independent, and comes to this country and is obliged to pay the full rate of duty, is absolutely ruined commercially, because the crop of sugar is the only staple product. They raise a great deal of tobacco, but it is insignificant as compared with the sugar, and the future of Cuba depends upon the reestablishment of her sugar industry. She can take care of herself provided she can get into the United States free of duty, or if she enters the United States on the same terms with other sugars; but entering here with a duty of \$1.685 per hundred pounds, when her sugars are in ordinary times only worth about \$2.25 a hundred pounds—you can readily see that such a condition as that would mean the absolute ruin of the island of Cuba.

THE TARIFF AND THE BEET-SUGAR INDUSTRY—THE AMERICAN FARMER GETS NO MORE FOR BEETS THAN THE GERMAN.

A great deal has been said about the need of the farmers in the United States having protection, heavy protection, in order to enable them to raise beets for the manufacture of beet sugar in competition with the farmers in Europe. Now, I have gone through the figures with as much care as I could. I have not got sufficient data to submit them to you to-day, but I possibly will have a little later. As far as I have investigated I find that the American farmer receives from \$4 to \$4.50 per ton for his beets. I find that the German farmer gets almost the same price for his beets, which leads me to infer that the American farmer has been held up for the pity of the public by the beet-sugar manufacturers only to get this high rate of duty. In fact, the farmer does not get it, but the manufacturer of the beet sugar gets it.

Now, here is a little paragraph taken from Willet & Gray's circular of June 29: The farmers of Germany received last year for their beets, delivered, \$4.38 per ton. I believe that ton is 2,204.6 pounds. This was prior to November; and after that, for later deliveries, \$4.52. Holland paid to her farmers \$4.26 to \$4.46 where it was near the factory and \$4.06 where it was distant from the factory. Russia paid \$4.24; Sweden paid \$4.42 to \$4.85; Belgium, \$3.47 to \$6.17, according to the grade of the beet; France paid \$4.83 to \$5.21 per ton for the beets.

There has been a very interesting book written by Herbert Myrick in the interest of the American sugar industry, and I will quote a few paragraphs here in regard to the prices of beets.

The Watsonville factory (in California) pays \$4 a ton for all beets. He gives a little table here showing the prices paid to the farmers in southern California, showing an average of \$4.35 a ton. Then, speaking of the Chino factory in California, the average price for beets was \$3.75, and speaking of the Chino factory again, he says the factories have been obliged to reduce their price from \$5 to \$4 a ton. In Lehi Valley, in Utah, he says, at \$4.25 a ton the farmers received \$162,000 for the crop. I could go on and quote a great many other instances, but it is not necessary.

The point I wish to make is this: The beet-sugar manufacturers in this country have called and are still calling for a very high rate of duty, in order to enable

the American farmer to raise beets in competition with the European farmer. My investigation would show that the manufacturers of beet sugar in the United States pay to the American farmer, in spite of the duty, but very little more than the German farmer gets from the German manufacturer.

DUTY ON RAW SUGAR AND DUTY ON REFINED—THE BEET-SUGAR MANUFACTURER GETS BOTH.

The Dingley tariff protects the manufacturer of beet sugars—as to the sugar tariff there are two rates of duty. The first is \$1.825 on the 100 test; that is, the standard test at \$1.685, and for every degree up or down $3\frac{1}{2}$ cents, equivalent to \$1.825 for 100 test. It pays another duty of one-eighth cent per pound where the sugar is above No. 16 in color and called refined sugar.

Q. (By Mr. FARQUHAR.) How do you make the 100 test on that?—A. All sugars pay a duty on the test, whether raw or refined. If it is refined it pays an additional duty of one-eighth cent on the pound.

Now, the manufacturer of beet sugar in the United States gets the first duty of \$1.825, and as he manufactures refined sugar he gets another protection of one-eighth cent on the pound, or $12\frac{1}{2}$ cents. Then these beet factories are situated, most of them, west of the Missouri River, and freight to the Missouri River we can figure at about 50 cents—one-half cent on the pound.

Q. From the port?—A. Yes; from the coast. So he has an advantage over foreign imported refined sugar of the two rates of duty plus the cost of transportation to the Missouri River. Where he is supplying the local demand in the region west of the Missouri River it gives him an advantage of \$2.45 on every 100 pounds of sugar he produces.

BEET SUGAR SHOULD BE MADE IN THE UNITED STATES FOR $3\frac{1}{2}$ CENTS A POUND.

Now, I notice in the report of the Agricultural Department in Washington on the beet-sugar industry that some figures have recently been made abroad on the cost of the production of beet sugar in the United States. They are looking upon the United States as a possible competitor. They take the theoretical yield of the beet as reported by the United States Department of Agriculture and the experiment stations, which reports show the beet in the United States, in most of the States of the Union, as equal to the beet on the continent of Europe. They figure on the actual reports of the prices paid for these beets—the figures that I have given. In that way they get at the cost of production; that is, the price at which beet sugar ought to be produced in the United States— $8\frac{1}{2}$ cents a pound, I believe, for granulated sugar. It may be $3\frac{1}{2}$; unfortunately I have not the data with me.

Now, the point I have been trying to make is that this high rate of duty, given at the request of these beet-sugar manufacturers—

Q. (By Mr. SMYTH.) Does not that affect the Louisiana planter: does it not protect him?—A. Exactly. I am illustrating with beet sugar because the other has been brought out to some extent, I think, in your investigations.

Now, if beet sugar, granulated, can be produced in the United States at $8\frac{1}{2}$ cents a pound, according to the reports of the experiment stations, and at the figures given, based on the actual prices paid for the beets and the labor, it would seem that the manufacturing of beet sugar here in this country requires nothing like the present protection.

HIGH DUTY MAKES HIGH SKILL UNNECESSARY—THE LOUISIANA SUGAR INDUSTRY.

In practice they have not come up to the theoretical yield of the beets; but they do it in Germany, they do it in Austria and in France, and there is no good reason why they should not do it in the United States, except for the fact the protection is so large it does not pay them to make a wide study of such questions as this.

Now, in Louisiana, when they had an enormous protection—the old protection—they went on making sugar in open kettles.

Q. (By Mr. CLARKE.) That was before the McKinley tariff?—A. Clear before that. After the McKinley tariff came into force, sugars were made free and domestic sugars were paid a bounty, which was less than the former protection, but a good bounty. When that period came they went to work and began to improve their methods, because they could not get the prices for the sugar, and in Louisiana to-day you will find as fine plants as anywhere in the world. That was brought about by low prices. When I first went into Cuba some years ago, when prices dropped so low, a new set of men came in there;

and they built some of the finest factories in the world, worked them scientifically and got skilled labor, and found they could produce sugar at a profit at a price which everybody supposed would entail a heavy loss. That was the result of the stimulation of low prices. The same thing happened in Demarara; the same thing happened in Germany. Instead of being discouraged when prices went down to the cost of production, they went to work scientifically and found a way to reduce the cost.

Q. (By Mr. FARQUHAR.) Have you anything to say about withdrawal of the Louisiana bounty? In what condition has it left the industry in Louisiana?—A. Except for a very unfortunate freeze that they had last winter, something unavoidable—the sugar industry in Louisiana was in better shape a year ago than it had been previously. They produced a large crop in 1897-98, and would have produced a still larger crop in 1898-99 if it had not been for the weather.

Q. (By Mr. SMYTH.) Was not that improved condition due to the protection they had after the Dingley tariff?—A. As regards prices it was.

LOW PRICES COMPEL IMPROVED METHODS—CANE AN ARTIFICIAL GROWTH IN LOUISIANA.

Q. A change in that tariff would seriously affect their prosperity, would it not?—A. I will not say that. They had not begun to improve their methods until sugars went down to a point where it stimulated them; and the prices in Louisiana during the last year or two would have been considered ruinous 20 years ago.

Q. (By Mr. CLARKE.) Did not their improvement begin under the stimulus of the McKinley tariff?—A. No; there was no duty under the McKinley tariff. They improved their methods when sugar went so low they could make no profit out of it.

Q. (By Mr. SMYTH.) Do you think that industry could be prosperous if the duty was withdrawn?—A. No; I do not think so. I do not think the climate of Louisiana is adapted to the production of sugar cane. It is an artificial growth there, and they are deserving of the greatest credit for being able to produce sugar there at all. It is only through the very best of work that they have been able to compete in spite of the protection. In the case of beet sugar it is another thing.

Q. But the duty applies to all sugar, whether beet or cane?—A. Yes. Our climate in the United States is as well adapted to the production of sugar beets as any other place, whereas the climate of Louisiana is not adapted to the production of sugar cane as are the West Indian Islands and parts of South America. Cane in Louisiana never fully ripens. It is always cut before it matures. It does not contain the sugar that is contained in the same cane in the West Indian Islands.

THE TARIFF AND THE SUGAR REFINERS.

A great deal has been said about the protection accorded to the refiner. We will see what they get. I can not give you the exact foreign cost of granulated sugar, but if I say $8\frac{1}{2}$ cents a pound it will be near enough. Now, the first duty that pays on 100 test would be \$1.825 per hundred; if that is figured out it amounts to something over 50 per cent. The second rate for refined sugar is $12\frac{1}{2}$ cents on the hundred pounds, and on a value of $3\frac{1}{2}$ cents would be $3\frac{1}{2}$ per cent ad valorem.

Q. (By Mr. FARQUHAR.) That is claimed to be insufficient, is it not? Considering the duties on refined sugar and the countervailing duties against the bounties in Europe, what is the protection to the American refiner?—A. Our countervailing duty offsets the bounties in Europe.

Q. Then that is a protection here?—A. It is a protection against the sugar coming from those countries.

Q. Sugar refiners claim there is insufficient protection to their business now.—A. I think we can throw the bounty out entirely, and then in addition to that the refiner has one-eighth cent per pound.

Q. That is $3\frac{1}{2}$ per cent ad valorem?—A. I believe that is the protection the refiner gets. If you have granulated sugar in Europe for export to the United States at a given price, it pays one-eighth cent a pound over and above what is assessed as regular duty. That one-eighth cent is the protection the manufacturer gets for refining sugar.

COST OF REFINING.

Q. Can you give us the rate of profit to the refiner, independent of the tariff?—A. I am not acquainted with the management of refineries at the present time. It would be my experience of 10 years ago, which is a back number now. I know what we figured our cost at that time; we considered it to be about a half cent a pound.

Right here possibly I might call your attention to this thing in the discussion that I have seen in the papers about the cost of refining sugar. People seem to figure just the bare cost of refining. Besides the cost of refining, namely, labor, fuel, char, office expenses, etc., you must take account of packages, insurance on goods in transit, and interest on money borrowed to conduct your business. It may be that the concern has money enough to conduct its own business, but the interest on that accumulated surplus ought to be considered. What it would cost the refiner to-day I do not know, but if he has reduced the cost 25 per cent from those figures as we calculated them 12 years ago, I should consider that he has done very well.

THE TARIFF AND THE BEET INDUSTRY.

Q. (By Mr. FARQUHAR.) Suppose instead of one-eighth cent it was one-fourth cent duty, what effect would that have on the consumer?—A. I think that would depend on the source of supply. If the present competition is waged for a long period they are going to continue to sell sugars at very little, if anything, above the cost of refining them.

Q. (By Mr. SMYTH.) Do you think such a change in the tariff would stimulate the beet industry in this country?—A. Well, no. I think a man that can not make money under the present protection had better go out of business.

Q. (By Mr. CLARKE.) Prices would be lower without the present protection, I suppose?—A. Yes.

Q. You say low prices stimulated the development of the Louisiana industry?—A. I said it stimulated the improvement in the method of production.

Q. (By Mr. SMYTH.) They had to cheapen the cost?—A. Or go out of business.

Q. They went at it in a scientific way?—A. Exactly. Now anybody ought to be able to go into the beet industry to-day, if there is anything in it at all, and make money whether he knows anything about the business or not. The sugar business is something to be learned. I have been in the business for more than 30 years, giving most careful attention to it all the time, to the cost of production in all parts of the world, and I do not think that I have begun to know it yet.

CUBA—LITTLE FRESH CAPITAL GOING THERE.

Q. What is the condition of the sugar industry in Cuba at the present time? You are interested in sugar raising in Cuba?—A. Yes, sir. Before the insurrection 1,080,000 tons of sugar: the crop that has just closed, a little over 800,000 tons. That reduction was brought about by the insurrection and war. Now the people are afraid: they have no money in Cuba, no available money for investment. There is plenty of money in the United States, and plenty in Europe, in England, and also in Spain. They would go to Cuba and go into the sugar business, but they are afraid of the independence of the island and the withdrawal of the United States.

Q. You think it is true that English capitalists are investing in Cuba at the present time?—A. Capitalists have invested in railroads.

Q. Any in sugar plantations?—A. I do not know of any. There may have been some. They have invested quite largely in railroads.

Q. Since peace?—A. Since peace. Before, these people had interests there, but they are consolidating and extending. Very little fresh capital is going into Cuba; and the reason is, they see very clearly that if Cuban sugars have to pay the high rate of duty in the United States in the future, and sugars are admitted free from the Sandwich Islands, Porto Rico, and the Philippines, and the domestic industry is stimulated by the present enormous rate of duty, they could not compete.

DOUBTFUL WHETHER THE PRESIDENT COULD MODIFY THE TARIFF AS TO CUBA.

Q. (By Mr. CLARKE.) Supposing Cuba should be independent, and there should be a reciprocal agreement between this country and Cuba, like that which is being arranged with the British West Indies, could the sugar industry in Cuba prosper?—A. Well, before I answer that question I should like to go back a little. Special power was conferred upon the President to make reciprocity treaties for 2 years from the date of the signing of the Dingley Act. That power expires on the 24th of July, this month. Whether the President has a constitutional power to make treaties affecting the tariff I am not able to state; some hold he has, but I think in the face of the coming election the President would be very cautious about exercising that power.

Q. Congress might extend the time, I suppose?—A. Congress might extend the time by a special act. Congress can do what it likes in regard to the tariff. It is

a very simple matter to make suggestions, and very good suggestions, in regard to the settlement of these matters; in practice it is a most difficult thing to get any partial tariff bill through Congress, particularly if it is a sugar-tariff bill.

Q. (By Mr. FARQUHAR.) Without opening the tariff question at all before Congress, could not this take the form of reciprocal treaties with these countries?—A. I do not think so, sir.

Q. I understand in the Dingley bill there is executive authority.—A. It does seem to me, if the President had the constitutional power to make treaties why did Congress take so much care in conferring such power and limiting it? I think, looking back at our treaties for 50 years, that every treaty which has involved the expenditure of money, or has affected the existing tariff, has gone to the House.

A 20 PER CENT REDUCTION OF DUTY WOULD NOT MEET THE NEEDS OF CUBA.

Q. Without any opening of the question of the tariff by the coming Fifty-sixth Congress, if they took up the reciprocal features and made the extension, it would accomplish all that was needed in this matter?—A. No, sir.

Q. What else is needed?—A. Suppose there is a change of 20 per cent. That will reduce the duty on centrifugal sugars from \$1.68 to \$1.35. That is against no duty from the Sandwich Islands, no duty from Porto Rico. My point is this: No country—I do not refer to Cuba especially, I only illustrate with Cuba—no sugar country in the world, in the face of the enormous production, can hold the United States market in the face of discriminating duties, because the selling price of sugar ranges too near the cost of production. Now, the world's price of sugar two years ago ranged at less than the average cost of the world's production. Some few individuals were able to make money because they thoroughly understood their business. These individuals were not confined to any one place—they were all over the world; but I believe the world's crop of sugar was produced at a loss for a period of at least three years.

When you make some sugars free and put a high tariff on others, the effect is to aid, first, the sugars that come in without duty; second, those with a favored duty, and to leave out such as pay the full rate of duty. The result would be that if there is any discriminating duty the enormous natural production will drop the price below the cost of production, and no country can compete in the United States market against a discriminating tariff. I do not say they will not compete for a month or a year, but the effect in two or three years will be to drive them out of business.

THE SUGAR DUTIES AND THE CONSUMER.

Q. When American refiners claim that one-eighth of a cent is insufficient as a protection, and that one-fourth of a cent will be sufficient, what are we to argue as to the condition of the consumer? Is the sugar cheapened to the consumer, when the price of sugar is really regulated by the refiners of the United States and nobody else? By what process will you cheapen the refined product for the American people—for the consumers generally?—A. I would take the duty off raw sugar entirely, except countervailing duties against bounty-paid sugars.

Q. Mr. Havemeyer claims that would abolish all the refineries and break the business to pieces.—A. Do you think you understood Mr. Havemeyer right on that point? I am very much inclined to think you are mistaken. I say the way to reduce the cost of sugar to the consumer is to abolish the duty on raw sugars. As to the duty on refined sugar, one-eighth cent a pound is so small that I do not think it affects the consumer in any way. If you want to reduce the profit of the refiner, that is all you can do; take off the one-eighth cent a pound.

Q. With free raw sugar, what effect would that have on the refining business in this country?—A. No effect whatever.

Q. (By Mr. SMYTH.) What would be the effect on the income of the Government? If the duty on the raw material was repealed, what would be the loss to the Government?—A. I could figure that, but it would be a rough estimate. It would be about \$56,000,000.

Q. In what form would the Government make that?—A. That is a pretty big question. We have tariff taxation and internal-revenue taxation. I think one of the easiest ways the Government can raise a revenue is on refined petroleum oil. There are many articles of that nature where the collection of the revenue would be very simple. Not having given particular thought to the question of revenue, I would only make the off-hand suggestion that a reasonable revenue tax might be placed on coffee, and an internal-revenue tax on many articles of domestic production, such as refined petroleum oil.

Q. Would not your argument in favor of the free importation of raw sugar apply to raw materials of every kind?—A. Perhaps it would, but I would not make any statement as to things with which I am not personally familiar.

DOMESTIC PRODUCTION NOT DESIRABLE AT THE PRESENT COST TO THE CONSUMER.

Q. (By Mr. CLARKE.) Do you think it desirable to have a considerable domestic production of sugar—raw sugar?—A. No; I do not, at the present enormous cost to the consumer.

Q. Do you think it desirable for the Government to do anything to encourage the domestic production?—No; I do not.

Q. Do you think that prices would be kept as low to the consumer without domestic production as with it?—A. Yes; I do. The domestic production is so small a proportion of the consumption it practically has no effect on prices.

Q. Suppose it should develop to be a very considerable proportion, so that it would be a factor in competition, would it not help to keep the prices low?—A. If it became a material factor in the supply, and materially reduced the duty-paid price of sugar in the United States, the effect would be to stop the foreign production of sugar so far as the United States market was concerned, because the current prices are now and have been so near the cost of production.

Q. Well, would not there be sufficient foreign sugar imported to compete with the domestic supply, so that the effect of that competition would be to reduce the price to the consumer?—A. When that production gets to be a material factor in the supply of the United States it will naturally reduce the duty-paid price; with the duty-paid price you reduce the foreign value; in reducing the foreign value you very soon get below the cost of production abroad.

Q. Should you be able to purchase a foreign supply, at less than cost of production though, if there was no domestic production?—A. You can not purchase any article for a long period at less than the cost of production.

Q. As a general proposition, you think the interest of the consumer would be safeguarded by domestic production, do you not?—A. No, I do not.

Q. You refer to sugar alone?—A. I am speaking only of sugar. I am not going into the general matter of the tariff. I have always been a protectionist in the past, but I am trying to illustrate this thing under the conditions in which we find ourselves to-day, the conditions which have grown out of the war with Spain.

THE BEET-SUGAR INDUSTRY OUGHT NOT TO REQUIRE PROTECTION.

Q. You think the climatic advantages of production in Cuba are superior to those in any part of this country?—A. Certainly for the production of sugar cane.

Q. It would be practically impossible, then, for our growers to produce for the general domestic market without some form of protection? A. I can not answer that question. I do not know what the cost of production of beet sugar in this country is. I have already stated that the Germans have calculated that cost at 3½ cents a pound of granulated sugar, and if they are correct, and they would seem to be correct from the reports of the experiment stations, it would not seem that beet-sugar makers in the United States require any such protection as they are accorded at the present time. In fact, they ought not to require any protection.

SUGAR MANUFACTURERS LOOK TO THE TARIFF FOR THEIR PROFITS.

Q. Do you think there would be any beet-sugar industry in this country without some form of protection? A. If the people in this country want to produce sugar, they would naturally come to the point where they could produce that sugar at the least cost and get the greatest profit. There are people in Boston, in the last year, who have been looking into the production of sugar as an industry. One went to the Sandwich Islands because, he said, "Sandwich Islands sugar is coming in here free of duty, and at the present tariff I can get for my sugar, out in the Sandwich Islands, 4½ cents a pound." Another concern went to Porto Rico because, they said, "The annexation of Porto Rico is assured, and under the present tariff I can get 4½ cents a pound for the sugars which I can produce in Porto Rico, while they are only worth 2.69 cents in Cuba." Another concern made an investment out in Nebraska in beet sugar because, they said, "The United States is protecting domestic sugar to the extent of \$38 a ton. We have got some cattle in Nebraska that we should like to feed as cheaply as possible, and we should like to get the by-product of the factory to feed them; and if we turn out 10,000 tons of sugar, under the great protection afforded by the United States, it will amount

to about \$400,000; and while we are not conversant with the sugar business, we believe we can make our profit there."

I was sent a prospectus of a beet factory; in fact, I have had a great many, but one in particular was very nicely figured out. They showed very large profits on paper. I went through the figures and found them to be correct. I figured that out on the free-sugar basis, and found that their very large profits were turned into a very considerable loss. That is, the profits they expected to make were out of the existing tariff. Now, naturally a man that is conversant with the business, is cautious about entering upon a business that is dependent for its profits on the existing tariff, because, in my short experience, I have seen the tariff of the United States change with almost every Administration we have had.

Q. (By Mr. FARQUHAR.) It has always been on the safe side for the American refiners; they have been accorded excellent protection by Congress?—A. Yes.

NO TARIFF PROBABLE AGAINST HAWAII, PORTO RICO, AND THE PHILIPPINES.

Q. (By Mr. CLARKE.) Why do you assume that sugar must necessarily come in free of duty from Hawaii, Porto Rico, and possibly the Philippines?—A. Because it does come in free of duty from Hawaii.

Q. I know it does under the existing arrangement, but is it necessary that that arrangement should be continued, or should be extended to Porto Rico and the Philippines?—A. I do not believe that the United States is going to set up a tariff against any territory or possessions belonging to her. Whether it can be done or can not be done, I do not feel competent to give an opinion, but I do not believe it will be done.

THE HAWAIIAN PLANTER RECEIVES THE SUGAR DUTY, BUT DOES NOT PAY IT.

In that connection let me make a statement. The Hawaiian planter is selling his raw sugar in the United States, I might say in New York, at a price that gives him clear 4½ cents a pound. He is buying in the city of New York granulated sugar, made out of imported raw from Cuba and other duty-paying countries, at 3½ cents a pound or something less. In order to assure myself that that was a fact, I went to the New York custom-house within a few days and I said, "I wish to ask you whether the drawback on granulated sugar is in force in regard to Hawaii? In other words, if I come to you with 1,000 barrels of granulated sugar am I entitled to the drawback?" He said, "Yes; you are. We pay you the drawback." That is one of the many complications we have got into growing out of this war.

REFINING IN HAWAII AND IN CUBA.

Q. Is there any sugar refinery in Hawaii?—A. I can not answer; I think there is one.

Q. Are there any in Cuba?—A. One or two small local refineries, but there is no refined sugar exported. Refined sugar can be sent from New York to Cuba in bond and undersell them there, although the duty in Cuba is 2 cents a pound.

GERMANY AND SUGAR BOUNTIES.

Q. (By Mr. FARQUHAR.) How do you account for the great growth of the beet-sugar industry in Germany?—A. That is easily accounted for through the very large bounties paid by the Government.

Q. They pay bounties and we give protection through the tariff?—A. Exactly. It has been an enormous drain. The consumption of sugar in Germany in 1897 was 594,000 tons; the production of sugar, the past crop, in Germany was 1,725,000 tons; the production was about three times the consumption.

Q. That is all beet sugar in Germany?—A. Yes.

Q. By a system of bounties, which amounts to the same as our tariff here, the people of Germany have now, first of all, supplied their own home market with this beet sugar, and they have a surplus to export, and that comes into competition in this country?—A. Exactly. We endeavor to keep that out with a counter-vailing duty.

OUR RESPONSIBILITY TO CUBA AND PORTO RICO—CUBA NEEDS ONLY EQUALITY.

Q. Now, when the cost of producing the beet in France, Belgium, and Germany is very near the same that it is in the United States, for the benefit of the American farmer and people, why should not there be an inducement to sustain the present

tariff and produce all the sugar we can here without regard to Cuba or any other country?—A. There you have the question of our responsibility for these islands we have taken possession of.

Q. As a business view. We are here as a business commission.—A. We have driven the government out of Porto Rico and Cuba, and have done so to benefit the people, ostensibly. If, through our tariff, we prevent these countries from sending their products into the United States, we bring them to commercial ruin. That is the position we find ourselves in to-day, and which we have to consider. I have given you my opinion in regard to the manner of reducing the cost of sugar to the consumer. I should be very glad, indeed, as a producer of sugar in Cuba, to have my sugars admitted free of duty into the United States, and the present tariff maintained as to the other countries. That is human nature; but I do not come before you to advocate any such idea as that, and I will never go before Congress and urge them to take any such position as that. They have either got to put Cuba on a footing with other countries or they have got to throw her overboard entirely and let her sink—one of the two. If they would annex it and maintain the present tariff, that would be nice for me individually, but I would not ask Congress to do anything of that kind. If they will allow the Cuban sugars to come into the United States on exactly the same basis as sugars from other countries, whether subject to duty or free of duty, we have nothing to say more.

THE AMERICAN SUGAR REFINING COMPANY.

Q. Free sugar or tariff-covered sugar, whatever it may be—how do you account for it in this country that one great concern can name and maintain the price of refined sugar?—A. That seems to be very simple. The refining of sugar a few years ago was in comparatively few hands, but there was considerable competition. The refining capacity was largely in excess of the demand. Everybody wanted to run full time, and the consequence was none of them made any money. I was in the refining business for 10 years, and all the profits we made went into the improving of the plant, putting it in first-class condition. We poured money in constantly and did not get a cent of dividends. Then it was proposed to bring all of the houses together, and the American Sugar Refining Company, originally called the trust, was formed. They were enabled to fix a price for their sugars every day, based on the market for raw sugar, and maintain a margin between raw and refined sugar that gave them a profit. Whether that has been too little or too much I do not attempt to discuss.

Q. The only way to maintain the refining industry was to monopolize it?—A. The way to get a profit was to bring the 6 or 8 refineries together.

Q. So that, as you state, since 1891 the price of refined sugar is the price that Havemeyer and Elder put up on the wall?—A. Mr. Havemeyer is the president.

Q. That is simply the controlling power, I mean.—A. That is the controlling power.

Q. That is the chief executive power that fixes the price of sugar?—A. Yes. These prices are based on the market price of raw sugar.

COMPETITION WITH THE AMERICAN COMPANY IS POSSIBLE, BUT NOT PROBABLE.

Q. Do you think that any strong competition in refining, under present conditions, could ever arise in this country to fight the American Sugar Refining Company?—A. I should not think for a moment of going into the sugar-refining business and doing my business cheaper than the American Sugar Refining Company can do it.

Q. And make a reasonable profit?—A. Exactly.

Q. Unless connected with some other business, like the Arbuckles, such as coffee, where the two things would merge in the hands of the consumer, and where what was lost on one could be made up on the other?—A. I would not undertake to go into the refining business in the United States with the idea of refining sugar at a lower cost than the American Refining Company can do it. You ought to keep in mind that the moment the margin between refined and raw sugar gets too large it will admit refined sugar from Europe. You have only one-eighth of a cent a pound in the way of protection. The American refiner has got to do his business cheaper than the European refiner can do it in order to get his profit, or sugars are coming in from the other side. There is an enormous capacity there for refining, and you have only one-eighth of a cent a pound between them.

Q. You consider the countervailing duty as a protection?—A. Certainly; against European refined.

Q. You think that by admitting raw sugars free into this country it would

make no difference in the refining business of the country?—A. It would increase the demand for refined sugar. The lower you can sell refined sugar the larger the demand. The consumption of sugar per capita in England is considerably larger than in the United States, and the reason of that is the lower price.

Q. Considering the amount of capital in the American company, and considering the methods they have of distribution and the markets they command for raw sugar outside of this country—in fact, the power of the American Refining Company—do you think it is possible for any independent companies or association of independent companies ever to come into competition with the American company?—A. It is possible, but not probable.

Q. Why improbable?—A. You may say the improved woolen machinery and yarn machinery have driven out the old spinning wheel in the country towns, and there is no probability of our going back to the old way in which our ancestors spun their wool and made their clothing. It is unfortunate for a certain class of the people, but the consumer, the greater part of the people, have been benefited by it.

WITH RAW SUGAR FREE, GRANULATED SHOULD SELL AT ABOUT 3½ CENTS.

Q. If you could explain to the commission wherein this consumer is going to get cheaper sugar, we should like to hear it.—A. By the removal of the duty on raw sugar granulated sugar ought to sell in New York, and leave a fair profit to the producer and for the refiner, at a range of 3½ to 4 cents a pound; probably 3½ cents a pound would be about the basis of the cost of granulated sugar.

Q. (By Mr. CLARKE.) You mean that as a retail price?—A. No; in speaking of prices I speak of the refiner's price. Of course the jobbers have to get their profit, which is about one-fourth cent a pound.

Q. (By Mr. FARQUHAR.) The grocers make very little?—A. Until the grocers' association was formed they made no profit at all.

Q. That was a concession from the refiners, was it not?—A. The refiners assisted in it. The refiners got out of the retail business and let the jobbers make their profits.

Q. (By Mr. SMYTH.) These jobbers are making their profits out of the consumer?—A. Exactly. But the consumer can not come with his pail to the refiner and get his 10 pounds of sugar. All these things have to be distributed by some middle party; that is unavoidable.

THE REFINER'S MARGIN HAS VARIED. ON THE WHOLE, THE CONSOLIDATION HAS REDUCED THE COST TO THE CONSUMER.

Q. (By Mr. CLARKE.) Based on the relative cost of raw sugar, how does the price of refined sugar to the consumer compare, at the present time, with what it was before the American Sugar Refining Company was formed?—A. You are speaking of to-day's price, or the current average ruling prices?

Q. Average ruling prices is what I mean.—A. I want to be a little cautious about answering that question, because the market has fluctuated so. After the formation of this company the margin between raw and refined sugar was considerably larger than it was before the combination. For 6 months or a year past, perhaps, while this strong competition has been in force, the margin has been considerably smaller than it was previously.

Q. What strong competition do you refer to?—A. The Arbuckles, Mollenhauer and 2 or 3 other houses. The margin was brought down as low as 32 or 33 cents a hundred pounds. Taking into consideration the fact that the raw sugar contained 96 per cent and the granulated sugar 100 per cent; that they furnish packages for delivery, and the freight to the grocery or railroad for shipment; the brokerage and the interest on money; insurance; and that they have to keep the refineries in the best possible condition of repair—taking all that out of the difference between the cost of the raw and the price at which they sell the refined sugar, it is astonishing to me that they are able to keep the average margin as low as they do.

Q. You think the general effect of the consolidation has been to improve the process of manufacturing, reduce the cost of refining, and enable the refining company, if it chooses, to reduce the cost to the consumer?—A. Undoubtedly, sir. And I think, as a whole, that they have done so.

Q. You are not able to give the figures?—A. I would not attempt to give a definite statement, but they have been running at 32 to 33 cents margin and giving the benefit to the consumer. They do not do it as a matter of charity. They did that for quite a period; some weeks.

THE WHISKY COMBINATIONS (RESUMED).

WASHINGTON, D. C., *October 20, 1899.*

TESTIMONY OF MR. EDSON BRADLEY,

President of American Spirits Manufacturing Company and vice-president of The Distilling Company of America.

The commission met at 11.10 on Friday, October 20, 1899, Representative Livingston presiding. Mr. Edson Bradley, after being duly sworn, testified as follows:

Q. (By Mr. JENKS.) Will you give your name?—A. Edson Bradley.

Q. Your address?—A. 802 Fifth avenue, New York City.

Q. Your occupation?—A. I am president of a distilling company, and merchant in my private business.

Q. How long have you been engaged in the business of selling whiskies?—A. Twenty-seven years.

WITNESS' CONNECTION WITH VARIOUS SPIRIT COMPANIES.

Q. What position do you hold in the Distilling Company of America?—A. I am one of the vice-presidents, also a director.

Q. And in the American Spirits Manufacturing Company?—A. President.

Q. Are you connected with either of the other three companies that entered into the Distilling Company of America?—A. I am president of the Kentucky Distilleries and Warehouse Company.

Q. Are you connected with the Standard Distilling and Distributing Company?—A. I am a director.

Q. And of the Spirits Distributing Company?—A. I am not connected with it; have no official connection.

Q. We have had testimony here with reference to the development of the whisky industry in this country, and particularly in reference to these larger combinations, that has brought out the facts pretty completely before the formation of the American Spirits Manufacturing Company. Can you tell us what arrangements were made with the preceding organization by the American Spirits Manufacturing Company when it was organized?—A. I am not conversant with the history of these old companies. My coming into this business was comparatively of recent date, at the time of the formation of the Kentucky Distilleries and Warehouse Company last winter. Of course I had a little knowledge from hearsay with regard to these old companies, but no official knowledge.

PRICES—REBATE SYSTEM.

Q. Perhaps as a merchant dealing with the American Spirits Manufacturing Company you can give us some information with respect to the prices of spirits from the time of its formation on, in a general way, if not in detail.—A. I can do that; yes.

Q. Will you be kind enough to tell us about the date of the formation of the American Spirits Manufacturing Company?—A. I can not tell you that; I do not know.

Q. Can you give us an idea, then, of the course of prices for the last 4 or 5 years?—A. What impressed my mind, and the only thing that I could tell you definitely about, was that period during which the rebate system was in operation, when the old officers of that company exacted at times very high prices for their manufacture. The system was this: An agreement was made by the purchaser at the time of every purchase that during the year all articles which he used that were manufactured by the American Spirits Manufacturing Company were to be bought from that company. He was not to buy outside, and in consideration of his so doing he was promised to

be paid at the end of the season or year a certain rebate on his purchases.¹ These rebates were represented by certificates issued at the time of the purchase, and on the indorsement of these vouchers for deposit in bank for collection it was so arranged that this agreement was made a condition over the signature of the indorser. That was in effect for a good long time; I should say for a couple of years, according to the best of my recollection. I am not speaking with any knowledge save as a purchaser. During that time the fact that the trade was somewhat in the power of this company was undoubtedly used to extort very great profits from it.

Q. Were these rebates paid by the American Spirits Manufacturing Company, or by the old Distilling and Cattle Feeding Company, or both of them?—A. Both, to the best of my recollection. I am not, however, sure of this; it is a very indefinite thing in my mind. At the time this was going on I was not connected with these companies at all; and I am speaking very indefinitely, of course.

Q. About what time, as near as you can recollect, was this system of rebates given up?—A. I should think it was something like three or four years ago.

Q. In the last two or three years, then, the American Spirits Manufacturing Company has not been following this rebate system?—A. Not at all.²

PRESENT POLICY: LOW PRICES, CASH.

Q. What is the system of sales now?—A. The system of sales now, since I have to do with it officially, is this: In the first place, we have reduced our selling price to the very lowest possible price consistent with the making of any profit. We believe it is below the cost of manufacture of any other distiller. We make, of course, a very small profit, but as much as we intend to make for a good long time to come. We have settled on this for a definite policy for some time. We are concentrating our manufacture in a very few plants and manufacturing on a great scale. We manufacture much cheaper than formerly, and we introduce every known method of labor-saving economies of all sorts, and we are giving the purchaser the benefit of that. Of course, our object is to do all the business we can, like every manufacturer, and we do it by selling cheaper than other people do. We sell for cash, practically. We sell the high-proof goods, such as alcohol, and our terms are spot cash, sight draft, with bill of lading attached, carload lots. We sell to large buyers; our business is exclusively with them; largely with the branches of the distributing companies; not only with those controlled by the Distributing Company, but also with the so-called outside branches, those that have arrangements with us to sell.

Q. When you say, "We do so and so—" A. I am speaking of the American Spirits Manufacturing Company now.

Q. I did not know but you were speaking of the four?—A. I was speaking of the one alone.

PROPORTION OF THE WHOLE OUTPUT OF THE COUNTRY.

Q. About what proportion of the total output of the country at the present time has the American Spirits Manufacturing Company?—A. About 85 per cent.

Q. What is the difference between the nature of the product of the American Spirits Manufacturing Company and the Standard Distilling and Distributing Company, if any?—A. In the main they are the same, although the Standard Distilling and Distributing Company manufacture some specialties, gin and so-called continuous distilled goods, a cheaper grade of whisky, and they also put up their goods in some cases at proof, instead of alcohol, as trade requirements may dictate.

Q. About what per cent of the output is under the control of the Standard Distilling and Distributing Company?—A. Roughly, I should say about 85 per cent controlled by them. I may not understand your question; I have got this thing confused. I should have said the American Spirits Manufacturing Company and the Standard Distilling and Distributing Company controlled about 85 per cent.

Q. About how is the percentage distributed between the two?—A. The Standard Distilling and Distributing Company produces, I should say, of that 85 per cent probably 50 per cent.

Q. The Spirits Distributing Company is entirely a distributing company, I understand, and is not a producing company at all?—A. It is entirely a distributing company. It owns a rectifying and compounding establishment, but does not produce, as a manufacturer, any spirits and alcohol.

¹ See Mr. Clarke, p. 171; Mr. McNulta, pp. 207, 210, 211; Mr. Cook, pp. 241, 242; Mr. Luyties, pp. 250, 251.

² See Mr. Clarke, p. 181; Mr. Cook, p. 244.

Q. Is that mainly a distributing company?—A. Mainly a distilling company.

Q. In spite of its name?—A. In spite of its name; it has branches of distribution also, but it is doing less in proportion than it formerly did as compared with the Standard Distilling and Distributing Company.

PRESENT PRICES—RECENT REDUCTION—CHIEF COMPETITOR.

Q. You spoke a moment ago of the number of distributing agents that you had. Is the work of distributing the product largely in the hands of any one of these four companies that entered into the formation of the Distilling Company of America?—A. The larger part of the distribution is in the hands of the Standard Distilling and Distributing Company.

Q. You said the prices had been much lessened with the idea of making a small profit and extending the market as far as possible. For what time has this low price been held on spirits?—A. It is about 6 weeks that the present prices have been in force.

Q. How much lower are the prices now than they were for some period before that time?—A. The basic prices, the published prices of the companies, are about 4 cents lower than they were; but for a long time the policy of the Standard Distilling and Distributing Company had been to cut prices in special cases where competition was very severe with the outside dealers.¹ Of course, the natural tendency had been to drift to these lower prices, and a considerable part of the business was being done, before this complete change was made, at these low prices, quite as low as to-day; but within 6 weeks the basis has been put at this very low point, so that all sales are now made at these figures.

Q. What is your price now?—A. \$1.22 per high proof gallon.

Q. How much is tax?—A. \$1.10; 12 cents net for the spirit.

Q. That is the price per proof gallon for high proof goods? Who is the largest competitor in the country now against yourselves?—A. The Merchants' Distillery at Terre Haute, Ind.

Q. Have you knowledge so that you can tell about what proportion of the total output they control?—A. Yes; I think I can tell you, approximately. They are mashing about 5,000 bushels a day out of a total of 45,000, practically; 47,000 perhaps I should say.²

Q. A trifle over 10 per cent?—A. Something over that. Of course I give that from mere hearsay again.

Q. Could you furnish the commission a list of the prices of corn at Peoria, running back, we will say, for two years? Corn is your chief raw material, is it not?—A. Yes.

Q. Of corn, and of your finished product?—A. Certainly.³

¹ See Mr. Clarke, pp. 178, 181, 182; p. 189, bottom.

² See Mr. Rice, p. 836.

³ The following table gives:

Average prices received by the "trust" per gallon of proof spirits.

The same less United States internal revenue tax.

The same less tax and rebates when rebates were given.

Net amount received by the "trust" for the spirits obtained from 1 bushel of corn.

Average price of corn per bushel at Chicago.

Difference between the value of 1 bushel of corn and the value of the spirits obtained from 1 bushel.

The estimated amount received for the spirits obtained from 1 bushel of corn is based upon the average yield per bushel reported by the "trust" for its distilleries for each year. This differs from the average yield for all distilleries in the United States as reported by the Commissioner of Internal Revenue. The figures reported by the "trust" and here used are as follows:

Year.	Proof gallons per bushel.	Year.	Proof gallons per bushel.	Year.	Proof gallons per bushel.	Year.	Proof gallons per bushel.
1884..	4.10	1888..	4.58	1892.....	4.62	1896..	4.68
1885..	4.45	1889..	4.64	1893.....	4.67	1897..	
1886..	4.55	1890..	4.67	1894.....	4.77	1898..	4.8
1887..	4.62	1891..	4.71	1895.....	4.66		4.6

The prices of spirits are those reported by the "trust." The prices of corn are those of the Chicago Board of Trade, on which the price of spirits is based; see Mr. Rice, p. 847. Both these series of prices are taken for the most part from the reports of the Peoria Board of Trade, the principal distilleries of the "trust" being situated at Peoria.

(Footnote continued on p. 816.)

Q. Peoria is your chief manufacturing point, is it not?—A. That is our chief point.
 Q. Have you had any information with reference to the method of organization of the Standard Distilling and Distributing Company—the capitalization, the cost of the plants, etc.?—A. No; that was before my time.

NUMBER OF ALCOHOL PLANTS RUNNING.

Q. You say that of late you have been concentrating the industry in comparatively few plants?—A. Speaking only of alcohol.

Q. Speaking of alcohol, how many distilleries has the American Spirits Manufacturing Company running now?—A. We are operating 5 at the present.

Q. Where are these 5 located?—A. There are 4 of them in Peoria and one of them at Terre Haute, Ind.

Q. How does the output of these 5 distilleries at the present time compare with

(Continuation of footnote from p. 815.)

Prices of spirits.

Year and month.	Proof spirits per gallon.	Spirits per gallon, less tax.	Spirits per gallon, less tax and rebates.	Spirits from 1 bushel of corn.	Corn per bushel.	Spirits from 1 bushel, less price of the corn.	Year and month.	Proof spirits per gallon.	Spirits per gallon, less tax.	Spirits per gallon, less tax and rebates.	Spirits from 1 bushel of corn.	Corn per bushel.	Spirits from 1 bushel, less price of the corn.

α Rebate, 6.4 cents.

b Rebate, 8.14 cents.

(Footnote continued on p. 817.)

the output of the American Spirits Manufacturing Company 2 years ago? Is it greater or less?—A. It is larger.

Q. Do you know how many distilleries were running at that time?—A. I could not tell you; I think, though, about 12.

Q. About how many distilleries are running for the production of proof spirits in the country at the present time?—A. I know of but 4 outside of our distilleries.

Q. So there are only 9 or 10 in the whole country?—A. There may be other small ones, but I do not know of them.

BEVERAGE WHISKIES—TOTAL OUTPUT—PROPORTION CONTROLLED.

Q. What is the nature of the product of the Kentucky Distilleries and Warehouse Company?—A. Exclusively Bourbon and rye whisky for aging; beverage whiskies—whiskies to be used as a beverage.

*See Mr. Clarke, p. 168; Mr. Luyties, p. 256.

a Rebate 8.14 cents.

b Rebate 8.23 cents.

c Rebate 2 cents.

d No rebate.

Q. About what proportion of the output of companies of this kind does your company control?—A. That is a very difficult question to answer.

Q. Will you explain why?—A. We have been in operation such a short time that we have not demonstrated what part of the trade we can control. We have 53 distilleries, whose previous output, as shown by the tax payments on whiskies at these distilleries during the past 5 years, warrants us in believing we may manufacture there and sell 9,500,000 gallons. In addition to that we are operating 2 very large cheap-whisky distilleries, the output of which is dependent upon trade demands. Our assumption is we shall make there 5,000,000, making a total of 14,500,000 gallons this year. It would appear that the consumption of Kentucky whiskies for an average of 5 years was in the neighborhood of 20,000,000 gallons. So we shall possibly make about three-fourths of it.

Q. When you speak of Kentucky whiskies, do you include under that name rye whiskies made in the East also?—A. Oh, no; only those made in Kentucky.

Q. You control also some large distilleries that manufacture a somewhat similar product in the East?—A. We do; yes.

Q. What are they?—A. The Hannis Distillery, the Mount Vernon Distillery, the Monumental Distillery, and the Philadelphia Pure Rye Distillery, all in the East, and one, the St. Paul Distillery—rye-whisky distillery also—in the West.

Q. Is this St. Paul Distillery the same one that was formerly owned by the American Spirits Manufacturing Company?—A. The same; yes.

Q. It was owned, also, earlier by the Distilling and Cattle Feeding Company?—A. That was back of my time again. I think that is so.

Q. Has it, in your knowledge, been used for the production of rye whisky, or was it used for the production of alcohol earlier?—A. For the production of alcohol.

Q. With reference to the production of these distilleries you have mentioned in the East, can you give us an estimate of their output, so that we can form a pretty definite idea of the proportion it bears to the total output in this country that is manufactured for aging?—A. We shall make about one-sixth of the output of the Eastern ryes; that would be about 2,000,000 gallons.

Q. So far, then, as the production of rye whisky is concerned, you come a long way from having a monopoly of the product?—A. We come a long way from monopolizing anything.

Q. At the same time, so far as the output of spirits is concerned, you come well on toward 90 per cent of it?—A. Yes.

KENTUCKY DISTILLERIES AND WAREHOUSE COMPANY AND OTHER SUBORDINATE COMPANIES.

Q. You are familiar, I understand, with the details of the organization of these different companies into the Distilling Company of America. Will you tell us, to begin with, what the nature of this organization—the Distilling Company of America—is, and what its relation is to the different organizations that came into it? Tell us, in the first place, your general plan of organization.—A. You would like me to begin with the Kentucky Distilleries and Warehouse Company?

Q. I would.—A. The Kentucky Distilleries and Warehouse Company was organized about February last for the purpose of purchasing the Kentucky distilleries—solely Kentucky distilleries. I should like to refresh my memory with figures as I go along, if you will permit me.

Q. Certainly.—A. (Referring to memorandum.) It was organized with an authorized capital of \$12,000,000 of preferred stock and \$20,000,000 of common stock.

Q. What was the nature of the preferred stock?—A. Seven per cent cumulative. \$10,500,000 of the preferred stock and \$18,500,000 of common stock was issued by the company for property purchased and for a working capital of \$1,500,000; and the properties acquired by the company through the issue of said stock were and are the Kentucky distillery properties now owned by that company, together with about 90 per cent of the standard brands of Kentucky whisky.

Q. Do I understand the distilleries cost in cash \$10,500,000?—A. The distilleries and brands cost the company, together with the working capital of \$1,500,000, \$10,500,000 preferred and \$18,500,000 of common stock, as I have stated. A proposition was made to the company to transfer the various Kentucky distilleries now owned by the company, together with \$1,500,000 of cash-working capital, for the full-paid stock as stated. This left in the treasury unissued \$1,500,000 of preferred stock and the like amount of common stock. Of the other subsidiary companies I have, as I have stated, no knowledge in their beginning. When I came into this matter they were in existence and operating. Their capitalization is as follows, or was at that time: The American Spirits Manufacturing Company, \$7,000,000 of preferred and \$28,000,000 of common; the Spirits Distributing Company, \$1,250,000 of first preferred and \$1,575,000 of second preferred and \$3,675,000 of common.

Q. Will you give, in connection with the amount of the preferred, the nature of it; for instance, the first preferred, what was the per cent?—A. I think that is 6 per cent.

Q. You have not the figures?—A. No. The Standard Distilling and Distributing Company, \$8,000,000 of preferred and \$18,000,000 of common.

DISTILLING COMPANY OF AMERICA.

The Distilling Company of America was incorporated about 3 or 4 months ago. It was created for the purpose of purchasing the stocks of the 4 companies I have mentioned, and it has purchased on an average 95 or 96 per cent of these stocks and is to-day the owner of them. The capital of that company is \$55,000,000 preferred, \$70,000,000 common, of which \$23,750,000 remains in the treasury of the company. The balance was paid for the stock of the underlying companies and for the Philadelphia Pure Rye Distillery, for the money subscribed for the purchase of the Hannis Distilling Company's distilleries, and \$1,500,000 for treasury working capital. The Distilling Company of America is not an operating company; it is simply a majority stockholder in these subsidiary corporations; incorporated under the laws of New Jersey.

ADVANTAGES OF CONSOLIDATION.

Q. What was the purpose of bringing these 4 companies together into this new company, which should not be an operating company but which should simply control the majority stock of each one of them?—A. It was believed that by securing harmonious operation in this way they would all be much more effective, as they certainly are, than operating separately. For example, the business is very much furthered by preventing the manufacture of spirits in the State of Kentucky and the manufacture of whiskies outside the State of Kentucky—outside of the territory where the alcohol is made; both companies benefit largely from that fact. Also, it was possible to use, of course, more harmoniously the great distributing machinery of the distributing companies for the selling of Kentucky whiskies, and thereby make a great saving in the expenses; and the benefits are endless. Any great business of that order controlling every branch of the business naturally works to the advantage of all. Through all these houses we supply a wholesale dealer with everything he uses in domestic goods, and with the sale of one of course we get the trade of the others; so they are all benefited.

CONTROL OF CONSTITUENT COMPANIES—PERSONAL POWER OF DIRECTORS.

Q. The officers of the Distilling Company of America are in a position to direct, as much as they think wise, the action of each one of these separate companies?—A. They naturally, as majority stockholders, control the board of directors of underlying companies; that is to say, they have men who are guided by their policy and advice in the board of directors.

Q. You spoke of the officers of the Distilling Company of America being majority stockholders in the company?—A. I mean officially so, of course.

Q. Is it true that the directors have personally a majority of the stock?—A. They do not own it personally, but do control it. The directors have a very large percentage of the stock, and their friends have a great deal, and they have a very large following. They are men who understand the business thoroughly and have the confidence of the stockholders, and, of course, control a majority of the stock in that way; but they do not own it in person.

METHOD OF CONSOLIDATION.

Q. Will you explain more in detail than you have done the plan by which the stocks of these different companies were purchased with stock of the Distilling Company of America?—A. The Central Trust Company of New York received as trustee, or whatever the relation might be, the stocks of these merger or underlying companies in exchange for the stock of the Distilling Company of America, upon a basis which you have there, I believe, which was offered through the public press, giving a certain percentage such as they deemed best for these different stocks. Of course they purchased them not upon an equal basis, because the earning capacity of these different companies was not equal. They tried to do it as equitably as possible, and offered as equitable prices as possible upon the basis of their earning capacity. For example, the Kentucky Distilleries and Warehouse Company received 85 per cent of preferred and 15 of common for its preferred stock, and 70 per cent of common for the common stock. That is, 70 per cent of the common stock of the Distilling Company of America for the common stock of the Kentucky Distilleries

and Warehouse Company. The others were proportionate, as their earning capacity was estimated.¹

Q. In order to carry out this plan of combining these different organizations into one you had a committee on organization appointed to attend to the work?—A. Yes.

Q. This committee on organization was appointed by whom?—A. It was largely influenced by those men who owned a great deal of stock. This thing was gotten up, of course, for the purpose of carrying through the combination of these entire properties for the trade reasons I have given you, and these men who were very heavily interested in the stock were naturally the movers in that thing.

Q. In selecting a committee?—A. Yes.

PROMOTERS' PROFIT.

Q. I notice that in the proposition made here, it is stated that there was put into the hands of these organizers \$31,250,000 preferred and \$46,250,000 of com-

¹ The following is the deposit agreement under which the consolidation was effected:

Whereas P. Lewis Anderson and Henry D. Macdonia, both of the city and State of New York, hereinafter called organizers, propose to create under the laws of the State of New Jersey, or of some other State to be approved by the counsel of the organizers, a corporation, to be known as The Distilling Company of America (or some other name satisfactory to the organizers), hereinafter called the corporation, the object of which corporation shall be, among other things, the manufacture, sale, distribution, and warehousing of whiskey, spirits, and alcohol, which corporation shall have an authorized capital stock of one hundred and twenty-five million dollars (\$125,000,000.00), consisting of fifty-five million dollars (\$55,000,000.00) preferred stock, evidenced by five hundred and fifty thousand (550,000) shares of seven per cent. (7%) cumulative preferred stock, and seventy million dollars (\$70,000,000.00) common stock, evidenced by seven hundred thousand (700,000) shares of common stock. The charter of the corporation shall contain such other provisions as the organizers and their counsel may approve; and

under the law
five per cent. (5%) noncumulative preferred stock and twenty-eight million dollars (\$28,000,000.00) common stock;

(b) Kentucky Distilleries and Warehouse Co. (hereinafter called Kentucky Co.), organized under the laws of New Jersey, having an issued capital stock of ten million five hundred thousand dollars (\$10,500,000) seven per cent. (7%) cumulative preferred stock and eighteen million five hundred thousand dollars (\$18,500,000.00) common stock;

(c) Spirits Distributing Company (hereinafter called Distributing Co.), organized under the laws of New Jersey, having an issued capital stock of one million two hundred and fifty thousand dollars (\$1,250,000.00) six per cent. (6%) cumulative first preferred stock, one million five hundred and seventy-five thousand dollars (\$1,575,000) two per cent. (2%) noncumulative second preferred stock, and three million six hundred and seventy-five thousand dollars (\$3,675,000.00) common stock, all of said common stock being now owned by the Standard Distilling and Distributing Company, hereinafter referred to;

(d) Standard Distilling and Distributing Company (hereinafter called Standard Co.), organized under the laws of New Jersey, having an issued capital stock of eight million dollars (\$8,000,000.00) seven per cent. (7%) cumulative preferred stock and sixteen million dollars (\$16,000,000.00) common stock; and

Whereas the organizers contemplate that the corporation shall acquire and become the owner of at least a majority of the entire issued capital stock of the Manufacturing Co., of the Kentucky Co., and of the Standard Co., and of each of them, and shall also acquire and become the owner of at least a majority of the entire issued preferred stock of the Distributing Co.; and

Whereas the organizers contemplate that the corporation shall acquire and become the owner of either the rye properties hereinafter named or of the entire capital stock (less such nominal number of shares as shall be necessary to qualify directors thereof) of a certain other company which may be organized (which other company is hereinafter called Rye Co.), and which Rye Co., if organized, shall acquire by purchase or otherwise become the owner of the following rye distilling properties:

(a) At least ninety-five per cent (95%) of the entire capital stock of Hannis Distilling Company of Philadelphia and Baltimore; and

(b) St. Paul Distillery; and

Whereas the organizers further contemplate that the corporation shall be furnished with a cash working capital of at least one million five hundred thousand dollars (\$1,500,000.00); and

Whereas the organizers contemplate that the corporation shall retain in its treasury enough of its preferred and common stock with which to enable it to acquire, if in its discretion it should so desire (but without any obligation so to do), by exchange or purchase, or otherwise, all of the remaining stock of the Manufacturing Co., of the Kentucky Co., of the Standard Co., and of the preferred stock of the Distributing Co., upon the same or a similar basis to that herein provided for the acquisition of said majority stock of the Manufacturing Co., of the Kentucky Co., of the Standard Co., and of said majority preferred stock of the Distributing Co.; and

Whereas the organizers further contemplate that in addition to so much of its preferred and common stock that is to remain in the treasury of the corporation for the acquisition by the corporation of the remaining stock of the Manufacturing Co., of the Kentucky Co., of the Standard Co., and of the preferred stock of the Distributing Co., as hereinbefore recited, the corporation shall also retain in its treasury for future purposes twenty-three million seven hundred and fifty thousand dollars (\$23,750,000.00) of its preferred stock and twenty-three million seven hundred and fifty thousand dollars (\$23,750,000.00) of its common stock; and

Whereas it is further contemplated that the organizers shall, as a purchase price, receive from and be paid by the corporation thirty-one million two hundred and fifty thousand dollars (\$31,250,000) of its preferred stock and forty-six million two hundred and fifty thousand dollars (\$46,250,000.00) of its common stock for all of the said issued capital stock of the Manufacturing Co., for all of the said issued capital stock of the Kentucky Co., for all of the said issued capital stock of the Standard Co., and for

mon stock, for the purchase of the entire stock of all these four companies, which on the basis laid down in the plan makes \$20,540,000 of preferred and \$32,890,000 of common stock. That leaves a surplus in the hands of these organizers of \$10,710,000 of preferred and \$13,360,000 of common; what use was to be made of that surplus left in their hands?—A. That was to pay as far as it was required for the stock of the underlying companies not yet deposited with the Central Trust Company. Of course there is still outstanding stock of these companies.

Q. The \$20,540,000 of preferred and \$32,890,000 of common stock is made up on the basis of taking in all of the common and all of the preferred stock of these com-

all of the said issued preferred stock of the Distributing Co., and for said one million five hundred thousand dollars (\$1,500,000.00) cash working capital, and for said rye properties or the entire capital stock of said Rye Co., less the directors' qualifying shares aforesaid, and that for every said share of said stock of the Manufacturing Co., the Kentucky Co., the Standard Co., and the Distributing Co., not turned over and transferred by the organizers to the corporation, there shall be deducted and retained by the corporation from said purchase price an appropriate amount of the preferred and common stock of the corporation, calculated upon the basis hereinafter specified; and

Whereas for the purpose of carrying out this agreement the Central Trust Company of New York (hereinafter called Trust Company) is hereby designated and made the depository hereunder; and

Whereas the undersigned are respectively the holders and owners of the certain number of preferred and common shares of said Manufacturing Co., of the Kentucky Co., of the Standard Co., and of the preferred stock of the Distributing Co., set opposite their respective names; and

Whereas the undersigned are willing and desire to sell, transfer, and assign their said respective shares to the organizers, for and in consideration and upon the basis of the exchange hereinafter specified;

Now, therefore, in consideration of the premises and in further consideration of the sum of one dollar (\$1.00) to each of the undersigned by the organizers in hand paid, the receipt of which by each of the undersigned is hereby respectively acknowledged, the undersigned do hereby severally, but not jointly, agree to and with the organizers as follows:

I. The undersigned do hereby severally agree to sell to the organizers and do deposit with the Trust Company, properly indorsed in blank, and bearing the proper revenue stamps, certificates representing certain of the preferred and common shares of the Manufacturing Co., the Kentucky Co., the Standard Co., and of the preferred shares of the Distributing Co., the amount of which is designated opposite their respective names. The Trust Company shall issue appropriate temporary negotiable receipts evidencing such deposits.

II. For each of said preferred shares and each of said common shares so deposited hereunder the undersigned respectively shall be entitled to receive from the Central Trust Company, when this agreement shall have become operative and when and as the new securities shall have been received by said Trust Company, the following:

For every said preferred share of the Manufacturing Co. fifty per cent (50%) thereof in preferred stock of the corporation;

For every said common share of the Manufacturing Co. twenty-five per cent (25%) thereof in common stock of the corporation;

For every said preferred share of the Kentucky Co. eighty-five per cent (85%) thereof in preferred stock and fifteen per cent (15%) thereof in common stock of the corporation;

For every said common share of the Kentucky Co. seventy per cent (70%) thereof in common stock of the corporation;

For every said preferred share of the Standard Co. eighty-five per cent (85%) thereof in preferred stock and fifteen per cent (15%) thereof in common stock of the corporation;

For every said common share of the Standard Co. sixty per cent (60%) thereof in common stock of the corporation;

For every said share of the first preferred stock of the Distributing Co. eighty per cent (80%) thereof in preferred stock and twenty per cent (20%) thereof in common stock of the corporation.

For every said share of second preferred stock of the Distributing Co. twenty per cent (20%) thereof in preferred stock and twenty per cent (20%) thereof in common stock of the corporation.

III. This agreement shall not become binding, operative, and effective unless there shall have been deposited hereunder with the Central Trust Company or under similar agreements certificates representing a majority of the entire issued capital stock of the Manufacturing Co., Kentucky Co., Standard Co., and of each of them, and of the preferred stock of the Distributing Co.

The Central Trust Company may, in its discretion, in lieu of the actual deposit with it of certificates for shares, accept an agreement in writing to make such deposit upon five days' notice from the Trust Company so to do; and the deposit when made shall be deemed to have been made within the time limited or extended as herein provided. In computing a majority of stock to render this agreement operative there shall be included any and all shares as to which obligations to deposit the same shall be accepted by the Trust Company.

IV. When this agreement has become binding, operative, and effective the Central Trust Company shall deliver to the State Trust Company all of the stock deposited hereunder upon the Central Trust Company receiving from the State Trust Company shares of stock of the corporation adequate and sufficient to pay the said purchase price of the stock so deposited hereunder.

V. June 30th, 1899, is hereby designated as the date of the expiration of the time for the deposit of the shares hereunder, but such time may be extended, not exceeding thirty days thereafter, by agreement between the organizers, the Central Trust Company, and the State Trust Company; and in case the State Trust Company shall not within thirty days after said June 30th, 1899, or after the expiration of any extended time, notify the Central Trust Company that the organizers are ready to complete the purchase of the shares so deposited hereunder, the shares deposited hereunder shall be returned by the Central Trust Company without charge to the depositors of the same respectively or to the holders of said receipts upon the surrender to the Central Trust Company of said receipts duly endorsed.

VI. For purposes of convenience copies of this instrument may be signed, and when so signed all of such copies shall be considered as originals, and signatures thereto shall be considered the same as though appended to one copy hereof.

VII. The deposit with the Central Trust Company of shares hereunder shall have the same force and effect as though the one making such deposit signed this instrument.

Dated New York, June 21, 1899.

panies on the basis suggested.—A. There was a certain amount of this stock which went to the subscribers for the \$3,500,000 that was used to purchase the Hannis properties and this \$1,500,000 working capital. That stock was divided. I can not tell how that was done. There was a bonus given with the stock, as is always given in these matters, to those who subscribed that \$3,500,000. There was \$3,500,000 of cash paid into this Distilling Company of America proposition, and the subscribers got the preferred stock and a bonus of common stock.

Q. I had understood from the statement you made before there was about \$1,500,000 paid in?—A. No; \$1,500,000 of working capital, and about \$2,000,000 was paid for the Hannis properties.

Q. Do you include in that the St. Paul property?—A. The Hannis and the St. Paul.

Q. That was \$2,000,000?—A. That was \$2,000,000.

Q. That was paid in cash?—A. That was paid in cash.

Q. Was there any other obligation left upon these organizers of the companies besides turning over this stock, and turning over the Hannis and St. Paul distilleries?—A. No.

Q. That discharged their obligation?—A. Yes.

Q. After they have turned over all this stock of these different companies with these two distilleries the rest is their profit as promoters?—A. That is right.

ANNUAL REQUIREMENTS FOR PREFERRED STOCK INCREASED.

Q. At about what price is the preferred stock of the Distilling Company of America selling?—A. About 43, I think.

Q. And the common?—A. About 14.

Q. In this organization that was made of these different companies was there a reduction or an increase of the fixed charges for interest, for dividends on the preferred stock, etc., made by the combination?—A. I do not think I quite understand your question.

Q. Taking all the preferred stocks of the original companies, of course, there was a certain interest charge that was required. Under the new company there is a preferred stock of— A. \$31,250,000.

Q. Seven per cent. Now, has the charge upon the company as a whole been increased by the change or decreased?—A. Slightly increased.

Q. Do you recollect the increase?—A. About \$250,000 a year, I think; in that neighborhood. The preferred capitalization has increased from about \$28,325,000 to \$31,250,000—about \$250,000 increase. I can not say exactly, because I do not know exactly the rate of interest on the old preferred stock; but it is about \$250,000, I think.

DIVIDENDS.

Q. Do you recollect whether the American Spirits Manufacturing Company had before paid its dividends on its preferred stock?—A. It had not.

Q. Do you recollect whether the other companies had?—A. The Standard Distilling and Distributing Company had, the Kentucky Distilleries and Warehouse Company had paid one dividend, and the Spirits Distributing Company had paid dividends.

Q. Three had?—A. And the other had not.

Q. Under the new organization either all would have to be paid or none. The point is this: Before, the preferred stock was divided into five different parts; two

¹ See tabular statement as follows:

Stock of companies consolidated and annual requirements of preferred stock.

Companies consolidated. (See deposit agreement, p. 820, footnote.)	Preferred stock.	Annual requirement.	Common stock.	Stock of Distilling Company of America required for complete exchange.	
				Preferred stock.	Common stock.
Manufacturing Co.	\$7,000,000	\$350,000	\$28,000,000	\$3,500,000	\$7,000,000
Kentucky Co.....	10,500,000	735,000	18,500,000	8,925,000	14,525,000
Standard Co.....	8,000,000	500,000	16,000,000	6,800,000	10,800,000
Distributing Co...	1,250,000	75,000			
	1,575,000	21,500	8,675,000	1,315,000	865,000
Total	28,325,000	1,751,500	66,175,000	30,540,000	33,290,000

The annual dividend requirement of \$30,540,000 7 cent preferred stock of the new company is the old preferred stocks.

might and the other three might not pay dividends; but in the reorganization with this added charge, unless all can be paid I assume none can be paid?—A. You must not confuse the subject. The underlying companies are absolutely independent of the Distilling Company of America. These companies will declare their dividends upon their earnings if the directors think right, just as they have done in the past. Of course, it is true the Distilling Company of America will not declare a dividend, except for the benefit of all that part of the holding that was paid for these stocks, but the underlying companies still continue—some to declare dividends, others not.

Q. So far as the minority stockholders are concerned, they are in the same position as before?—A. Absolutely; undisturbed.

Q. The funds from which the Distilling Company of America must pay its dividends, if at all, come from the dividends of these different companies and from the profits of these new companies—the Hannis Company and others?—A. That is right; I will say these rye companies are to be incorporated in the Rye Distilling Company; so that will be a subsidiary branch of this whole organization.

Q. That is something contemplated?—A. A new company will be formed to include these rye distilleries.

Q. Under these circumstances that will stand as another subsidiary company, all of whose stock will be held by the Distilling Company of America?—A. That is right.

ADVANTAGES OF NEW JERSEY CORPORATION LAW.

Q. You said a moment ago that this new company, the Distilling Company of America, was organized under the laws of New Jersey. Where were the other companies that have gone into the combination organized?—A. The Kentucky Distilleries and Warehouse Company is also organized under the laws of New Jersey. I can not say positively, but my impression is that the Spirits Distributing Company and the Standard Distilling and Distributing Company are also New Jersey organizations; but the American Spirits Manufacturing Company is organized under the laws of New York.

Q. We have had some testimony in the last 2 or 3 days with reference to the reasons why these larger organizations in so many cases incorporated under the laws of New Jersey; what, in your judgment and the judgment of the other men in this organization, were the reasons for your organizing in the State of New Jersey instead of New York or Kentucky?—A. Less taxation for one thing, and immunity from liability on the part of the stockholders and officers under certain conditions. We do not have to publish reports, for instance, as we do in New York and some other States. These are the reasons, so far as I understand them.

Q. With reference to the publishing of reports that you have just spoken of, there are, I believe, under the statutes of the State of New Jersey, certain annual reports with reference to officers that are to be filed?—A. The report to which I referred is the annual report filed in New York, which if not filed makes the officers liable for the existing indebtedness. No such report as that has to be filed in New Jersey. We do have to file a report giving the names of the officers, etc., but the failure to report does not, as I understand it, subject the officers or stockholders to any debts of the organization. I may be wrong; I am not a lawyer.

COMPLIANCE WITH NEW JERSEY LAW.

Q. Do you know whether these annual reports have, as a matter of fact, been filed in the State of New Jersey?—A. Of our companies?

Q. Of the four companies?—A. Yes; I think they have all been filed; that is my understanding.

Q. Have you kept for each one of these companies a regular transfer office in the State of New Jersey?—A. Yes.

Q. Can you give the name and address of your New Jersey agent?—A. The Kentucky Distilleries and Warehouse Company, and the Standard Distilling and Distributing Company, and the Distilling Company of America have as their agent Mr. A. Q. Garretson, whose office is at No. 1 Exchange place, Jersey City, N. J. The Spirits Distributing Company is represented by Mr. George P. Vickers, 243 Washington street, Jersey City, N. J.

Q. Are the certificate and transfer books of these three companies you have mentioned as represented by Mr. Garretson kept in his office?—A. It is my understanding that duplicates of them are kept there, and that the stock is received there when presented. The general transfer books are kept in New York City, but at any moment, if required, they would be sent over there if needed for any purpose. They are kept there merely as a matter of convenience. We keep duplicates there at Garretson's office.

Q. The stock has been received there and stock has been transferred there?—A. Yes.

Q. Is there kept in Mr. Garretson's office a list of the stockholders, with address and amount of holdings?—A. Yes.

Q. Kept posted up to date?—A. I understand so.

Q. Has that been true?—A. In the past?

Q. Yes.—A. So far as I know since I have had anything to do with the matter; yes.

Q. Since you have been an officer?—A. Since I have been an officer. I have not personally seen the books, but it is my understanding that has been done all this time.

Q. So with reference to the other special matters required by New Jersey law, has Mr. Garretson kept posted in a conspicuous place the names of these companies he represents?—A. That has been done continuously.

Q. Can you make the same statement with reference to Mr. Vickers?—A. Yes.

Q. With reference to the stock and transfer books also?—A. Yes.

INTERNAL-REVENUE RECEIPTS WOULD BE GREATER IF THE RATE WERE LOWER.

Q. If the question were asked about the opinions of those in the spirits manufacturing business in this country as to an abatement of the internal-revenue tax, could you make any statement on that point?—A. Personally I think the tax rate is too high for the greatest revenue to the Government. I think they would get a greater revenue at 90 cents, or even a little less, than they do at the present time. Our companies are not interested in that question particularly; I can not say that we should not be like everybody else, glad to see the tax rate reduced; but I do not think we would ask for it. There are some administrative features of the law we should very much like to see changed, but I do not think we would ever take any action to reduce the tax on whisky.

OBSTRUCTIVE REVENUE REGULATIONS.

Q. What changes would you suggest?—A. In the administrative features of the law!

Q. Yes.—A. That is a very long story. The law is very obstructive and needs many changes. We are terribly hampered, for instance, in our export business. We have not the privilege, for example, of exporting bottled whiskies in bond to foreign countries. We are not permitted to bottle and retain in a bonded warehouse until we have orders for shipment, and consequently our exports are delayed two or three months putting up special lots of export goods. We certainly should have the privilege of keeping these goods in our warehouse, bonded, the same as barrels. We can not detain at seaboard either; we are no better off there; but must send them right out as soon as they are put up. Just to show you how remarkable the law is in many respects, we have the privilege of exporting whiskies on which the tax is paid and obtaining a refund on the whisky. The tax is kept at \$1.10. When we export whiskies that have paid \$1.10 we can only obtain a refund of 90 cents, because the law was not changed to include the change in the tax rates. There are thousands of such things going on every week that are obstructing our business and from which the Government obtains no revenue or protection. There are any number of instances of obstruction of distilleries that are perfectly ridiculous, that have no bearing on the Government's revenues and still hamper us in our business."

ILLICIT DISTILLING; THE RESULT OF TOO HIGH A TAX.

We have found this a very serious matter, one which interests the Government as well as us. In this country to-day there are hundreds of distilleries, little bits of distilleries, making everywhere from 1 barrel to 10, 15, or 20 barrels, that can not be reached by the Government because the expense would eat up the revenue; and they are making whisky illicitly every day in the year. There certainly ought to be some method provided. I would suggest myself a very high license tax, so as to prevent a man from running such a distillery so long as the laws are as they are; and if necessary a man should not be permitted to make whisky unless on a sufficiently large scale to justify putting a Government officer there to watch it and see that the Government got the tax on the whisky. Of course, we are interested in that because we pay our taxes, and the Government is interested because it wants to collect its tax. The reduction of taxation is something that we certainly can not say anything about. I do personally believe that the Government can collect more if

of course, if you reduce the tax to 1

¹ See Mr. McNulta, pp. 229-234; Mr. Cook, p. 243; Mr. Luyties, p. 251.

² See Mr. Clarke, pp. 182, 183; Mr. Luyties, p. 259.

the incentive is not great enough they will stop of their own accord. If you go to 75 cents, they will not make any to speak of. At 90 cents they will make comparatively little.

Q. Your judgment would be that with a tax of 75 cents and a more complete collection of the revenue, the revenue would be as great?—A. In my judgment, it would be greater.

Q. As low as 75 cents?—A. I think so. The statistics of the revenue department show the greatest revenue per capita was at that rate, and every increase has lessened it ordinarily. It does not come, in my opinion, from the increased use. If a man wants whisky, he buys it, whether at \$1.10 or less; but it comes from removing the incentive to illicit distilling and robbing the Government.

Q. (By Mr. FARQUHAR.) Have you any estimate of the whole amount of this illicit distillation—the increase?—A. No; no one can tell that. We only judge from the unlimited opportunity that men have to carry on that traffic, and from the very great number of seizures made of illicit stills, which is only a small percentage of the number of those engaged.¹ Many of them have been running for years before they are caught. The statistics show that every increase beyond 75 cents has lessened the Government's revenue; and that, to my mind, shows how great the illicit distilling is.

ILLICIT STILLs ALL OVER THE UNITED STATES.

Q. How wide is the distribution of these illicit stills? Is it local?—A. Oh, not at all; it is all over the United States.

Q. Over the United States?—A. All over the country; greater, perhaps, in the Atlantic States, in the mountains of the Atlantic coast and in Tennessee than anywhere else. I simply made that statement because there the greatest seizures are made; but the thing is done right along in New York City. Some of the biggest illicit seizures are made in New York City. Only a few months ago one was seized there, making a barrel a day of whisky; and it had been running for two or three years within two or three blocks of the office of the chief of internal revenue—right in the middle of our city. What is to prevent if the incentive is sufficient? I can run a still in my house on Fifth avenue for five years and defy them to catch me.

PROFITS OF ILLICIT DISTILLING.

Q. (By Mr. JENKS.) How expensive is it to put up a still that will manufacture a barrel a day?—A. It could be done for \$100; but the profits are simply terrific. They make a profit of \$30 or \$40 a barrel; even selling at the actual cost of whisky to those who pay the revenue.

Q. (By Mr. FARQUHAR.) How large would the distillery have to be to justify the Government in keeping officers there?—A. It is customary to run a distillery about 200 days in the year. It does not run very satisfactorily in hot weather, especially these little houses where the facilities are poor. The cost of the Government officers would be probably about \$2,500 a year to the Government, and they would have to stay there after the operations had been suspended to guard the whisky that had been made; that would be about \$8 per day, and the Government's revenue would be about \$40 on the barrel at the present rate. They could well afford to put two men there to guard that distillery if they were making a couple of barrels a day—that would be about 25 bushels—but they do not do it. I have a little plantation in North Carolina where I go to shoot quail. I know a man worth \$250,000, and he has no vocation on the earth except running a little still on which by no possible chance could a man make his daily bread if he paid the tax; and he is a very rich man. It is only about a 20-bushel house, but he is the richest man in that section of the country, and owns about 30,000 acres of land. It is not so very valuable land; but he is rich; he is a man very well up—a great politician, by the way, and runs the whole county.

RETAILING AND CONSUMPTION OF ILLICIT WHISKY.

Q. (By Mr. KENNEDY.) Do you know anything about the sale of illicit whisky to the retail trade?—A. I have a good deal of knowledge on that.

Q. Do the illicit distilleries divide their gain with those who sell it?—A. They have to give a little of it, as the stuff is very poor and they have to give a bid for the business. They do not give much. I own two very valuable trade-marks, the Old Crow and the Hermitage. These trade-marks are pirated all over the country, and I have a man seeking constantly for the infringers of them among the retail trade. I got one year in New York City over 3,000 bottles of whisky bearing these labels. At least 80 per cent of that was illicit whisky. Of course, most of these infringements occur in the dives, you know.

Q. How do you know that?—A. It is the simplest thing in the world. It is very

¹ For the number of seizures, see p. 843.

poor, has got a nasty sort of smell, and anybody familiar with it can tell the instant he puts his nose over it. I know, of course, that was supplied by these fellows to the tenement houses all around the city—to these men in small quantities and bottled; and there, of course, the Government officers absolutely lost trace of it. There is no way you can trace it there, and it is a favorite method of distillers of the illicit stuff. I have informed the internal-revenue officers, but they did not seem inclined to take it up. There is no question the country is full of it.

Q. Does it reach the better class of retail places?—A. Very little. The quality is too bad for that. I think the great majority or bulk of it is stored in the locality where it is produced, probably. The difficulty of transportation of that stuff, where it is made in the country, would make it probable that its use is confined to the immediate neighborhood of the stillhouse. This stuff I am speaking about is no doubt made in the big cities, where it is easy to get it into the saloons without discovery; but the thing is going on to an enormous extent; there is no doubt of that. How much, you can not tell, until you reduce the whisky tax. That is the only way you can get at it; but you are offering a tremendous premium now for it. You know, I suppose, that during the civil war, when you raised whisky to \$2, the revenue ceased; the Government got no revenue; practically nothing at all.

Q. (By Mr. JENKS.) Then it dropped back to 50 cents?—A. Then 50 cents, and it went to a tremendous figure; and 75 cents was found to be the greatest revenue-producing rate. This is too great a country to watch that thing, you know; you can do it in England; they do it after a fashion, because they cover every few acres with a revenue officer; but you can not do it here.¹

CHEAP WHISKIES.

Q. You said some time ago that one of your companies, I think it was the American Spirits Manufacturing Company, had one large distillery which manufactured cheap whisky?—A. Well, all these distilleries of the Standard Distilling and Distributing Company make so-called whisky; it is not whisky; it is proof spirits, put up in charred barrels so it is colored, you know, and sold for cheap whisky.

Q. I was going to ask you to explain that.—A. It is not whisky, technically; technically whisky is not rectified; that is to say, it is not run through charcoal, so that all the impurities are taken out of it, all the essential or fusel oil; it is the crude distillation for the fermentation of the grain or mash, and depends upon the aging or oxidation that occurs in time to remove these oils and fusel alcohols. That is, strictly speaking, whisky; the other is spirits, but put up in a shape that causes it to be designated whisky in the trade.²

Q. Is the price such that it pays to make that stuff in any large quantity instead of making the pure spirits?—A. The cheap whiskies you have reference to?

Q. Yes.—A. Those whiskies are usually sold for a very trifle over the spirit price; they do command a little bit higher price; you see they are in condition to be bought by the retailer and used, as he gets them. The high-proof spirits must be rectified under the rectifiers' license, changed into other packages, reduced with water; that a small man is not prepared to do; so it does command a price a very trifle higher.

THE YIELD PER BUSHEL OF CORN.

Q. In connection with the figures you said you would furnish me with reference to the price, the monthly price of corn and spirits, could you add also the average yield per bushel of corn?—A. Yes.³

Q. And I should be glad if you could run that average yield back, say, ten years; the annual average.—A. I can give you the approximate yield.

Q. The average yield from corn made by your distilleries now, I suppose, is higher than the reports of the internal revenue would show?—A. I suppose so.

Q. You can tell us the yield approximately?—A. Yes. The yield in the alcohol distilleries in so-called finished goods, that is, high wines, after it has been rectified in charcoal, is about 4.80 gallons of proof spirits per bushel. The yield of the whisky distilleries of Kentucky, for instance, is about the same, but that is not what corresponds with the high wines of the alcohol distillery, and would be reduced to about 4.60 or 4.65 gallons after the product is rectified; it is now barreled just as it comes from the still, so that the yield in the alcohol distilleries is a little greater.

PRICE QUOTATIONS—HIGH WINES—PROOF SPIRITS.

Your basis for quotation of prices is proof spirits, now, is it?—A. Yes. Some years ago it used to be high wines?—A. Yes.

¹ For table of revenue and apparent consumption at different rates, see p. 843.

² See Mr. Clarke, p. 148.

³ See p. 115.

Q. If a person is to make a comparison between early prices of high wines and the present prices of proof spirits?—A. It makes no difference.

Q. It is substantially the same?—A. The term high wines was more descriptive of a kind of product, and prices were based after all upon proof gallons, so that makes no difference.

Q. The prices were the same although the name is different?—A. They were the same; yes.

COMPOUNDING OF WHISKIES.

Q. In connection with the business of any one of these four companies, do you do any compounding of whiskies?—A. Yes. The Standard Distilling and Distributing Company's branches compound and make up all combinations in which spirits are used for distribution to the trade in such forms as they require them. You see, for instance, in New York, the distilleries "bring down" the high-proof alcohol, as it is technically termed; they reduce it with water, and barrel it half proof or of such strength as desired, sometimes adding some whisky to it. That is done in all our branches.

Q. You make practically any kind of whisky that the trade wants?—A. Anything that is wanted we make.

KENTUCKY WHISKIES.

It might interest you, possibly, a little, to hear about our Kentucky business, prices, etc.

Q. Yes.—A. We acquired, in our purchases of the Kentucky distilleries, as I have said, some fifty-odd distilleries, and among them nearly all of the valuable trade-marks in Kentucky. There are but very few left outside. Now, trade-marks, of course, enable us to obtain a better price for the product than if they were staple goods without a name. To the extent that we manufacture these we are charging prices that are a little lower, but not much, than prices heretofore charged by the previous owners, over a series of years, on the average. In the very large staple whisky distilleries, however, which we have built, and which are now operating, we are producing a very good whisky and selling it at 15 cents a gallon, which is easily the lowest cost ever known of any whisky made in the State of Kentucky; and that we are selling all over the United States to anybody who wants it—a good whisky, but without a trade-mark. It is impossible for any distillery in the State of Kentucky, outside of this company, to produce that for 15 cents; they can not make it. Of course, in doing that we are serving the real purpose that this combination was intended to serve by evolution.

Q. Cheap production?—A. Cheap production; we still make a profit on that whisky.

THE POLICY OF LOW PRICES.

Q. I understood you to say that your prices were now made uniform, under the latest plan?—A. The alcohol prices?

Q. Yes. Would you not, under these circumstances, cut in special localities, to protect your custom against any competitor that came in?—A. No. Our policy now is definite for a year ahead, and we are making contracts a year ahead with anybody who wishes to make them at that price—\$1.23—for high proof, and we propose to adhere to that without any regard to what competitors do. We do not aim to monopolize the business. It is not necessary to do that. You can make all the money you want by simply keeping down to the price where the industry will not be increased as to production.

Q. You are making your prices an absolute price, for a year ahead, of \$1.23, regardless of what the price of corn is?—A. No; that is based upon the corn price—always upon 30-cent corn. Of course, all these prices are based upon a stipulated corn price.

Q. Then, as a matter of fact, this \$1.23 is simply based on 30-cent corn; if the price of corn goes up the price of whisky goes up to correspond, and if it lowers, in the same way?—A. Yes. We believe that alcohol can not be made in the United States by anyone for less than \$1.20, and if they are selling it for less they are selling it at cost. We are making a fairly good profit, good enough, and we propose to continue on that basis indefinitely. If we put it much higher we shall have competition as sure as we are alive. The trust, or so-called trust, is not proof against competition.

RYE WHISKY COMBINATION.

Q. How long has there been a rye whisky combination that has been large enough and complete enough to be really efficient in making economies in the trade?—A. Rye whisky?

Q. Yes.—A. There never was such a thing until we had purchased these few distilleries.

COMPOUNDERS INCREASING—NO DISCRIMINATION.

Q. (By Mr. FARQUHAR.) Is the business of compounding—that is, the business of compounding that is done independent of distilleries—on the increase or decrease in the country?—A. On the increase.

Q. Do your companies give any advantage to the compounders over and above other dealers in proof spirits?—A. Right along, you mean?

Q. Yes.—A. You mean do we in our sales?

Q. Yes.—A. No, sir; no discrimination whatever.

KENTUCKY WHISKIES—OUTPUT—PORTION CONTROLLED.

Q. How far does your combination control the output of Kentucky?—A. We have, as nearly as I can estimate—you see we have not yet demonstrated, because we have only run 6 months; we have about 14½ million gallons out of probably a production in Kentucky of 20 million gallons. Of course, the part that this very cheap whisky of ours is to play in this matter remains to be demonstrated. It may monopolize more of the business than we think. It probably will encroach more upon the business of the distillers as years pass, until we get even a greater percentage of it through manufacturing and selling so cheaply, but my estimate for this year would be what I stated.

FEW PERMANENT FORTUNES HAVE BEEN MADE IN WHISKY.

Q. You said that you had been for 27 years in the distilling business?—A. Yes.

Q. Do you think that a great many permanent fortunes have come out of the distilling business in this country?—A. Very few.

Q. And yet there have been enormous profits?—A. Enormous at times. The whisky business is one of great booms and great depression, due to the law at times and to the fact that it is an article that is accumulated in enormous quantities and stored. That causes tremendous depression and enormous booms, you know. It is a very peculiar business in that regard, and it is only a very few men that have passed through different stages of it and come out with money. I know perhaps half a dozen men in the country who have considerable fortunes.

EXPORT TRADE—UNNECESSARY LEGAL RESTRICTION.

Q. (By Mr. JENKS.) Have you some further general information to give? I notice you have some other notes.—A. I have a table of exports here indicating possibly a stimulation of the export of manufactured products to foreign countries, due to the lessening of cost of production through these combinations. Of course that is familiar to you. I thought you might ask my views on that subject, and I prepared myself to tell what I thought of it.

Q. I should be glad if you would elaborate a little upon the effect of combination in the export trade.—A. In our own peculiar business we have had but little time to demonstrate this thing, but if we had relief in regard to some of these legal obstructions, put in the way of our doing it as it should be done, I have no doubt we could greatly stimulate our foreign business. I know it could be done in alcohol if we had one privilege that was asked for and was refused by Congress—that is the permission to transport alcohol from the distillery to the seaboard in tank cars. There is no possible reason why it should not be granted, but it was refused. It would enable us to dispense with the barrel, which is a very large element of the cost, and ship, as they ship petroleum, in tank cars to the seaboard, and then in tank vessels abroad, to be used in the arts and manufactures. It could be handled in that way without any difficulty. A large quantity is used in the manufacture of smokeless powder, and the amount used is something terrific. We could get into trade with the world in that regard, if we could only dispense with the barrels. Of course, being handicapped by these things, we have not been able to demonstrate what we could do. These other people in their several industries—iron, steel, petroleum, and sugar to a very limited extent—but everything that is made from iron and steel—have shown that by reduction of the cost of manufacture, the business in foreign countries can be increased.¹

WASTES OF COMPETITION.

Of course it needs no argument to you gentlemen to demonstrate that you can make alcohol in a distillery mashing 15,000 bushels of grain a day for less than you

¹ See Mr. McNulta, p. 235; Mr. Cook, p. 245.

can in one of 500.¹ That is too easy; and also you can sell it much cheaper to the foreign buyer if in all the rest of your business you are enabled to dispense almost entirely with the services of salesmen, traveling expenses, advertising, and all these things which eat up profits of manufacture. There is no doubt, of course, that all of these things hurt somebody; somebody is hit. You know the salesman is, but to the consumer, who is a thousand to one of those people, it is a benefit. We are saving probably in our business not less than \$1,000,000 a year in the Kentucky end of it alone in salesmen, in their traveling expenses.

Q. Could you give a definite estimate of the number you have been able to dispense with?—A. About 300 salesmen.

Q. (By Mr. FARQUHAR.) And that goes to the benefit of the consumer in lower prices?—A. We are selling our whiskies at 15 cents that before never could be manufactured for 15 cents. Of course the thing is self-evident. We also make better profits, but we do not take it out of the consumer. We get it out of that great middle class, you know. I have taken a very great interest in this thing, more for amusement than anything else. I do not need it in my personal business, but I have gone very extensively into the figures of this whisky business. There is about \$40,000,000 lost somewhere between the distiller and the consumer in this country. It goes, of course, in trying for trade, for business. You will see about the town here "Hunter Whisky" advertised in the newspapers and everywhere else—electric lights blazing—and all this costs a pile of money. They have salesmen scouring all over the country. All that thing is wrong; it is preposterous; it does not enable the consumer to get better whisky; it only makes him pay a better price. Coming down here I saw on the street two shoe shops; Douglas was one, and the other I do not remember. They are very great shoe manufacturers. They have shoe stores in every village in the United States, and they are selling right to the consumer, for \$2.50 and \$3.50, good shoes. I have a pair of them on now, and they are good enough for me. That is what this thing is accomplishing, gentlemen; it is bringing the manufacturer and consumer closer together every minute, and it will result, just as all labor-saving machinery has resulted, in the saving to the consumer and the widening of his purchasing capacity. It will enable him to use things which he never dreamed of using before, and, altogether, will lift him from a labor animal to an intelligent and happy human being, just as all machinery has done. This is one of the great big machines that have come up in the process of evolution. We are going to do a big export business in our commodities, if we are only permitted to do it. If they will change the law for us and give us facilities for doing it, and not restrict and hamper us, we can supply the world with alcohol, just as all these other people do with their products. Look at the petroleum industry and see what they are doing.

ALCOHOL IN THE ARTS—CAN NOT BE FREED FROM TAX.

Q. (By Mr. FARQUHAR.) You have stated that this matter of transportation was for the benefit of the manufacturers and users in the arts. Do you know about what proportion the consumption in the manufactures and the arts bears to the beverages?—A. No; I do not know that.

Q. Pharmaceutical?—A. Here in this country it is comparatively little. The wood-alcohol people control that branch of this industry, but abroad our sales would be almost exclusively for that use, and they would be very large.

Q. (By Mr. JENKS.) Would it be practicable to remove the tax on alcohol wherever used in the arts?—A. No, sir; you can not do it to save your life. You would have nothing but illicit spirits in this country.

Q. That is attempted in some countries?—A. It is done in England; but you do not want to forget that is a little bit of a country, covered all over by internal-revenue officers. You can not do it in a country like this.

Q. If the tax were reduced to 75 cents, do you think there would be an increase in the consumption in the arts here?—A. There is no question about it; and you will find when that question is in Congress your fight is going to be with the wood-alcohol people.

AN AVOWED MONOPOLY.

Q. (By Mr. KENNEDY.) Is there any added excellence to either of your brands, Old Crow or Hermitage, since your combinations were effected?—A. I will answer that in this way: We are able to exist in my private business and to continue our business at least on a large scale. It has been done, perhaps increasing very slightly, for the reason that we are protected by trade-marks. We have a great protection, and that enables us to get very great profits—enormous profits. Out of these profits we pay enormous advertising bills. We employ skilled salesmen, and we use all

¹See Mr. Clarke, p. 183.

these efforts which have been made to assure this trade, to keep alive and to go on. We can do it yet just as in the past, but it is an artificial thing. The consumer pays for it—every dollar of it—and, while it lines my pockets and I am very glad to go on, it is not a good general policy for any industry in the United States. It is all right in my private business, and if you want to pick out a monopoly, and one that is screwing the people down to the last notch, it is that business of mine.

Q. You mean where there is a special brand?—A. I mean special brands sold on their reputation, and the effort to force sales, the advertising, and pushing and working personally, and all that sort of thing.

Q. Well, as a matter of fact, is that special brand, or either of those special brands of yours, any better now than they were, say, 1 year ago?—A. No; they are just the same.

CONSOLIDATION WILL RESULT IN IMPROVED QUALITY.

Q. Well, you have dispensed with the services of 300 salesmen?—A. Not in my private business; that is in the combination.

Q. That refers to the brands of that company?—A. Yes; they have been enabled to dispense with the services of 300 travelling salesmen who were originally employed by the old owners of these distilleries. I do not mean to say we discharged those men. Most of those men are still working for the old owners, but when that whisky is sold their occupation is gone.

Q. Are those whiskies any better to-day than a year ago?—A. Very much better.

Q. The whiskies have improved in quality?—A. Oh, no, not in quality. I thought you meant in a trade position.

Q. I mean the quality of the whisky?—A. The quality of the whisky under our manufacture will improve, but we have not improved any yet. It will be better, and I will tell you why that is so. Under the old arrangement, where the struggle for existence became so fierce between rival manufacturers that they resorted to every expedient in the world to cheapen their production, they put in Kentucky distilleries what are called "cookers." Properly, they are never used except for the manufacture of alcohol where the product is rectified through charcoal, and all the bad flavors are taken out in that way. They put them in for the reason that they increased their yield by so doing. The quality of the whisky deteriorated tremendously, and of course they did everything in their power in striving to reduce the cost in that way—any old way to get out. We have spent hundreds and thousands of dollars ripping the cookers out of the distilleries that we have bought. We have gone back to the old methods of making fine whisky in every single instance. Even these cheap whisky distilleries have not been benefited to that extent. The product of these distilleries will be very much improved.

HOW THE CONSUMER WILL GAIN.

Q. What I wanted to get at is this: Do not the retailers still sell whiskies of this combination at, say, 10 and 15 cents a glass, and have the consumers received any benefit from this great saving that you have effected by dispensing with these middlemen and middle agencies?—A. They will when the goods we are producing are fit to be used. They are still too new. They must have some age before being consumed.

Q. (By Mr. C. J. HARRIS.) You do not mean to say the saloons will make any difference in price, do you?—A. I beg your pardon; I did not say that. I said the whisky will go toward the consumer at a very much lower price. I do not know what the retailer will do with it when he gets it, but he is still open to competition. He can not escape that altogether. He must, I believe, give some part of that saving to the consumer. And not only that; the great bulk of whisky is not supplied to the consumer through the barrooms. It goes to them through stores in bottles, and there they will largely get the advantage of it. Competition will force it.

Q. (By Mr. JENKS.) The largest proportion goes to them through bottles?—A. Unquestionably. The present concerns in that branch of the business in the past few years have grown up enormously. The business in bottled whiskies has grown to a great extent through branch houses or agents of distilleries. Now, in New York I have such a house, and we are doing an enormous business in this class of whisky.

Q. (By Representative LIVINGSTON.) It is used by persons especially in the cities and counties where they have prohibition?—A. Yes. Now, nine-tenths—more than nine-tenths—of that whisky is sold in grocery stores. You can go into a barroom and get a drink of it if you ask for it. They use a great deal in the grocery stores, and if you go into a grocery store and ask for whisky of any kind you will get a bottle. If the groceryman is selling it he bottles it for himself, and there is where the great dispensation of this stuff is made, and not in the barrooms.

Q. (By Mr. KENNEDY.) When the traveling salesmen place their grievances before

the people they are simply making your argument for you?—A. Well, I do not know. I think we must consider the interest and benefit of the millions and not the interest and benefit of the hundreds. They can seek other occupations. The same arguments could have been used toward the sewing machine or any labor-saving machine, but they are not good ones and never will be.
(Testimony closed.)

WASHINGTON, D. C., November 17, 1899.

TESTIMONY OF MR. SAMUEL M. RICE,

President of the Distilling Company of America.

The commission met at 11.35 a. m., Senator Kyle presiding. Mr. Samuel M. Rice, president of the Distilling Company of America, was introduced, and, being duly sworn, testified as follows:

Senator KYLE. Please state your name, post-office address, and business.—A. Samuel M. Rice, No. 27 William street, New York City; president of the Distilling Company of America.

RECEIVERSHIP OF DISTILLING AND CATTLE FEEDING COMPANY—REORGANIZATION.

Q. (By Mr. JENKS.) We have had some testimony regarding the earlier combinations in the distilling business, particularly with reference to the Distillers and Cattle Feeders' Trust and the Distilling and Cattle Feeding Company. We should like to have you, if you please, explain to us the organization that succeeded the Distilling and Cattle Feeding Company. I should like to have you explain, in the first place, the organization of the American Spirits Manufacturing Company, and the way in which it took the plants and business off the hands of the Distilling and Cattle Feeding Company. Will you kindly speak freely on the matter of that organization?—A. The Distilling and Cattle Feeding Company went into the hands of receivers in the latter part of January, 1895. At that time there were three receivers appointed; two of them resigned later and Gen. John McNulta became the sole receiver. That was some time in the middle of March, 1895, I think. As receiver he continued the operation of the plants under the direction of the court; it was a sort of business that could not be wound up, the lives of cattle depending upon the operation of the distilling industry. So the United States Government continued in that business, practically, through the court. A reorganization committee had been formed in New York City representing practically all the stock of the company. That committee finally succeeded in having the plan of reorganization adopted, and some time in the month of August, 1895, under the order of the United States circuit court, certain properties, 17 in all, were purchased by the reorganization committee from the receiver.

EVENTS WHICH LED TO THE RECEIVERSHIP.

Q. Before this reorganization plan had been perfected, before the Distilling and Cattle Feeding Company had been put into the hands of a receiver, was a committee of holders of rebate certificates organized in order to protect the interests of these holders of the certificates as against the Distilling and Cattle Feeding Company?—Yes; the trade became restless; they feared that the rebate money might be misappropriated, or used for other purposes than the purpose it was originally set aside for. The trade had the impression, it was generally thought, that this was a trust fund, and that it was kept intact for the benefit of the owners of rebate certificates. There was a good deal of criticism at the time, and many dealers throughout the country sought methods of protection. The rebate committee was formed with the intention of getting such information as they could of the condition of the property, and of obtaining some safeguard or protection, if possible, to secure the payment of the money due the rebate holders.

Q. Were you yourself a member of the committee?—A. I was a member of that committee.

Q. Had they had reason to believe that this money, instead of being kept in a trust fund for the payment of rebate certificates, was being used in other ways?—A. There was a suspicion at the time that it was being so used, but there was no real knowledge.

Q. Did the investigation of this committee elicit any facts on the subject?—A. Not in the investigation of the rebate committee.

Q. Did the action of the rebate committee have anything to do with throwing the

company into the hands of a receiver?—A. No; but it rather precipitated the business—hastened it along.

Q. What were the immediate causes of putting the company into the hands of a receiver?—A. The rebate committee was organized, if I recollect right, sometime in June or July, 1894; and the action and investigation and the general information elicited by this rebate committee brought about a protective committee of stockholders. The stockholders then became a little suspicious of the management, and a protective committee was organized either in September or October, 1894—somewhere along there—and this stockholders' protective committee sent notices to the large holders of stock, and asked for proxies. These proxies were very readily given. In the course of a very short time, this committee had proxies for over 300,000 shares of stock, the entire capital being 350,000 shares. The stockholders' committee then placed itself in communication with the officers of the Distilling and Cattle Feeding Company, and informed them that they represented a majority of the stock, and that, having heard of the embarrassment of the company, or the alleged embarrassment, they were prepared to tide over such embarrassment until the next annual election; and they said they desired a meeting with the officers of the Distilling and Cattle Feeding Company. This was about the latter part of January, 1895. The officers then agreed to meet the committee; but instead of meeting the committee, the president went to Chicago, and made application for a receiver, and was himself, upon the application of holders of 1,700 or 1,800 shares of stock, I think, appointed receiver, together with, I think, Edward F. Lawrence, who was a director of the First National Bank of Chicago. Those gentlemen were appointed receivers, about the 28th, or somewhere along there, of January, 1895. Two or three days thereafter, upon action on the part of the stockholders' committee, Mr. Greenhut, who had been appointed one of the receivers, was removed, and in his place was substituted John J. Mitchell, of the Illinois Trust and Savings Bank; the court itself appointed Gen. John McNulta to represent the court. That brings us down to the triple receivership.

Q. What reasons were advanced by the stockholders' committee to the court for the removal of Mr. Greenhut and the appointment of Mr. Mitchell?—A. That there was general knowledge that Mr. Greenhut had been speculating in stock of the company.

Q. Was that proved as a matter of evidence before the court?—A. I was not present at the court proceedings. I do not know that any evidence was introduced before Judge Grosscup. He acted instantly and removed Greenhut and appointed Mitchell.

Q. Representations were made beforehand which caused them to believe it to be true?—A. Judge Grosscup believed it.

Q. So that it was really on that basis that he was removed; that he had been speculating in the stock of the company himself?—A. We presumed so; I have no doubt of that fact myself.

Q. That was a generally understood matter by the stockholders, was it—a matter of general belief?—A. It was generally suspected.

PROPERTY AND CAPITALIZATION OF THE DISTILLING AND CATTLE FEEDING COMPANY AND THE AMERICAN SPIRITS MANUFACTURING COMPANY.

Q. You say the American Spirits Manufacturing Company took over 17 plants. About how many plants did the Distilling and Cattle Feeding Company own?—A. The Distilling and Cattle Feeding Company was the outcome of the Distillers and Cattle Feeders' Trust. The Distillers and Cattle Feeders' Trust commenced with about—that is, did not commence, but commanded about 80 plants; that is, 80 plants became the property of the succeeding corporation—the Distilling and Cattle Feeding Company—but the plants purchased by the American Spirits Manufacturing Company numbered 17.¹

Q. Seventeen of the largest and best plants?—A. Seventeen practical plants.

Q. What was the capitalization of the Distilling and Cattle Feeding Company?—A. Thirty-five million dollars.

Q. And the American Spirits Manufacturing Company?—A. Seven millions of preferred and twenty-eight millions of common; the same amount.

Q. And still they took over very much less than half of the plants, although the capitalization remained the same. What proportion of the value of the plants did they take over?—A. The explanation of that is this: The 17 plants represented the value, and the remaining plants represented burden. In other words, the only thing of value that the company owned were these 17 plants. The others had been dismantled; they were badly located, and had been simply taken in by this Distillers and Cattle Feeders' Trust because they were disturbing elements, and it was thought wise to take them out of the way.

¹ See Mr. Clarke, p. 175.

Q. So that they were taken in really to remove them from the competitive field?—
A. I would hardly say that. They were not well situated for competitive purposes. But a man can manufacture goods and lose money and naturally be a party to over-production, and thus cause general demoralization to business.

EXCHANGE OF NEW STOCK FOR OLD.

Q. About what was the value of the stock of the Distilling and Cattle Feeding Company at the time it went into the hands of the receivers?—A. It was about \$8 a share.

Q. The American Spirits Manufacturing Company, in organizing with the same capitalization, was then organizing with its stock very decidedly below par, was it?—
A. It had nothing to do with the stock; it was simply an exchange. The reorganization committee simply issued its certificates against the stock of the Distilling and Cattle Feeding Company, and had nothing to do with fixing the capitalization. It simply became the agent, and merely gave as much stock as received. It never fixed the capitalization, and in fact had nothing to do with it.

Q. You spoke of there being seven millions of preferred stock and twenty-eight millions of common stock. On what terms was the stock of the Distilling and Cattle Feeding Company received in exchange for this preferred and common stock?—A. Twenty per cent was given in preferred stock and 80 per cent in common stock, which makes seven millions preferred and twenty-eight millions of common.

Q. Had there been, before the appointment of the receivers of the Distilling and Cattle Feeding Company, other suggestions and other plans of reorganization proposed?—A. Plans had been proposed by the management and submitted to the stockholders; but they were not well received, and that, of course—the managers not being able to carry through their own plans of readjustment—naturally lost the confidence of the stockholders.

Q. (By Mr. FARQUHAR.) Was it on account of loss of faith in the officers of the company?—A. Naturally supposed. I can not go into the thoughts of the stockholders.

MARKET VALUES OF OLD AND NEW STOCKS.

Q. (By Mr. JENKS.) What was the average value of the stock of the American Spirits Manufacturing Company for a year succeeding the reorganization?—A. The preferred stock varied, since the organization, from—this is not accurate—I should say, roughly, from 15 to 40.

Q. And the common?—A. And the common from 5 to about 15, or something of that sort.

Q. What had been the value of the stock of the Distilling and Cattle Feeding Company earlier than that, before these troubles arose? Had the stock ever sold very much higher?—A. The stock sold at one time in the neighborhood of 70, and there was great speculation in the stock at various times. That seemed to be the principal business.

Q. When the Distilling and Cattle Feeding Company was organized, how much stock was issued per \$100 of cash value of the plants?—A. I have no knowledge.

Q. Were you yourself in the distilling business at that time?—A. Not as a distiller; I was as a salesman and agent and distributor. I was selling spirits, not manufacturing spirits.

Q. But you say that the stock had varied from 60 and 70 down as low as 8?—A. Yes.

Q. (By Mr. FARQUHAR.) Did that occur from the amount of stock thrown on the market or the shrinkage of the real stock itself?—A. That is a Wall street question; I can not answer that.

Q. Well, your own judgment about the thing?—A. My own judgment is that if there are more sellers than buyers stocks will go down. If there are more buyers than sellers stocks will go up.

CASH VALUE OF PLANTS.

Q. (By Mr. JENKS.) When these seventeen distilleries of the Distilling and Cattle Feeding Company were bought up by the American Spirits Manufacturing Company, was any definite appraisalment made of the value of the plants?—A. No definite appraisalment. The values were as accurately arrived at as possible by experts of the reorganization committee.

Q. About what was the cash value?—A. At the outside, about ten and a half millions represented the real value of these plants.

Q. So that the stock that was issued in payment for them was supposed to be something over 3 to 1 of cash value?—A. No; the reorganization committee had

nothing to do with that whatever; they had to buy the practical operating plants of the Distilling and Cattle Feeding Company, so that they could continue in business—so that the new organization could continue—but the capitalization, or the relative value of one stock as compared with another, can not enter into the calculation. The reorganization committee simply exchanged certificates, and gave as much par value in return as they received.

Q. But your presumption was that there were about ten and a half millions of cash valuation, as nearly as you could get at it, and there were thirty-five millions of stock—rather more than three times the face value.—A. No; it was paid for in stock.

THE REBATE SYSTEM.

Q. You have spoken of the rebate system of the Distilling and Cattle Feeding Company. What was the amount of the rebates that were paid?—A. In a general way the rebate was 7 cents a gallon.

Q. Did that all go to the wholesaler, or was it divided between the wholesaler and distributor?—A. The distributor received 2 cents and the jobber 5 cents.

Q. Did the rebates vary, or was this the one and only rate?—A. There were several forms of rebates. I was not familiar with the business at that time except in a general way; knew very little about it except from general information.

Q. That was the most common form of rebates, as you understood?—A. That was the most common form of rebates.

Q. Did the American Spirits Manufacturing Company continue the rebate system?—A. No.

Q. Has the American Spirits Manufacturing Company employed the rebate system at all?—A. No.

SPIRITS DISTRIBUTING COMPANY.

Q. Besides the American Spirits Manufacturing Company, which has continued to the present time, there are also two or three other companies that united with them in forming the Distilling Company of America, I believe. What other companies?—A. Shortly after the organization of the American Spirits Manufacturing Company, there was formed the Spirits Distributing Company, organized under the laws of New Jersey.

Q. Shortly after the organization of the American Spirits Manufacturing Company?—A. Yes; early in 1896.

Q. Will you describe to us briefly the organization of this Spirits Distributing Company? Tell what connection it had with the American Spirits Manufacturing Company, if any.—A. The American Spirits Manufacturing Company had no facilities for distributing its product, and it was deemed advisable to have an effective channel of distribution; so the Spirits Distributing Company was formed for the purpose of distributing the product of the American Spirits Manufacturing Company. Its capital was \$1,250,000 of first preferred, \$1,575,000 of second preferred, and \$3,675,000 of common; the common belonging to the American Spirits Manufacturing Company.

Q. It was owned by the American Spirits Manufacturing Company?—A. Yes, to continue control.

Q. What were the terms of the preferred stock—the first preferred and second preferred?—A. The first preferred was 7 per cent cumulative; the second preferred was 6 per cent noncumulative.

Q. Were any preferences in the way of voting power given to the preferred stock?—A. None at all. It was intended that the American Spirits Manufacturing Company should retain control through its ownership of the stock.

Q. Was the ownership of the preferred stock largely in the hands of the American Spirits Manufacturing Company?—A. The subscription of the preferred stock was offered to the stockholders; it was underwritten, and such of the stock as was not subscribed was taken by the underwriters, as these things are generally done.

Q. So it was really intended to be, and has since been, a subsidiary company for the purpose of distributing the products of the American Spirits Manufacturing Company?—A. That was the purpose.

STANDARD DISTILLING AND DISTRIBUTING COMPANY.

Q. What other companies were united into the Distilling Company of America besides these two, the Spirits Distributing Company and the American Spirits Manufacturing Company?—A. Along about July, 1898, I think, there was organized the Standard Distilling and Distributing Company, under the laws of New Jersey, with a capitalization of eight millions of preferred stock and sixteen millions of common stock; eight millions of 7 per cent cumulative.

¹ See Mr. Bradley, p. 814, and footnote.

Q. That was organized for the purpose of buying up distilleries in different sections of the country, was it?—A. It was organized for the purpose of purchasing distilleries and distributing plants.

THE DISTRIBUTING OF SPIRITS MORE PROFITABLE THAN DISTILLING.

Q. What do you mean by distributing plants?—A. I say distributing plants. Distilleries and distributing plants.

Q. I beg your pardon?—A. The distributing business being the more profitable—the distilling business is practically a business of raw material; is a business which depends absolutely upon the price at which the product is sold. There is no such thing as brand of spirits and alcohol. It is, as I say, practically raw material, although it is a finished product. It is a basis for the entire whisky business; so that the distributing channel, when controlled by distilleries, became valuable, not only for the actual distribution of spirits and alcohol in their original form, but for the distribution of profitable blends, wines, and rectified goods, and so on.

Q. That is to say, these distilleries that were owned by the American Spirits Manufacturing Company and the Standard Distilling and Distributing Company were for the manufacture of spirits; and the distributors, using these spirits as base, compounded the liquors of various kinds that went into the trade for the purpose of consumption. This second part—the compounding part of the business—has for the last few years proved more profitable than distilling?—A. It always was more profitable. It was profitable because of the valuable trade-marks and brands.

PROPORTION CONTROLLED, OF THE WHOLE OUTPUT OF SPIRITS.

Q. What proportion of the output of spirits of the country did the American Spirits Manufacturing Company control at the time of the organization of the Standard Distilling and Distributing Company?—A. I should say, roughly, about 55 per cent.

Q. About what proportion did the Standard Distilling and Distributing Company succeed in controlling in the course of a year—say from its organization?—A. Roughly, about 35 per cent.

Q. So that the two companies together controlled somewhere about 90 per cent?—A. Ninety per cent at that time. Since that time one distillery has been built at Terre Haute, Ind.

Q. What company owns that?—A. The Merchants'.

Q. What is the capacity of that distillery?—A. I suppose about 4,000 barrels per day.¹

Q. Does that represent substantially the other 10 per cent?—A. The companies, the American Spirits Manufacturing Company, and the Standard Company, to-day are "mashing"—that is the technical term—about 40,000 barrels per day.

Q. And besides this Merchants' Distilling Company, and the plants represented by the two companies you have spoken of, there are no other large distilleries?—A. Oh, there are several smaller ones. There are five or six small distilleries, all of which are practically limited to local markets. There are several in Cincinnati, small plants, which supply the local trade; but so far as they may be regarded as competitive factors in spirits, the one plant in Terre Haute is practically the only one.

THE DISTRIBUTING BUSINESS; PROPORTION CONTROLLED.

Q. When this Standard Distilling and Distributing Company organized, was it organized through the efforts of men who were largely interested in the American Spirits Manufacturing Company?—A. I can not say that from personal knowledge, but no doubt it was. I had nothing to do with that.

Q. The thought being that the organization of this outside company and that of the American Spirits Manufacturing Company together would very largely control the output of the country?—A. It was deemed advisable, as I said before, to control more of the distributing branches; to get hold of the profitable part of that business. The Standard Company, when organized, and to-day, controls sixteen of the largest distributing plants in the United States, situated in all large cities.

Q. How many of the large distributing plants are left outside?—A. I can give you the method of doing it, which will explain it to you. The spirits produced by the Standard Company and by the American Spirits Manufacturing Company are distributed through an association called the United States Spirits Association. The United States Spirits Association is composed of 54 large distributors. They were made members of the association because they were the largest distributors and had practically control of the business of this country. I would not say all, but very nearly all. Out of the membership of the United States Spirits Association the

¹ See Mr. Bradley, p. 815.

Standard branches numbered 16. While they numbered only 16, the branches of the Standard Company distributed, I should say, roughly, 66 per cent of the entire output, and the remaining 38 distributors distributed 34 per cent. That refers to the product of the American Spirits Manufacturing Company and the Standard Company, which, roughly, this year, will be about 40,000,000 gallons. That gives you about the way the business is being done.

Q. The product of the Merchants' Distilling Company is distributed, I suppose, by themselves, or by their own distributors?—A. Distributed as best they can. Of course it is much more difficult where you have no organized methods of distribution to find a profitable market. Spirits can not be sold, as I have stated to you, like corn, like raw material; and naturally the channels of distribution are very valuable. If you are running a distillery of 4,000 barrels per day capacity, you must have salesmen, must have methods of selling goods, and if you must sell to small trade you must be prepared to furnish them with a little capital; to carry your customers. You must give them credit; and while it is a very easy matter to manufacture 4,000 barrels per day, and as easy to sell it, there is some difficulty about making profit.

TO STOP OVERPRODUCTION—PROMOTERS NOT KNOWN.

Q. You said that the Standard Distilling and Distributing Company was organized (although you yourself were not actively engaged in it, you have knowledge that it was so organized) by men who were large stockholders in the American Spirits Manufacturing Company, and that it was organized as an allied association?—A. Well, it was part of a general plan to practically control the entire whisky business, as far as control is desired in any business; not a monopoly, but control of the business, so that you may control the production; so that you can stop overproduction.

Q. Overstocking the market?—A. So as to stop overproduction.

Q. Who were the chief promoters of that Standard Distilling and Distributing Company?—A. I can not tell you.

Q. You do not know?—A. No. Those matters are never known, but the underwriters are generally found among financial men of Wall street. They do not advertise themselves as a general thing.

Q. Are you acquainted with any of the details of the purchase of the different distilleries, prices paid, and so on?—A. Nothing whatever. I know nothing about it, excepting what I know from general information.

KENTUCKY DISTILLERIES AND WAREHOUSE COMPANY—THE KENTUCKY WHISKY BUSINESS A BUSINESS OF BRANDS.

Q. There was a fourth company that united in forming the Distilling Company of America. What was that?—A. The next company that organized was the Kentucky Distilleries and Warehouse Company.

Q. Will you explain that organization?—A. The Kentucky Distilleries and Warehouse Company is capitalized at ten and a half millions of 7 per cent cumulative preferred stock, and eighteen and a half millions common stock.

Q. When was that organized?—A. In February, 1899. It purchased 90 per cent of all these standard brands of what are known as Kentucky Bourbon whisky, and took over, I think, and became the owner of 56 or 57 plants.

Q. Plants?—A. Yes, distilleries.

Q. You say it bought about 90 per cent of the brands. It bought also, I suppose, 90 per cent of the output of that kind of product?—A. No. This Kentucky whisky business is a business of brands. The real value of this business is in its ownership of one class of brands. There is a vast amount of capacity which has no value except for the production of cheap whisky, which might come into competition more or less with spirits; but the real value of the Kentucky whisky is the value of brands, not capacity. There was no intention to buy capacity. The intention was to buy good brands. Now, these 56 plants control more than 90 per cent of all the standard brands of Kentucky Bourbon whisky.

Q. Do the establishments that control these brands do largely a compounding business, or a distilling business?—A. Absolutely distilling. They are not compounders. They are manufacturers of straight whisky; that is, what is called also aging or maturing whisky.¹ These whiskies are manufactured, and are then placed in bonded warehouses connected with the distilleries, and are kept there for aging purposes. These whiskies are not fit to use until they are four years of age. The period in which they can remain in the warehouse is eight years.

Q. You were yourself an officer of this Kentucky Distilleries and Warehouse Company?—A. I was president. I became president of the company at its organization.

¹ See Mr. Clarke, p. 168; Mr. Bradley, pp. 817, 818, 827, 828.

Q. That company was organized also, I infer then, as a subsidiary in aiding to get all those interests together?—A. Yes.

THE RYE-WHISKY BUSINESS.

Q. Now, after those four companies had been organized in this close association, what was there left outside in the whisky business of the country that was valuable?—A. These small distilleries that I have referred to, these small separate distilleries, and the Merchants' Distillery, and a few, very few, brands of any value in the State of Kentucky.

Q. Was there left also outside the rye whisky?—A. That is another field.

Q. Yes; that is why I asked. Will you explain about that other field?—A. The production of what are called rye whiskies is centered in Pennsylvania and Maryland. Rye whiskies are practically identified with those States, the same as New England rum is identified with New England. No one knows why, but it is so. Rum made anywhere else would not have the same value as that coming from New England. So that rye whiskies, while they are made in Kentucky and also in Peoria, have no value as rye whisky. There are seven or eight standard brands of rye whisky.

Q. (By Mr. SMYTH.) Owning all these brands, do you have the opportunity of placing them on any whisky you please?—A. No; that is, we could do that, but that would not be good business. A brand has its value and retains the value much from the location in which the whisky is made. Those are very valuable things in a brand. It has frequently been done. It has frequently happened that a good brand was not, perhaps, profitable during times of demoralization; the prices would go down; and the owner of the brand, catching at a straw, would say "Well, I might make this brand somewhere else," and in that way he killed his brand. Locality, sentiment, is what makes the brand.

Q. More than quality?—A. Well, all whisky is good; there is no bad whisky.

Q. (By Mr. JENKS.) There are differences in whisky?—A. The trade says so.

Q. Now, about what proportion of the value of the output of whiskies—I am not referring to spirits, but to whiskies particularly—was there left outside in this rye-distilling business?—A. The rye distilleries belonging to this concern are the Mount Vernon and the Hannisville; Maryland pure rye, Philadelphia pure rye. In that field that represents about 25 per cent, not more. That is, these rye distilleries represent about 25 per cent of the value of the total rye whisky of the country. Twenty-five per cent of the output of Eastern ryes is represented by these distilleries. This refers to Eastern ryes.

Q. Was it contemplated in the general plan of organization that some of these rye distilleries be brought in also?—A. It was important, for this purpose: The different companies were in a position, through distributing houses, to sell a man everything he wanted except rye whisky. It was then deemed important to secure the best brands of rye whisky and the best blending establishments of rye. That is a very profitable business, and is a very important adjunct. In other words, one of our salesmen goes to a man and says, "Here are your spirits, here are your rectified goods, here is your wine, here is your gin, and here is Kentucky straight whisky," and there we had to stop. It became important to get rye whisky—a rye-whisky plant; so the Hannis Distilling Company was acquired. That company controlled two of the best brands of rye whisky, Mount Vernon and Hannisville, and controls the largest blending business of rye whisky in the world; the intention being that this concern should be able to supply the jobber everything he needs in his business.

DISTILLING COMPANY OF AMERICA OWNS STOCKS, NOT PLANTS.

Q. Now, will you kindly from this point take up the organization of the Distilling Company of America, and tell us how the different organizations were brought together into one?—A. I think you have the whole thing right before you.¹

Q. I have the general figures here.—A. That is the whole story, if you have that. A proposition was simply made to the stockholders of the different companies, under which the organizers of the Distilling Company of America agreed to purchase their stock for stock of the Distilling Company of America, as stated in this deposit agreement. I have forgotten the exact percentages, but they are given in the plan.

Q. The general plan being that the Distilling Company of America should buy up as much of the stock as possible of these different companies, and should in itself simply control stocks?—A. The Distilling Company of America is merely an owner or stockholder in these various companies.

Q. It did not itself buy up the plants of these four different companies?—A. No plants; it merely owns stocks.

Q. With reference to the rye-whisky companies that were brought in, did the Distilling Company of America really buy plants or stock?—A. Stocks altogether. It

¹ See Mr. Bradley, pp. 818-822.

is simply the owner of stocks. It is not in the whisky business. Its only source of dividend is the stocks. You may call it the clearing house for the stocks.

EXCHANGE OF STOCKS.

Q. In buying up the stocks of these different companies, did it exchange its own stock, generally speaking, for par or less than par?—A. The percentages are given here, I think. Can I refer to it?

Q. Certainly.—A. The organization made the following proposition: For every preferred share of the American Spirits Manufacturing Company, 50 per cent of preferred stock of the Distilling Company of America, and for the common stock 25 per cent. For every share of the Kentucky Company, common stock, 70 per cent; preferred stock, 85 per cent in preferred and 15 per cent in common. Standard Company, 85 per cent in preferred and 15 in common for the preferred, and for common stock, 60 per cent in common. The Spirits Distributing Company first preferred, 80 per cent in preferred and 20 per cent in common stock; for the second preferred, 20 preferred and 20 common.¹

Q. The common stock of this Spirits Distributing Company, being all owned by the company, did not need to be provided for?—A. No.

Q. In all of these companies, then, there was some scaling down of the capitalization?—A. Yes; the capitalization was scaled down.

Q. In the scaling down of the capitalization, were the fixed charges (that is, what was required to pay the dividends on preferred stock), lessened or, on the whole, was that increased?—A. No; the Distilling Company of America, as I explained, acquired the stocks of other companies, and of course paid for them, so that the total of preferred stock issued to-day is \$31,250,000 of the Distilling Company of America that is entitled to a cumulative dividend of 7 per cent.

Q. Does the cumulative dividend of 7 per cent on this preferred stock amount to more or less than the dividends on the preferred stock of the companies that were acquired?—A. I will take a pencil and we can get at that very quickly. The preferred stock of the constituent companies amounts to \$26,750,000.

Q. And part of this preferred stock of the other companies bore a quite low percentage, did it not—some at 5, and some even at 2?—A. The preferred stock of the American Spirits Manufacturing Company was 5 per cent. The preferred stock of the Spirits Distributing Company was 7 per cent. After some time there was a change made in that contract, under which the holders of first preferred were to take 6 per cent in lieu of 7. The second preferred stock was originally 6 per cent noncumulative; under this special arrangement the stockholders agreed to take 4 per cent of that off. They changed to 6 per cent on the first, and to 2 per cent on the second.

Q. If we take the amount that was to be paid on the preferred stocks of the old companies each year, and compare it with the amount that is to be paid on the preferred stock of the present company, is there an increase or a decrease?—A. It is difficult to figure that way, because the Distilling Company of America owns much more valuable property in addition to these stocks that it exchanged its stock for. It owns these rye corporations of which I told you, and there was a large amount of cash, \$3,000,000, supplied by the organizers of the Distilling Company of America.

Q. That is to say, owing to the fact that they acquired these rye distilleries, and also that they have acquired considerable cash in the exchange, they would be justified in assuming the additional amount?—A. The common stock that was exchanged amounted to a total of \$67,750,000. Of Distilling Company of America the present issue is \$46,250,000.

Q. Of this \$46,250,000 that was issued—?—A. (Interrupting.) That represents the exchange of \$67,750,000 total common stocks of the companies for which these exchanges were made.

THE ORGANIZERS' BARGAIN.

Q. This \$46,250,000, as I understand, was what was given to the organizers in order to make the exchange.—A. Yes, to the organizers for the purpose of making the exchange.

Q. If you figure up the amount that was required in accordance with the terms that were offered to the stockholders of the different companies to make the exchange, would it have used up all of this \$46,250,000, or was there some left over?—A. I have not figured that up. I can figure it, if you like. There was undoubtedly some left over for the organizers, after supplying the cash and the purchase of the rye plants, of the stocks. It is easily ascertained. I think I can figure the thing out.

Q. That is the purpose of the question. This \$46,250,000 of common stock and \$31,250,000 of preferred stock paid to the organizers was, if I understand, for the purpose of acquiring all the stocks of these four different companies, and what else?—A. For cash.

Q. How much cash?—A. Three millions in cash and for the acquisition of the stocks of the rye-whisky companies.

¹ See p. 821, footnote.

Q. You said for three millions of cash. The agreement as printed here provided for a million and a half.—A. Well, that is right. It provided one million and a half additional cash working capital, and other cash which was given for some of these stocks of rye-whisky companies.

Q. Yes.—A. In addition, of course, to the stocks of those. How much stock those organizers paid for those things of course I do not know. I have no knowledge of that.

Q. As regards the rye-whisky plants that were brought in, you said the Hannis Distilling Company was brought in. What was paid for that?—A. I could not tell you; I do not know.

Q. And what other was brought in? The St. Paul distillery, I think it was, that was mentioned.—A. I did not mention the St. Paul distillery, because that was part of that agreement, and, as I say, it was not what I call a distinctively Eastern rye-whisky plant, and it was not a part of the explanation I was giving, because we did not get to that point.

Q. But was the St. Paul— —A. (Interrupting.) The St. Paul was a part of the properties that were agreed to be turned over by the organizers; agreed to be turned over to the Distilling Company of America.

Q. Do you know what was paid for that?—A. I do not know. The organizers undertook to do so many things for so much stock. In other words, in that case they undertook to do these things for \$31,250,000 of preferred and \$46,250,000 of common; and they undertook to procure the exchange of at least a majority of all these stocks, and so much of the stock as was not turned over so much of that stock had to be retained or returned to the Distilling Company of America. In other words, \$31,250,000 of preferred and \$46,250,000 of common provided for all the outstanding stock of the four different companies; it provided for the acquisition of the St. Paul Company; it provided for the acquisition of the Hannis Distilling Company, and provided for \$1,500,000 cash working capital.

Q. If one figures out, as I have had done here, what it would take of the preferred and common stock of the Distilling Company of America to acquire all these stocks of these four different companies at the rate laid down in the deposit agreement here— —A. Exactly.

Q. It amounts to \$20,540,000 of preferred and \$32,890,000 of common, if we take them all?—A. Precisely.

Q. In accordance with the terms of the agreement. If we take that from the \$31,250,000 of preferred stock and the \$46,250,000 of common which were given to the organizers, it would leave in their hands \$10,710,000 of preferred stock and \$13,360,000 of common stock?—A. Whatever those figures show. As I say, I have not figured that. I have no doubt that is correct.

Q. That is correct.—A. I have no doubt that it is.

Q. On the basis that it is figured out. The point of the question is this: Leaving in their hands this \$10,710,000 of preferred stock and \$13,360,000 of common stock, the burden that was upon them was to furnish these two distilling plants and \$1,500,000 in cash? You said that a moment ago.—A. And the St. Paul distillery.

Q. The two; the Hannis and the St. Paul?—A. No, the Hannis Distilling Company owned two plants, the Mount Vernon and the Hannis.

Q. Both were in the Hannis Distilling Company?—A. Yes, and a large blending works.

Q. That was all included in the Hannis Distilling Company?—A. That was all included in the Hannis Company stock purchased.

Q. Then for the Hannis Distilling Company and the St. Paul and a million and a half in cash, you said a few moments ago that there was three million in cash that they had to supply.—A. I was mistaken in that; I should have said one million and a half.

Q. I understood you to say afterward that you spoke of the three millions because you thought there was that amount to be furnished. I was going to ask you if you thought that the acquirement of the Hannis Distilling Company stock and the St. Paul distillery was represented by a million and a half?—A. I can not tell you; I have no idea. I do not know what they cost. I have no doubt that the Hannis and Mount Vernon were the two most valuable brands of Eastern rye whisky; they were of very large earning capacity; and they were brands of whisky that we were very desirous to own. How much was paid for them I can not tell.

Q. How much do you estimate their value at to-day?—A. I should not like to sell them for five million in cash; I think we could get that for them.

Q. It was the understanding, I suppose, that after the organizers had furnished these plants, any surplus stock that they had in their hands was theirs?—A. That is their business; that is not mine. They didn't do this thing simply for luck or for their health.

Q. Were you one of the organizers?—A. I was not, absolutely not. They undertook to bring about a very important piece of work.

¹ See p. 822, footnote.

Q. Of course.—A. And it was questionable in my mind and questionable in the minds of men who knew a good deal about this sort of business whether it could be done. They undertook to do it, and they succeeded in doing it. As a matter of fact, the Distilling Company of America to-day controls on an average 92 per cent of all the stocks of these four operating companies. It was a most valuable thing for the stockholders of the operating companies, if it could be brought about, because it made it easy and made it practicable to operate all these companies on the most economical lines, to reduce the cost of production by concentration of plants and concentration of manufacturing and concentration of distributing charges and all that sort of thing. It was a valuable thing for these stockholders to bring about. They could well afford to pay well for doing that work. I have no idea what the organizers made, but whatever they did make I think they were entitled to.

Q. The question was as to whether it was in any way easily possible to see what they did make; and with reference to the price that was paid for the Hannis Distilling Company, that, of course, is a matter of common rumor. I thought perhaps you had definite information on it.—A. I have no definite knowledge, as I say.

STOCKHOLDERS NEARLY UNANIMOUS FOR CONSOLIDATION.

Q. Was there any serious objection on the part of the stockholders of any of these four companies to going into the combination?—A. It was the most remarkable phenomenon that ever came under my observation, the unanimity with which this thing was done.

Q. It was reported in the papers in July, after this deposit agreement had been published, that there were meetings of the stockholders of the American Spirits Manufacturing Company, at any rate, in opposition to the plan, and it was thought by some of them apparently, if one may judge from the papers, that it would be unwise for them to go in?—A. There was most vigorous denunciation of the plan and the scope of it and the people connected with it on the part of this committee—the American Spirits Manufacturing Company protective committee. I read columns upon columns.

Q. Yes. What proportion of the stocks of the American Spirits Manufacturing Company were, as a matter of fact, deposited under this agreement within the time limited?—A. I can not say exactly, but I think over 90 per cent.

Q. So that this opposition, you would say, came from only a very small minority of the stockholders?—A. My understanding is that they represented 1,700 shares of the common stock.

Q. Out of how many?—A. Out of 350,000. It was practically unanimous. It was the consensus of opinion almost unanimously that this was a good thing for the stockholders to do, as is evidenced by the fact that they deposited in such overwhelming numbers.

NO UNDUE SECRECY ABOUT THE AMERICAN SPIRITS MANUFACTURING COMPANY—IT WAS A WRECK.

Q. Statements were made at this time by some of these people that they wished a report of the business of the American Spirits Manufacturing Company, inspection of books, and a financial statement, and they declared that no financial statement had ever been made to the stockholders?—A. No public financial statement. It has always been the custom of the management of the American Spirits Manufacturing Company to invite the stockholders to its offices. The books have always been open to those stockholders, bona fide stockholders; in fact, they have invited the stockholders to come there and get all the information that the officers themselves had. So long as I was president of the company we were very glad to have the stockholders come in and to see them. The only difficulty was that too few of them took any interest in it. We were always glad to see the stockholders. Of course, in a case where we questioned the good faith of their application for information, we simply declined it absolutely.

Q. Were you in the habit at the annual meetings of making any report at all to the stockholders?—A. We always made a general statement of the affairs of the company. I never made a secret of the fact that the American Spirits Manufacturing Company was not a flourishing institution. It was the wreck of the old Distilling and Cattle Feeding Company, as you know, and was used simply as the means of bringing about all of these things that have been brought about; it was practically the method employed.

Q. And it was practically contemplated, as I understand you to say, almost from the time of its organization, that through the working of it, these other companies should be brought together into this larger organization?—A. That was the intention, and they simply took this wreck, as I told you, and used it for that purpose. It always was a wreck.

INTERNAL-REVENUE TAX, AT \$1.10 PER GALLON, IS EVADED BY ONE-FOURTH TO ONE-THIRD OF THE PRODUCT.

Q. I would like to have you give us your opinion, if you will, with reference to the present revenue laws of the United States as regards spirits.—A. Well, that is a pretty broad subject.

Q. And any suggestions you may have to make with reference to changes in the law.—A. I have had no time to make any preparation, I have been so busy and so occupied. There is only one thing that I did jot down; perhaps it may be of some interest if you will read this.

Q. You will be kind enough to read it to us?—A. Very well. It is a very rough draft. (Witness reads as follows:)

"The rate of tax to the legitimate distillers is not so important as the fact that such tax should be uniform.

"As it is to-day, the Government collects \$1.10 per proof gallon from such distilleries as are operated under its supervision and conducted as legitimate enterprises. It collects about one-half the tax on goods actually produced in from four to six thousand small registered stills located in six or seven Southern States. It of course collects nothing from illicit stills.

"It is estimated by good authorities that under the \$1.10 tax, from thirty to forty millions of gallons of spirits are annually consumed in this country, from which the Government derives no revenue.

"The question as to how much the tax on spirits should be is not one of sentiment; that is, it is not a question for the Government to consider what particular rate of taxation would please the distiller, or the dealer, or the consumer, but it is simply one of revenue, and the question is, 'What rate of tax per proof gallon will produce the largest revenue to the Government?'

"AS THE TAX GOES UP, THE AMOUNT REACHED BY IT GOES DOWN.

"In the fiscal year of 1893, the last year of normal business under the 90-cent tax, the Government collected the tax on 97,458,347 gallons.

"In the fiscal year of 1899, a year of unexampled prosperity, during which the per capita consumption of whisky had largely increased all over the United States, the Government collected the tax on 83,819,314 gallons.

"These figures refer to spirits distilled from materials other than apples, peaches, grapes, pears, and other fruits.

"It is thus shown that while it can be demonstrated that the consumption of spirits has largely increased during the past six years, the Government collected tax on almost 14,000,000 gallons less in 1899 than in 1893."

Those are very startling facts.

WHISKY AT 3 CENTS A GALLON.

Here is a price list, a published price list, issued June 24, 1899, offering among other things single-stamp 100-proof North Carolina corn whisky, at \$1.19, f. o. b., Reidsville, N. C. The cost of the package is 6 cents, and that leaves 3 cents for the whisky. That is the open price; and I will say to you, gentlemen, that you can buy all the whisky you want down there for about 85 cents a gallon, and the tax is \$1.10.

Q. (By Senator KYLE.) This is from Baltimore—Baltimore published schedule of what?—A. Published price list issued by brokers broadcast.

Following is a copy of the price list offered by the witness:

[Long-distance phone 1473-2. The A. C. Schmidt Company, whisky brokers and commission merchants, 1320 and 1322 Light street, Baltimore.]

To wholesale trade only:

DEAR SIR: We beg to call your attention to the following lots of whiskies. Quotations are subject to sale or advance. Owing to the unsettled condition of the market it will pay you to wire us your order, and be to your interest to correspond with us in relation to whiskies not herein quoted.

Kindly send us a list of your holdings.

Special.

Make offer on 8 bbls. Dec. 91, Normandy rye in bond.

We offer single-stamp 100 per cent North Carolina corn whisky, at \$1.19, f. o. b., Reidsville, N. C.

Redistilled single-stamp gin 100 per cent, at \$1.28½, f. o. b., Camden, N. J.

Samples on application.

We also offer 10 bbls. apple brandy, 94, Rochester, N. Y., at \$2.05.

Yours, truly,

THE A. C. SCHMIDT CO.

Wire orders subject to confirmation.

ILLICIT STILLS SEIZED.

Here is a statement. I suppose you have all these things because they are taken from the reports of the Commissioner of Internal Revenue. This is a statement of the illicit stills seized.

Q. (By Mr. JENKS.) It would be very convenient for us to put this in our record. (The following is a copy of the statement of seizures of illicit stills submitted by the witness.)

Illicit stills seized during the fiscal years ending June 30.

1889	466
1890	583
1891	795
1892	852
1893	806
1894	1,016
1895	1,874
1896	1,905
1897	2,273
1898	2,891
Total	12,961

Q. Two thousand three hundred and ninety-one in 1898?—A. But, of course, for every 1 seized there are 10 in operation; and every time you seize 1, the fellow loads up with another and goes ahead into another settlement, and in 2 weeks he is in business again.

Now here is a statement showing the consumption per capita of distilled spirits since the first tax, since 1860. That is an interesting thing. I presume you have that also.

Consumption per capita of distilled spirits from materials other than fruit, and tax thereon and revenue therefrom.

Year.	Tax per gallon.	Population.	Aggregate of population.	Aggregate gallons consumed.	Per capita consumed.	Revenue.
1860.	None.	31,443,321	31,443,321	83,904,285		None.
1864		34,046,000	34,046,000	85,295,393		\$17,059,792
1865		34,748,000				
1866 ..		35,469,000	125,575,875	37,979,104		75,958,208

		61,289,000				
1890.		62,622,000				
1891.		63,975,000				
		65,403,000				
		66,826,000				
1894.		68,275,000				
1895.		69,753,000				
1895.	1.10	69,753,000	110,615,275	115,104,612	.95	121,676,802
1896..		71,268,000				

INTERNAL-REVENUE RECEIPTS.

Here are the internal-revenue receipts from 1889 to 1899. I presume you have that.

Internal-revenue receipts from spirits during the fiscal years ending June 30.

1889.....	\$68,281,803.93
1890.....	75,181,685.90
1891.....	78,528,601.16
1892.....	83,776,252.86
1893 (97,458,347 gallons)	87,712,513.08
1894.....	78,612,150.22
1895.....	¹ 73,741,380.57
1896.....	² 73,743,018.60
1897.....	75,706,513.17
1898.....	86,188,630.91
1899 (83,819,314 gallons)	92,201,245.77

The above gives internal-revenue receipts from spirits distilled from materials other than apples, peaches, grapes, pears, and other fruits.

REGISTERED STILLS—UNTAXED SPIRITS FROM THEM.

Q. (By Mr. JENKS.) Have you any suggestions yourself to make with reference to a change in our revenue laws? The present tax is \$1.10. What would you think the effect on the revenue would be of lowering that somewhat?—A. The question from the revenue standpoint alone is, From what point can you stop the manufacture of whisky in the small stills over which the Government has no supervision? You never can stop illicit distillation. That is like counterfeiting or forgery. You can get after the fellows and put them in jail, but you never will be able to stop the commission of the crime. There are from 6,000 to 7,000 stills in the 7 Southern States licensed by the Government. They are called registered stills. It is utterly impossible for the Government to supervise the operations of these stills. The Government simply says, "We expect you to pay a tax on so many gallons from a bushel of grain." Then the pressure brought on the Commissioner is very great indeed, so that he is induced to make the estimated number of gallons as low as possible on this plea, which certainly has some justice. The Congressman from that district says, "Here, this is my friend John Jones. He has got a little still. He is mashing 5 bushels a day. Now, he operates that still himself, and the way he operates this still it is impossible for him to get as much from a bushel of corn as these big corporations that operate 5,000 and 10,000 bushel houses. If you want him to pay as much tax as these great monopolies or corporations, it is doing him an injustice, and it is driving him out of business." That is the argument that is made. The Commissioner says, "How much do you think John is producing?" and the reply is, "Well, he can not make more than 2½ gallons from his business." He is taxed on 2½ gallons. The fact is that these fellows are becoming so expert that they are producing 4 and 4½ gallons from a bushel of corn.³

Q. How much do you produce from a bushel in your distilleries?—A. We are improving all the time; we are producing in high wines a little over 5.

WOULD PUT A HIGH-LICENSE FEE ON EVERY STILL.

Q. You think they are producing over 4?—A. I think they are producing over 4. The fact is that these stills pay taxes on about half of what is produced, and the other half is practically illicit whisky. The remedy for that is a very simple one, but still it is a very difficult thing. The remedy is to charge a license fee for every still, charge them in proportion to the capacity. Of course it would cost our company a great deal of money, but it would assist the Government in the proper collection of the tax. If you charge every still in the country a license, say, on stills under 10 bushels so much, and from 10 to 100 bushels so much, and from 100 to 500 so much, and from 500 to 1,000 so much, a license from all, and make the license pretty heavy, that would be one remedy for wiping out a good deal of what is practically illicit distillation. It would cost our company a great deal.

Q. You say it would cost your company a great deal. Do you think it would require you to advance any more money than you do now?—A. What do you mean?

Q. You know that you pay a tax on the amount that you sell, and I suppose you recoup yourselves in the price to the consumer?—A. We simply add the tax. So far as we are concerned, it makes no difference.

¹ Includes \$36,706,331.11, at 90 cents per gallon.

² Includes \$3,973.57, at 90 cents per gallon.

³ See Mr. McNulta, p. 231.

THE PRICE OF STANDARD BRANDS CAN BE PUT UP INDEFINITELY, BUT IT IS BEST TO SELL SPIRITS NEAR COST.

Q. In this other form you would of course add the tax in the same way substantially?—A. Yes, if we could get it.

Q. Is there any reason why you could not get it?—A. We try to get what we can in safety. But one of the natural results of these great combinations is cheapening the cost of production and cheapening the products in cost to the consumer. The consumer does not care how much he pays for a fancy brand of whisky. If a man wants Old Crow he does not care whether you charge him \$2.50 a gallon or \$3; he wants Old Crow. Or if a man wants Mount Vernon he does not care if the price of Mount Vernon is \$5; he has it, and is going to have it, because he can make a profit on it everywhere. But when you come to a product like raw proof spirits it is a question of getting such a cost of production that you can make a profit; that you can market your product at a profit on the cost. In other words, no control of the spirits business is possible unless you keep your price very close to the cost of production. But when it comes to brands of whisky, anything in reason. The purchaser cares nothing about the price so long as you do not overproduce the brand. If there is an actual consumption of 3,000 barrels of Mount Vernon always, and we do not make any more than that, and every man that gets 5 barrels knows that it is going to be used, and somebody is going to drink up that 5 barrels, he had just as soon pay \$5 a gallon as 50 cents. But when you produce more than that by 500 barrels the overproduction of that whisky fixes the value of the 3,000 barrels; and the whole secret of making money out of the standard brands of whisky is the secret of keeping production down.

Q. You would say, then, that the chief advantage of your combination is that you can control your output, especially of those brands?—A. We absolutely control the output of the standard brands; that is absolutely within our own hands. We will not produce 1 gallon more of whisky than the country will take—than the actual consumption shows. But we mean to control the output of spirits by selling spirits at a price very close to the cost of production.

Q. The control of the output of spirits comes from the fact of keeping the price low rather than from the fact of controlling so large a proportion of the capacity?—A. That is all; nothing else. Anybody can make spirits.

MORE WHISKY AND ALCOHOL USED IN GOOD TIMES.

Q. Are you exporting any spirits?—(No answer.)

Q. (By Mr. FARQUHAR.) What is your practical observation in respect to the consumption of stimulants by the people in good times and hard times?—A. There is more whisky consumed as a beverage in good times than in hard times, naturally. The great consumer of liquor as a beverage is the laboring man. He is the great consumer, and when he has money he spends it for whisky and beer and cigars and tobacco and luxuries. When he has not, he can not get it on credit easily. He has no credit for whisky. He may have credit for dry goods, but he has no credit in a barroom. That applies not only to the consumption of spirits as a beverage, but also to its consumption as an article entering largely into manufacturing and the arts and sciences. When all the mills of the country are working full time the consumption of alcohol is very markedly increased. When hard times come, down goes the consumption. A very large quantity of alcohol is used, I should say, notwithstanding the obsolete laws of the Government.

Q. (By Mr. SMYTH.) Have you any statistics of the consumption of whisky in cities and in the rural districts?—A. No; I have not at hand, but I should judge there are such statistics in existence, and they show a constant increase in cities where you can get such statistics with some degree of accuracy. I have found, for instance, that the greatest consumption of whisky per capita is in the cultured city of Boston. I hope this will not get into the press. But no fellow is supposed to take a drink in Boston. They all go up the alleys, etc. But the consumption of spirits per capita is greatest in the New England States. That is due absolutely to the climate.

Q. (By Mr. JENKS.) You say of spirits; that is, not whisky?—A. When I say spirits in this connection I mean all that comes from spirits; spirits is the great basis for it.

Q. (By Mr. RATCHFORD.) Have you any statistics showing the consumption of whisky by the laboring classes as compared with other classes?—A. I could not give that, possibly.

Q. I understood you to say that the great consumer of whisky was the laboring man. What do you base that statement on?—A. On the fact that there are more laboring men than any other men in the country. They are about 6 to 1. That is all.

IF THE PRICE GOES UP, A DRINK COSTS THE SAME, BUT THERE IS LESS WHISKY AND MORE SPIRITS IN IT.

Q. You said that as far as the price of whisky to the consumer was concerned, the consumer cares little whether it was \$2.50 or \$3 a gallon. Are we to infer from that, that the laboring man does not care what he pays for it?—A. Oh, it does not cost him any more. He pays 10 cents for his drink.

Q. Regardless of the cost originally?—A. It does not make any difference, and really the retailer pays little more in proportion.

Q. Have you not seen 15 cents paid for it?—A. I am speaking of the ordinary drink in the ordinary barroom; but of course we are accustomed to pay 15 and 20 cents straight, and in periods of great prosperity I have paid as high as 25 cents when I wanted it very badly. The ordinary price of a drink is 10 cents. But say the ordinary retailer buys 5 barrels of whisky at \$1.50 per gallon. Now, if there is a variation of 2 or 3 cents in the cost of spirits, he still pays \$1.50 for the whisky; he may not have as much rye whisky in that whisky—he gets more spirits and less whisky, that is all. But the jobber or distiller is the man who really suffers, if anybody does, from the increase in price, and he recoups himself by reducing the quality. In other words, instead of putting 5 gallons of rye whisky in the \$1.50 whisky, he will simply put in 4.

Q. (By Mr. JENKS.) When the price of spirits goes up, practically no one loses except the consumer in the quality?—A. Practically no one loses except the fellow who drinks it. In the end he gets a little more spirits and a little less whisky, that is all.

Q. In the case of the brands of whisky that are bottled, the consumer pays it there directly in the higher price per dozen— A. (Interrupting.) No; the price for cased goods—in the first place, it is a question very much of brands. Very popular brands command anywhere from \$12 to \$18. It makes very little difference if whisky has gone up 15 or 20 cents a gallon. It simply means an additional cost of 20 or 25 cents on that case of goods which is sold from \$18 to \$20. And there again the retailer does not pay any more and the jobber does not pay any more.

CONSUMPTION GREATEST IN NEW ENGLAND.

Q. (By Senator KYLE.) Your statement was that the per capita consumption of spirits was greatest in Massachusetts?—A. I say in the New England States.

Q. The New England States?—A. I say I think it is due to the climate.

Q. Greater than it would be in North Carolina, for instance?—A. In North Carolina there is a great deal of corn whisky consumed, but we can not get at any statistics.

EXPORTS HAMPERED BY GOVERNMENT REGULATIONS.

You were talking about the matter of exports. We have the greatest corn-producing country in the world. We make alcohol cheaper than any other country on the face of the globe. There was a time, 20 years ago, when we exported as much as 150,000 barrels of alcohol in one year. Germany was losing that trade, and seeing her disadvantage, gave an export bounty, which took away the trade from this country. But, notwithstanding that bounty that was given by the German Government, we could easily compete—the distillers in this country could easily compete—if we had equal facilities for shipping. What keeps the trade away from us now is the high rate of freight, because we have got to put this stuff into barrels at once, into cooage, ship it from Peoria to New York, and from New York to the distributing points, Hamburg and Marseilles. What we have been trying to bring about in the last 3 or 4 years is a regulation permitting us to store alcohol in tanks, and ship it in tank cars, and then in tank compartments or tank steamers to the other side. That, practically, would give us control of the export business of the world. It is scarcely understood what that means to the agricultural interests of the country. It means that—General McNulta has gone into that; he was very familiar with that—in times of great surplus corn crops, when the price of corn is cheap, the ability to manufacture alcohol and keep it would permit the distilling companies to purchase so much corn for that purpose as to appreciably affect the market, and they could make the alcohol at such times as the market for corn was appreciably lower than the average times. It would be a great benefit for that reason alone, not taking into consideration the new industry created by the manufacturing of new alcohol, the railroads getting the advantage of that business, the steamers employed for that purpose, at no loss to anybody. It is simply a change in the existing regulations, and it has been delayed, I think, by the Government. The Treasury Department

¹ See Mr. McNulta, pp. 225-230.

acknowledges the embarrassment and the harassing of the proper conduct of this business simply for need of some slight change in the present laws, simply a modification.

PRICE OF SPIRITS BASED ON PRICE OF CORN—NO CUTTING.

Q. (By Mr. JENKS.) You spoke some time ago with reference to the cheapened cost of manufacture of spirits on account of the organization. Is your company in the habit of meeting competition in special localities by special cuts in prices in those localities?—A. No; I have dropped all that sort of business absolutely.

Q. You used to?—A. That was the method heretofore; that was the method employed by people heretofore connected with the business, but since I have been connected with it we have adopted the present policy.

Q. What is the method now?—A. We make prices for spirits at which we make a small profit, and anybody is welcome to sell at that price. We do not care where they come from.

Q. That price is based, I suppose, on the price of corn?—A. Absolutely, corn being the great factor in the production of spirits.

Q. What is the general market price to-day?—A. The price to-day is \$1.23.

Q. And does that fluctuate with the corn fluctuations?—A. We make a fluctuation of half a cent a gallon for each fluctuation of 2 cents per bushel of corn.

Q. You take as a basis No. 2 white corn?—A. We take as a basis No. 2 cash corn at Chicago.

Q. The Chicago price being your basis?—A. Yes.

Q. Instead of the Peoria price?—A. Yes; Chicago No. 2 cash, for the reason that we have a daily and almost a minute quotation of corn in Chicago, and we have not in Peoria.

Q. Then all your agents throughout the country are instructed to sell at those rates regularly, regardless of what your competitors may do?—A. Our instructions, as I explained to you heretofore, are to sell the products of the American Spirits Association at the price of \$1.23. This price is given by the United States Spirits Association to their salesmen, and they are instructed what the price of spirits is, f. o. b. That simply forms the basis for the different articles sold by these distributing houses—blends, compounds, rectified goods, gins, whiskies, brandies, and so on. They are notified that the basis of these is \$1.23, and then all these things are sold at so much over the base. Is that clear?

Q. That does not still make it quite clear as to whether they are permitted to cut prices, or whether they are instructed to cut prices in order to meet rivals.—A. We have given absolute and strict instructions to all of our people not to cut prices.

Q. Your prices are fixed regardless of what your rivals do?—A. That is right; in other words, it is the policy of running our company. The policy of driving a man out of Boston and following him to New Orleans has been proved to be a reckless policy, because you drive him out of Boston and he only sets up somewhere else. We do not want to drive anybody out of business; we want to see him make money.

Q. You put your price where he can make some?—A. Our price is satisfactory to us, and is put at a price and kept at a price where we make a profit.

Q. But at the same time you calculate that, owing to the advantages you have in production, you keep the price where you are not likely to encourage or increase competition?—A. What we think we accomplish by this is that we do not tempt new competition. Existing plants run and they will run; it is human nature to run. A man says, I am not making any money now but I will make money next year; and he will stay in the business.

Q. (By Senator KYLE.) I understand this, of course, is because, according to your plan, you can make money in your plants if anybody can?—A. Yes.

PRACTICALLY NO EXPORTS—THE FOREIGN CONSUMPTION.

Q. (By Mr. RATCHFORD.) I should like to hear the export trade question followed a little further as to the amount of whisky exported now by your company.—A. Practically none. When I say practically none, there are times—it has happened within the last 20 years twice or three times, when the potato crop in Germany has been a failure—that we have been able to get some of that business. Last year we had some business with the Japanese Government. We have built up quite a business in Japan. But the business that we are looking for is the very large business in alcohol—that is, the great consumption of alcohol, of German alcohol—that is used for the fortification of the ordinary wines; for instance, the Italian and the Spanish wines, the production of which is something stupendous, something between 800,000,000 and 900,000,000 gallons a year. That is rather startling. For the fortification of these wines about 10 per cent of alcohol is used—that is, from 80,000,000 to 90,000,000 gallons. The alcohol which is required now is supplied by Hungary and Germany. If we could have distributing points, if we could ship in tank cars to

the seaboard and in tank steamers across to Hamburg, which is a free port, and to Marseilles, which are the distributing points, that business would go to this country.

NO WHISKY EXPORTED FOR SALE; ONLY TO BE REIMPORTED, AVOIDING THE TIME LIMIT ON THE TAX.

Q. In gauging the number of barrels to produce, upon the basis of the consumption of the previous year, is it not a fact that an excessive amount is sometimes produced—an amount of a certain brand in excess of the market requirements?—A. You are speaking of spirits?

Q. Yes. And in that case it is exported, is it not, generally?—A. There is no overproduction of spirits and there is no such thing as brand in spirits.

Q. Is the same true of whisky?—A. There have been periods of overproduction of whisky. The Government permits whiskies to remain in a bonded warehouse, you understand, for eight years. This law has been changed since 1894, so that we have not faced any period of overproduction up to now, but we are just getting at it now, so that it will be a new phase in the business in 1900. That will be the maturity of the 1892 whisky. The Government, through another one of its very sensible regulations, says: "You must pay the tax on this whisky in 1900, but if you do not pay the tax we will give you the right to export it." In other words, if a man does not want to pay the tax at the end of the 8 years, he exports it to Bremen. The German merchants are very sharp merchants, and they see a point quicker than we do, I think. They have established warehouses in Bremen for that purpose. A man in Kentucky can export his whisky to Bremen; he can leave it there as long as he pleases; he pays the warehouse charges, and pays the freight, and he can leave his whisky in Bremen until there is a demand for it in this country. Then, when that demand comes, he brings it back and pays the tax on what is left in the barrel, and then, of course, finds the market. Now, of course, the natural way and the sensible way—and all other countries have it—is that the man pays the tax when he uses it, and pays the tax on so much of the stuff as he uses.

Q. When whisky, alcohol, and spirits are exported, are they usually sold in foreign markets for the same prices that they command in this country?—A. You want to separate them. When whisky is exported it is simply exported to get it out of the country, not to find a market. The intention is to bring it back. There is an affidavit required by the Government here, which says that this whisky is bona fide exported in that way and intended for such a market and not intended solely for export. Well, the fellow simply means to export it and says, "Yes; I expect to sell it," with the mental reservation that he knows that he can not sell and does not expect to. That is all there is about it. There is a small amount of whiskies sold in foreign countries, but they are simply consumed by Americans over there.

INJURIOUS GOVERNMENT REGULATIONS.

Q. (By Mr. JENKS.) Why do you put your alcohol and spirits so largely into barrels—wooden barrels—instead of storing them in metal?—A. The law does not permit us to store them in metal.

Q. Do you think it would be wise to have the law changed in that particular? Is there any reason, as regards the quality of the goods, for keeping them in wood?—A. Absolutely none; it is detrimental to keep them in wood.

Q. Besides the waste?—A. Waste and coloring. As regards coloring, the quality of alcohol depends on the coloring. It must be white to be merchantable; and when it has been barreled up in wood for two or three weeks, it is liable to color, which makes it less valuable.

Q. (By Mr. FARQUHAR.) Have these recommendations in respect to spirits been made to the Government in any form?—A. There was a bill introduced in 1897, both in the House and the Senate.

Q. 1-97?—A. I think it was in 1897. It was introduced in the House by the Congressman from our district, Mr. Graft, and in the Senate, I think, by Senator Pettigrew; a bill which covered this particular matter.

Q. (By Mr. RATCHFORD.) Your company has, no doubt, a great many laboring men employed?—A. We have a great many, but the element of labor is not an important factor in our business. These plants are almost operated automatically. Labor is not a very large item with them; it is a very small one.

Q. You have no difficulty with strikes or anything of that sort?—A. Nothing of that sort; never have had a strike. I don't remember any strike in a distillery. Testimony closed.

THE TIN-PLATE COMBINATION.

WASHINGTON, D. C., *October 16, 1899.*

TESTIMONY OF MR. W. T. GRAHAM,

Second vice-president of the American Tin Plate Company.

At a meeting of the United States Industrial Commission held at its offices in the Bliss Building October 16, 1899, Mr. W. T. Graham, second vice-president of the American Tin Plate Company, after being duly sworn at 3.15 p. m., testified on the subject of trusts.

Q. (By Mr. JENKS.) Will you kindly state your name and address?—A. W. T. Graham, Chicago, Ill.

Q. You are the vice-president of the American Tin Plate Company?—A. Second vice-president.

Q. Do you hold any official position in the National Steel Company?—A. No, sir.

Q. In the American Steel Hoop Company?—A. No, sir.

Q. Are you a director in these companies?—A. In both of them.

Q. How long have you been engaged in the tin-plate business?—A. Well, I think since about 1895 I have been to some extent in the tin-plate business; in a very small way.

DETAILS OF TIN-PLATE BUSINESS.

Q. I wish, to begin with, that you would tell us something about the business itself, in order that we may understand what you are saying. What is your finished product?—A. The finished product is tin plate, or finely finished steel plate coated with tin or a mixture of tin and lead.

Q. You have simply the one quality in the main?—A. No, sir; we have different qualities.

Q. What is terne plate in distinction from tin plate?—A. Roofing plate coated with a mixture of tin and lead.

Q. What is the ordinary basis for the quotation of prices of tin plate?—A. 14 by 20, a box containing 112 sheets; that is, the size of the plate is 14 by 20.

Q. Is it your custom in quoting prices to quote New York prices or prices f. o. b. at the mill?—A. Delivery prices, at New York or anywhere else—the destination of the plate.

Q. You usually quote in that way?—A. Yes.

Q. And you pay the freight yourselves?—A. Not necessarily. Sometimes the customer pays the freight and deducts it.

Q. What are the chief raw materials that you use?—A. The chief ones are steel and pig tin.

Q. In what form do you consider the raw material—the steel? Is it the steel plate itself?—A. Steel billets, steel slabs, and steel bars. We use steel in all these shapes.

DIPPING WORKS.

Q. In the manufacture of tin plate is it customary at some manufacturing establishments to buy the black plate and then simply coat it by dipping it? Are there any dipping works?—A. There are dipping works; yes.

Q. What is the difference between that method of manufacturing and yours?—A. They do not roll the black plate; they do not roll the steel.

Q. In your establishments you roll the steel into these plates and then dip the plates also?—A. Yes.

Q. These other establishments simply have the second process?—A. Yes.

Q. How many dipping works are there in the country now?—A. Really I could not answer that.

Q. You do not remember how many dipping works there are in the country?—A. I do not remember.

Q. Do you know whether there are as many in the country now as there were when the American Tin Plate Company was organized?—A. I think practically the same number. It may have varied one or two.

SIZE OF PLANTS—COST OF MILLS.

Q. What is the basis of the estimate of the output of a tin-plate plant? Can you estimate the size of an establishment by the number of hot mills or anything of that kind?—A. You can estimate that a given mill is in the habit of turning out so much per day; that is, it will do it on the average. That is about the only way.

Q. Can you give us an estimate as to the cost of putting up a tin-plate mill now compared with what it was at the time the American Tin Plate Company was organized?—A. I can not give you an estimate of it. I only know in a general way that the cost of construction has vastly increased; in some lines of work over 100 per cent, some less.

SELLS BLACK PLATE TO ALL DIPPERERS THAT WANT TO BUY.

Q. Do you yourself ever sell black plate?—A. Yes.

Q. Have you refused at any time to sell black plates to dipping works when they wanted to buy them?—A. No, sir.

AMERICAN TIN PLATE COMPANY—HISTORY OF ORGANIZATION.

Q. At what time was the American Tin Plate Company organized?—A. In December, 1898.

Q. Will you give us briefly the reasons for the formation of the American Tin Plate Company?—A. Well, the American Tin Plate Company was organized at the instigation originally of the manufacturers of tin plate. They had frequent meetings to consider the condition of their trade, and they were the instigators of the organization.

Q. Had there been any attempts at organization for some time before the Tin Plate Company was finally organized?—A. Well, what do you mean by "some time before?"

Q. Say 2 or 3 years before.—A. I do not know of any. The first move of that kind resulted—although it was perhaps dormant for a little while—in the organization of the American Tin Plate Company.

Q. The efforts that were spoken of, for example, in the papers for some months before were substantially the same movement, delayed somewhat in completion?—A. Yes; it began a year before.

PREFERRED AND COMMON STOCK.

Q. What is the capitalization of the American Tin Plate Company?—A. \$46,000,000, I think, is the issued capital.

Q. And what is the authorized capital?—A. \$50,000,000.

Q. What proportion of this stock is common stock and what proportion is preferred?—A. \$18,000,000 is preferred and \$28,000,000 common.

Q. What is the nature of the preferred stock; what special advantages does it have?—A. I think that that question might be answered by someone else better than by myself.

Q. What rate of interest is paid on that, and is the interest cumulative?—A. It is 7 per cent cumulative stock.

Q. Does the preferred stock have any preference in voting over the other?—A. As I understand it, all stock has an equal right to vote.

BUYING THE PLANTS—SUBSCRIBING TO THE STOCK.

Q. There seem to be ten millions more of common stock issued than preferred. Why is it arranged in that way? In the purchase of the different plants that came into the combination, what was the general mode of organization? What was the general mode of purchase of the different plants?—A. The option, we might call it, was for cash. They simply bought our mill, or any other manufacturer's mill, at a price payable in cash.

Q. You, for example, when you sold your mill, sold it at a cash price?—A. Yes.

Q. Then when the organization was made and this stock was issued you were at liberty to subscribe for stock instead of taking cash?—A. To a certain extent; I do not know that we were at liberty. We will put it this way—I was allowed to take some stock.

Q. Who was it that determined how much stock you could take?—A. I can not say who it was that allowed it. Whoever it was that presented the subscription paper would say that if you desired to take cash for the property you could have it, or you could have that much stock. I do not know anything about that. I simply said I wished to take that much stock, and it was given me. Really, who presented the paper I can not tell you now.

FOR \$100.

Q. At what rates were those shares of stock offered as compared with the cash price offered for your plant?—A. For each \$100 of cash consideration you were the recipient of \$100 in preferred stock and \$100 in common.

Q. Do you know whether there were any variations made from these rates or not?—A. No, sir.

Q. (By Representative LIVINGSTON.) Do we understand you to say you got 100 common and 100 preferred for \$100?—A. For \$100 cash consideration we had the option of taking the cash or \$100 each of the 2 classes of stock, preferred and common.

Q. That is, you got 200 for 100?—A. Yes, 100 common and 100 preferred.

EACH CONCERN MADE ITS OWN BARGAIN.

Q. (By Mr. JENKS.) In selling the different individual plants that went into the combination, what was the basis of estimation of the value? Was it the earning capacity of the plant as its earning capacity would be after the organization was formed, or was it the cost of building the plant, or was it the cost of putting up a new plant, or what was the basis of estimate?—A. I do not know. We were dealt with as a separate company. Our option was taken at a separate price.

Q. That is, you were asked what you would take, and you fixed the price?—A. Yes.

Q. Do different individuals who sold know what was given to other individuals?—A. They do not, so far as I know.

Q. Each one was dealt with separately?—A. Each one was dealt with as a separate individual.

Q. As regards the way in which the company is now organized for doing business, could you furnish the commission with copies of the articles of incorporation and by-laws?—A. I could not. I have not got them.

Q. Could they be furnished by the company?—A. They might be. I do not know whether they have copies of them.

Q. I suppose a copy could be made without very great difficulty?—A. My position is not such that I usually notice those things.

Q. So far as you are concerned you can not agree to furnish a copy?—A. I can not; no, sir.

Q. Under what State laws were you organized?—A. New Jersey.

Q. Does your company keep in the State of New Jersey its transfer books and its stock books?—A. Really, I do not know; mine is the commercial end of the business.

Q. That is outside of your range of the business, then?—A. That is outside of my range of the business. I do not know anything about it, do not worry about it, and do not know anything about it.

NO SALES TO RETAILERS. NO DISCRIMINATION BETWEEN JOBBERS.

Q. In your dealings with the trade do you deal directly with retailers, or do you deal with jobbers or wholesalers?—A. We deal directly with the wholesale dealers or jobbers and the large consumers. We do not sell the retail trade.

Q. You sell only to the wholesalers?—A. Only wholesalers and large consumers.

Q. Have you, since you have engaged in the business, refused to sell to any of these jobbers?—A. No, sir; we have not.

Q. You make no discrimination between jobbing houses at all?—A. No, sir; we do not.

Q. And there have been no exceptions to that?—A. We do not refuse to sell to any of them; there is no discrimination whatever.

JOBBER'S BRANDS AND CONTRACTS.

Q. Have any of the dealers to whom you have been selling had any special brands that they were in possession of before your organization?—A. Yes.

Q. You have acquired those brands?—A. Some of them.

Q. Where you have acquired brands do the former owners have the use of those brands?—A. They do.

Q. Under what conditions?—A. We simply make the plate under their brands and make these brands exclusively for their use. For instance, we will not sell to one jobber what is called the private brand of another jobber.

Q. Do you make any contract with that jobber himself that he shall buy his tin plate exclusively of you, or anything of that kind?—A. No, sir.

Q. Do you make any special written contract with these jobbers to whom you are furnishing special brands?—A. Yes; where we have an assignment of the brand we have an agreement with them that we will furnish them their plates of a particular quality under that brand, and that we will not sell that brand to any other jobber.

Q. Is there any statement made in your contract with reference to the price at which they shall sell that brand?—A. I believe there is a clause in the contract which guarantees to them that the price which they pay for that brand shall not be higher than the price on the same quality of plate—that is, if we were making a brand of the same quality and selling it, we could not sell the jobber under that agreement at a higher price than we were selling our own.

Q. He could not get the benefit then of any added price for that special brand beyond what he could get for any other tin plate of that same quality?—A. Yes; because he gains for the brand prestige by distributing it in a territory, whether small or large; a brand gains prestige, and an unknown brand of the same quality will not sell at the same price.

Q. Do you put in any of the agreements with these dealers such an article: this: "The obligation of the company to continue the manufacture of any brand shall be made contingent on buyers restricting all purchases of tin andterne plat to its products, and the company shall have the right to discontinue the manufacture of such brands on evidence satisfactory to its sales department that buyer has not so restricted purchases?"—A. The agreement that is in force, as I recollect it, does not contain that clause.¹

Q. Have you had previously any agreements that did contain any clause like that?—A. I think never, that were executed.

Q. You think that such plans as that were under consideration, but not carried out?—A. That is my recollection of it, that no agreement of that kind was signed.

OUTSIDE TIN-PLATE MAKERS (DIPPERS.)

Q. What proportion of the tin plate manufactured in the country at the present time has the American Tin Plate Company?—A. I can not say. These dippers make quite a large product. I never attempted—

Q. To tell what per cent of the total product you have?—A. I never did.

Q. Could you mention as many as half a dozen plants outside of your organization?—A. Yes, I think I could. There is Norton Brothers & Co., Chicago; Follensbee Brothers & Co., Pittsburg; Merchant & Co., Philadelphia, and a number of others. There is one in Cincinnati, I can not think what it is—the American Tin Plate and Galvanizing Company, I think it is called; John Hamilton, Pittsburg, and N. & G. Taylor, Philadelphia.

EXCLUSIVE CONTRACTS WITH MACHINERY MAKERS.

Q. That is sufficient. The statement has been made at different times that it is impossible now for an independent manufacturer of tin plate to secure machinery to manufacture tin plate on account of some contracts that your company has. Have you enforced them, or have you had any contract or any compact with founders and machinists not to furnish any independent plant or contemplated plant anything to go into the business with?—A. I think that is outside of my position; as I say, mine is in the commercial end of the business, the business of selling the product. I have charge of the sales agencies.

Q. Do you know with reference to this: has your company had any such contract?—A. I know of an arrangement or compact that was talked of by which we were to buy the entire output of some certain foundries.

Q. Well, by buying the entire output that would shut out any others from buying at that time?—A. But we got with that the benefit of the engineers of each of those companies, and any new thing they might develop we would get by virtue of it.

Q. Have you had also arrangements by which they would refuse to furnish even sheet mills machinery for making sheet iron?—A. I do not know of any such.

Q. Has the Tin Plate Company had any arrangements with the manufacturers of mills to build sheet mills only when a lease for 2 years was signed by the parties who bought them and turned over to the American Tin Plate Company, so that in that way you could control them?—A. I am not familiar with the details of any contract of that kind.

Q. You do not say that contracts of that kind have not been made?—A. I do not know that contracts of that kind have not been made. I am not familiar with the details of any such contract.²

¹ See Reid, p. 874; Mr. Griffiths, pp. 890-893.

² See Mr. Wheeler, p. 884; Mr. Reid, p. 875; Mr. Griffiths, pp. 888-890.

Q. (By Representative LIVINGSTON.) Can you make the general statement of what the contract contains without the details?—A. I can not.

Q. (By Mr. JENKS.) What officer of the company would be likely to know the details in reference to such a contract?—A. I hardly know.

PRICE OF TIN PLATE HAS NOT INCREASED MORE THAN COST.

Q. What has been the course of prices of the finished products since the American Tin Plate Company was formed?—A. They have been advanced.

Q. How much? You can give us the figures definitely enough to show us what the advance has been.—A. The first price we made was \$2.75 per box; the last price we made—that is, the base price—was \$4.65.

Q. Has the price of the finished product advanced more than the price of the raw material?—A. I think not, sir.

Q. The prices both of the steel and the tin have advanced in proportion?—A. Very heavily.

Q. Do you say that the prices of the steel and of the tin have advanced proportionately?—A. I do not know what you mean by proportionately. I would say that the cost of making tin plate, by reason of the advance in steel and pig tin and labor and supplies, has increased quite as much as the selling price.

Q. Then if we were to take, let us say, a full-weight box, you would think that the increase of the sheet steel and the tin and the increase in the cost of labor would make up all of this difference?—A. Yes. I will put it a little bit differently. That the cost of the steel and pig tin, and of the labor and the general supplies that go into it and that are necessary to the operation of a plant, have increased as much as the price has increased.¹

Q. Will you explain a little more in detail what are the general supplies that go into this?—A. Well, there is acid, there are rolls, there are castings that wear out and are broken and have to be replaced, and there are lubricants, and fuel, and many other smaller items. I have perhaps named the more important ones.

ADVANCE OF WAGES—STRIKE.

Q. What has been the relation of the Tin Plate Company to the laborers that have been working for it? Have you increased their wages?—A. Yes.

Q. How much?—A. Well, it has varied. I think the increase will run from 15 per cent as a minimum to probably, in some cases, as much as 50 per cent.

Q. What class of laborers have had their wages advanced 15 per cent, and what class of laborers have had their wages advanced 50 per cent?—A. The laborers represented by what is known as the Amalgamated Association of Iron and Steel Workers were advanced 15 per cent.

Q. And what classes were advanced 50 per cent?—A. Some isolated cases where workmen in certain factories were not paid so much as was paid in others; where wages were considerably below the average, they were brought up.

Q. Will you give us some of the details with reference to the increase in wages of the workers of the Amalgamated Association? Was there any strike or any formal demand on their part for an increase in wages?—A. They presented a demand for more wages, and a conference was agreed upon. When they met our people they presented their reasons for an advance of so much.

Q. What was it they asked for?—A. Twenty per cent.

Q. And then, as the result of a compromise, you advanced them 15 per cent?—A. We advanced 15 per cent after discovering that 15 per cent was the least figure that would be satisfactory.² That was the result of the compromise.

PLANTS DISMANTLED.

Q. Have you, since the American Tin Plate Company was organized, closed any of the plants that were brought in and dismantled them?—A. Yes.

Q. How many have been dismantled?—A. I can not say—1 plant in Baltimore, or 2; 1 in Brooklyn, New York. Those are the only ones, I believe, that have been dismantled.

Q. What was the special reason for that?—A. They were inefficient plants, badly located.

TIN PLATE PRICES IN ENGLAND.

Q. Go back for a moment to the question of prices again. Do you know whether the prices of tin plate here have advanced more in proportion than prices in Wales

¹ See Mr. Reid, p. 874; Mr. Griffiths, p. 902.

² See Mr. Reid, pp. 869, 879; Mr. Griffiths, p. 903.

and England?—A. You would have to fix the date for the comparison, because, you know, there are fluctuations in both countries.

Q. Yes. Say from the time the American Tin Plate Company was organized, up to date, has there been a greater increase in prices here than in England?—A. I can not say that without consulting some newspaper or trade report as to the price of tin plate on the other side.

Q. You have not kept track of that?—A. I have not kept track of it definitely in my mind.

SOME EMPLOYEES OWN STOCK.

Q. Do the wage earners in your establishment have stock in your company?—A. I have no doubt they have. I have known of 3 cases personally, and I imagine there are a great many of them.

Q. You know there are several cases of that kind?—A. I know of several cases where the workmen had stock in my old company, and these I remember; that is the way I happen to know it. And I presume that they have it yet.

Q. Is it the policy of the company to encourage the buying of stock by its employees?—A. As far as I know, the company does not encourage anybody to buy stock.

Q. A person buys it if he wants it and pays the price?—A. He can buy it if he wants to. They do not buy it from the company.

ALL JOBBERS TREATED ALIKE.

Q. You said some little time ago that you sold your output regularly to jobbers and large wholesale dealers?—A. Wholesale dealers.

Q. Are there any preferences shown to the large jobbers, in special prices?—A. There are none.

Q. They are all treated alike?—A. They are all treated alike.

KNOWS OF NO EXCLUSIVE CONTRACTS WITH STEEL COMPANIES.

Q. You said that you were a director in two or three companies; the American Steel Hoop and the National Steel Company? What are the relations existing between the American Tin Plate Company and the National Steel Company?—A. The National Company is the maker of material which we buy. We buy a part of our material from them.

Q. About what proportion of your material do you buy of the National Steel Company?—A. Really I can not answer that.

Q. Do you know what proportion of their output you take?—A. No, sir; I do not. We buy a considerable part of our material outside of the National Steel Company.

Q. Could you mention some other company from which you buy?—A. I think we buy from 3 or 4 others. We buy from the Carnegie Steel Company; we buy from the Illinois Steel Company.

Q. In buying from any of these other companies, do you have any contract giving you the exclusive right to purchase? Do they agree not to sell to others?—A. The contracts that are in existence, that I know of, have no conditions to debar them from selling to anybody else. I see the contracts because I sometimes have some questions to settle on them.

Q. Please repeat that.—A. I say the contracts that I have consulted for purposes of my own have no such conditions.

Q. You do not know that contracts of that kind have not been made by the company?—A. I can not testify negatively to that question; I do not know; but I made some of these contracts myself, and I know there is no condition of that kind in them.

THE TARIFF.

Q. The question of the tariff has frequently come up in connection with the Tin Plate Company. What, in your judgment, has been the effect of the tariff on tin plate, upon the industry in this country?—A. It has certainly been to encourage it, to build up the industry to the extent to which it exists to-day.

Q. What, in your judgment, would be the effect if the tariff on tin plate should be removed?—A. I think, at present, it would stop the manufacture of it if the tariff is removed. I think it would kill the American tin-plate industry, absolutely.

Q. (By Representative LIVINGSTON.) Could you have organized the tin-plate combination without the tariff?—A. There would not have been anything to organize.

CONDITION OF THE INDUSTRY BEFORE THE COMBINATION.

Q. (By Mr. JENKS.) What was the condition of the tin-plate industry just before the organization of the American Tin Plate Company? Was it in a flourishing con-

dition?—A. No; it was not. There was a condition of excessive competition, which simply meant that the strongest people, financially, and the best plants, physically, would continue in existence, and some of the weaker ones would go into bankruptcy.

Q. Had there been before the organization of the company, to your memory, any cases of bankruptcy in the tin-plate industry within a year or two?—A. If you include the dippers, yes. I do not know now of any mills that have gone into bankruptcy.

Q. But your opinion is that the condition of the business was such that some would have gone into bankruptcy soon if it had not been for some effort like this, made to relieve it.—A. Yes.¹

IMPORTS AND EXPORTS.

Q. Is there any tin plate imported at present? Has there been any within the last 2 or 3 years?—A. Yes; some.

Q. Can you give a definite estimate as to how much?—A. Well, no. Those figures are published frequently and I look them over usually when they come out, but I haven't them in mind.

Q. Do you do any exporting of tin plate?—A. No. We might ship some little tin plate into Canada and down into Mexico.

Q. You have practically no export trade at all?—A. We have practically no export trade at all.

BENEFITS OF CONSOLIDATION.

Q. You have spoken of the unfavorable condition of the business before the organization was made. Will you sum up for us what you consider to be the chief advantages of combination as it has worked out in your establishment?—A. Well, I think it prevents absurd and suicidal cutting of prices. I think there are conditions under which goods are sold very much under cost. I have done that myself. Then we, of course, naturally expect some betterment in our companies, better equipment of our plants, bringing them up to a better physical condition.

Q. How is the combination going to build your plant up to a better physical condition?—A. I would illustrate it by referring to some old-fashioned mill, built in the earlier days of the tin plate industry, with wooden buildings over it, where all of the material and all of the machinery were handled simply by force of muscle; and, on the other hand, to the modern plant, iron buildings, with the floor space served all over with an electric crane to pick up the material in one part of the building and put it in another.

Q. You can simply say, then, that by virtue of the larger capital you can get a better equipped plant than with a smaller capital?—A. Yes.

Q. Is it necessary that there be a capitalization of, say, \$50,000,000, or in that neighborhood, in order to secure these conditions? Could not an establishment of \$1,000,000, we will say, secure these advantages so far as plant goes?—A. With the smaller capital you may build a smaller plant with these appliances, but the appliances in a larger mill result in greater saving and better practice.

Q. You have something like 40 different plants, have you?—A. Between 30 and 40.

Q. Can you not make all of the saving in a vast single plant that you make by these different plants working together?—A. In the production of plates, perhaps that is true.

Q. What advantages have you, then, from the combination of these 35 to 40 different plants; what added economies?—A. The cost of the expense in operating those plants is reduced.

Q. Can you show how it is—where you save—the cost of superintendence, the cost of labor; or in what way do you save?—A. The cost of management; there would be a saving in that. There would be a very great saving in the cost of shipping the goods from the most convenient mill; the one having the lowest rate of freight.

Q. Can you recall any other?—A. In selling the goods there is unquestionably a large saving.

Q. How does the saving come about?—A. Each plant in the business requires a selling department, and all that that means in the way of agencies and traveling men and officials at home to direct that particular branch of the business.

Q. After the American Tin Plate Company was organized, were you able to dispense with the services of a goodly number of traveling men?—A. Traveling men, or people in the same place; commission men, or agents working for commission.

Q. So that was quite a material source of saving?—A. Yes.

Q. Can you tell how many men there were whose services you saved?—A. I can not; but each separate plant necessarily had some means of disposing of its output. Some of them had more elaborate organizations and others rather slender ones, or sold their goods through commission people and paid others for selling them.

Q. And there was quite a material saving along that line?—A. Yes.

¹ See Mr. Reid, pp. 886, 887, 882; Mr. Moore, p. 965; Mr. Griffiths, pp. 898-899, 900; Mr. Taylor, p. 941.

FREIGHT RATES AND REBATES.

Q. You have spoken of the saving that you make in freight rates by virtue of the fact that you can ship from nearer plants. Because you are a much larger shipper, can you get special advantages in freight rates over the railroads?—A. No, sir; what I meant was the old way of doing business—the Pittsburg mill might ship to Chicago and the Pacific coast and the Indiana mill to the Atlantic coast. Now the orders for the Atlantic coast are filled from the Pittsburg mills at a lower tariff rate of freight and the Western business is done from the Western mills.

Q. Yes. I had understood that; but I asked you a further question, whether from the fact that you are so large a shipper you can get better rates.—A. I do not know that we can get any better rates.

Q. You have no knowledge of any better rates that you do get?—A. No, sir.

Q. (By Representative LIVINGSTON.) Any rebates?

Mr. JENKS. The question is asked whether you get any rebates.—A. I have not any personal knowledge of any instances in which we get rebates.

Q. You do not deny that there are special advantages given?—A. I do not know. A good many of these people, companies, might have a man that would be engaged to route shipments, for the purpose of getting them through quickly and by the cheapest route. What he would do outside of that I do not know.

BONDS—DIVIDENDS—EARNINGS.

Q. The question is suggested whether the American Tin Plate Company has any bonded indebtedness.—A. I believe not, sir.

Q. What dividends have been paid by the company on the preferred stock?—A. I think the one maturing the last of this month is the third.

Q. And they have been paid regularly at the rate provided for?—A. Yes.

Q. Have you paid any dividends on the common stock?—A. No, sir.

Q. (By Representative LIVINGSTON.) Do you anticipate paying any?—A. We did not pay any in October.

Q. That is not the question. I asked if you anticipate paying any dividends on common stock?—A. Really I can not answer the question. I have not any knowledge as to what the company may do, or what the policy may be in that regard. It is a matter for the board of directors to determine, sir, whether they shall pay that or not, and I have no more knowledge than any director who is not an officer of the company.

Q. Do you earn money enough to pay any dividends on that common stock over and above dividends paid on preferred stock?—A. I think so.

CONCERNS CONSOLIDATED, AND THEIR CAPITALIZATION.

Q. (By Mr. JENKS.) Can you furnish the commission with a list of the different organizations that came into the American Tin Plate Company?—A. I could secure one.

American Tin Plate Company, Elwood and Montpelier, Ind.

Atlanta Steel and Tin Plate Company, Atlanta, Ind.

Beaver Tin Plate Company, Lisbon, Ohio.

Cincinnati Tin Plate Company, Cincinnati, Ohio.

Crescent Sheet and Tin Plate Company, Cleveland, Ohio.

Ellwood Tin Plate Company, Ellwood City, Pa.

The Falcon Tin Plate and Sheet Company, Niles, Ohio.

Great Western Tin Plate Company, Joliet, Ill.

Humbert Tin Plate Company, Connellsville, Pa.

Irondale Steel and Iron Company, Middletown, Ind.

Marshall Bros. & Co., Philadelphia, Pa.

Monongahela Tin Plate Company, Pittsburg, Pa.

The Morewood Company, Gas City, Ind.

Morton Tin Plate Company, Cambridge, Ohio.

National Tin Plate Company, Anderson, Ind.

National Tin Plate Company, Monessen, Pa.

Neshannock Steel and Tin Plate Company, New Castle, Pa.

New Castle Steel and Tin Plate Company, New Castle, Pa.

Pennsylvania Tin Plate Company, New Kensington, Pa.

Pittsburg Tin Plate Works, New Kensington, Pa.

Star Tin Plate Company, Pittsburg, Pa.

United States Iron and Tin Plate Manufacturing Company, Demmler, Pa.

Wallace Banfield & Co., Irondale, Ohio.

Washington Steel and Tin Plate Mills, Washington, Pa.

Baltimore Tin Plate Company, Baltimore, Md.

Blairsville Rolling Mill Company, Blairsville, Pa.

Hamilton & Co., West Newton, Pa.

Johnstown Tin Plate Company, Johnstown, Pa.

Ohio River Sheet and Tin Plate Company, Rochester, Pa.

In the above cases the entire property of the company was purchased.

In the following cases only that portion of the company's property which was used for the manufacture of tin plate was purchased.

Ætna Standard Iron and Steel Company,
Bridgeport, Ohio.

Cumberland Steel and Tin Plate Com-
pany, Cumberland, Md.

La Belle Iron Works, Wheeling, W. Va.

Langhlin Nail Company, Martins Ferry,
Ohio.

Reeves Iron Company, Canal Dover, Ohio.
Shenango Valley Steel Company, New
Castle, Pa.

Britton Rolling Mill Company, Cleve-
land, Ohio.

Somers Brothers, Brooklyn, N. Y.

Stickney Iron Works, Baltimore, Md.

Q. Could you furnish a list of corporations that came in, and the amount of the capital stock that each one of them had before?—A. I could not do that; no, sir.

Q. That information is not accessible?—A. It is not accessible.

Q. (By Mr. FAUQUHAR.) Why?—A. Because the properties were bought for a given price without any regard whatever to their capital stock; bought at the price they were supposed to be worth.

Q. How do you avoid the New Jersey law that declares that each one of your companies there shall show the capital stock?—A. Really, I do not know anything about it.

Q. (By Mr. JENKS.) These different plants were bought without any reference to their capitalization?—A. The capital was not bought.

Q. The plants themselves were bought. In asking the question whether you could furnish the capitalization there was no reference, of course, to what they were bought for. The question was as to whether that information is accessible. I suppose the information is not difficult to get?—A. I think it would be very difficult to get by anyone.

Q. Were the different plants that were bought regularly the property of corporations?—A. Some of them were not and some were.

Q. Some of them were owned by firms or individuals?—A. Some by firms, and if I am not mistaken, some plants were owned by individuals. There were plants in which a part of the property was sold, where the capital stock of the company from which the purchase was made would not represent the capital stock, or capital invested, in the tin-plate business.

THE COMPANY'S RECORDS.

Q. (By Senator MALLORY.) I understood Mr. Graham to say that he did not know whether there were any of the books of the American Tin Plate Company kept in the State of New Jersey. Am I right in that?—A. You are right, sir.

Q. Your function, as I understand it, as second vice-president, is to attend to the sales?—A. I have general charge of the selling department.

Q. Whose function is it to keep the records of the books of the concern?—A. I presume it would be the auditor's; the auditor is the general accountant.

Q. Who is the auditor?—A. Mr. Heaver.

Q. Where does he reside?—A. Chicago. The general accounts are under his supervision; that is, the charging of invoices and keeping of accounts with customers.

Q. Who has charge of the books—for instance, the stock book of the concern?—A. I do not know.

Q. Do you know any officer who has?—A. I do not know.

Q. Are you a director of the concern?—A. Yes.

Q. You do not know anything, then, about who keeps the books in his custody for the American Tin Plate Company?—A. I have never inquired about it.

Q. (By Representative LIVINGSTON.) Does that officer make any reports to the board of directors in your presence?—A. We have not been in business for a year, and we have not had any regular report made up.

BETTER MANAGED SINCE CONSOLIDATION.

Q. (By Senator MALLORY.) In your opinion, how do the plants, so far as the money-paying quality is concerned, the individual plants now in the American Tin Plate Company, compare with their money-making qualities before they went into that organization? In other words, do they pay now individually, plant for plant, as much as they did before?—A. I think they make their products for less money, and I think they are better managed than they were before, on the average. Better management means they do better under the same conditions.

Q. (By Representative LIVINGSTON.) Less expensive?—A. Less expensive.

ISSUE OF STOCK.

Q. (By Mr. C. J. HARRIS.) You say that your capital is about \$50,000,000, and you have issued \$46,000,000. What is done with this other \$4,000,000? Is it kept in the treasury?—A. It was never issued.

Q. What is the reason of retaining that in the treasury?—For the purchase of other plants?—A. I do not know what the particular reason was. I presume it was not needed.

Q. Have you, since the first organization, when you issued so much preferred and so much common stock, made any other issues in addition?—A. The plants were not all bought out at one time, so that there was a gradual issue.

THE SUPPLY OF STEEL: OTHER COMPANIES NOT CONTROLLED TO PROVIDE IT.

Q. Did I understand you to say that your tin company, for the sake of protecting its raw materials of plate, and so on, controls the National Steel Company and the Hoop Company?—A. I did not. Please repeat that question.

Q. I asked you if your company controlled these other 2 companies to provide yourselves with the raw material in the business.—A. We do not.

Q. Have you had any trouble in getting your plates for tinning supplied?—A. Our supply of steel at times gives great trouble.

NUMBER OF PLANTS—COMPETITION.

Q. You say that there were some 40 plants taken into this American Tin Plate Company?—A. I think it would be between 35 and 40.

Q. And there are some 6 outside that you attempted to name here?—A. I did not count them, and I am quite sure that I did not name them all. There are others. I thought the question addressed to me was only as to the number of dippers. Now there are a number of mills outside of our company.

Q. Do you find any competition to speak of in this line of business as you have it now organized?—A. Yes; we do.

CAN NOT PROPHECY ABOUT PRICES.

Q. Do you think that this advance of some \$2 per box on tin is a temporary one, due to the shortness of coal or the boom in all sorts of manufacturing, and do you expect in time, through the organization of this consolidation, to more or less cheapen the price to the people?—A. I think an answer to that would be an attempt at forecasting the future, and I should enter on that kind of ground with a good deal of misgiving; I do not know.

Q. Of course, the general public are interested in the price they pay for a product, and we naturally want to know what the tendency of your consolidation is going to be in that line.—A. Well, I can only speak of it as to the influence it has had to the present time.

NUMBER OF WORKMEN.

Q. (By Mr. KENNEDY.) How many workmen are employed in the tin-plate industry to-day?—A. Really I could not answer.

Q. Can you give an approximate answer?—A. Oh, I might give it within a few thousand.

Q. Well, give us that, then.—A. I presume there would be between 20,000 and 25,000.

Q. All those workers receive good wages, do they?—A. Some of them think not.

Q. Some of them think not?—A. Relatively, I think they do.

Q. How many are there in the employ of the American Tin Plate Company?—A. I meant in the employ of the American Tin Plate Company; 20,000 or 25,000.

Q. That does not include all the industry in the United States?—A. Oh, I have no means of estimating those on the outside.

Q. (By Mr. C. J. HARRIS.) Would that include the makers of the iron plate? (No audible response by the witness.)

Q. (By Mr. KENNEDY.) I want to find out how many are employed in the tin industry independent of these other concerns, the Federal Steel, etc., which he speaks about.—A. It would be an impossible thing for me to estimate or attempt to estimate outside of our own company.

Q. All of them have come into this industry within the past nine years, have they not?—A. Yes, I believe they have; less than that.

PRICE NOW AND BEFORE 1890.

Q. What is the price of tin now, as compared with the price prior to 1890?—A. Lower.

Q. How much lower?—A. Well, I could not tell you. Those figures I have seen frequently, but I can not remember them.

Q. Is it very much lower, notwithstanding the recent advance of \$2 a box?—A. Yes, my recollection is, considerably lower.

Q. (By Representative LIVINGSTON.) Is it tin plate or tin that is cheaper?—A. Tin plate.

Representative LIVINGSTON. Not tin.

Q. (By Mr. KENNEDY.) Is not tin cheaper, too?—A. Pig tin?

Q. Yes.—A. I do not know what it was in 1890. Tin plate is.

THINKS PROFITS HAVE DECREASED WITH THE ADVANCE OF MATERIALS.

Q. (By Representative LIVINGSTON.) Are you making more money now on your contracts than you did prior to July 1?—A. Contracts of what nature?

Q. I suppose that you make your contracts to furnish tin plate, and that you do not keep up with those orders; you are sometimes 3 or 4 or 5 or 6 months filling those orders?—A. Yes.

Q. You took orders of that kind in the early part of this year; and you took others in the middle of the year, and are running on them now. I want to know if you are making more money on the latter contracts than the former.—A. Our contracts are made every day in the year. Sometimes, made for immediate shipment, they do not extend over any period beyond that in which we can make shipments according to the specifications which come in the contract. Others may call for deliveries extending over 6 months or possibly 12 months. I should like to answer the question intelligently, if I could.

Q. Well, I might put it in a more direct way. Is your percentage on your capital increasing or decreasing as you go along in your combination?—A. I think it would depend upon what you count the cost of the product we are making now.

Q. I tried to do that in an explicit way, but you did not seem to understand it.—A. I do not know what you consider the cost.

Q. Your materials were at one price last January; they are very different to-day, are they not?—A. They were not at one price last January; they varied.

Q. Your steel and tin cost you about the same last January as now?—A. Of course not; steel has advanced since last January; it has advanced 100 per cent.

Q. That is what I supposed. Now, on that advance are you making more money or less money?—A. I think we are making less with the advanced cost of material.

Q. That was the point I wanted to bring out, whether you were keeping up with the advanced cost of material, or whether you were making a greater profit or a less profit.—A. Those conditions are continually changing. I think we are not making so much money on the present cost of material as we were making last January.¹

SOURCES OF TIN, AND CHIEF MARKET FOR IT.

Q. (By Mr. FARQUHAR.) From what country does your pig tin come?—A. It comes from Cornwall, some of it; some little from South America, some from Australia, and some from China and the Straits of Malacca.

Q. What city or center in the world makes the price for pig tin?—A. I do not know that any city makes it or any country.

Q. What city is the main market?—A. You mean where it is consumed?

Q. I mean the market.—A. Where it is bought and sold?

Q. Relatively the same as Liverpool for wheat. What other city is there for pig tin?—A. London is the city where pig tin is traded in more than in any other.

Q. Is there any production of pig tin in this country?—A. I do not know of any.

AS TO A TABLE OF PRICES.

Q. In your position of second vice-president you are quite conversant, of course, with prices?—A. Yes.

Q. Can you furnish this commission the prices of black plate from 1888 to 1899?—A. I could not.

Q. You have no means to reach that?—A. I have no means to reach that.

Q. How far can you go back?—Our company goes back to last December.

Q. Only your company?—A. That is all. We have no records back of that.

Q. You have no means, then, yourself, in this great company of yours, with \$50,000,000 of authorized capital, to furnish this commission, through any of your officers, with the prices of pig tin and black plate and the finished products and wages from 1888 until now?—A. Only by depending on trade quotations, as anybody might look them up.

Q. Which you depend on as business men?—A. Yes. I would say that no officer of our company has any better opportunity to make a statement of that kind than any one outside of the company.

¹ See Mr. Reid, p. 874; Mr. Griffiths, p. 902.

SALES OF BLACK PLATE.

Q. How extensive have been your sales of black plate to outsiders?—A. Black plate for tinning?

Q. Yes.—A. Quite extensive.

Q. How extensive?—A. I could not tell you.

Q. Give us an average—10 per cent, or anything.—A. I think perhaps it would be 20 per cent.

Q. Are these sales open to all purchasers?—A. What sales?

Q. The sales of black plate.—A. No, they are not open to all. We do not sell to the small consuming trade, and we do not sell to the retailer.

VALUE OF AMERICAN TIN PLATE COMPANY'S STOCK.

Q. Is your stock sold on the New York stock market?—A. Yes.

Q. Common stock and preferred?—A. Yes.

Q. Can you give the commission any idea how it is selling, to-day, for instance?—A. I can come within 2 or 3 points of it—1 or 2 points of it. The last price that I saw, I believe, was 85 and 37 and a fraction. I have not seen the market on it for several days.

AMERICAN STEEL HOOP COMPANY—CAPITAL—DIVIDENDS.

Q. (By Representative LIVINGSTON.) I understood you to say that you are a director in the steel hoop organization also?—A. No.

Q. I thought you said to Mr. Jenks that you were a director in both companies?—A. Yes, I did.

Q. And you are a director in the Steel Hoop Company?—A. Yes.

Q. What is that company capitalized at?—A. At \$14,000,000 of preferred and \$19,000,000 of common.

Q. What is the guaranty of the preferred?—A. It is 7 per cent cumulative.

Q. Has any dividend been paid on the common stock of that company?—A. No; there has not been.

SOLD HIS PLANT FOR THE BEST PRICE HE COULD.

Q. (By Mr. CLARKE.) When these plants were acquired, how was their value estimated or arrived at?—A. It was arrived at between the buyer and the seller.

Q. Well, what was the basis of it? All material property or something for good will?—A. I do not know about any plant but my own.

Q. You sold your plant to this concern?—A. Yes.

Q. Did you exact a price for good will as well as for the material?—A. I got the best price I could for it.

Q. Can you not, without revealing too much of your private business, answer my question?—A. I can not, any more than by saying that in selling an article of that kind, selling property, I got the best price I could.

Q. That would go without saying. I want to ascertain what is the probable basis of the preferred stock and also of the common stock.—A. I could not say to you what any other seller got for his plant; I do not know.

VERY FEW NEW DEVICES—AS MANY MEN TO A MILL AS 25 YEARS AGO.

Q. Are you familiar with the manufacturing part of your business?—A. To some extent.

Q. Is there a great deal of new machinery in use in that business compared with 6 or 7 years ago?—A. There is perhaps better machinery; that is, stronger and heavier.

Q. Are there any new devices that economize production?—A. Very few.

Q. Are there any more than 1 or 2 sizes of tin plate produced now?—A. Yes; the number is indefinite.

Q. How was it before the industry was established in this country?—A. I think there were fewer sizes made.

Q. How does the machinery in use in this country compare with what was used in Wales before the industry was established here?—A. I think it is heavier on the average. Some of the first mills were perhaps as light as the mills built on the other side.

Q. Is it not better in other respects? Is there not more variety to it and more economy gained here in production?—A. There is perhaps economy by reducing the breakage. The number of men in a black-plate mill is the same to-day in Wales and here that it was 7 years ago or 25 years ago.

WAGES OF SKILLED MEN HERE AND IN WALES.

Q. Is the labor employed in your industry organized?—A. Part of it; yes.

Q. You have constant demands for an increase in wages?—A. No; not constant. We settle with a large part of the people we deal with or employ once a year.

Q. Were many of your skilled workmen engaged in the industry in Wales before it was established here?—A. Quite a good many of them.

Q. Do you know how their wages here compare with what they received there?—

A. Two and a half times to 3; some of them 3 times what they were paid there.¹

Q. How does the cost of their living here compare with the cost there?—A. Well, it depends upon how they live.

Q. On the same scale, how does it compare?—A. I have never seen the homes of Welsh rolling-mill workers, but I know how they live in this country.

Q. Do you know how much money has been saved to the American people in the price of the tin plate that they consume since the industry was established in this country?—A. I have not figured it. I think they have saved by the introduction of the industry here.

AMERICAN TIN PLATE BETTER THAN WELSH.

Q. Do you consider that the quality of the goods produced in this country is equal to that produced in Wales?—A. Better.

Q. In what respect is it better?—A. Well, it averages better in uniformity of quality, in the base of the tin plate, which is steel, and in the coating.

Q. Don't they produce steel plates in Wales?—A. Yes.

Q. How can it be that in a very new industry, with so many inexperienced hands employed in it, we can produce a better quality than they can there where they have been at it for so many years?—A. I do not know, unless it is because we learn quicker.

Q. (By Mr. FARQUHAR.) Do all the concerns in your combine pay the Amalgamated scale of wages?—A. Practically; in one sense, yes. We have 1 mill in which they had some little different character of machinery, in which we agreed with the Amalgamated Association that there should be a slight variation. Other mills that have not been paid the same scale were brought up to it.

OUTSIDE MILLS.

Q. (By Mr. JENKS.) When you gave a short time ago a list of some of the mills outside of your organization were you referring to the dippers or the mills?—A. Dippers.

Q. I had understood you were referring to the mills, and I wish to ask you the question in reference to the mills. Can you give a list of half a dozen mills outside of your company?—A. There is the St. Louis Stamping Company, now the National Stamping and Enameling Company of St. Louis; there is a mill at Harrisburg, Pa.; there is a mill at Wheeling, W. Va.; there is a mill at Washington, Pa.; there is one at Avonmore, Pa., and there is a mill at Cincinnati. Those are the more important ones. I think there are perhaps others.

Q. Are they new mills that have been started up within a year past?—A. Some of them.

Q. And some of them were in existence before your organization was made?—A. Yes.

Q. Is the total amount of the output of tin plate in the country greater or less than it was when your organization was formed?—A. I think greater than it was before.

Q. Can you give anything like a definite answer as to how much greater?—A. I can not.

PATENTS ARE OF SMALL IMPORTANCE.

Q. Does your organization control any patents that have been made common to all of the different mills that have come into the combination, which before were held simply by 1 or 2 corporations; do you get any gain in that way?—A. I think there are some few patents.

Q. That were held before by individual plants, but are now used by all of them that are in the combination?—A. Yes.

Q. Can you mention any of them?—A. I think there is a tinning machine.

¹ See Mr. Reid, p. 881.

Q. Would you say that that source of saving was of any special significance in your organization?—A. No, I can not.

MARKET QUOTATIONS.

Q. A number of questions have been asked with reference to the history of prices, and so on, and you have suggested trade papers. You would say, I suppose, that the prices before this organization was made varied somewhat with the different manufacturers, so that there was perhaps no single price for the country as a whole?—A. Yes.

Q. Since the American Tin Plate Company has begun business it would be reasonably accurate to say that their prices are the prices for the country, would it?—A. Yes; I think that would be reasonably accurate.

Q. That they control a large enough proportion so that the others presumably follow very nearly?—A. The others could not afford to sell at as low a price really, but of course they had to do it.

Q. So you would say that the quoted prices of the American Tin Plate Company, which we find in the papers now, could be called the quoted prices of the country?—A. Yes.

Q. If we go back to a time before your organization, would you say it was reasonably accurate for our purposes if we took the prices as given in the New York Metal Exchange or the American Metal Market?—A. I would not like to answer. The New York Metal Market is a paper that I never read until recently, and I do not know much about it.

Q. (By Mr. FARQUHAR.) How is the Iron Age?—A. The Iron Age is, perhaps, approximately correct in its market reports of tin plate.

Q. (By Mr. JENKS.) You would say that the prices we get from the Iron Age would be reasonably accurate?—A. Reasonably accurate.

Q. Of course, we would expect some variations, but for the purpose of comparison that would be reasonably correct?—A. Yes; the Iron Age, as all other trade papers, makes mistakes, and will occasionally publish a price that is incorrect.

Q. But in the main it is substantially correct?—A. Yes.

CAPACITY ENOUGH FOR DEMAND—LARGEST PLANTS.

Q. (By Mr. PHILLIPS.) Do you have sufficient capacity to supply the demand of the United States for tin?—A. We have just now.

Q. What are the large plants in your combine?—A. Elwood, Ind., and New-castle, Pa.

PREFERRED STOCK REPRESENTS VALUE OF PLANTS.

Q. (By Mr. JENKS.) I should like to go back for a moment to this question of capital. You spoke of the knowledge you had of the amount you received for your plant, but said that you had no knowledge of others. You spoke of the common and preferred stock. You said that the option was given that you receive cash or 1 share of preferred stock and 1 share of common stock for each \$100. Was it your understanding that the preferred stock represented, say, the cash value of the plant and the common stock represented good will, or anything of that kind?—A. That was practically it.

Q. That was the general understanding?—A. Yes.

Q. You have supposed that was generally true in reference to all the plants that were brought in?—A. Yes.

Q. So, if we should take the preferred stock, that would fairly represent the cash value of the plants in the organization?—A. Yes.

PLANTS COULD NOT BE REPRODUCED TO-DAY FOR WHAT THE COMPANY PAID FOR THEM.

Q. There has been considerable change in the cost of material, wages, and so on, since the tin-plate organization was formed. Do you suppose at the present time that the plants of the American Tin Plate Company could be reproduced for the amount of their preferred stock or less?—A. The preferred stock represents cash as well as properties.

Q. Yes; how much cash?—A. I could not say.

Q. You do not recall how much was reserved for cash?—A. I do not know how much it is, but I think it would be difficult to rebuild the plants at the cost of those in our organization to-day.

Q. I do not quite understand you.—A. I think it would be difficult to rebuild plants to-day at the same cost as the plants in our company.

Q. That is to say, if we were to take this amount of cash that was put in, then you

would say that you probably could not rebuild your plants now for what was paid for them in preferred stock?—A. Yes.

Q. Or for what the preferred stock would represent?—A. Yes.

Q. (By Mr. FARQUHAR.) And you answered the question that the common stock represented the good will. You multiply your \$18,000,000 preferred stock by 3 and you get \$54,000,000; and that was nearly your entire capital stock?—A. I subscribed to the stock knowing what was to be issued. I did not sell the plant for it.

Q. The curious feature of it is that there was a difference of about \$32,000,000 there unaccounted for, and by some of the answers to your questions here it seems to be good will. There is nothing positive in anything you have stated to show that these plants were worth over \$18,000,000?—A. I will state that I subscribed for the stock the same as any other subscriber who had not any previous interest in the American Tin Plate Company, knowing what the stock was to be.

Q. (By Mr. JENKS.) May I put the question in a little different way? If I understand your answer, you would say that in your judgment the plants of the American Tin Plate Company could probably not be reproduced now for \$18,000,000?—A. Less our cash capital, and all personal assets, including accounts.

Q. But exclusive of the good will. Simply the working capital and the plants themselves; you think \$18,000,000 would about cover it?—A. I would put it this way, that the cost value of the American Tin Plate Company's plants would be less than the cost of reproducing those plants.¹

Q. When you say cost value you mean what was paid for them? You do not mean the cost of building them in the first place?—A. No.

Q. You mean what was paid for them?—A. Yes.

SELLS BLACK PLATES TO ALL DIPPERS WHO WISH TO BUY.

Q. You said a little while ago that you did not sell to retailers. Would you say that some of these dipping plants would come under the head of retailers, so that they would be excluded from your selling black plates to them on that basis?—A. No.

Q. Those are all large enough so that you would sell to them right along and exclude none of them?—A. We do not.

RELATION TO THE NATIONAL STEEL COMPANY.

Q. If I may go back again to the question of the National Steel Company, you said that was an independent organization. Was the National Steel Company organized by men who were members of the American Tin Plate Company, officers, directors, and heavy stockholders?—A. I do not know any more about that than any outsider, and I do not know whom you would call the organizers of the National Steel Company.

Q. It has been commonly asserted in the newspapers and elsewhere that the Tin Plate Company, in order to assure itself of getting steel or raw material when it wanted it, thought it worth while to take the initiative and organize the National Steel Company?—A. Well, I do not know that the American Tin Plate Company ever took the initiative.

Q. Not the company technically, but the men interested in it. It would seem reasonable?—A. Some of them, I presume, were interested in having it organized, but I do not know anything about it. I was interested in it because I had an interest in one of the properties that went into it.

Testimony closed.

TESTIMONY OF MR. F. S. WHEELER.

Treasurer of the American Tin Plate Company.

The commission being in session, at 4.50 o'clock Vice-Chairman Phillips, who was presiding, introduced Mr. F. S. Wheeler, of Chicago, treasurer of the American Tin Plate Company, who, being first duly sworn, testified as follows:

Q. (By Mr. JENKS.) Please give your full name and address.—A. F. S. Wheeler, Chicago.

Q. You heard the testimony that has just been given by the previous witness. So far as your own knowledge goes, do you agree with that throughout?—A. Yes.

Q. There are one or two points that were not cleared up by the previous witness that perhaps you can help on further. What position do you hold in the American Tin Plate Company?—A. Treasurer of the company.

Q. As treasurer of the company are you familiar with the contracts that are made by the company?—A. No; my duties would lie more in the custody of the cash and financial matters.

¹ See Mr. Griffiths, pp. 911, 912.

Q. If money were paid out under those contracts, would you be likely to know in reference to it?—A. I would only pay out on approved vouchers that came to me.

STOCK AND TRANSFER BOOKS.

Q. Have you any knowledge as to where the transfer books of the company are kept?—A. We have a transfer office in Chicago which takes care of the local Chicago exchange, our main office; and the Guaranty Trust Company, of New York, are the transfer agents for New York, and I have always understood that they have looked after our Eastern business entirely.

Q. In what State was your corporation organized?—A. New Jersey.

Q. Do you keep any office in New Jersey?—A. Yes; we have one.

Q. Where is the office in New Jersey?—A. It is in Orange.

Q. Is that office supplied also with the transfer books of the company, a list of the stockholders, etc.?—A. I understand so.

Q. Are transfers of stock made in that office?—A. The transfers are all recorded there, I believe.

Q. Are transfers made there?—A. Well, I think so. The books are kept there and a record of transfers of the stock.

Q. So you think that the transfers are made in that office?—A. I so understand; yes.

Q. Is that office open regularly during all business hours?—A. I presume so.

Q. Do you know whether the records of the company in any of the offices are open to all stockholders, so that any stockholder can find out who his associates are and how much is held by the different stockholders?—A. Why, I think so.

Q. Is there any provision in your by-laws with reference to that matter?—A. I do not recollect the wording of the by-laws on that point.

Q. But you do understand that any stockholder of your company can at any time find out who the other stockholders are?—A. I understand so.

Q. And the amount each holds?—A. Yes.

Q. Do you understand that that can be found out at this New Jersey office?—A. I think so.

EXCLUSIVE CONTRACTS WITH MACHINERY MAKERS.

Q. Have there been any contracts made by the Tin Plate Company with founders and machinists not to furnish independent plants with machinery for plate making?—A. I would not have any record of it.

Q. Have you information of any such contracts?—A. I have not.

Q. Have you information of any contracts with these manufacturers by which they are to refuse to furnish sheet mills with machinery for making sheet steel, unless an agreement is made not to make plate, black plate, for tinning?—A. I would not know anything about that.

Q. You do not know anything about that?—A. No.

Q. (By Mr. FARQUHAR.) Of your board of directors, is any one a resident of New Jersey?—A. Yes.

Q. Is he the owner of a mill there or has he been an owner?—A. There are no mills in New Jersey.

Q. Is he a capitalist or what?—A. Well, he is a capitalist, stockholder in the company.

COMMON STOCK—GOOD WILL.

Q. The question has been asked why there is such an inordinate difference between your preferred stock of \$18,000,000 and your issued stock of \$46,000,000. Can you give an explanation, as the financial man of the concern, what the difference between 18 and 46 represents, either to your stockholders or to the public?—A. Well, it has been stated by my predecessor to be the good will; I think that is as clear an expression of it as can be given.

Q. (By Mr. CLARKE.) Have you been engaged in the manufacturing business yourself before going into this combination?—A. Yes.

Q. How do you think, generally, the good will compares with the value of the plant? Which is the greater in the manufacturing business, good will and the opportunity for business, or the plant?—A. Well, I do not think you could give any fixed ratio; it depends on circumstances.

Q. How do you consider it in your business?—A. Our issue of stock would indicate to a certain extent our estimation of it.

Q. Is that your opinion?—A. I was a subscriber to some of the stock.

Testimony closed.

WASHINGTON, D. C., October 17, 1899.

TESTIMONY OF MR. DANIEL G. REID,

President of the American Tin Plate Company.

The commission met on Tuesday, October 17, 1899, Senator Mallory presiding. Mr. Daniel G. Reid appeared at 10.40 a. m., and, being duly sworn, testified as follows:

Q. (By Mr. Jinks.) Will you state your full name?—A. Daniel G. Reid, Chicago, Ill.

Q. You are president of the American Tin Plate Company?—A. I am.

AMERICAN TIN PLATE COMPANY—TRANSFER AGENTS.

Q. Under what laws is the American Tin Plate Company organized?—A. The laws of the State of New Jersey.

Q. Have you an office in the State of New Jersey?—A. Yes.

Q. Where?—A. 525 Main street, East Orange.

Q. Is it a registry and trust company?—A. The New Jersey Registration and Trust Company.

Q. Have you a special agent in charge?—A. We have. The name of the company is the New Jersey Registration and Trust Company.

Q. You keep your stock and transfer books in the New Jersey office?—A. The stock and transfer books have been there since the organization of the company.

Q. They have been kept there regularly since the organization?—A. That is, except in writing them up.

Q. Your stock and transfer books are now in the office of the company regularly?—A. I am told so.

Q. Do you maintain a transfer office anywhere else?—A. We have one in New York and one in Chicago.

Q. What are the names of the transfer agents you have in New York and Chicago?—A. The Guaranty Trust Company of New York and the Merchants' Loan and Trust Company of Chicago.

Q. Have you also a registrar in New York?—A. The First National Bank of New York.

Q. Any other one?—A. One in Chicago.

Q. The actual transfers of the stock are made in the New Jersey office?—A. They are made in both places.

Q. The stock is actually transferred in Chicago and New York?—A. Transfers are made in New Jersey.

RIGHT OF STOCKHOLDERS TO EXAMINE STOCK BOOKS.

Q. Does your charter contain any restrictions on the right of the stockholders to examine the books and papers and documents of the company?—A. I can not answer that question; I do not remember, but I think they have none.

Q. You think there are no restrictions at all on the rights of the stockholders to examine the books?—A. The stock books?

Q. The stock books and the transfer books?—A. Yes.

Q. Is the right based on any resolution that you know of, or have you taken any action at all that gives the stockholders the right to examine these stock and transfer books; do you know whether they have ever passed a formal resolution?—A. There was a resolution passed.

Q. You can furnish us a copy?—A. Yes; I have a copy of it.

(The witness subsequently submitted to the commission a copy of the resolution as follows:)

[Extract from the minutes of the stockholders' first meeting of the American Tin Plate Company.]

Ordered, (1) That in compliance with the laws of the State of New Jersey this corporation have and continuously maintain a principal office and place of business within the State of New Jersey, and have an agent at all times in charge thereof, upon whom process against this corporation may be served, and therein keep the stock books and transfer books for the inspection of all who are authorized to see the same, and for the transfer of stock.

That the books in which the transfers of stock shall be registered and the books containing the names, addresses, and number of shares, respectively, of the stockholders shall be at all times during the usual hours of business open to the examination of every stockholder at said principal office.

That the name of this corporation be at all times conspicuously displayed at the entrance of its principal office in this State.

And be it further Ordered, until this resolution be duly rescinded,
(2) That such office and place of business be in and at the office of the New Jersey Registration and Trust Company, No. 525 Main street, East Orange, N. J., and that this company be registered with the said Trust Company.

(3) That the New Jersey Registration and Trust Company, being by statute authorized to act in New Jersey as the agent of corporations, be, and hereby is, appointed the agent of this corporation in charge of said principal office, and upon whom legal process against this corporation may be served within the State of New Jersey, and also the transfer agent of the stock of this company."

Q. Does your company at its office in New Jersey keep a complete, full alphabetical list of the stockholders, their residence, and the amount of shares held by them?—A. I understand so.

Q. These books are open to the inspection of any stockholder on demand during regular business hours?—A. Yes.

CAPITALIZATION: \$10,000,000 COMMON STOCK FOR COST OF ORGANIZATION.

Q. What is the amount of capital stock of your company?—A. \$50,000,000.

Q. And there has been issued— A. \$48,000,000.

Q. How is this divided between preferred and common?—A. \$28,000,000 of common and \$18,000,000 of preferred.

Q. What is the special reason for issuing \$10,000,000 more of common than of preferred, if any? For what special purpose was that \$10,000,000 issued?—A. The property of the original tin plate companies was purchased by Judge Moore; he turned the companies over to the reorganized company, for which he received so much money, which was in stock.

Q. The point is this, if I understand your answer, that this \$10,000,000 was turned over to Judge Moore for the purpose of organization?—A. Exactly.

Q. And the \$18,000,000 of preferred stock and the \$28,000,000 of common stock was used in purchasing the plants?—A. It was issued in purchasing the plants.

Q. The extra \$10,000,000 for the cost of organization was put into his hands; that is right, is it?—A. I do not know just the way you put that.

Q. Eighteen million dollars of preferred and \$18,000,000 of common were issued for the purchase of the plants and the supply of any cash that might be needed to run the plants afterwards, and the \$10,000,000 was turned over to Judge Moore to use at his discretion?—A. As a matter of fact, Judge Moore purchased the original plants for cash; so much cash; had a cash agreement. Then he organized this company, and afterwards the mill men who agreed to subscribe for stock had the privilege of coming in and doing so. If a man subscribed for 100 shares of stock, he got 100 shares of preferred and 100 shares of common; otherwise he got cash. But the Judge had the mills bought on a cash basis, and the stock feature was an after consideration so far as the mill men were concerned.

Q. As you understand it, then, \$18,000,000 of preferred and \$18,000,000 of common was used to raise the money to buy the plants directly, and the \$10,000,000 was used for the expenses of organization, and put into the hands of Judge Moore, to be used at his discretion for that purpose. Is that right?—A. Yes; that is right.

CONDITIONS BEFORE CONSOLIDATION.

Q. What was the situation of the tin-plate trade that led to the organization of the American Tin Plate Company?—A. Well, the competition between the old companies had become so strong, the business was fast drifting into a condition where there was little, if any, profit. There were a number of mills losing money and very few of them making any, and it was a matter of the mills getting together. So they appointed a committee to look Judge Moore up and ask him if he would not take charge and arrange this; get them together, in other words.

Q. The initiative was taken by the mills themselves?—A. Yes. The fact of the matter is, the mill men chased Judge Moore for a year to get him to take charge of it, which he finally did.

Q. You say none were making money, and many were losing; had there been any failures among the tin-plate mills that you know of?—A. None at all.

Q. The organization was made in order that they might make larger profits?—A. As a matter of fact, there were a number of tin-plate mills carried by steel companies and people in other lines, and had been for years before. I do not mean to say all the mills were losing money; on the contrary, the majority were making money; nothing great, but a profit. I do say a number of them were being carried by steel companies; one case particularly I know of.

Q. And the competition had been fierce enough so that in the minds of the mill

Q. There was danger of bankruptcy on the part of some of them?—A. I am quite sure if the consolidation had not gone through there would have been 15 companies closed and seven or eight thousand men out of work.

Q. You think there would have been 15 closed down; out of what number?—A. I think there were 30 companies.

Q. That went into the combination?—A. Thirty-nine.

Q. Fifteen of these 30 in that condition?—A. I did not say that. I said a number of them; I believe 15 of them would now be closed down.

COURSE OF PRICES—CONTRACTS.

Q. Will you explain what the course of prices of tin plate has been, say, from 1 year before the formation of the American Tin Plate Company to date?—A. I should say tin plate, full weight plates, were worth a year before \$3.10; from that they drifted down to as low as \$2.60 at the time of the organization. In the last 6 months the larger part of the decline took place.

Q. Between the \$3.10 and \$2.60, the larger part of the decline occurred in the 6 months before the company was formed?—A. Yes.

Q. How has the price been since? Perhaps you had better tell us the course of prices from the formation of the company to date.—A. When the new company took the contracts of the old companies, which they had made for the delivery of plates, they assumed contracts, I presume, amounting to about 4,000,000 boxes of tin plate to be delivered at prices ranging from \$2.65 to \$2.75. During this boom in raw material and all that sort of thing while the ruling market on the other side was \$5.25, delivered f. o. b. New York—

Q. For how long a period did these contracts run?—A. To the 1st of July last.

Q. Are you still working on the basis of these old contracts?—A. No; they are about cleaned up. We have some old contracts yet which we are delivering to customers.

Q. Were the larger part of these contracts for a period of 6 months or a year?—A. Up to the 1st of July; very few for a year.

Q. Up to what time?—A. Beginning January 1. However, there were sales made after the organization of the company, through January and February, at along about \$3, \$3.25, \$3.50, and \$3.75. Lots of these contracts we are still working on.

Q. If I understand you, the regular prices quoted in the markets and the trade papers do not represent the exact condition of affairs with the mills?—A. Not what they were getting for plate.

Q. Will you perhaps explain a little further what the course of the market has been from the time the Tin Plate Company was formed to date—that is, the selling price?—A. It has been upward.

Q. Could you give us the figures?—A. That started, I think, at \$3.

Q. You said the prices were about \$2.60?—A. We sold some for \$2.75 after the company was organized. Then at \$3, \$3.25, \$3.35, \$3.57½, \$4.25, and the present price is \$4.65.

Q. When these prices were put up from \$3.57½ to \$4.25, was that one immediate change made at once?—A. That was at the time of the advance of steel from \$22 to \$37 or \$38 a ton.

Q. As soon as the price in steel was advanced, you advanced the price?—A. Pig tin and steel went up very rapidly in 30 or 40 days.

THE BOX OF TIN PLATE.

Q. When you are speaking of these prices, what are they—the price per box?—A. Yes. 14 by 20—100-pound plates, f. o. b. the mills.

Q. Can you tell us how much steel and how much tin there is in a box of this finished product?—A. In a full weight box there are 106½ pounds of steel and 2½ pounds of tin, making 108 pounds.

Q. So that you make the prices on 106½ pounds of steel and 2½ pounds of tin, and figuring out the cost of that will give substantially the cost of the raw material?—A. That is it.

Q. Subtract the cost of the raw material from the cost of the full weight box, and you will find the cost of production, plus your profit, the profit of the seller or manufacturer?—A. There is something to be figured besides. In rolling steel there is some scrap. There is an allowance for that to be made.

Q. That could be counted in the cost of production?—A. Yes.

Q. Is that an absolute waste?—A. Oh, no; but there is perhaps 20 per cent waste in rolling \$38 steel, and the scrap would sell for \$14 or \$15, perhaps; I do not know the exact scrap market.

Q. So, figuring out the prices in this way to determine the general range of market, there is this waste?—A. Yes.

Q. Could you furnish the commission with the course of prices, monthly prices, of finished product, of steel billets and of tin, for a period running from 1886 to date?—A. I can get them for you.

Q. Will you be kind enough to furnish them to us?—A. Yes.

¹ Mr. Reid gives the following estimate of the labor cost of tin plate, in a letter dated December 16, 1899: "In regard to the average amount of wages paid per box of tin, based on 14 by 20 size, I beg to say that the figures that I give you herewith are the only ones obtainable at the present time and are from one of the largest works now in the consolidated company. They date back since 1893. At that time the mill was a small one and the cost per box would show higher than when the mill was larger and had a greater output. The average price of labor per box in the year 1893 was \$1.60. This was during the time of small output. In 1894, after the works had been increased somewhat, it was \$1.33. During the years 1894, 1897, and 1898, up to the time of consolidation, the average price about was \$1. This was when the mill had been increased to its present capacity and was getting its maximum output. Please remember these figures were made during the old scale of wages and before the present scale became operative."

TABLE 4.—Average price of imported coke tin plates, 14 by 20, full weight, 108 pounds, delivered at New York, duty paid.

[Prices furnished by Phelps, Dodge & Co., at request of Mr. Reid.]

Until July 1, 1891, the duty was 1 cent per pound.

July 1, 1891, to August 28, 1894, the duty was 2½ cents per pound.

August 28, 1894, to July 24, 1897, the duty was 1½ cents per pound.

Since July 24, 1897, the duty was 1½ cents per pound.

WAGES—PAY ROLL—AMALGAMATED ASSOCIATION SCALE.

Q. Will you tell us what the course of wages has been to one or two different classes of workmen in this industry from 2 years before the Tin Plate Company was organized up to date, the same as you did about prices?—A. The wage scale has been advanced since the new company came into existence; the ordinary common labor around the mill about 20 per cent, and skilled labor 15 per cent; but in adjusting scales between different mills there has been an advance greater than 15 or 20 per cent on common labor. The advance in the entire pay roll of the company would amount, I should say, to about \$2,000,000.¹

Q. Annually?—A. Annual pay roll.

Q. What has been the increase in the number of men?—A. I should say we have on 2,000 more mill men than we had.

Q. When you were organized?—A. When the new company was organized; yes.

Q. (By Mr. KENNEDY.) How many more?—A. 2,000; close to it.

Q. Have you an agreement with the Amalgamated Association of Iron, Steel, and Tin Workers in your combination?—A. We have an agreement to pay them a scale of wages, beginning July 1, to the following July 1.

Q. Is that a sliding scale?—A. It is a scale like this: For every increase in the price per box of 10 cents, I think it is, after it reaches a certain price, the increase in labor runs 4 cents a box.

Q. Are you paying them now on the basis of these contracts that you are filling of old organizations that came into your combination?—A. We are paying the new scale on every box rolled in the mill, regardless of the prices the goods are sold at.

Q. So they are not to get an increase when you have finished the old contracts?—A. They are now getting the increase.

Q. (By Mr. JENKS.) When did that begin?—A. The 1st of July.

Q. (By Mr. FARQUHAR.) Does that scale stand for 12 months?—A. It stands for 12 months.

THE SLIDING SCALE SLIDES UP, NOT DOWN.

Q. At the very high price you are selling tin at, are the wages of mechanics commensurate with the prices you are getting from the consumer?—A. They are the best paid men in the country.

Q. Are they sharers?—A. They are getting their full share. In fact, if there was any little change in raw material to bring about a higher cost the only way I see to meet it is to get it off the laboring man. If there was a further increase in the cost of pig tin and steel to the figure that we hear talked of as the probable price next year, the only way the Tin Plate Company could run except at a loss would be to cut the workman.

Q. (By Mr. JENKS.) Cut wages below what they are now?—A. Cut wages below what they are now.

Q. (By Mr. KENNEDY.) Could you not increase the cost of the product to the consumer?—A. We could some; yes.

Q. Would not that be as easy a way as reducing the wages of the men?—A. A 10 advance on steel would mean a good deal.

¹ See Mr. Graham, p. 853; Mr. Griffiths, p. 903.

Q. Could you not share it between the consumer and the workingman instead of taking it all off the workingman?—A. We are tied up with the workingman until next year; we would have to pay them these wages; we could not change; that is what I was trying to illustrate.

Q. (By Mr. FARQUHAR.) So you have a rigid scale for 12 months?—A. For 12 months; yes.

Q. (By Mr. JENKS.) If I understand your contract, if you put up the price of the product, the wages of labor are increased proportionately. Suppose trade conditions are such that the price of the product falls below what it was when the contract was made; does your agreement with the workingmen provide for lowering the wages proportionately?—A. That stands; their wages are fixed for a year. If there is a further increase in price above the price at the time the scale was made, I believe it was \$4.25, then they slide up.

Q. (By Mr. FARQUHAR.) First of all, there is a minimum scale agreed upon; if the prices rise there is an arrangement that they are to share four-tenths of that rise?—A. That is it exactly.

Q. (By Mr. JENKS.) Can you not furnish us with a copy of that scale?—A. Ye

Western scale of prices governing wages in rolling mills for the year ending June 30, 1901 published by National Lodge, Amalgamated Association of Iron, Steel, and Tin Workers

TIN-PLATE SCALE.

When a box of 100 pounds coke tin plates is selling at \$4.25 the scale of prices as appears below shall be paid. On each 10 cents increase in the price per box 2 per cent advance on the prices below shall be paid, and on each 10 cents per box decrease a deduction of 2 per cent shall be made to said base, but it is understood that the wage list below is the minimum for the year ending June 30, 1900.

1. Thirteen per cent less than above prices for iron, except shearman.
2. Twenty per cent added for changed iron and steel.
3. Seventeen per cent added for pickle-finished iron and steel, except shearman.
4. For all sheets sheared into circles on tin-plate mills where the loss exceeds 10 per cent 20 per cent extra shall be paid.
5. All plate and sheets cut down to smaller sizes on tin-plate mills to be paid for at scale prices.
6. For all sheets rolled on tin-plate mills, 14 square feet and over, not cut down to smaller sizes, and for tin plates, worked other than tin-plate style, sheet-mill prices including hands' prices shall be paid, and when working sheets, tin-plate style, the additional percentage of entire sheet-mill cost over tin-plate shall be added to all hands' wages on the mill, and it is understood when plate worked on a tin-plate mill and is not "first" pickled, annealed, cold rolled, and thoroughly treated as plate for

tinuing purposes before leaving the mill where it is worked, it shall be paid for at sheet-mill prices. (For rules, see Addenda.)

7. Where improved squaring shears are used the company shall pay for opening packs and grinding the knives, and on jaw and crocodile shears the company to pay for opening packs, and in mills where plates are cut into smaller sizes than 14 by 20 additional pay for shearing shall be arranged, shearman to change and set the knives.

8. Catchers on tin-plate mills to receive 23 per cent of roller's statement, the same to be deducted from the roller's statement and paid by the company.

9. Eight (8) hours shall be a day's work on tin or black plate mills, said mills not to follow out, except when notice to mill crew is given of a change in time of starting Friday morning to Saturday morning, and mills are not to operate on Saturday afternoon or Saturday or Sunday nights.

10. It is agreed that no more than three changes in the classification of sheet and tin-plate mills can be made during the scale year, and due notice shall be given before such changes.

11. The weight of bar to be marked on the bar when brought to the mill, or scales for weighing bars be furnished at the option of the company.

12. In each tin mill a blackboard shall be furnished, on which the complete weight of each turn shall be placed within a reasonable time after being made.

13. All tin and black plate shall be weighed by the company after being sheared and opened.

The limit or a turn's work of 8 hours shall be as follows:

On gauge.	100 pounds.	On gauge.	100 pounds.

The following advance applies to scale of wages paid by American Tin Plate Company for years 1898 and 1899:

	1898.				1899.			
	Hour.	Day.	Week.	Month.	Hour.	Day.	Week.	Month.
	<i>Cents.</i>				<i>Cents.</i>			
Blacksmith.....	20½				27			
Blacksmiths' helpers.....	16½				17½			
Carpenters.....	22½				24			
Carpenters' helpers.....	11½				12½			
Cranemen.....	15				16½			
Electrician.....				\$60.00				\$75.00
Grease makers.....	13½				14½			
Assistants.....	12½				13½			
Annealers.....			\$12.50				\$15.87½	
Annealers' helper.....		\$1.25				\$1.45		
Machinists.....	17½				18½			
Machinists' laborer.....	11½				12½			
Laborers' foreman.....	15				16½			
Laborers.....	11½				12½			
Truckers.....	12½				13½			
Watchman.....		1.40				1.54		
Watchman.....		1.25				1.37½		
Scrap wheelers.....	a 75				a 82½			

a Turn.

Where the rate paid prior to January 1 was \$1.50, or less, the new rate is 15 per cent higher; \$1.50 to \$2, 12 per cent higher; \$2 to \$2.50, 10 per cent higher.

In addition to this, some of the employees mentioned are advanced 25 per cent.

In the finishing department, including the tanners and risers, who do most of the work in connection with the turning or finishing of the plate, the advance since January 1 has been from 15 to 50 per cent, dependent upon the wages in existence in the different mills before the consolidation.

PRICES HAVE NOT RISEN PROPORTIONATELY TO COSTS.

Q. You have spoken of the advance in raw material and wages; has the price of the finished product been proportionate?—A. Proportionate to the advance in steel, wire nails, etc.?

Q. Proportionate to the advance in steel, tin, and wages; your raw material and wages?—A. I would say no; our advance has not been so great proportionately.

MODE OF SELLING—NO DISCRIMINATIONS BETWEEN JOBBERS.

Q. Will you explain to us briefly now your general method of selling; the nature of the contracts that you make for sales; persons to whom you sell, and so on; the general methods of selling the finished product?—A. The product of the American Tin Plate Company is sold from our New York and Chicago offices, sold through what we call our selling agents. There is a general agent in New York, and in Chicago Mr. Graham has charge of it, with sales agents under him. The contracts are made in the usual form—John Smith agrees to sell to Thomas Jones so many boxes of tin plate, price named, delivered f. o. b. mill, terms 30 days, or 1 off for cash 10 days; and that is all, I believe.

Q. You sell regularly to jobbers?—A. To all jobbers except the small retailers—people who buy small lots.

Q. Do you have any agreements with any of these persons to whom you sell as to whether they will buy from other parties or not?—A. None whatever.

Q. Have you refused or do you refuse to sell to any jobber—any large dealer of the kind you have mentioned—whose credit is good?—A. We never have; no.

JOBBERS' BRANDS.

Q. Will you explain to us the arrangements you have with jobbers with reference to special brands?—A. We have no arrangements of that kind.

Q. Do you manufacture any special brands of tin plate?—A. We do.

Q. Were these brands acquired from special dealers?—A. We manufacture certain brands for certain parties. For instance, we manufacture special brands of terneplate. They have a terneplate they have been selling for a number of years—Acme brand—or some such thing as that. They will ask us to brand the box so and so, and that we will do for them.

Q. You do make use of these special brands for special dealers?—A. Yes.

Q. Under these circumstances do you restrict that brand to these dealers or sell it to others?—A. That is their brand.

Q. You do them that favor of restricting that special brand to them?—A. Yes; I think there is a little charge for that. I forget just the charge there was, and I do not know whether there is one now or not. I pay little attention to that end of it, and I do not remember.

Q. When you give this exclusive use of the brand to a dealer of this kind, do you make this obligation of your company to continue the manufacture of any brand for a special dealer contingent on his restricting all his purchases of tin andterne plate to your products?—A. As I remember it now, there was some talk of that kind at one time, but we never closed it up. It was never closed.¹

Q. So, as a matter of fact, you have never enforced any such contract?—A. To the best of my knowledge, no.

CONTRACTS WITH MACHINERY MAKERS.

Q. Have you made any arrangements, any agreements, with founders and machinists that have been working for you?—A. We have 6 or 7 machine men and roll makers and housing makers which we have picked out as the best makers in the country. We have a contract with them agreeing to take their entire product of rolls, housings, etc., made for tin-plate work. There are a number of others on the outside from whom housings, rolls, etc., can be procured.²

Q. You have an agreement of that kind to take the full product of some 6 or 8 that you considered best?—A. Yes.

Q. Could you give us an estimate of the number of manufacturers of a similar nature outside with whom you have no such agreement?—A. I presume there are 5 or 6 outsiders.

Q. So you possibly have this contract with half the manufacturers?—A. Fully half, yes; I should say two thirds.

Q. But there are still left perhaps one-third of the manufacturers with whom you have no such contract?—A. Who are free lances to do as they please.

Q. Have you any agreement with these manufacturers that if they manufacture mills for other parties they shall make no black plate for tinning for any limited period?—A. There is an arrangement, agreement, or understanding that they will not sell tin rolls to mills for the purpose of rolling tin plate so long as they have a contract with and are doing business for us.

Q. That understanding is with these few manufacturers from whom you have agreed to take the largest part, at any rate, of their output; if they sell to anybody else they must do it with the understanding that their machine is not to be used for the purpose of making tin plate?—A. They are free to sell where they please outside of tin plate. We take all the rolls they make for tin-plate work.

VERY FEW PATENTS.

Q. How far are these products of which you agree to take the full amount covered by patents?—A. I do not think any of them. There may be a few little traps and trinkets, but outside of that I do not think so.

Q. Generally speaking, you think not patented at all?—A. Generally speaking.

RELATIONS WITH THE NATIONAL STEEL COMPANY.

Q. What are the relations that exist between the American Tin Plate Company and the National Steel Company?—A. The only relation existing between them is that part of the directory of the Steel Company are members of the directory of the Tin Plate Company, and part of the Tin Plate directory are members of the National Steel Company's directory.

Q. What proportion of your raw material do you buy from the National Steel Company?—A. I should say half; not over half, I should say.

Q. Are the products that you buy from the National Steel Company bought under special contracts substantially of the same nature as the others?—A. We buy from whom we can buy the cheapest; the Carnegie Steel Company, the Federal Steel Company, and the National Steel Company, whichever sells the cheapest.

Q. Owing to the fact that a number of men are directors of both companies do you have a freedom in talking over conditions of business with the National Steel Company that you would not have with the Carnegie Company, so that you would be

¹ See Mr. Graham, p. 851; Mr. Griffiths, pp. 890-893.

² See Mr. Graham, p. 852; Mr. Wheeler, p. 864; Mr. Griffiths, pp. 888-890.

assured of getting the raw material from them?—A. It is a means of keeping well posted as to iron and steel, what is going on in the iron trade. We are always sure when we have a friendly relation with the National Company to get steel and not have to shut down; to keep the mills running.

Q. You are sure the National Steel Company will not make a contract to dispose of the whole of their product to the exclusion of the American Tin Plate Company?—A. For instance, last winter the Carnegie Steel Company shut down 8 or 10 of our mills for a few days until the National Steel Company got to work and gave us some work. Carnegies were oversold for a time and could not make delivery.

PLANTS SHUT DOWN—THE JOHNSTOWN CASE.

Q. Will you tell us the number of plants of the American Tin Plate Company that have been shut down, dismantled?—A. There has been one 2-mill plant at Cleveland, two 2-mills at Baltimore, a mill in a second story of a building at Brooklyn called the Somers mill; that is all I think of now—a little mill down the Ohio River called the Ohio River mill. To offset that, however, we have added 4 mills at Monessen, Pa.; 1 mill at Cleveland, Ohio, in addition to the other mills; there are 2 at Canonsburg, and we have started 10 new mills at Newcastle. We have 20 going, with the Shenango and others that have been started; so we have added 20 or 25 against 10 or 12 shut down. The reason they were shut down is they were started by somebody who had a village lot he wanted to sell and that sort of thing.

Q. Did you have a plant at Johnstown that was shut down?—A. A 2-mill plant at Johnstown we shut down on account of some such conditions as I have mentioned in regard to these other plants. When the plant was built there, there seems to have been some town-lot scheme behind it. It was a bad place for us, and we shut it down for 5 or 6 weeks, maybe longer. A committee of citizens waited on us and made some concessions with regard to something or other, I do not know how it was done, and enabled us to start up the mill—some coal arrangements.

Q. The committee waited on you?—A. Yes. They made some concessions in regard to coal.

Q. In regard to the price of coal? What was the general nature of the concession or advantages that they offered you?—A. As I remember, it was in regard to the price of coal; I think we had the Pittsburg rate of freight.

Q. Practically they offered to pay out of their own pockets enough to put that plant in such condition that the establishment would be on an equality with the Pittsburg establishments?—A. So that we could operate it at a profit instead of at a loss.

Q. They made you an offer to put it in such condition you could operate at a profit?—A. Exactly.

QUESTIONS OF UNION LABOR.

Q. Did you close any works at Lisbon, Ohio?—A. No; they were shut down a week or two on account of a strike. It was a nonunion mill not working under the Amalgamated scale. I do not remember the facts, but I do remember the mill was shut down for 2 or 3 weeks; but it is now operating under the Amalgamated scale, as well as the other mills, with the exception of perhaps one.

Q. Do you remember any agreement when the mill was started up that you would employ union men, so that it opened as a union mill?—A. As I remember the facts now, when the Amalgamated conference took place in June the Lisbon mill was a nonunion mill. I think they sent a committee down to Lisbon and the mill was declared union and came into the Amalgamated; that is how it happened. I think the mills were shut down 2 or 3 weeks until that arrangement was made.

Q. (By Mr. KENNEDY.) Do you say all the mills in your combination except one are operated by the Amalgamated Association?—A. That was the mill mentioned by Mr. Graham yesterday, which has a little peculiar machinery we were experimenting with. He explained the facts yesterday.

Q. How many employees in this one mill?—A. I should say 700 or 800.

Q. You have no difficulty with the Amalgamated men in the other mills on account of this mill being nonunion?—A. None at all.¹

NO DECREASE OF LABORERS PER UNIT OF PRODUCT, OR OF OFFICE FORCE.

Q. (By Mr. JENKS.) You have mentioned the number of laborers in your employ and the amount of the pay roll being very largely increased. Have you been able, owing to the more efficient methods of management and other sources of saving, to lessen the number of laborers per unit of product, say, per hundred boxes; is the number of laborers less for every hundred boxes you put out now?—A. I think we are working more men now.

¹ See Mr. Graham, p. 861; Mr. Griffiths, pp. 904-906.

Q. Are you working more men per unit of product?—A. I think so.

Q. Suppose you take your total output as it was and as it is now; is the number of men employed now less in proportion to the output?—A. I think very few, if any, less; there have been very few men dropped out of the various works. There is an office pay roll with each mill. One case in question is a 4-mill plant where the pay roll in the office was \$16,000 for clerks, and so on. There were some brothers-in-law in there; there are a number of cases like that. We have got in the Chicago office 150 men, and this has taken in all the office force which was in the various mills; and instead of \$16,000 pay roll for a mill like that, we have a pay roll of perhaps \$1,200 or \$1,800.

Q. So you have decreased the office force?—A. There have been no men cut off at all. As the office force at the mill has been decreased they have been taken into the New York and Chicago offices.

SAVINGS—BUYING—FREIGHTS.

Q. What is the chief source of saving by the combination itself? What are the main ways in which you save by going into the combination?—A. There is a saving at the mill in the office force, and there is quite a saving in buying all sorts of supplies.

Q. By being a larger customer you can get better rates?—A. Buying pig tin; pig tin is very high. Large buyers as we are can buy tin at 2 or 3 cents a pound less than the small buyer.

Q. Then there are other sources of saving?—A. There are a good many little things like acid; we buy, I suppose, \$10,000 worth of acid a month, of acid alone; and we can get it some cheaper than the little companies do.

Q. Is the nature of your product such that you can concentrate, making one product at one mill and another at another, and in that way save more than if the plants were working independent?—A. We can work ternoplates entirely at one mill, and use another mill for coke plates.

Q. You would not consider that source of saving very large in your industry?—A. Nothing great, except you can give a customer a little nicer plate.

Q. By concentrating one kind of product in one mill is there any saving in labor?—A. None at all, except as I said, the office force; not in the workmen.

Q. You have two central selling offices to which all orders are sent; are you able to make any material saving by shipping from the nearest plants?—A. Yes; for instance, if we ship from Indiana to New York, the freight rate is 28 cents a hundred as I remember now; from Pittsburg it is 11 cents; from Canonsburg it is 2 cents less, I think.

Q. It is your custom to ship from the nearest mill to save the freight?—A. Yes.

FORMER METHODS OF SELLING—THE BIG FOUR—PRICES NOW THE SAME TO ALL.

Q. Have you been able to make a saving by lessening the number of commission and traveling men?—A. I do not think, as a rule, the commission men—the traveling men—of the tin plate companies are very expensive. For instance, one of the managers or one of the owners, if the inquiries came in by mail, would get on the cars himself and go. Our company handled their business that way, and I take it for granted they all did. For a time it was the rule to pay the New York jobbers, what they call the Big Four, a commission for selling plates. That was finally given up and the only commission paid would be, for instance, where some mill hard up would give them a discount for cash, or some such arrangement as that. "We will advance you \$50,000 or \$100,000, and you give it back in plate at so much a box."

Q. You said the owners of plants or managers did the selling themselves?—A. They did.

Q. Are these same managers employed by the American Tin Plate Company—the same who have been managing the separate plants?—A. Nearly all of them; there are a few that are not; not over half a dozen of them, if any, that are not employed.

Q. Do you think there is any gain in having these men put in a position where they can devote their whole time to the mill instead of half of it to the selling?—A. I think we can get a better output, better plates, and it satisfies the customer better.

Q. The saving of traveling expenses also, as regards that?—A. So far as the tin plate companies—the 39 companies—are concerned I do not suppose the entire number of companies had 10 of what you would call regular traveling men.

Q. You speak of the large jobbers, the Big Four in New York, that had been prominent in the business before the organization of the Tin Plate Company. Are these 4 jobbing houses still doing a regular business in New York?—A. No; one of them is practically out of business.

Q. Which one is that?—A. Our Eastern sales agent, Mr. Dickerson.

Q. You took one member of the firm and gave him a salary as sales agent?—A. He is our Eastern agent now.

Q. Did you take persons from any of the other houses?—A. We took a traveling man that belonged to the firm of Robert Crookes & Co. as our San Francisco agent.

Q. He was a traveling man?—A. What we call a road man at a salary.

Q. Do you have any special arrangements with Phelps, Dodge & Co. at the present time?—A. What kind of an arrangement?

Q. With reference to purchases, importing any special kind of material, or any special rates to them in selling your products?—A. They buy plates at \$1.65 in lots of 5,000, 10,000, and 100,000 boxes. They pay cash in 10 days, regular discount. That is the only arrangement we have with them.

Q. The rates are the same?—A. To everybody; there is no distinction between persons as to the price of a box of tin plate.

Q. You have not any arrangement with them as to furnishing you with pig tin?—A. We have this arrangement; so long as they furnish it as low as anybody else, we buy from them.

Q. You give them the preference?—A. As long as they keep the prices down.

THE TARIFF—EARLY EXPERIENCES.

Q. Will you give us your opinion with respect to the relation of the tariff to the tin-plate industry? I should be glad if you would go back to the first tariff on tin plate and explain your opinion of the relation of that tariff to the tin-plate industry as a whole. How long have you been a tin-plate manufacturer?—A. Since 1891; but active only since 1895.

Q. If you would be kind enough to give us the effect of the tariff?—A. To begin with, there would be no tin in this country without the tariff; it would be impossible to manufacture it and sell it. Beginning back at the early days in 1891 and 1892, the Elwood mill (with protection at \$2.20) cost \$150,000, to make tin plate. The cost, of course, came in through a lot of Welshmen who came over here and had their ideas about light machinery and engines and all that sort of thing; there was a lot of machinery broken up. The output was small, and when tin plate was selling in 1893 at \$5.85 a box, our plate was costing us \$9 to make.

Q. (By Mr. JENKS.) When you first started the industry you imported some Welsh workmen?—A. Yes, the rollers were all Welsh to begin with. Now, there are, I should say, about 50 or 60 per cent. A great many Americans have learned the trade and are gradually working in, but the Welshman is a very jealous fellow and tells just as little as he can, and the American has got to pick it up for himself.

Q. Then, at the beginning, even under the very high tariff, it was difficult to start the industry and for a time you manufactured tin plate at a loss?—A. We manufactured at a loss.

Q. (By Mr. FARQUHAR.) What was the tariff on tin at that time?—A. \$2.20 a box, as I remember.

Q. And, now, since then?—A. Then it was put to \$1.20, and now it is at \$1.50.

Q. (By Senator MALLORY.) That is on 100-pound boxes or 150 pounds?—A. One hundred pound boxes.

Q. (By Mr. FARQUHAR.) The \$1.20 was under the Wilson tariff?—A. Yes.

Q. And the \$1.50 was under the Dingley tariff?—A. Yes.

Q. (By Mr. JENKS.) What was the effect on the industry of reducing the tariff from \$2.20 to \$1.20?—A. Well, in the meantime the American was getting his mill in a little better working order and getting out his plates a little bit cheaper, and while he was running along there under the \$1.20 tariff, the workmen came in and asked for a 15-cent raise, as I remember it now, and we had a 3 or 4 weeks' row over that, and the thing finally drifted along and I think they took it up down at Washington and put it at \$1.50; that is about the history of it as I remember.

Q. Do you recollect the date when the Wilson tariff went into effect?—A. I think it was in 1894.

Mr. KENNEDY. August 28, 1894.

PRICES—IMPORTS.

Q. (By Mr. C. J. HARRIS.) Do you remember the price of tin plate when the industry was first started in this country, say 1890 or 1888, or somewhere along there?—A. Well, I think, just offhand, that it was somewhere between \$6 and \$7. At times it was higher than that. I think at one time tin plate sold as high as \$17 a box.

Q. (By Mr. JENKS.) What is the price of tin plate now, did you say?—A. \$4.65.

Q. \$4.65; is there any tin plate imported?—A. Nothing except to be reexported.

Q. At what price would tin plate have to be here in order to enable tin to be imported at a profit for home consumption?—A. You mean to ask me the price now?

Q. You say the price is \$4.65. How much higher can you put that price before you

meet competition from the other side?—A. Oh, we can put it on the market to-day, I should say, 35 cents to 55 cents a box.

Q. Higher than it is now?—A. Yes.

Q. So you could run it up to \$5.25 without much fear of meeting competition from the other side?—A. That is right.

Q. (By Mr. FARQUHAR.) Could you run it to \$5.37½?—A. The price of plates f. o. b. New York a few days ago was \$5.27½; that is, from the other side.

WAGES OF VARIOUS WORKERS.

Q. (By Mr. JENKS.) The question came up some little time ago with reference to the relation between the price of tin plate and the wages of the laborers. You could, then, if I understand you now, still increase the wages of the laborers somewhat until the price of tin plate should be forced up to, say, \$5.25, and make the consumer pay instead of making the laborers suffer?—A. Well, the laborers to-day, as I remarked a few minutes ago, are the best paid laborers in the country. Our rollers can make in 8 hours' work close to \$10 a day under the new scale. Our entire pay roll, I will say, would be in the neighborhood of \$10,000,000 per annum.

Q. Now?—A. Yes; now.

Q. (By Mr. KENNEDY.) How many of these rollers are there and what is it that gives these men such large wages; how many rollers are there in a mill?—A. There is 1 roller to each mill each turn.

Q. Just 1 roller?—A. Yes. Then there is the heater, doubler, and catcher, and the whole crew, as they call it; but the roller is the skilled man and gets the high money. Then next to him comes the doubler and catcher.

Q. What wages do they get?—A. \$6 or \$7 a day, according to the tonnage. They are allowed to make so many tons in 8 hours, for which they get a tonnage price.

Q. (By Mr. JENKS.) You say they are allowed to make so much in 8 hours?—A. By the Amalgamated Association.

Q. Do the rules of the organization hold them down to that amount?—A. Yes.

Q. (By Mr. CLARKE.) Does that work require high skill?—A. The roller is supposed to be a skilled man. I think if he is real clever he can learn the business in 3 years from the time he starts in.

Q. Is it hot and heavy work?—A. It is very hot in the summer time.

Q. Is it dangerous to the health?—A. Not especially, no; on the contrary, they are very healthy men.

Q. (By Mr. C. J. HARRIS.) When you speak of mills, you do not mean that you have 1 roller for 1 establishment?—A. Oh, no.

Q. One manufacturing establishment may have how many mills in it?—A. That is an expression we use. We say a 4-mill plant. They would have a roller for each of those mills, on each turn, and perhaps an assistant roller in addition to the heater, doubler, etc.

Q. In New Castle you have how many mills?—A. Fifty mills. We have 2 plants there.

Q. The New Castle and the Shenango?—A. Yes; in New Castle.

Q. Which is the largest plant you have?—A. The Shenango plant, with 30 mills.

Q. (By Senator MALLORY.) What wages do the other workers get outside of the rolling mill—the dippers?—A. The tanners?

Q. Yes.—A. The tanners are paid on a scale. They have a union or federation of labor that controls them, and the same scale is paid in all mills. The price is so much per box, and the tinner to-day would make, working his turn, I understand, from \$2.50 to \$3, and then his helper would make \$2, or somewhere in that neighborhood.

Q. Is that about the least wages that any of them get?—A. No. Then there is the packing house and shipping house, and what we call around the mill the labor gang, which might be, perhaps, 150 or 200 men all the time.

Q. They are not skilled?—A. Oh, no; just common laborers.

Q. For the labor that you class as skilled \$2 to \$2.50 is about the least, is it?—A. Yes; that is, really in the tin house they have no right to be regarded as skilled laborers. In the Elwood tin house, for instance, 19 out of 20 of them are boys taken off the farms or off the streets, and all they do toward operating the machines is just simply to take hold of a pair of tongs and put a piece of sheet in between the rolls, and the other man gets it on the other side with a pair of tongs and puts it on a cleaner. As I say, they were taken off the farms and the streets of country towns surrounding to do this business.

Q. (By Mr. JENKS.) About how long does it take them to become skilled?—A. Two or three months.

Q. What did you say was the wages that you paid to the unskilled laborers?—A. The outside men knocking around the works?

Q. Yes.—A. \$1.40.

Q. That is really the lowest you pay for any help?—A. Yes.

Q. (By Mr. FARQUHAR.) Is that \$1.40 the wages paid the women and children in your packing house?—A. Oh, no; the women make so much per box, and the girls make about \$1.25 per day. In fact, the work has been so plentiful and steady that they do not want to hire out in these towns to do housework. They all want a job in the tin shop.

Q. (By Mr. JENKS.) Do you employ any children?—A. The laws of the the different States—I do not know exactly as to the West Virginia laws, but West they are not allowed to employ anyone under 16 years of age.

Q. But you do employ young persons as young as 16?—A. Yes.

Q. What work do they do?—A. Well, they are grease boys around the mill. There is a great deal of grease used in connection with the rolls, and they are working in these boys for this kind of business, etc., and so on.

Q. (By Mr. C. J. HARRIS.) Including your whole help, what should you say the average wage was per day? You say they are the best paid people in almost any line.—A. What I said was this, that the rolling mill men in a tin plant were the best paid men in the iron business in the country. Now, then, taking in all the labor and averaging it up—is that what you mean?

Q. Yes; all the employees—girls, boys, women, and men—what would it average?—A. I should say \$2.50 per day.

WAGES IN AMERICA AND IN WALES.

Q. (By Mr. KENNEDY.) What would the roller who gets \$10 in this country formerly receive in Wales?—A. My recollection is that their scale over there would be about \$3.50 per day, as against \$10 here.

Q. (By Mr. JENKS.) That is your present scale?—A. Yes.

Q. (By Mr. KENNEDY.) Do you know anything about the difference in the cost of living in the two countries?—A. I do not. I do not know how they live over there, but the rolling mill men in this country live just as well as men worth \$150,000 or \$200,000. They are right up to date; they have got pianos, horses and buggies, and everything of that kind.

Q. (By Mr. C. J. HARRIS.) Lace curtains in the windows?—A. Yes; lace curtains in the windows, all of them.

WE HAVE THE MONEY AND THE TIN, TOO.

There is one thing I should like to call the attention of the commission to, and that is this: Of course you have all thought of it, that there is one thing that tin plate has done; it has kept about \$30,000,000, or a little more than that, now perhaps \$35,000,000, from going out of the United States to the other side. That money has been spent here in labor and in buying steel, which it takes labor to make; and buying acids, which it takes labor to make; and running on down the list, which represents a great many more people than those actually paid by the American Tin Plate Company.

Q. (By Mr. CLARKE.) If we sent that money out of the country, what should we get for it?—A. We get tin back, and this goes into tomato cans to be thrown over the fence.

Q. By keeping it here we have that and the tin, too, do we not?—A. We have the money and the tin; yes.

PRICES REDUCED.

Q. (By Senator MALLORY.) You have done all this, and at the same time you have produced tin plate to the consumer at a less rate than you did before you established these tin-plate plants?—A. As I understand your question, you asked me if we are selling tin plate now at a lower price per box than before the tin-plate plants were operated on this side?

Q. Yes.—A. We are selling, and have been selling, tin plate at \$2 per box right along below the price before the mills were operated on this side, and I would say that our price now is from \$1.50 to \$2 per box—understand, I am not giving you the exact figures—\$1.50 to \$2 per box below the average price, before it was manufactured in this country.

FIFTY CENTS DUTY TO SPARE AT PRESENT.

Q. (By Mr. JENKS.) I understand from what you say in reference to the tariff, that you could still put the price of tin plate, a box, about 50 cents higher than it is now before there would be any importation?—A. Oh, yes.

Q. On the present basis, then, there is half a dollar out of \$1.50 tariff that you would not really need just now?—A. Well, that would do, figuring it that way. I do not know whether you have just got the right idea in figuring it that way.

Q. (By Mr. C. J. HARRIS.) If they should lower the price and introduce their tin here at a less rate—say \$4.65—you would not have any margin, would you? Suppose these other men from Wales lowered their price 50 cents, then you would not have any margin to play on, would you?—A. None at all. That, of course, is the danger of the other side.

Q. (By Mr. JENKS.) Under the present conditions on the other side and on this side, there is half a dollar you do not need?—A. Yes; but it is liable to come off any day in a drop of price in Welsh plate.

LABOR AND STEEL CHEAPER IN WALES.

Q. (By Mr. FARQUHAR.) Is not the price of raw material just as high to the British manufacturers as American?—A. They pay exactly the same.

Q. (By Senator MALLORY.) How about steel billets?—A. Well, the steel billets, I will say, they pay a little less for. Their labor they pay over a third less.

Q. (By Mr. JENKS.) Then the main difference between prices in England and here is the difference in labor?—A. Exactly. We pay \$2 here and they pay about \$1.35 there.

Q. (By Mr. C. J. HARRIS.) Just now are not steel billets a little lower over there than they are here?—A. I just said they were.

Q. But as a general average? Of course, this is rather an extraordinary time here. As a general average how would the two countries compare?—A. Ordinarily they are much lower.

THE DEMAND CAUSED THE RISE OF PRICES.

Q. (By Mr. FARQUHAR.) In a business way, how do you account for this great advance in the raw material that enters into steel, and the product itself, from the mine down? Have you studied this advance and what brought it about, what the necessities were, etc.?—A. What brought it about? The demand.

Q. The demand?—A. The demand. The consumption has been greater than the supply for a year.

Q. After the supply, what do you look for? Falling rates?—A. I certainly do not expect these prices to hold up always. I think we are all right for this year and next.

Q. Do you suppose it is possible to sustain the present price of billets for 6 months?—A. I do; yes.

FURNACES AND MILLS INSUFFICIENT FOR THE PRESENT WANTS OF THE COUNTRY.

Q. Will not the fact that there has been an immense forwarding of ore from the northern Michigan mines and northern Minnesota mines to Pittsburg and other centers bring down this steel-billet price?—A. Well, they would have to build new steel plants, you know, before they could use the ore. I know of only one that is being built, and some plants enlarging; and to build a new steel plant would take 2 years, perhaps longer, and longer than that if they built their own blast furnace.

Q. Is it given as a business reason, as the cause of the rise, that there was a scarcity of the ore itself, or was it the insufficiency of the mills to fill the demand that came?—A. I think that the wants of the country were greater than the ability of the mills to supply, and have been for a year.

Q. (By Mr. FARQUHAR.) The question is this, for the general public and all of us: Whether you business men see now the turning of these high prices, whether in respect to tin or steel?—A. See a turn in the price?

Q. Yes.—A. Coming?

Q. Yes; coming.—A. No, sir; I do not.

Q. Do you think the present prices will be sustained during this whole season and next year?—A. I think the present prices will run through this present year and at least half of the next year.

THIS COMBINATION NOT DUE TO THE TARIFF.

Q. (By Mr. KENNEDY.) According to your testimony the tariff has established this great industry which employs a large number of workmen at exceptionally good wages, and gives this product to the people at a considerably less price than prior to 1890. That being true, should you say that the tariff has had anything more to do with bringing about this business combination which you have entered into within

¹ See Mr. Graham, p. 861.

the past year than it had to do with the establishment of like combinations in the oil trade of this country?—A. It certainly had not.

Q. (By Senator MALLORY.) I understand that before the formation of this combination of which you are president there was very little profit in the tin-plate business in this country?—A. Before our present organization was formed?

Q. Yes; very little profit; that some were making no profit, and those that were making a profit were just barely making a profit?—A. Some few were losing money.¹

EXPORTING TIN PLATE IS FAR IN THE FUTURE.

Q. What was the date of your completion of this American Tin Plate Company?—A. I think the 6th of January. The organization was completed in December, but I think the last bunch of companies was taken in on January 6.

Q. Now, from your observation, what is your opinion as to the ability of a combination such as the American Tin Plate Company to manufacture tin plate on an even basis, or a nearly even basis, with foreign manufacturers?—A. Well, of course, it is the desire of all big companies to reduce gradually the price at which they can sell their product rather than put it up. Of course, high steel and high pig tin and high labor and high supplies of all kinds, not only in the tin-plate and steel business, are going to keep things up for a time; then these big prices will come down.

Q. Well, the higher prices affect the foreign manufacturer as well as you. There is very little difference in the price of steel billets and pig tin to the English and the American manufacturer; so I take it these things are pretty nearly on a level, as far as the raw material is concerned?—A. Yes.

Q. Now, what I want to get at is this: Do you think the time will come when you can compete with England and any other tin-plate manufacturing country in the foreign markets—ship your surplus out of the United States?—A. It is a good way in the future, a long way in the future, so far as that goes. There would have to be a great many economies and things brought about. We are handicapped, to start with, on one thing, and that is the labor question, and that is one of the big things in the case of tin plate.

Q. Well, to-day, so far as this market is concerned, you are underselling the English?—A. As the market stands.

Q. I wanted to see if there was a probability that you would be able to manufacture at a rate sufficiently low to make us anticipate that in that line of manufactures, at least, you would be able to compete in foreign countries in a not remote future.—A. It is in the long future, I should say.

Q. Then we shall not go into the tin-plate business in competition with the rest of the world for some years?—A. Not for some years.

WE CONSUME TWO-THIRDS OF THE TIN PLATE OF THE WORLD.

Q. (By Mr. CLARKE.) Do you know what proportion of the world's product of tin plate is consumed in this country?—A. Well, they have something over 400 mills, I think, on the other side, against 300 on this. I understand they are operating about the same number of mills that we are. Our production would be 30 per cent more than theirs with the same number of mills, taking them as they run, understand; and we shall consume in this country this year over 9,000,000 boxes of tin plate, so you can figure about what it is.

Q. Should you say we consume 60 per cent at least?—A. That would be my opinion, roughly; so I will say that we consume in this country practically two-thirds of what is consumed in the world.

Q. The home market is constantly increasing in extent?—A. Constantly increasing; and we also consume, as you know, some foreign plates that go out of the country again and bring rebates—in which meats, vegetables, etc., are shipped—so that the consumption over here would be fully two-thirds.

NEW YORK PRICE AND PRICE AT MILL.

Q. (By Mr. JENKS.) You have said that you would furnish us some prices of tin plate for some years back. Would the prices you would furnish presumably be New York prices, or on a basis of prices elsewhere?—A. They would be New York prices.

Q. And what difference should one make in order to compare the New York prices with the prices you quote?—A. Eleven cents. The New York prices would be 11 cents over the mill prices.

THE COMPANY AND OUTSIDERS—OUTPUT AND CAPACITY.

Q. About what part of the output of tin plate of this country does the American Tin Plate Company control?—A. About 90 per cent.

¹ See Mr. Griffiths, pp. 898-898, 900; Mr. Taylor, p. 941.

- Q. How many plants are there outside?—A. 1, 2, 3, 4, 5—I think 6.
 Q. Do you know how many mills there are in these plants?—A. 12, 18, 24, 27.
 Q. About 27 or 28 mills?—A. Yes.
 Q. How many have you?—A. We have 300.

UNITED STATES TIN PLATE COMPANY.

Q. What is the United States Tin Plate Company? Do you know of such a corporation?—A. The United States Tin Plate Company, the old United States Tin Plate Company, was a concern at Demmler, Pa., which now belongs to the American Tin Plate Company. The present United States Tin Plate Company was organized at Trenton, N. J. The charter was taken out by myself, Mr. Dill, and Mr. Leeds. I believe we were the ones that signed the original papers, in order to protect the name.

Q. So it is not an active organization?—A. It is not an active organization.

Q. Is there any other similar organization?—A. The United States Tin Plate and Stamping Company.

Q. That is the same kind of a corporation?—A. Yes.

Q. The corporation is organized simply to protect the name against any rivals that might come in?—A. Yes.

Q. Will you see that the commission is furnished with a copy of your charter and by-laws complete?—A. The charter and by-laws Mr. Dill will furnish you a copy of.¹

ATTEMPT AT TIN-PLATE MANUFACTURE IN 1874.

Q. (By Mr. CLARKE.) Was there any tin-plate industry in this country prior to 1890; had there been at any time?—A. There was not. There was an attempt made to make tin plate, I think, at Demmler, Pa., in 1874, but before 1890, as to any quantity, no, and a few years before that, none.²

Q. (By Mr. FARQUHAR.) How much money was involved in the Demmler plant?—A. I should hardly be prepared to say, but I think not over \$100,000.

Q. Do you know whether or not it paid a profit at any time?—A. I hardly think so. Mr. Cronineyer ran the plant. He was a tin-plate man in the early days, and agitated the thing as a tariff man. He was the man who attempted to make tin plate at Demmler.

Q. Do you know whether or not the English manufacturers issued a circular to the trade in this country at that time, saying that whatever price the American manufacturers made they would make a lower one?—A. I do not know. If there was any such circular issued I never heard of it.

Q. Those mills were obliged to shut down because they could not make a profit?—A. Well, it was only a small attempt, a little 1-horse plant, you might say. They shut down and went out of business.

Q. It was not an object for capital to embark in the business, then, until after 1890?—A. That is correct.

CAPITAL OF OUTSIDE CONCERNS.

Q. Do you know the amount of capital that is embarked in the business in this country at the present time?—A. I do not know what the working capital of some of those outside plants might be, but I suppose they are carried by some steel company or somebody—I should imagine so—and that being the case, I should think there is \$2,500,000 outside of the American Tin Plate Company; maybe not over \$2,000,000.

PREFERRED STOCK AND COMMON STOCK—GOOD WILL.

Q. In forming the American Tin Plate Company, upon what basis did you issue the preferred stock and common stock? That is to say, what did you consider that the common stock paid for, and what did you consider that the preferred stock paid for?—A. The preferred stock and common stock did not pay for anything. The preferred and common stock was purchased from Judge Moore, who had bought these plants for cash.

Q. (By Mr. CLARKE.) Then the preferred stock paid for the plants, did it not, practically?—A. He paid cash for the plants.

Q. He paid cash for the plants and you paid him?—A. He sold the stock.

Q. Did you not consider that the preferred stock practically paid for the plants, for the tangible property?—A. As I have already said, Judge Moore paid for the plants in cash. It was a cash transaction. However, if an owner of tin-plate property would come to him and say, "I do not care for mine in cash; I will take so many

¹ See appendix.

² See Mr. Griffiths, pp. 887, 899.

shares in stock," he would get from him a share of common and a share of preferred stock for each \$100 that he did not take out in cash.

Q. No matter how many transactions were involved in it, and by what circumlocution it was brought about, as a matter of fact, did you not consider generally that the preferred stock paid for the tangible property that was acquired?—A. Well, if a mill had \$100,000 cash coming to it from Judge Moore and he gave them \$100,000 in preferred and \$100,000 in common stock, that man would know that he was getting preferred stock for his \$100,000, and whatever he got beyond might be said to be so much bonus.

Q. Was it not considered that the common stock was represented by the good will, the opportunity to do business and make money?—A. I suppose it was.

Q. How do you estimate the relative value of the tangible property and the opportunity to make money? Which is the greater?—A. Well, it would depend somewhat on the property, the conditions, etc. It would be a pretty hard matter to give an answer on that, on 1, 2, 3, 4, 5, 6, different factories, I think. Some would be worth a good deal more than others.

Q. Look at it in this light for a moment: If a mill should be destroyed by fire, or a cyclone, it could be rebuilt for half a million or a million dollars, perhaps. If the business should be destroyed by some untoward event, what would the mill be worth?—A. The mill would not be worth anything, unless you could find a buyer coming along to take it off your hands after the business was gone.

Q. Very well; then, you consider that the good will, the business, the trade built up, and the opportunity to continue it, are worth more than the mill and all the machinery in it?—A. Not in all cases; no, sir.

PRICES OF PLANTS COVERED GOOD WILL AND ALL.

Q. (By Mr. JENKS.) If I understand you correctly, you said that these plants were bought by Judge Moore on a cash basis?—A. Yes.

Q. If a man had got an option on a plant for \$100,000 in cash, he could take that cash and quit business?—A. Yes.

Q. If he preferred to take instead of cash \$100,000 worth of preferred stock and a \$100,000 in common stock, he could do that?—A. Yes; Judge Moore would let him have it.

Q. The price, then, that Judge Moore and these tin-plate manufacturers agreed upon was on a cash basis, and that would include, would it not, the value of the plant and the value of the business in general?—A. Good will and all.

Q. The good will and all?—A. Yes.

Q. So that, as a matter of fact, the price that was agreed upon, the cash price agreed upon, would mean both the value of the plant itself and the good will?—A. Certainly; yes.

STOCK REPRESENTS 3, 4, 5 TIMES THE CASH VALUE OF THE PLANTS THEMSELVES.

Q. At the time when the American Tin Plate Company was organized, was it the presumption that if the Tin Plate Company were organized the business would be a fairly profitable one? Were times good enough so that it seemed as if the business would be a profitable one if they could get this organization through?—A. It seemed so; yes. It seemed that there would be a great deal more money in the business than there had been in the past; there would be no cutting of prices, cutting down to a losing basis.

Q. When the different manufacturers were negotiating with Judge Moore for the sale of their plants, was that taken into consideration by them?—A. Yes; they were looking to him to put it together, and were very anxious to have him, and that was taken into consideration.

Q. It was also true that the prices they would agree upon would be, presumably, in most instances, higher than they would have been if they had been going to sell their plants to another private individual without a thought of this combination?—A. If they were just selling individually, yes.

Q. Without thought of a combination, they would have been willing to sell lower than they did sell to Judge Moore?—A. I think so; yes.

Q. It was worth more in the combination and so they got more for it?—A. Yes.

Q. If we were then to speak about the proportion of the stock that is represented by the real value of the plants themselves, under ordinary conditions of business, without combination, the presumption would be that the shares of preferred and common stock, taken together, would represent 3, 4, or 5 times what the cash value of the plant itself alone would be under ordinary conditions.—A. Well, whatever the case might be, 1, 2, 3, 4, 5. Presumably there were cases where preferred and common stock would represent, we will say, 4 times the cash value of the plant itself, under ordinary conditions.¹

Q. Counting both at par, you mean?—A. Yes; counting both at par.

¹ See Mr. Griffiths, p. 911.

\$5,000,000 WORKING CAPITAL.

Q. (By Mr. CLARKE.) Was any of the working capital derived from the sale of common stock?—A. No.

Q. None whatever?—A. Why, the working capital was derived from Judge Moore for all of this stock.

Q. (By Mr. JENKS.) Now then, Judge Moore, as I understand, when he presented this plan to the different tin-plate manufacturers for the organization of this company, was to furnish these plants and so much working capital?—A. Exactly.

Q. How much working capital?—A. About \$5,000,000.

Q. He was to turn over the plants and \$5,000,000 capital?—A. That is it exactly.

Q. (By Mr. C. J. HARRIS.) Have you got \$5,000,000?—A. We had about \$5,000,000 when we started.

INCREASED COSTS CAUSED THE RISE OF PRICES.

Q. (By Mr. FARQUHAR.) In the course of some questions that were asked of you in respect to the low prices of tin, around \$2.60, \$2.75, \$3.20, \$3.87½, \$4.25, and up to \$4.65, you gave a general answer that these advances were caused by the demand?—A. By the advance in the price of raw material.

Q. But the demand was the cause of bringing the prices up?

THE WITNESS. The demand for what?

Mr. FARQUHAR. For the plate itself, for the finished product.

THE WITNESS. Well, I would hardly put it that way. The prices were put up because the steel, the labor, and the pig tin that went into it, all cost more money.

Q. Yes; I am looking at the reason. Then the second part of the question was this: Did the cost of steel billets advance comparatively as largely as your price for tin plate?—A. It did.

Q. Did the price of the pig tin advance relatively with your prices?—A. Pig tin more than doubled in price.

Q. Did your advance in wages relatively follow this rise?—A. Wages were advanced in some cases 15 and in some cases 20 per cent.

Q. So that you would answer that your advance from \$2.60 to \$4.65 is a normal advance?—A. Correct.

WHAT INDUCED THE COMBINATION.

Q. Now, that is settled. The question was asked you what were the reasons why you went into this combination, and I desire to ask you a question or two there. Did you keep in view the fact that this was a thoroughly protected industry, an industry built by the taxpayers of the United States?—A. Had we that in view?

Q. With that in view, they claim that a trust or a combination in any business in Europe or here results from three great factors—lower prices, overproduction, and diminished profits. Did all or any of these three influence you to make the combination?—A. Diminished profits certainly did.

Q. Well, did overproduction?—A. Yes—no; overproduction did not.

Q. Would you answer plainly whether your intention was to eliminate or control competition?—A. Neither.

Q. Neither?—A. Neither. It was for the purpose of getting together to do away with foolishness in making prices, and competition, I suppose, would enter into that, although there is competition now in the field against us.

Q. Did you not answer that it was the fierce competition that drove you to make a combination?—A. Didn't I?

Q. Yes.—A. A short time ago I said that competition, perhaps, was one of the factors that entered into it.

Q. Yes, and that you made this combination in order that you might make prices stable and secure more for yourselves than you could with open competition?—A. Certainly; yes.

THE OUTSIDE MILLS CAN NOT MAKE TIN PLATE FOR WHAT THE COMPANY SELLS IT FOR.

Q. Do you think the general public have shared in any of the economies that you have inaugurated in your production of tin as prices stand to the consumer to-day?—A. Well, the public are paying more for tin plate than they did before the organization of the company, but the reason they are doing that is the cost of the supplies that enter in.

Q. You would say, then, that this advance in the price of tin plate to the consumer is not arbitrary on the part of your company?—A. Not at all.

Q. But follows naturally in the course of business?—A. Correct.

Q. Controlled naturally by the cost of the raw material and by the demand?—A. Not so much demand as the cost of raw material and the price of labor.

Q. You would answer that it was not the opportunity to suppress competition that caused your organization?—A. I did not say that.

Q. You do not say that?—A. Well, we never for a moment thought that we should not have competition. In fact, there were mills out, and are now, as competitors; but it was to get a number of mills together that would regulate that very much, and not only in buying and selling tin, but in handling supplies, and handling the business in a very much more satisfactory way.

Q. Do you not practically now, in your great organization, name the prices of tin plate to the consumer?—A. We do; yes.

Q. You do not find in the market now, with even the free competition that exists against you, that there is any material cutting of prices?—A. Not at all.

Q. If your organization was not as strong as it is, of course prices might be cut?—A. No; not so.

Q. Why not?—A. For this reason: I think that with the competition we have to-day we can make our own prices, of course. I hardly believe that the outside mills to-day, with the facilities they have for handling, can make tin plate for what we are selling it for. Now, there may be some mills operating and making tin plate and consuming it, and there may be some mills making tin plates for their own use, in the manufacture of wares, like the Harrisburg mill, for instance, and all that sort of thing; but I do not believe, with the present prices of raw material, they can make tin plate and sell it to the public as cheap as we can.

OUTSIDE NONUNION MILLS ARE NOT CUTTING PRICES.

Q. As labor enters largely into the cost of tin plate, do you know that these opposition mills, as we may call them, now pay union wages? Are they on the same basis as you as far as the payment of the scale is concerned?—A. I think that part of them are. I think part of them are nonunion mills running on nonunion scales.

Q. What proportion do you think are nonunion?—A. I should say half of them.

Q. Do these nonunion mills that pay nonunion wages endeavor to cut below your rates?—A. In selling tin plate?

Q. In selling tin plate.—A. No, I do not think they do. In some cases they sell at a slight percentage above our prices.

Q. Quality for quality?—A. Yes.

Testimony closed 12.25 p. m.

The commission was called to order at 2.30 p. m. by Mr. Clarke, who presided.

Mr. DANIEL G. REID recalled.

COST OF A PLANT AND NECESSARY WORKING CAPITAL.

(By Mr. JENKS.) It has been suggested by some of the commissioners that they would like to know what would be the cost, as near as you can estimate it, of putting up a plant to-day, we will say a 10-mill plant, in a pretty good place, say Pittsburg? What would be your estimate of the cost of a 10-mill plant?—A. It would be a very hard question to answer, for this reason—I might answer it in this way: The cost of a 10 mill plant was \$400,000 a year or two years ago. I should estimate now that it would cost 60 to 75 per cent more.

Q. You would say, then, that the cost of a 10-mill plant at the present time would be about how much, in round numbers?—A. Well, based on that estimate, I should say \$500,000 or \$600,000.

Q. Do you include real estate in that?—A. No; I should not include real estate.

Q. That excludes real estate?—A. Excludes real estate.

Q. Suppose you should put up one of double that capacity to-day, a 20-mill plant, would you estimate the cost of that at twice as much?—A. I think it would cost a little more than twice as much, on account of heavier engines.

Q. Rather more than twice as much?—A. Yes.

Q. (By Mr. KENNEDY.) Is it more as compared with the former cost, the increased cost of materials? You said that of the mill that cost \$400,000, the cost is increased by 65 per cent, and you estimate the cost of a mill, a new mill, at between \$500,000 and \$600,000.

Q. (By Mr. JENKS.) Did you intend to give your estimate on the cost of building the mill 2 years ago at \$400,000?—A. It is a very hard question to answer. I said \$400,000 would be the cost 2 years ago, and I said that now it would be \$500,000 or \$600,000. Of course, that is assuming a great many things; it is guesswork.

Q. Can you give any estimate of the amount of running capital that is required to carry on efficiently the work of a tin-plate mill? Suppose we take, for example,

one that would cost half a million dollars. What would you consider a fair amount of capital to handle that business well?—A. It would take \$25,000 per mill to handle it right.

Q. \$25,000 per mill?—A. Yes; at the very lowest figures. It might be possible it would take more than \$25,000 per mill now on account of the excessive cost of supplies.

Q. I understood you to say that was the very lowest cost?—A. Yes.

Testimony closed.

WASHINGTON, D. C., November 16, 1899.

TESTIMONY OF MR. WILLIAM GRIFFITHS,

Manufacturer of tin plate.

The commission met at 10.50 a. m., November 16, 1899, Senator Kyle presiding. Mr. William Griffiths, manufacturer of tin plate, being duly sworn, testified as follows:

Q. (By Senator KYLE.) You may state your full name and address.—A. William Griffiths, tin-plate manufacturer, Washington, Pa.

SALE OF PLANT TO THE AMERICAN TIN PLATE COMPANY—TERMS AND CONDITIONS

Q. (By Mr. JENKS.) How long have you been engaged in tin-plate manufacturing? A. In the manufacture of tin plate proper I have been engaged upward of 11 years.

Q. Have you had any connection in business with the American Tin Plate Company? A. Only as far as the surrender of the plant that I was interested in is concerned.

Q. You mean that you sold out a plant to the American Tin Plate Company?—A. That is my meaning.

Q. Is there any special reason for using the word "surrender?" Did you consider you were compelled to sell?—A. Not as far as the American Tin Plate Company is concerned; only as concerns my connection with my partners. There was a disposition on their part to be absorbed and an indisposition on my part. Not having a majority of the stock I simply surrendered.

Q. In the purchase of the plant in which you were interested did the tin-plate company make any conditions with reference to further engagement in the tin-plate industry by either yourself or partners?—A. In their first approach they did.

Q. They asked that you should not engage further in the business?—A. They named in the option that was first given us for our consideration a period of 15 years in which we should not engage in the business, either in making tin plate or any of the by-products that constitute the character of tin plate.

Q. In the contract that you finally made with them for the sale was there any such provision?—A. Not to my knowledge; no, sir. It simply referred to the transfer of our plant without any of the conditions that you speak of. The business was consummated with such rush and haste that they did not even afford us time or opportunity to examine the papers we were called upon to sign, simply stating that they related exclusively to the transfer of our property.

Q. With whom did you conduct these negotiations for the sale of your property?—A. Almost exclusively with Judge Moore, of Chicago, and his copartner in the formation of the scheme or project, Mr. Wheeler, of Chicago.

Q. Were the contracts made for cash prices?—A. They were made for cash, with the option of taking stock in the new company.

Q. If you exercised the option of taking stock, on what terms was stock to be taken as compared with the cash prices?—A. They gave an amount of stock known as preferred stock representing the cash consideration that was offered you, and as a bonus they gave you the same amount of what is known as common stock.

BUILDING A NEW PLANT.

Q. Have you since the selling out of your former plant to the American Tin Plate Company started a new plant?—A. I have, sir.

Q. You are engaged in active business now in opposition to them?—A. I am engaged in the active work of building.

Q. You have not begun manufacturing?—A. Not as yet commenced the manufacture of tin plate.

RELATIONS BETWEEN MACHINERY MAKERS AND THE AMERICAN TIN PLATE COMPANY.

Q. Have you in connection with the building of this plant found any difficulty in securing on this side of the water the necessary machinery for equipping your plant?—A. Oh, I may unequivocally say no, as far as representative machinery is concerned.

Q. You judge, then, that so far as the building of new plants in opposition to the American Tin Plate Company is concerned they have not secured a monopoly of the equipments for tin-plate mills?—A. Not an absolute monopoly; no, sir.

Q. They have secured enough of it so that it, in your judgment, is a serious hindrance to competition?—A. Yes.

Q. Is there any patented machinery used in connection with tin-plate manufacture which they control?—A. None that I know of of any value, with the exception of what is known as the pickling machine.

Q. Is there a patent on that?—A. There is on the pickling machine. At the same time there are other machines in the market that are not protected by patent which are fully equal to the machine I speak of.

Q. So that in the control of that patent they really are not seriously hampering any competitor in manufacturing?—A. No, sir.

Q. You said that you think they do control so many of the manufacturers of tin-plate machinery that it is a serious obstacle?—A. Yes.

Q. Will you explain a little more fully?—A. Yes. In the first place, the representative founders and machinists whose business it is to build machines and equipment for tin-plate mills have been formed, at the instigation of the American Tin Plate Company, into a compact. That compact prevents any outsider or any independent concern from securing machinery from those parties. There are 13 parties in that compact.¹ There are 2 outside of that compact, or were 2 a short time ago; 1 in Philadelphia, the Philadelphia Roll and Machine Company, and a firm that struggled for a manufacturing existence for some years and was very little patronized, known as the West Penn Foundry and Machine Company, at Avonmore. I have good reason for believing that the Avonmore Foundry and Machine Company is dominated by the American Tin Plate Company. Within the last 2 or 3 weeks there has been put into operation a concern outside of the compact to manufacture exclusively the equipment that you speak of. In securing the mill machinery, the rolls that you speak of, I secured services from the Avonmore Foundry and Machine Company. That was a weak and struggling concern, and I presume, in the beginning, the American Tin Plate Company thought that it would be of little value to take them into the compact; consequently they built me the mills. They signed with me an agreement that they would furnish me with all materials or rolls for a period of 5 years. I sent to them—a month ago—a specification for 2 additional mills. They did not make any satisfactory response to my solicitation. Two weeks after I sent the specification for these mills a gentleman by the name of Mr. Banfield, one of the American Tin Plate officials, called to see me in the city of Pittsburgh. Failing to see me, he conferred with a friend of mine, and told him that I had sent a solicitation to the mills I have spoken of, and that very recently he had put in considerable money, and they had increased the capital stock, and, being an American Tin Plate official, he thought that it would be eminently improper to build the mills for an independent concern; consequently he would refuse the order.

Q. Although you have a written contract?—A. Although I have a written contract.

Q. What position does Mr. Banfield hold in the American Tin Plate Company?—A. He is what is commonly known as manager; that is, he supervises a district or superintends a number of mills within a certain territory.

Q. (By Mr. FARQUHAR.) Has the Avonmore concern refused to carry out the second order?—A. Through Mr. Banfield; yes.

Q. (By Mr. JENKS.) Has he a controlling interest in the Avonmore concern?—A. He gave us to understand that he had.

Q. You think, then, that, so far as the manufacture of tin-plate machinery is concerned, all of the leading establishments, with one exception, are controlled by the American Tin Plate Company?—A. Yes; and of course this exception that I speak of is an unknown quantity, never having built any mills. The principal stockholders were formerly connected with what is known as the Mesta Foundry and Machine Company. They consolidated prior to the existence of the trust with the Robinson and Rea Machine Company, of Pittsburgh, representative builders of rolling-mill machinery; and some of the stockholders of said company formed themselves into another company, which is now known as the Canton Roll and Machine Company.

Q. Do you know whether the American Tin Plate Company has any further control over these manufacturers of machinery beyond a contract to take their entire output for a period of years?—A. Oh, I think the manner in which you put it is

¹ See Mr. Graham, p. 852; Mr. Wheeler, p. 864; Mr. Reid, p. 875.

² Compare testimony of Mr. Graham, p. 852; Mr. Reid, p. 875.

rather misleading, or the manner in which they may have put it is misleading; that is, to take their entire output.

ON WHAT TERMS SHEET MILLS CAN BUY MACHINERY.

Q. Have you any knowledge of the nature of the contract?—A. To disprove any such condition as that I might cite the situation of the sheet mills, whose business is in a measure kindred to the tin-plate industry. They manufacture what is known as regular orthodox sheet iron in long lengths. There is no sheet manufacturer to-day that is able to get rolls or sheet-mill machinery without signing a contract with these foundries and machinists agreeing that those rolls and that machinery shall not be used for manufacturing sheet iron for tin-plate uses for a period of 2 years.¹ Now, my knowledge comes directly from the self-same foundries and the machinists.

Q. Those who have been trying to get such machinery?—A. No; from the builders of this machinery and from the builders that are not in this compact that we speak of.

Q. (By Mr. FARQUHAR.) Have you had any positive refusal from these manufacturers?—A. Yes.

Q. In writing?—A. No, sir.

Q. Verbally?—A. Verbally; yes.

Q. How do you stand now in respect to the furnishing of your own machinery independent of your second order?—A. Well, there is a combination, as I said before; but the Canton Roll and Machine Company have our orders for any machinery we may require in the manufacture of tin plate.

Q. Is their plant ample enough to supply all the independent owners of tin-plate mills?—A. That would depend very largely upon the extent of new firms coming into the business.

Q. Have you any knowledge yourself of new firms coming into the business?—A. None, sir; only by common rumor recently in regard to what is called the National Tin Plate Company of Virginia. I am well acquainted with Senator Whittaker, of Wheeling, whose name has been prominently associated with the new project, and I think the rumor, to a great extent, is baseless. It may not be altogether idle, but nothing has positively matured.

Q. (By Mr. JENKS.) Have you any documentary evidence of any kind at all in the form of letters from the Tin Plate Company or in the form of copies of contracts of the Tin Plate Company with those manufacturers of machinery of whom you have spoken?—A. No, sir.

Q. You have simply the refusal?—A. The verbal refusal.

Q. The verbal refusal of those men themselves, and the reason they gave?—A. Yes; in the first place soon after I dissolved my association with the American Tin Plate Company.

Q. You were connected with them?—A. Only in that way. There is no question in regard to the fact that I am the oldest manufacturer in the business. I was approached by several of those machinists and foundries, who tried to induce me to go into the sheet-mill business, and after that solicitation told me the conditions upon which they would build me sheet-iron machinery.

Q. On condition that you would not —?—A. On condition that I would sign a lease for a period of 2 years not to make any sheet iron for tin-plate uses whatever. If I did I would forfeit the machinery I had bought.

Q. You spoke of their saying that they would furnish you the machinery provided you would sign a lease. Can you tell us in detail what you mean by signing a lease, and who was to have an option of this lease?—A. The control, as I understood it from them, resolved itself into a lease form in which you paid two-thirds of the purchase price when the machinery was delivered; the remaining one-third was to be paid in 2 annual payments, and I suppose if at any time during the 2 years it came to their knowledge—to the knowledge of the American Tin Plate Company—that you had rolled any material that would finally appear as tin plate you would forfeit your mills. Furthermore, I understand that the lease when signed is turned over to the American Tin Plate Company.

Q. And that company then would simply take possession of these mills, as belonging to them until final payment was made?—A. That is the inference.

Q. Payment on the installment plan, the title remaining with the seller until final payment is made?—A. Yes.

HOW BLACK PLATE FOR TINNING DIFFERS FROM SHEET IRON.

Q. (By Senator KYLE.) The stipulation was that you were not to manufacture the kind of sheet iron that is rolled for tin-plate purposes. Is it a peculiar kind of sheet

¹ See Mr. Reid, p. 875.

iron?—A. Yes; there is more labor expended, and the process for making sheet iron for tin-plate uses is somewhat lengthened out, in order to give it a better finish; but the art is practically the same.

Q. There is a brand that is known as tin-plate sheet iron?—A. Well, I might state that I went into the business in the first place as a dipper, and at that time we imported our iron and we had to secure a supply from sheet mills.

Q. I want to know how you could determine where the product went? You can not tell unless you roll a special kind for tin-plate purposes.—A. You can tell in which direction it would go after it left our mill. That is, we can conjecture as to the uses to which it is applied.

Q. Throughout?—A. We might, unless someone is buying surreptitiously for the purpose of deception. We should be dull indeed if we did not know in which direction it would travel after it left us, because the gauge would determine that to a very large extent, and the finish that would be solicited would determine it to a very large extent, so it would be calculated to create a suspicion.

Q. (By Mr. JENKS.) Then, black plate that is used for tinning is different in quality and weight from sheet iron used for other ordinary purposes?—A. Yes; very largely in weight, although it is a very common thing to roll what is known as 28 gauge for general sheet-iron purposes, for stove purposes, for pans for domestic uses; and there is a brand of plate that is also largely used as represented in 28 gauge, which is known to the trade as one cross, or 1 X.

THE SHEET-MILL LEASE—ATTITUDE OF MACHINERY MAKERS.

Q. (By Mr. FARQUHAR.) How did you construe the proposition of this 2-years' lease? Is it a stepping-stone to an ultimate stoppage?—A. To a further lease?

Q. Yes.—A. I think it was; yes. The foundries and machinists that I speak of were not disposed to extend that lease over the time that is stipulated; consequently the American Tin Plate Company had to submit to that condition.

Q. In other words, there were 2 years that you could not, if you signed this lease, go into the productive industry?—A. That is, as far as tin-plate making was concerned; that is very positive. That information, as I stated before, was conveyed without any form of solicitation whatever by the parties that represented this compact.

Q. (By Senator KYLE.) And you state that you have very few letters from the American Tin Plate Company touching your contracts or anything else?—A. Oh, I have no communication whatever with the American Tin Plate Company. Have you reference to the foundries and machinists?

Q. (By Mr. JENKS.) Yes.—A. No, I have no letters whatever.

Q. (By Senator KYLE.) It seems to be the policy, then, to send an agent when they want anything done?—A. I would constantly come in contact with these gentlemen that I have been acquainted with for some years and talk with them on the subject, and no later than last Saturday I was talking with one gentleman, and he stated to me that there was a disposition on the part of many of those in that compact to furnish the independent mills with the machinery desired. The disposition was there, but they did not want to go on record as being the first ones to break through. They are not securing—that is self-evident—they are not securing anything like the amount of orders for tin-plate machinery under the trust administration that they secured under the independent administration.

DEMAND FOR MACHINERY IS LESSENED—MILLS RUN LESS STEADILY.

Q. (By Mr. JENKS.) You think, then, that if the American Tin Plate Company were not so largely in control of the business the demand for this tin plate machinery would be very much larger than it is now?—A. I made the remark that it was very much larger under the independent régime than under trust administration, and as a matter of fact the mills of the American Tin Plate Company are not running as much as they were when represented by the independent mill owners.

Q. It simply is a fact that there were more orders for machinery of this kind 2 years ago than there are now?—A. By reason of the fact that they ran much steadier.

PLATE NOT MADE UNDER JOBBERS' BRANDS UNLESS THE BRANDS ARE ASSIGNED.

Q. When the American Tin Plate Company bought the individual plants that were afterwards organized into this one company, what arrangements were made with reference to the individual brands by the different manufacturers, or by the large jobbers?—A. There was nothing stated in regard to brands that were owned by large jobbers, inasmuch as individual mills have no manner of control over them. As to the brands that were owned directly by the mills, they were to go over to the

American Tin Plate Company. There were very few brands owned by individual mills. The mills, prior to absorption, very cheerfully and graciously made all brands that were solicited; brands that were owned by individual jobbers.

Q. What attitude has the American Tin Plate Company taken in reference to brands owned by individual jobbers?—A. Their attitude is a very formidable and a very aggressive one.

Q. Tell us what it is.—A. Notwithstanding the statement made to the contrary,¹ they are even to-day enforcing the condition that if they make those brands, those brands have got to be assigned to the American Tin Plate Company; otherwise they will not make them. They promulgated in the first place a memorandum to the trade in which they stated in very positive terms that as a condition of making those particular brands that were under individual ownership, or protected by patent or copyright, those brands must be turned over—assigned to the American Tin Plate Company; and in case the American Tin Plate Company became defunct, or went out of existence, they would revert back to the original owners. But if it should appear to their sales agent that the jobbers were having those brands of plate made by any independent concerns, or buying any form or manner of tin plate outside, no matter of what grade, they would consider that sufficient justification for claiming the brand. Now, they have modified their contract to some extent; but the idea, that is, the coercive or arbitrary idea, is incorporated there. I can read you a copy of a recent contract, or that part relating to the assignment of the brands, and their claims upon the brand if it should appear to them that their conditions stipulated in the contract had not been complied with.

Q. Have you a legal form of assignment?—A. I have a legal form of their assignment; their copy.

Q. Can you file that with us?—A. I can let you read it.

Q. Perhaps you may read that to us, omitting any special names.—A. There are no names mentioned in this. This is my own copy. I can read this to you; it will not injure the interests of anyone.

Q. We will take a copy of that and return the original to you.—A. There is one where the trade-marks have not been registered, and here is one—they are identically the same—in cases where trade-marks have been registered in the Patent Office.

Know all men by these presents, that _____, of the city of _____, in the State of _____, party of the first part, for and in consideration of the sum of one dollar (\$1.00) and of other valuable considerations this day paid and delivered to said party of the first part by American Tin Plate Company, a corporation organized under the laws of the State of New Jersey, whose principal business office is located in the city of Chicago, county of Cook, and State of Illinois, party of the second part, does hereby assign, transfer, and set over unto the said party of the second part the exclusive right to use, place, and stamp upon tin plates and terneplates the following brands or trade-marks which have heretofore been used by the said party of the first part as brands or trade-marks; that is to say, _____.

And said party of the first part covenants and agrees to and with said party of the second part to save harmless and indemnify said party of the second part from all actions, suits, payments, costs, damages, expenses, and liability whatsoever which may come to the said party of the second part, or occur, by reason of the use by said party of the second part of said brands or trade-marks upon tin plates or terneplates, which may be at any time manufactured by said party of the second part.

Witness the hand and seal of the said party of the first part on this the _____ day of _____, A. D. 1899.

Signed, sealed, and delivered in presence of— _____ [SEAL.]

Know all men by these presents, that _____, of the city of _____, in the State of _____, party of the first part, for and in consideration of the sum of one dollar (\$1.00) and of other valuable considerations this day paid and delivered to said party of the first part by American Tin Plate Company, a corporation organized under the laws of the State of New Jersey, whose principal business office is located in the city of Chicago, county of Cook, and State of Illinois, party of the second part, does hereby assign, transfer, and set over unto the said party of the second part the exclusive right to use, place, and stamp upon tin plates and terneplates the following brands or trade-marks, which have heretofore been used by the said party of the first part, as brands or trade-marks, and which said brands or trade-marks have heretofore been registered in the office of the Commissioner of Patents of the United States of America, as shown by certificates of registration bearing the numbers _____; that is to say, _____.

And the said party of the first part hereby covenants and agrees to and with the said party of the second part to save harmless and indemnify said party of the second part from all actions, suits, payments, costs, damages, expenses, and liability whatsoever which may come to the said party of the second part, or occur, by reason of the use by said party of the second part of said brands or trade-marks upon tin plates or terneplates which may at any time be manufactured by said party of the second part.

Witness the hand and seal of the said party of the first part on this the ____ day of ____, A. D. 1899.

[SEAL.]

Signed, sealed, and delivered in presence of—

This agreement, made this ____ day of ____ A. D. 1899, between American Tin Plate Company, a corporation of the State of New Jersey, party of the first part, and ____, of ____, in the State of ____, party of the second part, witnessed as follows:

1. First party agrees to manufacture for, and to sell and deliver to, second party, in the regular course of business of first party, and subject to its general rules and regulations, now in force or hereafter to be made, as respects price, time, manner and place of delivery, and time and manner of payment, and at the current and regular market prices prevailing from time to time, such quantities of tin and terne plates as second party may require and need in the business of second party during the life of this agreement, provided second party shall at all times comply with all provisions hereof to be performed by second party, all of said tin plates and terne plates if required by said second party to be branded with such one of the appropriate trade marks or brands heretofore assigned by second party to first party as second party may designate to first party in writing.

2. Second party shall pay to first party for all tin and terne plates which may be ordered by second party, and pursuant to such order tendered by first party to second party in accordance herewith, at the current and regular market prices prevailing at the time of ordering the same, such payments to be made upon the usual terms of credit and discount for cash governing the business of first party at times of delivery, but no order for goods shall be given by second party, which, as to the time of delivery, shall extend beyond the time for which first party may be, at the time of receipt of any such orders, quoting or giving to the trade prices of the kind of goods embraced by such order.

3. First party shall not have the right, except as is herein otherwise provided, to use any of said trade-marks or brands so assigned it by second party, except upon goods to be manufactured for, and upon the order of, second party, but if the second party shall refuse to accept any goods ordered by second party and accordingly manufactured by first party in accordance herewith, then first party shall have the right to sell such goods in the market without removing therefrom any trade-mark or brand placed thereon.

4. First party shall not be required to manufacture for or deliver to second party any goods under this agreement if, at the time any goods may be ordered hereunder, or may be required to be delivered hereunder, first party shall have reasonable cause to believe second party is or will be unable to pay for such goods at the time when payment therefor would become due.

5. All goods properly ordered hereunder shall, subject to the other provisions hereof which are applicable, be delivered by first party within a reasonable time, such reasonable time to be estimated in all cases with reference to the conditions affecting the manufacturing business of first party, and the demands of the market for tin and terne plates, and the ability or inability of first party, from any cause or causes whatsoever, including strikes, scarcity of materials used in manufacturing or otherwise, to make delivery.

6. First party agrees that it will not at any time increase the price of any goods ordered by second party pursuant to this agreement, above the current and regular market prices of like goods, because of the brand or trade-mark which may be placed upon any goods ordered under this agreement, or for any other cause whatever.

7. In case second party shall at any time during the life of this agreement, order, purchase, or receive any tin or terne plates marked with any one of the trade-marks or brands hereinabove mentioned, or other private brand, except from the first party, the latter being at the time in no default in the performance of this agreement, then first party shall have the right to terminate this agreement, and said trade-marks and brands so assigned to it shall be and become its absolute property; but if first party shall not be able to meet the legitimate needs of second party for tin or terne plates, then second party shall have the right to purchase from others than first party such tin or terne plates as second party may legitimately require in excess of the amount which first party may be able to furnish.

8. In the event first party shall be dissolved or cease doing business, or make a general assignment for the benefit of creditors, or this agreement shall be terminated for just cause by second party, or shall be kept during its life by second party, then said trade-marks or brands shall revert to second party absolutely.

9. If first party shall fear that any one or more of said trade-marks or brands can not be lawfully used by it, or if any suit shall be brought affecting its right to use the same, then first party may, at its election, be excused from manufacturing or delivering any goods bearing such trade-mark or brand, and, in any event, second party shall indemnify first party from all damages, expenses, and costs arising from the use of any of said trade-marks or brands.

10. This agreement shall be in force from the day of the date hereof down to the first (1st) day of January, A. D. 1915.

In witness whereof the parties hereto have caused their respective names and seals to be hereunder written and affixed on the day and year first above written.

Attest:

By

Secretary.

Q. (By Mr. JENKS.) Now, you say that you know that some of these contracts have been made lately?—A. I know positively that they have refused to manufacture tin plate under jobber's brands, simply because the jobber would not assign his brand to them.

Q. How long since such refusal was made?—A. It is being conducted almost every week.

Q. You say you know positively. You have, of course, some specific instances in mind?—A. Yes.

Q. Now, can you give us the date or nearly the date of some of these specific instances you have in mind?—A. I should not like to mention the dates, by reason of the fact that it might be a clew for the American Tin Plate Company to discover who the particular jobber was. By reason of the fact that they virtually hold absolute sway, they might make it very disastrous for that particular jobber. Here is a letter to a jobber—

Q. Just one moment further. Perhaps you can name a date since which this has been done?—A. Since the 1st of October.

Q. That is sufficient. You know this has been done since the 1st of October?—A. Yes. Here is a letter:

"GENTLEMEN: Your 2 favors of ——— and ———, with reference to the stamping of brands of plates on orders [I am not giving the number of the orders], were duly received and noted. As you have not agreed to our conditions governing private brands, we assume that you wish to have these stamped under the mill brand, and have instructed the mill accordingly, which we trust will be satisfactory."

Now, then, those plates would not be accepted under the mill brand by the architect that has specified these plates. The sale of those special grades of plates is largely dominated by the architect who has charge of the building. He would nominate, for instance, "Taylor's Old Style," that plate and no other, or "Merchants' Old Style," or "John Hamilton's Best Re-dip." Those brands are represented by special nomenclature, giving them the titles.

Q. This letter you have read is also one of comparatively recent date?—A. Yes.

WITNESS'S PLANT PAID FOR IN STOCK.

Q. (By Senator KYLE.) In your contract by which you turned over your property to the American Tin Plate Company you said you received a certain amount of cash and a certain amount of preferred and common stock?—A. That was optional with the company, yes; they could secure part cash or part stock, at their pleasure.

Q. And you did receive part cash and part preferred stock?—A. What, the company I was identified with?

Q. Yes.—A. We received all our holdings in stock.

Q. (By Mr. JENKS.) You preferred to take that instead of cash?—A. Yes.

Q. (By Senator KYLE.) What exception was made for the minority stockholders, of which you appear to be one?—A. Possibly I was the largest single stockholder. No, sir; there was no exception made; they all concurred in their desire to take stock instead of cash.

Q. (By Mr. JENKS.) Do I understand that it was left optional with each individual stockholder to take his choice of stock or cash?—A. Yes.

NO OTHER CONDITIONS IMPOSED ON JOBBERS; BUT NONE ARE NEEDED.

Q. Do you know whether the American Tin Plate Company keeps any special control over the jobbers to whom it sells in reference to the purchase of their entire stock from that company?—A. None outside of the enforcement in regard to brands.

Q. Further than that you think they leave it entirely optional with the jobber to buy from them or any other person?—A. Oh, yes; there is no option on the part of the jobber; they are the only parties able to supply his wants at the present time, with the exception of a mill that recently commenced to manufacture at Avonmore, Pa.

Q. Do I understand from your statement that the American Tin Plate Company has at the present time absolutely no competition excepting from this one mill?—A. That is the only one manufacturing outside. Mr. Graham stated yesterday before the National Hardware Association that convened in Pittsburg, "We govern conditions." His statement presupposes that they are in absolute sway.

AMERICAN TIN PLATE COMPANY CONTROLS BLACK PLATE—THE SUPPLY OF STEEL.

Q. Does the American Tin Plate Company, in your judgment, aside from the control of machinery control the black plate?—A. Yes; just as they control tin plate.

Q. By that do you mean that they manufacture all of the black plate?—A. Yes.

Q. It would be impossible, then, at the present time for any dippers to do business without their special consent; they would have to buy black plate from them?—A. That is the condition; yes.

Q. And any independent manufacturer of tin plate would have to be the manufacturer of his own black plate?—A. Yes.

Q. Do you know whether it would be possible for a manufacturer of black plate to buy his raw material, or do they control that also?—A. To a very great extent they control the raw material.

Q. Can you tell to what extent?—A. Yes. Of course you gentlemen understand the pressure of demand for all iron and steel commodities at the present time. I think there is a possibility of the Carnegie Company administering in the future to independent concerns, but not at the present time. They are virtually tied up this year, I know, by an obligation to the American Tin Plate Company.

Q. (By Mr. FARQUHAR.) A contract or understanding?—A. A contract—no, sir. Jones & Laughlins, of Pittsburg, are in a position to make in part the tin-plate bars from which we roll our tin plate, and there are 3 or 4 others that manufacture billets. I came in contact with the president of the new mills recently started—the Avonmore mills—a few days ago, and they put down a bar mill, which is something unusual for a tin-plate plant, to reduce billets into the form of bars. He told me that up to the present time they had no trouble in securing billets from Jones & Laughlins.

Q. (By Mr. JENKS.) You spoke of a contract between the American Tin Plate Company and the Carnegie establishment?—A. That is only hearsay. I understand they made a contract with them for 1 year for a very, very large tonnage of bars, to the exclusion of anyone else—that is, during that year.

Q. Do you think the contract provided explicitly that it was to be to the exclusion of others, or only that they were to give a very large order?—A. They have finished this contract. I think the Carnegie Company administered it to the letter that they were to administer to no one else's wants. I know, within 7 or 8 months, I myself approached the Carnegie Company with an order for bars, but could not get any.

Q. You say you know that because you tried it?—A. Yes.

Q. (By Mr. CLARKE.) Now, let me understand what the reason of that is. Because of the great demand for iron and steel, or because they are full of orders ahead, or because they had signed a contract whereby they stipulated they would not furnish to outsiders?—A. No; possibly there was no stipulation of that kind. I would not wish to go on record in regard to that matter. What I have learned has been altogether from hearsay. I know it for a fact that they placed a very large contract for bars with them for the purpose of exclusion, because other mills—when I say other mills, I have reference to the National Steel Company—very recently administered to their wants in that particular direction—the Carnegie only administered sparsely.

Q. (By Mr. JENKS.) Do you understand that the National Steel Company sold its entire output of tin-plate bars to the Tin Plate Company?—A. No; I do not understand it in that way. As far as tin-plate bars are concerned, I think possibly they do. The National Steel Company manufacture what are known as sheet bars, which are somewhat different in weight and length, but practically the same as the Tin Plate Company now use. The National Steel Company now administers to the sheet mills, and have always since they have been in existence, either in consolidated form or individual form.

AMERICAN TIN PLATE COMPANY IS KILLING OFF THE DIPPERS.

Q. Can you explain somewhat further the situation with reference to dippers?—A. The dippers at the present time certainly are in the shadow of the American Tin

Plate Company's displeasure; they are not encouraging them to continue in business; in fact, they are doing all they possibly can to discourage them.

Q. In what ways?—A. I know of two or three firms that have been closed up at the instigation of the American Tin Plate Company, one notably that I was associated with some years ago. As soon as their contracts for black plate were finished, contracts that were placed prior to the existence of the American Tin Plate Company, they told them that they could not furnish any more black plates. Not being desirous to get out of business, they thought they would resolve themselves into jobbers. The American Tin Plate Company positively refused to supply them with the finished tin plate to sell to dealers until they surrendered their dipping business to the American Tin Plate Company. It forced them to take a certain sum of money for what machinery they had, machinery that represents the dipping business. And as soon as the company got possession of the machinery it supplied them with the finished tin plate to sell to the dealers. That condition exists generally. Of course, if it were absolutely essential, proof of that statement could be secured.¹

Q. You say that you know of two or three cases where dippers were compelled to sell their dipping machinery to the American Tin Plate Company before the American Tin Plate Company would sell them the finished plate. Is that question a matter of record? Can that be shown by the contract of sale?—A. What? The circumstances that I speak of?

Q. Yes.—A. Oh, yes; I presume it can. I presume it can, unless they took the precaution of conferring directly with them. I do not think so, because they have not cloaked or mantled all their operations in regard to such matters.

Q. You are not in a position now to furnish a copy of such a contract?—A. No; not at the present time.

Q. Do you think you could undertake to do so?—A. Oh, I think so. I might have to obligate myself in a measure to administer to their wants. The American Tin Plate Company would certainly resent any such disclosure on the part of the parties that you speak of, and they would naturally hesitate, I presume, about giving you the information. Take, for instance, the parties that I speak of; they have gone into the jobbing business; that is, supplying the small trade and dealers.

Q. But you said you thought there were a number of such cases?—A. Yes; I should say the large majority. There were, all told, I believe, at one time 20 dippers in the business.

Q. And more than one half of them have gone out of business, having sold their dipping plants to the American Tin Plate Company?—A. Yes; or else they are making plates in a way that they do not want to disclose to the American Tin Plate Company. For instance, dippers generally redip. By redipping they make a superior grade of plate. Redipping means, of course, dipping what has been dipped before. In the redipping process they contribute very largely to the amount of coating on that plate; and by reason of contributing a larger amount of coating the supposition is that greater endurance is given to that plate for any purpose. The special brand makes a difference in the quality of that kind. I know of some instances where the dippers are buying in carload lots, from larger jobbers, plates that have a very thin coating, and then they redip them and make out of them a particular brand that they have been manufacturing for some years. They can not secure those plates through the American Tin Plate Company for that purpose.

Q. Nor can they secure the black plates?—A. Nor can they secure the black plates. The dippers are very loath to leave that business until every avenue is closed against them; and that is one of the means that they have been employing lately—buying common tin plate from large jobbers and adding by the redipping process a larger amount of coating to those plates and getting an additional price, something in proportion to the cost of coating.

Q. Do you know whether the American Tin Plate Company has in any of these later instances that you have spoken of agreed to furnish black plate or this cheaper grade of tin plate, provided these men would sell out their dipping plants or enter into any special agreement with the Tin Plate Company about the selling of their tin plate, or do they simply give the excuse that they have sold their entire output and have nothing to furnish?—A. I know the oldest dipper in the United States. His contract is worked out. Being an aged dipper—of course they are courteous gentlemen and they have some little respect for age—when he went to Chicago to visit them they very politely told him that, of course, they would fill his orders for black plate when they had any black plate to sell. They have never had any black plate to sell, and his needs have been most urgent. He wrote to them in regard to getting a form of plate that I spoke of—the plate that was thinly coated—in order that he might fill his orders for his particular brands, and they wrote back to him telling him that it was not the disposition of the American Tin Plate Company to encourage dippers in anything.

¹ See Mr. Graham, pp. 849, 850, 863; Mr. Greer, p. 928.

REFUSAL TO SELL TO DIPPERS IS ARBITRARY.

Q. (By Mr. CLARKE.) Why does not that condition of things afford a good opportunity for somebody to erect a mill for the production of black plate?—A. I think that very largely up to the present time people have been intimidated by reason of the arbitrary measures that they have adopted, and, as Mr. Graham said, their absolute control of conditions.

Q. How can they absolutely control conditions in this great country?—A. I do not think they can.

Q. (By Mr. FARQUHAR.) It takes time to build a plant and bring it up?—A. They have a full, good opportunity now.

Q. (By Mr. CLARKE.) To be sure they have a little temporary advantage. It takes a little time to build a mill. Why does not somebody build a mill?—A. Doubtless they will in the future when conditions relax a little. As I remarked before, you gentlemen are very well acquainted with the pressure of the demand for all iron and steel commodities.

Q. May not that pressure of demand have influenced the American Tin Plate Company somewhat in declining orders for black plates?—A. No; emphatically no.

Q. Could they have supplied black plates for the dippers?—A. Oh, without a question of a doubt.

Q. Do you know that their own needs———A. (Interrupting.) Yes.

Q. Did not call for all their black plates that they had or could furnish?—A. Well, I would draw my inference from present conditions. They have approximately 272 mills; at the present time there are 80 of those mills closed down.

Q. (By Senator KYLE.) Eighty, did you say?—A. Yes; fully 80—possibly more.

ARBITRARY MEASURES TO SUPPRESS COMPETITION.

Q. (By Mr. CLARKE.) You are erecting black plate mills in connection with your new plant?—A. Yes; I am erecting a steel plant to make my own billets so as to be in independent form, manufacturing black plate, and putting up an auxiliary tinning house.

Q. You know of no condition in the laws of this country that prevents you from doing that?—A. No; or else I certainly would not have done so. I do not think there is any moral obligation on my part to remain out of the business. I am not a native of this country. I have been here since I was a boy, and tin-plate making is certainly my birthright, my birthgift. I know no other business; have always been associated with it. When I was not making tin plate, I was tin plating articles that were made out of sheet iron.

Q. Then do you know what can be done in the way of public legislation to improve your condition or opportunity in that respect?—A. No; I am assisting you gentlemen to diagnose the case. If there is any disease there, why you are the ones to suggest a cure.

Q. If the law gives you all the rights you need, then the question is whether we have anything to recommend?—A. Well, there is no question but they have been most tyrannical in their measures. The fundamental idea with them has been at all times to keep competition away from them; and, as I have stated here, they have resorted to the most arbitrary measures to do that. I do not believe that they would hesitate at anything, as long as they could avoid the displeasure of the law, to keep out independent concerns. I cited that case at Avonmore. They have simply put in about \$50,000 to keep other people besides myself from getting plate machinery.

Q. (By Mr. JENKS.) You stated a little while ago that you thought it possible that you could furnish some documentary proof of some of the statements that you have been making with reference to the attitude of the company toward the dippers and others. We should be glad if you could do that.—A. If that statement of mine went on record it would be impossible, almost impossible, for me to furnish that proof.

Q. I was going to say that if you could furnish proof of that kind, it is, of course, unnecessary that any names should be put in it. We should simply like to have information of that kind well authenticated as to relating to the dippers.—A. Well, I will make an attempt in that direction.

MAKING 20 PER CENT OR MORE BEFORE CONSOLIDATION.

Q. What has been the course of prices for the last few years?—A. The tendency of prices, ever since the industry was protected, has been downward until since the American Tin Plate Company took charge of tin-plate making. Last year, the year 1898, we saw the lowest prices in tin plate in the history of the business; that is, in this country.

Q. Were the prices at that time so low, owing to the severe competition, that in your judgment it was essential that a combination of this kind be formed in order to prevent widespread bankruptcy on the part of the manufacturers?—A. Not under careful management. Our books are open for inspection by anyone. The books relating to our own mill will disclose 20 per cent profit on our investment for 4 months of last year.

Q. Until the time you sold out?—A. Until the time we sold out.

Q. You were making 20 per cent?—A. Yes; possibly exceeding 20 per cent.

Q. (By Mr. FARQUHAR.) The prices were lower than at any time in the history of this country?—A. Yes.

Q. (By Mr. JENKS.) Where is your plant located?—A. Washington, Pa.

GOOD EFFECTS OF NO LICENSE.

Q. Do you think the location of Washington, Pa., is especially favorable?—A. Yes; as favorable at the time as any other location. We secure cheap fuel. Transportation service is all right. It is peculiarly fitted in one respect. You have got a good class of workmen there by reason of the fact that we have no licensed places in the town. The rolling mill men as a usual thing are addicted to the use of intoxicants. You see our men work 3 turns a day. Each turn represents 8 hours; they generally get through in 7½, and as it is in different portions of the day, men going to and from their work in licensed towns have an opportunity to gratify their taste for intoxicants and generally gratify them; and, of course, then you know why your men are not there to render service on the particular turn that they should work on. In that particular respect it is beneficial for that particular industry at that point.

Q. (By Senator KYLE.) In other words, as regards fuel, transportation rates, etc., you are no more favored than Pittsburg or some other western town?—A. No more favored, no. Pittsburg rates prevail there east and west.

FAILURE OF ILL-MANAGED CONCERNS IS BETTER THAN A TRUST; BUT NONE HAD FAILED.

Q. (By Mr. JENKS.) You think, though, that if you could make 20 per cent on the prices that ruled last year, any other well-managed establishment, fairly situated, might easily have made sufficient to pay dividends at any rate?—A. Yes.

Q. So that in your judgment there was no pressure of competition resulting in such low prices than it was really essential to make a combination in order to prevent bankruptcy?—A. I have no doubt that some mills were not making any money, were simply struggling for existence, by reason of improper management. It is a business that presents infinite details. I knew of no business that presents more details, and every detail has to be carefully watched and attended to in order to make a success and a profit.

Q. In your judgment would it be for the advantage of the country as a whole that establishments so managed should go out of business rather than that there should be a combination to save them?—A. Well, of course, it was a source of distress for those that were struggling for a manufacturing existence to struggle under that.

Q. I am speaking of the welfare of the country.—A. And it was a grand relief that something turned up or discovered itself to relieve that distress.

Q. I was asking you a general question with reference to the welfare of the country as a whole. Take your time. Do you think that on the whole it is more advantageous for the country as a whole that ill-managed establishments should fail rather than that they should be taken into a combination to save them from failure?—A. Yes; I would say positively yes.

Q. You think, then, that the failure of such establishments in the tin-plate industry as would have failed had this combination never been formed, would not have injured the country as a whole?—A. No; that is, the evils resulting from such a condition would not be of the same magnitude as the evils that have arisen under trust domination.

Q. What proportion or what percentage, in your judgment, of the tin-plate establishments of the country were in such a situation as that?—A. Oh, I do not think—I could not point to any one in that situation, I could not. There was never a failure amongst any of them.

Q. None at all?—A. No.¹

GNASHING OF TEETH WHEN PROFITS DROP FROM 100 PER CENT TO 20.

Q. You simply say that while you think there were some such, you have no special definite idea?—A. No; of course, there was much wailing and gnashing of teeth,

¹ See Mr. Graham, p. 865; Mr. Reid, pp. 866, 867; Mr. Moore, p. 965.

but that I think was occasioned very largely by the fact that we commenced to sell a box of tin plate—a box of tin plate is represented as 14 by 20, 100 pounds base—there is 100 pounds of plate in that particular box.

Q. You mean the plate in that box?—A. Yes; and I have sold as a manufacturer and as a dipper of that plate, directly before the McKinley bill was in force, at \$5.75 in carload lots. Now, that was the maximum price that that common grade of plate reached. Then it gradually began to go down until it reached the low price of \$2.60. Now, just consider the distance, the differential, between \$5.75 and \$2.60. Who would not wail and gnash his teeth at a condition that would so soon resolve itself in that form?

Q. (By Senator KYLE.) Between what dates?—A. Between 1891—in a period of 6 years.

Q. (By Mr. JENKS.) At this price of \$2.60 you were still making a profit of 20 per cent on your investment?—A. Yes.

Q. (By Mr. FARQUHAR.) What was your profit at \$5.75?—A. Almost 100 per cent.

Q. (By Mr. JENKS.) Then you mean to say that for the first 4 years after you went into business you made about 100 per cent a year?—A. On our investment.

Q. You doubled your money every year for a time?—A. For 2 or 3 years it was possible to do that; but, of course, as I said, it declined from \$5.75 until it reached the low level of \$2.60.

Q. (By Senator KYLE.) And you were making 20 per cent then?—A. We made 20 per cent last year. I speak now as president of the concern that I was associated with.

Q. (By Mr. JENKS.) You say, then, that from the time you went into the tin-plate business in this country until you sold out to the American Tin Plate Company you never made less than 20 per cent, and before the McKinley bill you made more than that for some years?—A. Yes.

Q. (By Mr. FARQUHAR.) How many times do you turn your capital over?—A. Four or five or six times.

Q. How many times during a twelvemonth according to your methods?—A. We had 4 mills. We would turn it over three times at the low prices I spoke of. We would do approximately a business of \$350,000 a year on a capitalization of \$115,000.¹

BEGINNINGS OF THE BUSINESS.

Q. (By Mr. CLARKE.) Where were you engaged in the tin-plate business prior to 1891?—A. In Pittsburg.

Q. How long had you been in it there?—A. I commenced to manufacture special grades of roofing plate in 1888, and have always been engaged in tin plating—that is, during the major part of my existence—in Pittsburg. You understand what I mean by tin plating?

Q. Yes.—A. Coating iron with tin.

Q. How large an establishment did you then have?—A. We commenced with simply 1 bath, turning out only 50 boxes a day.

Q. That you call a small business?—A. To-day, yes; that was a small business, yes.

Q. There was practically very little tin plate manufactured in this country?—A. None at all at that time. You understand that we did not manufacture it from the beginning to the end. We secured black plate, which we imported, and, as I remarked before, we secured black plate from the sheet mills.

Q. You manufactured roofing plate almost exclusively?—A. Exclusively. We manufactured no black plate. I might state that the plate that I speak of that we secured from sheet mills would hardly be of the quality or kind that you could make bright tin plate or coke plate, or charcoal bright plate from—only roofing plates.

Q. Was there a good profit in the business?—A. At that particular time?

Q. Yes.—A. Yes; we made money from the very beginning.

Q. Why did not a larger number of people go into it if it was so profitable?—A. Well, it was a new venture. Now, understand me, we only made a special grade of plate, a special brand. For instance, at that particular time you are talking about—the ordinary grade of roofing plate has almost invariably been sold in 20 by 28 size—the common plate was sold at \$8.75, while we were selling to the dealers the plate that I speak of that we manufactured at \$15.50 a box. It was not possible at that time to manufacture the common grade of plate.

INTERFERENCES BY THE TRUST CAN PERHAPS BE NEUTRALIZED.

Q. Now, you know of no conditions to prevent anybody from going into the manufacture of either tin or terne plates and making money in the business if they manage the business carefully and well?—A. No present conditions, no. I think the

¹ See affidavit of Mr. Greer.

interference that the trust has placed in the way of anyone desirous of going into the business with the requisite business knowledge can be neutralized.

Q. You regard the conditions and restraints that they attempt to place upon their customers as distinctly against the interests of trade, in limitation of trade, do you not?—A. Oh, yes.

Q. Do you consider them as violations of existing laws?—A. I must confess to very little knowledge on that subject, but from what I have read and from what I have studied I would say yes.

Q. Have you taken counsel on the subject to know whether you had any right to protect yourself against any such restrictions?—A. No; no, I never deemed it essential to go that far. I thought possibly I might prove superior to the interference that I spoke of.

t

INDEPENDENT CONCERNS CAN MAKE TIN PLATE CHEAPER THAN THE COMBINATION CAN.

Q. (By Mr. A. L. HARRIS.) If the American Tin Plate Company should become well established in business, what will be the opportunities for small concerns to go in and do a profitable business?—A. I may be overpresuming in answering that question, but I think really that independent concerns can make the tin plate cheaper and administer the economies in the business much better than the American Tin Plate Company under its present organization and administration.

Q. What I desired to get at was this: Would there be any danger of the American Tin Plate Company, with its large amount of capital, freezing the small men out?—A. That is, by underselling them?

Q. Yes; by underselling them.—A. Well, I intended to answer that question in the remarks that I made, that I thought the independent concern could possibly economize to a greater extent, that concern being directly under the owner's eye, than the American Tin Plate Company. I have not the least hesitancy in saying that it is costing them more to-day to manufacture tin plate under their present operations and administration than it was under individual ownership, because the man that owned the plant—he was directly on the ground, and if he had practical knowledge of the business he was cudgeling his brain all the time in the direction of his own interest.¹

Q. (By Senator KYLE.) That does not correspond with the testimony that has been given in regard to the silver-plate companies and these others. All of these gentlemen testified that there was a saving in the organization by having one president and one set of officers.—A. Well, I know that is a controverted case.

RUNNING LESS REGULARLY THAN UNDER THE OLD MANAGEMENT.

Q. (By Mr. JENKS.) Is the plant that you formerly owned being run now by the American Tin Plate Company?—A. Is it in operation?

Q. Yes.—A. No.

Q. They have closed the one that you sold?—A. Yes; they were running up to a few days ago; they had run for 7 days. Prior to the 7 days they were closed down for 3 weeks. They have not worked the men one-fourth of their time since the 1st of June; a condition that never existed under the former management.

Q. Under the former management?—A. Yes; or conditions.

PAY ROLL INCREASED—COST OF SUPERINTENDENCE NOT APPRECIABLY DIMINISHED.

Q. Do you know about the cost of the superintendence of the plants under the management of the American Tin Plate Company as compared with what it was before?—A. I know their pay roll has been much larger.

Q. That is, the pay roll for the average workmen or the pay roll for the officers?—A. No; I mean the pay roll as far as the labor representation is concerned directly at the mills. I know the pay roll was larger before the advance was granted to the tin-plate workers, which was granted last July.²

Q. How about the pay roll of the superintendents? You, for example, being president of the company, had others associated with you—other officers of the company. You had your salaries. Do you know whether the men who, under the management of the American Tin Plate Company, took your places received as much as you were receiving?—A. No; there has been a change made in that respect. For instance, I had my superintendent there—superintendent of the mills; I had my superintendent of the tinning department. They are getting practically the same salary—they are getting identically the same salary that I paid them. My salary, of course, has been lopped off—cut off clean. That has been taken of course by what is known as the district manager. And in his particular bailiwick he might have 7 or 8 mills.

¹ See Mr. Graham, pp. 855, 857.

² See Mr. Reid, pp. 876, 877.

Q. So that you think that the American Tin Plate Company has not saved very much in the salaries of its superintendents of these different plants?—A. No; by reason of the change of management and the results of that change.

Q. (By Mr. FARQUHAR.) You gave testimony a short time ago as to the infinite details in this tin-plating business. Is it not a fact that a good many of your officers—officers with nominal titles in your organization—were all operating managers; that is, they held not fancy titles simply, but in your own mills and other mills, those that were called president and vice-president and superintendents were men who were really at the head of your various subdivisions—in practical control and care of the mill proper?—A. Oh, yes; they had practical knowledge of the business, and were the best men we could get put in; that is quite correct.

Mr. FARQUHAR. That answers the question. It is the change of the business; it is not the title itself. The business is totally different from almost any other.

The WITNESS. Yes.

THE OWNER'S EYE ESPECIALLY NEEDED IN TIN-PLATE MAKING.

Q. (By Mr. RATCHFORD.) I would like to ask if the witness can give any reasons showing wherein the conditions in the tin-plate industry differ materially from the conditions in any other industry as regards the cost of production? If there be a saving in the tin industry by individual ownership, why does the same not apply to others, so far as you know?—A. Well, the difference would only be marked in that statement that I made before—that I know of no industry that has so many details associated with it; and you have got to take care of all the details to get a good general result. Neglect of one of the most minute details might depreciate the value of your plate when it is finished 25 or 50 per cent, or might render it almost altogether worthless.

Q. Is it to be assumed that men who are officers of the combination and who are paid salaries are not as careful in looking after details as was the original owner of the plant?—A. The district manager is supposed to supervise, superintend, and direct the manufacturing. Now, his district, as I said before, possibly will number 5 or 6 different mills or works, representing possibly 20 or 30 mills. It is simply impossible in a business involving so many details for one man, making his appearance once a week, even though he is a practical fellow and possesses a world of information on that subject, to get good results.

Q. Has not that general manager superintendents over the men, and under the superintendents foremen over every department?—A. Yes.

Q. Who are supposed to look after it?—A. Who are supposed to look after it. But when there is no one to look after your superintendent daily, why look out for results.¹

COMPARISON OF RESULTS AS A SUBSTITUTE FOR THE OWNER'S EYE.

Q. (By Mr. JENKS.) Do you know whether the American Tin Plate Company requires reports daily in detail from each one of its superintendents as to methods of manufacture, cost of manufacturing, and all of the important details?—A. As to the details of the business, yes.

Q. So that one mill can be checked up against the other, and in that way they can bring pressure to bear upon the managers sometimes that is practically fully as great as could be brought to bear where there is an active manager in person.—A. That is their policy; not daily reports—that would hardly be possible—but weekly or triweekly reports.

Q. In your judgment that system of competition brought about by daily reports to one central officer, with the possibility of a man losing his position if his report does not show as favorable results as do the others, is not as efficient as the former system?—A. It is not as efficient, although that, of course, is an incentive on the part of the superintendent to exercise himself to the extent of his ability if he wishes to maintain his position.

EFFECT OF WEAK COMPETITORS UPON AN INDUSTRY.

Q. You spoke of the fact that you had no doubt that there were, before the formation of the tin-plate company, some establishments at any rate that were making but very little money, or were perhaps losing money.—Oh, I should not like to say that they were losing money. I think that possibly the weak ones financially were almost all making money—were all making money.²

Q. At the same time some were making very little money?—A. I think probably that was the case.

¹ See Mr. Taylor, pp. 941, 942.

² See Mr. Graham, p. 855; Mr. Reid, pp. 866, 867, 882; Mr. Moore, p. 965; Mr. Taylor, p. 941.

Q. The question in mind is this: What is the general effect upon any industry of having several of the competing establishments in such a position that they are making no money or are even losing money? What is likely to be the effect of such a condition upon those who are making money? Is there any more danger of their cutting prices unduly, any danger of their becoming more dangerous competitors than the stronger establishments?—A. I do not thoroughly understand your question. Kindly put it in a little plainer form, please.

Q. It is often said among railroads that the most dangerous competitor is the bankrupt road, because it has to get business anyway and will take business at lower rates than the railroad will that is paying dividends. In your judgment does the same thing hold in general business? When an establishment is about on its last legs is it likely to be the one that will cut the most severely in order to get rid of its stock and get a little cash in hand?—A. Well, they energize themselves to a condition of desperation; that is, it inspires them to a greater extent—their distresses and their almost bankrupt condition—to exert themselves so as to work out their salvation if possible. That is a spur and incentive that is not with the prosperous concern.

Q. (By Mr. FARQUHAR.) The question that was asked, as understood here, was this: Is a weak or semisolvent concern in the tin-plate trade dangerous to the whole trade?—A. The great danger in that condition would be the tendency on the part of that weak concern, I suppose, if business was dull, to cut prices in order to get orders.

Q. Then what makes—what is the next cut they make after prices?—A. Well, they cut their own throat.

Q. (By Mr. FARQUHAR.) How about wages?—A. Of course, that is inseparably associated.

Q. (By Mr. RATCHFORD.) Is the weaker concern more likely to cut prices and wages than the stronger concern?—A. There is more of a necessity for them to do so.

GOOD WORK OF THE AMALGAMATED ASSOCIATION.

Q. (By Mr. FARQUHAR.) So that the legitimate, true, and proper outcome is that both the manufacturers and wage-earners have got to carry the weak concerns?—A. Yes; although that condition could not exist in the tin-plate business—never has existed—because the labor representation has been dominated by a very strong organization.

Q. And an organization in harmony with you manufacturers?—A. Always. Only at our annual meetings—

Q. (Interrupting.) You said the failure came to both the manufacturers and the workmen?—A. Our interests were inseparably associated.

PRICES DECLINED BECAUSE PROFITS WERE VERY LARGE.

Q. (By Mr. A. L. HARRIS.) Do I understand you to say that the reduction of rates from \$5.75 when you began to \$2.60 last year was caused by cutting, or was it rather a gradual reduction?—A. No; I think it was the result of there being a very large profit in the business, and not a proper business representation upon the part of the men that had the mills, who would place orders a year ahead in their anxiety to know that the future was provided for to some extent.

COMBINATION NOT A NECESSITY.

Q. (By Mr. FARQUHAR.) Now, one plain question. As far as you know, was there any necessity in the tin-plate trade for the formation, in December, 1898, of a combine, association, or trust, called the American Tin Plate Company?—A. No; it had not reached that extent yet.

Q. Competition had not reached a position to drive them to protect themselves against each other in any way?—A. No.

Q. Nor the profits in the markets had not done it?—A. No.

Q. And the great demand that came also in 1898 for iron and steel was still a great incentive for them to stay off and not incorporate?—A. Of course, the price of materials went up amazingly when this demand came, and our prices certainly would have to sympathize with the price of material.

Q. To your mind there never was the necessity, either in the strength of competition nor in the extension of markets, to bring forward a combination of this kind in the trade?—A. No; not a positive, pronounced necessity.

PURPOSE OF THE COMBINATION.

Q. (By Senator KYLE.) When these promoters visited you first, in the interest of the American Tin Plate Company, did they express anything to you as to the avowed

purpose of the formation of this company or trust? What was the object of the trust?—A. Oh, yes; they gave us to understand that if the trust was formed of course it would hold absolute sway.

Q. And the purpose was, then, to crush competition entirely and to raise the price of tin plate?—A. Of course, they would not say it in as strong phraseology, but they would say it in another way.

Q. That was indicated to you as the purpose of the organization?—A. Oh, yes; that was indicated. You take my copartners; they were as strong as myself. There was an indisposition on my part, and there was an apprehension on their part that we could not manufacture after the American Tin Plate Company took hold of the business.

Q. They did not represent this to you on the ground of economy?—A. Oh, no.

Q. You pretty nearly knew that you could manufacture tin plate cheaper than the combination could?—A. No; they gave me every assurance that I could realize a larger salary than I ever realized when I was in the business.

PRICE OF TIN PLATE HAS RISEN MORE THAN COST OF MANUFACTURE.

Q. Now, as regards the prices, you were getting a specific price; I think it was \$2.60?—A. At the time we abandoned our business.

Q. What time was the trust formed?—A. It was consummated in the early part of December, 1898.

Q. Since then the price of tin plate per box has materially advanced?—A. Yes; from \$2.60 up to \$4.65.

Q. In the meantime the raw material has advanced very considerably?—A. Very considerably.

Q. What percentage do you say is the increase in raw material?—A. Fully 100 per cent; that is, in tin-plate bars.

Q. And wages have increased?—A. Fully 15 per cent, skilled labor; 10 per cent, common; and the price of tin plate has advanced.

Q. About how much?—A. Well, it has advanced about 82 per cent.

Q. Eighty-two per cent?—A. Yes.

Q. (By Mr. JENKS.) Do you think on the whole that the prices of raw material and wages have been increased proportionately to the increase in the price of the product?—A. The increase in price has been more than proportionate to the cost of making tin plate.¹

DETAILS OF COST.

If you wish positive data in that respect I can give them to you. I have reference to my own plant. I formulate prices on that basis.

Q. To what extent in your judgment have the tin-plate company been able to realize their hopes and expectations?—A. Well, this is only private opinion. I think they have been woefully disappointed.

In 1898, when we sold our plant to the American Tin Plate Company, the price of coke plates was \$2.60 a box, 14 by 20, 100-pound base. That is the base on which we formulate all our prices, 100 pounds, 14 by 20. The cost of making that plate to us was \$2.40 a box; we were getting \$2.60. Now, the American Tin Plate, of course, would take exceptions to that statement. We have what is known as wasters, that is, imperfect plates, which we sold at that time for 25 cents a box less. Subtract the difference of 25 cents from \$2.60, and that would make \$2.35 the selling price, and the cost \$2.40. And on those common grades of plates we averaged about 5 per cent of wasters. So you see that we were gleaming a profit on the common grade of plate which cost us \$2.40 and we were selling at \$2.60. Of course, we made the higher grades of plate; we made these special brands for jobbers that commanded a higher premium or profit than the common plates. That was when we paid \$17.50 for bars. Now, bars, as I remarked before, I could not buy to-day, if I could buy them at all, I could not buy possibly for less than \$40 a ton. I do not mean to say that the American Tin Plate Company is buying bars at \$40 a ton. It was our practice to make our contracts for tin-plate bars for six months. They may possibly make them for a year. I think their president, Mr. Reid, stated that by reason of buying in large quantities they bought much cheaper. They may possibly be paying \$30 for their bars per ton. Thirty-dollar bars, with the increase in the general cost of manufacturing, representing the advance that has been given the men and the great advance that has been made in tin that represents the coating upon the black iron, should make tin plate cost \$3.54 a box, which they are selling for \$4.65 a box. Of course, I might say that it is only conjectural on my part as to what they are paying for bars. I did buy some bars a short time ago, 1,000 tons, for \$36 a ton. Now, I know that I can make coke plates, the common grade of coke plates, with \$36 bars and 32-cent tin—tin is not 32 cents to-day; it has declined to 26—for \$3.84.²

¹ See Mr. Graham, pp. 853, 859; Mr. Reid, p. 874.

² See Mr. Greer, pp. 923, 924.

Q. (By Mr. JENKS.) What did you say the market price is?—A. \$4.65. Is that all the information that you desire?

Q. I think that covers it.—A. Now, I do not say that the American Tin Plate Company could do it. Of course they would say they could not. I formulate these prices from the standpoint of my own experience, added to the advances that have been made on all the constituents that enter into the manufacture of tin plate.

MANUFACTURERS WOULD HAVE STOPPED THE FALL OF PRICES.

Q. (By Mr. RATCHFORD.) I understand you to say that there was really no necessity for a combination in the tin industry?—A. No absolute necessity; no.

Q. The fact that prices have declined so largely, from upward of \$5 a box to \$2.60 per box, within a few years prior to the organization of the combine, would not that indicate that there was a necessity? And, furthermore, the fact that prices have advanced from \$2.60 to upward of \$4 since the organization, would not that tend to prove that the organization, or the combination as it is called, at least has accomplished its purpose to preserve prices and enable itself to maintain wages?—A. Well, they have accomplished their purpose as far as the advance of prices is concerned. There is no question but the American Tin Plate Trust, as long as they govern conditions, will place prices to the full limit.

Q. How about wages?—A. They granted a 15 per cent advance to their skilled workmen; 20 per cent was asked.¹ They were in such a position that they could not afford to get away from granting that advance.

Q. If prices had continued to decline, is it your opinion that they would inevitably have had to fall back on their workmen and reduce their wages?—A. Yes; oh, yes.

Q. There is no doubt about that part of it?—A. No.

Q. (By Senator KYLE.) Do you think the price would have declined even had this trust never been formed?—A. No; I think it had reached its limit.

Q. Reached its level?—A. Yes; because there would have been a concerted action on the part of the manufacturers if this thing had not discovered itself, if this trust had not developed. We had been trying to do that thing, to arrange some method by which we could maintain prices, for 2 years prior to this. It does not make any difference how much profit you were making in the beginning, of course; your eyes always looked longingly to the largest amount you did make in the business, and the further you get away from that the greater the longing on your part to get back as nearly as possible to the original condition. That is only human nature.

NO MANUFACTURER WOULD ADMIT THAT HE WAS LOSING MONEY.

Q. (By Mr. RATCHFORD.) At that limit of \$2.60 a box, you state that the manufacturers were making a fair, reasonable profit?—A. I stated that we were making 20 per cent during the last 9 months of our manufacturing existence. There was no manufacturer that would admit that he was losing money. Some have told me that they made over 25 per cent last year. Of course, they may have made very largely special grades. There was not that cut in special grades of plate. For instance, when I first commenced to manufacture tin plate in the orthodox way—that is, manufacturing from the bars—we sold a high grade of tin plate for \$9.50; that is, a special brand; and we were selling at \$9.50 when we went out of the business. There was not that decline in special brands of plate. To even up the small margin on those ordinary grades, the grades that represented the largest amount of tin plate that was made, we generally covered ourselves, more than covered ourselves, in the special grades that we made.

PRICES FELL 50 PER CENT; PROFITS, 80; WAGES, 20.

Q. (By Senator KYLE.) During this time of the fall of tin plate from \$5.75 to \$2.60, a fall of over 50 per cent as regards your finished product, what was your fall in wages paid to employees?—A. I can not speak authoritatively, but as far as my recollection will serve me I should say 20 per cent.

Q. It did not decline in the same ratio, then, as the cost?—A. No.

Q. (By Mr. JENKS.) There had been also a decided decrease in the cost of your material during that time?—A. Oh, yes. At that time you could buy tin-plate bars for \$25 a ton. The lowest price we bought tin-plate bars for was \$17.50, during the year you speak of. Some might have made a better bargain and bought them for \$16.50.

Q. The highest price you said was \$25?—A. During the time you speak of, I think it possible that bars could have been bought at that time for \$25 a ton.

Q. (By Mr. RATCHFORD.) They are \$36 now?—A. That is what I bought them for,

¹ See Mr. Graham, p. 853.

but possibly you could not get them now for \$36. The market price for billets is \$36, and there is generally \$2 difference between the billet and the bar.

Q. (By Senator KYLE.) You were making 100 per cent in the first instance, then?—A. Yes.

And at the last, 20 per cent profit?—A. Yes.

A fall of 80 per cent as regards your profit?—A. Of course; every year we continued in the business our knowledge was expanding and growing.

Q. Your wages had decreased 20 per cent?—A. 20 per cent; yes.

UNEASINESS AND APPREHENSION OF THE WORKMEN.

Q. (By Mr. JENKS.) You say that since the American Tin Plate Company has been formed they have advanced wages some 15 per cent or 10 per cent for different grades. Are the workmen on the whole, do you think, pleased with the American Tin Plate Company? Do they consider it, on the whole, for their advantage that this tin plate company has been organized?—A. At the present time?

Q. At the present time?—A. No; I think that the workmen generally are standing on the ragged edge of desperate thought and feeling. No; a spirit of uneasiness and apprehension has taken possession of the workmen.

Q. (By Mr. JENKS.) What reason have you for thinking so?—A. I come in frequent contact with them, by reason of the mills I am building. The highest skill in the tin plate mills is exercised by what are known as the rollers. There are 816 rollers for the 272 mills that I speak of.

Q. That are in the American Tin Plate Company?—A. Yes. I had application for a small plant that I am building from 150 rollers out of the 816. By the way, I met a representative laborer in the tin-plate industry a few days ago. He is a man that is looked up to by reason of somewhat superior intelligence, and he sways the thought and sentiment to a very great extent of the men he comes in contact with; that is, of the men that are represented in that industry. I asked him for an expression as far as he was concerned, and as far as the men he comes in contact with in Pittsburg were concerned. Yesterday afternoon he placed this in my hands. Now, I can not give his name, by reason of the fact that he would not remain in the employ of the American Tin Plate Company long if they knew he had written this. If you gentlemen desire me to read this and you think you can spare the time, I will do it.

Q. Yes; we shall be glad to have you. You spoke of this man as being an influential man among the laborers and you do not wish to give his name. Does he have any official position in their unions?—A. He has invariably been selected one of the committeemen.

Q. That is sufficient.

A WORKMAN'S VIEW.

The witness (reading):

"PITTSBURG, November 14, 1899.

"MR. W. H. GRIFFITHS:

"In reply to your request for the views of the tin-plate workers in general in regards to the Tin Plate Trust, otherwise called the American Tin Plate Company, I have to reply that I can not claim to be familiar with the views of all the tin workers throughout the country, but I can give you an accurate expression of the views held by my fellow-workmen of the city of Pittsburg; and, as we number over 1,000 in this city, we may perhaps be considered as fairly representative of the whole.

"When the various independent concerns first consolidated, workmen regarded the movement with a great deal of uneasiness. Trusts have acquired a bad name from the workman's point of view. The concentration of so much capital into the hands of one dictatorial management naturally gives it power to drive a hard bargain and often an unfair one with labor.

"It can not, however, be stated with justice that the American Tin Plate Company made any radical changes on its acquisition of the independent mills. The same wages were paid and the same rules and regulations as heretofore existed were continued. The various labor unions that represented its employees were recognized, and the contracts that existed between employer and employee in general observed. This amicable state of affairs continued throughout the brisk season, and the early fears of the tin workers were in a great measure allayed.

MORE IDLENESS THAN EVER BEFORE.

"Since the commencement of the dull season, however, the tin workers have much to complain of. The coming winter will see more tin-plate workmen idle than ever occurred before in the past since the starting of the industry in this country. The dull season in the tin-plate trade sets in in the late fall and generally lasts through

the winter months. The present year it came earlier than usual and will in all probability last longer. When the trade was in the hands of independent firms large quantities of ware were manufactured into stock against future calls or sold at very small profits to large buyers, who stocked it in their own warehouses against the brisk season; thus the workmen were given employment throughout the slack winter months. But the trust, having complete control of the trade, will neither incur the cost of storage on its own premises nor abate its ironclad prices so that the buyers may lay up a stock for future trade.

"The consequences are, a large number of mills have to be shut down. In the past, before the trust absorbed all the mills, even when orders were exceptionally scarce, and many mills would be running less than full time in all parts of the country, yet each manufacturer would strive to obtain his share of the demand; consequently the work would be more equally distributed among all the mills, and therefore the hard times were never felt by the workmen as they are likely to be felt this year. Never before in the history of the trade have two large plants like the Pittsburgh mills been known to close down entirely for want of orders in the same town, thus throwing out over 1,000 work people during the severe winter months, while another plant owned by same company is running its full capacity and actually turning out more work than it is entitled to according to the agreement between employers and employed last July at Chicago.¹ Of course, this is one of the economies of the trust, but the workers may well exclaim with the frogs in the fable, who on being tormented by some thoughtless boys, cried out 'What is only play to you means death to us.' In like manner the workers can cry out to the trust, 'What is only economy to you is starvation to us.'

MILLS KEPT RUNNING WHERE THE AMALGAMATED ASSOCIATION AGREEMENT DOES NOT APPLY, OR IS VIOLATED.

"To the tin-plate workers there appears much more in this system of economizing than is apparent to the general public. There is a most unjust discrimination in the selection of the mills that are shut down. When our representatives met those of the American Tin Plate Company in conference at Chicago last July an agreement was drawn up between the parties of which I select two clauses. (1) That the union representing the tin-plate workers should not interfere with the plant operating at Monessen, in the Pittsburgh district, where a lower rate of wages was paid than settled for other mills. (2) That no mill should turn out more work than the quantity agreed upon between the 2 parties to the agreement at Chicago. The mill at Monessen is running regularly because a lower rate of wages is paid there, while the Pittsburgh mills are kept idle. Other mills also near Pittsburgh (the New Castle mills) are running to their full capacity, owing to the fact that the American Tin Plate Company gets a larger output daily in those mills than contracted for at the Chicago conference.¹ This latter is in direct violation of the agreement. So that one set of workmen is given more work than the agreement between employer and employees allows them, while another set is left without any work at all. There is, however, more in it than the over-glutting of one and the starving of another crew of workmen. A larger output from a mill means increased profit for the manufacturer, just as a lower rate of wages means it. The only fair inference therefore that can be drawn from the foregoing facts is that the reason that the Monessen and New Castle mills are kept running to their full capacity while those of Pittsburgh are closed down owing to the fact that labor does not cost so much at Monessen and New Castle as it does at the Pittsburgh mills.¹ Ostensibly we are idle through want of orders, but as a matter of fact we are locked out because we will not work at a lower rate of wages, as do the men of Monessen, nor turn out a larger output, as do the men of New Castle. The managers of the New Castle mills might say that they do not compel their workmen to violate the limit-of-work rule. It is not necessary that they should compel them. They reward them by keeping them working when their fellow-workmen of the other mills in the same district are shut down. The best proof that the above is the true explanation of the shutting down of the Pittsburgh mills, is the answer that the general manager of the American Tin Plate Company gave to a deputation from the Cumberland, Md., mills, which are also idle, on being petitioned to restart the latter mill.

"He replied, 'If you can in any way give the company a concession of 10 cents per box, which is the amount that is required to put you on an equality with New Castle, your mill will be restarted.'"

Q. That was not in respect to wages?—A. As I saw in the papers, it was in regard to transportation; but that was an absurd statement to make, by reason of the fact

¹ See Mr. Greer, p. 924.

that the New Castle mills are 200 miles farther from the East than the Cumberland mills.

Witness (resuming reading). "Yet all these mills that are now closed down used to compete successfully with those now working when operated by independent firms.

REDUCTION OF WAGES INTENDED?

"But we are persuaded that the trust has much more than present economies in view. Observant workmen perceive in this method of distributing the work a much deeper meaning than present economy.

"The trust, through its officials, calls it one of the exigencies of the state of the trade. The workmen see in it a farsighted policy that is being carried out systematically with consummate skill, the key to which is the utterance of President Reid, of the company, a few days ago at Washington, D. C., to the effect that a reduction of wages would in all probability be demanded next July.¹

"The policy that is now being followed by the American Tin Plate Company is to make the resistance on the part of the workmen to such a demand as feeble as possible. The means adopted to attain this end may be briefly stated as follows:

"(1) Shutting out, through the winter months, of a large number of their most important workmen; (2) keeping at work regularly those whom they have always found pliant and subservient; (3) doubling up in those mills that are in operation, putting two men at one job, promoting the younger workmen, thus insuring a plentifully stocked market of skilled labor in case a labor dispute might occur. With these conditions brought about, the trust thinks it can safely venture on demanding the reduction of which we have had ample warning recently. That a few thousand workmen must be kept idle during the severe winter season in order to carry out the plan will not, it appears, prevent the trust in carrying out its policy. We have no legal right to demand our share of the work, and moral right ceased to exist with the advent of trusts. We had thought that the consolidation of all the mills under one control would be helpful to both employers and employees; but we have been effectually cured of that delusion. If the American Tin Plate Company can not practice its economies without the wholesale shutting down of mills, and throwing hundreds of its employees out of employment, if it can not pay dividends on its enormous issued stock without causing so much human suffering, then we say that the trust is more of a curse than a blessing.

"These are the exact views of the idle tin workers of our two Pittsburg plants. We have discussed the matter thoroughly these last few weeks, having ample time on our hands to do so."

Of course that is a workman's view. Of course his thoughts and feelings are governed by conditions that are staring him in the face.

Q. (By Mr. RATCHFORD). In substance, do you accept the truthfulness of that statement?—A. Well, you understand I am a manufacturer and have been for some years. Yes. In substance, I rather think there is a great deal of truth in the statement he makes.

CAN THE WORKMEN HELP THEMSELVES?

Q. Now, let me ask you this: The complaint that is made by the writer of that paper is against the treatment received by the workmen in Pittsburg as compared with those in New Castle. Could that complaint not be obviated or removed by a closer organization of these men—if these men in Newcastle were organized and co-operated with those in Pittsburg, as the members of the Amalgamated Association do in other places—they would not work cheaper in New Castle than Pittsburg, and they would not work longer hours and would not produce cheaper material?—A. Yes. Let me state to you that the workmen in the New Castle mill and the workmen in Pittsburg mills are all Amalgamated Association men. There is only one exception referred to, the Monessen mills. No; they are not violating any agreement of the Amalgamated Association.² That is a condition; if this condition still continues, that is a question which they will doubtless consider at their next national annual meeting. It was an industry that gave very steady work to the men, while, as I remarked before, there are fully 80 mills closed down at the present time.

MEANING OF "MILL."—80 IDLE OUT OF 272.

Q. (By Mr. JENKS). Eighty of the smallest mills?—A. The Pittsburg mills are not small mills.

¹ Compare the testimony of Mr. Reid, p. 869, bottom.

² Compare the workman's letter, p. 905.

Q. (By Mr. A. L. HARRIS.) What do you mean by a mill; do you mean a plant?—A. No; a works or firm might have 4 mills; there might be 2 mills owned by a firm; that was the smallest number under one management. There were 4 mills, 6 mills, 8 mills, 10 mills, 12 mills, 20 mills, and recently a 30-mill plant built at Newcastle.

Q. (By Mr. JENKS.) What is the total number of mills owned by the American Tin Plate Company?—A. 272, about, counting some sheet mills they bought.

Q. Of that number about 80 are now shut down?—A. About 80.

Q. At what time did the Pittsburg mill close?—A. Three or 4 weeks ago.

Q. (By Mr. CLARKE.) Were 2 plants closed down or 2 mills?—A. Two plants controlling 22 mills.

THE ONLY HELP FOR THE WORKMEN IS IN STICKING TOGETHER.

Q. (By Mr. RATCHFORD.) I was going to refer to another statement of the paper read. The writer claims that the agreement originated in Chicago is not being carried out?—A. Yes.

Q. And in another case he states, referring to these workmen at Monessen, that they are pliable, and that the independent members of the trade are locked out?—A. Well, he simply hints at a condition; that they are keeping the pliable men there; of course he is looking at it from a workman's standpoint.

Q. That is systematically carried out by the trust in order to accomplish certain ends next year?—A. Yes.

Q. If these men to whom he refers are pliable, and will do the bidding of their employer, will they not do so as well under independent management as under trusts?—A. Well, when distress and hunger visit them, I do not think they would.

Q. You do not think they would?—A. No, sir. Now, I shall have to beg your pardon. I am not here as a representative of labor, and I am not here to talk on the labor question.

Q. The point I want to make is this, that if these men work concertedly with each other in organization (we understand, generally, that they have such an organization, and a very good one)—if they work concertedly with each other, and maintain their prices, scales, and agreement, it would be impossible for the tin-plate trust to bring about these conditions?—A. Yes; I acknowledge all that, sir.

Q. And that, if they did not work in such concerted form, such a condition might be brought about by independent manufacturers?—A. Yes; I admit all that. Of course in a general gathering of that kind that is represented by such large numbers you will always find some weak ones.

CONDITIONS AT MONESSEN.

Q. (By Mr. CLARKE.) Let me ask if there is any particular difference in the cost of living at Monessen and at Pittsburg?—A. No, sir. I should say that the cost of living possibly would be a little higher in Monessen than in Pittsburg; we generally find it so in small towns.

Q. (By Mr. FARQUHAR.) The difference would be in rents?—A. Difference in rents, yes; and then other commodities that you buy, store goods, and so forth. If you will permit me to use the term generally—much higher—oh, yes; a great deal higher in a country place, in small towns, than large places.

Q. (By Mr. JENKS.) Do the men in the plant at Monessen belong to this same association?—A. No, sir. Now, I have very little knowledge of the matter. There was some special method of making black plate, introduced in the Monessen mills, before the trust took hold, and I understand that the trust wanted to experiment with this for 1 year, and the form of labor that was represented in those particular mills did not come within the circle of the Amalgamated Association.¹

Q. (By Mr. FARQUHAR.) They do not come within the scale at all?—A. Yes. Now, that was the idea of that, and I understand the American Tin Plate Company were very obstinate in their demands so far as the Monessen plant was concerned.

UNION LABOR AND STRIKES.

Q. (By Mr. RATCHFORD.) What is the history of the trade as regards strikes? Are strikes very frequent or less frequent under the new combination than they were formerly? Have you had any trade strikes?—A. Oh, yes; there have been several nominal strikes, but not in the mills proper; that is, not in the department that rolls the black plate. There have been two or three strikes in the tin-house

¹ Compare Mr. Graham, p. 861; Mr. Reid, p. 876; Mr. Greer, p. 924.

department. That has been the result of the fact that the tin house, or the labor in the tin house, has resolved itself into an organization, which it never did before the trust came into existence—

Q. Have these strikes taken place under the trust?—A. Yes. They might have taken place, you know, under individual administration, if they had been organized.

Q. But practically you had few strikes or none at all prior to the organization of the combination?—A. I only remember one strike during the existence of the business, and that extended for some 2 or 3 months.

Q. Did that take place in your establishment?—A. No, sir; that was prior to my connection with the general manufacturing of tin plates, that was when I was known to the trade as a dipper.

Q. (By Mr. CLARKE.) You think, then, that the consolidation of the mills under one control has had a tendency to cause labor to organize more effectively than before?—A. No; not as far as the mill labor is concerned, but in the tin house they may. They might possibly have organized if the trust had not become a fact. There never was an organization in that particular department until within the last 6 months, and after that they had some little trouble; but the strikes have not been of any consequence whatever. There were strikes in that particular department, but the trouble did not extend generally; it would only be at this mill, or the other mill, and the matter would be adjusted.

Q. (By Mr. CLARKE.) Is your labor organized? That is in your tinning department?—A. You mean—well, I am not employing any labor at the present time.

Q. No; but you were before?—A. No, sir; it was not organized, no. That is what I stated; there was no organization in the tinning department until within the last 6 months, and it might be due to that fact that some differences of opinion arose; but the differences were only nominal, and they were very readily adjusted. You can readily understand that a new organization would lay down certain conditions that might be a little off color from the point of view of the employers.

Q. You found no great difficulty, but, on the other hand, a convenience in dealing with the Amalgamated Association, I suppose?—A. Yes.

Q. Might that not be equally true in the tinning department?—A. Yes; I suppose the same condition would exist.

PRICES; MARKET REPORTS.

Q. (By Mr. JENKS.) When you sold out your establishment to the American Tin Plate Company you retained your own books, accounts, and so on, I suppose?—A. Yes.

Q. Would it be possible for you to furnish to the commission a list of prices based on your own experience, running back for a period of some years, say the monthly prices of the finished tin plate of standard sizes—the prices that you had to pay for tin-plate bars, and the prices you had to pay for tin?—A. Yes. Permit me to state that I only went into the manufacturing of tin plate—that is, from the bar, from the beginning—in 1896. Prior to that time I was what is known as a dipper. My compensation was very large and profits were large; consequently I was satisfied. That is the reason I did not go into the tin business earlier.

Q. You can give the prices from 2 establishments so far as you were dealing in those goods?—A. Yes; but the prices I would give you as far as the dipping business is concerned might not be of any consequence whatever.

Q. They would be tin and black plate, would they not?—A. Yes; but we made altogether special grades of plate.

Q. You can not give the general—A. No; I made no common plate; still I did make some after.

Q. You can give us the course of wages in those establishments?—A. Yes.

Q. What do you consider on the whole the best trade paper to get these facts from as to prices?—A. You get them from the Daily Metal Report that is published in New York.

Q. The American Metal Market?—A. Yes; they are absolutely correct.

Q. Do you think prices in the Iron Age would be correct?—A. Yes.

Q. (By Mr. CLARKE.) Bulletin of the American Iron and Steel Association?—A. Yes; all those papers would be correct. I never saw any variation of prices in any of those trade papers.

The commission took a recess till 2 p. m.

After recess, 2.12 p. m.

PLANT SOLD FOR 25 OR 30 PER CENT ABOVE COST.

Q. (By Mr. JENKS.) You said that for the last year that you ran your independent plant you had earned a 20 per cent dividend on the investment. I suppose that with business conditions as good as that, when you made terms to sell your plant to the American Tin Plate Company, you got a high price?—A. We got about 25 per cent or 30 per cent over and above the original cost of our plant.

Q. By the original cost of the plant you mean the cost of buildings, or simply the plant itself?—A. The plant itself, together with the machinery.

Q. And the stock you had on hand?—A. No, sir; no. That was a matter that was dealt with separately and was distinct from the purchase price.

Q. Then they offered you in cash?—A. Our stock on hand was sold at market prices which prevailed at that time, for whatever goods or stocks we had on hand. For instance, on the plate I spoke of, 100-pound plate, 14 by 20, we secured the market price that prevailed, \$2.65.

Q. For the plant itself you received between 25 and 30 per cent above the complete cost?—A. What it cost us; yes. The matter was treated in rather an indefinite manner, I believe. When that question was propounded I do not know; there has been a condition of feeling on the part of all manufacturers who were represented in the industry prior to the trust not to communicate as to what they did get. I do not know that there was any particular restraint put upon them. I know I never asked that question of another manufacturer and I do not think a manufacturer asked me the question; but there was a standard price put upon a modern tin plant. There may have been exceptions where a better price was obtained, and there may have been an exception where a less price than that stipulated was obtained; but I think the standard price generally prevailed.

THE COMBINATION'S STANDARD PRICE, \$40,000 PER MILL.

Q. Would you mind mentioning the standard price per mill?—A. No; I do not know that I am under restraint not to answer that question—\$40,000.

Q. Per mill?—A. Yes.

Q. In your judgment, is a mill a fair basis of valuation for a tin-plate plant? For example, would you say that a 10-mill plant was, speaking generally, worth just about twice as much as a 5-mill plant?—A. Yes; approximately; yes.

Q. When you so approximate, do you think it would be worth rather more than twice that much, or less?—A. That would depend very largely upon the person who was building. For instance, a 10-mill plant might be geared, to speak in mechanical parlance, and then again a 10-mill plant might be driven direct. Under these conditions where you drive direct you require more engines and more steam capacity; consequently the expense would be greater.

Q. More than double?—A. Well, it would be almost double, because I do not think it would be the proper thing to run more than 2 mills direct, where you could run 4 mills geared with the same steam power.

TARIFF PROTECTION STILL NEEDED.

Q. In your judgment has the protective tariff on tin plate been necessary for the development of the industry here?—A. Yes, positively so.

Q. Do you think that at the present time, with the industry developed as fully as it is, it is essential that the tariff rate be maintained?—A. No; I should not like to go on record as saying that the present tariff rate was absolutely essential.

Q. When the tin-plate manufacturers could make anywhere from 100 per cent to 20 per cent profit in the industry, with the tariff where it then stood, would you think it essential that the tariff be maintained at something like the rate that was put on?

The WITNESS. At the present time?

Mr. JENKS. During this period that you have mentioned, when you made from 100 per cent to 20 per cent?—A. Fully, so far as this is concerned. I do not think for one moment that if the McKinley tariff had not become a law the industry would have grown as rapidly as it has. It was certainly the McKinley tariff bill that encouraged the industry at that time, because until the McKinley tariff bill was talked of there was not a thought given in the direction of erecting tin-plate mills.

Q. You think, then, it would be fair to say that the tin-plate industry in this country is really a creation of the McKinley tariff?—A. Yes.

Q. Do you think that at the present time if the tariff were removed the industry would be destroyed?

The WITNESS. If removed altogether?

Mr. JENKS. Altogether.—A. Yes. I think I stated to you this morning that it was possible during the last year, when the prices of material were exceedingly low, to make a box of coke plates at \$2.40 that sold at the mill for \$2.60. It would cost us to lay that down in New York—well, the minimum cost would be \$2.78.

Q. At that time?—A. Yes. At the same time they could lay tin plate down in New York, and were laying it down in New York—the 100-pound coke plate, 14 by 20—at \$2.18.¹

Q. At that time?—A. Yes. That was independent, of course, of any effect that the tariff had.

Q. What was the rate of the McKinley tariff act?—A. Two and one-half cents.

Q. (By Senator KYLE.) Specific?—A. Yes.

Q. And under the present law?—A. One and one-half cents. Now, if conditions resolved themselves into the former system, we could not possibly make tin plate without some tariff assistance. I demonstrated that by conditions that prevailed last year.

THE COMBINATION BRINGS NO BENEFIT TO THE COUNTRY.

Q. (By Mr. JENKS.) You have spoken at different times of the arbitrary manner in which, in your judgment, the present tin-plate company does business. Do you think that in such a combination as has been formed there are fair opportunities for savings? Are there really advantages from combination of that kind that might be beneficial to the country?

The WITNESS. Beneficial to the country?

Q. Yes. Can you mention some advantages that you think might exist from a combination of that kind?—A. No, sir; I can not.

Q. Do you think that there is an opportunity for them at times to make a decided saving in cross freights? For example, supposing they have a tin-plate mill in Chicago and another in Pittsburg; they would, I suppose, under present circumstances, fill orders in the neighborhood of Chicago from the Chicago plant and in the neighborhood of Pittsburg from the Pittsburg plant? If they were independent concerns, would there be likely to be cross freight that would involve a good deal of extra expense paid to the railroads?—A. Yes.

Q. Can you say that when the tin-plate officials mention the savings in cross freight from their combination as a benefit to the country they are speaking reasonably?²—A. No; as a benefit to the country, no; because whatever grist they get from that source goes into their own mill.

CHARGE A FREIGHT RATE "EVEN IF THEY COULD HAUL IT FROM THESE MILLS."

Q. In the other case it would go to the railroad?—A. Yes. What I mean to say is, if an Eastern firm—for instance, a Pittsburg jobbing house—buys tin plate from a Pittsburg mill, they are going to charge them a freight rate even if they could haul it from these mills. It is the American Tin Plate Company that is getting the benefit of that condition.

Q. You think they do not divide any benefits that come from that condition with the consumer?—A. Not with the consumer; the consumer does not derive any; the jobber does not derive any.

Q. Did I understand you to say it was the custom of the American Tin Plate Company to charge a freight rate to a Pittsburg dealer, a Pittsburg jobber, when they were delivering the goods from the Pittsburg mills?—A. Yes; charge them a 10-cent freight rate. They charge a 10-cent freight rate, and the freight rate from Pittsburg to Philadelphia would be 16 cents. The jobber in Philadelphia has to pay 6 cents more than the Pittsburg jobber if the goods come from Pittsburg.

DISADVANTAGES THAT COME FROM COMBINATION.

Q. What, in your judgment, are the chief disadvantages of a combination like the American Tin Plate Company?—A. One of the disadvantages was hinted at in that communication that I read to you this morning. As far as it would affect labor, I believe I read the statement that it is a much more difficult matter to get justice, as far as wage is concerned, from a large corporate body than it would be from an independent plant. Then, again, I do not think that they can study economies generally as closely

¹ See table of prices, p. 869.

² See Mr. Graham, p. 855.

as if the firms were under independent management, where a man exercises all the skill and all the knowledge he possesses directly upon the scene of action.

Q. Do you think those the two greatest disadvantages?—A. Those are the two greatest disadvantages.

Q. Do you think of any others?—A. It establishes a bad precedent as far as the general industries of the country are concerned. If they make a success, and maintain an existence, and are able to dominate the conditions, as they seem to be at the present time, it is an encouragement for every industry to form themselves into this same body of power.

Q. And you think this domination of one power in any one field of industry tends to weaken, on the whole, the real strength of that industry?—A. It soon debars us of the liberties we prate about so much.

Q. (By Senator KYLE.) And very much discourages an individual from going into business?—A. Certainly it does.

CAN PAY DIVIDENDS AT THE EXPENSE OF CONSUMERS.

Q. (By Mr. FARQUHAR.) How is it about paying dividends on large stocks?—A. Well, I do not think they can pay them as readily as they can on small stocks, where capitalization is a legitimate one.

Q. But is it not a fact that nearly every one of these combinations has a large surplus of common stock that has been given as a bonus, offered share for share as an inducement for parties to go in for preferred stocks that are selling way down at 70; and with over capitalization, how is it possible for them to ever return any dividends to the public and their own stockholders?—A. Under the present conditions, the American Tin Plate Company can most assuredly do it, or else the management is fearfully out of joint.

Q. (By Mr. JENKS.) By keeping prices at what you consider an uncommonly and extraordinarily high level?—A. Yes.

Q. (By Mr. FARQUHAR.) It is at the expense of the consumer, then, that they can pay dividends?—A. Yes.

Q. Is it your own opinion, speaking generally, and your observation generally, that these combinations are really overcapitalized?—A. Oh, no question about it.

Q. Do you think that men who own mills in good working condition and paying a good ordinary dividend would ever go into any combination of that kind unless there was a remarkably good premium attached to the offer to them of coming into the combination?—A. No, sir; most emphatically, no.

Q. You can always speak of that from your own experience?—A. Yes.

VALUE OF PLANTS WHEN BUILT PERHAPS \$12,000,000.

Q. (By Senator KYLE.) What amount is the American Tin Plate Company capitalized for?—A. Twenty million preferred and thirty million common.

Q. Fifty million?—A. Fifty million.

Q. What is the value of the plants, taking them individually?—A. At the time they were bought?

Q. Yes.—A. I presume they could have been built for \$12,000,000. They can not be built for that to-day.

Q. At the time they were gathered into this aggregation?—A. Yes; at that time, I should say, \$12,000,000.

Q. Twelve million dollars, good will and all?¹—A. Yes.

Q. (By Mr. JENKS.) What did you say the basis per mill was?—A. About \$40,000.

Q. How many mills went into the combination?—A. Two hundred and seventy-two.

Q. (By Senator KYLE.) This \$40,000 includes good will and everything?—A. The \$40,000 includes good will of the mills, property, and everything in these mills pertaining to the manufacture of tin plate.

\$10,000,000 TO THE PROMOTERS.

Q. (By Mr. A. L. HARRIS.) Do you know how much the promoters were to get?—A. Yes; \$10,000,000 of common stock.

Q. (By Mr. JENKS.) Was that stated to the persons who were asked to sell out to them?—A. Yes.

Q. It was an agreement—perfectly open matter?—A. Yes.

¹ See Mr. Reid, p. 884.

Q. You received that information from Mr. Moore himself?—A. No, sir; I read it in the general form of agreement.¹

Q. That was included in the written agreement, was it?—A. Yes. That written agreement was presented to each manufacturer to read.

Q. And you stated that the promoters were to receive \$10,000,000? They were to pay the expenses of organization out of that?—A. Well, I can not say positively whether that was the case. I have been led to draw that conclusion from statements that have been made since that time.

DESPITE HIGH PRICES, \$20,000,000 TO \$25,000,000 WOULD BUILD THE PLANTS TO-DAY.

Q. (By Senator KYLE.) It was represented to you that they could be made to pay a very good dividend on this whole amount under the reorganization?—A. Oh, yes; I was cognizant of that fact myself, being a manufacturer. That is, with the high prices that were prevailing at the time we sold out. Of course, I knew that was the fundamental idea in the character of the project.

Q. (By Mr. JENKS.) You said that at the time you sold out, the property could probably have been duplicated for about twelve million?—A. Yes.

Q. About what would you say it would cost to duplicate them now? You are in the building business. You know what the increase has been.—A. Well, I might be able to put down a mill probably 20 per cent less than a competitor would, having extensive knowledge of the business.

Q. Speaking of your own particular plants?—A. Well, take your machinery and buildings and power service, and it has increased almost 100 per cent.

Q. Well, would you suppose that in the neighborhood of \$20,000,000 or \$25,000,000 would build those plants to-day?—A. Yes.

Q. Not over \$25,000,000?—A. Not over \$25,000,000. I might cite you a few facts and you can draw your own conclusions. For instance, I contracted for building one building in particular, in March, for the sum of \$5,850. I sent in a specification for an identical building six weeks ago, and they asked me \$9,000. For instance, I bought a 30 by 60 Corliss engine for \$7,200. That included a feed-water heater. For a 28 by 60, less in size, they asked me to-day \$10,850. Of course, you gentlemen are fully aware of the conditions of the times; we all expect—

\$40,000 A MILL A FAIR VALUE TO-DAY.

Q. What would you say would be a fair basis per mill for valuation now if you are going to put down mill plants?—A. Oh, I think I could put them up at \$40,000 a mill.²

Q. To-day?—A. Yes.

Q. So you think this basis of calculation that was agreed upon was at that day a very high basis of calculation?—A. Yes, but not to-day.

Q. How many mills are you putting up?—A. We have assembled now 3 mills. We are building for 4 more.

TARIFF NOT THE FATHER OF THE TRUST.

Q. (By Mr. CLARKE.) You have stated that the establishment of the tin-plate industry in this country is due to the McKinley tariff?—A. Yes.

Q. Do you think that, except in that sense, the tariff is the father of the tin-plate trust?

The WITNESS. Of the present trust?

Mr. CLARKE. Yes.—A. Well, it just follows the natural flow of circumstances. It has a relationship, of course, from the statement I made in the morning. Of course, if we had remained as independent plants, it would have been the father of our business on the lines I spoke of. I am not prepared to state, gentlemen, that you would not have seen any tin-plate mills at the present time, but I do know that that was the fountain from which all these streams have flowed. Possibly, in a year or so after the period that I spoke of, somebody might have been able and brave enough to build a tin-plate mill and show conclusively that it was possible to operate tin-plate mills here with a profit.

Q. But, granting that the establishment of the tin industry in this country is due to the tariff, is the tariff the father of the trust in any other sense than that?—A. No, sir; I do not think so.

¹ Compare testimony of Mr. Reid, p. 866; Mr. Moore, p. 960.

² The American Tin Plate Company has 272 mills. See Mr. Griffiths, p. 907.

Q. Would you have ventured to establish your business then or build the mills which you are building now without a protective tariff?—A. I do not think I would have done so, unless I had had an example before me.

DISADVANTAGES OF COMBINATION MAY BE MADE UP FOR BY SAVING CROSS FREIGHTS AND SUPPRESSING COMPETITION.

Q. (By Mr. RATCHFORD.) I want to recur to the excess of cost of production, which you referred to some time ago, of the American Tin Plate Company as compared with the individual manufacturers. Are we to understand that the independent manufacturer has to that extent an advantage over the American Tin Plate Company, or is that excess of cost accounted for in any other way?—A. The excess of cost is accounted for by the fact that all materials represented in tin-plate making have advanced in price.

Q. Is the price not increased alike to the American Tin Plate Company and to the independent manufacturer?—A. To a certain extent. I think I ventured the remark that I really did not know what they were paying. They may be paying very close to the market price, and they may be paying \$10 below the market price per ton for tin-plate bars. The most expensive constituents that enter into the make-up of tin-plate are the tin-plate bars, the labor, and then comes the tinning, or coating, which is very small compared with the other costs. For instance, block tin a week ago was 32 cents a pound; to-day it is 26 cents a pound. That would make a difference on a box of tin plate of 15 cents, which would mean a profit on the normal amount of plate that is turned out per year of \$1,500,000. So that, while it is small in detail, the aggregate is considerable.

Q. The particular point I wanted to refer you to is this: You are understood to have stated that the individual manufacturer is better able to look after details?—A. Yes.

Q. And as a result is able to show a saving that is not shown by the American Tin Plate Company?—A. That is my individual opinion.

Q. Then to that extent you believe that an individual manufacturer, or independent concern, as it is called, has an advantage in production?—A. Yes.

Q. Is that disadvantage that results to the American Tin Plate Company, as compared to the individual producer, compensated for in any other way? Do they make it up in any other way?—A. What, the American Tin Plate Company?

Q. Yes.—A. Well, they would make it up to a certain extent, as far as freight rates are concerned, by shipping to the jobber from the nearer point of manufacture.

Q. Is it not accounted for also in this way, that by closing up mills they suppress competition?—A. Yes, they keep the supply down.

DOES NOT KNOW OF FREIGHT DISCRIMINATION.

Q. You spoke about freights. That is a point I believe you have not brought out yet. Do you know of any advantage that the American Tin Plate Company has over the individual manufacturer in the matter of freight rates?—A. That is, as to any gracious consideration extended by the railroads?

Q. Yes.—A. No, sir; I do not.

Q. There have not been any complaints on the matter?—A. No, sir; I have not heard of any.

SAVINGS IN BUYING—RELATIONS TO PHELPS, DODGE & CO. AND CROOKES & CO.

Q. (By Senator KYLE.) What is the saving in regard to the cost of materials?—A. That is, to the American Tin Plate Company in contradistinction to the independent manufacturers?

Q. Yes.—A. The saving would be considerable by reason of the fact that they are large purchasers.

Q. Do they purchase all their material from 1 firm or 1 or 2 firms?—A. Yes, as I understand it, they buy all their block tin from Phelps, Dodge & Co., of New York. They buy their palm oil, I believe, that they use very extensively, from Crookes & Co.

Q. What per cent do you believe they would save in this way over the independents in the purchase of stock?—A. Well, I do not know. As far as block tin is concerned, I do not suppose they would save very largely, nor in palm oil. It would just depend on the time when they bought. The individual manufacturer might not possess the ability to buy a 6 months' supply. The supposition is that the American Tin Plate Company is able to buy for 6 months, and they would take advantage doubtless of a low market when they made their purchases.¹

¹ See Mr. Reid, p. 877.

Q. It would not be so great a per cent, however, that it could not probably be overcome by the individual?—A. Oh, no. That is, in the economies that he is able to practice that they are not?

Q. Yes.—A. Yes; I would state that individually as my opinion.

Q. (By Mr. JENKS.) Have some of the members of Phelps, Dodge & Co. and Crookes & Co. positions on the board of directors of the Tin Plate Company?—A. Yes; Phelps, Dodge & Co. have Mr. McLean as a director, and Crookes & Co.—well, I think possibly they buy their palm oil from that source in order to administer a kind of poultice for any soreness that might occur there. They were large jobbers and practically closed out of business. They took one of their representatives, Mr. Wells, and put him on the Pacific coast as their sales agent.

PLANTS RUNNING AND PLANTS CLOSED.

Q. You spoke about the fact that 2 of the large plants at Pittsburg had been closed down. Was it not possible, at least, that they were closed down because of the difficulty of securing their raw material, the tin-plate bars, etc.?—A. No.

Q. Why not? I suppose there is a very strong demand and it is difficult to make the supply?—A. I do not think that was it, as far as the tin-plate trust was concerned. Of course, they say that the mills were closed down indefinitely with the possibility of reopening them again for service. They had discharged their superintendents and their clerical force, and I understand were removing the metal from their tinning departments.

Q. What reasons do they themselves give to their men for closing down?—A. They assign no reasons. They are very indefinite; the men chafe because they can get no form of satisfaction as far as the future is concerned.

Q. Is the Newcastle mill running overtime?—A. No; that apparently does not come in.

Q. You run 24 hours a day, do you not?—A. Yes; it is necessary to do that for economy.

Q. (By Mr. FARQUHAR.) The Newcastle mill is running full?—A. They are running full.

Q. So that any production that has come in there is taken up by the Pittsburg syndicate?—A. Yes.

JOBBER'S SELLING AS MUCH AS EVER.

Q. That has frozen them out?—A. Yes, that is my opinion, if the trade is somewhat dull, that they have brought it about largely by themselves. I know, as far as the statement is concerned by some of the prominent jobbers in the country, that they are only buying for their actual wants, and hope that something will turn up in the future whereby they can turn their patronage in some other direction. This matter of brands with the jobbers has been a very serious thing with them and has incurred their resentment.

Q. The demand for tin plate is just as large now as it was in 1898?—A. Well, yes.

Q. It is a great deal more, is it not?—A. Well, the supposition is that it is sympathizing with the general demand.

Q. (By Mr. FARQUHAR.) Any combination that can control 75 to 80 per cent of the whole product of the country, if not more, certainly can maintain prices by putting on the market just so much of the product?—A. The jobbers have been selling just as much plate this year as they ever sold.

EFFORTS TO RESTRICT PRODUCTION HAD BEEN UNSUCCESSFUL.

Q. But a curtailment of the product is a very easy remedy for the purpose of putting the price up?—A. Yes.

Q. Is it not the usual way for manufacturers to do that—to even partially agree among themselves to curtail the output so as to maintain prices?—A. It is customary; yes. We have never had an agreement amongst ourselves; we have never felt able to do that.

Q. You have striven to do it?—A. We have striven to do that, to formulate an agreement, with reference to carrying out that thing. But I do not know whether it was a lack of honor on the part of some of us or not. They generally found an opening that effected a breach in the agreement.

PRICE NOT LIKELY TO FALL SOON—ADVANCE IN WALES.

Q. As you are going into the business now again, probably competing with these people, have you an idea that under present conditions, and if there is no change made in the tariff—although there are threats that there will be—the price of tin plate

to the consumer will be anything lessened in the coming year or two?—A. Under present conditions?

Q. Yes.—A. Yes; it might be somewhat less—that is, if there was a change in the tariff. That was the question you put, was it not?

Q. Do you think that independent of the combine the prices would naturally fall away from what they are?—A. I do not think so.

Q. Then you believe in a combine to arbitrarily hold and control prices, provided the combine is strong enough?—A. I do not believe in that.

Q. Do you think it is human nature to do that?—A. It is human nature to do the very best you possibly can for yourself and those closely connected with you.

Q. That is right.—A. Pardon me, there has been an advance of about 72 per cent on the foreign output, on the Welsh tin plate, and about 81 per cent on the domestic within the last 4 months. The Welsh tin plate is unusually high, by reason of the high price of materials over there.

TIN PLATE IMPORTED.

Q. Is the American market—the United States market—very much cut off from the Welsh manufacturers?—A. Very largely; yes. There are some grades there that are made from what is known as open-hearth material, which is somewhat better than our open-hearth material here. The material is known to the trade as Siemens.¹ There is more ductility and tenacity in the material itself; and that ductility and tenacity is required for some special purposes. But then that represents a very small percentage of the tin plate.

Q. (By Mr. JENKS.) Do you know whether there is any imported, with the idea of receiving a drawback, to be reexported?—A. Oh, yes, yes; the Standard Oil Company very largely follows that practice.

Q. They buy it cheaply?—A. They buy across the water of some large manufacturers.

Q. And they do not buy very much of the American product?—A. No, I will not say that; I know in 1898 I sold them some myself.

Q. But they buy largely abroad?—A. Yes. Mine was an emergency order

A SIX-MILL PLANT QUITE LARGE ENOUGH.

Q. (By Mr. A. L. HARRIS.) What sized plant, measured by the number of mills in the plant, can be operated with the greatest economy, in your opinion?—A. Well, in my opinion, when you exceed six mills you have too much for one man to look after and look after economically. The larger your mills the larger your leakage, in consideration of the innumerable details that I spoke of this morning. I have been given to understand that across the water four-mill plants could be worked to greater advantage and more profit than larger plants. That has been generally understood and very frequently published.²

Testimony closed.

TESTIMONY OF MR. H. F. GOING,

Retired canner and manufacturer of tin cans.

The commission met at 2.12 p. m., Chairman Kyle presiding. At 3.10 p. m. Mr. H. F. Going was introduced, and, being duly sworn, testified as follows:

Q. (By Senator KYLE.) State your name and address.—A. H. F. Going, Baltimore, Md.

Q. (By Mr. JENKS.) You have been engaged in the manufacture of tin cans?—A. I was engaged first in the canning of hermetically sealed food, and incidentally we made the cans or packages that contained the food.

Q. For how long were you in this line of business?—A. My first entry into the canned-goods industry was in 1864, and up to a recent time I had been engaged continuously in that line of business. I still retain a small interest in it, but at this particular date am not actively engaged as much as previously.

FORMER PRICES OF IMPORTED TIN PLATE.

Q. For how long a time were you engaged in the manufacture of tin cans?—A. From 1868 to 1894.

¹ See Mr. Taylor, p. 932.

² See Mr. Greer, p. 925.

Q. Will you be kind enough to tell us what the effect of increases in the price of tin plate has been, according to your business experience, upon the industries with which you were connected—in the first place upon the manufacture of tin cans, and afterwards upon the tinned-goods industry?—A. Going back to the earliest period in which I took particular notice of the price of tin plate, I would state that at that time we received all our supplies from England; and as the value of the greenback rose or as gold declined, so did the price of tin plate vary. After it got down to a basis of \$5 or \$5.25 a box, during the dull period on the other side, we manufactured cans on that basis very cheaply. Later on industrial activity increased on the other side and the demand for iron sprang up; and as pig iron is the thermometer of trade, prices of tin plate went up in harmony with the prices of pig iron, and values went back to \$7, \$8, and \$9 a box; and so throughout the various years of changing trade, until about the time of the McKinley tariff bill.

EARLY IMPERFECTION, AND LATER IMPROVEMENT, OF AMERICAN TIN PLATE.

Shortly after that we commenced to get occasionally a little lot of American plate; but the American plate was not at first satisfactory, for the reason that it was not rolled by men away up in their line, as they are to-day. It was rather irregular in manufacture. In addition to that we found that the phosphorus and sulphur had not been sufficiently taken out of the plate, and it was rather brittle. In the stamping up we found it would often crack. But by the improved American methods the quality of plate improved, as well as by the improvement of American machinery, which, as I understand from the report of the president of the Royal Institute of Engineers of England, is so far superior to the English machinery used in the production of plate that they are left behind in the race. Did they not have the cheap labor on their side they could not hold themselves up in competition with the price of American plate. That was at a period when plate was selling at about \$2.60 a box at the mills. With the introduction of American machinery there, he stated, and with the low rate of wages paid to their operatives, they need not fear as to the result from competition from anywhere. I hear that they have adopted a great many of our mills over there in their manufacture, and are introducing more. After a while the quality of the American plate improved to such an extent that to-day, with the two side by side at the same price, the average can manufacturer will take the American plate. The skill of the workmen has produced a better result; the tin is softer and more ductile; it has a better coating.

RECENT DETERIORATION OF TIN PLATE.

It did have a better coating, but I understand lately, since the formation of the American Tin Plate Company, that they are reducing the surface coating to such an extent that the canner now—the manufacturer of cans—has commenced to be a little apprehensive. That coating, as has been stated to you, is done by dipping, and after it comes out of the dipping tank it goes through something in the shape of a machine called a squeezer. But in the years I am speaking of, when we imported tin plate, there were 5 pounds of pig tin used to 100 pounds of black iron. They have reduced it now to a basis of about 2½ pounds. And the action of salt on the interior of the can in the liquor in which the article is preserved, like a vegetable, or the action of an acid in the case of fruits or tomatoes, has oftentimes an injurious effect on that plate because it has such a thin coating. You can almost, as it were, see the pores, if it may be expressed so, of the iron through the coating.

Q. Do I understand you to say that this deterioration in the quality of tin, or at any rate the lessening of the thickness of the tin coating of the plate, is new since the formation of the American Tin Plate Company, or did it begin 3 or 4 years ago?—

A. No; it had already commenced with the tightness of business. The closeness of competition had commenced it on the other side and extended it here.

Q. You have noticed that for the last 4 or 5 years?—A. Yes.

Q. You think the quality of tin plate that is sold by the American Tin Plate Company to-day is not poorer than that which was sold 3 or 4 years ago to the manufacturers—a year ago?—A. That is the case.

Q. You hear it is still poorer?—A. The can manufacturers say that the coating now being of such thinness has given them considerable trouble, and that it is not equal to the quality that was furnished them before the trust went into effect, and when a mill, as it were, had to stand upon its own bottom.¹

¹ Compare affidavit of Mr. Greer, p. 926.

CAN MANUFACTURERS WANT GOOD TIN PLATE.

The can manufacturer wants to get the best quality he can for his money, for the reason that he is responsible to the canner for the value of the can and the value of the contents. He has to pay for both if the can is spoiled through any imperfection in the tin plate. Therefore he is very particular from what mill he gets his supplies. A mill in Indiana, called the Elwood, was getting quite a reputation for perfection of manufacturing, and other mills in proportion. Some of them that did not stand so well—their product had to be sold for a less price. If you picked out your brand, you were expected to pay 5 cents or a dime more per box in order to get the quality that you wanted.

Q. Is it customary for the manufacturer of tin cans to have some favorite brand and regularly to buy that brand so that they can always be sure of their quality?—A. He would always take one certain brand in preference, because he had used it and found it to be satisfactory and was unwilling to change.

Q. And was ordinarily willing to pay 5 or 10 cents a box more?—A. That amounts to very little when you figure that a box of tin plate of 100 pounds would turn out 270 cans. The 5 cents or a dime a box would not make very much difference. But where he had to pay for the can and contents—the can he would sell probably for 1½ or 1¾ cents, and when the contents got into it it would run up to 15 or 25 cents; that was his reason why he was so particular in getting the quality of plate.

Q. You think that the ownership of brands and the keeping up of the quality of the brands as it was originally is a matter of great importance to the tin-plate manufacturer or to the jobber selling to the tin-can manufacturer?—A. It would be more important to the manufacturer of cans, because he would like to adhere to that; but where he has to take what he can get and has no voice in the matter, of course he is not so well satisfied as he would be if he could get what he wanted.

SHORTAGE OF CANS IN THE SUMMER OF 1899.

Q. In your establishment do you manufacture more cans than you need for your own canning industry?—A. At times.

Q. You have a surplus to put on the market?—A. We kept our men working as long as we could, and when we could not find use for the cans in our own canning industry we would sell to some party who did not have a can shop.

Q. Did you find in your business experience that a decided increase in the price of tin affected the demand for tin cans materially?—A. Not to such an extent as one would think. The man that wants cans wants them in his packing season, and then, like the gentleman from Texas with his gun, he wants them bad, because the articles are of a perishable nature. If he does not have the cans right there his raw material will spoil on his hands. That was the case this summer to a great extent in Maryland and also in California. The cans could not be furnished fast enough, and a good deal of the raw material had to be thrown away.

Q. What was the reason for that; because there was an unusually large output so far as the material for canning was concerned, or because there was a short supply of cans and of tin to make cans from?—A. The increase of business in general throughout the country stimulated a larger demand for goods in cans than had been the case heretofore. During the dull period the consumption of canned, tinned food goes off considerably, because the purchasing power of the average consumer is gauged by his receipts, his wages, and at the low scale of wages under a limited sphere of operation they had to limit their supplies. When the good times came in recently the canner or can manufacturer was overwhelmed with orders. Previous to the formation of the American Tin Plate Company notice had been given of the formation or of such an arrangement. These individual mills sent notices around to their friends that they believed that there would be a trust formed, and they had better get in under cover. Immediately orders were placed, to my own knowledge, of from 40,000 to 100,000 and 150,000 boxes each by individual can-manufacturing concerns. When the trust was formed it took in all the outstanding contracts, and there were a great many of them. I suppose it was the exception to find a man in the manufacture of tin cans but what had in a great measure supplied his needs.

Q. For a year?—A. For a year. And the American Tin Plate Company at first shut down a great many mills. I do not know for what purpose; some people thought to get them up in better shape or something. But when the time came for delivery, as specified in a contract—for instance, for March delivery—the can manufacturer did not get them, and he had to do the best he could. He had to go out and buy somewhere else to supply his needs, and he did not get them sometimes for 30 and sometimes 60 days after. Well, what could he do? He could not really go

out into the market and buy them for the account of the trust. He did not care about getting in bad odor with them. The supposition was that they controlled 95 per cent of all the plate mills in the country. So he did the best he could. That threw some of the manufacturing plants in cans out of the market for a while. For the time being it threw them out of the manufacturing and they had to wait. I refer to examples that I know of. Some of them were shut up for two weeks and some a little longer, because they could not get any plate and the trust was behind in deliveries. Gradually, though, as the summer rolled around, the deliveries commenced catching up, and by September there was very little complaint on this score; but by that time the season practically was over for the manufacture of cans.

Q. Do you ascribe that large demand for can goods, to any material extent, to the war in Cuba and the Philippines?—A. No; not to any great extent. During the war in Cuba the Government bought about two hundred odd thousand cases of canned tomatoes, and also other articles. But when you reflect that the canning trades of this country have an output of over 500,000,000 cans, you will understand that the Government purchase of 200,000 cases of 24 cans each did not cut much figure. It is the general resumption of business that has made the demand for canned food.

Q. How large a part of this demand for canned goods comes from abroad? How much of an export trade is there?—A. To a very limited extent compared with the home consumption. For 7 years I did the largest export business, I think, in Baltimore, and I endeavored to spread that export business; but I was handicapped in every direction by the tariff that was imposed upon it in the different countries, and I found eventually that it was useless to try anywhere except in England. In England we sold lots of goods, principally, though, in tomatoes.

Q. What kind of goods did you can mostly?—A. Everything in the line of fruits, vegetables, and oysters.

PRICE OF TIN PLATE CAN HARDLY AFFECT THE CONSUMPTION OF CANNED GOODS.

Q. Does the increase in the cost of the tin cans affect, to any noticeable extent, the prices of canned goods?—A. No; I think not, for the reason that before the advance in tin plate the price of a 3-pound tin, which is the ordinary quart tin, you might call it, was a cent and a half, and I should say it went up, through the excitement of last summer, say to 2½ cents. That is a cent a tin, or 12 cents a dozen. I hardly think that the average consumer would stop buying any line of goods because of an advance of a cent a can. To-day it is about three-fourths of a cent.

Q. Then you would say that an advance in the price of a box of tin plate, base, from \$2.60 to \$5.50 would not affect the consumer of tinned goods to any extent?—A. \$5.50? \$4.65 is the highest now.

Q. I am putting it high.—A. At \$5.50?

Q. Yes.—A. It would depend on the times. If there are average good times I do not think they would stop for the difference. My opinion is that when it comes to an article of food the consumer denies himself less in that than anything else.

EARLY ORGANIZATION AGAINST CONVICT LABOR.

Q. During your experience in the canning industry, have there been organizations, combinations, among the tin-can manufacturers or among the canners?—A. Yes; we commenced first with an organization among the canners, which was in 1866.

Q. I wish you would give us a brief sketch of these combinations among the canners.—A. That was brought about in order to put a stop to the making of tin cans in the penitentiary of the State of Maryland. A man from Connecticut, by the name of Porter Cook, had a contract with the State officials for the hire of convicts, on a basis, I believe, of 50 cents per day. In 1864 all things were on an inflated scale, and wages were high compared with what they were later on, and our men made from \$3 to \$4 a day. The fact that men who were good enough citizens to stay out of jail were having their wages brought into competition with men who were unfortunate enough, to say the least, to get into jail, induced the can manufacturers and the journeymen can makers to get together and form an association with the idea of putting a stop to that. By marching in procession with bands of music, and showing the political power they held, these journeymen can makers prevailed upon the legislature to repeal that law. That was the first combination in the canning or can manufacturing industry.

CANNED-OYSTERS COMBINATION.

In 1868, competition became very close among the canned-oyster packers of Baltimore, and they formed an association or combine, industrial combination you may

terms it, in which the minimum forfeit to be paid was \$1,000. They fixed a stated price to sell their goods by, and they made such profit that someone who did not share in the sales to the extent that others did commenced cutting secretly, and within a twelvemonth the combination broke up completely in confusion.

LABOR UNION—HIGH WAGES—MACHINERY.

Shortly after that the operatives in the can shops got together and formed an association and called it the Can Makers' Mutual Protective Association. The idea was to maintain a scale of wages and to stand together in case of an advance. In 1879—

Q. (By Senator KYLE, interrupting.) In case of a decline—to stand together in case of a decline?—A. Well, I do not think they were considering a decline, because we never had had any reduction so far in the wages.

Q. What was your statement that they agreed to stand together for?—A. To get an advance, because that was one of the first things they did. They were making then on a basis of \$2.50 a day, the journeymen can makers, and the first thing they struck for, after being in good practical condition, was an advance of 20 per cent, and they ran along up until finally they got it over a hundred and odd per cent; and they made the mistake then of working only 3 days in the week, because they reasoned, if they could work 3 days in the week and make the same wages that they could in 6, what was the use of working the other 3 days? And the other 3 days were used, in many instances, in riding around in hacks and going fishing. We did not get any more output and they did not get any more out of higher wages. While some men worked steadily and made \$50 a week, others were still satisfied with \$15; but they had 3 days' worth of fun and the other men did not have any. That association ran along for some time and affected wages. But finally machinery commenced to show itself in the manufacturing of cans, on account of the frequency of these strikes, and on account of the strength of this combination. Men became restive under these influences, and the manufacturer of cans commenced figuring to get away from being dictated to by his employees. And then the ingenuity of man went to work and the first machine, got out by a man named Brooks, was the starting point for all the vast machinery that has come out since. And to-day the men who work in the canning shops of the country, making them by the old process, are so few that they do not figure in the output. Machinery to-day makes the great bulk of cans.

NEW COMBINATION OF OYSTER PACKERS.

Now, a combination later on of the packers of Baltimore was put in the shape of these later-day trusts; that is, a stock organization. Each man bound himself to enter into that. That was in 1878, brought about by the dull times that were prevailing in that year. And they went into the combination, or stockholders' organization, to control the sale of the entire output of the canned-oyster industry of Baltimore, which, at that time, was the only oyster-packing port of the United States. The first year their profits were over 100 per cent; the next year, as they had taken in a great many outside concerns that were not really in the oyster business, they had to pay a dividend on a largely inflated basis, you might call it. In other words, they had to pay for idle plants, and the second year the profit was much less. And the third year an opposition came up, which, at the formation of the association, was denominated, as it might be, the tail of the arrangement. We left out one or two concerns, and as they stated at the time these concerns were really the tail and we were the dog, and the dog would wag the tail; but by the third and fourth years the profits at which we had worked had evolved a number of opposition houses, to such an extent that the tail commenced to wag the dog, and we found it prudent to break up our concern and go back to our original condition. Then competition set in for a number of years, and at different times industrial combinations have been formed by the canners of Baltimore, but rarely have they lasted over a twelvemonth or 2 years.

THESE COMBINATIONS MADE THEIR PROFITS BY RAISING PRICES.

Q. (By Mr. JENKS.) In what form have these later ones been, that of pools or agreements to hold prices?—A. Pooling and affidavits to prevent the cutting of prices and so on. And to-day, and for a number of years past, there has been no organization. They fear now that anything of that character would have to be capitalized at a rate that would put them beyond the economical point of production.

Q. Has there been at any time a combination between the Baltimore canners and the canners elsewhere, or have these organizations been confined simply to Baltimore?—A. Only to Baltimore. There have been no organizations elsewhere. But recently, within this past twelvemonth, they have commenced to get together in

California, and they are now discussing a combination of all the New York State canners, and they are getting in line with the general idea that by consolidation economies can be practiced and bigger dividends paid.

Q. From the experience you have had with these combinations in Baltimore, what is your own opinion of that matter? Is there any special saving by combination, or did you simply make your profits of 100 per cent or less from the added ability that you had to put prices up on the consumer?—A. Our idea was that by consolidation we could stop the competition.

Q. You really expected, then, to get your profits from the increased price and not from any economy?—A. Precisely. We thought that where we were competing one against another, if we could get together as one seller we could make our own prices; and that was the practical result for a time.

MANUFACTURERS WOULD PREFER TO HAVE THEIR MEN IN A COMBINATION, PROVIDED THEY COULD CONTROL IT.

Q. In these various combinations that the manufacturers made, did they make any attempt—did they express willingness to divide their profits with their employees in the way of increased wages?—A. Never; they were looking solely for their own benefit.

Q. When the employees got their increase of wages, it came through their own combination forcing it from the employers?—A. That is all. I would say that at a later day the manufacturers favored a combination that would make permanent figures and stay there, if they could make a contract with the men for the period of a year, which was the longest, at least. But machinery at that time had come in, and finally the machinery practically drove the journeymen out of business. For a number of years they did have an arrangement with the employees that was very satisfactory. They had regular wages paid right along, and they had no trouble. As a general thing, I believe that the manufacturers would prefer to have their men in a combination, provided they could control it. But, before, the combination could not be controlled; the man that would talk the most and was probably worth the least in the combination would probably influence the men there, and that would draw the men out to strike at perhaps the wrong period.

Q. These combinations that you speak of were among the canners. Did you also have similar combinations among the can manufacturers of that kind?—A. They did, but they could not hold together as well as the men. They invariably gave in after standing out, for the reason that they had contracted for the delivery of the cans at specified times; and, as I have already said, they wanted those cans very bad, and they had to deliver, and they could not stand out against the men. The men could stand out longer than the manufacturers.

Q. (By Mr. JENKS.) Have you any suggestions that you would like to make with reference to monopolies in general, or to combinations?—A. No; I have no suggestions to make. I have not much of an opinion of combinations; I believe they generally fall by their own weight.

Q. (By Senator KYLE.) Fall by their own weight? Tell us what you mean by that. That is frequently referred to in the newspapers and in the testimony.—A. All the combinations that I have been in were not able to hold themselves together for an indefinite length of time; and if I may judge by those that I have been in, they do not seem to be able to stand up indefinitely.

POOR TIN PLATE MAKES CANNED GOODS UNRIGHTLY.

Q. (By Mr. JENKS.) I judge from what you said in reference to the American Tin Plate Company that you consider that its check upon the manufacturing of tin plate was, for a part of the year at any rate, a detriment to some extent?—A. I have not the slightest doubt that if any can manufacturer were put into a position where he could only buy his plates from one individual, on general principles he would kick against that.

Q. You think he could not count so well upon the quality of his tin?—A. If he could not import his plate, he would have to take what he could get.

Q. And you think your experience the last year would justify the belief that the American Tin Plate Company is not giving them so good a quality of tin as they were counting on?—A. That is the report that I have heard—that the quality of the tin plate is not so good as it was before.

Q. (By Mr. A. L. HARRIS.) What effect has poor tin manufactured into a tin can upon the consumer of the canned goods, where acids are affecting the tinning, even if the contents are not spoiled?—A. The iron that forms the body of the plate is a healthy metal. The doctors give it to us occasionally. That would have no effect

on the health of the consumer. A can that is hermetically sealed has comparatively little oxygen in it or life to start fermentation, and it remains in statu quo for a period of a great many years. It would have this effect where that coating is very thin, that in opening the tin, you would find the can more discolored inside, from the fact of the coating being so light, than it would be where the tin had been redipped, as explained this morning by the witness before me. The can made of tin plate which had been dipped once or twice and had a better coating would be a much better-looking object on the inside. I think it would have no prejudicial effect on the consumer, even with that light coating.

Q. When a man opens his can and finds the contents in that condition, it detracts very much from the value of the goods in the opinion of the consumer?—A. Well, from the point of view of the sight, if you opened a tin and found it very much discolored inside it would not look quite so nice as it would with a perfectly bright interior.

Q. (By Mr. FARQUHAR.) Is not the quality determined by the packers themselves, by unseasonable packing, overripe packing, and a good many other causes?—A. There are a great many factors that would enter into it.

Q. That would enter in independent of this tin matter?—A. If an article was green or overripe or partly decayed, all those are facts that would enter into the healthfulness and sightliness of the article.

CAN MANUFACTURER GUARANTEES AGAINST DEFECTS.

Q. (By Mr. JENKS.) Did I understand you to say that the manufacturer of the tin cans guaranteed the preservation of the goods that were canned?—A. No; but if the preservation of the goods was impaired by the fact of a default in the manufacture of the tin or the can, then he has to pay.

Q. That is what I mean; guaranteed so far as that goes?—A. If that can broke in the forming up and there was some little leak not bigger than the point of a needle, the action of the atmosphere getting in there soon starts fermentation, and of course with fermentation come the gases and distention of the tin, and it becomes unsalable.

Q. Goods that are spoiled in that way are sent back to the tin-can manufacturer to pay for?—A. They are sent back to him as proof that the defect is there; he examines them, and if he finds that it is so he has to pay for them.

CAN MEN DO NOT YET FEEL THE NEED OF NEW LAWS.

Q. (By Mr. CLARKE.) Do your studies and observation of economy in relation to industry suggest to you the need of any change in existing laws for the protection of the people?—A. Well, so far, those laws have not been oppressive. As I said before, the can manufacturer, in the instances that we are speaking of, has so thoroughly supplied himself with material that he has not felt the pinch yet. When the time comes that he has to take what is given him and pay the price for it, then he will commence to feel restive, and then possibly feel the need of some legislation that will relieve him from the peculiar position.

Q. If the management of a large consolidation like the American Tin Plate Company is far-sighted and liberal, or if there is considerable competition, will that time come when there would be a pinch and he would need some public relief?—A. I do not think that they would say that there was any need for legislation until they get pinched.

SOURCES OF TIN PLATE—IMPORTED FOR EXPORT TRADE.

Q. (By Mr. FARQUHAR.) Was any part of the output of the Cumberland mill used in Baltimore?—A. Oh, yes; we used materials from different parts of the country—more particularly, though, did we in Baltimore get it from Indiana. There was more tin plate used in Baltimore from Indiana than from elsewhere—and from Newcastle. I suppose Newcastle furnished possibly more tin to Baltimore than even the Elwood plant did.

Q. Is there any difference between the tin that you use in the domestic trade and the export trade in quality?—A. In the export trade we invariably used the imported article. We did not think it quite so good as the domestic; but as we got a rebate of the entire amount of the duty paid, with the exception of a slight percentage, we used that in preference to the American plate. But the export trade out of Baltimore is not such an item. Out of California it amounts in fruits alone, I suppose, to about 500,000 cases of fruit a season. In the salmon industry it will run up probably to three times as much.

COMPETITION OF GLASS CANS IS NOT FORMIDABLE.

Q. (By Mr. RATCHFORD.) To what extent has the industry in which you are engaged been affected by the earthenware and the glass jar for the purpose of fruit canning?—A. Not to any extent appreciable.

Q. Have you any competition from that source?—A. There are certain people that use goods put up in glass packages instead of tin, for the reason that they believe the glass probably is more healthy; but the difference in the selling price is so great that oftentimes the storekeeper will say to them, "Why, here is the same goods in tin at 40 cents a tin for which you pay 60 cents a glass jar," and show them the difference.

Q. (By Mr. FARQUHAR.) Is not the glass jar used also almost altogether for the home packing; that is, domestic packing?—A. At home? Oh, no; there are a great many tins made, what we call the open tops is not such a great item, but still it is considerable. The tin open top cans and the glass jar are the only packages used by the average housewife. The average housewife thinks, of course, her own productions superior, and in a great many cases they are. She puts them up in glass; occasionally in tin.

Q. (By Mr. RATCHFORD.) Is it not a fact that glass jars are more extensively used for that purpose to-day than ever before?—A. Yes, and it will be still more the case since they have been able to reduce the price of fruit jars. At first I paid \$16 a gross for glass jars in 1868. To-day that same jar can be bought for \$4.50.

Q. How do you account for the great reduction in prices?—A. By decreased cost of manufacture and improved methods of manufacture.

Q. Machinery?—A. Not so much machinery, I think, as it is that they have been able to produce a greater output per man.

Q. Well, it is a fact that they manufacture such jars by machinery?—A. They do now within a very recent period, but it is confined, I think, to a few houses. Ultimately I think it will be extended everywhere; for the machine-made jar is superior to the hand-made.

Q. Are glass jars used by you in canning?—A. Not in our city. The only place where glass jars are used in canning is at sundry points in New Jersey, the city of Providence, and Petaluma, Cal. I speak now of factories; that is all.

Testimony closed.

AFFIDAVIT OF MR. GEORGE GREER,

District manager of the American Tin Plate Company for the New Castle district, New Castle, Pa.

The following communication, written as a personal letter, is verified by Mr. Greer's affidavit, p. 9.30.

NEW CASTLE, PA., December 8, 1899.

HON. THOMAS W. PHILLIPS,
Vice-Chairman Industrial Commission, Washington, D. C.

DEAR SIR: I had hoped to have the pleasure of an interview with you during your recent visit to New Castle, but was not aware that you were in the city until after you had left.

I address this letter to you entirely on my own responsibility. No stockholder or officer of the American Tin Plate Company has made any request or intimation to me suggesting that I address you. I know that you have had very large experience in business enterprises, and as a stockholder and director of the American Tin Plate Company, and one of the pioneers, as you are aware, in the tin-plate industry in this country, particularly in New Castle, I wish to call your attention to a few matters that have come to my notice through the press.

In the Iron Age of November 23 I see that Mr. Griffiths, of Washington, Pa., appeared before your honorable body and gave some evidence with reference to the cost and profit on tin plate. Mr. Griffiths was formerly engaged in a small dipping plant near Pittsburg, and afterwards was one of the parties who were interested in the Washington Tin Plate Works. Those works were sold to the American Tin Plate Company, and I have personal knowledge, from interviews and statements made by Mr. Griffiths at a number of meetings of the manufacturers before the new organization, that he was then decidedly of the opinion that it was necessary for some combination or "gentlemen's agreement" to be made as to maintaining prices, in order that the manufacturers might make a reasonable and legitimate profit from

their investment. It was reported to the management of the American Tin Plate Company by one of their competent experts that when the American Tin Plate Company took hold of the Washington mill they found the tinning department in practically the worst condition of all the mills in the Pittsburg district. The condition of the tin-plate works at Washington was such that it was absolutely necessary to make a change in the management of the tinning department, which necessarily displaced Mr. Griffiths and brother. Whether or not the change of superintendence in the tinning department at the American Tin Plate Company's Washington plant could have influenced Mr. Griffiths in any way as to his testimony I can not say, but I notice that he volunteered a very large amount of information, a considerable quantity of which was merely assumption on his part, and an unbiased reader can hardly come to any other conclusion after having carefully read and analyzed Mr. Griffiths's statements, if put correctly in the Iron Age of November 23. I will, however, call your attention to a few of the statements made by Mr. Griffiths, which, if made as reported, were not correct; and if he is mistaken in one or two items it is quite likely that he is mistaken in many.

First. He says that when plates were worth \$5.75 per box he made 100 per cent profit, and when they were worth only \$2.60 about the time the American Tin Plate Company was organized, he cleared 20 per cent profit, and that he never made less than that as a manufacturer. I am prepared to prove to you, from the cost sheets of mills thoroughly equipped and organized, that if Mr. Griffiths paid 100 cents on the dollar for materials and labor, either he is mistaken or he had no actual knowledge as to what his costs were. A box of tin plate is based on 14 by 20, 112 sheets, or 31,360 square inches surface measure. The New Castle mills were built and in operation much earlier than the Washington Tin Plate Company. The first sale of coke plates made by the New Castle mill was to a Chicago buyer at \$5.10 per base box delivered f. o. b. Chicago, less 1 per cent cash 10 days; and from this time the price of coke plates constantly declined until it stood at \$2.50 to \$2.60 f. o. b. mill for about 6 months prior to the organization of the American Tin Plate Company. The average price of the first 3 months' operation of the New Castle mill was \$5 for coke plates delivered f. o. b. Chicago and New York, which would net not over \$4.75 at the mill.

At that time our steel billets cost \$18.10½ per ton; pig tin 21½ cents per pound, and general supplies less than now; and it was then costing us about \$3.50 per box to make the plates above referred to. The present market price of steel is almost double, and pig tin is very much higher; materials for repairs and general supplies are higher to-day than at the time when the New Castle works were first put in operation; and at that time the prices paid for tonnage and general labor were lower than the prices that are now being paid. The increase in the cost of the raw materials and supplies used over the cost of the same materials used during the last half of 1893, the time above referred to, without adding anything for increased cost of labor, comes very close to \$1 per basis box of finished coke tinned plate. There is no company in existence that started at the time when the New Castle works did but had to spend thousands of dollars in experimenting and discarding useless machinery that was suggested by our Welsh friends who came over to America to teach the Americans how to make tin plate. During the period of excessive low prices for tin plate, which was during the year 1893, coke plates were selling at from \$2.50 to \$2.60 at the mills. At that time tin-plate bars, pig tin, palm oil, lumber for boxes, and all necessary mill supplies were purchased at the lowest prices that have prevailed during the past 7 years; but no mill in the Pittsburg district could make a box of coke plate under \$2.40 at actual cost, and if Mr. Griffiths was making a box of tin plate at \$2.40 he was doing very much better than any mills we know of with similar equipment. But for the sake of analyzing his statement we will assume that his cost of \$2.40, as stated by him, was correct, and that at the time the American Tin Plate Company was organized he was clearing 20 per cent.¹ If so it would require him to sell his plates, based on a cost of \$2.40, at \$2.88 per box net. It would be necessary to allow the buyer 1 per cent cash discount, and probably a commission to some jobber or salesman, which would require plates to sell somewhere in the vicinity of \$2.95 for coke tin plates, net at mill. If Mr. Griffiths actually did secure 20 per cent profit, based on the cost of \$2.40, he must have been selling his plates fully 33 to 35 cents a box above the average market price for No. 1 quality coke plates. As to his statement that plates were worth \$5.75 per box, no such price was obtained for coke plates by any manufacturer, unless it may have been in one or two box lots; no such price was obtainable by any of the large well-known mills for established brands of No. 1 coke plates. If Mr. Griffiths refers to plates that he may have sold before he

¹ See pp. 897, 898. Mr. Griffiths's statement was not that he made 20 per cent on his cost per box, but that he made 20 per cent per annum on the capital invested.

COMPETITION OF GLASS JARS IS NOT FEARFUL.

Q. (By Mr. RATCHFORD.) To what extent has the industry in which you are engaged been affected by the earthenware and the glass jar for the purpose of fruit canning?—A. Not to any extent appreciable.

Q. Have you any competition from that source?—A. There are certain people that use goods put up in glass packages instead of tin, for the reason that they believe the glass probably is more healthy; but the difference in the selling price is so great that oftentimes the storekeeper will say to them, "Why, here is the same goods in tin at 40 cents a tin for which you pay 60 cents a glass jar," and show them the difference.

Q. (By Mr. FARQUHAR.) Is not the glass jar used also almost altogether for the home packing; that is, domestic packing?—A. At home? Oh, no; there are a great many tins made, what we call the open tops is not such a great item, but still it is considerable. The tin open top cans and the glass jar are the only packages used by the average housewife. The average housewife thinks, of course, her own productions superior, and in a great many cases they are. She puts them up in glass; occasionally in tin.

Q. (By Mr. RATCHFORD.) Is it not a fact that glass jars are more extensively used for that purpose to-day than ever before?—A. Yes, and it will be still more the case since they have been able to reduce the price of fruit jars. At first I paid \$16 a gross for glass jars in 1888. To-day that same jar can be bought for \$4.50.

Q. How do you account for the great reduction in prices?—A. By decreased cost of manufacture and improved methods of manufacture.

Q. Machinery?—A. Not so much machinery, I think, as it is that they have been able to produce a greater output per man.

Q. Well, it is a fact that they manufacture such jars by machinery?—A. They do now within a very recent period, but it is confined, I think, to a few houses. Ultimately I think it will be extended everywhere; for the machine-made jar is superior to the hand-made.

Q. Are glass jars used by you in canning?—A. Not in our city. The only place where glass jars are used in canning is at sundry points in New Jersey, the city of Providence, and Petaluma, Cal. I speak now of factories; that is all.

AFFIDAVIT OF MR. GEORGE GREER,

District manager of the American Tin Plate Company for the New Castle district, New Castle, Pa.

The following communication, written as a personal letter, is verified by Mr. Greer's affidavit, p. 9.30.

NEW CASTLE, PA., December 8, 1899.

HON. THOMAS W. PHILLIPS,

Vice-Chairman Industrial Commission, Washington, D. C.

DEAR SIR: I had hoped to have the pleasure of an interview with you during your recent visit to New Castle, but was not aware that you were in the city until after you had left.

I address this letter to you entirely on my own responsibility. No stockholder or officer of the American Tin Plate Company has made any request or intimation to me suggesting that I address you. I know that you have had very large experience in business enterprises, and as a stockholder and director of the American Tin Plate Company, and one of the pioneers, as you are aware, in the tin-plate industry in this country, particularly in New Castle, I wish to call your attention to a few matters that have come to my notice through the press.

In the Iron Age of November 23 I see that Mr. Griffiths, of Washington, Pa., appeared before your honorable body and gave some evidence with reference to the cost and profit on tin plate. Mr. Griffiths was formerly engaged in a small dipping plant near Pittsburg, and afterwards was one of the parties who were interested in the Washington Tin Plate Works. Those works were sold to the American Tin Plate Company, and I have personal knowledge, from interviews and statements made by Mr. Griffiths at a number of meetings of the manufacturers before the new organization, that he was then decidedly of the opinion that it was necessary for some combination or "gentlemen's agreement" to be made as to maintaining prices, in order that the manufacturers might make a reasonable and legitimate profit from

their investment. It was reported to the management of the American Tin Plate Company by one of their competent experts that when the American Tin Plate Company took hold of the Washington mill they found the tinning department in practically the worst condition of all the mills in the Pittsburgh district. The condition of the tin-plate works at Washington was such that it was absolutely necessary to make a change in the management of the tinning department, which necessarily displaced Mr. Griffiths and brother. Whether or not the change of superintendence in the tinning department at the American Tin Plate Company's Washington plant could have influenced Mr. Griffiths in any way as to his testimony I can not say, but I notice that he volunteered a very large amount of information, a considerable quantity of which was merely assumption on his part, and an unbiased reader can hardly come to any other conclusion after having carefully read and analyzed Mr. Griffiths's statements, if put correctly in the Iron Age of November 23. I will, however, call your attention to a few of the statements made by Mr. Griffiths, which, if made as reported, were not correct; and if he is mistaken in one or two items it is quite likely that he is mistaken in many.

First. He says that when plates were worth \$5.75 per box he made 100 per cent profit, and when they were worth only \$2.60 about the time the American Tin Plate Company was organized, he cleared 20 per cent profit, and that he never made less than that as a manufacturer. I am prepared to prove to you, from the cost sheets of mills thoroughly equipped and organized, that if Mr. Griffiths paid 100 cents on the dollar for materials and labor, either he is mistaken or he had no actual knowledge as to what his costs were. A box of tin plate is based on 14 by 20, 112 sheets, or 31,360 square inches surface measure. The New Castle mills were built and in operation much earlier than the Washington Tin Plate Company. The first sale of coke plates made by the New Castle mill was to a Chicago buyer at \$5.10 per base box delivered f. o. b. Chicago, less 1 per cent cash 10 days; and from this time the price of coke plates constantly declined until it stood at \$2.50 to \$2.60 f. o. b. mill for about 6 months prior to the organization of the American Tin Plate Company. The average price of the first 3 months' operation of the New Castle mill was \$5 for coke plates delivered f. o. b. Chicago and New York, which would net not over \$4.75 at the mill.

At that time our steel billets cost \$18.10 $\frac{1}{2}$ per ton; pig tin 21 $\frac{1}{2}$ cents per pound, and general supplies less than now; and it was then costing us about \$3.50 per box to make the plates above referred to. The present market price of steel is almost double, and pig tin is very much higher; materials for repairs and general supplies are higher to-day than at the time when the New Castle works were first put in operation; and at that time the prices paid for tonnage and general labor were lower than the prices that are now being paid. The increase in the cost of the raw materials and supplies used over the cost of the same materials used during the last half of 1893, the time above referred to, without adding anything for increased cost of labor, comes very close to \$1 per basis box of finished coke tinned plate. There is no company in existence that started at the time when the New Castle works did but had to spend thousands of dollars in experimenting and discarding useless machinery that was suggested by our Welsh friends who came over to America to teach the Americans how to make tin plate. During the period of excessive low prices for tin plate, which was during the year 1898, coke plates were selling at from \$2.50 to \$2.60 at the mills. At that time tin-plate bars, pig tin, palm oil, lumber for boxes, and all necessary mill supplies were purchased at the lowest prices that have prevailed during the past 7 years; but no mill in the Pittsburgh district could make a box of coke plate under \$2.40 at actual cost, and if Mr. Griffiths was making a box of tin plate at \$2.40 he was doing very much better than any mills we know of with similar equipment. But for the sake of analyzing his statement we will assume that his cost of \$2.40, as stated by him, was correct, and that at the time the American Tin Plate Company was organized he was clearing 20 per cent.¹ If so it would require him to sell his plates, based on a cost of \$2.40, at \$2.88 per box net. It would be necessary to allow the buyer 1 per cent cash discount, and probably a commission to some jobber or salesman, which would require plates to sell somewhere in the vicinity of \$2.95 for coke tin plates, net at mill. If Mr. Griffiths actually did secure 20 per cent profit, based on the cost of \$2.40, he must have been selling his plates fully 33 to 35 cents a box above the average market price for No. 1 quality coke plates. As to his statement that plates were worth \$5.75 per box, no such price was obtained for coke plates by any manufacturer, unless it may have been in one or two box lots; no such price was obtainable by any of the large well-known mills for established brands of No. 1 coke plates. If Mr. Griffiths refers to plates that he may have sold before he

¹ See pp. 897, 898. Mr. Griffiths's statement was not that he made 20 per cent on his cost per box, but that he made 20 per cent per annum on the capital invested.

was identified with and operated the Washington mill, he was compelled to buy black plate for dipping, and when coke plates were actually selling at \$5.75 per box, which was during the year 1891 and the early part of 1892, black plates were selling in carload lots delivered in Pittsburg and Philadelphia at from 3.7 to 4 cents per pound. A box of plates weighing 100 pounds requires 97 pounds of black plate, which, at 3.7 cents, would practically be \$3.59 for the steel. As pig tin was worth 23 cents to 25 cents per pound, the cost of tinning, boxing, and loss in wasters in a small plant could not have been far from \$1 per box; hence we can not see where Mr. Griffith made 100 per cent profit in selling plates at \$5.75 per box. As I have said, he could not have secured that price for coke plates at any time while he operated the Washington mill, and if he referred to plates dipped he could not have purchased the black plate at other mills and paid 100 cents on the dollar and made any such profit as he stated.

I am also surprised that Mr. Griffiths used the letter that he read, which was evidently written by some "sorehead," with reference to the closing down of mills and the output at the New Castle works. First, the statement that the New Castle workmen are required to turn out a larger output than the scale calls for is an absolute falsehood. The workmen at New Castle work under exactly the same conditions as the men at all other mills.¹ The agreement is signed with the conference committee representing the Amalgamated Association, and the same conditions apply as to output of all mills. There is this difference, however, that at the New Castle works there are 2 large mills and at the Shenango works 4 large mills, making a total of 6 at New Castle, on which larger sheets are rolled than on the ordinary smaller tin mills, and on which the workmen are allowed a larger production, based on the sizes which they are working, and the same rule applies to other mills of similar size. As to the statement about the mills at Monessen, it is scarcely worth noticing, except that the mills are arranged differently. They are under a patent process secured by Mr. Donner, on which a small concession is allowed by the workmen on account of the method of roughing and rolling the sheets.

It is a fact that the American Tin Plate Company, when they assumed the contracts of the various companies at the time the purchase of the individual mills was made, were encumbered with very large orders for future deliveries, many of which extended up to October 1 and a part to the 1st of January, 1900. The entire product of black and tinned plate of the New Castle and Shenango mills was sold fully up to October 1 and a very large portion of the last quarter's product up to January 1, 1900. The product at the Shenango mill had been very largely sold in advance by the Shenango Valley Steel Company. At the same time contracts for fuel, bars, pig tin, etc., had been made by the various companies, which were also turned over. Unfortunately the management of some of the smaller mills that had sold their product in advance had not been cautious enough to cover their supplies, and the American Tin Plate Company was compelled to purchase materials for many of the works at advanced prices, while the product was sold at low prices.

Both the New Castle and the Shenango works have been and are now making shipments of thousands of tons of black plate to those known in the trade as dippers in Chicago, Pittsburg, Philadelphia, Norristown, Baltimore, and New York, and these facts ought to be good evidence that "reputable" and "responsible" dippers of tin plate have been and are still securing a supply of black plate from the American Tin Plate Company. It is true that the tin-plate trade has been handicapped for years by irresponsible dippers. About all the losses the Newcastle works ever sustained was by selling to that class of buyers, and I know of two other manufacturers whose losses were much larger than our own on account of their selling black plate for tinning. As good business policy the American Tin Plate Company, as manufacturers of tin plate, have tried to discourage the innumerable irresponsible brands that have been put out, with the view of having kept before the buyers only the American Company's own guaranteed brands or those made for the reputable and well-established jobbers and dealers. They are very desirous of putting none but reliable roofing plates on the market; and this, which is intended for the protection of the buyers as well as the sellers, does not meet with the approval of a certain class of trade, who would no doubt like to buy plates carrying less coating than certain well-known brands at a lower price and have them branded "Jones's" or "Smith's" Worcester grade roofing plates. Formerly the word "Worcester" was known as denoting an excellent quality of plate. It is a fact, however, that during the year preceding 1899 large quantities of plates were sold as "Worcester" grade that were very inferior to the genuine coated Worcester grade plate. We believe a customer in buying a piano or a first-class carriage is better protected if he feels confident that when he buys a Steinway piano it is made by Steinway & Sons, New York; or if he buys a Brewster carriage that it is the genuine Brewster. I know that the manage-

¹ See p. 905.

ment of the American Tin Plate Company is very desirous of furnishing none other than plates of excellent quality and finish to their customers, and I believe that the general practice in all the mills is much better to-day than it was as a whole during the preceding years, when they were operated under the individual management in accordance with the whims or notions of each superintendent, and he did not have an opportunity to compare notes with other mills. The practice of the best mills where the best results were obtained has been and is being adopted in all of the mills as fast as possible, and we believe that plates of a much better and more uniform quality are now turned out by the American Tin Plate Company than the general average of the plates under the independent management.¹

As to the continuous operating of the mills during the winter season;² during the past 4 years it had been the policy of a majority of the manufacturers, as soon as the canning season was over, which is usually about the 1st of October, to sell direct to the jobbers and large consumers for the next 6, 9, and 12 months' supply. To do it they were compelled to sell at prices that would fully satisfy the jobber. The plates would be stored in the manufacturer's or the jobber's warehouse, and when the spring trade opened those plates were always a hindrance to the manufacturers in securing a fair price for their product; and we believe if the mills had not been under the management and control of the American Tin Plate Company during the past 12 months more mills would have been idle on account of bankruptcy and not being able to run than have been already closed down on account of shortage of orders by the American Tin Plate Company. Had the intense competition continued, no doubt a number of the mills would have become bankrupt, as some were actually on the verge of bankruptcy when they were purchased by the American Tin Plate Company.

Mr. Griffiths says, in conclusion, that in his opinion "a plant of 6 mills would enable the manufacturer to take advantage of all economies effected by the proper division of labor, and that such a plant constituted the limit of economical management by one good man."³ We also notice he stated "that under present conditions in Wales a 4-mill plant was regarded as the unity of economical management." I have no doubt that Mr. Griffiths is honest in his opinion. I will only add that he is a fair sample of the plausible and talkative foreigners who assumed to know all about the manufacturing of tin plate when they first came to America. Mr. Griffiths is a plausible talker, but as a progressive tin-plate manufacturer he certainly is not worth considering. In fact, there are very few, if any, foreigners that have been of much assistance to the American manufacturers in establishing their mills. Nearly all of the old "Welsh" ideas as to hot rolling, shearing, annealing, and tinning were discarded and abandoned by the progressive and wide-awake American manufacturers. They were tried and found wanting at New Castle, and at Elwood, Ind. The American tin-plate manufacturers have made very rapid advancement, and it has been brought about by careful and intense application of American engineers and workmen, who first made themselves acquainted with the various processes necessary to manufacture and finish tin plate, and then went about adopting the best methods for securing the desired results. The best organized and best conducted plants to-day are officered and managed by live Americans.

I desire also to call your attention to the additional fact that up to the early part of the year 1898 there were scarcely enough mills in active operation to supply the demand for tin plate, and the jobbers and the well-to-do class of consumers were ready and willing to purchase plates and accept deliveries in advance of their actual requirements, which enabled all of the mills to keep in continuous operation. A large number of the mills were completed and put in operation during the year 1898 and the early part of 1899; and the manufacturing capacity is now, and has been for some time, considerably in excess of the requirements of American consumers. In addition to this fact, the unprecedented advance in the cost of steel bars, pig tin, palm oil, boxes, and all mill supplies, such as castings, brasses, and labor, has added to the actual cost of tin plate, and a very large portion, if not all, of the export trade has been lost to the American manufacturers. Also the buyers and jobbers of tin plate, like buyers and jobbers of nails and all kinds of merchant iron, are of the opinion that the present high prices can not continue for any considerable length of time, and hence are not now disposed to go into the market and anticipate future wants, unless at a considerable concession from present prices; and with the present price of pig tin, steel bars, and lumber for boxes the American Tin Plate Company can not, without actual loss, reduce the price of tin plate for the jobber to speculate on or for the consumer to anticipate his future requirements until the raw materials mentioned can be secured at a lower cost. Taking the general average selling price of tin plates, as can be shown from the books of the American Tin Plate Company for the year

¹ See Mr. Going, p. 916; Mr. Greer, p. 926.

² See pp. 905, 906.

³ See p. 915.

1899, the buyers as a whole have no reason to complain. The jobbers' price as published in the Iron Trade Review and other papers is not the price which the manufacturer secures for the plates f. o. b. mill. Formerly under the independent ownership and management of the mills there were a number of so-called jobbers or dealers who simply had desk room rented in New York or Chicago and would send out circular letters to consumers and buyers of tin plate and offer plates at 5 to 10 cents per box below the market price. They were well posted as to the mills that were somewhat short of orders and in such financial shape that they must accept business in order to keep in continuous operation at almost any price; and as soon as they secured an acceptance of some of their propositions they would telegraph that they had an order in hand to place and would state the price at which they would place it, requesting a wire reply. It is needless to say that that class of jobbers or dealers are now out of business; and of course they are very loud in their denunciations of the American Tin Plate Company. Under former conditions they were simply leeches and hangers-on to the trade, which it seemed impossible to get rid of under the conditions existing at that time.

I will refer to one other statement made by a can manufacturer, Mr. H. F. Going of Baltimore,¹ who is quoted as a large canner of food products, and until recently an extensive manufacturer of cans. He states that the coating has been reduced from 5 pounds to 2½ pounds of tin to 100 pounds of black plate, and that most of the reduction has been made since the American Tin Plate Company was organized. This statement is very misleading. First, no coke plates which are used for canning purposes made by the Welsh manufacturers or the American manufacturers ever did carry 5 pounds of coating. None other than a very high grade of charcoal carry 5 pounds of coating per box. The facts are that the Welsh imported coke plates for several years used for canning purposes have carried less coating than the American cokes. And, further, it is susceptible of proof that American tin plates put on the market by the larger part of the American manufacturers since the year 1892 have been better coated than the imported Welsh plates. For proof of this I refer you to the largest users of tin plates for canning purposes in America, such as the Pacific Sheet Metal Works, of San Francisco; Norton Brothers, of Chicago, also Baltimore; Black & Krebs, Baltimore; Ginna & Co., New York City; Phelps, Dodge & Co., New York; A. Booth Packing Company, Chicago and Baltimore. The parties named are known all over the United States, and I believe that you will find, upon investigation, that some of the parties I have mentioned have used much larger quantities of both imported and American tin plate per year than ever Mr. H. F. Going did. And, further, it is a fact admitted by the largest consumers of tin plate for canning purposes that American Bessemer tin plates furnished by the American manufacturers are and have been very superior to the plates furnished by Welsh manufacturers. The steel is softer and more ductile, and a smaller percentage of breakage and damaged goods results from the use of the American plates. Second, they are better coated; and last, but not least, the consumers of American tin plate have had a better plate and at a lower price since the American manufacturers commenced manufacturing than they were ever able to secure prior to 1891. Notwithstanding the enormous advance in steel, pig-tin, and other supplies, as well as the advance in labor, the present cost of tin plates to the consumers in America is away below any average price which they were ever enabled to secure before plates were furnished by the American mills.

Another fact which I wish to call your attention to is that a very large majority of the late independent manufacturers are still stockholders in the American Tin Plate Company and are identified with the business and giving it their best and undivided attention in active connection with the management and operation of the mills. I feel confident that just as soon as the decreased cost of materials will warrant a reduction it will be the policy of the American Tin Plate Company to reduce the price to the lowest possible limit, in order to increase the home consumption of tin plates, and also to secure all of the canners' export trade. We feel certain that this will be the policy of the company.

As to discrimination in closing down mills, I wish to call your attention to a few matters that perhaps Mr. Griffiths and others have not thought of. First, the New Castle mills have contracts for fuel extending into the first of the year 1900. The Monessen and some other mills referred to are advantageously located as to fuel supply. The Cumberland mill, which is mentioned as being one discriminated against, is not advantageously located as to fuel and steel supply. Unfortunately there is no tinning department connected with the Cumberland mills. Large quantities of what is known as black iron are made by the sheet mills for the makers of

¹ See p. 916.

granite ware, and a great deal of it was formerly made in such mills as the Cumberland mill. You will notice that the sheet-iron trade is very much depressed at present, and the only reason for closing down the Cumberland mill was a shortage of orders and the fact that they were not equipped for tinning purposes. It is hoped that trade will so revive and that the demand will be such that a majority, if not all, of the tin-plate mills can be put in operation very soon after January 1.

Another fact: a large number of the mills have been in continuous operation for the past 3 or 4 years, and it has been found necessary to make some extensive repairs and changes in furnaces and equipment. A number of mills that are now closed down are being thoroughly overhauled and put in first-class condition. We find it will be necessary to close down the New Castle mills about the middle of this month for about 3 weeks to make some repairs that are absolutely necessary and can not be delayed any longer. We find it necessary to rebuild some annealing furnaces and make several betterments. A 4 weeks' shut down annually is necessary to keep any mill in proper condition for continuous operation, even if the demand is such as to require the full production of the mills continuously for 12 months; and the keeping of some mills in continuous operation, while others have been closed down on account of the conditions I have referred to, is, we believe, such business policy as any competent management would adopt.

I beg pardon for imposing on your valuable time with this long communication. I hope and believe, however, that you will, as a citizen of New Castle, somewhat familiar with the history of the tin-plate trade, have the actual facts clearly and fairly placed before your commission. I trust that if your report is now completed, if the statements published in the Iron Trade Review of November 23 have been misleading to those members of your commission who were not familiar with the tin-plate situation, you will call their attention to the facts I have presented. If any additional information is desired I shall be pleased to furnish it, either in writing or in person. I regret that someone who was thoroughly familiar with all the details of the manufacturing of tinned and terne, or roofing, plate, as well as the uses to which the various grades are put, could not have been present to cross-examine Mr. Griffith and Mr. Going for your information.

The statements that I have made as to costs, selling price, quality, coating, etc., can be verified by competent and unimpeachable witnesses under oath.

Thanking you in advance for giving this communication your attention, and assuring you that I have no other object than to see that the facts connected with the American tin-plate industry be fairly presented to your honorable body, and believing that under your careful leadership these facts will receive fair and just treatment, I am,

Very truly, yours,

GEORGE GREER.

(The following are interrogatories proposed to Mr. Greer, and answers made by him.)

Q. What has been the course of prices of finished tin plate from the time when your establishment was organized to the present date?—A. Commencing with the year 1892, and continuing until the latter part of the year 1898, there was a decline in the prices of tin plate during each year. During the latter part of the year 1894 there was a decline of \$1 per base box on account of the reduction in the tariff. As an offset to the reduction in the tariff a large reduction was conceded and allowed by skilled and general labor. Also, fortunately for the tin-plate manufacturers, the price of steel declined to about \$15 to \$16 per ton. Prices of black plate for tinning purposes declined fully 1 cent per pound, or \$20 per net ton. During a portion of the third and fourth quarter of the year 1895 there was a small advance in tin and black plate, caused by a sharp advance in steel. The advance in steel, however, did not hold for any great length of time, and as steel declined the prices of black and tinned plate declined proportionately to a point below the lowest price received for plates during the year 1895. From the latter part of the year 1896 until the latter part of 1898 the price of tinned, terne, and charcoal plates declined, selling lower during 1897 than during 1896, and lower during 1898 than during 1897.

Q. How would you analyze the cost of manufacture so as to show the profit per box throughout this period?—A. The plan adopted by the New Castle works for analyzing the cost of manufacture to show the profit per box through this period was as follows:

First. No interest on capital invested was charged in any expense or cost account. Account was kept of the amount of fuel consumed; cost of steel; labor, including tonnage, skilled and piece labor, day labor, and machinists; repairs, lubricants, and supplies, pig tin, palm oil, acid, and general supplies, boxes, superintendence, office and clerical force, general expense account (which includes taxes, insurance, and incidental expenses). All betterments and additional construction or addition to

mills were charged to construction account. The cost per box of plate was determined by charging the tinning department with the net number of pounds of finished black plate delivered to the tinning department, with the cost of the white pickling, including acid and labor, delivering the white pickled plates to the tinmen, riser, daster, and cleaning, delivering the plates to the assorting room, including the assorter or inspector, the reckoner (being the party who counts the sheets), shearmen (or trimmers), boxers, branding or stenciling of boxes, truckmen, shipping and warehouse labor, and handling, shipping or storing the box of plates. The fuel delivered to the tinning department was charged separately; also a reasonable proportion of the office and clerical expenses, reckoned as necessary to take care of that department; also the machinists' labor and supplies for repairs. The account of the tinning department was always kept separate from the hot-rolling and black-plate department, inasmuch as we have always sold large quantities of black plate; hence the cost of tin plate was arrived at by adding the net cost per box of tinning to the net cost of the substance or weight of black plate used per box of tin plate. In addition to the items enumerated, the loss from seconds, or what is known as wasters (which usually sell at 25 cents per base box less) must be added to the cost of firsts or primes. The percentage of wasters usually amounts to from 8 to 12 boxes per 100 in coke-finished plates, and in charcoals, from 12 to 20 boxes per 100. The allowance or depreciation for charcoals, however, is much higher, from 50 cents to \$1 per box, depending upon the substance or weight of the plate coated.

Q. Are the workmen in the tin-plate company trade-union workmen under the Amalgamated Association, and do they receive the Amalgamated scale of wages?—A. My understanding is that all of the skilled workmen employed in the various mills of the American Tin Plate Company are members of the Amalgamated Association and the Tin Workers' International Protective Association of America.

Q. Has the American Tin Plate Company been as ready to treat with trade-union men as were the separate companies before the organization, and are trade unions and their officials recognized by the tin-plate company?—A. The American Tin Plate Company has recognized and treated with the trade-union men as an organization, as the individual establishments did before the consolidation. Further, when the American Tin Plate Company bought the individual mills, several were running nonunion; that is, they did not recognize the Amalgamated Association or the Tin Workers' Association. The American Tin Plate Company did agree with the Amalgamated Association and the Tin Workers' Association that they might unionize all the mills, and agreed to pay and are paying the Amalgamated scale prices for hot rolling and shearing and the Tin Workers' Protective Association prices in the tinning departments. This applies to all the mills under the control of the American Tin Plate Company, with the possible exception of the Monessen mill, on account of a different process of roughing and hot rolling black plate. The trade unions and their officials are recognized and treated with by the officers and district managers of the American Tin Plate Company.

Q. Kindly explain the relation between the American Tin Plate Company and the various dippers in the country, stating under what conditions, if at all, the Tin Plate Company has refused to sell black plate to the dippers.—A. During the year 1898 the price of finished tin coke plates and charcoal plates had declined to such an extent that a number of the dipping plants discontinued buying plates, except such as they coated and sold asterne or roofing plate. The individual manufacturers who were properly equipped and prepared to tin their plates could tin the plates and sell them to the trade at a price at which the dippers could not afford to sell to the general trade. The price at which coke and the cheaper grades of charcoal tin plate were selling was the market price for black plate with the cost of tinning added, which left no margin to the dipper for paying freight on black plate, unloading, handling, coating, shipping, and delivering. Hence a considerable number of stacks were not in operation during the year 1898. The majority of those operated were tinning roofing plates, and a number discontinued dipping a portion of their plates and purchased roofing plates direct from the mills, as the margin between the cost of black plate and the selling price of the finished tin plate was not such as would justify some of them in operating their tinning or dipping machines.

As to the American Tin Plate Company's relation with the various dippers of the country, I can not say as to all of them. We have orders on the books at the New-castle works for delivery to dippers in large quantities, a number of which orders have been but recently entered for dippers in Chicago, Baltimore, Philadelphia, and New York. We have shipped to dippers doing business in the cities mentioned, including Pittsburg and the vicinity of Philadelphia, during the year 1899, about 28,000 net tons of black plate. Taking 100 pounds substance as basis, a ton of black plate is the equivalent of 20 boxes of tin plate. In addition, there was shipped by the

Shenango works of the New Castle district during the first 6 months of the year fully 3,000 tons of black plate, making a total of about 31,000 tons of black plate shipped to dippers from the New Castle district. I have no knowledge and have not heard that the American Tin Plate Company has refused to sell black plate to any responsible buyer or dipper who is prepared to pay for it and to comply with the terms of the sales department of the American Tin Plate Company.¹

Q. What is the nature of the contract which the American Tin Plate Company makes with former owners of special brands? Are the purchasers of these brands required to buy all their tin plate from the American Tin Plate Company?—A. As to the nature of contracts which the American Tin Plate Company might have made with owners of special brands I am not advised. I have not heard of any instances of purchasers being required to buy all their tin plate from the American Tin Plate Company.

Q. How does the quality of the tin plate, both as regards thickness of coating and the finish of the plates, compare with that made in this country 2 years ago by independent manufacturers?—A. Both as regards coating and finish of plate, so far as I have seen, I believe that the standard quality of the plates in some mills is uniformly better, and as district manager of the New Castle mills I have instructions in writing from Mr. Arms, of the operating department at Chicago, to make a good plate at the New Castle mills. I believe that the finish and coating of the common terne or roofing plates has been improved at the New Castle mills during the present year, and the higher grade roofing and charcoal plates are fully up to their former high standard as to quality and finish. And as to coke plates, we are doing our best to improve as to quality and finish at both the New Castle and the Shenango works. We are now making some changes and hope to turn out a better finished plate in the New Castle district during the year 1900 than we have uniformly turned out during any preceding year.

Q. Explain the reasons for the closing down of the mills of the American Tin Plate Company at Pittsburg.—A. My understanding, based on the explanation of the district manager of the Pittsburg mills, is that they were closed down on account of shortage of orders.

Q. Have there been any strikes on the part of the workmen employed by the American Tin Plate Company since its organization? If so, explain briefly the circumstances and the results.—A. I know of none except one at Elwood, Ind., caused by the discharge of a workman for taking spirituous liquors into the mill and thereby violating one of the rules of the company. We understand the strike was not of long duration, and the workmen were requested to return by the president of the Amalgamated Association. From the information we have, we believe the Amalgamated Association were hasty and were not justified in declaring a strike.

Q. What are the chief reasons for the formation of the American Tin Plate Company?—A. After having considered the then existing condition of the tin-plate industry, for some considerable time prior to the purchase of the individual mills by the American Tin Plate Company, we concluded that it would be better for us, as stockholders of individual mills, that all should become partners each with the other. By so doing we hoped to stop the intense "cutthroat" competition, and believed that the mills under one management, by the purchasing of supplies, and by distributing the finished product from the mills nearest to the buyer or consumer, would secure savings that could not be secured by the independent individual mills.

Q. What are the chief advantages from such a combination that have been proved by the experience since its organization?—A. In so short a period it is difficult to state what advantages or disadvantages arise from the consolidated or single ownership of the individual companies. In my judgment the time is too short since the organization of the American Tin Plate Company and the conditions under which they have been compelled to operate up to the present time have been so unusual as to make it impossible to reach a fair conclusion as to the advantages or disadvantages of the consolidation. The unprecedented advance in all kinds of raw material and supplies, as well as the advance in labor, made it necessary for the American Tin Plate Company to advance the price of tin plate. The advance in bars was fully 120 per cent, in pig tin 150 per cent, and in labor from 15 to 25 per cent, and there were large advances in all kinds of materials and supplies. The advance in tin plate has not been in proportion to the advance in raw materials.

Q. What are the chief disadvantages, if any, that come from such an organization? For example, is there any lack of efficiency on the part of superintendents coming from the fact that they are workers under orders instead of independent producers?—A. We can only answer from our own experience. During the past year the entire management of the New Castle mills, with the exception of the purchasing of steel, pig tin, and supplies, and the selling of the product, has been under my care, and the

¹ See Mr. Griffiths, pp. 894-896.

New Castle mills have been operated and managed under my instructions exactly as they formerly were when the New Castle mill was run independently. This applies to the Shenango, New Castle, and Neshannock mills. I believe that if the buyers and users of tin plate in the United States will give the American Tin Plate Company a reasonable time they will conclude they are accorded fair and just treatment. No individual company, and much less a large company, can afford, as a matter of business policy, to be arbitrary or to give their customers any other than fair and just treatment; and we believe that the present policy of the American Tin Plate Company is to consider carefully the interests of the buyer and to deal justly with all their customers.

Q. Have you any suggestions to make regarding legislation in connection with industrial combinations, either to restrict them in their form of organization or in their management, or to protect them and their interests in any way?—A. We believe the political agitation with reference to classing large corporations as trusts or monopolies is premature. The time will come in the near future when the production and supply of the blast furnaces and steel mills will be fully equal to the demand, and on account of the changed conditions and the magnitude of business enterprises only large corporations or aggregations of capital can at all exist and make a reasonable return to the stockholders, and at the same time furnish the finished product at reasonable prices to the buyer and consumer. I believe that hasty legislation should be avoided, and the new organizations should be given a fair and impartial trial before the lawmakers of the country undertake to handicap them by hasty legislation. If you consider the abnormal conditions under which the American Tin Plate Company has been compelled to do business during the year 1899, you will see that the advance on tin plate has not been in proportion to the advances made in raw materials used in the manufacture, nor in proportion to the advance of the finished products in other lines of which the basis is steel. For instance, the lowest point at which wire nails sold per basis to jobbers during the period of low prices was from \$1.05 to \$1.10. The present price, I am informed this morning, is \$3.15, being an advance of nearly 200 per cent. There is very much less labor employed in making a keg of wire nails than in making a box of tin plate. Steel bars have advanced from the lowest price of \$15.50 to \$36 per ton, while the base of tin plate, from the low price of 1898, \$2.60 per base box, has risen only to \$4.65 per base box f. o. b. mill. You will find by comparison with pig iron, steel, wire nails, angles, beams, channels, etc., that the advance is much less on tin plate than in other branches of the iron trade. Although the American Tin Plate Company has been attacked by numerous correspondents in a number of Eastern papers on the ground that they have arbitrarily advanced tin plate, the actual facts are that the profit to the American Tin Plate Company, based on the increased cost of materials and labor, is to-day less, taking into account the output and the large amount of labor employed, than in almost any other branch of the iron business with which we are familiar.

Q. Make any further statements on the subject which seem to you of consequence.—A. As stated in my letter, a box of plates containing 112 sheets, 14 by 20 inches, or 31,360 square inches, is what is known to the trade, dealers, jobbers, and buyers as the basis for a box of tin plate, and where prices are quoted without adding to the quotation that they are for charcoal, terne, or roofing plates it is always understood that it refers to what is known as coke or canners' plate. Charcoal plates are made of various grades in at least 4 qualities, the price depending upon the finish and amount of coating per box. Terne or roofing plate also varies greatly in price, depending upon the substance, finish, amount, and quality of coating. The quotation of \$2.60 per box, being the price at which coke plates were sold f. o. b. mill during the latter part of the year 1898, referred to a 100-pound basis; that is, it referred to a box of plates containing 112 sheets, 14 by 20, whose substance or weight when coated was 100 pounds. Hence, when Mr. Griffiths referred to plates selling at \$2.60, the only interpretation that the general trade could place on his statement was that he referred to a box of coke plate. In justice, however, to Mr. Griffiths, I am of the opinion that the larger proportion of his trade was in roofing plates, and as the price of roofing plate depended somewhat on the brand, finish, and coating, the variation in price was almost as great as the number of brands under which roofing plate was sold. Profits or prices based on terne plate should have no bearing on coke plates used by canners and the general trade, as the quantity of roofing plate sold, compared with coke plate, is but a small proportion of the entire output of the American tin-plate manufacturers.

STATE OF PENNSYLVANIA, *County of Lawrence*:

I swear that those statements made by me of my own knowledge are true, and that all other statements I believe to be true; also that the information given and

the facts as set forth in a letter addressed to the Hon. Thomas W. Phillips, under date December 8, 1899, are true as to the material facts and statements as set forth in said letter.

GEORGE GREER.

Sworn to and subscribed before me this 27th day of December, A. D. 1899.

[SEAL.]

WALTER D. CLARK,
Notary Public.

WASHINGTON, D. C., December 8, 1899.

TESTIMONY OF MR. NATHAN A. TAYLOR,

Independent tin-plate manufacturer.

The commission met at 11.55 a. m., Vice-Chairman Phillips presiding. Mr. Nathan A. Taylor, of Philadelphia, Pa., independent tin-plate manufacturer, was introduced as a witness, and being duly sworn testified as follows:

Q. (By Mr. CLARKE.) Please give your name, residence, and occupation.—A. Nathan A. Taylor, Philadelphia. I am a member of the firm of N. & G. Taylor Co., manufacturers of tin plate. We are also dealers in kindred articles, but that is unimportant.

Q. Is that a partnership or a corporation?—A. A partnership; it always has been.

Q. How long has the firm existed?—A. We are a very old firm, with changes in the partners. I have been connected with it from my younger days, for 35 years, and I have been a partner, I think, for 20 years.

REASONS FOR BUILDING A LARGE TINNING PLANT ONLY.

Q. Do you manufacture tin plates?—A. Yes.

Q. How long have you been manufacturing them?—A. We have been manufacturing tin plates in Philadelphia since the tariff bill of 1890. I believe that was the date of the McKinley bill.

Q. But your firm existed before in the manufacture. What did you manufacture before?—A. We have always made very largely special brands of tin plate, being very closely connected and allied with the consumers' interests; and before it was possible to make tin plates in this country we had them made for us in Wales and England, and under our own formula very frequently, being closely connected with those works which supplied us. When the tariff changed in 1890, we simply transferred the making of those brands and that tin plate to our works here.

Q. Before 1890 and since then, did you and do you manufacture both tin andterne plates?—A. Both kinds.

Q. And put your own special brand upon them?—A. Not necessarily.

Q. Your plates had a reputation in the trade?—A. Yes; I think so.

Q. Before the industry was established in this country?—A. Yes; since it is necessary with some brands to individualize them in some way by stamping the sheets. That is done in roofing tin largely, so that the consumer will know what those brands are; otherwise, if taken out of the box, there would be no way of identifying the brand. We originated that idea of stamping those sheets a good many years ago.

Q. Do you manufacture your black plates or confine yourselves to tinning?—A. We confine ourselves to tinning.

Q. Where do you get your black plates?—A. Our black plates for the last 7 or 8 years, probably, have been largely of American manufacture and obtained from American mills. If I might be allowed to explain—

Q. (By Mr. PHILLIPS.) Certainly.—A. We thought we knew a great deal about the tin-plate industry, having been really connected and identified with it over so long a number of years. When the tariff changed, fortunately for us as we thought in America, enabling us to make tin plates here, one of two things was open to us—either to put up a complete plant, as it might be called, combining the making of black plate with the tinning process, or to separate the two. I felt that we should be best served in our interests by putting up a large tinning plant, for several reasons; by doing that we put it up in our own city, largely an industrial city and a very important center for distribution, in which we could have a better command of labor both in the quantity and quality and cost of labor; and the freight from Philadelphia on what we might not sell in Philadelphia proper would be very small, reaching large centers, as three-fourths, or 65 per cent at least, of the tin plate used in the

United States is consumed east of the Allegheny Mountains. A more important reason that influenced us in simply putting up a very comprehensive tinning works was the desire to have that large power of tinning in order to fill promptly our customers' wants within any reasonable time. Then I felt at the time that if we waited a little while we should know a great deal more about making black plate in America than they ever had known in Wales, that the product on the other side was not as good as it ought to be, and that their ideas were, as we know in kindred things, very old, and they could see no reason for changing them. I felt, therefore, that if we waited a little while we should know a great deal more here about making that black plate, and it would cost us a great deal less to put a black-plate mill up subsequently than it would to put it up in a hurry. I felt that with the inventive genius of the American people means would be found to very largely improve and at the same time cheapen that manufacture of black plate, and so we have been waiting from year to year, and every year has seen successive steps in that improvement.

AMERICAN IMPROVEMENTS IN BLACK PLATE AND IN TINNING.

Q. (By Mr. CLARKE.) How do the black plates produced in this country now compare for quality with those produced abroad?—A. Oh, they are very largely superior to anything that is produced abroad. I speak of that in the finished product. In the Bessemer quality, as far as the intrinsic quality is concerned, the American Bessemer is vastly superior in every respect—in ductility and tensile strength, in the surface and in the finish—in every respect vastly superior to the foreign quality. In the open-hearth, or the Siemens-Martin, process we have not improved materially, I think, over the quality of the foreign production, nor has that been used very largely in America. In Wales they were obliged to use those two separate materials, the Bessemer and the open-hearth product, according to the use you might want to put that tin plate to, and the difference was very wide over there; but in America our Bessemer has been so vastly improved that there is not that difference between the Bessemer as produced now and the open-hearth as we would produce it here.¹

Q. What proportion of the black plates used in this country are Bessemer and what open-hearth?—A. For tin-plate purposes it is somewhat difficult to say. I could not hazard a guess at it; it would simply be a guess.

Q. Has the process of tinning been improved since the industry was established in this country?—A. We have made very many improvements in tinning, but they are not so marked as the improvement in the black plate.

Q. How do the present prices of tin and terne plates compare with the prices for 5 years prior to 1890?—A. I can not speak from recollection as to facts. I think the present prices are much less than they were at that time, but I am speaking without data before me. They are, I think, no higher to-day than they were 5 or 6 years ago.

Q. Do you now import any tin plate or black plate?—A. No, not to any extent; only in a very small way, in special items where there is some necessity for it.

WORK PEOPLE AND WAGES.

Q. What wages are paid to your operatives, and also to the operatives in the black-plate mills?—A. I can not speak from knowledge of the wages in the black-plate mills. The wages in our tinning works are graded very much throughout the different processes. I might say that we pay very full wages, in our opinion. We have always kept in close touch with our men—willing to listen at any time to any fancied grievance on their part—and we have continuously paid them, through bad times as well as good, pretty uniformly good wages.

Q. Do they work by the piece, or by the day, or by the week?—A. In both ways. The minor labor is mostly by the day or week; the highest and skilled labor is usually by the piece.

Q. Is your labor organized?—A. No.

Q. Are men, women, and minors employed?—A. Very few minors, and if so, in a minor capacity.

Q. Some women?—A. Yes; we employ women to clean the plates after they are tinned in the higher grades. We go to considerable expense in that respect. I do not think the practice obtains in Western mills to the extent that it does with us; their cleaning is done very largely by machinery, but we do ours largely by hand and we think it produces better results.

Q. Do you know how the wages you pay compare with the wages that are paid in similar plants abroad?—A. No; not as to facts. I know our wages are very much more than are paid abroad; how much I can not say.

Q. Are your operatives native to the country or have most of them come from

¹ See Mr. Griffiths, p. 915.

Wales?—A. Most of them are native to the country. We have a few that came from Wales when we started our works, and they have been with us continuously ever since. We have not as many, though, of foreigners as we had when we started.

Q. Have you had any labor difficulties?—A. None whatever.

Q. Do the wages of labor in your works compare favorably with the wages of labor in most of the industrial establishments in your city?—A. Yes, they compare very favorably. I think I stated that we think we pay very full wages indeed.

Q. You think that is true of the tin-plate industry and the black-plate industry generally in this country?—A. Yes; so far as my knowledge goes, very full wages are paid, especially in the skilled departments.

NO RELATIONS WITH THE AMERICAN TIN PLATE COMPANY—SUPPLIES OF BLACK PLATE.

Q. Do you sustain any relation whatever to the American Tin Plate Company?—A. None whatever in any direct sense.

Q. Do you compete with them?—A. We are in a sense their competitors; yes, we are independent of them.

Q. Do you buy anything from them or they from you?—A. No; we have no dealings together.

Q. How do you obtain your black plates, and from whom—not necessarily the firms?—A. We have had our black plate always made for us by black-plate mills, and have selected those which could do the best work for us and at the time were most favorably situated as to freights, so that the cost of freight on their product to our works would be a minimum. We have taken, as a rule, the output of such works, and have been cognizant of their methods and of their cost; and I have arranged in our contract with them to pay them a certain profit upon such costs. Sometimes the contracts have been of a sliding nature where the prospect of the value of materials was in any way uncertain, and the price of our product from those mills was based on the cost of materials ahead. We practically took the output of certain black-plate mills which never made tin plates, and, as I said before, were favorably located. When the American Tin Plate Company was formed, these mills, with our approval, naturally embraced the opportunity offered to obtain a very handsome price for their plants and sold out to the American Tin Plate Company; but they had large contracts with us which would not have terminated for some time ahead, and the American Tin Plate Company assumed those contracts and have been filling them and are continuing to do so. Except in that respect we have had no direct relations with the American Tin Plate Company.

Q. You do not know just what effect the consolidation of those companies with the American Tin Plate Company will have upon the future of your supplies?—A. No; I do not know what the effect will be. We expect no difficulty in obtaining or making such supplies as we need, when the time comes.

Q. Have any independent black-plate mills been built or operated since the American Tin Plate Company was organized?—A. Upon that subject I only know what I have read in the newspapers and trade papers. I believe there are such. At the time when the American Tin Plate Company was organized there were still some few independent concerns left out.

Q. You have not built any yourselves?—A. No; not yet.

Q. You do not know whether you will or not?—A. I can not tell. We of course must obtain our supplies at the lowest possible cost; it is simply a matter of business with us.

Q. Is there a sufficient supply from the mills outside of the American Tin Plate Company to supply you?—A. No; they can not supply us. We require about 1,500 tons of black plate a month. If our works were equipped for making the ordinary kinds of tin plate we could without difficulty, by working night and day, turn out one-tenth of the entire consumption of the United States.

THE RISE OF TIN PLATE NOT CAUSED BY THE COMBINATION AND NOT UNDULY GREAT.

Q. Have you observed any variation in the prices of tin plate since the consolidation of companies into the American Tin Plate Company; and if so, to what do you attribute that variation?—A. There has been a steady advance in the price of tin plates since the organization of the American Tin Plate Company. I do not think they had anything to do with that, as the cost of materials advanced very largely, and those costs always seemed to be beyond the prices that the American Tin Plate Company would establish from time to time. In other words, I think it was the pressure of buyers that forced the American Tin Plate Company to advance their prices, or they would have been filled up with business that they would have had to

do at a loss. I think their prices have been less, throughout the whole period from their organization to the present, than the cost of making the tin plates at the current value of the materials. If we compare the present prices with the prices in Wales, where there is perfect freedom of action on the part both of the buyer and the maker, we find that the current kind of tin plate known as 14 by 20, coke tin, 100 pounds, was selling a year ago at about 9 shillings a box, and the present quotation is about 15 shillings a box, an advance of 6 shillings a box, which is \$1.50. If we take the very lowest price at which American tin plate was sold at any time from the Western mills, that lowest price was \$2.65; the present price of the American Tin Plate Company is \$4.65. We have an advance in the foreign product of \$1.50, and we have an advance in the American product of \$2.¹

Q. (By Mr. FARQUHAR.) How is that?—A. Of \$2, the difference between \$2.65 and \$4.65. I think that 50 cents difference between Wales and America is justified entirely in the present difference between the cost of labor in the two markets. I do not think the present price of tin plate is out of the way at all. Naturally every thing in our line, from the pig up, partakes of a better profit than it did a year ago and there is therefore a better profit throughout, in the intermediate products, compared with a market that is unrestricted in its field of production and amenable to no conditions as it is here, you find an advance in England of \$1.50 a box and America of \$2, and the difference in the American market is entirely justified by the difference in labor.

GOOD EFFECTS OF THE ESTABLISHMENT OF THE INDUSTRY IN AMERICA.

Q. (By Mr. CLARKE.) Have you any knowledge as to the number of people who are employed directly in the tin and tin-plate industry in this country, and in the production of black plates for tin plates?—A. No.

Q. Have you any knowledge as to the number of millions of dollars saved by the consumers of the United States in the purchase of tin plates from home producers instead of from foreign producers?—A. They have saved a great many millions of dollars; it is impossible for me to estimate it; the saving has been very large. The inception of the American industry in this country greatly lowered the price, and it has been going down ever since. All that has been a saving to the American consumer, and besides we have developed very largely our iron and steel resources. To make tin plates employed these men that otherwise would not have been employed. Everything has been very favorable to this country in the establishment of the new industry.

Q. Are there any natural conditions in this country which are obstacles to the successful production of tin plate?—A. None whatever. We have more favorable conditions in this country for making tin plate than exist anywhere else.

WE MIGHT HAVE EXPORTED TIN PLATE, BUT WE CAN NOT AT PRESENT DISPENSE WITH THE TARIFF.

Q. (By Mr. CLARKE.) Do you produce wholly for the domestic market?—A. Entirely so.

Q. Do any of your products go abroad?—A. We have done business of that kind; it is unimportant, though. I think that if the American Tin Plate Company had not been formed, and individual mills had been built and continued in their individual capacity, and we had not since that time had the wonderful enhancement of values that we have had, we should have reached the point before long at which we could have exported tin plate, at least to some countries, because the prices of American tin plate a year ago were not very far off from the prices in England itself.

Q. Does the tariff affect your business in any way, and if so, how?—A. Well, the tariff was necessary to the establishment of the tin-plate industry. We have worked independent of it since, because the price has steadily declined independently of the tariff on the imported article—so much so, as I have just said, that a year ago our price for tin plate was almost as low as the price in England itself.

Q. Could the industry safely dispense with the tariff?—A. Not at present. It is an advantage, as long as there is a difference in labor between the two countries; in point of fact the industry at certain periods, at least for a brief period, might have dispensed with the tariff, but the tariff is no injustice to the consumer when we consider that it often prevents speculative importations.

CONDITIONS BEFORE AND AFTER THE M'KINLEY TARIFF.

Q. Were there inclinations to import so as to prevent the establishment of the industry in this country before the passage of the McKinley law?—A. The importers

¹ English advance, 66 per cent; American advance, 75 per cent.

of tin plate in this country naturally bought everything they could. They imported tin plates that, in their opinion, would cost them less here, duty paid, before the tariff of 1890 went into effect—it was simply a business operation on their part, calculating that the increased duty would make the importation of those plates cost so much more. In point of fact, their expectations were never realized, as the market steadily and largely declined immediately after the passage of the tariff bill. Large quantities of tin plate were imported, and they were more than the holders could carry, and more than the consumers wanted. The law of supply and demand simply brought the prices down. At the same time the American product commenced to build up, and these goods were produced and purchased, and the foreign tin plates held in this country simply had to be sold at the same price to compete with the coming American product.

Q. It was not true, then, that the duty was added to the price of the domestic product as well as of the foreign product?—A. In no sense true. The American consumer has never been charged the duty on tin plates since they were made in this country.

Q. (By Mr. A. L. HARRIS.) How do the prices of foreign tin plate to-day compare with 1890?—A. The prices in 1890 were very high; stimulated, as I have just stated, by these excessive importations the foreign holders were able to unload upon us stuff that they had not been able to sell for about 15 years—they cleared out everything.

Q. Take the normal conditions; take the year before that and make comparisons?—A. I would not like to make a statement without data before me, but my impression is that the foreign market for tin plate in 1890, and say for 2 years back of that, was much higher than the present price of American tin plate—very much higher.

Q. Did American competition have anything to do with bringing that down?—A. It had everything to do with it. It is reasonable that we allow for the wonderful development of iron and steel in America, which has also cheapened that part of the making, but the American competition had everything to do with it.

Q. (By Mr. CLARKE.) You think then that it is necessary, or at least desirable, to preserve the tariff or some rate of duty to protect against the dumping of foreign surplus stocks on this market?—A. Oh, yes; I think the tariff is essential, and it should also be consistent. There would be no particular reason for largely reducing or withdrawing the tariff on tin plates without scaling everything else down that is kindred to it.

WITNESS'S BUSINESS HAS ALWAYS PROSPERED—HE SEES NO PERIL.

Q. Do you think of any change in existing law, national or State, which would benefit the tin-plate industry in this country?—A. No; I can not conceive of any legislation that would benefit it.

Q. Have you any complaints to make of existing conditions?—A. We have no complaints to make at all, as far as our business is concerned, of existing conditions.

Q. Your business is prosperous?—A. Our business is prosperous and it always has been. We have not been affected in the past when business has been depressed in tin plates among the Western mills by the conditions that have existed among them. We have always catered to the very best buying element, have always striven to make the very best tin plates, have always found buyers for them who have made no complaint of our prices, and we have continued on that line and there seems to be no occasion to deviate from it.

Q. So far as you have observed, or can observe at the present time, then the industry in this country is not hazarded by the consolidation of companies?—A. No; I see nothing at all in that respect. I have stated that the present price of tin plate, although it is in a sense fixed by the American Tin Plate Company, is, in my opinion, a very reasonable price, indeed, and entirely justified by the advance in the cost of materials and labor. I do not know what price may be established ahead.

Q. (By Mr. A. L. HARRIS.) Does the American Tin Plate Company fix the price of the finished product at this time?—A. They fix the price of tin plate as far as their business is concerned. Any outsider, whether he be a dealer, merchant, or manufacturer, of course can sell at what price he pleases.

DOES NOT KNOW OF ANY MONOPOLY OF TINNING MACHINERY.

Q. (By Mr. A. L. HARRIS.) You use machinery in your mill in the manufacture of tin plate?—A. Oh, yes; we use machinery largely in the manufacture of tin plate.

Q. Is there any monopoly in tin-plate machinery in this country?—A. None that I know of. We have had it usually made in Philadelphia.

Q. Does the American Tin Plate Company control the patents upon the best machinery for the manufacture of tin plate?—A. Not that I know of.

Q. Or the black plate?—A. No; not that I know of; there are very few patents in that connection that I know of.

AMERICAN IMPROVEMENTS.

Q. Has the quality of tin plate deteriorated since the American Tin Plate Company has had control?—A. I do not think so; of course I can not speak of knowledge of their product or of their mills. I do not think, though, generally speaking, that there has been any change in the product—the American product.

Q. (By Mr. PHILLIPS.) How does the quality compare of the tin plate made here and abroad at the present time?—A. In my opinion, the quality of the tin plate made in America is very much superior in every particular to what is made abroad, with the exception of some high grades, the quality of which is still kept up abroad, but the quantity of which is unimportant. In some high grades it is fair to say that we have not improved very much over their methods; we think we have, but possibly not to any great extent, but in the rank and file of the steel, improvement has been very marked in favor of the American product. I just said, a while ago, that the quality of the basis of the black plate of the Bessemer quality of the American product was wonderfully in advance of the corresponding Bessemer quality in Great Britain.

Q. You think the tinning also is equal, if not superior?—A. Oh, yes; in every respect.

Q. Do you know anything of the new patent that has been made in regard to tinning—that has been operated some, I believe, in Wheeling?—A. I only know of that as I have seen it in the papers; I do not know anything about it.

Q. Do you know that it is claimed that they can make tin at a very much less price and consume less time in the tinning?—A. I do not think they intended giving out that statement. As I understand it, what they claim—and I think it is a very old claim—is to save something in the intermediate processes before the black plate is made. There is no claim to save in the tinning or of shortening the time in the process of tinning. I believe their claim is simply up to the finishing of the black plate. What their claim is I do not know.

Q. I have been informed that they claim it would require several days less time in finishing the tinning.—A. To tin a sheet of black plate and finish it in the common kinds takes a very short time indeed, and in the better kinds it probably consumes a few hours. The mere tinning process is a brief one.

Q. Then the process is largely in preparing the black plate for receiving the tin?—A. The process is largely in preparing the black plate for receiving tin.

Q. And that is their claim?—A. That is what I think. They claim something by which some of the many processes up to the finish of the black plate can be saved. I think it is an old claim.

UNION LABOR.

Q. You spoke about not employing organized labor, or union labor, in your mills. Do you pay as large wages as those who employ that kind of labor?—A. Yes; I believe we pay about the same price.

Q. Is your firm opposed to organized labor—to employing it especially?—A. That matter never came up before us and we have never thought of it. Our men have simply worked without any organization and we have paid them.

Q. (By Mr. CLARKE.) You say you have had no labor difficulty?—A. We have never had any labor difficulty.

Q. (By Mr. FARQUHAR.) Have your employees at any time made any demands relating to prices or hours of labor?—A. No demands. At various times in a small way they have talked to us about wages and we have simply talked to them. There have been unimportant changes—sometimes reduced and sometimes advanced; but they were quite immaterial. Our men have always been well satisfied. They could not be otherwise, because we feel that we pay our people very full wages indeed, and we are willing to do so in consideration of what we think we get out of it. Our make of tin plate is very largely—three-fourths of it—made up of high grades of bright tin and roofing tin, and we must have good labor for that, and it is not reasonable to suppose that we would hedge in any or that we would be unwilling to pay fair wages to obtain those results.

Q. Have your men at any time attempted to form unions or join the Amalgamated Association?—A. Not that I know of. I never heard of such a thing.

Q. So that your work would be considered entirely open for the hiring of union

labor or nonunion labor?—A. We hire anybody who applies to us if we need him. We would not, of course, hire him as representing organized labor, simply because we never have had that condition.

Q. And you would not hire those that are recognized as men advanced in organized labor circles or anything of that kind—what people call agitators?—A. No; we should not want to have anything to do with them. We have a large command of labor in a city like Philadelphia. If we need labor, we probably have applications a hundred to one for it.

Q. Is it not a fact that nearly all your labor in the tin-plate business is in the Amalgamated Association?—A. I do not know much about the number in the tin mills in the Western mills. I am not a good witness in that respect.

WHO GOT THE M'KINLEY TARIFF PASSED? WHO GAINED BY IT?

Q. Is it not generally understood that the Amalgamated Association, both in the class of employers and the employees of those mills, are sharers in the protection that the tariff has given to American labor and American manufacturers?—A. Well, all labor entering into the manufacture of tin plate is benefited by the tariff.

Q. Is it not a fact that organized labor was one of the great means of your getting this tariff?—A. No; I do not think so. It seemed to be—

Q. (Interrupting.) Do you suppose that Congress made the laws for the manufacturers and not for the American workingmen?—A. No; I understood they made them for the benefit of the consumer.

Q. Did the consumer appear at the halls of Congress to get the tariff put on?—A. I do not know in what way the tariff was obtained. We had no interest in it particularly at that time.

Q. You are not aware, then, that the iron workers of this country were the men that were almost mainly instrumental in getting that tariff on?—A. No; I did not know anything about that at all. As far as our firm is concerned, we simply watched events, believing that the tariff on tin plate was to be imposed. Various attempts had been made in the past to impose it. I think they failed on account of the conditions at those times not being favorable to the establishment of the industry. I think that when the tariff commission—I think in 1880—

Q. (Interrupting.) 1883.—A. 1883. I appeared before it myself at that time and rather advocated the lowering of the duty, because it seemed to be then a tax upon the American consumer, because at that time the conditions did not exist here for making tin plates; but, of course, when favorable conditions existed, I changed my views entirely and have been a strong advocate of a protective tariff ever since. I think that under this tariff not only have our immense industries been established, but labor has been largely benefited by the tariff on tin plate.

Q. Was not the main reason for the McKinley bill, when it was discussed, that it was the creation of a new field of labor and the development of the raw material of this country?—A. I looked upon it—

Q. (Interrupting.) The employment of a larger field for workingmen—was not that the main reason given?—A. I can not recall what the main reason was. I think it came about in a general way, and I think the establishment of the tariff came about from natural causes; that we felt the need of a further development of our resources here and we could not do it without the benefit of the tariff.

Q. You are not sure, then, whether the tariff was made for the benefit of the manufacturers or made for the benefit of the American workingmen?—A. For their joint benefit.

Q. And they ought to be joint sharers?—A. They are, I think.

Q. Are you aware that under the Amalgamated Association scale the workingmen are really sharers, under the sliding scale, with the manufacturers?—A. I do not know anything about the Amalgamated Association's scale. In our tinning works we simply pay, as I have stated, good wages and wages that we have established with our men; and they have been satisfactory.

WITNESS'S BUSINESS NOT AFFECTED BY THE FORMATION OF THE AMERICAN TIN PLATE COMPANY.

Q. As an independent manufacturer, what effect, good or bad, has the establishment of the American Tin Plate Company had with you?—A. Just what effect—in what way?

Q. What effect on your business as a manufacturer?—A. On our business? I can not see that it has had any effect on us whatever; it has simply been a continuation of the Western mills under another organization.

Q. You say it was an enlargement. With your present works running full night and day, do I understand that you manufacture one-tenth of the whole product of this country?—A. I think I stated that if our works were running full night and day and turned out the ordinary kinds of tin plate we could make one-tenth of the tin plate consumed in the United States.

Q. Do you think your opportunities to work up to this one-tenth are good while the American Tin Plate Company is in existence?—A. There is no reason for attempting this large product. We give our attention very largely to the making of high grades, and necessarily we do not get out the product of those grades that we would get out of the common kinds.

THE AMERICAN TIN PLATE COMPANY FIX THE PRICE, BUT THEIR ADVANCED PRICES ARE JUSTIFIED BY THE COSTS.

Q. I think you asserted, or seemed to imply, that the American Tin Plate Company fixed the prices to the consumers of this country. Is it a fact or not?—A. I think I stated that the American Tin Plate Company fixed their prices, and that any other dealer or merchant or independent manufacturer is entirely at liberty to fix his prices; but, as a matter of fact, the American Tin Plate Company, by taking over all the individual mills practically supply the tin plate of the United States, and they have fixed prices at different periods.

Q. You say that practically they are the makers of the going products of tin?—A. I would say that practically they are the makers of prices of current kinds of tin plate.

Q. (By Mr. PHILLIPS.) How much have they advanced the price since their organization?—A. I think I stated that at the time of their organization what is known as canners' tin, I. C. 14 by 20, 100 pounds, was selling for \$2.65; their present price is \$4.65, a difference of \$2. Of course, there are very many kinds of tin plate, but we take that as representing the basis of value.

Q. Do you consider that an exorbitant price, if they make a profit even at \$2?—A. I do not think their profit is any more now than it was then. I think that if you take the foreign market as a basis, where buying and selling is unrestricted and where there is perfect freedom of action, no consolidation whatever, keen competition, you have an advance over there of \$1.50 on that same article. You have a corresponding advance here of \$2. Now, the 50 cents must—

Q. (Interrupting.) In this same kind?—A. In that same period.

Q. In that same period?—A. At the time of the formation of the American Tin Plate Company this kind of tin that I was alluding to was selling for \$2.65, representing practically the lowest price it ever touched at that time or before. That kind of tin is now fixed in price by the American Tin Plate Company at \$4.65. The advance in the foreign market has been fully \$1.50 a box on the same kind of tin.

Q. In that period?—A. In that period; and that 50 cents of greater advance in the American product is entirely justified, within my knowledge and in my opinion, by the difference in labor in the two countries. The difference in labor, as I understand it, is very largely against us in rolling black plate.

Q. (By Mr. FARQUHAR.) To what do you attribute the advance in tin plate in the last year or two?—A. We all know of the great advance in the price of iron and steel and in pig tin, and that, together with the advance in wages and some small advances in minor things like oils, justifies entirely the present price of tin plate.

Q. Have you advanced wages in your establishment since the advance of prices?—A. I think slightly, but we paid very good wages before, and we never reduced them when wages were reduced by the Western mills.

Q. So you say the advance is a normal advance?—A. The advance is normal.

Q. Regulated by supply and demand?—A. Regulated entirely by supply and demand.

Q. Both foreign and American markets?—A. Entirely so; both markets.

Q. You claim there is not an arbitrary price among you tin-plate men in this country in fixing the present price?—A. I do not know enough about the business methods of the American Tin Plate Company. I know they have fixed the price.

Q. In your own business, do you know?—A. In our own business, I was going further to say that we fix our own prices independently always.

Q. (By Mr. A. L. HARRIS.) Do you know what per cent of the product to-day the American Tin Plate Company manufacture?—A. No; I could hardly venture a guess at that, but they make a large part of it.

NO TIN PLATE IMPORTED EXCEPT FOR DRAWBACK.

Q. Is there any competition in the importing of tin?—A. No; it costs more, with the freight and duty. The American product, without the favor or prejudice of the

American Tin Plate Company, or any other dealers or company or manufacturer, is very much less in price than the imported tin plate.

Q. (By Mr. PHILLIPS.) There is, then, no importation of tin plate?—A. None whatever, except in some special lines, the amount of which is inconsiderable. Of course the oil people—consumers of that kind—import the foreign article, because they make it up into cans and export it and get back the duty less 1 per cent.

Q. (By Mr. FARQUHAR.) So that under the present conditions there is no importation to affect at all?—A. None whatever. The selling price of the American product is very much less than the cost of importing the corresponding foreign product.

SUPPOSE THE TIN-PLATE DUTY WERE REMOVED.

Q. Suppose the tariff was abolished; how would the competing power of foreign tin be with the American tin?—A. Well, the immediate result of the abolition of the tariff on tin plate would be to put the foreign market up.

Q. Then you would expect, on the repeal of the tariff on tin plate, that the American product could then enter into immediate competition with the European—that is, European tin could immediately enter into competition with the American?—A. We could not immediately enter into competition with them because our protection would be removed. We should have to adjust ourselves to those circumstances. Those circumstances would be the reduction of wages here immediately and very largely, or the men would be thrown out of work. We should also have to be satisfied with a very much less profit or none at all. To keep our work going we should also have to buy certain material for less prices than we can now, which would mean an adjustment of everything in the iron and steel line. You can not disturb the tariff on tin plate unless you correspondingly disturb it on everything else. I am free to say that this country, with its wonderful development, is gradually becoming independent of a mere tariff per se; but I think, as I stated before, that it is very important that we have the benefit of a tariff, where it is not abused, as it keeps out speculative importations at a bad time.

Q. You have the home market to yourselves?—A. Yes.

Q. That is one reason?—A. And we can supply the whole market.

Q. Of course you know there is the talk all about us, and some discussions through the newspapers, that the remedy for these combinations, especially in the tin-plate business, is to take away the tariff entirely. As you are a manufacturer, I think the commission would like to know just about where it would land the tin-plate interest in this country.—A. That is a good question.

Q. That is just what we want to get at, the fact, and your own opinion as a practical man.—A. I have had some experience in changes of the tariff. We have had a good many of them before the American industry was established. If the tariff on tin plate were removed or largely reduced, as I said before, the immediate effect would be a very large advance in the foreign market. In other words, they would take advantage of that advance and it would be continued as long as they had a demand in this country. Then, in the course of time, the American manufacturer would commence to adjust himself to those changed conditions.

AS TO MONOPOLIZING MACHINERY.

Q. (By Mr. PHILLIPS.) Does the American Tin Plate Company seek to control the machinery that goes into the making of plates?—A. I can say nothing on the subject, except that I have seen it in the newspapers. We are not interested as yet in that.

Q. You would be directly interested if you were going to make your own black plate, would you not?—A. We should.

Q. To know whether you could get such machinery?—A. But I have never found any difficulty in getting any made that I was willing to pay for. In our own works we have employed a great deal of machinery and mechanical knowledge on the part of others. We never had any difficulty in getting anything made.

Q. Have you heretofore ever dealt, however, with persons who had absolute control, or very largely the control, of a great industry?—A. We have never dealt with anyone except with those who have made machinery for the tinning works.

NO GREAT COMBINATIONS IN THE BRITISH TIN TRADE.

Q. (By Mr. FARQUHAR.) Is the manufacturing of tin plate in Great Britain in the hands of a few or many manufacturers?—A. Very many.

Q. Very many manufacturers; they have no large aggregations of capital?—A. None whatever.

Q. In the manufacture of tin plate?—A. Mostly small ones, mostly smaller plants; very many. That has been the natural growth of that industry which we faced here before we established the tariff of 1890.

Q. Has there not since the American tariff went into operation been formed an aggregate of capital or of interests in Wales to find markets and establish prices?—A. No, sir, I think not; nothing except in a friendly way maybe, but no attempt at any establishment of prices whatever. There is, however, I should state in fairness, though a very minor matter—there is and always has been a combination among some English manufacturers of large tinned sheets. That combination has always existed, to my knowledge, 25 or 30 years I think; it never seemed to do any harm—always existed and still exists; the consumers got used to it. I do not mean to say that it at any time established high prices, immoderate prices; but there is, it is fair to state, in England, amongst manufacturers of large tinned sheets—a very unimportant industry—a combination as regards prices.

WITNESS IS HARDLY A COMPETITOR OF THE AMERICAN TIN PLATE COMPANY.

Q. (By Mr. FARQUHAR.) Do you think that the creation of great aggregations of capital like the American Tin Plate Company is an advantage to the whole trade?—A. I think we shall have to wait and see how it works out.

Q. Await the result?—A. At the present their action has been moderate and business-like throughout, as I have said. They have not attempted at any time to fix any higher price for tin plate and have rather kept under the advancing costs.

Q. (By Mr. A. L. HARRIS.) Have they any economic advantage over you in the manufacture of tin plate through the immense combination?—A. Well, it is not exactly fair to them or possibly to us to make a comparison, because we simply tin on a very large scale. We have connection with a large number of mills and have made the product all the way up to tin plate.

Q. (By Mr. PHILLIPS.) Do you employ traveling salesmen in handling your product?—A. We do employ traveling salesmen, but not necessarily for selling our product. It is for business purposes; and then we are dealers—merchants in kindred goods along the line, and have always been, more or less.

Q. Do you employ more now than you did prior to the organization of the American Tin Plate Company?—A. We employ exactly the same number.

Q. And do you come in competition, or do you generally sell at about the same price that they do?—A. Well, as I said, probably three-fourths, or at least 65 per cent, of the entire consumption of tin plates in the United States is east of the Alleghenies. Our own market is therefore more immediately around us, and in that sense we do not exactly come in contact or competition with the American Tin Plate Company, or any more than we formerly did with individual mills whose business is more naturally in the western territory. Also, the American Tin Plate Company, being a very large organization, is desirous of turning out product, and probably would like to make the kinds that entail the least trouble. We, as individual makers, are quite willing to take upon ourselves any trouble if the consumer will pay for it, and, as we make high grades, we do not exactly make the same things as the American Tin Plate Company. When it comes to what I might call the calico end of our business—a small product, comparatively, with us—we do come in competition with the American Tin Plate Company, and our prices are about the same. We can not very well get more, although, in our opinion, our product may be better, and we can not, on account of cost, sell for any less.

SOURCES OF TIN.

Q. (By Mr. PHILLIPS.) Where do your supplies come from?—A. From Oceania entirely—from the producing primary markets, which are largely the Straits Settlements, some from Banca, and some little from Australia.

Q. Nearly all of the American tin is secured from where?—A. There is no American tin.

Q. You use no American tin?—A. It is all imported, mostly from there. There is American tin existing, but we have never been able to get at it in a commercial way.

COST OF TIN PLATE AS AFFECTED BY PRICE OF FIG TIN.

Q. (By Mr. A. L. HARRIS.) Has the price of tin increased?—A. The price of tin has increased enormously, more so than any of the ingredients. We use, we may say, iron or steel and tin. The price of tin was about, as near as I can recollect, 13 or 14 cents a pound a year ago. Two months ago it was 34 cents a pound, and to-day, or yester-

day, it was about 27 or 28 cents a pound. If you consider the enormous advance of an article in a natural way, except by speculation prevailing, you will see how much that has increased the cost of making tin plate. If you take what is known as canner's tin, which we are speaking of, you have about 2½ pounds coating to a box of tin, 14 by 20, and 112 sheets. The cost of that tin plate has increased to that extent by the advance in pig tin; but more than that, in our own individual case, the increase has been enormous to us, because we make bright plates that carry 16 pounds and upward, 14 by 20. We make roofing tin, a large part of tin and alloy, composed of one-third or one-half tin. Although the price of lead has not advanced materially, you can easily see how very much higher our cost is where we use very much tin in our product. Now, as I stated, the advance of tin is natural, without control in any sense whatever. It has simply advanced upon its merits, and the statistics show an increased consumption, due entirely to the establishment of the American industry and the enlargement of our product here, the large increase in our production, and at the same time an improvement in the Welsh output. They have sought, under their adverse circumstances, when they lost this market, other markets, and they have gradually been increasing their production, reopening their old mills, so the consumption of tin has very much increased.

Q. Largely caused by the natural law of supply and demand?—A. Entirely so.

Q. (By Mr. FARQUHAR.) Are you aware of what nationalities the men are that control the production of tin?—A. I can not state from knowledge. I think they are English. The Dutch settlements produce a good deal of tin from the territory of Banca to Billiton. Of course the Australian and the Straits output are very large, also. No doubt they are very largely under English control.

REASONS FOR FORMATION OF AMERICAN TIN PLATE COMPANY—NO BUSINESS NECESSITY.

Q. (By Mr. PHILLIPS.) Do you think there was any necessity for the formation of the American Tin Plate Company?—A. There was no necessity as far as the makers of tin plate were concerned. It was the result of bad management on the part of many of the mills, who were confronted with a proposal to sell out. It should be borne in mind that the American industry started out under very favorable conditions, and there seemed to be before this change of tariff in 1890 a sort of fascination about the article by which a good many outsiders seemed to think they should enter the business; consequently, when the American mills commenced to be formed they were put up on a favorable basis probably, and people attempted to work them who had not a sufficient knowledge of the business to work them right. In my opinion probably 75 per cent of the individual mills had no experience whatever when they started in the manufacture of tin plate; consequently they suffered in that respect, and it was simply, in my opinion, the lack of management on the part of individual mills that necessitated the formation of the present company. In our own case, we have gone through the whole period, always prosperous without exception, and never following the keen competition that existed amongst the Western mills. Then, again, if they faced these conditions they could have remedied this, if they thought they were in danger of excessive competition amongst themselves, by reducing the production at two periods of the year. They could have reduced their production either in July or in December, when the consumption is at a minimum, and prevented the overproduction of stock, and in that respect very largely improved their condition. If they had gone on in that way, I think we should have reached a time when they could have had the additional relief of exporting American tin plate. I think that while some of the individual mills were poorly managed, some of them were very well managed, and I think if the truth were known, a good many have made money in bad times. Others did not; probably on account of conditions and lack of management, through want of knowledge on the subject, and they could not survive. It was the survival of the fittest.

PERSONAL SUPERVISION NEEDED FOR MOST EFFICIENT MANAGEMENT.

Q. Do you believe a large aggregation of mills, a large number of them at different places in the country, can do work under one head as economically as individual owners could operate them, looking directly after their own business instead of employing help?—A. I can only give my opinion, and that is that a reasonable mill, reasonable in capacity, operating in one place, can be certainly managed better and at a lower cost per unit of production than a series of mills that are scattered. The only saving in a large number of mills is in the smaller executive cost. But I think that is very much neutralized by want of proper superintendence; and tin plate is an article that should be watched very carefully, and requires personal supervision.

We often feel ourselves as if we ought to have a superintendent to watch our superintendent;¹ not that there is any necessity for it, but it is an article that goes through so many processes before it is really boxed up, that it should be watched very carefully. I do not see how that can be done by visiting superintendents. The American Tin Plate Company themselves are business men and conduct this enterprise for business purposes; and they are adopting that principle in dismantling outside mills and concentrating their product.

SAVINGS OF CROSS FREIGHTS—NO DISCRIMINATION.

Q. (By Mr. A. L. HARRIS.) Does the large combination get any advantage in freight rates?—A. None whatever. There are no advantages to be obtained in freight rates at all, on account of their size. Oh, no; none whatever. They have an advantage in being able to ship from the nearest mill to the consumer; that is all.

Q. (By Mr. PHILLIPS.) There is not a great deal of difference, you consider, by entering others' markets and cross shipping, where they would naturally, when combined, ship from the nearest point?—A. Oh, the American Tin Plate Company must save a considerable amount over the practice of the individual mills in that respect. They deliver from their most convenient mill.

Q. But they lose, perhaps, you think, in efficiency of management as much or more than they make?—A. I have no right individually to make any reflection on the management. I did not intend that. I merely said that in my opinion central mills could be managed more efficiently than a series of mills, and especially in the tin-plate business, because tin is an article that requires much care if you want to make it right.

(Testimony closed.)

¹ See Mr. Griffiths, p. 900.

NATIONAL STEEL COMPANY.

WASHINGTON, D. C., October 17, 1899.

TESTIMONY OF MR. WILLIAM E. REIS,

President of the National Steel Company.

The commission met at 1.35, Mr. Clarke presiding. At 1.45 Mr. Clarke introduced Mr. William E. Reis, of Chicago, Ill., president of the National Steel Company, who, being first duly sworn, testified as follows:

Q. (By Mr. JENKS.) Will you be kind enough to give your name and address?—
A. W. E. Reis, Chicago.

NATIONAL STEEL COMPANY—STOCK BOOKS—TRANSFER AGENTS.

Q. You are the president of the National Steel Company?—A. I am.

Q. When was this company organized?—A. February, 1899.

Q. Under the laws of what State?—A. New Jersey.

Q. Can you give us any regulation that you yourselves made with reference to the keeping of the stock books and transfer books, and to the degree of accessibility that should be given them?—A. I can give you a copy of the resolution passed by the stockholders.

Q. Will you be kind enough to read it?—A. (Reading:)

[Extract from the minutes of the stockholders' first meeting of the National Steel Company.]

"*Ordered*, (1) That in compliance with the laws of the State of New Jersey, this corporation have and continuously maintain a principal office and place of business within the State of New Jersey, and have an agent at all times in charge thereof, upon whom process against this corporation may be served, and therein keep the stock books and transfer books for the inspection of all who are authorized to see the same and for the transfer of stock. That the books in which the transfers of stock shall be registered, and the books containing the names, addresses, and number of shares, respectively, of the shareholders, shall be at all times during the usual hours of business open to the examination of every stockholder at said principal office.

"That the name of this corporation be at all times conspicuously displayed at the entrance of its principal office in this State.

"*And be it further ordered*, until this resolution be duly rescinded,

"(2) That such office and place of business be in and at the office of the New Jersey Registration and Trust Company, No. 525 Main street, East Orange, N. J., and that this company be registered with the said trust company.

"(3) That the New Jersey Registration and Trust Company, being by statute authorized to act in New Jersey as the agent of corporations, be, and hereby is, appointed the agent of this corporation in charge of said principal office, and upon whom legal process against this corporation may be served within the State of New Jersey, and also the transfer agent of the stock of this company."

Q. Does this New Jersey Registration and Trust Company still remain your New Jersey agent?—A. It does.

Q. And has this resolution been lived up to strictly with reference to the keeping of the books there continuously?—A. So far as I know, yes.

Q. Has the National Steel Company any other transfer office?—A. We have a registrar in Chicago and one in New York.

Q. What is the transfer agent in Chicago; also the one in New York?—A. The Merchants' Loan and Trust Company in Chicago and the Guaranty Trust Company in New York.

CAPITALIZATION—PREFERRED STOCK AT PAR, COMMON AS BONUS.

Q. Will you tell us what the capitalization of the National Steel Company is?—A. Fifty-nine million dollars.

Q. And how it is divided?—A. Twenty-seven of preferred and 32 of common.

Q. Will you explain to us briefly the general method of organization of the National Steel Company?—A. I do not know that I can; it came to me after it was organized; I was not one of the organizers.

Q. You are not one of those who got into it first?—A. I came into it, but I did not create it.

Q. Were you one of the original members; that is to say, was your plant one of those that went in?—A. We put the plant in, but I had personally nothing to do with the preliminaries prior to the organization of the company.

Q. So far as your own plant was concerned, you can perhaps tell us the general arrangements that were made with reference to your coming in; for example, did you give an option on your plant for cash?—A. Yes.

Q. For a certain amount. And then how did you understand that the preferred stock was to go?—A. We gave an option in this way; we gave an option for cash with the privilege to take all cash, or part cash and part stock, or all stock at our option. We exercised the option at the completion of the company and took all stock.

Q. At what rates was the stock taken?—A. We took 1 share of preferred stock for each \$100 of cash, and with each share of preferred stock we got 1 share of common; so we got a share each of preferred and common for each \$100 of value.

Q. The cash value that was given was estimated, when you agreed to sell, on the basis of what that plant would be worth as put into an organization of that kind?—A. Well, we put it in at the same price we were offered for it by another company.

Q. How long before had this offer been made by another company?—A. Thirty days.

Q. (By Mr. FARQUHAR.) Where was this plant?—A. New Castle, Pa.

Q. (By Mr. JENKS.) What is the name of this company?—A. The Shenango Valley Steel Company.

NATURE OF PRODUCTS—SELL TO ANYBODY WHO WANTS TO BUY.

Q. Will you explain to us briefly what the nature of your business is in the National Steel Company—what your product is and your raw material?—A. What we produce?

Q. Yes.—A. Our products are steel billets and slabs, 4-inch and larger billets, small billets, sheet and tin-plate slabs or bars, as we call them. We do not go to the consumer with any of our product at all.

Q. To whom do you sell?—A. The American Tin Plate Company and other finishers of material who go to the consumer with the finished product. We do not sell anything in the finished shape.

Q. So far as your material is concerned, have you sold any to tin-plate companies besides the American?—A. We sell to anybody who wants to buy.

Q. Have you sold to anybody since your organization besides the American Tin Plate Company?—A. Yes, we have.

Q. Could you mention one?—A. We are shipping bars to Cincinnati now.

ORE—MINES—BOATS.

Q. Are you yourselves the owners of the mines where you get your raw material?—A. Partially.

Q. Would you explain a little more in detail as to the nature of your raw material, what proportion of it you produce yourselves and what proportion you buy?—A. Well, based on the coming year, our requirements of Lake Superior ore will be about 3,000,000 tons. With our present equipment we expect to produce about 1,250,000 or perhaps 1,400,000 tons from our own mines. The balance of that we expect to purchase on contract.

Q. Do you own your own ships for transporting ore?—A. We own 9 boats, yes.

Q. Do you own any railroads or any inland transportation?—A. No; we do not own any railroads; only narrow-gauge local roads around the works.

Q. (By Mr. FARQUHAR.) What mines are they?—A. The Chapin Mining Company in Iron Mountain, Michigan, and the Winthrop mine in Marquette County, at Ishpeming.

Q. How long have you been the owners of the Chapin mine?—A. Sixty days probably; very recently; we have been negotiating for it since last fall a year ago.

Q. You say you have your own transportation line on the lakes?—A. We have 9 boats, which will carry about a million tons of ore; a little short of carrying our own products.

STEEL WORKS AND FURNACES—COST OF FURNACES—WORKING CAPITAL.

Q. (By Mr. JENKS.) How many plants have you in your company?—A. Six, I believe. It depends altogether on what you call a plant; we have 6 steel works and we have 15 furnaces.

Q. (By Mr. JENKS.) Where are your steel works?—A. Newcastle, Youngstown, Sharon, Mingo Junction, Bellaire, and Columbus.

Q. What is the average output of one of your moderate-sized plants?—A. Well, our total output I could give you. We are producing about 5,000 tons of steel per day.

Q. What is the output of your largest?—A. About 1,800 tons.

Q. Can you give us an estimate as to the cost of building one with an output of, say, 1,000 tons?—A. I do not think I could.

Q. A general estimate along the line you heard with reference to the tin-plate plants?—A. In the first place, I do not think you could build one in 3 years, anyway. We can not get the material. We are building 3 new blast furnaces; I can give you a rough idea of what that would be.

Q. Yes.—A. We used to have a table that 100 tons' production, I think, would cost \$100,000. That was a rough way of getting at it. That would go 3 years ago. That is, 500 tons of pig iron a day would cost \$500,000.

Q. That was your estimate?—A. That is just a rough way of getting at it. It is like building a house—the result is always a little more. We are building 3 to-day, and I think every one of them will cost us 3 times that.

Q. Where are the added elements of cost in the last 3 years?—A. Increased cost of machinery and structure and labor.

Q. Added cost all along the line?—A. All along the line.

Q. Can you give an estimate as to the relative amount of running capital that is required in a large steel plant as compared with the cost of the plant itself?—A. Oh, I think it would require at least 50 per cent for the working capital.

Q. With 50 per cent of the value of the plant itself for running capital you would operate it easily?—A. You understand, of course, the nature of the business. The ore has all to be brought down during the open season of navigation; it requires considerable money to freight it and store it.

THE COURSE OF PRICES.

Q. Can you give us an account of the general course of prices of your product, we will say, for the last 3 years?—A. I think so, approximately.

Q. If you have the data at hand you may go back a little earlier.—A. I can give you the data compiled by the iron and steel people. I have here the Annual Statistical Report for 1898 of the American Iron and Steel Association of Philadelphia.

Q. (By Mr. JENKS.) That gives the data that I have asked for with reference to the course of prices back for how many years?—A. It runs back to 1891.

Q. You will give us some figures with reference to the last 3 years, and be kind enough to let us have this book?—A. Yes. Bessemer pig iron in 1894—these are prices at Pittsburgh—averaged about \$11.38; 1895, \$12.72; 1896, \$12.14; 1897, \$10.13; 1898, \$10.33. The present advance commenced in December, 1898, and continued moderate through January and February, and then became very radical.

Q. And the price now is?—A. The price now is \$22.50 to \$23.

Q. To what do you ascribe this very great increase in prices?—A. Not enough to go around, I guess. Why, in the last two years our exports, as you all know, have been very heavy, and we were completely cleaned up of all surplus material in the iron and steel line. Our own consumption increased naturally, and we discovered a shortage, and the fear that there would not be enough to go around probably advanced prices a good deal.

Q. Are you also working on contracts that have been made some months ahead, or do these market prices represent the prices you are getting?—A. These are the market prices of pig iron. We are not sellers of pig iron at all; we use our own and buy quite largely.

Q. Now, with reference to the prices of your own finished product of steel billets, what has been the course of prices there?—A. Upward.

Q. Can you give it to us in general terms?—A. The corresponding price of billets in 1894 was \$16.58; 1895, \$18.48; 1896, \$18.83; 1897, \$15.08, and 1898, \$15.31, at Pittsburgh.

Q. And then the average last year, the price?—A. That is 1898; but since January of this year the advance has been rapid.

Q. So that the price is now?—A. Price is anywhere from \$34 to \$38. I saw some quotations in the paper up to \$44; that is imaginary, though, I think.

MARKET QUOTATIONS, \$31; ACTUAL DELIVERIES, \$21.

Q. Now, these are the market quotations. Are you yourselves selling generally upon market quotations, or are you working on contracts, so that your real income from these sources is considerably less than this?—A. Well, our average price is very materially less than that. From the nature of our business, we have got to carry a good deal of tonnage ahead. We have got 700,000 tons of steel on our books still to be delivered; so that the idea that the manufacturer is getting all this advance that is reported every day in the papers is simply erroneous.

Q. Perhaps you would like to develop that somewhat further with reference to the differences between the price that the manufacturer is getting and the quoted price?—A. I think the average price we received for one hundred and some thousand tons shipped in August was \$21 and some cents, while the market quotations in the papers were for the same time anywhere from \$31 to \$44.

Q. (By Mr. KENNEDY.) I should like to ask if you are getting contracts now with these market quotations upon which you manufacture and deliver in the future?—A. We are as far as we can in the future. We are selling material every day, and we expect our average selling price to advance materially each month as we get away from the old business.

Q. What was the average quotation in July and August?—A. You mean our quotations to customers?

Q. Yes, and the market quotations, too?—A. Well, I do not know as I can give you that; I should judge somewhere about \$34.

Q. Your quotation or the market price?—A. Our price.

Q. And the market price?—A. Well, I do not know what you would call the market price. As to trade-paper prices, if somebody's necessities are urgent, as I see in Pittsburg occasionally, and he buys a carload at \$44, that is heralded all over the country as the price of material, which it is not.

Q. (By Mr. FARQUHAR.) That extreme price is not an indication of the real price?—A. None, whatever.

Q. (By Mr. JENKS.) But I understood that you, yourselves, were selling in July and August at about \$34? A. Thirty-four dollars; in that neighborhood.

WAGES—THE AMALGAMATED ASSOCIATION.

Q. Will you make some statement, please, with reference to the course of wages in your industry for the last 3 years; that is, before your organization was effected and since that time?—A. Well, our wages are adjusted the 1st of July of each year, running a year.

Q. By the Amalgamated Association?—A. For the skilled labor—not all Amalgamated, no; our common labor and mechanics are adjusted when occasion requires it. There was an advance in January; I think another one in March, and another one in June; so that the labor has had three advances—the unskilled labor—since January. We adjusted the scale the 1st of July, running until July of next year—in some cases an advance of 15 per cent, and in others 20 per cent.

Q. (By Mr. KENNEDY.) Most of your skilled workmen are members of the Amalgamated Association, are they not?—A. No; I judge we are about evenly divided on that.

Q. In making the scale with the Amalgamated Association, do the unorganized workers in the same department in the different works get the wages that are allowed to the Amalgamated men?—A. Steel works are different from tin-plate and puddling mills. There the rate is uniform. There are no two steel works that pay the same rate per ton, owing to local conditions and different productions.

Q. The sliding scale of the Amalgamated Association would take those differences into consideration?—A. They give more allowance to a more modern mill than they do to an old mill, if you have increased mechanical appliances and increased tonnage.

Q. What I want to know is, are the unorganized workers given the benefit of the arrangement you make with the Amalgamated Association?—A. Relatively, yes; the men not in the Amalgamated Association get relatively the same wages that the Amalgamated men do.

Q. The Amalgamated men keep up, practically, the wages for the unorganized men?—A. Practically, yes.

ADVANTAGES OF CONSOLIDATION—CHIEFLY GETTING MINES.

Q. (By Mr. JENKS.) What advantages do you get from the consolidation of these different plants under one management? What are the special advantages that come from consolidation?—A. The ability to strengthen our position and the acquisition of ore property and coal property.

Q. You say that is substantially the only advantage?—A. That is the greatest advantage.

Q. You get more capital to handle, so that you can secure your coal and your ore at much better rates?—A. And we are put in better condition to compete with our competitors. We are only producers of about 18 per cent of the steel that is made. We have some pretty strong competitors, and we had to equip ourselves as well as we could for that business.

Q. Do you have any opportunity for making any large saving through specialization of the work in different plants, or through freight rates that come from shipping from a nearer transportation point?—A. We avoid cross freights; that is all.

Q. There is a considerable saving there?—A. Yes.

Q. Is there any saving that comes in the manufacture itself, the process of manufacture, that you get through consolidation?—A. I think not.

Q. (By Mr. FARQUHAR.) As to the acquisition of your mines in northern Michigan, do you regard it as a positive necessity in your business to possess the raw material?—A. Absolutely so; yes.

Q. Are you much advantaged in the owning of your own mines there and your own transportation?—A. We think so. We have control of our own supply to that extent.

TARIFF ON BILLETS, BARS, AND SHEETS CUTS NO FIGURE.

Q. (By Mr. JENKS.) Will you give us your opinion with reference to the effect of the tariff on the steel industry?—A. Well, we have not seen much effect one way or the other for the last 8 or 10 years.

Q. Are you exporters of steel now?—A. No, we never have been. We are making material that has been largely exported, but that was before the National was formed.

Q. Would you say, then, that at the present time, so far as your judgment goes, there is no need for a tariff on iron and steel and you see no effect from it at all?—A. Not to us individually.

Q. On the industry as a whole?—A. There are different branches, and I am only speaking for one branch, billets, bars, and sheet; but I should say that in our particular branch I do not see that the tariff cuts any figure one way or the other.

Q. There is no need for a tariff on that?—A. I should say not.

Q. (By Mr. KENNEDY.) There is no need to have a tariff on that portion of your products that enter into the manufacturing of tin?—A. Of course we are affected by anything that affects that industry, but for us individually we do not need any tariff. Of course if it should be taken off the tin industry we should be affected with others.

Q. So that indirectly you need the benefit of the tariff?—A. Yes, indirectly. I say that in the steel business they need the tariff; but we individually do not.

Q. (By Mr. JENKS.) You say you do not need any tariff on steel billets used in tin plate?—A. We do not need any on steel billets, because there are none imported.

Q. (By Mr. CLARKE.) Suppose there should be a large accumulation of the stock of billets in Europe or any other country and the owner should need to realize and put those billets on the market at a sacrifice price, would the tariff be of any advantage to you then?—A. Well, in the first place, we do not make our material ahead of specifications. We do not pile it up like tin plate or nails.

Q. Have they not been known to do it on the other side?—A. Not to my knowledge. All of it is made on specifications.

RELATIONS BETWEEN NATIONAL STEEL, AMERICAN TIN PLATE, AND AMERICAN STEEL HOOP.

Q. (By Mr. JENKS.) What relations exist between the National Steel Company and the American Tin Plate Company?—A. Friendly. There are no official relations existing between us.

Q. What are the business conditions between the two as regards buying and selling; do you furnish them material to any great extent?—A. Yes.

Q. How large a proportion of your product do they take?—A. I judge in the neighborhood of between one-fourth and one-fifth.

Q. Can you tell how many of the directors in your company are directors in the Tin Plate Company?—A. Indeed, I could not.

Q. Several of them, you think?—A. Quite a number of them; they are interwoven with each other.

Q. Are any of your regular officers also officers in the Tin Plate Company?—A. Only as to the executive committee.

Q. Vice-presidents, treasurers, etc.?—A. The treasurer of the National Steel Company is also the treasurer of the Tin Plate Company.

Q. Is he treasurer also of any other?—A. The Hoop Company.

Q. Of the American Steel Hoop Company?—A. The American Steel Hoop Company.

Q. In your dealings with the American Tin Plate Company do you make separate individual contracts with them as you do with other companies that do not have similar members or directors?—A. Absolutely so.

Q. Everything is done by means of a special contract?—A. By general contract, the same form of contract in force with other people.

Q. Are your relations with the American Steel Hoop Company of a similar nature?—A. Yes.

Q. Owing to the fact that you have the same men to a considerable extent, the same stockholders in the different companies, your relations are rather more confidential than with others?—A. We hope so; that is the object we have—to get a market for our material.

Q. As regards the management of the companies, they are kept entirely separate?—A. Absolutely.

Q. You deal with them as separate customers?—A. Absolutely.

Q. (By Mr. FARQUHAR.) Are those members or directors the main stockholders in your company; are they very large stockholders?—A. They are all large stockholders, so far as I know. You say the directors; I do not recall all of them. The members of our executive committee, which consists of 7, are all large stockholders in the different companies.

Q. So they are conserving their own interests in being on the directorate?—A. Yes.

MANY MORE STOCKHOLDERS THAN BEFORE CONSOLIDATION—WORKMAN STOCKHOLDERS.

Q. (By Mr. JENKS.) Can you tell about how many stockholders you have?—A. Well, I saw the list at the last dividend in September; I think about 1,100; between 1,000 and 1,100.

Q. How does that number compare, if you have any means of knowing at all, with the number of stockholders in these different concerns before they were combined?—A. Oh, well—

Q. (Interrupting.) Larger or smaller?—A. One hundred to one, probably.

Q. Very much larger?—A. Oh, yes; the other corporations were close corporations before; they were small in number.

Q. To your knowledge are there any goodly number of workmen that took stock in the National Steel Company; any who are working for you?—A. Individually I do not know of a goodly number; I know of individual employees who are stockholders.

NO STRIKES—ALL SKILLED LABOR ON AN ANNUAL SCALE.

Q. Have you had any troubles with your employees that have resulted in strikes?—A. No.

Q. You have these regular arrangements with most of your workmen with reference to scales of prices running through some months or through a year?—A. With skilled labor. You will remember that our skilled labor is all controlled by the annual scale.

Q. (By Mr. KENNEDY.) You said that only about half of them are controlled by the Amalgamated?—A. By the Amalgamated, but we give the other mills a scale at the same time.

STOCK ON THE MARKET—DIVIDENDS.

Q. (By Mr. FARQUHAR.) Have you any idea how much of your stock is on the New York market?—A. There is just about one-third of the preferred.

Q. One-third of the preferred?—A. Yes, that is my recollection, on the 30th of September.

Q. How much of the common?—A. That I did not see, as we have never paid a dividend on the common. I did not go over the stockholders' list.

Q. What is the latest quotation of the preferred stock in New York?—A. About 95 or 96.

Q. Is there any quotation for common that you recollect?—A. 50 to 52.

Q. How much variation have you had in your figures for the last three months on stocks?—A. 98½ I think was the highest for preferred and 94 the lowest; I think 55, probably, and 50, on the common.

Q. How often have you declared dividends?—A. Quarterly.

Q. You have paid, then, three dividends?—A. Two.

Q. What was the dividend?—A. One and three-fourths per cent; 7 per cent cumulative stock.

THE ODD \$5,000,000.

Q. Between your preferred and your common there seems to be a difference of \$5,000,000?—A. Yes.

Q. As it was issued share by share, what became of that \$5,000,000 in making up your account?—A. I know where it went in the accounts, but where the \$5,000,000 went I do not know anything about; that was before my day.

Q. Have you a general idea as to what the \$5,000,000 was for?—A. Oh, I suppose, general expenses; that covers a multitude.

Q. If it is a fair question, was there such a thing as promotion in your company?—A. I do not know how you use the term promotion. Mr. Moore was instrumental in bringing these different interests together.

Q. (By Mr. JENKS.) Was he acting at the instance of the different manufacturers that approached him and asked him to see if he could arrange the matter for them?—A. I could not say; I did not ask him. I do not know what the rest may have done.

Q. (By Mr. KENNEDY.) Was the promoter paid in common stock?—A. Indeed, I can not say. No, I was not conversant with the conditions at that time.

Q. Well, you know by public rumor what the promoter was paid?—A. The general supposition is that the difference between the preferred and common stock is used in the promotion of the scheme. That is the ordinary common belief.

Q. The difference in the value of the stock or what?—A. The difference in the issue.

Q. Oh, the difference in issue; \$5,000,000, then?—A. Yes.

Q. What is the present market value of your common stock?—A. About 50 or 51.

Q. That would be \$2,500,000, then?—A. If he sold it. You can not tell what he did with it, if he got it.

EARNINGS—DIVIDENDS ON COMMON.

Q. (By Mr. FARQUHAR.) Does that 1½ per cent quarterly dividend represent the amount of your profits?—A. That is, up to this time?

Q. Yes.—A. No, it does not; our profits have been in excess of our dividends.

Q. Has that extra profit gone into betterments or in what form is it?—A. Well, we are making improvements.

Q. What is the working capital that you set aside?—A. About \$8,000,000.

Q. That entered largely into the acquisition of these mines and transportation properties, did it not?—A. Some of it; yes.

Q. (By Mr. KENNEDY.) Is there any prospect of paying dividends on the common stock?—A. We have hopes.

Q. Can you say anything about the earnings of the common stock that would give the public an idea of what the prospect is—what the hopes are?—A. Why, we have not published any statement of our earnings.

Q. Can you offer any statement in regard to the earnings of the common stock?—A. I could; I don't know whether I should like to; I know what we are earning.

Q. Well, I shall not press you. I will just ask you if you will make the statement?—A. Well, I had rather not have the publicity given to it.

Q. All right.

EXTENT AND VALUE OF ORE LANDS.

Q. (By Mr. CLARKE.) What is the extent, the number of acres of your mineral lands?—A. The Winthrop property embraces 160 acres in fee.

Q. And the other?—A. The Chapin Mining Company has a lease, I think, of five forties, on which we pay a royalty.

Q. Both produce the same quality of ore?—A. No.

Q. Are those properties extensively developed?—A. There has been taken from the Chapin property—we shall ship this season about 900,000 tons of ore.

Q. How many years has it been worked?—A. I think the total shipments from the mine have been about 7,000,000. It has been through two or three hands, and idle at times during the depression.

Q. How much more do you estimate there is there?—A. We have in sight, without going below our feet, about 6,000,000 tons. We know, as near as we can know anything under ground, that it is there.

Q. How much do you estimate there is in the other?—A. Well, it is so much that we never estimated it.

Q. What do you consider the money value of these mineral lands?—A. That would depend on conditions in the ore business. They are, perhaps, to-day worth 200 per cent more than they were a year ago to-day.

Q. Have you a supply for your works for the next 25 years?—A. Well, I should hate to even venture an opinion on that.

Q. Which do you consider the more valuable, the material properties that you own or the opportunities that you possess to do business?—A. Well, to-day I think the opportunity is worth more than the other; combined, they are both of them very valuable. The opportunity to do business a year ago was not worth as much as it is now.

FAILURES IN IRON MINING.

Q. (By Mr. FARQUHAR.) Is it not a fact that there have been a great many failures in the iron mines there, in northern Michigan and Minnesota?—A. That is the rule and not the exception.

Q. There have been some of the largest failures, have there not, in this whole country up in that section?—A. Yes; you go back to the Gogebic, the first development there, and it almost bankrupted the country.

Q. And many of those mines for years have been run at a loss?—A. Yes.

Q. (By Mr. CLARKE.) Why was that; do you know?—A. Why they were run at a loss?

Q. Yes.—A. Well, the extreme competition for a limited amount of business doing, low prices prevailing, \$9 Bessemer pig iron from the two valleys, \$10 in Pittsburg.

Q. (By Mr. FARQUHAR.) Was there not also an important development of new mines there?—A. The development of the Mesaba region coming into competition with the Gogebic and the Ishpeming and Marquette regions, the Mesaba proposition being simply a steam-shovel proposition in its early history, putting ore on the cars for 10 cents a ton.

Q. (By Mr. CLARKE.) When those properties failed, was that at the time when we were importing a great deal of iron and steel into this country from abroad?—A. No.

Q. When did they fail?—A. During the depression and low prices.

Q. Can you name the year?—A. From 1892; 1893, 1894, 1895; it has been continuous right along since 1892.

Q. During the general depression of industry in this country, then?—A. Yes.

STRUCTURAL STEEL.

Q. Has there been a very large increase in the demand for structural iron and steel in this country within the last 2 years?—A. Very large.

Q. Have wooden bridges pretty generally given place to steel bridges?—A. Yes.

Q. Is that true in regard to frames of buildings in cities?—A. The larger office buildings, yes.

Q. Does not that demand greatly increase the business of the various steel companies?—A. That branch of the industry takes a great deal of our tonnage.

Q. And to that class of business is largely due the advance in the price of the product?—A. Unquestionably so.

Q. Is that special demand likely, in your judgment, to continue and increase?—A. I should say yes, emphatically.

Q. Then, in your judgment, it adds largely above normal conditions that existed a few years ago to the value of steel properties?—A. Yes.

OUTPUT NOT INCREASED—PAY ROLL INCREASED, BUT PARTIALLY FOR CONSTRUCTION.

Q. (By Mr. JENKS.) Has the output of the National Steel Company for the last year exceeded materially the output of the several plants the year before?—A. We have only been in operation since February or the 1st of March. I should think not; they were all operated full before the combination and they have all run full since.

Q. About the output of this last year compared with the preceding 2 years, has it increased materially?—A. They have all been moderately successful concerns; they have all run full.

Q. Regularly for the last few years?—A. Yes.

Q. As to the number of workmen, is it substantially the same as before the organization and as it has been for the past 2 or 3 years?—A. A little more; our pay rolls show more men to-day than we had in March. Of course, that is due partially to the fact that we are on considerable construction. We probably have 1,800 more men to-day than we had in March.

Q. About how many men are you employing?—A. About 8,000 at the steel works; that does not go into the ore country or the coal country.

Q. The pay roll has increased more in proportion than the number of men taken on?—A. Yes.

IDLE FURNACES—NONE IDLE NOW.

Q. (Mr. KENNEDY.) I should like to ask if a large number of pig-iron furnaces have not closed down in different parts of Pennsylvania in the last 5 or 6 years?—A. Quite a number; yes.

Q. Quite a number in eastern Pennsylvania, particularly?—A. They have suffered the most. There have been quite a number in western Pennsylvania in the Shenango Valley; quite a number of what we call antiquated plants—not modern—unable to live through the prices prevailing in 1896, 1897, and 1898. They have all started up now.

Q. All started up now, you say?—A. As far as I know. I do not know of an idle stack east or west.

Q. Have not some of them moved away from the localities where they were operated 5 or 6 years ago?—A. When a furnace closes down there is not much to move.

Q. The business is moved?—A. They can revive it again, such as it is; but they can only live through these high prices.

Q. Did the combinations have anything to do with the closing?—A. Nothing whatever. There is no combination in pig iron.

Q. The combination in your trade would not have any influence on them?—A. None whatever. We are buyers of pig iron largely.

18 PER CENT OF BESSEMER STEEL—COMPETITORS.

Q. (By Mr. FARQUHAR.) How many great combinations, great corporations, are there in your line of business in this country?—A. The Carnegie Steel Company, the Federal Steel Company, the Pennsylvania Steel Company, the Maryland, Jones & Laughlins Steel Company, Wheeling Steel and Iron Company, Loraine Steel Company. These are the principal large ones. We are not a trust as you generally hear the word used.

Q. I want to know just the line of competition in your business.—A. As I remarked, we produce probably 18 per cent of the Bessemer steel. We are not a monopoly as I understand the term.

PUDDLING A THING OF THE PAST IN PENNSYLVANIA—SOUTHERN WAGES.

Q. (By Mr. KENNEDY.) Are a number of men formerly in the iron and steel industry in Pennsylvania now in the Alabama fields?—A. Quite a number of iron workers, puddlers, have gone south. Puddling is practically a thing of the past in Pennsylvania.

Q. Can you say what the wages are in the Alabama field as compared with that part of the country?—A. The Amalgamated Association controls the Alabama mills as well as the Pennsylvania mills.

Q. You are not disadvantaged by cheap labor in that industry in the South?—A. Not in the mills; no.

AMERICAN STEEL HOOP COMPANY.

WASHINGTON, D. C., October 17, 1899.

TESTIMONY OF MR. CHARLES S. GUTHRIE,

President of the American Steel Hoop Company.

The commission met on Tuesday, October 17, 1899, Senator Mallory presiding; Mr. Charles S. Guthrie appeared, and after being duly sworn, testified as follows:

Q. (By Mr. JENKS.) You may state your full name.—A. Charles S. Guthrie.

Q. Residence?—A. Pittsburg, Pa., and New York.

AMERICAN STEEL HOOP COMPANY—ORGANIZATION—CAPITALIZATION.

Q. You are president of the American Steel Hoop Company?—A. I am.

Q. In what State is this company organized?—A. New Jersey.

Q. Will you explain to us what provisions, if any, have been made by the company with reference to keeping its registration office?—A. The questions asked Mr. Reis would practically cover the same as regards our company. The rule is practically the same with us.

Q. What is the amount of your capital stock?—A. \$14,000,000 preferred and \$19,000,000 common.

Q. Is the general plan of your organization substantially that of the American Tin Plate Company and the National Steel Company?—A. Substantially the same in every respect.

Q. (By Mr. FARQUHAR.) The authorized capital is how much?—A. \$33,000,000.

Q. (By Mr. JENKS.) Will you explain to us the nature of your product? How does it differ from that of the National Steel Company?—A. We manufacture everything in the line of light iron and steel hoops, bands, cotton ties, bars, rounds, half-rounds—everything in that line that goes into the manufacture of hinges and general hardware, barrels, etc.—all rolled on very high speed rolls. We get all the raw material from the large producers, like the National Steel Company, with the exception of the little open hearth we make ourselves.

SAVINGS OF CONSOLIDATION.

Q. Can you tell us what especial advantages come in your line of business from having a large organization and the combination of a number of different plants instead of individual plants?—A. There are so many I can hardly give them all. In the first place, we have very great advantages in manufacturing. We make in the neighborhood of 85 to 90 different sizes, which necessitates frequent changes of rolls. If we give a mill 1,000 tons of one size, there is an economy of \$1 to \$1.50 a ton. We can not tell the exact figures, but we do know the saving is very great along that line. Aside from that, there is great economy in having all the management in one office; the economy goes through every department and every mill from one end to the other. Then we have the benefit of the good work of one mill to compare with that of another. If one mill makes 12-inch stuff, 10 or 9-inch stuff, different sizes, and gets out 60 tons and another 40, we can say to the one that got out 40, "What is the trouble, this other mill gets out 60?" We have an absolute check on the tonnage from the beginning to the end on all the mills, and in that way we think we have accomplished a great deal of saving. In another direction we have savings in freight by preventing shipments from crossing each other. We ship from the mill nearest the consumer. For instance,

we ship from Youngstown west to Cincinnati; from Pittsburg and the Eastern mills we ship east or south. We gain great advantages from this consolidation which we can not tell until the end of the year. We are figuring this thing out, and at the end of the year shall know absolutely what each ton costs to make and what the savings are relatively to the other plants. We have more or less of those data.

Q. What is the date of the organization?—A. The 17th of April.

Q. It has often been suggested that from a combination of this kind there would be disadvantages, because, it is said, profits are secure, and the different superintendents would become careless and not do their work so efficiently and thoroughly as if acting solely upon their own responsibility?—A. I do not think that is so at all. With our company I am sure it is not so. We aim in every department to get active young men. Their record is compared with that of the other men, and it is really a merit system. And the man whose mill does the best work will be paid and promoted accordingly.

PLANTS—THE OLDER MEN DROP OUT.

Q. How many plants have you?—A. Nine.

Q. (By Mr. FARQUHAR.) Where?—A. Union Iron and Steel Company, at Youngstown. They have mills at Girard and Warren as well as Youngstown. The Kimberly Company mills, at Sharon and Greenville, Pa.; J. Painter Sons & Co. mills, at Pittsburg; William Clark Sons & Co., at Pittsburg; Monessen Steel Company, Monessen, Pa.; Lindsay & McCutcheon, Allegheny; Portage Iron Company, Duncansville, Pa.; Pomeroy Iron and Steel Company, at Pomeroy, Ohio; the Isabella Furnace Company, in Pennsylvania. And we have coke works in Blair County which belong to the furnace property.

Q. These are different companies that came together as your organization?—A. Yes.

Q. (By Mr. JENKS.) Have you kept in the different establishments substantially the same men as superintendents?—A. Substantially so. In the organization of this company a great many of the older men dropped out, and we retained the young men familiar with the business and tried to pick out the talent in the companies.

MISCELLANEOUS EXPENSES GREATLY LESSENED.

Q. In order to check up these establishments one with the other you have frequent reports?—A. Every day; the tonnage from each mill. We are working on a cost system, which I hope will be as complete as can possibly be had to check the tonnage of each mill. In July or August we kept a very close account of the cost per ton, distributed over our product, of our fixed charges; that is, officers' salaries, traveling expenses of agents selling—everything outside of labor; office rents, everything of that kind; and we got it down to 40 cents a ton. The selling charges alone of any company, as far as I can get it, have never been less than 50 cents, and usually they figure \$1 to sell material.

Q. Before the organization?—A. Yes; and now we have our charges down to 40 cents a ton, based on 70,000 tons a month. That includes everything outside of dividends, of course.

Q. Since your company was organized have you shut down any plants?—A. None; we are running everything full.

THE COURSE OF PRICES.

Q. What has been the course of prices in your product?—A. They have advanced very materially; advanced gradually with the prices of raw material. When the company was organized we were getting \$1.40 base.

Q. What do you mean by base?—A. That was the base price for certain sizes.

Q. What size do you take for base?—A. It depends on what you are making. It varies for bar iron and steel and everything of that kind. I could not give you that without the figures; that is the basis of all prices. Above that we have what we call extras; that is, for small sizes. We run into wire gauge—about 20 gauge. Of course we get higher prices for rolling very light material. It is rolled out into long strips, and we have to get more for it. We have a regular card for extras. When the company was organized, steel was in the neighborhood of \$18 and \$19; you have heard what the gentlemen say the price is to-day. It varies anywhere from \$34 to \$38. Our selling price to-day is \$2.15 for iron, and \$1.40 was the price at the organization of the company. Our price to-day for hoops or bands is \$2.50; that is, \$50 a ton. The price of raw material is \$34 to \$38, so you see we have not advanced our price relatively as high as raw material.

WAGES.

Q. (By Mr. FARQUHAR.) What has been the course of wages?—A. They have advanced all along the line in every department from 15 to 25 per cent.

Q. Are you working mostly union men?—A. About one-half.

Q. You make with your men a regular annual agreement?—A. A regular annual agreement. About half of our men belong to the Amalgamated Association. The Pittsburg mills are nonunion mills. We pay them practically the same wages as the Amalgamated men. We make individual contracts with these men. It has been so for a number of years and before the organization. The men are satisfied.

Q. (By Mr. KENNEDY.) Do the members of the Amalgamated Association very largely control the fixing of their wages in your mills?—A. It is a matter of negotiation every year. We get together on the best basis we can. For instance, the puddled iron, bar iron, and that sort of thing is based on the sale card. As the selling price advances, the price of labor advances. It is figured out on the tonnage and the average selling price of our product. If we get an advance, the men get an advance. It is the same as the Tin Plate Company.

Q. Do you have a committee of conference?—A. We meet the Amalgamated Association and get together and fix a scale of wages for the year.

Q. That scale of wages applies to unorganized men?—A. No; it does not, because conditions are different.

Q. I mean the skilled workers?—A. The conditions are different in every mill. We have special machinery in some of the mills. The Amalgamated Association recognizes that fact. We pay some salaries. One of our head rollers at Youngstown gets a salary whether the mill runs or not.

Q. You say, other things being equal, you pay some men less than you do others for the same work?—A. No; I don't think so. It is distributed. For instance, a roller in the Amalgamated Association gets more than the men in our mills that are nonunion, but some of the other men in the nonunion mills get more. It makes the average practically the same; we have divided the question so as to equalize wages in the mills.

Q. Does not the conference with the Amalgamated men generally settle the scale of wages?—A. Practically so.

Q. So when you are conferring with the Amalgamated men you are fixing a scale of wages for them and those outside of the Amalgamated Association?—A. That is practically the case.

Q. They are doing a work for the unorganized men?—A. In a sense that is so.

COULD NOT COMPETE WITH ENGLISHMEN IN GALVESTON, BUT FOR THE TARIFF.

Q. (By Mr. JENKS.) Can you give an opinion as to the effect of the tariff in your special line of business?—A. I can give you my opinion. I think it is very material. We ship our product from one end of the United States to the other. We ship to Maine and San Francisco, Seattle and Galveston. We go from one port to the other with cotton ties, bands, everything of that kind. We have a rate of freight which is higher from Pittsburg to the ocean points than the Englishman can send the stuff for. He can ship for 4, 6, 8 shillings a ton to Galveston, Charleston, or any of these ports, and our freight from Pittsburg is heavier by the railroad than the freight across the water. Now, if we had not any tariff it would mean that we should have to meet that price; that any time England had a surplus and wanted to dump it in America—my idea is that the English and German manufacturers invariably make a dumping ground of America when they are slack of work; they distribute their fixed charge over a full tonnage; they get their profit out of the home trade and dump their surplus into America, and that affects the workmen. If we have to meet that competition—we can manufacture more cheaply than anywhere else in the world if it comes to certain conditions, but we could not reach out over all this country and compete with the foreigner in certain ways if we had not a tariff. We should have to take it out of the labor or shut up. While it does not directly affect the National Steel Company, it does affect us, and what affects us affects them. We consume their stuff and the Tin Plate Company does the same. We want to take a leaf out of the book of the German and the Englishman, and we want to send stuff abroad. We are now exporting at present prices, but that is due to the world-wide demand; prices are high on the other side.

EXPORTS NO SIGN THAT PROTECTION IS NOT NEEDED.

Q. You spoke of the fact that you are exporting now in spite of the great demand here. It is often assumed that when an industry is exporting it does not need any tariff for protection.—A. That is erroneous in every way. I think the steel business has shown that. The Carnegie Steel Company were practically the pioneers in exporting steel. They were doing it to make a market. They started largely in 1893. They wanted gold and could not get it. Everything was shut up and they came to us—I

was in Naylor & Co. at the time—and we were exporters and importers of steel, and we sold it on the other side. They proposed to sell for 20 per cent less than it sold for at home, lower than their cost price; and it was done to keep things moving and bring gold back to this country.

EXPORT PRICES NEARLY THE SAME AS DOMESTIC.

Q. As regards the products which you are exporting now, how do the export prices compare with the prices here?—A. At the present time we can not export unless we cut the market. A year ago we were exporting quite freely; and we expect to get back to a time when we shall export ten times what we do to-day.

Q. When you were exporting considerably, how did the export prices compare with the prices here?—A. Nearly the same.

Q. Haven't you found it advisable to do the same thing you complain of, put out your surplus abroad at a lower rate?—A. We expect to.

Q. So that you want to make a dumping ground of England, do you not; a dumping ground for yourselves?—A. Not especially Germany and England, but their colonies. We do not care particularly to go to Germany and England; we have other places. We want our shipping lines to put us on an equality. If we can get rates to the ocean and have our own ships to South America and across to England and the continent, we can go anywhere, and even if we have to sell at cost we keep the mills and the men busy and the country gets the benefit of the policy. Prices are now high in America, England, and Germany; it seems to be a world-wide demand; they are just as busy as we are.

CONSOLIDATION HELPS EXPORTS.

Q. Is there any relation between this matter of export trade and the making of a great organization such as yours compared with the smaller individual companies?—A. By having an organization such as we have we are able to employ agents all over the world and go to the expense of pioneering for business as a smaller concern could not. They could not afford with a tonnage of 10,000 a month to send a man abroad, but with 60,000 or 70,000 tons a month we can send men all over the world and make money by doing it; it is perfectly clear.

CAN COMPETE WITH ENGLISHMEN IN ENGLAND.

Q. (By Mr. FARQUHAR.) How do you manage to undersell the Englishman in the English market?—A. Cut his prices, usually.

Q. You must certainly have a saving and better machinery or advantage in output?—A. The great advantage is the raw material. England's coal price is \$4.50 and coke \$5.50; our coal is \$1.50 at Pittsburg, our ore costs less, and transportation rates on the lakes are lower than anywhere else in the world. Just now is an exceptional time, and the demand is ahead of the supply.

Q. In ordinary times you can keep up American wages and beat the Englishman in his own market?—A. Without the slightest doubt; we can whip him and make money.

Q. When you take the general run, you think Americans are able to compete with the English and Germans in their own market?—A. Without the slightest doubt, and make a profit.

Q. (By Mr. JENES.) You can lay down steel rails, for instance, in China cheaper than an English or Belgian or German firm?—A. We are doing it right along.

Q. (By Mr. FARQUHAR.) And build bridges in Egypt, I suppose?—A. Yes, and everything else. The truth of the matter is, the Creator of all things has been good to us. We have the raw material, the coal, the coke, the ability, the intelligence, and we are pushing it for all it is worth; and I think it is only a question of time, and a very short time, when we shall control the iron and steel markets of the world. I have one partner over there in the Northeastern Steel Company and another with Dorman, Long & Company, and they have absolutely given up the idea of competing with us if it comes to a close fight.

CLOSE RELATIONS WITH STEEL-MAKING COMPANIES.

Q. Is it not one of the real strong incentives you have, to make these great aggregations of capital?—A. One of the strongest and most talked about. You gentlemen have all asked the question about the directors of these companies, the American Tin Plate Company, the Hoop Company, and the National Steel Company. We think

we have pretty good directors. We think we have gotten the ability of all the steel companies, the best men, men of intelligence, men who understand the business; and we all get together and consult about these matters, and we can do a great many things we could not do in any other way.

Q. (By Mr. JENKS.) You consider that a decided advantage, having these relations existing between these different lines?—A. Decidedly so. If we want to buy steel we go to the National and talk with them. "We have an inquiry for 10,000 tons of hoops from Germany—we have sent quite a number there—we must have a certain price for this business, some of our mills are practically idle; we want to run the mills and you want a large tonnage." Mr. Reis will say, "What do you want in our line? We will make the price and you go ahead." That is where the advantage comes in.

Q. So, having these relations as to directorship, by explaining the circumstances you are placed in you get a special rate from the National Steel Company?—A. Yes, and I think individual concerns can do so. They have gotten this from the National. They want tonnage. They want to run their mills full. Their idea is to put out a big tonnage and manufacture at the lowest cost price.

Q. By having the same directorate you have more freedom?—A. Yes, though our relationship with Carnegie is very close, and frequently we buy a great deal of steel from Carnegie.

HOME MARKET.

Q. (By Mr. CLARKE.) As to the economy in production, is there not a great advantage in having an assured home market?—A. Oh, yes; no doubt about it.

Q. (By Mr. FARQUHAR.) Unless you control the home market you could not compete in foreign markets?—A. I think not; we should have a hard time of it; our home market is the best of all, and always will be.

PROMOTION.

Q. (By Mr. KENNEDY.) Who promoted this combination of which you are president?—A. It was handled by Judge Moore.

Q. Do you know how Judge Moore was compensated for this work?—A. I presume in the same way as he was compensated in other cases.

Q. Five million dollars divided between common and preferred stock?—A. I do not know that Judge Moore got \$5,000,000.

Q. You say you presume as in other cases. Do you know in what way that was?—A. I do not. Manufacturers, as a rule, recognized the point and Judge Moore has not had to go to them; they have come to him; he has had a happy faculty of organizing these companies so that the public believe in them.

Q. You do not have to go to the public, they come to you?—A. It has been so all along the line.

TIN PLATE AND

COMPANIES.

WASHINGTON, D. C., October 17, 1899.

TESTIMONY OF MR. WILLIAM H. MOORE.

The commission met on Tuesday, October 17, 1899, Mr. Clarke presiding. Mr. William H. Moore appeared at 3.30 p. m., and, being duly sworn, testified as follows:
Q. (By Mr. JENKS.) Will you give your name and address?—A. William H. Moore, Chicago, Ill.

SEVERAL CORPORATIONS ORGANIZED BY THE WITNESS.

Q. You have been active, I understand, at different times in bringing together into one organization some of these different lines of business—acting as a promoter?—A. I have at different times furnished capital for a number of organizations.

Q. Were you the promoter of these three—the American Tin Plate Company, the National Steel Company, and the American Steel Hoop Company?—A. I organized them; yes.

Q. Did you also organize somewhat earlier the Diamond Match Company and the National Biscuit Company?—A. I did.

Q. About what time was the Diamond Match Company organized?—A. I could not state the exact year; several years ago. The assets of the Diamond Match Company in Connecticut were purchased and afterwards transferred to the Diamond Match Company of Illinois.

Q. Can you tell about what time that was—within a year or two?—A. At least 8 years ago.

Q. With reference to the National Biscuit Company, when was that company organized?—A. Just before the breaking out of the war—the Spanish war; I can not give you the exact time.

Q. Will you explain to us the method employed by you in organizing the National Biscuit Company?—A. The assets of the National Biscuit Company were purchased at an agreed price in cash; not the assets of the National Biscuit Company, but the assets of several biscuit companies—the New York Biscuit Company and two or three other companies. They were all large organizations. They were purchased for cash and put together under one organization.

Q. Will you explain a little more in detail the way in which they were put together in one organization?—A. It is comparatively a simple matter and yet a difficult thing to do. At that particular time these modern organizations—there were very few of them, and capitalists did not understand them, and, therefore, it was very difficult—next to an impossibility—to get this organization through. That organization went through successfully, and possibly it has been easier for me to organize these other companies later on account of the organization of that particular company.

GENESIS OF THE AMERICAN TIN PLATE COMPANY.

Q. Was the general method followed in the organization of that company substantially the same as that followed in the organization of these later ones?—A. Practically the same as you have heard here to-day. In other words—I do not wish to volunteer anything.

Q. I should be very glad if you would state it in your own way; I was going to ask you to do so.—A. Practically the same thing applies to the American Tin Plate Company as to the other organizations. If I recall, there were 35 or 40 different plants.

Q. In the American Tin Plate Company?—A. Large and small; some owned by individuals and some by corporations, all or many of them having floating indebtedness, some of them mortgages, and practically all of them a number of stockholders

and various interests to deal with. I had organized the National Biscuit Company—or while I was organizing the National Biscuit Company a committee of manufacturers called on me in New York and requested me very urgently to take hold of the organization. At that time (they stated afterwards) they thought I was not very enthusiastic about it. I was very busy, and I knew it was a very difficult thing to do. The result was, it was delayed 2 or 3 months. As I learned, they had meetings at Pittsburg and possibly other places, and they came to me again. So it ran over a period of a year or a year and a half from the time they first called on me until the final organization of the company. In a nutshell, I found it necessary to deal with each one of the manufacturers individually and to buy their property on a cash basis. I found it was going to be necessary to have a very large amount of money, not only for working capital, but also to pay each individual manufacturer, because they did not know me; they did not know much of the organization. They were afraid they would get into some company where they would be much worse off than before. I finally prepared myself with the proper amount of capital to pay them in cash and also to furnish the working capital for expenses. Then I organized the company, and I said to the manufacturers, "Here are so many plants—35 or 40 plants. I propose to pay you cash for all these plants if you want it, each or any one of them, and I propose to put in so much working capital."

Q. How much did you put into the Tin Plate Company?—A. I think it has been stated here.

Q. Five millions?—A. Four and a half or five. You have it already stated in the testimony.

BOUGHT AND OWNED THE PLANTS PERSONALLY.

That amount of money I furnished. In other words, I practically bought and owned the plants personally, and the manufacturers did not compensate me for organizing the company. In other words, I was the lawyer and the banker as well. I obtained money from many different sources. I borrowed large amounts of money myself in order to carry it through, and, as stated, there was no prospectus issued. I did not think it the proper thing to issue a prospectus, but it was stated in the subscription paper, mentioning the number of plants: "Whereas it is proposed by a syndicate to organize a company known as the American Tin Plate Company, with a certain number of plants"—mentioning the names of the plants—"and with so much capital, and for that amount of capital the syndicate shall receive so much stock, which is all preferred stock"—you have heard it here—"and also all the common stock." So it went together in one lump sum. There was an extra amount of common stock over preferred stock. You gentlemen know that it is necessary to pay commissions, and the expenses run up very largely, and sometimes you are in danger of falling down. You will find on investigation that hundreds of organizations have fallen down in the last few months.

COST OF PROMOTION AND ORGANIZATION.

Q. If I understand the plan with reference to the American Tin Plate Company, it was this: It was stated here that there were \$46,000,000 of capital stock issued altogether, \$18,000,000 of preferred and \$28,000,000 of common, in payment for all these plants and a certain amount of cash, and there were \$10,000,000 extra left. Do I understand this extra \$10,000,000 would be considered the cost of promoting the organization?—A. The cost of promotion and organization. I have in mind a case where it was necessary to give away all the common stock and a good deal more to get it through. In other words, in order to organize a company of this kind you must prepare in advance for an amount of money sufficient to carry it through. The tin-plate men were anxious to have this company organized. If I handled it I wanted it to go through; I could not afford to have it fail. Therefore I had to have sufficient compensation to distribute as I saw fit in obtaining money necessary to carry it through. The manufacturers change their minds, often at the last minute. The manufacturers say to you, "I do not care to have any stock in the organization;" but at the last moment, when they find it is to be a success and the capital is there, they believe in its success and come in and subscribe for the stock. But you must provide for all of the capital you need to put it through.

BOUGHT THE PLANTS, SOLD THE STOCK.

Q. In the organization of the American Tin Plate Company you had taken cash options on all these plants; so, practically, you had bought all of them for cash?—A. Yes.

¹ See Mr. Reid, p. 806; Mr. Griffiths, p. 911.

Q. Then you had also this \$46,000,000 worth of stock for sale, and it was in your power to allot that stock to the different manufacturers as you thought best?—A. Yes. At the last moment, when they saw it was going to be a success, they wanted the stock which had been provided for the capitalists. In other words, the capital had been gotten together and was ready and waiting; the manufacturers saw it was going to be a success, and then they wanted a large amount of stock themselves.

Q. You held this practically in your own hands so that you could allot it as seemed to you wisest and best?—A. Yes; I owned it.

Q. (By Mr. FARQUHAR.) At any time did any manufacturer know the option of any other manufacturer?—A. Not if I could keep it from him.

Q. So there was no opportunity for comparisons?—A. It was a business transaction. Each manufacturer imagines his plant is better located, better than his neighbor's; he knows it is; he has no doubt about it.

Q. Did you have in some cases, to gain the manufacturer, possibly, to give him a little more concession than the figures showed?—A. I do not remember about that. I started the company and put it through and made it a success, and they would not think much of me if I had not. The point in the organization is this: It had to be organized on such a basis that the manufacturers would believe in it and take the stock. If I had not organized it on that basis they would not have believed in it. If they believed in it the capitalists would believe in it.

ALL HAVE MADE MONEY.

So in all these companies I have organized the stock has sold in round numbers, the two stocks together, common and preferred, at from 40 to 50 or 60 per cent premium, and sometimes even higher, within a reasonable length of time. So the practical operation has been that the labor by reason of the advance in wages—there has been an advance, as you have heard from the testimony here to-day—and the capitalists and the manufacturers have all made money, and are all satisfied. That is, I say all in the general acceptance of the term.

Q. (By Mr. JENKS.) In describing the method you have followed here, you have stated that you owned all these plants. This was your company; you had its stock for sale, and sold it as you thought best. The suggestion has been made here that this \$10,000,000 of common stock was to be for the purpose of promotion. As I understand the matter, technically it was this: You had \$46,000,000 of stock in your hands to dispose of?—A. The whole matter was at my disposal.

Q. You had to take, yourself, the risks; you had to pay, yourself, all expenses of lawyer's fees, registry fees, commissions—as you suggest, everything necessary?—A. Yes; and I had to go to the bank and borrow two or three million dollars personally, in some of these cases, and take my own chances of carrying it through.

Q. You, as promoter, took all the risks and the manufacturer none?—A. Yes. I have not gone to the bank in the usual acceptance of the term to put it through—bankers have been subscribers; the employees of these various companies also. The manager would come to me and say, John Jones wants to get a hundred or two hundred dollars' subscription, and invariably, even if it was scarce, I would arrange it so he would have it. So I should say a large percentage of the employees have made money, more money than they ever made before, by reason of the organization of the company. In many of the individual companies they were not allowed to be into

FREE OF DEBT—NO MORTGAGE WITHOUT CONSENT OF TWO-THIRDS OF THE PREFERRED

These various companies more or less owed money to the banks, and on account the different conditions you could not expect them to go into a combination and let them to take stock, because they had to have the money to pay off indebtedness. The result has been the indebtedness of these various constituent companies has been paid off.

Q. In every case you bought it free; offered a certain amount of cash for the plant free?—A. There may be some particular instance of a mortgage which could not be removed, but whenever it could be removed it was removed. It came to the public as a clean proposition, and I have especially provided in the charter that the company could not be mortgaged without the consent of two-thirds of the preferred shareholders.

Q. Is there any limit of time with reference to that?—A. No; it was a permanent arrangement in the charter, so that the directors can not run the company into debt and mortgage the property.

CAN NOT TELL WHAT HE PAID FOR THE PLANTS.

Q. (By Mr. KENNEDY.) Can you say what the value of all these plants was as turned in to you?—A. I could not.

Q. I mean the value fixed on them?—A. I could not tell that; no. It would require quite a memory to go over the various plants.

Q. What would have happened if at the last moment all these manufacturers had insisted on cash instead of stock for their plants?—A. They would have gotten it.

Q. The cash was there for them?—A. It would have been there. Of course it all has to be done simultaneously. The capitalist does not want to put in his money unless he knows the plant is going in, and the capitalist relies on me to see that it is going through right.

Q. (By Mr. JENKS.) There was a general understanding among the manufacturers that went into the American Tin Plate organization that the cost of the plants plus the cash capital furnished amounted to substantially \$36,000,000?—A. I do not know about that. They were talking originally about compensating me with a certain amount of stock, but I could not handle it that way. I had to buy the properties and own them, and handle it as I saw fit. When I got the company organized, I put the best talent in the tin-plate business into the company. And on that account it is worth a great deal more money, and if you were to take out the talent—in other words, put it this way: I believe that the talent and the good will of the tin-plate business—the trade—is worth as much as the plants themselves. In other words, in other lines of business I have in mind the good will is worth several times as much as the assets—one notable one, the Lipton Company, where £700,000 of assets are selling on the basis of £5,000,000.

Q. In purchasing these plants from the manufacturers— A. (Interrupting.) At least let me correct that; I was so told by an English gentleman but a few days ago; he said he had to do with it.

Q. In buying these plants from the different manufacturers you took all of the options as cash options?—A. Yes.

Q. So that the value that the manufacturer put on that plant, if you agreed with him, included the value of the plant itself, as it stood; included the good will that went with the business, and included, I suppose, any contracts that he had?—A. Yes; there were certain contracts that he had, and then each manufacturer was situated differently. Some had real estate in large cities, and there was no rule of three by which you could go. You had to be governed by circumstances.

Q. But then the option, the cash option, really included everything?—A. Really included everything; there may be some exceptions, that a manufacturer wanted some stock and put it in himself, in the way of stock, in case the company was organized.

Q. The general statement that has been made here to-day, as I understand it, 2 or 3 times, is that the 18 million of preferred stock and 18 million of common stock represented substantially—that is, the 18 million of preferred stock represented substantially in round numbers—the values of the plants, the amount paid for the plants. Do you agree with that?—A. I can not say; it may not be exactly.

Q. I did not say exactly; I say substantially.—A. I would not even go to that extent, substantially. That I do not know. I simply know that I owned these plants and presented this plan to the manufacturers. There were so many plants to go in at so much money. "Now, do you want any stock of this company which I own? the capital is thus and so," and he wanted the stock, because he could get, within 30 or 60 days, 40 or 50 or 60 points better.

SELECTED THE OFFICERS.

He knew before—of course he did not know exactly, but he knew toward the close that certain people would be in the management; I studiously had to avoid that, because each manufacturer wanted to be the president of the company—not every one of them, but quite a number of them—and vice-president, or in the executive committee; that all had to be kept quiet until toward the close. Then they discovered that I had selected the very best talent in the tin-plate business.

Q. You yourself selected the first board of directors?—A. I did arbitrarily. I had to do it for the protection of the capitalist as well as the manufacturer.

Q. When it came to the payment for these plants, did you quite generally give the manufacturers the opportunity of taking, instead of cash, 1 share of preferred and 1 share of common?—A. That was the general rule.

ACTUAL AND REPUTED CONNECTION WITH OTHER COMPANIES.

Q. Have you organized other companies besides these 5 that have been mentioned, the Tin Plate, National Steel, and others?—A. The Union Bag and Paper Company.

Q. Any others?—A. I have had applications to organize hundreds of others, from the marshes of Maine to the Pacific coast.

Q. These are the only ones that you have carried through?—A. These are the only ones that I have carried through.

Q. Is the plan of the organization of the Union Bag and Paper Company substantially the same as these others?—A. Yes; practically the same.

Q. Is your plan of promoting them the same?—A. Yes.

Q. In any one of these last cases have you called in banks and bankers to underwrite the stock?—A. There has been no underwriting, what is technically known as underwriting, in any of these. Bankers and capitalists all over the country, after it was known I had made a success of this organization, applied by wire, letter, and telegram to subscribe for the capital stock.

Q. If they have done so, they have subscribed for capital stock the same as any private individual would have done?—A. Yes; I can not say that bankers and brokers have not been allowed commissions in some instances. I can not say about that.

Q. (By Mr. KENNEDY.) Have you had anything to do with the bicycle combination?—A. I did not.

Q. I understood you had, that is the reason I ask.—A. I have been accused of being connected with quite a number of properties that I have not been.

NOT OVERCAPITALIZED, FOR \$100 PREFERRED + \$100 COMMON SELLS FOR MORE THAN \$100.

Q. (By Mr. FARQUHAR.) There is a public impression that these companies are capitalized far beyond their worth; any of the companies you have mentioned to-day.—A. That is erroneous, from the fact that in the companies that I have mentioned—take the two stocks together—everybody knows what they are getting when they get common stock; they know they are not getting anything that represents assets. Take the two stocks together, and they have always sold—there might be depressed and panicky times, or something of that kind—they have always sold at a very large premium. That is why they stand so well with the bankers, trust companies and societies, and private individuals, that are pretty rapidly absorbing the preferred stocks of these companies.

Q. When you were organizing these companies did any of the parties to the organization know the amount to be set aside for you as promoter?—A. There was no amount set aside for me as promoter. That question is frequently asked, "What do you charge to put these organizations together?" My reply was, "I will not charge you anything; I will buy your properties and formulate a plan, and if you do not want to go into the new plan you can take cash. That is the only way I can do, and I must organize them on the basis that you are a manufacturer, and that you believe in the organization, assuming that you have the right management, and the capitalists rely upon me to put in the right managers.

Q. Then, practically, you as founder or promoter made your own margin?—A. I made my own margin. I owned the properties, and I made my own profit in my own way, which apparently up to the present time has been satisfactory to everybody. It is a very difficult thing to organize these companies. It is a very difficult thing to get capital to go into these companies, and the public is discriminating between the good and the bad. It would be impossible to put anything now to the public which was not A No. 1, first class. The public know it right away.

Q. Are there organizations of this character, organized by other parties, that are nothing but stock-jobbing concerns?—A. That I can not say.

Q. I mean from your general knowledge?—A. I should not like to talk about anybody else's business.

Q. Without naming anyone, have you any knowledge that there are really organizations of this character that are nothing but stock-jobbing concerns?—A. I have not any personal knowledge; I merely know of rumor, newspaper talk, the same as you do, exactly, and no other way.

REASON FOR ORGANIZING IN NEW JERSEY—NEW JERSEY IS THE BEST PLACE.

Q. Is there any particular reason why all of your companies should be organized in New Jersey?—A. I think there is.

Q. Will you state them, if you please?—A. Yes; for the New Jersey law is very much better for the organization of these companies, very much better.

WE SHOULD COPY THE ENGLISH LAW.

Nearly all of these laws of the different States contain some objectionable feature. My idea is that by and by legislation in this country will be practically the same as in England. Their laws were very severe a long time ago in England against any large combination or corporation. They were all repealed, and now you can organize a corporation and do almost anything which is legitimate, and the securities of the industrial corporations are selling on the London Exchange, London market, on a basis of 3 or 4 per cent. Capitalists have said to me frequently in this country, "We do not know where we are going to put our money. We only get 2½ or 3 per cent on a bond, whereas these preferred stocks of the better organized companies, where they do not owe anything, we get on a basis of 7 per cent, and we do not know why it doesn't stand as well as a bond." Some of the most conservative men of this country are arguing that way, and there are some men and some women of minor means, whose incomes are small, that naturally are enabled to have a larger income by being able to buy preferred stock in these companies.

Q. But when you draw a comparison between English law and American do you not take into account that you have only one kingdom to deal with there and one lawmaking power and one supervision, whereas you have all the corporation laws of 45 States to deal with, with no national control?—A. We have 45 States, but we only incorporate under the laws of one State, and we have a right to sell goods in any State of the Union.

EACH STATE SHOULD PROTECT ITS OWN CORPORATIONS.

Q. You spoke as if the law of New Jersey was more liberal than that of any other State of the Union for these organizations. Is it fair that the State of New Jersey should give an incorporation with more liberal features and possibly less safeguards than the State of Illinois, and that New Jersey could do Illinois business?—A. I think not; I think the Illinois law, until recently, the past 3 or 4 years, has been very similar for organization.

Q. Well, the State of New York?—A. I do not know very much about the State of New York. All companies look more or less to what the taxation will be, whether it is reasonable or unreasonable. I do not think it is fair for different States to tax these companies and drive them out of the State, and drive them into the State of New Jersey. I think the State is working against its own interests.

Q. But is not there such a thing in law and justice as a comity between States, so that one State ought not to permit an unjustly formed corporation, or one with greater powers and more powers to issue stock and sell stock than it can have under its own laws? Is it not a right that a State ought to have, the protection of its own corporations?—A. I think each State ought to protect its own corporations. I think they will do so more and more as they understand these organizations and the situation they are in; the same as railroads.

NEED OF CORPORATE ORGANIZATION.

My idea is that if it were possible to dissolve all the industrial organizations we should have the greatest panic this country has ever known. There is the strongest kind of a demand all over the country, in almost every line of business, to organize, and the trouble is they do not know how. It takes time; it takes education; and I think, incidentally, this commission is doing the right kind of work; it educates the people and they will understand it better.

Q. Do you see any difficulty in the future, the same as overcame a great many of the English companies under the limited copartnerships or incorporations of years ago, that may come out of the issuing of stock under the New Jersey law that is not covered by any value in the assets or the business?—A. I do not see any difficulty; I think the New Jersey law is a fair law. I think many provisions of the New Jersey law will be adopted by legislatures in other States. The trouble is they do not understand the New Jersey law.

Q. Is there any more liberty in the laws of West Virginia than in the laws of New Jersey?—A. I think there is; yes.

Q. And where you have more liberty you have less safeguards?—A. Yes; perhaps it becomes fashionable to go to New Jersey to organize, and there is a large amount of capital, as is well known, in New York, and the New York capitalists like to have companies organized under the laws of New Jersey. Ordinarily, being a Western man, I would rather have an organization in the State of Illinois; but there has been a good deal of persecution of corporations in Illinois, which makes it unpleasant at

times. I do not think there is as much there now. My experience is that the laboring man in all corporations I know anything about favor them; I mean intelligent laboring men. We can afford to pay them larger wages. As an illustration, this tin-plate business. If it had run along the way it was, as you heard in the testimony of Mr. Reid, several of these tin-plate companies would have gone into bankruptcy. I know, because I paid them the money to clean up their indebtedness.

A NATIONAL CORPORATION LAW NOT DESIRABLE.

Q. Do you think it would be an advantage to have a national law for incorporations which would give supervision over all the States?—A. I think not. I think this is all going to regulate itself; I think it will legislate itself—the law of supply and demand. There can not be a monopoly in this country.

CONSOLIDATION TENDS TO REDUCE PRICES.

Q. You do not think that this large capitalized association of 50 millions can arbitrarily make prices for the consumer?—A. I think not. I think the tendency is toward very much lower prices. In fact, corporations that I know of that have been running for a long time—for instance, the Diamond Match Company; matches are sold at constantly reduced prices each year. Of course, the company could not do it in the first place, because the plants were not in proper shape and proper condition. They are getting in new machinery and improving their plant, comparing the cost of one factory with the cost of another, and in that way they have reduced the cost of production; and in that way the prices have been reduced to the consumer. It has got to be so with all of these companies; the companies can not live unless they do business on that basis. All of these companies have got to put their plants in proper shape to meet the severest kind of competition, and if they can not get a fair, reasonable price for their product they can not afford to pay a fair price for labor.

IF OTHER STATES MADE LAWS AS LIBERAL, WOULD NEW JERSEY CORPORATIONS GO TO THEM?

Q. (By Mr. KENNEDY.) You say that you think the New Jersey law is very liberal, and that the other States will follow in the wake of New Jersey in this matter?—A. I think the New Jersey law is not only liberal, but fair.

Q. You think that the other States will follow, eventually?—A. Adopt many of its provisions.

Q. Assuming that nearly all the industries have combined and have been incorporated under the laws of the State of New Jersey, then other States model their legislation upon this New Jersey law. What would be the effect; would those corporations give up their organization in the State of New Jersey and go to other States?—A. That would be a difficult question to answer; it is frequently done, but I can not answer that.

Q. What do you believe would be the result?—A. You mean if all the business in the country organized under the laws of New Jersey?

Q. Yes; it is rapidly being organized under the laws of these three States—New Jersey, Delaware, and West Virginia. Now, it is probable that within a very short time, within a few years if it goes on as it has been going on, all industries will be organized and incorporated under the laws of one of these States. Then, if the other States, Illinois, for instance, should enact legislation the same as those States, would Illinois be apt to get any of these corporations?—A. I think before that is done the other States will change their laws. I think the State of Illinois is inclined to be a little more liberal now; for instance, the gas companies were attacked seriously for a few years, and finally the legislature passed a law legalizing the incorporation of this gas company, so that a person investing in the stock should be sure he had something safe and secure.

Q. Is it your idea, if there were a dozen different States in the Union with laws as favorable as these of New Jersey are, that the American Tin Plate Company and the Steel Hoop Company would continue as New Jersey corporations?—A. Probably in the case of these particular companies, yes; because it is necessary for them to get together and consult more frequently, and as they have already been incorporated under these laws they probably would not be changed, those particular companies. It might be different with reference to other companies. That is, as long as the State of New Jersey treats the companies fairly.

Q. Well, these corporations are great sources of revenue to the State of New Jersey are they not?—A. No doubt they are. I do not know exactly what they do, but I

understand some portion of it goes to the improvement of roads, schools, etc.; and the laws in the State of Delaware are somewhat similar, in competition with the State of New Jersey.

Q. And if the other States participate in this rich revenue, they will have to be pretty lively with their legislation, will they not?—A. I think so, sir. I think the tendency is more liberal; I do not mean liberality which does not mean protection to the shareholders. In every well-organized company the stockholders are allowed to see the books, and there is no reason why they should not see the books, and practically see what is going on. It is only some shareholder who holds a few shares that wants to make trouble.

AS MUCH WATER IN MASSACHUSETTS COMPANIES AS IN OTHERS.

Q. (By Mr. FARQUHAR.) On account of the anti-stock-watering laws of Massachusetts there is not much likelihood of any of these companies going there?—A. I think they have as much water in Massachusetts companies as in any others.

Q. Have they not got some pretty strict laws in the State of Massachusetts as to watering stock?—A. They have, apparently so. I think the water is there just the same.

ENGLISH CORPORATION LAW.

Q. (By Mr. JENKS.) I understood you to say that you thought that as time went on we should gradually approach nearer the system of the English law. In what particulars do you think English corporation law is superior to that of New Jersey?—A. Well, I do not know that it is. Perhaps the New Jersey law is somewhat on the lines of the English law; and as a gentleman said to me not very long ago, a man well versed in law: "If my son was going to be a lawyer I would advise him to go to England and study for a year, because English laws, with reference to corporations, are going to be the laws of this country."

Q. Can you designate any special particulars in which you think the English laws are superior?—A. I can not. I do not know whether this cuts very much figure or not, so far as the practical operation of the corporations is concerned, or as far as the public is concerned, but under the English laws, just before the annual meeting, a printed copy of the condition of the company is sent, I think, to each stockholder, and then after this statement Mr. Jones retires and offers himself for reelection as a director. I do not know whether this is of much benefit or not, but each of these companies must make a statement to the stockholders before each annual meeting. The general impression is that in the organizing of these large companies there is a great concentration of power. On the other hand, it is a distribution of power; and instead of a few persons owning these various companies, the stock is widely distributed.¹

DESIRABILITY OF PUBLICITY.

Q. Would you favor a greater degree of publicity with reference to the condition of these companies, such as you imply there is under the English law?—A. I do not know that you need any more publicity than that the company should present a statement to the annual meeting; and, as I understand, it is required by the New Jersey law—a full statement of the affairs of the company.

Q. (By Mr. C. J. HARRIS.) Does it have to be a sworn statement, or is there any safeguard taken that that statement should be correct? What I am trying to get at is, can not the corporations that are so disposed present more or less of a doctored statement?—A. They can; it does not make any difference what the laws are.

NO FEAR OF ADVERSE LEGISLATION.

Q. Do you apprehend any trouble from the fact that you are incorporated in 1 State and are doing business in 45 other States?—A. I do not. We have the right to do it under laws of Congress.

Q. But suppose there are certain States, as there are, that pass legislation adverse to these national companies?—A. That exists now. We are doing business in those States now. They want our products and they have to have them.

Q. Might not that style of legislation become rather dangerous and burdensome after a while?—A. It might be, yes; but that will all regulate itself. This country is never going to pass legislation that drives the manufacturer out of business.

Q. Would not national legislation do away with that and give companies more security than they have under the present system?—A. I do not see how it would.

Q. (By Mr. FARQUHAR.) Is there a lower taxation in the State of New Jersey than

¹ Compare Mr. Stetson, p. 973: "Nine-tenths of the corporations are controlled by boards of directors which either own or absolutely represent a large majority of the stock."

there is in any other State for corporations?—A. I can not say that; I do not think so; Judge Dill can tell you that. My impression is we are paying a good, strong tax in the State of New Jersey; that is my impression.

Q. But the pro rata; the larger your capital the less you pay?—A. Yes.

Q. Proportionately?—A. Yes.

THE OLDER MEN WANT TO RETIRE.

Q. (By Mr. C. J. HARRIS.) What will become of all of these men who have been owners of these companies, these individual owners, when they are all consolidated into one—under one management—what avenue is there for them?—A. That question is frequently asked me by the men who sell out—"What am I going to do?"—and I say to them "Are you running your plant well?" "Yes, I am;" "Do you imagine you could run it just as well under the organization?" "I can." Well, if he can do it, he runs it; there will be practically no change; in other words, there are not enough good men to go around in these organizations; that is the trouble we have.

Q. (By Mr. KENNEDY.) Do you find men of middle age, or past middle age, generally in control of these establishments?—A. I find in nearly every one of these establishments, the capitalists, or bankers, of middle age, or past middle age, who want to retire, want to leave it with the younger men, who are now running it to-day.

Q. You have eliminated the older generation and brought in new blood?—A. Who wished to be eliminated.

Q. I notice the presidents are all young men now?—A. Well, you have a pretty good idea of what the management of these companies is from what you have seen here; and the public believe in them, because the management is good.

PREFERRED AND COMMON TOGETHER BEAR A PREMIUM—WHY?

Q. (By Mr. CLARKE.) I understand you to say that the preferred and common stock of these companies together bore a premium?—A. Yes.

Q. How, then, are they selling at less than par on the market?—A. I mean the two together; that is, if you were the owner of a plant and sold it, you received a hundred shares of preferred and a hundred shares of common, and those two together are selling at a premium, and have done so, selling at 40 to 50 points premium; take, if you please, the preferred at 95 in the case of some company, and the common at 50 and add the two together and it makes a premium. In other words, if your common stock had not been there, the preferred stock would have been selling at that premium.

Q. What, then, is the basis of the value of the surplus of the common and preferred stock over the cost of the properties and the good will involved?—A. I can not tell you that; I merely know that I had the plants and organized the companies on that basis, and practical men believe in them and subscribe to them.

Q. In your opinion, are any of these companies overcapitalized, taking the preferred and common together?—A. I think not. The management and the common stock together will in turn be of more value than the plants themselves.

Q. Are you a stockholder in these companies?—A. I am.

Q. Are you a director or other officer of any of them?—A. I am. I am one of the executive committee.

Q. Are you earning something on both classes of stock?—A. We have money in the treasury.

Q. And are you likely to continue if there is a condition of general prosperity?—A. If there is a condition of general prosperity we shall continue to do so, as much so as the railroad earnings; and the industrial companies are here to stay.

(Testimony closed.)

FEDERAL STEEL COMPANY.

WASHINGTON, D. C.,
Thursday, October 19, 1899.

TESTIMONY OF MR. FRANCIS LYNDE STETSON,

Counselor at law.

The commission met at 10.45 a. m., Senator Mallory presiding. Senator Mallory introduced the witness, Mr. Francis Lynde Stetson, of New York City, counselor at law, who, being first duly sworn, testified as follows:

Q. (By Mr. JENKS.) Will you give your name and address?—A. 15 Broad street, New York; Francis Lynde Stetson.

Q. And your business?—A. Lawyer.

Q. How long have you been practicing law?—A. I was admitted in May, 1869, in the city of New York, and have practiced there ever since.

FEDERAL STEEL COMPANY—CAPITAL—ORGANIZATION.

Q. Were you familiar with the organization of the Federal Steel Company?—A. I was.

Q. At what time was it organized?—A. In September, 1898.

Q. Will you be kind enough to explain to us the main provisions of the charter of the Federal Steel Company?—A. It was intended to be self-explanatory; I thought we had so made it. I can answer you any questions you desire to ask.

Q. If you will kindly outline some of the leading provisions of it, there may be some questions in connection with it that may develop a little further on.—A. I am most willing to do it, but unless my attention is directed to a particular point I should not know what to say. It is like a sailing master who is looking out on the surface of the ocean; he does not see anything unusual, but the passenger does.

Q. (By Mr. C. J. HARRIS.) Is not the amount of capital stock rather unusual for that industrial combination?—A. Well, perhaps it bears a closer relation to value than it did in some of them.

Q. (By Mr. JENKS.) What is the capital stock of the Federal Steel Company?—A. You will have to let me look at that memorandum. I go through these matters and they pass out of my mind, and I could not tell you just what it is. [Looking at paper.] The authorized capital of the Federal Steel Company was \$100,000,000 preferred and \$100,000,000 common.

Q. How much of that was issued?—A. Oh, that I can not tell you, but it was understood—my recollection is that \$98,000,000 was originally issued. I have never had anything to do with the Federal Steel Company—that is, since the time of organization, October, 1898, and it has entirely passed out of my mind.

Q. Did the Federal Steel Company itself acquire directly the properties which are now managed, as it is supposed, under the direction of the Federal Steel Company? Did they acquire the properties themselves?—A. What has been done since I can not tell you, but at the outset it was the acquisition of the stock of three companies—the Minnesota Iron Company, the Illinois Steel Company, and the Elgin, Joliet and Eastern Railway Company.

Q. That is, the company acquired the stock instead of acquiring the properties?—A. The company acquired the stock instead of acquiring the properties.

Q. Did it acquire the total stock of all these companies, or simply a majority of the stock?—A. It invited—I do not say it invited—but the vendors invited the stockholders of these companies to sell their stock, it being understood that not less than a majority would be accepted; and as a result, substantially all the stock of each of those companies came in, according to my best recollection.

Q. To whom were those sales of stock made?—A. That I can not say without reference to the papers, which I have not with me. I had no intimation until this morning of what subject I was to be examined on, so I speak with some difficulty;

but my recollection, my best recollection is that the shares were deposited with the Colonial Trust Company of New York for the purpose of their purchase by a syndicate of which J. P. Morgan & Co. were managers; and that when deposited in an amount exceeding a majority of each company, then J. P. Morgan & Company in behalf of the syndicate exercised the option of delivering to the Federal Steel Company the shares thus deposited. Judge Gary is here and knows better than I about it and will correct me if I am in error.

Q. And your memory is that the shares were to be sold substantially to this syndicate by the stockholders of these different corporations, and that this syndicate then was to deliver them to the Federal Steel Company?—A. No; that the stockholders were to sell and deliver to the company upon and under an arrangement made for such sale and delivery by the syndicate through its managers, J. P. Morgan & Co. I do not think that the title of the shares ever passed into the syndicate or into the syndicate managers.

Q. What was the special relation of the syndicate, then, to this deal—simply acting as agents?—A. Well, I should say that this syndicate, under these conditions, is a good deal like the ordnance bureau down here when it calls for tenders for a gun. It calls for one part from one manufacturer and one part from another, and then it assembles them. I should say on the whole that the syndicate, or any other syndicate rather, assembles and collects the properties or securities to be transferred.

Q. And then transfers them?—A. Then transfers them, or causes the transfer to be made; sometimes transfers them and sometimes causes the transfer to be made.

Q. What was the general nature of the contract that the syndicate had with the Federal Steel Company with reference to this transfer?—A. I have no recollection of that; and if I had, I could not say.

Q. Why?—A. Because I should consider that a matter between myself and my clients.

Q. On the ground that you were counsel for them?—A. That it is not my secret. They can tell if they will; that is theirs.¹

Q. I asked this question to learn if you were acting as counsel?—A. Yes; I was counsel for the syndicate.

Q. As you understand it, does the Federal Steel Company, by holding a majority of the stocks of these different companies, control them? Do these separate companies still have a separate, individual existence?—A. I assume that they have. As I say, I have paid no attention to these matters since September, 1898.

Q. That was the form in which they were organized?—A. That was the initial form.

ACQUIRING PROPERTIES—ACQUIRING STOCK.

Q. Would you explain to us from the purely legal point of view how that arrangement differs from the old form of trust organization as it was in the Standard Oil Trust?—A. That I do not know anything about; I have never paid any attention to that. I do not know anything about the Standard Oil Trust.

Q. You do not know what that was?—A. I do not know anything about it; I never saw a certificate or had anything to do with it. I can say, on the other hand, how it differs from the International Paper Company, which I organized.

Q. Well, if you will.—A. That corporation was organized under the laws of the State of New York. It acquired the physical properties of 12 or 15 corporations, and those were immediately dissolved. There was absolute ownership and no existence continuing in the former corporations. They merely got the other corporations by purchasing the physical properties which were owned by the others.

Q. That was the point of my question. So far as these larger corporations are concerned, that we have been getting testimony about here, they have usually acquired properties?—A. I should say not. It is mostly the other way.

Q. Those that we have examined?—A. Oh, I beg pardon; but I should say it was not the general plan of incorporation.

Q. As regards the instance you spoke about, the Federal Steel, they had acquired the stock. I wish to have you explain, if you can, the different methods of management. We can leave that to the next witness if you are not familiar.—A. Oh, I do not know anything about that.

WHY INCORPORATED IN NEW JERSEY.

Q. Will you explain to us why it is better to incorporate under the laws of New Jersey than under the laws of New York? What special advantages, if any, do the New Jersey laws give to incorporations?—A. Well, it depends upon what you wish to do. If the Federal Steel Company had had a considerable property or plant in the State of New York I should have advised its formation under the laws of the

¹ See page 987, footnote.

State of New York, as I did in the case of the International Paper Company, where the principal property was in that State. But the Federal Steel Company contemplated the acquisition of interests in properties that are situated only in Minnesota, in Illinois, in Ohio, and in Pennsylvania. The question then came, shall we organize in any of these four States. There were sufficient reasons why it was not desirable to organize in any one of those four. I will say briefly that the laws of Pennsylvania do not permit the ownership of real property by a foreign corporation, and the rate of taxation in Pennsylvania upon a domestic corporation is very high. The laws of Ohio, under the constraint of their constitution, impose a double liability upon all stockholders whatever the conditions. The laws of Illinois, as they have been administered and interpreted—not only there but in the State of Ohio as well—are exceedingly inhospitable to the development of large business enterprises; and the laws of Minnesota also impose a double liability upon stockholders. By that process of exclusion, in consequence of those four features as well as others, they drove these corporations out; the laws of those four States. Then being foot-loose, of course we looked for the most favorable conditions, and at that time I suppose the most favorable conditions were those presented by the laws of West Virginia and the laws of New Jersey. The statute of West Virginia fixes a limit on the amount of corporate capital; and, by the way, I should say that the laws of Pennsylvania did the same until this winter, when they have been enlarged. And that left New Jersey certainly as available as any other, and there was no reason why we should not go to New Jersey as well as New York, because neither is the home of the corporation.

STOCKHOLDERS' RIGHT OF EXAMINATION—THE STATUTORY RIGHT ONLY.

Q. I notice, with reference to the power that should be given to the board of directors to determine what power or what privilege shall be given to the stockholders as regards the business of a corporation, that this provision is made [reading]: "The board of directors from time to time shall determine whether and to what extent, and at what times and places, and under what conditions and regulations, the accounts and books of the corporation, or any of them, shall be open to the inspection of the stockholders; and no stockholder shall have any right of inspecting any account or book or document of the corporation, except as conferred by statute or authorized by the board of directors, or by a resolution of the stockholders." What are the special privileges of examination that are conferred by statute in New Jersey?—A. I forget. I do not pretend to retain them. I never testify as to what a statute contains unless I have got it before me; certainly where you have to examine similar statutes and provisions of different States.

Q. You do not recollect whether the New Jersey law is more or less liberal in that particular than the laws of the State of New York?—A. I do not. I do not think that that was the point. I think the point there was to cut off all the right except that which the statute gave, and not leave an indefinite common law or equitable power to be exercised, which, it has been held in some cases, does continue in addition supplementary to the statute. It is very difficult for an administrative officer, usually a clerk not of high class who has charge of the books, to know whom he shall recognize and whom he shall repel when a request is made for an examination of his books. Certainly, the mere idle curiosity of a volunteer does not justify the interruption of the business of the corporation, while most respectful attention should be given to anyone who has a real interest. My theory, and I think the theory of most corporation lawyers, is that it is most desirable that the rights should be defined in something that can be read so that "he who runs may read;" and that is the purpose of that; not undertaking to affect the statute, but to say, "you shall have the rights that are given you by statute and you shall have no others." And that is permitted by the general provisions of the corporation law of New Jersey, permitting the articles to define or restrict the rights of stockholders.

POWER OF THE CORPORATION TO BUY ITS OWN STOCK.

Q. There is a further provision here with reference to the powers of directors in other particulars that perhaps you can explain in a similar way. It says [reading]: "The corporation may use and apply its surplus earnings, or accumulated profits authorized by law to be reserved, to the purchase or acquisition of property, and to the purchase or acquisition of its own capital stock from time to time, to such extent and in such manner and upon such terms as its board of directors shall determine." Is it usual to make a provision of that kind that a company may purchase its own stock?—A. No; it is not.

Q. Can you explain why?—A. But I have always put it in in any place where the law permitted me to do it. In the laws of the State of New York there has been, though I do not suppose it survives in all cases, an absolute prohibition against a cor-

poration using any of its own funds for the purchase of its capital stock; but I have never seen in reason and justice why a corporation, out of its surplus, might not be reducing its capital stock. Of course, it is entirely improper that any of the funds of the corporation, other than those constituting the surplus, should be paid back to the stockholders under a guise of purchase of corporate stock. But when the corporation is solvent and has a surplus, I can see no good reason why that surplus should not be so used. It was intended here to confer this right.

Q. To give the directors the power, if they had a large surplus, to use it in that way, instead of allowing it to remain as a surplus?—A. It is simply a more convenient form of reducing capital, which is permitted by all laws. It is another form of doing that.

POWER OF THE DIRECTORS TO INCREASE THEIR NUMBER.

Q. That is what I wished. Is it usual in the case of corporations to give to the directors so much power as there is here in the way of increasing the number of directors by the board of directors itself? [Reading]: "The number of directors at any time may be increased by vote of the board of directors, and in case of any such increase the board of directors shall have power to elect such additional directors, to hold office until the next meeting of stockholders, or until their successors shall be elected."—A. Well, is it usual?

Q. Yes.—A. Yes, with those corporations properly formed. This will show you exactly what is needed.

Q. That is what I wish.—A. You start a corporation and it is exceedingly unhandy at the outset to have 13 or 15 directors. You have a small body, say 3 directors, as in this case. You go through all the preliminary work and establish your corporation and do your work and then you want to complete your original organization. It is a very unwieldy and difficult thing to call together a stockholders' meeting in compliance with all the forms of law for the purpose of an increase. But if you put in such a provision as that, your directors can immediately increase, and that creates a vacancy which the directors are able to fill until the next annual meeting. That is all the purpose of that.

Q. The purpose, then, is really to provide for the convenience of the organization?—A. At the outset. If it operates badly afterwards the stockholders can ordinarily overcome that. It is a mere matter of convenience for organization.

NOTHING IS UNDUE THAT IS AGREED TO—ABSOLUTE FREEDOM IS BEST.

Q. And in your judgment it does not in any way limit the power of the stockholders themselves unduly in the control of their organization?—A. Well, that word "unduly" is the word that troubles me. That it limits them I have no doubt. But it is a mere question of what the parties choose to agree to. It is like any bargain; two parties get together and say, "We will do this and this under these conditions," and, having entered into this compact, nothing in conformity with it can be unfair; nothing can be undue.

Q. If you will permit me to explain the purpose of a question of that kind. The commission wishes, of course, to find out as fully as it can the effect of the different laws in some of the different States along these different lines; and when I ask you the question as to whether this gives undue power as against the stockholders, the question has this bearing: In your judgment, is a provision of law of this kind wise or not? Is it best to put so much power in the hands of the board of directors? Is there danger of its being abused?—A. I understand your question, and that is where I come to the greatest of all judges of his time, Sir George Jessel, who says that nothing is so desirable as liberty of compact; that the greatest of all liberties is the liberty of compact. Now, there is no such thing as due or undue amongst men of mature mind who are competent. Give them absolute freedom of compact. That is not, I say, due or undue. If the parties want to make a corporation of that kind, let them make it. It does not do anybody any hurt except themselves, and "Volenti non fit injuria." It can not hurt a man that wants to do it. Therefore, I say again the word "undue" disturbs me.

Q. Your proposition is, as a lawyer, that it is wise to give the utmost freedom in all matters of that kind?—A. Absolutely. This paternal system or idea is at the root of most of the evils that underlie what the public complain of in corporations. They have been coddled into the belief that when they deal with a corporation they have got to have some kind of protection and may rely on some kind of protection that they do not invoke in their dealings with individuals. Every man who deals with an individual inquires as to his credit before he makes up his mind as to whether he will extend to him the facilities of his credit or not; but in some way, when he comes to the same man organized into a corporation, then he is taught that he can rely on something besides the credit of that institution, can rely on a report or statement it makes, which is fallacious. He may, if the report is untrue, punish

that man criminally, which he seldom does; but that does not pay him for the credit that he has extended. And that false prop and delusive support upon which the public are invited to rely by many of these laws is a real injury, in my honest belief, and is not any benefit.

THE DUTY OF THE TRUSTEE IS LIMITED BY THE TRUST.

Q. (By Mr. C. J. HARRIS.) The tendency in all this, it seems to me, would be to give the directors, as was said here, an undue power in relation with the stockholders. The powers of the stockholders and the directors of a corporation are not on an equality. I understand that the directors of a corporation are the trustees for the corporation; they have the whole power in the corporation where the stockholders have not; and for the sake of putting them on an equality, they should be subjected to all those laws which are specially established to prevent a trustee from doing wrong to those whose interests are intrusted to him?—A. A trustee, as I understand it, is never held to any trust other than that created by the instrument appointing him.

Q. Yes.—A. Therefore the question is, What is put into that trust? I agree with you absolutely that a director must be absolutely faithful to his trust and fulfill his trust; but what is the trust? There is the charter, and when the parties came together they expressed their duties and powers and rights there; and the rights of the trustee under his trusteeship and under that instrument are just as sacred as the rights of the cestuis que trustent; the one is just as sacred as the other.

LEGISLATION CAN NOT MAKE THE WEAK STRONG; EXPERIENCE MAY.

Q. I do not question that from the legal standpoint that may be true; but my idea is that in these large aggregations of capital where men, women, and children are holding stock the stockholder nowadays may need a little more protection than you seem to be inclined to give him?—A. The legislature can not give it to him, nor can you or I. There is not anything yet that takes incompetents, lunatics, and paupers and makes them competent, responsible business men. You can not do it, and you have got to trust to the development that comes from the experience of having your property at risk. Othello's great point was, "I have had losses, too," and I would not give anything for the business qualifications of a man who has not had something at risk. As long as he thinks he is buoyed up by some life-preserver he will not make a success, nor will the community and the world get on through the efforts of that kind of coddling.

Q. You think there would have to be some kind of legislation other than that done through the legislature?—A. Which?

Q. What we are trying to find out is whether there is any demand for that sort of legislation?—A. Of course, you have asked me before this commission not alone to testify to facts, but also to express opinions. I have these opinions with great positiveness, and I have delivered them, I hope, with courtesy—but certainly with great positiveness.

DIRECTORS GENERALLY OWN OR REPRESENT A LARGE MAJORITY OF STOCK.

Q. (By Senator MALLORY.) Do you think now, as a corporation lawyer, that it is good policy to give directors of corporations power to increase their own number without consulting the stockholders?—A. I think so.

Q. You think that is good public policy?—A. I do, for the reason that nine-tenths of the corporations are controlled by boards of directors which either own or absolutely represent a large majority of the stock. This theory that there is a large body of unknown stockholders that have got particular interests that they want to control and can not do it because they are fettered by a board of directors without any substantial interest is absolutely fictitious. The interest and the agonies are in the board of directors, and they are not in the stockholders. When it comes to a question of financial stress, the men that have to go about and put their names to papers are not the stockholders; they are the directors that put their backs under the load and their fortunes at risk, and I would give always—all that I have in this world is in the form of corporate investments—and I am only too glad to put it at the risk of men who are directors where I am not, for I am a director in very few companies.

Q. Well, that is hardly an answer to the question?—A. It is; pardon me, I should not have said that it is, Senator, but it is intended to be.

LIBERTY OF CONTRACT—NOT LIBERTY OF ACTION.

Q. The only point I want to get at is your view, and you seem to be under the impression that there is too much law restraining the liberty of action of the gov-

erning powers of corporations. I think you expressed an opinion to that effect?—A. Liberty of contract. I did not say liberty of action—liberty of contract. I would allow the corporations, if they so wished it, to contract there again. I would have it—if I may illustrate it, pardon me, by a story of John Van Buren. When he organized the Manhattan Club in the city of New York, he put all the powers in the board of directors, and some one said to him, "Why do you do this? Up at the Union Club"—which was a social club of a very high order—"they do not do that." He said, "They are different clubs. We will trust the body up there, but we will not down here." And the question, after all, is what are you going to do in any particular body. If a man wants to contract with the directors and protect himself, I will give him that freedom, and I will say that in the absence of a contract exempting the board of directors from limitation, I would leave them under general limitations of law.

STOCK BOOKS SHOULD BE OPEN TO STOCKHOLDERS.

Q. (By Mr. JENKS.) As regards the provisions of law which permit stockholders to examine the stock books of corporations at any time so that they can find who their associates are, the amount of the holdings of each associate, and so on, do you favor that kind of a law giving that privilege to stockholders?—A. I do, certainly. I think the law of New York, which I assisted in framing, has that provision—that is, that every stockholder and every judgment creditor should have that right.

Q. You would not give the power to the board of directors to refuse to permit stockholders to examine the books?—A. No; but I would give the power to the board of directors of providing a convenient hour. Simply say, "You must come at such an hour, otherwise the books can not be examined"—but only for the purpose of convenience. I think that every stockholder and every judgment creditor should have the right of knowing who the stockholders of a corporation are.

DIRECTORS GENERALLY FAITHFUL, IN SPITE OF PRIVATE INTERESTS.

Q. If I may continue for a moment what you were saying a little while ago as to the powers of the board of directors—you say that the board of directors represents regularly the interests of a majority of the stockholders?—A. Generally.

Q. Of course, that is true so far as the stockholding is concerned—very frequently not as far as numbers are concerned, usually not. Would you think that it is often the case that half a dozen, or not over a dozen, leading stockholders, who hold a majority of the stock among them, may have interests opposed, say, to a thousand or several thousand stockholders, so that the few holding a majority, who themselves are probably directors, might find it for their individual interests to so direct the affairs of the corporation that it would be for their interest and not for the interest of the majority of the stockholders in number?—A. That is conceivable.

Q. May I follow that up a little further? Is it particularly uncommon in your judgment?—A. Oh, no; it is not at all uncommon; it is not at all uncommon; but I have never, in a case where I have been called in, been conscious that that power was exerted in that way. I think that I have seen men in two different corporations become as keen on one side as they were on the other when they passed into different boards.

Q. Do you think that the danger is one that would call for any limitation by law?—A. I do not. I think you would lose on the other side what you might gain on this. You lose efficiency of action.

LIABILITY OF STOCKHOLDERS SHOULD BE ABOLISHED.

Q. The question is suggested here as to whether you would abolish the limit on the liability of stockholders that we have in most States, I suppose; the limitation to the amount of capital stock held?—A. I would put into every constitution what there used to be in the constitution of Kentucky and what there is in the constitution of West Virginia, that there should be no liability. Instead of abolishing the limitation or increasing the liability, I would abolish the liability.

Q. Will you explain just what you mean by that?—A. It is not a question of public policy there; it is a question of credit. And I have explained that I would drill this into every man: That when he deals with a corporation, he is dealing with it just as he deals with an individual. He has got to find out whether that corporation is responsible; and the law, the common law, is abundant and adequate to provide remedies for a man who makes the inquiries and who is told untruly at the time of the particular transaction. This whole question of individual liability has been better stated by Mr. Morawetz in a letter he wrote me at one time, in which he said that it was "a pitfall for the unwary and a windfall for the undeserving."

WHY INCORPORATORS GO TO NEW JERSEY.

Q. (By Mr. FARQUHAR.) Is it a fact that under the laws of the State of New Jersey a good deal of New York capital and Eastern capital has gone into that State?—**A.** A great deal of New York capital has gone into the State of New Jersey, and the reasons why it has gone there have been of two entirely distinct classes. The one concerns the question of taxation. The taxation of corporations in New Jersey has been less than that in New York. The other is concerned with the liabilities and immunities of stockholders and directors in New Jersey. In New Jersey there is no personal liability of stockholders in addition to the amount paid in for the capital stock; that must be paid in full. There is a mistaken idea abroad that the law of New Jersey permits stock to be issued as fully paid when it is not fully paid. That is not so. The law of New Jersey merely declares what is the common law anyway and has been so interpreted by the Court of Appeals of New York, that the judgment of the board of directors exercised in good faith as to the value of property received for stock—and value is always a question of opinion and not of fact—is conclusive, if there be good faith. That is merely the common law. Another is the general immunity of directors from statutory liability. Another, and quite as important in most cases, is that in New Jersey there is no limitation on the amount of indebtedness which can be created by a corporation in comparison with its corporate stock. In many States the law says that you shall not create an indebtedness in excess of the total capital stock. That is not prohibited in New Jersey. I think those three particulars of the New Jersey law are quite as agreeable to investors or to proposing incorporators as the comparative immunity from taxation.

PUBLICITY FOR COMPANIES ORGANIZED FOR PUBLIC WORK, NOT FOR THOSE IN TRADE.

Q. Is it or is it not a fact that the corporation law of the State of New Jersey is framed in nearly all its sections to safeguard the stockholders; supremely to take care of the company as an organized company; that the law is framed for the benefit of the stockholder of the company and for the company itself and not to protect the public?—**A.** If I understand you, it is this: That the theory of New Jersey is that which is really the theory of every State that grants a corporate charter, namely, that it is for the benefit of the State that the corporation should be created. That must be the theory of every act of incorporation, either general or special; that the State, having invited this creature to come into existence, gives it a chance to live.

Q. Now comes the other question. From all your associations and relations, as far as the public know and this commission know, you have not been associated, either you or those who have financed and carried on these operations, in what is commonly called stock gambling. Now, would you state how it is possible so to amend the laws of New Jersey, or any other State, which are so liberal in providing for company organizing, that the public will be safeguarded in knowing what the worth of the stocks is, their intrinsic value; that there may be publicity sufficient to show exactly the state of the companies in their financial concerns? In other words, how far should the laws of a State lend publicity to the whole operations of every company chartered under it?—**A.** I think that with reference to companies that are organized for public work, like insurance companies and railway companies, that should be done. I think that to put that obligation upon companies engaged in trade, who have rivals that do not have to make such publications, would be an unjust discrimination; and there is no reason for it whatever, if you are going to permit corporations to engage in trade. That is a way of throttling the infant that has been born at the request of the State.

FAKE COMPANIES MAY ORGANIZE UNDER ANY LAW.

Q. Now another question. Is it not generally known in New York City and all our principal cities where banking and brokerage are carried on that there are in New Jersey possibly one-fourth of the chartered companies that are nothing but fakes and wildcat companies?—**A.** I do not know.

Q. Do you take it from public reports, I mean?—**A.** I never pay any attention to public reports. They do not constitute information; they deal with impressions. When you treat of property rights, you have got to get specific information.

Q. Do you think that under the laws of New Jersey there is a possibility for fake companies to be chartered and impose their stock on the public?—**A.** Not any more than there is under the laws of New York or any other State. That often happens. You may organize a company and put in \$100,000 or \$300,000, as was done under the strict laws of Massachusetts in the Cape Cod Canal Corporation, and it is an improvident investment, an unwise investment of capital, and it is gone almost immediately—as soon as it is put in—and yet that corporation is created and abundant litigation has ensued under that, although it was as honestly organized a corpora-

tion as you could make under those strict laws. In other words, the question must always come back to, What is the capital; what are the assets of the particular corporation at the time of the particular transaction? and the fact that at some time or other it had as much money as its capital represents is of no consequence, for it all may have been lost; it may all have been unwisely invested. Take a conspicuous instance under the law of New Jersey, the corporation that was formed for building the Stevens Battery, which General McClellan was in charge of. There was a corporation which was absolutely of no consequence when it got through, and it swallowed up millions and millions by unwise investment.

Q. It was simply a scheme to make money?—A. No; I don't say that. My point is this, that nothing is more illusive and delusive than the idea that if a corporation's stock be only paid in in money at the outset it is therefore better off than one that has issued its stock for property that could not be converted for 1 cent on the dollar. The question is what assets the corporation has got at the time of the particular transaction, and that can be ascertained only by present inquiry.

A REMEDY FOR STOCK WATERING.

Q. (By Senator MALLORY.) Have you any suggestions to offer?—A. I had only one point which I thought proper. I have not obtained information, but only impressions, as to what was going on in this commission from the public prints. In January, 1892, a report was made by a committee, of which I was a member, on the question of corporations, to the Bar Association of New York; and the third provision of that report is the only one, I think, that I should like to bring before this commission for its consideration. As it is addressed to a subject about which a great deal of complaint has been made, namely, stock watering, I should like to indicate a remedy or relief which we thought was desirable [reading]:

"Third. To permit the formation of a distinct class of business stock corporations whose capital stock may be issued as representing proportional parts of the whole capital without any nominal or money value.

"The effect of such amendment would be to provide for the measurement of the interest or shares of the members of such a corporation by a statement of proportion, as in case of the part owners of a ship, and not by an arbitrary assignment of money value, which is delusive in the case of every corporation whose capital stock has a market value either more or less than its nominal par value.

"Such an amendment, though somewhat radical, is not altogether novel. It embodies a principle adopted in corporation laws in Germany.

"It would relieve any possibility of injury to the public from misleading representations as to the money value of corporate stock, and would also relieve from embarrassment conscientious corporate officers often compelled to deal with legal fiction as to which they have no personal knowledge, as though it were a reality within their own observation." (Proceedings of New York State Bar Association, January, 1892, p. 138.)

Q. (By Mr. FARQUHAR.) Do you choose to amplify that in any way further than you have presented it?—A. I think that states the case.

PURPOSE OF ISSUING LARGE CAPITAL STOCK.

Q. Will you state the circumstances that brought this about? How many were concerned in it?—A. That was never acted upon; it was merely presented as a report and never followed up. But the real desire of corporate management of stockholders is not always fully understood. The real desire of the issue of large capital stock is generally to get a very large common divisor and to get as many persons interested in the enterprise as may be, and the nominal amount of each share is of very slight consequence. You will see \$100,000,000 of stock issued and the next day after it goes on the stock exchange it sells for from \$10 to \$12 a share. Nobody supposes that stock is worth \$100,000,000. The total stock is only worth \$10,000,000 to the public at large, if it expressed its opinion about it, and its par value becomes immediately a fiction. On the other hand, the Central Trust Company stock of New York, say, sells at \$1,500. That is just as much a fiction; it is just as fictitious to say that it is \$100 stock as it was in the other case to say that the \$13 stock was \$100 stock. No one deals with reference to par; they all deal with reference to the fact. Now, as the fact in many of these cases is obscured by this assignment of a nominal or par value, under this theory of freedom of contract, I would permit a corporation to say, "Here are our shares; we have so many shares and you have such a proportion of the property, be it worth more or less." Then dividends need not be made by per cent, but as they are in the case of mining companies—so much a share—and there would be no one deceived, and every purpose would be accomplished that I can think of that is desired by the creation of these large nominal capitals.

RAILROAD REORGANIZATIONS CAUSED BY REDUCTION OF RATES, NOT BY OVERCAPITALIZATION.

Q. (By Mr. C. J. HARRIS.) Have you been connected with the legal part of the organization of some railroads in this country?—A. I have.

Q. Can you name some of them to the commission?—A. The Richmond Terminal, now constituting the Southern Railway, the Northern Pacific, the Reading, the Erie, the Memphis and Charleston, the Hocking Valley, and the Detroit, Bay City and Alpena, now the Detroit and Mackinac.

Q. Any others?—A. There are others, but I do not now recall them; those are what come to me now.

Q. I do not know exactly how far you are connected with the business portion of those reorganizations; I suppose mostly with the legal questions?—A. Entirely with the legal; I have nothing to do with, and I have paid no attention to, the business part.

Q. Why are these reorganizations made, as a general thing; what are the reasons? On account of their bankruptcy, or failure in business to a certain extent, as they were organized before you took hold of them?—A. In every case it was the inability of the corporation to earn its fixed charges; not the question of dividends, but fixed charges. It made promises to pay which it could not keep; foreclosure was imminent, and it was necessary to make some arrangement by which the interest in the property could be preserved.

Q. Was this in some cases from a lack of ready capital, or was it generally from a certain mismanagement or lack of business capacity?—A. I should say it came from a lack of income resulting from the ruinous reduction of rates, partly by legislation and partly by the foolish competition of railroads with each other. If the rates in this country were a fraction of a per cent higher, no one of these companies that I have mentioned need have gone into bankruptcy.

Q. What was the state of their capitalization? That is what I want to get at generally. Are they generally overcapitalized?—A. In none of these cases—now I am speaking of facts—did share capital have anything to do with it, or money. They had created a bonded debt for the money they had borrowed and could not pay. It was money, dollar for dollar. Take for instance a fair sample, the Richmond Terminal. Its stock declined to a fraction of 1 per cent on the dollar. It did not make any difference what its share capital was; it disappeared; this body of share capital was wiped out.

PRINCIPAL OFTEN INCREASED—ANNUAL CHARGES ALWAYS DIMINISHED.

Q. In these reorganizations, for instance, this you have just mentioned, was the capitalization, bonds and stock, under the reorganization greater or less than it was before you took hold of it?—A. In some cases they were more and in some cases they were less. It was intended generally for the purpose of inducing those who had been interested before to make fresh contributions of cash, which was necessary. That was always the real case. I do not think that more than three of those corporations received less than \$20,000,000 to \$25,000,000 of new cash to help it along and to start it anew. To get those contributions in cash it was necessary to make concessions, and in some instances the capitalization, if you so choose, the bonds and stock—I call the stock only the capitalization—was greater than it was before. But this was for the reason that the old bonds would bear various rates of interest, running from 6 to 8 per cent. In every instance the new bonds have been as low as 5 per cent, and they have gone down to 3 per cent; and as compensation for that reduction of interest, the nominal amount of bonds would be larger. In every case the annual charge, the fixed charge, has been very much smaller. And that is the whole point of the reorganization, to get a smaller annual charge.

Q. You have stopped the high-priced bonds and got lower ones?—A. The high-interest bonds. And to do that you have got to make concessions. People would say, "I will take 4 per cent where I otherwise would be getting 6 per cent, if you will make it up to what is equivalent to 5 per cent by giving me a larger amount of principal." That is what it comes to.

Q. You speak of some of these roads that have been reorganized during the last 6 years—that is, during the period of dull times, we might say. Now, if they will not earn enough to pay their expenses, how does the magic of reorganization enable them to go on as they have done and pay not only expenses, but, I think, also interest on the bonds?—A. I did not say they do not pay expenses. Every one of those roads paid its operating expenses, but none of them paid its fixed charges.

OTHER GAINS BY REORGANIZATION.

Q. On the bonds?—A. It came down to a point at which these old bonds were certain to pay; then we ascertained an indefinite amount, the intermediate, and reduced to

that. That is just the process; and there are very few of those roads that to-day would pay interest on the bonded debt as it existed before reorganization. Then, two other things have happened—three other things. First, you have got these contributions of cash which I have spoken of, which carried off a lot of floating debt; next, all of these mortgages—and that is very important—provided for a reserve fund of bonds which may be issued ordinarily at a rate not exceeding one million or a million and a half a year, say, for 20 years, to provide for these constant demands upon a railroad which are necessary to be met and which it can not meet out of its current earnings, and which go to the betterment of the property. That was the real cause of the breaking of the railroads in this country in 1893. It was the cause of the panic in 1893. At the time of the Baring failure in 1893 it was computed that there were over \$250,000,000 of the floating debt of the railroad companies of this country to be funded and being pressed for payment. Now, to-day, they have got credit; they have got a breathing spell; they have got ahead. I do not believe one of these reorganized railroads has a dollar of floating debt to-day.

HIGH ABILITY OF RAILROAD MANAGERS.

Q. In this system of combinations of railroads, what can you state, if anything, about the character of the men who are placed in charge; have you not a rather more skillful professional class of railroad men than under the old system?—A. The railroads have never been so well officered as they are to-day. The railroad managers of this country—I am not testifying about personal characteristics, but simply as a business matter—the railroad managers of this country represent the highest class of management of any kind of business of any government in the whole world to-day, in my judgment. I do not mean great statesmen, but the thing we have in mind. It is one of the greatest credits to America that it can exhibit such a body of men as our railroad managers to-day.

Q. I was speaking of their professional qualifications as such, and the reason I asked that is: Has not that been a very important item in the apparent success of these organizations?—A. In one sense it has, but the most of these gentlemen were connected with roads prior to 1893—prior to these failures; but they did not have the opportunity to work that they have now. They were harassed by the pressing necessities of the roads and financial necessities, and could not show what the character of the management was.

ABSOLUTE PUBLICITY FOR RAILROAD COMPANIES; NOT FOR TRADING COMPANIES.

Q. (By Mr. KENNEDY.) You have expressed yourself in favor of publicity of the affairs of the railroads?—A. Absolutely; that, I think, can not be made too strong.

Q. (By Mr. C. J. HARRIS.) That is a question that has been brought up here a great deal in regard to the railroads, whether there should be, as in the case of national banks, some such public investigation and certification to their records as that to show that they were, in the first place, not false, and, in the second place, that they were fully and correctly made. Have you any idea in regard to that?—A. I think that is entirely reasonable. You will understand, when I answered the question before, I was referring merely to the control of competition—those engaged in competition with traders who did not have to make these disclosures. The moment you come to this class of corporations publicity is absolutely desirable.

SUBMIT POOLING CONTRACTS TO A COURT OF LIFE JUDGES.

Q. (By Senator MALLORY.) You would be willing to give to the railroad corporations the same wide latitude of contract among themselves that you would give to the mercantile and ordinary private corporations?—A. I would not give the same; I can not tell you why, because I have not thought that out, but I should want to consider it. The comparative monopoly of any railroad in any particular place or in some particular place may call for a different rule than with reference to the ordinary corporations.

Q. Would you, with your knowledge of the railroad business— A. I will say this: I would give all railroads a right to make any corporate contract that they choose with each other, provided that the contract must be submitted to the Interstate Commerce Commission which we have in this country, and should be subject to annulment by the Interstate Commerce Commission for reason to be assigned.

Q. Now, to come specifically to a case; some years ago the House of Representatives was asked to pass a bill permitting railroad corporations to pool their traffic, to make pooling contracts, validating pooling contracts when made, and the difficulty that seemed to intervene to prevent the success of the movement arose out of the restraint which was sought to be imposed through the Interstate Commerce Commission upon the formation of this pooling business. A large number of gentlemen

in Congress favored the idea of allowing the Interstate Commerce Commission to have a veto absolute on the contract; that the advocates of the railroad side of the question would not listen to. They were willing to have power vested in the Interstate Commerce Commission to disapprove the contract, but to let that contract go into effect and be operative until some power above the Interstate Commerce Commission—a court probably—should sustain the Interstate Commerce Commission; in that case the contract was not to be in effect. In other words, the railroads were apprehensive that the Interstate Commerce Commission would arbitrarily interfere sometimes and prevent them from getting the benefit of a reasonable rate. Now, there is a movement in that direction again, I think very apparent, upon that point of giving the Interstate Commerce Commission, or some other body, absolute power to say, this thing shall not go into effect, and stop it there. What would be your opinion?—A. I would allow the power of contract, and I would let that contract continue until disapproved by the Interstate Commerce Commission or such other body as you might name, for reason. And I would then have it continued until the reasonableness had been tested by the courts. In other words, I should be glad to see the system they have in England. If you could get a system of life judges, such as they have there, constituting a court on this question, I would leave it to that court absolutely.

Q. Turn the Interstate Commerce Commission into a court?—A. Provided they were appointed for life.

Q. (By Mr. C. J. HARRIS.) Would they not get pretty arbitrary if appointed for life?—A. They do not in England; it has been running there for 40 years and there is no complaint at all, and originally there was more turbulence than we have. England is so small, it has a smaller mileage and all these points are close together, and they had tremendous difficulty; but they have had no opposition and no trouble, and I do not see why we should be floundering along on this side. But to pass over the greatest amount of property in this country to the decision for its existence of a board which is subject to political determination every four years is simply to kill your greatest property in this country. You give these powers to the Interstate Commerce Commission and you will never have another Presidential election on the silver question or anything else. It will be on the subject of which can grab the railroads. You are entirely changing our system of government when you do it.

IF THERE WERE ANY UNREASONABLE RATES, THERE SHOULD BE SUMMARY POWER TO ABOLISH THEM.

Q. Take these 4 railroads in pooling—A, B, C, and D. In their pool, of course, they agree upon a certain line of rates with regard to all sorts of things. Now, they agree upon that, and if A does not keep the agreement none of these others have any legal hold upon him. Now, we can easily see why that is an injustice to the railroads.—A. To which is it unjust; to the one who does not keep his bargain or the others who do?

Q. The others who do.—A. To that I agree.

Q. That is a contract to be carried out among the railroads as among others, unless against public policy. Now, of course, the thing we have in mind in our inquiries here is, where will the shippers or general public come in? If this pool makes an unreasonable rate and the law permits them to sustain that contract, then the general shipping public is at a disadvantage; and the proposition is that the Interstate Commerce Commission should come in and say whether those rates are right or not. If they are fair and reasonable, then your contract between railroads is just as good as between you and me or any others.—A. I never heard any railroad men ever object to that particular proposition you are now mentioning; nor would I. I think the power to determine whether a rate is reasonable or unreasonable is now lodged in the Interstate Commerce Commission, and should continue there. It is not the point of difference. The Interstate Commerce Commission wants the power to make a rate; not to declare a given rate unreasonable, but to make a rate, and that is the real stress. Of course, if there are any unreasonable rates in this country there should be a positive and summary power to abolish those rates; but now when you come to the other question as to the agreement to make reasonable rates, not to make unreasonable rates, I do not see why that agreement should not continue until the Interstate Commerce Commission or the other body should have been sustained by the courts; but as to the unreasonable rates, I do not say for a minute that such an agreement should prevail.

BUT THERE ARE NO UNREASONABLE RATES.

Q. (By Senator MALLORY.) As the practical working of the interstate-commerce law is exhibited to us now, that would practically amount to the railroads fixing their own rates for a number of years?—A. Perhaps, Senator, you have heard of unreasonable rates somewhere; I do not hear of any complaint anywhere over the country.

Q. The testimony is that there are no unreasonable rates to speak of now.—A. Those have all disappeared.

Q. The point is, it is a fact that we can not get a decision on an appeal from the Interstate Commerce Commission inside of 2, 3, or 4 years.—A. Therefore I do not think this great property, the greatest property of this country, should be exposed to the injury that results from that delay. I think it is a great deal better to wait a little longer to get the question decided for them. We are dealing with that on which the country lives—its industry.

MAKE THE INTERSTATE COMMERCE COMMISSION A COURT, WITH LIFE TENURE.

Q. My inquiry was made to elicit a suggestion, if possible, of any way of expediting this thing. No one wants to take advantage of the railroads. If the Interstate Commerce Commission should decide unjustly, it would be declared an unjust decision and the railroads should be vindicated, and vice versa. But the great difficulty with anything of that kind is the tremendous delay.—A. I have endeavored to make a suggestion. My suggestion would be to make the Interstate Commerce Commission a judicial body; but I want to put in a caveat there, subject to constitutional difficulties; there is a serious matter there. Even if it required a constitutional amendment, I would make the Interstate Commerce Commission a judicial body, appointing its officers for life; and I would let that body determine; and then you have a judicial determination, and it would not expose us to the delay you have mentioned, and I think everybody would agree to that.

Q. (By Mr. C. J. HARRIS.) That would involve that all of the members of the commission should be lawyers?—A. Not necessarily; not at all. I think they would all have to have, or should have, the judicial attribute of judicial fairness.

THE LINE BETWEEN PUBLIC AND PRIVATE CORPORATIONS.

Q. You made a distinction some time ago between public and private corporations, and intimated that the railroads, telegraphs, and corporations of that kind were public and that all manufacturing corporations were private; the suggestion has been made many times here that a corporation, such as the American Sugar Refining Company, which I have taken as a special example, that manufactures about 90 per cent of the output of sugar, according to the testimony given here, so affects the interests of the public that it should be considered a public corporation. The competition against that is no more vigorous, it is suggested, than the competition against railroads and telegraphs, and therefore any restraints put on railroads might very properly apply to any manufacturing company that controls so large a proportion of the manufacture in any one line as that, for example. Can you draw the line sharply between public and private corporations?—A. I think I can. I think the American Sugar Refining Company is not a public corporation. At the trust conference I see it reported that Professor Clark, of Columbia, said that combinations might deal with the competition of all the mills that were built, but can not deal with the competition of the unbuild mills. Notwithstanding Mr. Havemeyer's greater familiarity with the matter, I venture to say Mr. Arbuckle will "cut some ice" if he has not done it yet, and you will find that if the American Sugar Refining Company does not keep down the price of its commodity to a reasonable point, Mr. Arbuckle will find great success in that department of his industry. The natural law will work better than the interference of positive legislation.

RIVALRY BETWEEN CORPORATIONS AND INDIVIDUALS.

Q. With reference to the degree of publicity that should be given to a corporation like the American Sugar Refining Company, I understood you to say that much publicity would be unfair on account of the fact that it would have rivals whose affairs would not be made public. What would you say if there was a general law providing that all corporations should be given an equal degree of supervision; it would not be unjust then?—A. I am not speaking of rivalry between corporations, but between corporations and individuals engaged in the same business.

Q. You think it would be impossible to exercise the supervision over the individual?—A. You could not do that; you have no right to do that. If a man is not violating the law you can not inquire how he is investing his property here and there, and that is all that inquiry means. You do not go and call on a person and ask how his health is; but what they owe, what they have, and how they made it.

THE DEVELOPMENT OF BUSINESS WILL BREAK ALL FETTERS.

Q. Do you think if at the present time there were such rigid laws it would drive capital out of the corporate form into the hands of men acting as partners or private

individuals?—A. I do not know that it would. I am not equal in ingenuity to the task of determining how the positive growth and development of business is going to meet the embarrassments and fetters which legislators are trying to put on it, but it will. It will come in some way or other no matter how many embarrassments are put upon it; it will come in time.

NATIONAL INCORPORATION LAW UNDESIRABLE.

Q. (By Mr. FARQUHAR.) There is some testimony before this commission looking for a remedy in the corporation laws of the States, where in so many States it is impossible to attain uniformity, and the suggestion has been made and somewhat of an argument made before this commission that a national incorporation law ought to be passed for the regulation of all manufacturing and other companies engaged in interstate commerce; have you any views on a question of that kind?—A. I have, very decided.

Q. We should like to hear them.—A. It is an unnecessary law and therefore a harmful one; that is my judgment; it would be a harmful one.

Q. Would it be your opinion that Congress had the power under the Constitution?—A. Under the present Constitution I do not think it has the power at all, except as to the matters pertaining to interstate commerce. How far the courts may go in extending that term I do not know.

Q. Do you think it would come under the general-welfare clause of the Constitution?—A. I do not understand that the general-welfare clause—notwithstanding the great Chief Justice Marshall—confers any independent grant of power. I think the general welfare is the purpose for which the express powers are to be administered.

Q. But there is no positive authority conferred on Congress to frame laws covering—A. Not independent, because if that were so, we should not need any other Constitution. If Congress were to be the judge of the general welfare that would end it. You might as well say, in the first place, "Congress is hereby created to legislate for the general welfare of the public," and stop there. That would be all of your Constitution.

ADVANTAGES OF CORPORATE ORGANIZATION.

If the commission will permit me, I think perhaps it is proper that I should call your attention to what I think is the best statement of the purpose of a corporation in this country. It is found in Mr. Cook's treatise on the law of corporations having a capital stock (4th ed.), volume 1, page 21, § 6, as follows:

"In large enterprises the partnership has been found to be clumsy, dangerous, and insufficient. If unsuccessful, it brings ruin upon all of its members, because each partner is liable absolutely for all debts. Any member may bind the firm by his contract, and each one has an equal voice in deciding its policy. Its capital and credit, and consequently its amount of business, are limited necessarily by the capital and credit of a very few men—the members themselves. The death of a member or the transfer of his interest dissolves the firm. Any member may arbitrarily cause a dissolution at any time, and the insolvency of a member renders the partnership property subject to levy of execution for his debt. Upon the death of a partner the surviving partners have the sole charge of winding up the business, and the executor of the deceased partner is not allowed to come in. A partner may withdraw his money only at a sacrifice or by long and expensive proceedings. He can not conveniently sell his interest or borrow money upon it. New partners can not readily or safely be admitted.

"The partnership is restricted in its capital, dangerous in its liabilities, narrow in its exclusion of new members, too free in its mode of making contracts, and too contracted in its opportunities for withdrawal. It is becoming obsolete as a mode of doing business on a large scale.

"In a corporation all this is changed. The members are not liable for the debts. The amount already invested may be lost, but the private fortunes of the stockholders are not involved. The business is done and contracts made not by all, but by a select few called directors. A large capital is created by the union of funds from many sources. A person may safely invest in many enterprises and yet not take part in the management nor watch the business of any one of them. The leading spirit in an enterprise may hold a majority of the stock and may admit associates, employees, or strangers as holders of a minority of the stock, and yet he will retain the management as though he were the single owner of the concern. Persons may easily buy into or retire from the enterprise. Dissolution is not brought about by the death or withdrawal or dissatisfaction of a stockholder. The insolvency of a stockholder does not affect the business of the corporation. Upon the death of a stockholder his executor votes his stock and has a voice in the continuation of the business. A stockholder may sell or pledge his interest readily and intelligibly by

reason of the reports, dividends, and market quotations of his stock. The corporation is a protection in that the liability is limited; it is capable in that it renders possible the collection of a great capital; it is efficient because the directors, and they alone, govern its policy and its contracts; and it is convenient because it is easy to sell or buy or pledge or bequeath one's interest in the concern.

"The advantages of incorporation are set forth in the Law Quarterly Review for April, 1895 (p. 185), as follows: 'Incorporation secures first of all the benefit of limited liability. It further preserves the continuity of the partnership unaffected by the death, lunacy, or bankruptcy of the members, or by other contingencies. It minimizes the dangers of a dishonest partner by restricting the agency of the directors in articles of which all persons dealing with the company have constructive notice. It facilitates dealing with the shares of the partners by sale, mortgage, or settlement. It affords greater facilities for borrowing, more particularly for raising money on debentures. A shareholder who lends money to the company is not at the disadvantage of being postponed to other creditors as an ordinary partner is who lends to the firm.'"

Testimony closed.

WASHINGTON, D. C., October 19, 1899.

TESTIMONY OF MR. ELBERT H. GARY,

President of the Federal Steel Company.

The commission met on Thursday, October 19, 1899, Senator Mallory presiding. Judge Elbert H. Gary appeared at 12.10 p. m., and, being duly sworn, testified as follows:

Q. (By Mr. JENKS.) What is your full name?—A. Elbert H. Gary.

Q. Your address?—A. New York.

Q. You are president of the Federal Steel Company?—A. I am.

PROPERTIES AND BUSINESS OF THE FEDERAL STEEL COMPANY.

Q. Will you be kind enough to explain to us the nature of the business done by this company and the different companies that were brought together by its organization?—A. The Federal Steel Company is the owner of all the capital stock of the Minnesota Iron Company, the Illinois Steel Company, the Lorain Steel Company, and the Elgin, Joliet and Eastern Railroad Company. The Minnesota Iron Company is the owner of about 150,000 acres of iron-ore property. It is also the owner of the capital stock of the Duluth and Iron Range Railroad Company, which is a railroad connecting the ore property of the Minnesota Iron Company, located principally on the Vermilion and Mesaba ranges, with Lake Superior at Two Harbors and Duluth. The Minnesota Iron Company also owns the capital stock of the Minnesota Steamship Company, which owns about 22 steel vessels running on the lakes. The Minnesota Iron Company is also the owner of very large ore docks at Two Harbors. The Lorain Steel Company has a manufacturing plant at Lorain, Ohio. It is engaged principally in the manufacture of steel girder rails for street railways, and also to some extent in the manufacture of steel billets. It is also engaged in the production of pig iron, producing about 500,000 tons of pig iron per year. The Lorain Steel Company is the owner of a terminal railroad at Lorain. I should say that the Federal Steel Company is also the owner of the capital stock of the Johnson Company at Johnstown, Pa., which formerly belonged to the Lorain Steel Company. The Johnson Company of Johnstown is engaged principally in the manufacture of frog switches and crossings for street railroads—these complicated crossings which you see on the streets—and is also engaged in the manufacture of electric motors, etc. The Illinois Steel Company has plants at North Chicago, West Chicago, South Chicago, Milwaukee, and Joliet. It is engaged in the manufacture of pig iron. It produces about 1,500,000 or 1,600,000 tons of pig iron per annum. It is engaged in the manufacture of steel rails, billets, plates, rods, merchant steel, etc. The Illinois Steel Company is also the owner of the capital stock of the Chicago, Lake Shore and Eastern Railway Company, which connects its plants in Chicago and South Chicago with various railroads running into or near Chicago. The railroad runs down into Indiana; it is a terminal railroad, but a pretty extensive railroad. The Illinois Steel Company is also the owner of large tracts of coal property in Pennsylvania and West Virginia. It is also the owner of iron mines in Wisconsin and Michigan. The Elgin, Joliet, and Eastern Railroad Company is called the Outer Belt of Chicago. It runs from a point on Lake Michigan, in Indiana, around Chicago

about 90 miles from the center of the city, to a point on Lake Michigan at Waukegan, Ill. Neither the Federal Steel Company nor any of its constituent companies has any monopoly of any line of business, nor does it seek any. Its plan is to produce and deliver finished products at a minimum expense. It takes the ore from the ground, transports it, manufactures it into pig iron, manufactures the pig iron into steel, and the steel into finished products, and delivers these products. The Outer Belt, of course, crosses every railroad which enters Chicago.

ECONOMIES OF CONSOLIDATION—FEWER OFFICERS.

Q. Will you explain to us briefly what are some of the economies that have been made by bringing together these different companies engaged in different lines of work?—A. There has been quite a considerable economy in the management of the office. That applies more particularly to the employees or officers, who have received larger compensation in the aggregate than they are getting at the present time. It does not apply, of course, to the laboring men.

Q. Would you mind developing that a little further—going further into detail?

Q. (By Mr. FARQUHAR.) Have there been many displacements of the skilled employees, or do you maintain your works?—A. I would not say of skilled employees.

Q. Skilled officers?—A. We are looking for skilled employees all the time.

Q. Skilled officers?—A. I might say skilled officers; the officers have been fewer and the aggregate of salaries has been less.

Q. (By Mr. JENKS.) The aggregate of salaries?—A. Yes. The number of skilled laborers has been somewhat increased, and the amount paid skilled laborers has been increased, and we are looking for more all the time.

THE AMALGAMATED ASSOCIATION.

Q. (By Mr. FARQUHAR.) Are your skilled men usually members of the labor organizations?—A. Some of them are and I think some of them are not.

Q. Are you controlled in any way in the payment of wages by the Amalgamated Iron and Steel Association?—A. I think perhaps in the past, at least, the question has been influenced by those associations. Since the organization of the Federal Steel Company there has been no difficulty of any kind between any constituent companies and the laborers. Wages have been advanced at different times, but the question has been decided on its merits entirely; the result has been reached by conferences, and everything has been satisfactory so far as I know.

Q. For this year has the scale of the Amalgamated Association been presented to you as an officer, or anyone under you in the Federal Steel Company, for signature?—A. No scale has been presented to me; indeed, it would not be presented to me. Substantially every question that comes to me for advice comes to me through the presidents of the different companies. I am inclined to think that, in some cases, the officers of some of our companies have agreed to what you call the scale, the Amalgamated scale.

OFFICERS DISPENSED WITH.

Q. (By Mr. JENKS.) Can you tell us, specifically, how much the increase of wages has been in any of these different companies?—A. It has been, on the average, about 16 per cent.

Q. Does that apply also to railroads?—A. Yes.

Q. You said that a number of administrative officers could be dispensed with; can you give us any more definite information as to the amount saved, or the number whose places were no longer needed on account of the amalgamation of the constituent companies?—A. As an illustration, the Illinois Steel Company had a president, a first vice-president, a second vice-president, and a general sales agent, and several assistants. The office of one of the vice-presidents and the position of general sales agent were dispensed with. The two railroad companies each had a corps of officers, and now the officers of one are the officers of the other. That principle applies in all the companies on down the line until you get to the skilled laborers, and there there has been no change.

Q. The saving has been then almost entirely on the higher officials of these different companies?—A. Yes, in the higher officials entirely.

PUTTING THE DIFFERENT COMPANIES IN CLOSE TOUCH.

Then there has been a material advantage in dollars and cents resulting from the fact that the management of the Federal Steel Company is in close touch with all the business of all the companies, knowing the wants and the prices of each of the companies. For instance, the Lorain Steel Company may desire to purchase steel of

a certain kind; the Illinois Steel Company may at the same time desire to sell that very class of steel; the result is that the management of the Federal Steel Company brings about that sale or purchase or puts the officers of the different companies in close touch, so that the sale is made to the best advantage of both. That is only one illustration of the various kinds of business.

EACH CONSTITUENT COMPANY MANAGED INDEPENDENTLY.

Q. As a matter of fact, the business of each of these separate companies is managed entirely independently; the Illinois Steel Company would sell directly, as an entirely independent concern, any of its products to the Lorain Steel Company?—A. Generally, yes; each one looking out for its own interest as much as if the ownership of the capital stock was in entirely different hands.

Q. Why should they look out for their own interests in that way as much as if the stock were in different hands? Why would it not be advantageous for the Illinois Steel Company to sell at a relatively low rate to the Lorain Company, if they are going to share in the profits?—A. The Illinois Company has no interest in the Lorain Company any more than if it were an independent company, owned by other persons. Each company is seeking to make the very best record it can for itself.

Q. As I understand you, the stockholders of one are the stockholders of the other?—A. That is true; but that has no influence whatever on the management of the different companies. I am frequently called upon myself to settle disputes or differences arising between the different companies.

Q. The Illinois Steel Company and the Lorain Steel Company are purchasers of iron ore of the Minnesota Iron Company?—A. The Minnesota Iron Company sells a large proportion of its product to the Illinois and the Lorain steel companies; not quite half, perhaps.

Q. Do they buy all their ore from this company?—A. No; the Illinois Steel Company buys more outside ore than it buys from the Minnesota Iron Company, for the reason that the Minnesota Iron Company mines a very high grade of ore—the very best Bessemer ore—and the Illinois Steel Company can take a part of that Bessemer ore and mix it with cheaper ores purchased outside and produce a good quality of iron. On the other hand, the Minnesota Company can sell its proportion of higher grade ore to outside parties at a higher price; and the location of ores, which determines freight rates, also has an influence on this question.

RAILROAD AND SHIPPING INTERESTS.

Q. Is the ore shipped entirely in the vessels belonging to the company?—A. Not entirely. The carriage capacity of these vessels is about 2,000,000 tons. The Minnesota Iron Company will probably produce next year more than 3,500,000 tons of ore. The Duluth and Iron Range Railroad Company will carry more than 4,500,000 tons of ore next year.

THE CONSTITUENT COMPANIES PROTECT EACH OTHER.

Q. You say the different companies are managed entirely independently, but there is what you might call a community of knowledge between them as to the relative wants of one another?—A. It comes to them through the Federal Steel Company largely.

Q. Would that knowledge be rendered so efficient, that one of these companies—say the Illinois Steel Company—would not be allowed to suffer from the lack of ore, because it would be assured of getting its ore at all times from the Minnesota Iron Company?—A. Both are protected; the Illinois Steel Company is protected by the fact that it may get all its requirements from the Minnesota Iron Company, and the Minnesota Iron Company is protected, on the other hand, by the fact that it may secure customers in the Lorain and the Illinois Steel Company.

Q. So the officers of the Federal Steel Company, by furnishing information from time to time to these companies, may be assured that all the plants are kept running to the best advantage?—A. If the companies need ore it is furnished them.

Q. So long as it is more for their advantage to sell any part to outside parties it is done; but that would never go so far as to stop work for some one of these companies on account of lack of material?—A. No.

DIFFUSION OF KNOWLEDGE.

Q. You have mentioned these two sorts of economy—the saving in administration and saving through accuracy of information as to the business. Do you recollect any other sorts of economy you make with this organization?—A. In the number of

offices; in the methods of doing business. For instance, I do not care what plant one goes into, there are beneficial features in that plant that are not in other plants. In talking with any expert in any branch of the business, information is received that will be beneficial if applied or given to an official perhaps very remotely located; and, of course, the effort is to utilize to the very best advantage everything that is a benefit in any particular plant, or any ideas or knowledge or information that one person has that another has not.

PER CENT OF TOTAL PRODUCT MADE BY THE FEDERAL STEEL COMPANY.

Q. You have said the Federal Steel Company in no one of its lines of activity had anything like a monopoly of the product of the country. Could you tell us the percentage of the output in some of these lines—say the line of steel rails—that the Federal Steel Company has through its companies?—A. The Illinois Steel Company produces about 33 per cent—30 per cent—of the steel rails that are produced in this country.

Q. With reference to girder rails used by the street railways, about how much of the output of that product do you control?—A. Excuse me for interrupting you. The Illinois Steel Company, I should like to say, is also the owner of large coke works in Pennsylvania, and produces a very large quantity of coke. It will produce next year about 1,500,000 or 1,600,000 tons of coke, I think.

Q. Could you tell about what percentage that is of the total production of the country?—A. I do not think I can; I am inclined to think you are better posted than I with reference to the total production of pig iron. But if you know what that is exactly, I can give you items from which you can get the desired information. The Illinois Steel Company and the Lorain Steel Company probably will produce next year about 2,000,000 tons of pig iron, possibly a little more. I presume the total production of pig iron next year will be at least 14,000,000 or 15,000,000 tons; perhaps you know better than I. It probably requires, as a near enough estimate, about 1 ton of coke for 1 ton of pig iron; therefore, if the total production of coke next year will be 15,000,000 tons, it will be easy to ascertain what percentage of coke the Illinois Steel Company will produce.

INFLUENCE OF THE FEDERAL STEEL COMPANY OVER THE CONSTITUENT COMPANIES.

Q. (By Mr. KENNEDY.) Is this arrangement you speak of, between the Lorain Steel Company and the Illinois Steel Company and the Minnesota Iron Company, by which the Lorain and Illinois steel companies are assured of raw material all the time and the Minnesota Iron Company is assured that they will take its product, an arrangement by contract between them?—A. There is no arrangement of any kind between these companies, directly or indirectly, expressly or impliedly, or tacitly. The Federal Steel Company, of course, is aware of the requirements of the Illinois Steel Company, and has more or less influence on the action of the officers of the different companies; and if the Illinois Steel Company is desirous of purchasing iron ore it purchases it from the Minnesota Iron Company direct. It gets it just as cheaply as it can, and the Minnesota Iron Company gets just as large a price as it can. They deal at arm's length between themselves. Of course the officials or the management of the Federal Steel Company know the situation and have an influence in bringing these parties together, saying to one or the other, "Perhaps you had better do so and so;" but there is no understanding between these companies.

Q. Can the Federal Steel Company direct them to do so and so?—A. In the same way as you, as the principal stockholder of any corporation, would direct the affairs of that company, and no other. For instance, I have no doubt some very large stockholders of the New York Central Railroad Company who are not on the directory influence the management of the company, and yet technically they have nothing whatever to say about it.

Q. If it should come to pass that other steel companies than these two offered the Minnesota Iron Company a higher price for its raw product than these companies could afford to pay, what would be the result?—A. The Minnesota company would sell to the highest bidder.

Q. And these two constituent companies of the Federal Steel Company would be left in the lurch?—A. They would shift for themselves.

DOES NOT TRY TO RESTRICT COMPETITION.

Q. (By Mr. FARQUHAR.) Could you give this commission the reasons that impelled the owners of these various properties to form this Federal Steel Company, so long as they have no immediate cooperating features in their business? Was it a stock company simply to get the stock together and keep down competition, or what?—A. I have endeavored to give in a slight degree some of the benefits that have been derived. It was for the purpose of taking advantage of these benefits, I think. It

was in no instance intended to keep down competition. There is no possible way in which the Federal Steel Company or any of its constituent companies could keep down competition if it desired. It is in the field; it is an open business fight all the time. Our company has never attempted to buy the capital stock of any companies for the purpose of getting these companies out of the competitive field. It is not our plan at all. The plan is to have a knowledge of the whole business, and to have control of the companies who do the business from the beginning to the end, so that if there is any profit in any line, in any part of this line of business, we shall have the benefit of it.

METHOD OF ORGANIZATION—CAPITALIZATION.

Q. Was it an original purchase when this Federal Steel Company got the stock of all these companies or the properties of all these companies?—A. No; the Federal Steel Company made an arrangement with J. P. Morgan & Co. whereby J. P. Morgan & Co. agreed on their part to deliver to the Federal Steel Company the stock, or the majority of the capital stock, of these different companies on a certain basis, and the Federal Steel Company on its part agreed when the stock was delivered to give in exchange for it the stock of the Federal Steel Company. Now, perhaps in that connection I could make a little plainer what Mr. Stetson intended to say, if you care to have me. Perhaps I am more familiar with the transaction than he is in some respects. Mr. Stetson was the counsel of J. P. Morgan & Co., and they were the managers of a syndicate, so called. I am not quite so familiar with that branch of the business as Mr. Stetson, but I am more familiar with the value of these properties which the Federal Steel Company was interested in. The Federal Steel Company has an authorized capital stock of \$200,000,000—\$100,000,000 preferred and \$100,000,000 common. The amount of capital stock actually issued is about \$53,000,000 of preferred stock and about \$46,000,000 of common stock, making about \$99,000,000 issued—a little more than that, but not quite \$100,000,000. The actual book value of the plants and properties, not including the cash, of these constituent companies, was about \$45,000,000; the cash on hand which these companies had was about \$10,000,000—making \$55,000,000. There was an increase in the value of these properties, being largely in lands, amounting to about \$30,000,000—a little more than \$30,000,000, say \$31,000,000—making a total of \$86,000,000, which was estimated to be the actual value of the properties of these constituent companies. Now, the Federal Steel Company said to J. P. Morgan & Co., If you will give us the stock of these companies, and with it \$14,075,000 in money, making \$100,000,000 in all, we will give you \$100,000,000 of the capital stock of the Federal Steel Company—\$53,000,000 in preferred and \$46,000,000 in common. Then J. P. Morgan & Co. entered into an arrangement with—I am not quite so familiar with that perhaps, but an arrangement with the syndicate, whereby the syndicate agreed to furnish such part of this \$14,075,000 as was not furnished by the stockholders of the constituent companies. Then J. P. Morgan & Co. gave to the stockholders of these constituent companies the privilege of bringing to them their stock, together with their proportion of cash, and receiving in exchange stock of the Federal Steel Company, which J. P. Morgan & Co. received from the Federal Steel Company. Now, in making that trade, the Federal Steel Company issued its stock and obtained in exchange \$14,075,000 in cash, besides the stock of these constituent companies, which represented property of the value of about \$85,000,000 or \$86,000,000, including about \$10,000,000 in cash. The stockholders of the constituent companies received for their stock—and by the payment in cash, in the case of the Illinois Steel Company, of \$20 in money with each share of stock, and in the case of the Minnesota Iron Company, of \$27.10 in money with each share of stock, and in the case of the Elgin, Joliet and Eastern Railroad Company, of \$17.50 with each share of stock—the stock of the Federal Steel Company, about 1 share of preferred and about eight-tenths of a share of common. In making this exchange and doing this business J. P. Morgan & Co. made a profit of about \$200,000; I will not be exact; they paid all the expenses, including about \$40,000 for incorporation fees to the State of New Jersey. So that, you see, in the case of the Federal Steel Company—not comparing it with any other company, but with companies generally, perhaps, or at least with some other companies not necessary to mention by name—the Federal Steel Company instead of issuing for each \$100 one share of preferred and one share of common, or a little more of the common, to the syndicate managers or promoters, issued only a sufficient amount of preferred and common stock of the company to make up actually the value, what was considered to be the actual value, of the property of the constituent companies; and instead of issuing a lot of surplus common stock issued only about eight-tenths, or 80 per cent, of common stock—common stock equal to about 80 per cent of the preferred stock. Instead of paying a very large price for promotion fees or whatever it may be called, it paid practically nothing; comparatively a small sum.

Q. (By Mr. JENKS.) You mean this contract with J. P. Morgan & Co. was such

that J. P. Morgan & Co. received something like two or three hundred thousand dollars profit in their trade?—A. Not that for promotion purposes; they paid a large sum, of course, for expenses.

THE CAPITAL STOCK REPRESENTS THE ACTUAL VALUE OF THE PROPERTIES.

Q. There was one point not quite clear; you said there were, on the whole, about \$45,000,000 book values, \$10,000,000 in cash, and then \$31,000,000, you said, increase. That \$31,000,000 is not clearly brought out. Why did not that appear on the books in the accounting?—A. Let me give you some illustrations: The Illinois Steel Company had coal property in Pennsylvania—Connellsville coal property. It was on the books at just what it cost. There was one particular tract of 1,132 acres estimated to be worth about \$500 an acre. That has recently been sold for about \$1,000 an acre—that is one piece. The Illinois Steel Company had one iron mine that cost with improvements about \$75,000; they have just been offered \$600,000, all cash. The Illinois Steel Company has in the neighborhood of 858 acres of land within the city limits of Chicago that cost a nominal sum compared with its present value. The Illinois Steel Company has not made money doing business. It has done business at a loss too long; but it has made considerable money by the fact that it has owned property which has been increasing rapidly in value. The Minnesota Iron Company has one mine that we estimated at the time of this organization to contain about 25,000,000 tons of ore; on a basis of 25,000,000 tons of ore, there was a value in it over and above its cost of, say, \$10,000,000 or \$15,000,000. As a matter of fact, our recent investigations have shown us that there is at least 75,000,000 tons of ore in sight. That is only one of a number of pieces. That applies to a great many different cases of increase in the value of property.

Q. You had these different properties examined by experts and an estimate put on them; the book accounts examined also by experts; and then, as regards this surplus increase, that was added by these experts who were making the valuation; so the capitalization, as you have put it in here, was all on the basis of their estimate of the cash value, plus the cash in hand?—A. That is right. Different examinations were made for this reason: in the first place, the Federal Steel Company was desirous of so organizing the company that no more should be paid for the properties than they were worth, naturally; in the second place, the stockholders of the other companies were offered the privilege of exchanging their old stock for new stock in the Federal Steel Company. Now, when they took stock in the Federal Steel Company they not only got the benefit of the property of their own company, but were advantaged by the disadvantage of the other companies; and they were jealous of one another, and each one examined very carefully by committees the properties of the other companies. It was good-natured antagonism.

THE CONTRACTS WERE PUBLIC.

Q. In the case of these different companies that went into the Federal Steel Company there was absolute publicity among the different companies as to the amounts paid for the properties of the other companies?—A. Absolutely so.

Q. This contract made with J. P. Morgan & Co., the nature of the contract—that was public?—A. Yes.

Q. So that the contract between the Federal Steel Company and J. P. Morgan & Co. was known to all the stockholders, and practically open to the public?—A. Yes.

Q. (By Mr. KENNEDY.) Then, Morgan & Co. and the Federal Steel Company acquired these properties?—A. No; the Federal Steel Company acquired all the stock—the capital stock. First J. P. Morgan & Co. acquired the capital stock of these constituent companies, and then the Federal Steel Company acquired the stock of these companies from J. P. Morgan & Co.

Q. (By Mr. JENKS.) You say this matter was entirely public; perhaps you can furnish us with these contracts, so we can make it perfectly definite?—A. I think so.¹

¹ [Federal Steel Company with J. P. Morgan & Co., syndicate managers—Agreement—Dated September 9, 1898.]

AN AGREEMENT made this 9th day of September, 1898, by and between Federal Steel Company a corporation organized and existing under the laws of the State of New Jersey (hereinafter called the "steel company"), party of the first part, and J. P. Morgan & Co., of the city of New York (hereinafter called the "syndicate managers"), acting in behalf of a syndicate, parties of the second part:

Whereas the steel company has been organized with an authorized capital of \$200,000,000, of which one-half is 8 per cent noncumulative preferred stock and one-half is common stock, as shown by the certificate of incorporation of the steel company, which was recorded in Hudson County, N. J., on the 9th day of September, 1898, of which stock there have been issued 30 shares of common stock of the par value of \$100 each for \$3,000 in cash; and

Whereas, as hereinafter stated, the steel company desires, by means of an issue of its capital stock, to purchase or to acquire certain property necessary for the business of the steel company, and to pur-

CAN CONTROL CONSTITUENT COMPANIES THROUGH THE ELECTION OF DIRECTORS.

Q. I wish to go back again to the question suggested by Mr. Kennedy a little while ago as to the relations existing between the Federal Steel Company and these constituent companies. The Federal Steel Company owns all the stock of these different companies; the Federal Steel Company then, of course, directs or makes the election of the directors of each one of these different companies. It does elect directors in these different companies?—A. Well, of course, it is a stockholder. That is practically the effect; that would be the result in the case of a contest. As a matter of fact, one share of stock is kept in the hands of each director of the different companies; that has to be done under the laws. They will elect their own directors; we do not have to be present.

Q. Simply in case of a contest you would control?—A. Of course, we would control.

EACH CONSTITUENT COMPANY LOOKS OUT FOR ITSELF.

Q. I wish to go back to the example suggested a little while ago. If the Minnesota Iron Company could make a better contract with an outsider than it could with the Illinois Steel Company, as you said, it would sell to the outsider?—A. That would not be the result. You see what the practical result would be. Assuming that the Illinois Steel Company offered \$2.50 for ore, and the outsider offered \$2.60, the Minnesota Iron Company would say to the Illinois Steel Company, you must pay \$2.60, and the Illinois Steel Company would be forced to pay that price rather than shut down its mill; that would be the practical effect.

chase or to acquire the property or stock of certain companies owning, mining, manufacturing, and producing materials necessary for the business of the steel company; and

Whereas, after careful investigation and appraisal, the board of directors of the steel company have ascertained, adjudged, and determined that the value of the property and stock so to be acquired is equal at least to the par value of the stock of the steel company to be issued therefor; and

Whereas, in order to obtain such property and such stock for the necessary purposes of its corporate business, the steel company has desired, and now deems it important, to secure the assistance and cooperation of J. P. Morgan & Co., bankers, of the city of New York, who, upon the terms of this agreement, have rendered their assistance to the undertaking, and have consented to endeavor to form a syndicate to provide \$14,075,000 in money, for the purposes of the steel company, and to enable it to acquire the property and the stock of certain other companies hereinafter set forth, and

Whereas J. P. Morgan & Co. have aided and are willing to continue to aid the steel company by the formation of such a syndicate for such purposes, but only upon condition that a contract be made in the terms hereof; and

Whereas the outstanding capital stock of the Minnesota Iron Company consists of 165,000 shares, of the par value of \$100 each; Illinois Steel Company consists of 185,506.35 shares, of the par value of \$100 each; Elgin, Joliet and Eastern Railway Company consists of 60,000 shares, of the par value of \$100 each;

Now, therefore, in consideration of the premises and of the sum of \$10 to it in hand paid by Messrs. J. P. Morgan & Co., the receipt whereof is hereby acknowledged—

I. The steel company covenants and agrees to and with J. P. Morgan & Co., acting in behalf of a syndicate, substantially as follows:

(1) on or before December 15, 1898, J. P. Morgan & Co. shall make, or shall cause to be made—

(a) A transfer of not less than two-thirds of the shares of the capital stock of each of the following companies, viz, Minnesota Iron Company, Illinois Steel Company, and Elgin, Joliet and Eastern Railway Company; and

(b) A payment of \$14,075,000 in cash, the new company thereupon will issue to Messrs. J. P. Morgan & Co., or to such persons and in such proportions as may be indicated by them, 56,806 shares of the preferred stock of the new company and 454,285 shares of the common stock of the new company, and, in addition thereto, such preferred stock to an aggregate amount equivalent to the surrendered shares of constituent companies, estimated at rates of exchange severally and respectively as follows:

(One and three hundred and fifty-five one-thousandths shares of preferred stock of the new company for each share of the Minnesota Iron Company;

(One share of such preferred stock for each share of the Illinois Steel Company;

Eight hundred and seventy-five one-thousandths of one share of such preferred stock for each share of the Elgin, Joliet and Eastern Railway Company;

II. Messrs. J. P. Morgan & Co. agree in good faith to use their best efforts and influence toward bringing about such transfer and payment, and, in behalf of the syndicate, agree that, as a part of, and in connection with, the proposed transaction, and conditioned upon the consummation thereof, any and all shareholders of the Minnesota Iron Company, of the Illinois Steel Company, and of the Elgin, Joliet, and Eastern Railway Company, upon the surrender of their shares to the syndicate (together with a cash payment as hereinafter required), shall have fair and reasonable opportunity, for a period of at least ten days, to acquire and to receive, from the syndicate, preferred stock and common stock of the Federal Company on the following basis, viz:

"Each share of Minnesota Company (on payment by it of \$27.10 in cash) to receive 135 $\frac{1}{2}$ per cent in preferred stock of Federal Company and 108.46 per cent in common stock of Federal Company.

"Each share of Illinois Company (on payment by it of \$20 in cash) to receive 100 per cent in preferred stock of Federal Company and 80 per cent in common stock of Federal Company.

"Each share of Elgin Company (on payment by it of \$17.50 in cash) to receive 87 $\frac{1}{2}$ per cent in preferred stock of Federal Company and 70 per cent in common stock of Federal Company."

Such acquisition of new stock is to be effected by a deposit of the constituent shares with, and the making of the cash payment either to, the Colonial Trust Company, New York, or to the Old Colony Trust Company, Boston (as each depositor shall elect), in exchange for transferable receipts, upon the surrender whereof shares of the new company are to be delivered so soon as the same are ready.

It is understood that until the consummation of the transaction intended and indicated under Article I hereof, all deposits of shares and all payments in connection therewith under this Article II shall be subject to the control of J. P. Morgan & Co.

III. Messrs. J. P. Morgan & Co., with the approval of Roswell P. Flower and of Robert Bacon, or of

Q. (By Mr. KENNEDY.) Suppose it could not afford to pay as much as an outsider would offer?—A. It would have to take care of itself. If, as a matter of fact, the management of the Illinois Steel Company was such that it said, "We will pay \$2.50 and no more," it would shut down the mill. The Minnesota Iron Company would not take the \$2.50.

DID NOT UNITE COMPETING CONCERNS.

Q. (By Mr. JENKS.) Now, inasmuch as there has been so much talk with reference to trusts and trust organization in connection with corporations, would you explain to us clearly wherein, in any particular, this differs from the old trust organization? In that the common working stock of the different companies was put into the hands of the trustees, so far as the practical workings are concerned, is there any difference?—A. You refer to the Standard?

Q. We will say the Whisky Trust, the Standard Oil Trust, and the Sugar Trust.—A. The Federal Steel Company does not own the capital stock of any companies which were in competition in any line of business one with the other. I understand the Standard Oil Company—now, of course, I am not stating any secrets or giving any knowledge that is peculiar to myself, because I have none. I only state what I assume from the public reports in the newspapers, and I assume them to be correct. I understand that the Standard Oil Company purchased from time to time the capital stock of different companies who were in competition one with the other, and that to a degree, at least to some degree, it thereby established a monopoly or obtained substantial control of the business. If that is so, that would seem to me to be a trust, within the meaning of the word as commonly understood. I do not

either of them, may pay any and all expenses directly or indirectly connected with, or precedent to, the organization of the steel company; and in case of any such payments they shall be entitled to deduct the amount thereof from the cash payable to the steel company under this contract.

IV. Messrs. J. P. Morgan & Co. shall be liable only ratably with other syndicate members according to the amount of their several subscriptions. A list of such members, showing the amount of their several subscriptions, shall be furnished to the Federal Steel Company, and it may and shall look to such syndicate members ratably to the extent of their several subscriptions.

This agreement and any agreement in pursuance thereof are and shall be strictly inter partes; and no stockholder of the Minnesota Company, the Illinois Company, or the Elgin Company shall be deemed to have any rights thereunder. As to any and all such stockholders any rights shall be only those set forth in circulars to be issued inviting deposits.

In witness whereof these presents have been duly executed by the parties hereto the day and year first above written.

[L. S.]

Attest:

CHARLES MACVEAGH, *Secretary*.

FEDERAL STEEL COMPANY,
By BENJAMIN VAN DYKE, *President*.

J. P. MORGAN & Co. [L. S.]
Acting in behalf of a Syndicate.

To the shareholders of the Minnesota Iron Company, Illinois Steel Company, Elgin, Joliet and Eastern Railway Company:

Pursuant to arrangements made by a syndicate for an exchange of shares of the above-named companies for shares of the Federal Steel Company, the undersigned give notice that in behalf of such syndicate they are each prepared to receive certificates for any such shares for purpose of such exchange on the following basis and subject to the following conditions, viz:

Each existing share of Minnesota Iron Company (upon payment thereon of the sum of \$27.10 in cash) to be entitled to 1.355 shares in preferred stock of Federal Steel Company and 1.384 shares in common stock of Federal Steel Company.

Each existing share of Illinois Steel Company (upon payment thereon of the sum of \$20 in cash) to be entitled to 1 share in preferred stock of Federal Steel Company and eight-tenths of one share in common stock of Federal Steel Company.

Each existing share of Elgin, Joliet and Eastern Railway Company (upon payment thereon of the sum of \$17.50 cash) to be entitled to seven-eighths of one share in preferred stock of Federal Steel Company and seven-tenths of one share in common stock of Federal Steel Company.

Shares of the Minnesota Iron Company, the Illinois Steel Company, and the Elgin, Joliet and Eastern Railway Company, to insure participation in this arrangement, must be deposited with either of the undersigned trust companies not later than October 1, 1898, subject to the above-mentioned cash payment in respect thereto, and such cash payment must be made to the same trust company not later than October 10, 1898.

Transferable receipts will be issued for deposited shares, and the cash payment, when made, will be noted on such receipts.

The consummation of the proposed arrangements is dependent upon its acceptance by holders of at least two-thirds in amount of the shares of each of the three constituent companies.

If, for any reason, the arrangement shall not be carried out, the deposited shares and the cash payments will be returned upon surrender of our receipts.

All shares for deposit must be assigned in blank and must have proper revenue stamps attached.

The shares of the Federal Steel Company are of the par value of \$100 each. Suitable cash settlements will be made at time of delivery of the new stock in respect to fractions of shares of such stock according to any depositor.

COLONIAL TRUST COMPANY,
St. Paul Building, 222 Broadway, New York.

OLD COLONY TRUST COMPANY,
Ames Building, Washington Street, corner of Court, Boston, Mass.

NEW YORK AND BOSTON, September 10, 1898.

think that if you should buy the capital stock of one of the railroad companies in Washington and also the capital stock of some manufacturing establishment in Washington you would thereby be establishing a trust. Indeed, the laws of Illinois expressly provide that a manufacturing company may own the capital stock of a railroad company which connects with its manufacturing plant, the idea being that one is of benefit to the other and the public is not injured by any such purchase or control of interests. Now, as I said before, we have endeavored not to run counter and not to be antagonistic to the spirit of any law of any State; we are not attempting to control prices; we are not seeking a monopoly; we have been offered the capital stock or the properties of a good many different manufacturers engaged in our line of business, but we have not entertained any proposition at all.

Q. The question has to do simply with the general form of control. The board of directors of the Federal Steel Company is in such a position that it could, in case of emergency, practically direct the actions of each one of the constituent members, and that was supposed to be the purpose of this organization when it was formed?—A. That is right, and it is fair to say that the officers of these different corporations, presidents of the constituent companies, are in very close communication with me and listen to my advice from time to time.

THE RISK OF PRICES.

Q. Can you now give us briefly a statement regarding the course of prices in the leading products of the Federal Steel Company from a period a year or two, perhaps, before the formation up to the present time?—A. I can give you some of those prices. We all know that prices in manufacturing lines have materially advanced during the last 9 or 10 months, and indeed I do not know that that is confined to manufacturers. I think that is true of the general business of the country. I know it is true of the hotels. The price of pig iron about a year ago was, say, \$11; at the present time it is about \$23. Notwithstanding we produce a very large quantity of pig iron, we have not produced sufficient to supply our own wants, and have purchased during the last 6 months a good deal of pig iron; we bought some the other day, some of our companies; we bought, we will say, 150,000 tons of pig iron at about \$22.50. Coke a year ago was about \$1.50 a ton to one of our companies; our companies have to buy considerable outside coke at the present time; we are building some ovens now. They were trying to buy some coke not long since and were asked \$2.50 to \$3 a ton for it. Rails, which are one of the largest products of the Illinois Steel Company, a year ago were selling at \$18—very much too low; for 3 years rails sold for very much less than they could be produced for; for the last 3 years they have been doing business at a loss, a large loss. They are selling now at \$33, and, of course, you will see at a glance there is not very much profit in that—that is, if pig iron must be bought at \$23.50 cash. It costs something like \$8 or \$9 a ton to convert pig iron into rails, and you have got nothing left for your investment; and the investment, of course, is very large.

EFFECTS OF CONTRACTS.

Q. It is a case where special advantage came to the Federal Steel Company in having its own supply of ores?—A. Yes, certainly. The contracts for ore were made last year at a low price, and yet, I suppose, when the price is made for next year, the Minnesota Iron Company will get some benefit. It can not be possible that these other prices of finished products will obtain without the prices of ore increasing correspondingly. A year ago lake freight rates were 80 cents, and now they are \$1.25. Our people have contracted for, say, 1,200,000 tons extra, at about \$1.20 to \$1.25.

Q. Well, you had made your contracts earlier for ore. Had you also made contracts for the supply of finished materials, so that the real prices you are getting now are not the representative market prices?—A. About two-thirds of it, probably less; from one-half to two-thirds. Over half, mostly, nearly all of the capacity for rails was contracted at the low figure. As I say, the price of rails was abnormally low. The average price for rails for the last 9 years was \$25, and for the last 3 years, \$18; \$25, when pig iron is worth \$10 or \$12, is a fair enough price.

Senator MALLORY. Should you prefer to go on with your testimony and finish now?—A. I do not think it is very material. If it is just as convenient, I should be glad to get through and go back, but I am perfectly willing to stay. I think we are willing to give stockholders or the public any information concerning our business and our books and our profits.

The commission took a recess until 2.15 p. m.

2.15 P. M.

Senator MALLORY. The commission will resume its session. Mr. Gary is on the witness stand.

WAGES INCREASED—SALARIES DIMINISHED.

Q. (By Mr. JENKS.) I should like to ask you with reference to the course of wages in these different companies that have been organized into the Federal Steel Company from a little time before the organization up to date. If you can give us any specific facts on the question I shall be glad to have them.—A. All the companies—constituent companies, so called—together employed in August, 1899, 21,859 men. In October, 1898, they employed 18,717 men. The monthly pay roll for August, 1899, was \$1,393,450.19. For the year that would be \$16,721,402.28. The average price paid common laborers in August, 1899, was \$1.70 each. The increase paid common laborers in 1899 over 1898 was 15.64 per cent; decrease of average pay of officers and clerks at headquarters in 1899 from 1898, 6.26 per cent.

(Witness introduced comparative statement.)

Comparative statement of employees, and wages received by same, of the Federal Steel Company's constituent companies for the months of October, 1898, and August, 1899.

	Number of employees.			Average daily compensation.			Total monthly compensation.		
	October, 1898.	August, 1899.	Per cent increase.	October, 1898.	August, 1899.	Per cent increase.	October, 1898.	August, 1899.	Per cent increase.
Officers and clerks at headquarters.....	294	308	4.76	\$5.27	\$4.94	6.26	\$46,525.69	\$45,652.03	1.88
General superintendence.....	574	639	11.32	2.95	2.97	.68	50,628.30	56,732.10	12.06
Skilled laborers.....	7,405	8,584	15.92	2.32	2.53	9.05	516,690.80	651,349.06	26.06
Common laborers.....	8,076	9,879	22.32	1.47	1.70	15.64	356,778.97	503,615.95	41.16
Miners (not including those in Connellsville coke district).....	1,168	1,276	9.25	1.71	1.96	14.62	53,208.15	74,879.00	40.73
All employees of the Southwestern Connellsville Coke Co.....	1,200	1,173	2.25	1.49	1.74	16.78	53,739.57	61,222.05	13.93
Grand total.....	18,717	21,859	16.79	1.92	2.13	10.94	1,077,580.48	1,393,450.19	29.31

Total annual wages paid employees on basis of August, 1899, roll, \$16,721,402.28.

Q. (By Senator MALLORY.) I understand from that, then, something I did not understand from your first testimony, that your officers, or the officers of these companies, higher officers, actually had their salaries decreased all the way down the line?—A. We reduced the number of officers and reduced the salaries; that is, we replaced some, and there were some of the officers who resigned or separated from the companies and were replaced with other men at less salaries.

Q. (By Mr. JENKS.) Do I understand that you abolished some of the higher-priced officers as well, and that would tend to lower the general average?—A. Yes.

Q. You did not take away anything from the salary of anyone who stayed in the positions that were left?—A. No.

Q. (By Mr. FARQUHAR.) Do you desire to have it in evidence that you decreased the whole salary of the official service by lessening the number of employees?—A. Well, by reducing also the amount of compensation.

CONSTITUENT COMPANIES DEAL WITH EACH OTHER AS INDEPENDENT.

Q. (By Mr. KENNEDY.) Is there any arrangement between these different companies making up the Federal Steel Company by which, say, the Illinois Steel Company, for instance, could go to the Minnesota Company and say, "We can make a contract for a large amount of a certain kind of work if we can get our raw material at a certain figure." Would the Minnesota Company make them the figure at which they could take that work?—A. No.

Q. They would not—would not make any exceptions?—A. No.

BONDED DEBT AND CAPITAL STOCK OF CONSTITUENT COMPANIES.

Q. Has the Federal Steel Company a bonded indebtedness?—A. Yes; I beg your pardon; what is that question?

Q. Has the Federal Steel Company a bonded indebtedness?—A. No, it has not.

Q. (By Mr. C. J. HARRIS.) Have any of the companies a bonded indebtedness?—A. Yes; most of them; the Lorain Steel Company has no bonded indebtedness.

Q. (By Mr. FABQUHAR.) Has there been made any guaranty of these bonds by the Federal Company?—A. No.

Q. Then the separate companies take care of their own indebtedness?—A. Yes.

Q. (By Mr. KENNEDY.) Does that bonded indebtedness affect the stock of the Federal Steel Company?—A. No, if I understand your question; if I comprehend your question. I do not know whether you mean to ask whether it affects the selling value, the market value, of the stock, or not; if so, that is a question I can not answer. If anyone can tell what determines the value of stocks on the stock exchange, he knows more about the situation than I do; intrinsic values do not control values there, selling values, I think, as a rule; now I will not say as a rule, but always.

Q. (By Mr. JENKS.) What is the amount of the capital stock of each of these different companies?—A. Actually issued or authorized?

Q. Perhaps you can give them both just as well.—A. Well, the authorized capital stock of the Illinois Steel Company is \$50,000,000; the stock actually issued is in the neighborhood of \$18,650,000. The authorized capital stock of the Lorain Steel Company is about \$9,000,000, and the amount issued is perhaps \$5,000,000; I would not attempt to be accurate. The issued capital stock of the Minnesota Iron Company is about \$16,500,000; the authorized capital stock is very much larger, but I have forgotten the exact amount. The capital of the Elgin, Joliet and Eastern Railroad Company is about \$6,000,000 or \$7,000,000.

Q. The authorized you say there?—A. No, the issued, and perhaps authorized. For the other companies, I do not know that I could state it offhand; I have forgotten; but I can furnish these figures if it is necessary.

Statement, furnished later, showing the authorized capital stocks of the several constituent companies of the Federal Steel Company, also the amount of same issued to October 20, 1899.

Name of company.	Authorized capital stock.	Amount issued.
Minnesota Iron Co.....	\$20,000,000	\$16,500,000
Illinois Steel Co.....	50,000,000	18,650,000
Elgin, Joliet and Eastern Rwy. Co.....	6,000,000	6,000,000
Lorain Steel Co. (of Ohio):		
Common.....	6,000,000	6,000,000
Preferred.....	3,000,000	3,000,000
Lorain Steel Co. (of Pennsylvania).....	3,000,000	3,000,000

Q. The Johnson Company you do not know?—A. The Johnson Company's capital stock is about \$2,000,000.

Q. Now, as to the bonded indebtedness of these companies?—A. I can give them. The bonded indebtedness of the Elgin, Joliet and Eastern is about \$7,000,000; the Illinois Steel Company about \$13,000,000, and the others together, all of them, about \$5,000,000.

Q. That is, the Minnesota and Lorain?—A. Yes.

Q. About \$5,000,000 altogether?—A. Five or six million.

Q. (By Mr. C. J. HARRIS.) About \$25,000,000 in all?—A. In round numbers. Of course, when I spoke sometime ago about the actual value of these different properties, I meant the actual net value over and above the bonded indebtedness; for instance, I said the book value, not including cash, was in the neighborhood of forty-odd millions; that was over and above the bonded indebtedness.

Statement furnished later showing the outstanding issues of mortgage bonds of the constituent companies of the Federal Steel Company, October 20, 1899.

Total.	Less, held by the issuing company or by one of the constituent companies.		Balance outstanding in hands of public.	Date of maturity.	Rate of interest.
	By issuing company.	By constituent company.

a These \$6,500,000 of bonds are owned by the Minnesota Iron Company

b These \$50,000 of bonds are owned by the Federal Steel Company.

c Of these \$2,909,000 of bonds \$37,000 have been called for redemption, but have not yet been presented for payment.

MORE FEDERAL STEEL STOCK MAY BE ISSUED, BUT NOT FOR LESS THAN PAR.

Mr. C. J. HARRIS. I did not know but that went to the promoters.

Q. (By Representative LIVINGSTON.) How is that stock issued?—A. That has been issued?

Q. Yes.—A. About \$53,000,000 of preferred and \$46,000,000 of common.

DIVIDENDS.

Q. Do you mind saying whether you have paid any dividends on that or not?—

A. We have paid dividends on the preferred; we declared a dividend on the common stock, and the payment of that was enjoined by some small stockholder who bought a little stock—perhaps for the purpose, I do not know—on the technical ground that dividends on common stock could not be paid until the end of the year. Therefore there has been no dividend paid on common stock.

Q. (By Mr. JENKS.) Has the money been set aside especially for the payment of this dividend?—A. It has been.

Q. (By Mr. KENNEDY.) What dividends have been paid on the preferred stock?

Q. (By Mr. C. J. HARRIS.) Regular quarterly dividends, or not?—A. Yes; quar-

terly dividends—1½ per cent, two times. The dividend on the preferred stock was also enjoined, but, on hearing, the court modified that, and in December, I suppose, naturally, two dividends will be declared—that is, 3 per cent, making a total of 6 per cent for the year.

Q. (By Mr. JENKS.) Is the preferred stock cumulative stock?—A. It is not. Six per cent noncumulative.

FEDERAL STEEL'S CONTROL OF CONSTITUENT COMPANIES—IN NO SENSE A TRUST.

Q. (By Representative LIVINGSTON.) What control and what power of direction has the Federal Steel over the several boards of directors of the companies forming the Federal Steel Company?—A. It has no control whatever directly. It has the same control indirectly that any stockholder of any company has. If, for instance, you were the holder of all the stock or a majority of the capital stock of any corporation you would ultimately have control of that company. If your directors were elected for a term you could not get control until the term expired, and if their action was not satisfactory to you, naturally when the time of election came you would place in position a power, a directory, that was satisfactory to you, so that indirectly, or ultimately, you would have the control of the affairs of the company. The Federal Steel Company has that control over all these constituent companies.

Q. How many are in your directory of the Federal Steel?—A. Fifteen.

Q. Do these 15 men control the majority of stock of the company?—A. I should say no; not by a large majority; they are large stockholders, most of them.

Q. Before becoming directors of the Federal Steel, did they control the majority of stock of the several companies?—A. They did not; not by a good deal. Some of them were small holders, if they were holders at all in the old companies.

Q. Here is the very question that lies at the bottom of this. What necessity was there to form the Federal Steel Company when your own directors did not have the control of the 4 subordinate companies and do not now control their real operations—their business management?—A. I have already said they do ultimately control these other companies, because, owning the stock, they have the right at election time to select the directory. It is for the interest of the Federal Steel Company to own the capital stock of these companies just as it would be for our interest if you had a wagon and I had a horse to form a partnership so that we both should have a wagon and a horse.

Q. In other words, the preamble of your articles of incorporation ought to have read something like this: "In order to form a more complete or better union of the interests of these several companies, we hereby agree to form the Federal Steel Company." Would that cover about the requirement?—A. That is a very happy way of expressing the idea, at least. The Federal Steel Company—coming back to the question you started—I think, is in no sense a trustee; they are in no sense of the word a trustee of the stock of these companies; the stock is not held by the Federal Steel Company in trust. It is no more a trustee than you are a trustee of the stock you actually own in a corporation. There is no arrangement whereby the Federal Steel Company is to hold that stock for the benefit of any corporation; it is absolute owner and controls that stock just as much as you would if you as an individual owned it; no difference; no secret arrangement about it; no private understanding about it; no pool or any division in any way of business, business interests, or profits. That is strictly correct.

Q. In other words, you would put it in this very form—that were it owned by one person, this one person might own four different interests and control them as much as you do now with your Federal organization?—A. Exactly.

Q. The stock of these several companies is regularly voted by the directors of the Federal Steel?—A. As I said this morning, it would be in case it was necessary. Of course, if I supposed the holders of a great interest of stock would not elect a director that was satisfactory—capable, honest, and intelligent—I would make it a point to attend the meeting myself, and, voting the stock of the Federal Steel Company, elect a director that was satisfactory. That question, practically, will probably never arise—I should not think it would. Human nature is such that these people will take care of the interests of the stockholders of the Federal Steel Company.

PROPERTY AND REVENUES OF THE FEDERAL STEEL COMPANY.

Q. (By Mr. KENNEDY.) You have direct control over the earnings of all these companies, have you not?—A. No, except in the same way; we have no control whatever.

Q. You declare the dividends?—A. No; they declare their own dividends. The Federal Steel Company gets its dividends on this stock just as you get dividends on

your stock in the company. If the Illinois Steel Company has money which is available to pay dividends, the directors of that company will declare dividends to the stockholders of the company, and the Federal Steel Company, being a stockholder, will get that dividend; and the same is true of the other companies.

Q. (By Senator MALLORY.) What revenue has the Federal Steel Company outside of that, if it has any?—A. Well, the Federal Steel Company, you know, in making this purchase, insisted upon the \$14,078,000 in cash. It has that in cash—\$14,078,000. Then these other companies have in cash about \$10,000,000. In addition to that the Federal Steel Company has made some increase in its holdings in the purchase of coal lands, and has obtained a very fine profit on that.

Q. It has invested some of this \$14,000,000 in coal lands?—A. Yes; or in the stock of a corporation which owns and will operate the works on the property. The amount thus invested is or will be probably \$2,000,000, and the property is supposed to be worth several millions more than it cost.

Q. And it has a revenue from that, has it?—A. We shall have; quite large.

Q. Now, how are the salaries of the officers of the Federal Steel Company paid—from their earnings? The Federal Steel Company, you will remember, owns the capital stock of these companies.—A. That is it; and also gets interest on the money it has, and will have, I hope, a very fine income from this coal property, which is being developed and being improved.

Q. (By Mr. JENKS). At present, then, the property of the Federal Steel Company is in these three forms—part in mines, part in cash, and the rest in stock in these different companies?—A. That is right.

Q. And it has an income from these three sources?—A. That is right.

ULTIMATE CONTROL OF A MAJORITY STOCKHOLDER.

Q. (By Representative LIVINGSTON.) Suppose one of these independent companies refuses to obey any action of the Federal board of directors, what recourse have you?—A. Not any, until the next election.

Q. Well, do you admit that they are independent, and at the same time they are subject to you in that way?—A. Well, not subject to our orders. They are absolutely independent. I said this morning you might ask that question of the New York Central. Suppose the officials of the New York Central should do business in such a way as to be unsatisfactory to the Vanderbilt family, what would be the result? At the end of the year the Vanderbilt family, or the stockholders, whoever they may be, would elect a directory that would be satisfactory, but in the meantime they would be helpless. Suppose you own a majority of capital stock in some corporation and you elect a directory for a year. What are you going to do in the meantime during that year if that directory do not do business satisfactorily to you?

Q. Suppose you wait until the election comes, and then elect a directory in one of these companies, and the stockholders in that company refuse to acknowledge the directory that you have elected. Then what are you going to do?—A. The Federal Steel Company owns all the capital stock of that company.

Q. Yes. Now, then, how can you say they are independent? I see how it is; it is a wheel within a wheel; I see it.—A. Suppose you owned the majority of the capital stock of a corporation; the presiding officer of this commission owns a minority. Now, you get together at your annual election and you elect Professor Jenks and Mr. Harris and myself three directors of that company. We are in absolute control of that company for a term, although we do not own more than one share of stock each. You own a majority of the company and you cannot do anything. We do as we please. You sit by, and at the end of the year you put in a directory that is satisfactory to you; but it is not really a practical question, because Mr. Harris and Professor Jenks and myself have only one share, and if we are men of any sense or any honesty we are not going to disregard the wishes that you and the presiding officer of this company, who are the real stockholders, express.

NO LOSS BY NOT MERGING THE CONSTITUENT COMPANIES.

Q. Now, let me ask you a practical one. Why did you not mold these four into one to control it as one?—A. I am inclined to think it is better to leave it as it is.

Q. You do not mean to say that you could run these four companies as cheaply as if they were all molded into one?—A. Yes; I think so. We simply give what are now officers of these different companies a different name, but their services are required; there are no superfluous positions, no positions of mere honor; they are working men; the president of each of these companies is a hard-working man. If he was not a president he would have to be a manager or something else, and the vice-president would have to be assistant manager. They have no extra men.

Q. You just call them by different names after you have them combined. These officers—presidents, and so on—are stockholders in the Federal Steel Company?—A. Yes; most of them, if not all of them.

Q. (By Mr. C. J. HARRIS.) Do you have the same directors in each one of these subordinate companies?—A. No.

REASONS FOR INCORPORATING IN NEW JERSEY.

Q. (By Mr. JENKS.) Are there any other points that you would care to bring out?—A. The Federal Steel Company was incorporated in New Jersey because the laws of New Jersey seemed to give all the power and authority that were absolutely needed. Now, as I came from Illinois, for instance, I should have been glad to incorporate the Federal Steel in the State of Illinois, if it had been practicable; but by the laws of Illinois, for instance, a manufacturing corporation is not allowed to hold or own the capital stock of other corporations, with some exceptions—one, at least; it may own capital stock of a connecting railroad company—but if the Federal Steel had been incorporated in Illinois it could not have held and owned capital stock in the corporations in Minnesota, mining companies, etc., ship companies; and then in New Jersey the amount of capital stock which may be obtained is unlimited, whereas in Pennsylvania and West Virginia and other places it is limited. So far as I know, there is no provision in the New Jersey law which may be used to the disadvantage or prejudice or injury of a stockholder. If there is any such, I am not aware of it—I mean rightfully. It was suggested this morning that there are fake corporations in New Jersey. I have not the shadow of a doubt that there are immoral, illegal practices under the laws of New Jersey; but the same is true of other States. Some of the worst corporations and some of the worst cases under corporations have been perpetrated in Illinois and other States—no doubt about that. Certainly the Federal Steel Company, or anyone interested in it, had no intention, in incorporating in New Jersey, of obtaining any rights that were not absolutely honest. It certainly had no disposition, and none of its officers since have had any disposition, to conduct the business of the company to the prejudice or without the knowledge of the stockholders. We have sometimes been, I think, unreasonably annoyed by inquiries from stockholders, our stock being largely distributed; still, we have endeavored to take the pains to give such information as we had—all the information we had—to the stockholders, and be respectful, and give them every opportunity to know exactly what is being done.

PUBLIC KNOWLEDGE IS THE NEED.

As I have perhaps said before, I did not quite agree with some of the gentlemen that the affairs of a large corporation should be kept secret. I think the great benefit, if I may be allowed to state it—I think the great benefit to be derived from the law under which this commission is appointed, and the action of this commission, is in ascertaining fully all the facts which are so much in the public mind, and distributing the knowledge and information which they receive. That is what is needed; that is what the public should know. There are always two sides to these great questions. Very frequently the laboring man is abused, and very frequently the corporation is abused, and very frequently the public is abused, and very frequently the public laws abuse the corporation. They sometimes are too liberal in favor of corporations, and at other times they are too harsh against corporations. Now, when you bring all these people together, when such an instrumentality as this ascertains and inquires in an honest way, and the people ascertain what the facts are, and distribute those facts thoroughly, so that everybody has an opportunity of knowing what they are doing—all classes of people are not so dishonest that they are not going to do the fair thing—you will hear sometimes a harangue by some man who is supposed to be a leader among the labor people which is abusive of corporations, and perhaps some of the listeners believe what is said and are prejudiced against corporations. On the other hand, you will see some man who is interested in great corporations pronouncing against the laborer, and he is just as unreasonable, and people believe him, when if the opportunity for investigation were made they would not believe it. The result is that both sides are injured more or less. People should be brought together; that is what I think. Laboring men and capital should be brought together, and we should all know all the facts, and on that evidence all of us will properly consider and decide these questions.

CORPORATIONS SHOULD NOT TRY TO INFLUENCE ELECTIONS.

Q. (By Representative LIVINGSTON.) Pardon me for trying to get one more fact. What interest have you heretofore taken in politics and elections, looking to the interest of your company?—A. To whom do you particularly refer?

- Q. Your company.—A. Our constituent company.
- Q. I mean your company.—A. The Federal Company?
- Q. Yes.—A. Since I have had anything to do with it, nothing whatever.
- Q. Made no contribution? Is it against your by-laws or rules to do so?—A. No; it is not.
- Q. Do you anticipate the necessity of one of these days having to do so?—A. I hope not; I do not believe in that; I do not believe in a corporation as a corporation attempting to interfere with or influence elections. I think I have been requested once or twice to contribute, but have declined to do so.
- Q. Now, then, about your labor. Are your workmen free to do as they please?—A. Perfectly so.
- Q. There is no spying or anything of that kind done?—A. If there is I should like to know it. If anybody knows of anyone in any of our corporations attempting to influence any of the laborers to vote, I should like to know it. I do not believe in it.

SUITS TO RESTRAIN PAYMENT OF DIVIDENDS.

- Q. (By Mr. JENKS.) To come back to the question of the suits that you spoke of. You said that you had been delayed for some time in the paying out of the dividends on the common stock, and also later in paying a dividend on your preferred stock, by suits that were brought. Have you any knowledge as to whether the persons who brought the suits were large holders or small holders of stock?—A. They were very small holders and very recent purchasers. I was simply going to say that I think the shares were very limited in number, and that the purchases were made almost immediately before the suits were brought.
- Q. Had you any intimation as to the persons in whose interest these suits were brought?—A. No.
- Q. (By Representative LIVINGSTON.) If you have your own idea, would you tell the commission why these suits were brought? What was the purpose of it?—A. You want me to guess at it?
- Q. Yes.—A. I guess it was done for stock-jobbing purposes. I do not think these suits were brought in the real interest of stockholders. I can not imagine that a stockholder, for the benefit of himself or other stockholders, would prevent a company from distributing some of its surplus assets among the stockholders, as dividends.
- Q. Did the price of stock go down on that?—A. Yes, to some extent. I presume the point was made and the advantage reaped.
- Q. (By Mr. JENKS.) Did you have any intimation or knowledge of any persons back of those persons who brought the suit?—A. No; no personal knowledge.

NO STOCK JOBBING BY DIRECTORS.

- Q. (By Representative LIVINGSTON.) Did the company take advantage of it, of the move?—A. What do you mean by that?
- Q. Take up all stock when it went down that you could get hold of.—A. Oh, no. I do not know of any of our people that bought a share; none of our officers, none of our directors, bought a share, I think.
- Q. (By Mr. FARQUHAR.) Have you any rule about that?—A. As far as I know there are no speculators in our directory.
- Q. Have you any rules in your directory about purchasing stock and dealing in stock?—A. No. We have very frank interchange of thought and opinion, though, on these questions, from time to time, so that I know pretty well what the different people are doing. I think our directors have from time to time bought our stocks as they declined in selling value, but at that particular time my opinion is that not one of them bought a single share. Certainly none of them were directly or indirectly connected with the suits. In fact, they were all very much annoyed about it, and we did everything we could to get the injunction modified, and we set aside the amount of money so as to be certain to take care of stockholders. That is, when the court enjoined us from paying out these dividends; in the first instance when they brought suit, not having it in mind, they did not enjoin us from setting aside the money, so we set it aside to take care of our stockholders.

TARIFF.

- Q. (By Mr. JENKS.) Did you express an opinion with reference to the tariff—the effect of the tariff on your line of industry?—A. I do not feel competent to express any opinion on the tariff question. It is a larger question, in my opinion, than

--- FROM THE INDUSTRY

Q. (By Representative LIVINGSTON.) How is that—A. I say I do not think the time has arrived in the history of our business—

Q. You mean your company?—A. When we could get along without protection.

Q. (By Representative Livingston.) Well, could you not afford to lose the whole of that protection?—A. Well, that is a question I should want to study and be more familiar with before I could answer it honestly and satisfactorily to myself.

METHODS BETTER AND LABOR CHEAPER IN GERMANY.

The German people particularly are in a very advanced stage of manufacturing in steel interests, steel properties. I believe they can manufacture pig iron in Germany cheaper than they can anywhere else. They make principally basic Bessemer there, basic metal. They have their ore and their coal right together, and they are making coke in what are called the by-product coke ovens, thereby utilizing all the by-products—ammonia, gas, tar, etc.

Q. Have they not got that in Alabama?—A. Yes, they are putting them in in this country to some extent. Yes, they have a by-product coke-oven plant at Birmingham; they have one at Dunbar, and they have one near Harrisburg.

Q. Now, there they have coal and they have the iron ore right along with it?—A. Alabama?

Q. I should think they could do it as cheaply as they do anywhere?—A. They are making pretty cheap pig iron in Alabama; there is no doubt about it. I think labor is considerably cheaper in Germany. I have no doubt you are better advised than I am with reference to that. I do not think they pay more than about 65 to 70 cents for their laborers in Germany, and they have been very materially increased, you know, in the last 3 years.

EVERYTHING SYNDICATED IN BELGIUM.

They are pretty well protected in Germany and Belgium, for that matter, and England, and perhaps France. There seems to be a feeling on the part of the people, and also on the part of the government, to take care of these large aggregations. There is no such antagonism there as there seems to be in this country; and at the present time I think the manufacturers are pretty thoroughly protected by syndicate agreements. For instance, I asked a prominent manufacturer in Belgium why he did not produce larger quantities and did not keep his mill running full. He said he could not get coke. "Why," I said, "I understood you to say you owned your own coal and --" "I own coke," he said, "Everything is syndicated. Coal is syndicated and we have allotments and --"

AS TO THE NEED OF PROTECTION, WHEN WE CAN EXPORT.

Q. You are aware of the fact that a great deal of ore, iron ore and steel, especially steel, is being shipped now from Alabama to the Orient. Now, how is it that they carry that across the continent and ship it over to Japan and China, if they need protection?—A. Now, that is largely a question of freight, I think, is it not? There is a limited market for that ore. We sell some rails in Japan; we could not sell rails in England at the present time.

Q. Let us understand that now. Do you mean to say that the discrimination now under the tariff does not equal the transportation, or does it give you the transportation in length of time? Do you not lose that discrimination in the transportation from here to Japan, in the freight?—**A.** I am inclined to think, as I say, this is too large a question for me. Do not understand me to admit even that I am competent to express any opinion on that, because I do not think I can in that regard. I think the tariff on steel production at the present time is more than the freight—

Q. (Interrupting.) From here to Japan?—A. From this country to Japan. That is my impression; you know a good deal better than I do about that, I am sure.

THE TARIFF IN GENERAL.

Q. One remedy proposed for these trusts is to take away the tariff entirely from them; just turn them loose. Suppose Congress should do that; what effect would that have on your industry, for instance?—A. In the first place, you refer to trusts.

Q. I mean all trusts, yours — A. Now, that word has been in the newspapers so much that I do not believe we have a clear understanding about it; at least, I do not. The word is used indiscriminately.

Q. Make it corporations and let it go; just corporate companies. Now, suppose all the protection we give companies or combines like yours—suppose it was all gone; what effect would it have?—A. Yes; that would have an effect, if you should take away the tariff. Just where this principle or proposition should be applied requires a great deal of study. But with reference to a great many industries, if you should take away the protection which is now given them, you would permit foreign products to be brought in here to the absolute ruin of these industries. Then what would be the result? In the first place, you have deprived the laboring man of an opportunity to earn a living, and, in the second place, you have given the foreigner an opportunity to come in here and make his own prices; and in that way you have very materially prejudiced the rights and interests of the consumer. Therefore I think, as I said before, I think the tariff question really is—now, I may be entirely wrong; I would not set up my opinion against anybody's—but I think the real tariff question is to determine just how much protection is necessary to enable the industries of this country to continue in business at living prices so as to take care of the workingman and so as also to prevent the foreigner from having the control of this business to the prejudice of the domestic consumer. Now, then, on the other hand, if you make the tariff so high that you create such a monopoly, or if you pass any law which enables the creation or existence of such a monopoly in this country as gives the control of any business to the manufacturer or to the producer to the prejudice of the consumer, why, then, you have gone too far in that direction.

NO MONOPOLY OF STEEL.

Q. Have you not done that with your steel company?—A. How is that?

Q. Have you not done that with your steel company?—A. I do not think the tariff question has anything whatever to do with the present prices.

Q. Have you not got a monopoly of the steel business in the United States?—A. Who?

Q. You.—A. Oh, we have no monopoly of any branch of business. I emphasized that this morning. We do not seek any.

ANY DISCRIMINATION MUST BE BASED ON ILLEGAL ACTIONS.

Q. You misunderstood my question. I do not want to discuss the tariff question in its general relation as bearing on all these matters. I asked that question with reference to breaking up these combines and trusts. What would be the effect on your industry? And as to others that are not combined in a trust, what effect would that have on the combines and the trusts? Would that break them up?—A. I am inclined to think it would. Of course if you destroy the corporations you destroy them, that is all. If you call a corporation a combine, if you drive it out of business, that is the end of it.

Q. (Interrupting.) I suppose that if Congress should legislate on that matter there should be some explicit definition of what a trust is, and then we should hold down to that definition all these industries in withdrawing protection from the industries. It would certainly be my idea not to consider a corporation a trust or a combine until it interferes with ordinary competition, and the moment it did that I should call it a combine.—A. I am not attempting to argue the question at all with you, but I doubt whether you can control the question by the adoption or repeal of tariff laws. In the first place, there is a legal question that perhaps you can answer better than I can.

Q. In other words, do away with free charters?—A. Yes; that is one question; but if you could take away our tariff law which was enforced as to some individuals and some corporations, if you could take that away as against other corporations, it would be because those corporations were illegal or doing business illegally. You can not do it on any other grounds. You can not make a tariff law applicable to you because you are worth \$500,000, and not applicable to the presiding officer because he is worth \$600,000. If the law discriminates so as against the presiding officer or his business,

it must be on the ground, I should think, that he is engaged in an unlawful business. Now, when once you reach that question, when you have determined that, you do not need any tariff law. If he is engaged in an unlawful business, you have absolute control over it anyhow, either by State or Federal law. Now, these great aggregations of capital undoubtedly are for the benefit of us all, certainly for the benefit of this country, and certainly for the benefit of the employees generally. But the aggregation of capital may be used in such a way as to do a great deal of harm, and that is the question you are inquiring about, I think; that is the corporation you seek control of.

NO REMEDY NEEDED BUT THE ENFORCEMENT OF EXISTING LAW AGAINST RESTRAINT OF TRADE.

Q. If you admit that there is an evil, then have you got a remedy?—A. I do admit that there is frequently an evil; I do admit that there may be an evil; I do admit that there are monopolies and there may be monopolies, and that they are prejudicial to the consumer very frequently; but I think it is equally true that combinations in restraint of trade are unlawful.

Q. Unlawful?—A. Combinations in restraint of trade are unlawful. They are unlawful by the common law; they are made unlawful by statutes in various States.

Q. Let us see what you mean by restraint. Suppose the combination that you speak of now raises the price of a commodity for a purpose unreasonably, or suppose it lowers it unreasonably for a purpose; would not that be unlawful?—A. Of course it is.

Q. Now what is your remedy, what is your suggestion? If Congress takes that as a rule as to what constitutes an illegal combine, what remedy would you suggest to control them?—A. Is it necessary to go to Congress to get that remedy?

Q. I do not know whether it is or not.—A. Assuming that it is, first, for the sake of considering the question, if Congress had the authority, the constitutional right to pass a law and enforce the provisions of that law, then it would adopt simply what I understand to be now the common law and to be what is made the statute law by the enactment of statutes in different States. If the Federal courts could enforce the provisions of that Congressional law there would be no trouble. Congress now under the Constitution has the right to pass a law, and has passed a law, which affects this question of monopolies so far as interstate commerce is concerned. Now, if it had the right to pass a law which should apply to local business, business done in the States, is there any doubt that it would be enforced just as the present law is enforced? Does anybody doubt the efficacy of the Federal courts to enforce the provisions of the Sherman Act, so-called? The difficulty has been that it was attempted to make that law applicable not only to interstate commerce but to commerce within the State, and the Constitution was not broad enough to cover that question.

Q. Well, you remember the English decision that a monopoly is where—I will read it to see if it conforms to your idea. This you get from volume 4, page 291, New Commentaries of the Laws of England, by Henry John Stevens, first American edition, New York, John S. Voorhees, law-book seller, 1846. [Reading:] "A monopoly is a license or privilege allowed by the King for the sole buying and selling, making, working, or using of anything whatsoever, whereby the subject in general is restrained from that liberty of manufacturing or trading which he had before. These monopolies had been carried to an enormous height during the reign of Queen Elizabeth and were heavily complained of by Sir E. Coke in the beginning of the reign of James I, but were in a great measure remedied by statute 21 Jac. I, c. 3, which declared such monopolies to be contrary to law and void."—A. The first part of that refers to a lawful monopoly. There is such a thing as a lawful monopoly.

Q. Patents are excepted.—A. Our Government gives a patent right; that is a lawful monopoly, I think.

Q. (Reading:) "Except as to patents to the authors of new inventions, and except also patents concerning printing, saltpeter, gunpowder, great ordnance, and shot." Those were exceptions under the English law. Now, then, we have the English law.—A. (Interrupting.) It is unlawful monopolies you are talking about here.

Q. I am talking about unlawful monopolies. Congress would have, if it has the right—I am not discussing that question—but suppose it has the right; it can determine first what an unlawful monopoly is and then prescribe the remedy. And for that reason, I ask you, if it should do that, and if it should withdraw the protection from all monopolies, would that be a remedy?—A. If we were to assume various things to be true, that might be a remedy. I doubt if that would be practicable. In the first place, it would be impossible, perhaps, to define a monopoly, and certainly it might be difficult to apply it if you did define it; and if you simply, in general

terms, withdraw the protection from a monopoly, then there would always arise a dispute as to whether the individual or the corporation was in control of a monopoly.

THE NEED IS LIGHT AND UNDERSTANDING.

Q. You would not desire to suggest to Congress, however, in the face of those that trouble us, not to make an effort in those cases to prevent injustice?—A. I still think that the very best remedy is—

Q. (Interrupting.) To let them go?—A. No; I do not believe in that. One of the greatest questions in this country is to know how to protect both the individual without anything on the one hand and the individual or corporation that has large means on the other hand. That is the great question.

Q. If you will pardon me, you recognize the fact that there are two parties in interest in the combine. There is the combine itself; there are the laborers employed in the combine, and there is the public standing on the outside without any relief or anything else.—A. You mean the consumers?

Q. Yes.—A. Of course, they ought to be protected.

Q. The great public must be protected. Now, what remedy do you have?—A. I was going to say that I think the best remedy is plenty of light on the subject, plenty of discussion, a thorough understanding. We have, I think, at the present time, without mentioning any names or corporations, we may have some monopolies in the country at the present time. I think so.

Q. (By Mr. KENNEDY.) Do you know of any monopoly in this country under this definition which Mr. Livingston has read to you. "A monopoly is a license or privilege allowed by the king for the sole buying and selling, making, working, or using of anything whatsoever whereby the subject in general is restrained from that liberty of manufacturing or trading which he had before"—A. I do not recall any. It was the custom in the old times actually to create monopolies, to give people the right to make, buy, and sell things, and give individuals an absolute monopoly. We do not have that in this country, as a general thing—of course not; but there are no doubt monopolies in this country at the present time. I think, however, that with plenty of investigation and plenty of discussion they will not succeed in the long run. That is my judgment; they will fall by their own weight; they will go to pieces. Then, when a corporation gets into a place where it is abusive to the public, I think competition and opposition will grow up and be effective. The danger is always of going so far and so hastily that great wrong will be done. Of course we are all aiming for the greatest good to the greatest number. We want aggregation of money in this country, of course. I have no doubt that all of you read the speech on this subject by Sir Michael Hicks-Beach this summer.

Q. I should say there are very few people in this country that want large amounts of money aggregated in a few hands in a few localities, they want it spread out.—A. Well, we want it sufficiently aggregated to produce at the very lowest cost the largest quantities, and at the same time furnish employment to the laborer, and to bring to this country the largest amount of foreign money.

Q. Not hurting the consumer in the meantime?—A. Not hurting the consumer in the meantime.

Q. That is good doctrine.—A. That is a good basis; that is a good place to stop.

THE EXPORT TRADE—SCOTLAND—JAPAN.

Q. (By Mr. JENKS.) You have some export trade, have you, in the Federal Steel Company?—A. Well, the Lorain Steel Company at the present time is doing some export business. It has taken quite a large contract in Scotland lately. That, you know, is engaged in the street-railroad business, girder rails, etc. The Illinois Steel Company has not shipped any rails nor any billets for some time. The prices over there are pretty nearly the same as the prices here at the present time, and, taking the cost of carriage into account, it would not pay to export. But there is another better reason than that; and that is, that the demand here is so great at the present time that it is difficult to supply it. A few days since I told some of our people I thought they had better take an order for quite a large quantity of rails, to be shipped to Japan at a little less price than we were selling here. I think it is trade that we should keep up. I believe in doing business for the benefit of all concerned.

Q. You think it is worth while to encourage that export trade now and hold your market there?—A. Yes; we may need that business 2 or 3 years hence; and, as I have already said, we have got 21,000 employees as against 18,000 2 years ago, and it is just as much our business to take care of them as it is to take care of our stockholders, in my judgment. We want to keep that business, and we want to keep our trade for future business, and there is quite a large tonnage to go to Japan.

Q. (By Senator MALLORY.) How do you get that over there?—A. We ship them overland to San Francisco.

Q. Could you not do it more cheaply by shipping them around?—A. No.

Q. (By Mr. JENKS.) Do you recall whether they go through on our roads or by the Canadian Pacific?—A. Well, that is a matter of arrangement with the railroads, depending upon time, etc. I think they would naturally go from the Illinois Steel by one of the Pacifics—the Union Pacific or the Southern Pacific—or the Santa Fe; I think so.

Q. (By Mr. FARQUHAR.) Does the protection contained in our tariff cut any figure in the price of the rails that you sell in Japan?—A. No.

Q. Not a particle, does it?—A. No.

Q. (By Representative LIVINGSTON.) Suppose the same protection was in Japan on foreign rails that we have here on foreign rails, would you be able to sell over there at all?—A. No; probably not.

Q. Then you have a free-trade market on the outside?—A. Well, generally speaking, I am for this country as against the world; so are you.

Q. (By Mr. FARQUHAR.) Three leagues from the shore you are right in the world for the markets of the world, for the world's prices?—A. Yes.

Q. (By Mr. KENNEDY.) There are no rails manufactured in Japan?—A. No.

Q. (By Representative LIVINGSTON.) In some countries there is but little manufacturing going on. We want to get their trade, and I think it is very fortunate for us.—A. That is what all Europe is doing. They are taking care of their own countries. That is what we should do, of course; that is a business proposition.

ENFORCED PUBLICITY ONE OF THE BEST REMEDIES.

Q. (By Senator MALLORY.) Have you thought or considered at all the question of the publicity that it has been suggested should be given to the dealings of trusts as a possible preventive to injustice being done by them?—A. I have spent some thought on that. I believe that is one of the very best remedies.

Q. Has it occurred to you to think how that publicity could be secured or enforced on trusts that are not engaged in interstate commerce, for instance?—A. By statute laws.

Q. That would have to be by the States?—A. Yes, by the States.

POWERS OF CONGRESS.

Q. It has been suggested that that could be reached by constitutional amendment to the Constitution of the United States, giving Congress the power to exercise control over all corporations that are engaged in interstate commerce in any way. Under that provision there are very few of these large combines or trusts but could be shown to be in some way, in some lines of business, engaged in interstate commerce; and they could be reached. If Congress possessed that power, do you think it would be of any material benefit?—A. My impression is that under the present Constitution no adequate law could be passed by Congress; and I think it would not be practicable to attempt to amend the Constitution, because you immediately raise this whole question of State rights. I think the representatives of the different States, when it came to a test of the question, would be opposed to giving the Government the right to take up a question which the States individually now have the right to control thoroughly. But assuming, as I understand your question does, that you had the right to pass such a law, the only difference would be that in that case your laws would be enforced in the Federal courts, whereas at the present time they must be enforced in the State courts. Now, which is the better forum is a question to be considered. I have always believed that a Federal court was a better forum than a State court for the enforcement of all provisions of law which either court may have jurisdiction to enforce. Whether I have answered your question or not, I do not know.

Q. Do you think that Congress now has no power to impose any regulation or restriction upon corporations engaged in interstate commerce?—A. I think it has not except as it is applied to the interstate-commerce business. That is a line, perhaps, somewhat difficult to define, to ascertain.

Q. A corporation is engaged in interstate commerce; that is a fact. Has not Congress, under the interstate-commerce power which it exercises under the Constitution, the right to exercise control over that corporation if it is engaged in interstate commerce?—A. I think not. This I understand to be the proposition. You inquire whether, inasmuch as the corporation is engaged in interstate commerce, the Federal authorities may not exercise jurisdiction over the corporation itself, including all its business, whether it is interstate-commerce business or not. Now, I think not. I

think the fact that a corporation is engaged in interstate commerce does not give the United States the control over the corporation; but it is the interstate-commerce business, that part of the business of the corporation that is interstate, which the United States has control over or may interfere with. That is my understanding of it.

Q. You think, then, that a court would draw that distinction when it came to construe action taken by Congress undertaking to regulate one of these corporations that was engaged in interstate commerce, and, of course, intrastate commerce also? You believe that a court would undertake to draw the distinction you have drawn, and say that Congress has control over this corporation so far as it affects interstate commerce, and that its power ceases so far as it goes to anything else?—A. I think your inquiry goes a little too far. I do not think the court would say it has control over this company, so far as it is engaged in interstate commerce. It has jurisdiction over the business so far as it is interstate commerce.

Q. The Supreme Court has held that under the interstate-commerce and foreign-commerce power, Congress has not only control over interstate and foreign commerce, but also over the instrumentalities—it uses that expression—but also over the instrumentalities. Under that, it controls the action of a sailor who runs away from his ship, and he can be arrested and locked up until his captain comes and takes charge of him.—A. So it might examine a corporation engaged in interstate commerce. I do not think it could examine the books of a corporation which related to anything other than its interstate-commerce business. It may be a line somewhat uncertain and difficult to find.

Q. (By Representative Livingston). Your idea is that your company could not be complained of nor classed with these railroad companies?—A. I did not quite understand.

Q. Your argument is that we could not go any farther in Congress than we have gone with the railroad corporations, where we could control, under the provision of the Constitution, all the mails anywhere—of course, that is interstate, going in and out. Do you think that is as far as we could go with your company—we could control you when you got into another State with your bridges and rails?—A. I think you would have the same control over our company that you have over a railroad; no more.

Q. Not any more?—A. I do not think you could make fish of one corporation and fowl of another. It is the business that determines.

Q. If we did, and that interfered with your chartered rights under the State in which it was incorporated, of course there would be a fight between the United States authorities and the State authorities of New Jersey?—A. Yes.

J. P. MORGAN & CO. HELD CONTROL OF THE CONSTITUENT COMPANIES.

Q. (By Mr. JENKS). When you made the contract with the Morgan syndicate, so-called, with reference to the stock of these different constituent companies, did that syndicate have control at that time of a majority of the stock of these different constituent companies?—A. I believe it did.

Q. It had the control of each one?—A. That is, the syndicate managers; yes; J. P. Morgan & Co.; they were the syndicate managers; they organized the syndicate to furnish the cash and take stock.

Q. You think that J. P. Morgan & Co. themselves, that one company, had a majority of the stock of these constituent companies?—A. Yes.

Testimony closed.

Whereupon the commission at 3.45 p. m. adjourned until to-morrow morning at 10.30.

THE AMERICAN STEEL AND WIRE COMPANY.

WASHINGTON, D. C., November 14, 1899.

TESTIMONY OF MR. JOHN W. GATES,

Chairman of the American Steel and Wire Company of New Jersey.

The commission met at 10.40 a. m., Chairman Kyle presiding. Mr. John W. Gates, of Chicago, chairman of the American Steel and Wire Company of New Jersey, was introduced as a witness, and, being duly sworn, testified as follows:

Q. (By Senator KYLE.) State your full name and address.—A. John W. Gates; residence, Chicago, Ill.; position, chairman of the American Steel and Wire Company of New Jersey.

NATURE AND EXTENT OF THE BUSINESS OF THE AMERICAN STEEL AND WIRE COMPANY.

Q. (By Mr. JENKS.) Will you kindly tell us, in the first place, something regarding the nature of the business of the American Steel and Wire Company; what is your raw material, and what is the nature of the products?—A. We are owners of iron mines, miners of iron ore, owners of coal mines, miners of coal, burners of coke. We operate 8 or 9 blast furnaces, 3 Bessemer steel works; we have, either built or in process of construction, 17 open-hearth furnaces, about 22 to 25 rod-rolling mills, and 20 to 30 wire mills; and our finished product is plain wire of every shape and kind used in America, barbed fence wire, wire nails, and every kindred article in the wire line.

Q. Wire fences?—A. Yes; wire fencing of all kinds, wire clothes lines, wire rope, wire for electrical purposes, and all the various purposes for which wire is used.

Q. Are you able to furnish your rod mills and wire mills all of the raw material that they require from your own plants, or do you have to buy some outside?—A. We have been buyers in 1899 of perhaps 40 to 45 per cent of our products. We have been makers of from 55 to 60 per cent of our product.

Q. Are you also large producers of copperas?—A. Yes; I think we make a large share of the copperas made in this country.

Q. About what percentage do you make?—A. It would be a guess on my part. I should say that we make two-thirds of it.

Q. What proportion of the wire nails do you produce?—A. I presume that varies from 65 to 90 per cent.

Q. And with reference to the rods that are used in the production of wire, what proportion of that product?—A. There are 5 rod mills that are not in the American Steel and Wire Company.

Q. And how many did you say you have?—A. I think we have—I should have to count up, if you would like to have me.

Q. Well, if you can, give us pretty nearly what it is?—A. (Witness figures). We have 23.

Q. You probably, then, have from 75 to 80 per cent at any rate of the rod production of the country?—A. I should think we had fully that.

Q. Perhaps more?—A. Seventy-five to 80 per cent.

Q. The statement was made in the papers, before the organization of the present American Steel and Wire Company, if I recollect rightly, that the Illinois American Steel and Wire Company, which, I believe, is one of your constituent companies, had control of about 75 per cent of the total output of wire rods and nails. Is that a fair statement?—A. Well, no; I do not think that would be a fair statement. I do not think we had. There is what the manufacturers would call the active tonnage and the inactive tonnage. The active tonnage we would call in manufacturing a concern that runs every day in the year regardless of the price; whether it is good or bad, they

keep running. The inactive tonnage would be the tonnage that was only operated when prices were good. Of the active tonnage, I presume that the American Steel and Wire Company of Illinois had probably 60 per cent; but they did not have 80 per cent of the active and inactive tonnage, for there were a lot of rod mills that did not run at all.

THE PRICE OF IRON ORE.

Q. Can you give the statistics of prices for some time past, we will say for the last 3 or 4 or 5 years, of some of your leading products; for example, the prices of iron ore, the cost of transportation of this ore from the mines to the mills, the prices of steel billets, of rods, and of wire nails? I may say that we have already sent to you a similar request that you perhaps did not see.—A. I never saw it. The price of iron ore in 1896 was based on Norrie ore as a base ore, and was fixed at \$4. Other ores were sold, taking into comparison the moisture, the percentage of metallic iron, and phosphorus and the various chemical qualities and physical qualities, on a scale up or down from \$4. That was for the season of 1896. In 1897 the prices were fixed on the basis of Norrie ore at \$2.75. In 1898, about \$2.80 to \$2.90. In 1899, \$2.90 to \$3. For 1900, I presume, any of us would be willing to pay \$2.50 a ton more.

Q. (By Senator KYLE.) Do you mean \$4.50?—A. No; I should say that we would be willing to pay \$5.50 for ore that we paid \$3 for this year. The reason for the great advance is not any combination, consolidation, or agreement; but there never has been until this year, I believe, 10,000,000 tons of pig iron made in this country—certainly not lately. This year, I think, there will be over 13,000,000 tons made. Never until 1899 has the value of ore been fixed at anything more than a few cents per ton in the ground. To-day a mine that will measure up a million tons of ore of the grade of Norrie would sell for a couple of dollars a ton in the ground, \$2,000,000 for the ore in the ground. Three or 4 or 5 or 6 years ago that ore might have brought 40 cents or 50 cents. Never until this year have the owners of ore mines realized the value of ore. They have been mining out their principal. Year after year they have been taking out ore as long as there was any in sight, not figuring on the value of it, figuring that they wanted to keep in business. This year a tremendous tonnage came not only from American consumption but from all over the world, and the consequence is that the price of ore has pushed itself up. There has been no agreement on ore, as far as I know, for the last 2 or 3 months, of any kind, shape, or nature, and yet ore has sold higher than it has sold in a great many years.

Q. You have said that the average price in 1899—I suppose that was from the beginning of the year 1899 up to date—has been from \$2.90 to \$3?—A. The price of ore is always fixed along in the winter or early spring for the season's delivery, and when I say 1899 ore, I mean the price that was fixed last January.

Q. And that contract price runs through until the coming January?—A. That runs through the season of navigation.

OWNERSHIP OF LAKE SUPERIOR MINES.

Q. What proportion of the iron ore output of the Lake Superior region—is that where yours is, mostly?—do you control?—A. Perhaps one-sixth or one-seventh—somewhere in that neighborhood.

Q. What are the 2 or 3 other large controlling concerns of that ore besides yours?—A. There is the Oliver Mining Company, the Federal Steel Company, the National Steel Company, the Republic Iron and Steel Company, and then individual owners.

Q. But those that you have mentioned are the largest?—A. Those are the largest producers. There is a good deal of the property that is owned in fee by one man or set of men, and others pay a royalty on the mining of that ore.

LAKE FREIGHT RATES.

Q. Now, will you take up the question of freight rates?—A. Lake freight rates?

Q. Yes.—A. Lake freight rates from the head of Lake Superior to South Chicago and lower lake ports have been as low as 50 cents a ton, and I am not quite sure that they have not touched 45 cents.

Q. Can you give them substantially from 1896 up to date, as you did for the ore?—A. Very nearly, for I was president of the Illinois Steel Company for those years. I would say that in 1895 lake freight was established early in the season at about \$1. Before the close of the season we paid \$1.75 for large tonnage. In 1896 they attempted to establish the freight rates at 75 cents. I think we chartered some boats at 45 cents—

what we call wild charters. I know we chartered a good deal of tonnage at 50 cents; I think we chartered some wild tonnage at 45 cents—boats that had nothing to do, and it was simply a question whether they should lie still or take what they could get. In 1897 it was from 50 to 70 cents, as I remember it, varying. In 1898 it was from 55 to 62 cents. In 1899 it has been from 60 cents to \$2. I am president of the American Steamship Line. We have hauled ore at \$2, and we have hauled ore at 60 cents. We have loaded our boats on one trip with \$2 ore and the next trip at 60 cents, and vice versa.

THE AMERICAN STEAMSHIP COMPANY.

Q. What proportion of your transportation are you able to put in your own vessels?—A. It has so happened that we have not handled a ton of our ore this year.

Q. So your own vessels have been working for other people?—A. Our vessels have been hauling Carnegie and Federal Steel ore and grain entirely. The boats that we have chartered have handled our own ore. It might be right the reverse the next year; we might handle all of our ore; but that is hardly possible, as we have already chartered now—

Q. (By Senator KYLE.) What is the governing principle as to what you haul? What determines whether you shall haul your own or somebody's else?—A. I am speaking now about the American Steamship Company and not the American Steel and Wire Company. The American Steamship Company is owned by some of the parties in the American Steel and Wire Company and some that are out. It is managed by Capt. A. B. Wolvin, of Duluth, and he has carte blanche to get as much money as he can from any source for the boats.

Q. (By Mr. JENKS.) You spoke of the American Steel and Wire Company controlling or owning the ships?—A. No.

Q. You had reference to this American Steamship Company?—A. No; you misunderstood me. I said I was president of the American Steamship Company, and a good many of the stockholders are identical, probably one-half or two-thirds of them. The American Steel and Wire Company are not in the transportation business at all.

Q. Merely some of the stockholders are the same?—A. Some of the stockholders are the same. The line was bought while I was in Europe.

Q. Has this American Steamship Company capacity enough to haul all the ore for the American Steel and Wire Company?—A. I should think it had; yes.

COST OF LAKE TRANSPORTATION.

Q. Now, if you will continue further with reference to the cost of putting this ore from the vessels into the mills as needed.—A. Very much depends upon the size of the boat and the modernness of the boat. If it is an old-fashioned wooden boat that makes 8 or 9 knots an hour, it necessarily moves slow; if it is a modern steel steamer that will carry five or six or seven or eight thousand tons, you can handle ore pretty cheaply. I should say, however, that the fair cost of the lake tonnage—if that is what you want to get at?

Q. Yes; that to begin with.—A. A fair estimate of the cost of lake transportation would be that we can not move ore for better than about 60 cents a ton.

Q. Yes.—A. Take that, every bit.

Q. Yes.—A. The modern boats could not do better than that, and the old-fashioned boats probably can not move it for 60 cents.

RAIL FREIGHTS, LAKE TO PITTSBURG—RELATIONS TO RAILROADS.

Q. Where does the American Steel and Wire Company have the largest amount of ore delivered for its own use?—A. At Lake Erie ports.

Q. Can you give us an idea of the cost of transportation from the vessels to the mills where you use it?—A. I think the freight rate is about 90 cents—I would not be positive as to the freight rates because I do not charge my mind with them—90 cents from Lake Erie ports to Pittsburgh.

Q. Is it at Pittsburgh that you use the most?—A. Yes; we use more ore at Pittsburgh than we do at Cleveland. Perhaps it is pretty nearly a balance between Pittsburgh and Cleveland.

Q. Has the American Steel and Wire Company, or any of its largest stockholders, also large interests in the railroads over which the ore goes; that is, is the relation between the American Steel and Wire Company and the railroad over which most of its freight goes similar to that between the American Steel and Wire Company and the American Steamship Company?—A. No. I have some interest

in the Baltimore and Ohio Railroad, but I do not know that they get a ton of our ore. I do not know of any other prominent stockholder in our company who has a dollar's interest in any railroad that transports our ore either from the mines to the lakes or from the lakes to the furnaces.

MARKET QUOTATIONS—WASTES OF MANUFACTURING.

Q. Speaking in general with reference to the prices of the various products of the American Steel and Wire Company, would you say that the general market prices that are given in the trade papers, say the Iron Age, are fairly typical and fairly accurate?—A. Well, I should say that the Iron Age was the best trade paper in this country for the iron and steel manufacturers. It will come the nearest to giving facts.

Q. So that the market rates there could be fairly relied upon for general results by this commission?—A. I think so.

Q. If we were—in order to get at the nature of the business along this line—if we were to take the price of steel billets at Pittsburg, say, and compare that with the price of smooth wire at Pittsburg, subtracting the one price from the other per hundred pounds, the result, you would say, would be fairly accurate as to the cost of the manufacture of the steel billets into the rods, the cost of the manufacturing?—A. It would be misleading.

Q. In what particular?—A. We will suppose that the waste of rolling a \$15 billet into a wire rod was 8 per cent; that would be \$1.20 of loss. When you strike a \$35 billet the waste would be 8 per cent, or \$2.80. Now that carries all through the various processes. In the manufacture of nails there is a loss of perhaps 2½ or 3 per cent for what we call the whisker—the shearing of the point of the nail. In \$14 or \$15 steel that is not a very important item, but in \$35 and \$38 and \$40 steel it is a very important item. So that carries through the various lines. You must have a larger spread as the price of your raw material advances in order to make the same percentage of profit.¹

GROWTH OF MANUFACTURE—DECLINE OF PRICES.

As an illustration, I appeared before the Senate Committee on Finance in 1888. At that time perhaps 40 or 50 per cent of the wire rods used in the United States were manufactured here; the balance of them were imported. I stated at that time to Senator Sherman, I think, or Senator Allison, who was chairman of the committee, that if they allowed a certain protective tariff, six-tenths of a cent a pound, within 10 years we would make all the wire rods that were used in this country. We finally got the six-tenths of a cent protection, and to-day America exports a good many wire rods and imports practically none. They export 10 tons where they import 1, and 20 years ago it was entirely the other way. When I went into the wire business in St. Louis, the price of barbed fence wire was about 8 or 9 cents a pound for painted and 9 or 10 cents for galvanized, and practically every ounce—

Q. (By Senator KYLE, interrupting.) What year was that?—A. About 1880 or 1881. Practically every ounce of wire we made was made from imported stock, and our percentage of profit was less 18 or 20 years ago, with the price of barbed fence wire twice as high as it is now, than it is to-day or was a year or 2 years ago.

Q. (By Representative LIVINGSTON.) What is the output of iron and steel in this country? Is it not twice as much or four times as much as it was 20 years ago?—A. In 1874, I think, the output of wire in this country was about 40,000 tons.

Q. I am talking about the material from which you make it; I was asking you about the iron and steel.—A. I was answering you by giving you the wire end of it. I can not carry the iron and steel statistics back that far. I do not think they were kept. I think Mr. Swank began keeping the statistics about 12 or 15 years ago. In 1874 the output of wire in the United States was about 40,000 tons—about 25 years ago; in 1899, I think, the output will be 1,250,000 tons.

Q. (By Mr. FARQUHAR.) How do you account for this difference—by cheapening the process of manufacturing, and thereby making profits? Or is it the demand at the decreased prices?—A. Well, it is the decreased price, making a cheap fence for the farmer to use or a cheap nail for the farmer to drive; it is the electrical transmission of power, and the thousand and one things that wire is used in connection with. That has a great deal to do with it. And then, on the other hand, the process of manufacturing has been cheapened very much; and while all this process has been going on I think labor to-day is paid higher wages than 15 or 20 years ago in our line. I think 1899 will show the highest scale of wages that we ever paid in our history to our workmen.

¹ See Chart.

RECENT CHANGES OF PRICES.

Q. (By Representative LIVINGSTON.) What is the increase in the price of wire to the consumer in the last 24 months?—A. It is perhaps proportionate with the increase of the cost of raw material; I do not think it is quite.

Q. Can you give the figures?—A. Well, I should say that pig iron has increased from \$9 to \$24. That would be practically 200 per cent. And wire has increased perhaps 125 or 150 per cent—less proportionately than the raw material.

Q. (By Mr. JENKS.) The difference in price per 100 pounds, according to the Iron Age, between steel billets at Pittsburg and smooth wire has gone from, we will say 44 or 45 in October and November of 1898, up to the neighborhood of 80 in June and July. The difference in price between smooth wire and wire nails, on the other hand, has remained almost exactly the same. Can you tell why that is?—A. I think that when the larger manufacturers were separated they perhaps gave inducements in the price of one to get people to buy the other. We have gone on the basis of fixing a profit that would allow a fair remuneration to us on the market price of the material we had to buy; and I think our scale of prices will figure out to be a fairer scale to both the producer and the consumer than the one that was in vogue 1 or 2 years ago. We go on a profit basis entirely; that is, we do not seek to make more profit on a ton of wire nails than we would on a ton of plain wire, or vice versa, considering the amount of capital involved in the manufacture of each article.

Q. I still do not quite understand the difference. Here is a very material increase in the difference between steel and smooth wire, also between smooth and barbed wire, but practically no increase in the difference between the prices of wire and wire nails.—A. Well, that was last year.

Q. That is the difference between the latter part of last year and, say, midsummer of this year.—A. In 1895, 1896, 1897, and 1898 I was president of the Illinois Steel Company. I am not conversant with wire prices during that particular period. My time was given to the Illinois Steel Company. I can tell you about the prices of rails or billets perhaps very much better than I could about the price of wire.

Q. I was referring simply to the latter part of last year. At what time was the American Steel and Wire Company organized?—A. I think their charter was about the middle of January.

Q. Of this year?—A. Yes.

Q. And this difference of prices that I was referring to was simply for a few months before that time?—A. Yes.

MONOPOLY OF BARBED WIRE, NOT OF SMOOTH.

Q. There has been, as I said before, a very decided increase in the difference of price between barbed wire and smooth wire, and also between steel and smooth wire, but no increase in the difference between wire and wire nails; what is the explanation of that?—A. The price of barbed wire has advanced more than the price of smooth wire, has it not?

Q. Yes; by 50 per cent.—A. That is no doubt due to the fact that we have a monopoly of the barbed wire. We practically own every patent on barbed fence wire and machinery in existence in the United States, and we claim that no one can manufacture barbed wire without infringing our rights. We paid a great many hundred thousand dollars for these patents, a great many hundred thousand dollars more in litigating and sustaining them. We sustained one recently in the Supreme Court.

Q. So that, so far as the price of barbed wire is concerned, you have a decided advantage in having practically a complete monopoly of the patents?—A. Yes.

Q. That does not apply to so great an extent in smooth wire?—A. No, it does not.

Q. At the same time you did say that you controlled a very large proportion, 75 or 80 per cent at any rate, of the output of smooth wire?—A. Yes.

Q. Perhaps more than that. You are enabled by virtue of that large output to fix pretty definitely your prices and be sure you get some profit at least out of that?—A. We do not aim to produce anything that does not pay us a profit. We go on the principle of making a profit on everything that we make. There may come a time when we may have to sell at a loss, but at the present time we are having a profit on everything.

Q. And by virtue of your large output—the large proportion of the total output—you are able to hold your price on the smooth wire. And now, with reference to wire nails, what proportion of the total output do you have there?—A. No; I do not claim that we hold the price on wire. We do not claim to at all.

Q. (By Mr. JENKS.) Except in so far as the barbed wire business goes, of course?—A. In the barbed wire business if any concern sees fit to infringe our rights we shall

begin litigation against them. We have done that probably in almost every circuit court in the United States. Yes, and been successful; but we do not attempt to control the prices of smooth wire or wire nails or anything that we do not have a legal right to control by virtue of our patent monopoly, which, I think, has several years yet to run.

COMPETITION IN WIRE NAILS—NO PATENTS.

Q. About what proportion do you have of the output of wire nails?—A. I should say about the same proportion as of plain wire.

Q. (By Representative LIVINGSTON.) What is that?—A. Sixty-five to 80 or 95 per cent, somewhere; I can not tell you.

Q. Is it not a fact that competition has kept the price of wire nails down, while the smooth wire has gone higher?—A. No; I do not think so.

Q. Do you not know it to be a fact that the farmers and the mechanics object to the price of wire nails, and will take the other nails just as soon as you put up the price?—A. I think every advance that we have made in the last year has affected wire nails and smooth wire about the same.

Q. The price of wire nails has not gone up, while the price of smooth wire and barbed wire has doubled almost.—A. We claim a perfect right to put any price on barbed fence wire that would seem justifiable on the ground that we have paid out hundreds of thousands of dollars for patents. We do not claim that right on the others.

Q. You have acquired a patent monopoly, and you justify it then?—A. Yes. The granting of a patent gives a man a monopoly, as I understand, if he has a good patent.

Q. (By Mr. CONGER.) Do you make as much profit on the manufacture of nails as you do on the manufacture of barbed wire?—A. No, I think not.

Q. Why do you not? Why do you not ask a price that will bring you as much profit on the nails as on the barbed wire?—A. Because there are no patents on nail machinery that we know of, and there are patents on barbed-wire machinery producing this product.

Q. There is some competition, then, in the manufacture of wire nails?—A. Yes; there is some in the manufacture of barbed wire, but not very much. It is limited to two or three, probably three more concerns that have licenses.

Q. (By Mr. JENKS.) Is there as much profit at the present time for your concern in the manufacture of wire nails as there is in the manufacture of smooth wire?—A. Why, I think about the same.

Q. Do you have agreements with independent manufacturers of wire nails, more or less formal, as regards the prices at which the nails shall be marketed?—A. No; we do not; we have no agreement whatever.

Q. You furnish to those manufacturers of wire nails in various cases the smooth wire from which the nails are manufactured?—A. Yes; sometimes we do.

MONOPOLY OF WOVEN WIRE FENCING, AND HIGH PROFITS.

There is a great deal of woven wire fencing made in this country. We claim a monopoly under patents of most of the woven wire fencing. We made the past year about 25,000 miles of woven wire fencing under patents that we purchased, and we get a very much larger profit on that than we do on the plain fence wire or even barbed wire or wire nails, for the reason that we own the patents on the machines and the patent on the product.

NO MONOPOLY OF WIRE-NAIL MACHINERY.

Q. As to the machinery that is used in the manufacture of wire nails, is any large proportion of that patented?—A. No; I think not, now. I bought the first wire-nail machinery for our company in Germany about 13 or 14 years ago—in Dusseldorf, Germany. At that time all the wire-nail machinery in this country was manufactured in Germany, but it is now all manufactured here and we are exporting that machinery.

Q. At the time of what was called the wire-nail pool, some 3 or 4 years ago, the statement was frequently made that the machines for the manufacture of wire nails were practically under the control of that wire-nail pool at that time.—A. That was without a scintilla of truth in it; none whatever.

Q. There was no agreement between that pool and the manufacturers of the wire-nail machinery not to furnish the independents?—A. I do not know as to that, because I had nothing to do with it. During the years of the so-called nail pool I was president of the Illinois Steel Company.

Q. Then how is it that you declare that there was no truth in the widely published statement that there was such an agreement, and that the wire-nail pool did control the wire-nail machinery?—A. I say that because as far back as 1885 and 1886 I went to Germany and bought wire-nail machinery and had it shipped here, and the makers of it did not claim that there was any patent on it when I bought it there. If there was no patent on what was known as the Malmedie machine in 1885 or 1886, no wire-nail pool or agreement made 10 years later would claim that they had a monopoly on the machine.

Q. I understand you to say that the wire-nail machinery is now all manufactured here?—A. Yes; all that is used is manufactured in this country.

Q. Would it be a possible thing for the wire-nail pool to make an agreement with the manufacturers of that machinery not to sell independents on condition that they would take their total output, or anything of that kind?—A. The answer is that any machine shop could make wire-nail machinery. It is not a hard thing to make, and there are no patents on it. Kilby, of Cleveland, who makes everything in the line of machinery, and who has made a great deal of machinery, has made a great many wire-nail machines, and Whitney, of New York, has made a great many, and we have made a great many ourselves in the past.

Q. When you furnish a manufacturer the smooth wire which enters into the manufacture of wire nails, in those cases where you do furnish the raw material, do you have any understanding as to the prices at which they shall sell the wire nails?—A. No.

WIRE-NAIL PRICES—NO AGREEMENTS—QUANTITY PRICES.

Q. If they wish to follow your prices that is their own matter?—A. We have no agreement whatever. If they wish to sell at a loss, they can do so. I think our prices are different, or terms are different, from those of any of our competitors. That is my understanding.

Q. In the selling of your product, do you make it a practice to sell to jobbers mainly, or do you sell also to the smaller wholesale dealers and retailers?—A. We sell to anyone who wants to buy; we make no distinction.

Q. Do you give an advantage in price to those who buy in car lots?—A. I think we have one price for carload lots, one price for less than carload lots, and one price for larger quantities—100 or 200 tons. I am really not familiar with that.

Q. That is to say, if you made this third distinction that you spoke of, there would be an advantage in price to the very large dealer who took, perhaps, several carload lots in contradistinction to the smaller ones who took only one?—A. Yes; I think we have a jobber's price, a carload price, and a less than carload price. My impression is that the difference between the carload and the less than carload price is 15 cents per 100 pounds, but I can not tell you what the difference is between the jobber's price and the carload price.

Q. There is a difference?—A. There is a difference. Mr. Pearson is here in the room and he can tell you. He is a very large customer of ours.

Mr. JENKS. Will Mr. Pearson kindly answer the question? Can you tell the difference in price between the carload price and the jobber's price?

Mr. PEARSON. Fifteen cents a keg.

Mr. JENKS. And then the difference between the carload price and the less than carload?

Mr. PEARSON. Fifteen cents, except on a contract; if the jobbers place a contract for 1,000 kegs it is 2½ cents cheaper.

The WITNESS. I am not familiar with the prices.

THE ADVANCE OF WAGES.

Q. (By Mr. JENKS.) Will you explain to us briefly the relations of this company to its wage-earners as regards any increase or decrease in wages since the organization of this company, so we might compare it with the prices themselves?—A. On the average, I think we are paying about 40 per cent more than the constituent companies paid before.

Q. (By Mr. JENKS.) That is, you think the wages have advanced about 40 per cent since the beginning of the year?—A. Yes; possibly more. I think we have made two advances of 15 per cent each, and one of 10. I am not certain but we have given another of 10; different departments of our works have advanced differently.

The men who roll the steel are paid at a scale. For instance, at \$15 billets they would be able to earn, we will say, \$2.50; with billets at \$20 they would be able to earn \$3.50; with billets at \$25, perhaps \$4.50; at \$30, \$5.50 up. So that they are

getting two or three times as much. In the general scale of wages, taking all of our workmen in the various mills, I think the average advance would be fully 40 per cent. In some cases it would be 150; but I have to take it as an overall proposition, unless I should single out certain departments. I think the average advance would be 40 per cent.

Q. (By Representative LIVINGSTON.) Has the advance in the rate of wages been proportionate to the advance of the prices of your product?—A. I think fully, considering the advance in raw material.

DOES NOT AND WOULD NOT RECOGNIZE THE AMALGAMATED ASSOCIATION.

Q. What proportion of your workmen are union men?—A. We have no means of knowing. We make no distinction whatever between union and nonunion; so I have no idea how many of our men are union and how many are not.

Q. You spoke of the fact that the wages were fixed on a sliding scale. Do you make any agreement with your workmen at the beginning of the year with reference to that sliding scale—what the rate shall be, running through the year?—A. Usually; yes.

Q. Is that agreement made with the representatives of the union?—A. I think it is made with the men as individuals.

Q. (By Mr. FARQUHAR.) Is it not a fact that the scale of wages in the mills is framed by committees of the manufacturers and of the Amalgamated Iron, Steel, and Tin Plate Association of workmen?—A. The usual custom for fixing the scale of wages is for the Amalgamated Association at their annual meeting to agree upon what they think is a fair scale and to present it to the manufacturers. Now, the manufacturers that employ nonunion labor usually pay the same as those that employ union labor. That is the usual method. If a manufacturer that employs union labor is not satisfied with the scale he fights it out with the committee—with what is known as the mill committee—and after he gets the mill committee to agree, the men that employ nonunion labor, or the men that do not recognize unions, usually pay the same scale as those that have an agreement with any association.

Q. The question was asked by Professor Jenks whether your workmen are paid under the union scale or not. You said you think they agree individually.—A. They agree individually.

Q. You do not recognize, then, the Amalgamated Association in your works?—A. Well, we do not as an association.

Q. That is what I wanted to know.

Q. (By Mr. RATCHFORD.) How many men do you employ?—A. Do you mean including everything in full?

Q. Yes; in the iron industry, both mining and manufacturing?—A. Well, if I should guess, I should guess 36,000.

Q. Will you explain how it is possible for your company to treat with these men individually as to wages?—A. In the iron mines we pay the going wages, whatever they may be. This year, I think, we made three or four advances in the iron mines. The vesselmen are not employed by the American Steel and Wire Company; that is in a separate company; but the vesselmen, I think, are paid about the same way. The coke men and the coal miners and the coke burners are paid whatever scale is paid in the district.

Q. What is it that determines this scale of wages if there is no union to treat with? How is it arrived at?—A. Largely a question of negotiation between the mills, the mill owners, and the workmen.

Q. The workmen, acting in an individual capacity, or in a representative capacity?—A. Oh, they generally appoint a committee.

Q. Then they have a form of organization, have they?—A. Not that, in our case, we recognize. They have never asked us that—to recognize them.

Q. Is it not a fact that the iron miners have a national organization?—A. I think they have; yes.

Q. And the coal miners as well?—A. I think so.

Q. But your employees are not connected with it, to your knowledge?—A. We do not know whether they are or not. We treat with them in an individual capacity. For instance, if they came to us and said that they represented lodge so-and-so, we should know then that they were in an association; but they have never done that; they have come and said that they were a committee.

Q. To put the question very plainly, have you at any time discouraged the organization of your men into a national association, or refused to treat with them as organized men?—A. I do not think we have ever been asked to treat with them as organized men.

Q. (By Mr. FARQUHAR.) Do you mean to say that you have never been asked to sign an Amalgamated Association scale, by a properly constituted committee of the Amalgamated Association?—A. Are you referring to the American Steel and Wire Company, of New Jersey? To my own knowledge, we never have.

Q. Have you at any time, your present company or the company you were connected with before in iron manufacturing, ever signed an Amalgamated Association scale with the men?—A. Yes; we have; years ago.

Q. That was the Illinois Company?—A. No.

Q. Which company was it?—A. The Illinois Company has union labor to-day, and recognizes its men as union men. I think our mill at Allentown, north of Philadelphia, had Amalgamated labor at one time. Our mill at Pittsburg, the Rankin mill, had Amalgamated labor at one time.

Q. (By Senator KYLE.) Rankin?—A. What is known as the Rankin mill. Our Joliet mill, I think, had union labor at one time, and possibly our St. Louis mills, but they have not had for several years.

Q. (By Mr. FARQUHAR.) Do you wish it understood broadly, then, that you do not recognize the Amalgamated Association in your present company?—A. We have not been asked to. None of them have asked us to recognize them. If you want to, put the question to me as to whether we would recognize them if they asked us to.

Q. No; I asked the question as to whether you did or did not.—A. We do not and have not been asked to; there has been no request to.

Q. You mean to say that these scales have never been presented to your present company?—A. By whom?

Q. By the Amalgamated Association.—A. Not to my knowledge; no.

Q. (By Representative LIVINGSTON.) Would you do it if they should ask you?—A. No; we would not.

TARIFF NEEDED TO KEEP MEN EMPLOYED, AND TO PAY FREIGHTS.

Q. (By Mr. FARQUHAR.) You laid considerable stress on the advantage that the tariff gave you, while you were before the Finance Committee of the Senate, and subsequently that tariff was framed to suit your people. Were you not aware that the tenor of all the discussions in Congress, and through the press, and everywhere, was that that tariff was built to protect American wages first, and not your product?—A. I think we have made money by having a protective tariff, and I think our workmen have also.

Q. (By Representative LIVINGSTON.) You said that you received a certain amount of protection; you did not say what.—A. Six-tenths of a cent a pound on wire rods.

Q. You said that you have a monopoly on machinery and patents?—A. Not for rolling wire rods.

Q. I did not understand whether it was for barbed wire or smooth wire?—A. Not for smooth wire.

Q. But then you have a patent on the machinery for making nails?—A. None whatever.

Q. I want to ask you if you need that protection any longer to enable you to stand?—A. Yes.

Q. You mean to say that your syndicate or trust or combination, whatever you might call it—I do not name it—could not exist without that protection now?—A. I mean to say that if we want to keep the same number of men employed, and give the railroads and transportation companies of this country the same amount of freight, we can only do so by having a protective tariff.

Q. You could do that by lessening profits on your wares, could you not? You could give labor the same wages, but it would come out of the profits you now make?—A. It would depend entirely upon the destination of the goods. If the goods carried a freight rate, as they very often do in this country, of from \$5 to \$15 or \$20 a ton, we could not, sir. The tariff question, in my judgment, is very closely involved in that question of transportation.

Q. Then you need the protection more as an offset against the charges for transportation than you do for anything else?—A. More than for any one thing.

EXPORTATION—AMERICAN AND EUROPEAN WAGES.

Perhaps you gentlemen would like to have me state the wages paid by us in comparison with the scale of wages paid to workmen in Europe, producing the same articles.

Q. (By Mr. RATCHFORD.) We should like to have the scale of wages paid to your workmen as compared with the scale of wages paid American workmen in the same industries, in the same departments.

The WITNESS. How is that?

Mr. RATCHFORD. We should like to have the scale of wages paid to your workmen as compared with the scale of wages paid now to the members of the Amalgamated Association.

Mr. FARQUHAR. That is right.

Q. (By Mr. RATCHFORD.) And also to the members of the Iron Miners' Association.—A. I think we pay the same.

Q. We should like to make a comparison if you will be pleased to state the scale.—A. I think we pay exactly the same. There is probably one factor that some of the gentlemen are not aware of, and that is our average exportation. Our average exportation for the year, for 1899, has been about 700 tons per day, so that I think the gentlemen would do well to look at the European scale of wages, for they are competing with us in the same countries.

Q. (By Mr. CONGER.) I wish you would make the comparison of wages paid here and in Europe, as you started to do a few minutes ago.—A. I think we pay at least 60 to 85 per cent more on an average.

Q. That is in your wire mills?—A. Yes; wire mills, rod mills, and the various departments. I think our average will be not less than 60 and from that to 85 per cent higher.

AMERICAN AND EUROPEAN COST OF LIVING.

Q. (By Representative LIVINGSTON.) Do not your wage-earners pay from 65 to 85 per cent more for their food and clothing?—A. No, sir; they do not.

Q. They do not? You have looked into that, have you? You have thoroughly satisfied yourself?—A. I have studied the situation on both sides of the water for 20 years. There is only one thing practically that is cheaper on the other side of the water for the workman, and that is rent.

Q. Their clothing is the same, too?—A. You can buy a pair of shoes in America cheaper than you can buy the same pair in Europe, and you can buy clothes cheaper. You can buy various goods as cheap and cheaper. The living of the workmen is as cheap in the United States as anywhere in the world, providing the workmen live the same; but the Americans live better than foreign workmen.

Q. You mean they buy a higher grade of goods?—A. They buy a higher grade of goods and live better, send their children to better schools, and enjoy the comforts of life; but the cost of living is certainly, in my judgment, as cheap in the United States, everything considered, as anywhere in the world for the laboring man. I have been to all the mill districts, practically, in Europe.

Q. Now, can you give us that scale compared with European labor?—A. I made the statement that it was not less than 60 and I think 85 per cent higher in this country than anywhere else in the world.

Q. (By Mr. RATCHFORD.) The scale of wages?—A. Yes.

Q. And the cost of living is not any higher?—A. None whatever, sir.

WHY AMERICA CAN EXPORT DESPITE HIGH WAGES.

Q. Will you explain your ability to export in such large quantities if wages in Europe are so materially lower than they are in the United States?—A. Yes; I am very glad you asked me that question. In Germany the cost of coke is about \$5 a ton. The cost of a ton of coke at the ovens in this country until recently has been about \$1.50; therefore the American manufacturers have the advantage in the cost of the fuel over the Germans. They also have an advantage in the cost of the ore over the Germans, so that if to-day the American wages were the same as the wages of the Europeans, and the capacity was sufficient in this country, this country could make all the iron and steel manufactured and used in the world, in my judgment—no question about it—paying the same scale of wages, understand.

Q. Admitting that the manufacturer in this country has some advantage in the cost of fuel, is it not a fact that the manufacturer in Germany has an advantage in the cost of transportation?—A. I think not; I think it is the other way; I think the American railroads are the cheapest transporters in the world; very much cheaper than they are in Germany and England, and I have studied it from a German standpoint and from an English standpoint. I do not think there is any country in the world that transports a ton of freight per mile as cheap as the American railroads.

Q. Yes, but the proximity to the markets there—is it not a fact that the manufacturer is closer to the point of distribution than in this country?—A. Possibly they are closer, but the answer is that the American railroad managers make the American manufacturer as close by making him a rate that will allow him to do business.

EXPORTS TO ENGLAND.

Q. (By Representative LIVINGSTON.) Have you been able to compete with the English manufacturer in this same way?—A. Yes; our London office sells perhaps 60 per cent of the wire sold in Great Britain; I think it does. We started our office in London in 1893 and figured at that time that the annual expenses of running the London office, including clerk hire and rent, ought to be about £1,500 a year, \$7,500. In the year 1899 the cost of operating the London office will be probably £15,000 a year. We are doing an average business in London of \$15,000 to \$20,000 a day.

Q. Now, what is the difference in price of products in London and in your home office?—A. Our export prices in New York and London are practically the same, and the merchants have the choice of buying f. o. b. New York or f. o. b. London.

Q. (By Mr. CONGER.) How are you able to make those prices the same in London as New York?—A. I should have said with the freight difference—that is, it is f. o. b. New York at a certain price and f. o. b. London with the freight added across.

EXPORT PRICES LOWER THAN DOMESTIC—THE REASONS.

Q. (By Mr. JENKS.) How does the export price compare with the price to the American consumers?—A. We are selling to the markets of the world at a less price than at home.

Q. Will you kindly explain the business reasons for doing that?—A. The business reason for doing that is that by working up a foreign business we can operate our mills more fully, we can make our goods cheaper, and whenever the time comes that there is a decline of the home price it will not necessarily affect the foreign prices. There are times when the export prices are higher than the home prices. Just at the present time our home prices, I think, are probably 50, 60, or 70 cents a hundred higher than our export. I do not really know just the difference, but I know there is a difference in favor of export to-day. At times it is the other way. But by manufacturing, say, 200,000 tons of wire per annum to export to all parts of the world we cheapen the entire cost of manufacture very materially. By doing that we are able to give the consumer at home a lower price in the long run, and employ perhaps 25 or 30 per cent more workmen, so that in the long run we figure that it will equalize itself. Our home prices and our foreign prices are never necessarily on a parity; one might be higher and the other might be lower; it would depend entirely on circumstances.

“BUSINESS PRINCIPLES.”

Q. (By Representative LIVINGSTON.) If you had the same competition in New York and St. Louis that you have in London and Germany, you would have to sell at a less price here, would you not?—A. Well, if the raw material cost the same—

Q. Independent of the raw material.—A. It is hard to say that a flour-mill owner would fix the price of flour irrespective of the price of wheat; I have never known one to do it. We all base our prices on the price of raw material.

Q. Then why do you sell in London lower than here?—A. We sometimes get a good deal more in the foreign market.

Q. More than here?—A. Yes.

Q. I understood you to say that your price is less?—A. I say at the present time it is less.

Q. Then you are not fixing the price, the foreign price, on the cost of the raw material now?—A. We are fixing the tonnage; if we sell 100,000 tons of wire per month, we fix an average price on the 100,000 tons of wire; we go over that on the next month's business. Our foreign prices may be advanced \$2 or \$3 a ton. We work perfectly independent on both sides of the water, and if the raw material advances on the other side we put up the price. If the prices decline on this side and not on the other side, we would hold the prices right up to the highest point that we could get the business at. We aim to run on business principles and get all the tonnage that we can.

Q. Now, that is just the point. Over there you run the price to the highest point possible under competition; at home you do not have that?—A. I beg your pardon; we have plenty of competition at home.

Q. Have you patents?—A. Are you talking about barbed fence wire as if it was the chief business of our company? It is 12 or 13 per cent of the business. We have practically a monopoly on that, barring, I think, 3 manufacturers, who are our licensees—John A. Roebling Sons, Trenton; Janesville Barbed Wire Company; and Dillon & Griswold Wire Company. They are licensees, and they have a right to manufacture under the patents, and they make barbed wire, and make prices as they

see fit. We pay no attention to the prices they make; their prices may be \$1 higher or \$1 lower than ours.

Q. The point I wanted to arrive at is just simply this: Do you regard competition at all abroad or at home in fixing prices?—A. We regard competition in both places, both at home and abroad. If we had a large tonnage of finished product on hand, and the markets were moving slowly, we should reduce our prices perhaps at home and abroad the same day. On the other hand, if the prices of the foreign products were advancing on raw materials, we might hold our export prices, or even put them higher. We run our business according to supply and demand, considering the cost of production.

GERMAN CONDITIONS—SUBSIDIES AND SPECIAL FREIGHT RATES FOR EXPORTS.

Q. (By Mr. CLARKE.) Is it not a fact that exports from any country are often sold in the foreign market lower than in the domestic market?—A. Very often; yes. That is certainly true in the German market; and I will say that the Germans receive a subsidy of \$7.25 on every ton of stuff they export, and that subsidy is made up by various allied lines of manufacturing, to encourage the export business. The Germans own the railroads; and when it comes to making the freight rate from one German point to another they will perhaps charge 2 cents per ton per mile, or its equivalent, and if it is an export proposition they will do it for 2 mills per ton per mile, the Government standing the difference. In other words, in the German Government everything is based on encouraging the export of goods out of the country and employing the workmen to the fullest capacity.

Q. (By Mr. JENKS.) Has this export trade from America been increased rapidly in late years?—A. Yes.

CONSOLIDATION HELPS EXPORTS.

Q. Do you think that the fact that a number of separate establishments have come together into one has had any material effect on the export trade?—A. Multiplied it by 3. Last year the exports were less than 100,000 tons; probably 60 or 70, not more than 80. This year it will be over 200,000, as a result of consolidation, whereby we can afford to go at the business in a more systematic way.

Q. The individual concerns could not have afforded to take these pains to increase it?—A. No question about that.

EXPORTS TO CHINA AND JAPAN—OVERLAND RATES.

Q. (By Representative LIVINGSTON.) Have you a trade in the East—in Japan and China?—A. Yes, we have a very large trade in China and Japan. I think in the month of August our Chinese trade was larger than that of any other country. In September I think the Chinese trade was second. They are just beginning to buy goods in China and Japan.

Q. Do you ship from the Pacific or Atlantic; over the Atlantic or Pacific Ocean?—A. We ship mostly overland to the Pacific coast, and thence by water. The railroad presidents have seen the necessity of taking care of the through rate, water and rail, and have encouraged the business to such an extent that practically all of the Japanese and Chinese business of our country goes overland; and if you gentlemen would recommend a subsidy to Congress, subsidizing shipbuilding on a basis of the tonnage of American products, whether it be wheat or corn or manufactured products, you would be doing the greatest favor you could to the entire producing class of this country.

SHIP SUBSIDIES.

Q. Supposing you got the canal, would that help?—A. That would help very much; but remember that other countries subsidize steamship lines and mail lines, and allow them to operate cheaply enough to be able to carry the products. As an illustration, until within a very short time our shipments to Argentina have been made via London or Liverpool, for the reason that Lambert & Hull, who were the main shipowners operating to Argentina, with headquarters in London and Liverpool, have made less ship rates from London and Liverpool to Argentina than it is possible to make from New York. We shipped thousands of tons of stuff from New York to London and Liverpool and reshipped it and paid the same rate from these ports to South America that we had to pay from here. That is true also of the German lines operating to Brazilian ports. They get subsidies, as I understand it, in mail lines; and freight rates from Hamburg, Antwerp, and Bremen to Brazilian ports are very much less than the freight rate from New York. Therefore at times we are forced to make a sacrifice in freight rates in order to sell goods in competition in these countries.

EFFORT FOR A WORLD-WIDE COMBINATION.

Q. (By Mr. JENKS.) It was reported some months ago that there had been in serious contemplation, at any rate, a combination between the American manufacturers here and corresponding manufacturers in Germany.—A. I went over there for that purpose.

Q. Will you kindly explain that to us?—A. I met all the wire makers of England, Germany, Belgium, France, and Austria, and I believe all in Europe, and I advocated an agreement by which we could get better prices for our product and divide the tonnage on an equitable basis. They thought we were entitled—I have no objection to telling you—to about 25 per cent of the business, and they thought they ought to have 75. Before I got away they offered us 45 and wanted 55. I did offer to take 50 and give them 50, but they would not do that.

SYNDICATES IN GERMANY.

Q. Have the manufacturers of steel rods in Germany, or of wire nails, combined?—A. In every line. They have agreements, printed and signed by the board of directors, and they are legal and can be enforced.

Q. Is the same true with reference to England and Belgium?—A. Belgium does not cut much of a figure in the wire business. I do not suppose the entire Kingdom of Belgium makes as much wire as our smallest mill.

Q. How is it in England?—A. I think they have their agreements in England in nearly all lines.

Q. As I understand in reference to Germany, it is substantially a written agreement, is it not, a pooling of the prices?—A. In Germany the agreements are usually 3 or 5 year agreements, got up in printed form, submitted to the board of directors of each company, and signed by what are called the managing directors of the various boards, and are legal and can be enforced. As a rule their prices are from 30 to 35 per cent higher to the home trade than they are to the export trade. The German manufacturers are the only competitors we have to-day. We do not acknowledge England as a competitor in the wire line. Our own company makes, I think, 55 per cent of all the wire made in the world. If the German manufacturer would run his business on the same business basis that we run ours on we should be getting 90 per cent of the export business; but they are subsidized by the various allied lines to the extent of \$7.25 on every ton of wire they export. In addition to that, the railroads, which are owned by the Government, make them a freight rate which will allow them to move their goods for almost nothing from the interior to the seaboard; then with their subsidized ships starting from their ports they have an advantage over us from all directions. I have argued that out and thrashed that out with them for months. I was over there, I think, for nearly 2 months. The coke men are in a syndicate over there; the ore men are in a syndicate; the coal miners are in a syndicate; pig-iron makers are in a syndicate; the rod makers are in a syndicate; the wire makers are in a syndicate; the nail makers are in a syndicate; and everything they have passes through one funnel.

Q. (By Mr. JENKS.) Everything they all have?—A. Everything that the different allied interests have passes through one funnel. This man is general agent of the rod business, this man on the plain wire, this man on the billet business, and so on down the line. Their entire idea is that they have but one competitor in the world, and that is the United States; and in order to protect their export business and keep any portion of it they must work in harmony. They talk it freely, and say they can not make goods as low, notwithstanding the fact that they pay their workmen about half as much as we pay ours.

Q. In different lines of industry—wire mills and iron mills—are they also allied? They have an understanding with regard to the prices of raw material?—A. Every one of them.

Q. So that there are not merely agreements among the manufacturers in the same line, but different lines that aid one another are also together in one great combination?—A. Yes.

Q. The Government recognizes these agreements and will enforce them by law?—A. Yes.

GOVERNMENT SUPERVISION IN GERMANY—AMERICA SHOULD HAVE IT.

Q. What supervision does the Government have over these establishments and over these agreements?—A. Well, I imagine the Government has pretty full supervision over that.

Q. You think the Government requires quite detailed reports from these companies with reference to their business?—A. I judge they do, for this reason: One gentleman

from over there—he was what is called the managing director or director-general—told me that his works cost him about 25,000,000 marks, and he said he kept charging the cost of his works down year after year, besides paying 10 per cent quarterly dividends, until he got them where they stood on the books at 1 mark. The Emperor sent for him and asked him if he thought the German Empire could be run on that basis, and he made him put it back to 25,000,000 marks and pay the back tax. So I think they have pretty full supervision.

Q. You think, then, that the Government has detailed information with reference to the business itself? Does it also have the practice of taxing off the surplus profits in this way for the benefit of the imperial treasury?—A. This gentleman that told me is a very reliable man; in fact, he is the chairman of one of the important lines, besides being president of his own company. He told me that the Emperor said to him, "If this thing were to continue, where would the German Empire raise its money from?"

Q. So you think that the German Empire does keep control?—A. I think they keep very close control, and I think they know what the various concerns are making; and are encouraging the German manufacturer, particularly in the export business.

Q. I judge from what you have said that you think that is a wise plan for the German Government to follow.—A. I do; I think if this Government would adopt the same tactics, we should be the only manufacturing concern in iron and steel within the next ten years.

Q. You would favor having necessary Government supervision over every large establishment?—A. Unquestionably; and I should be willing to give up a large percentage of my stock to have it so.

GERMAN SYNDICATES.

Q. (By Mr. CLARKE.) Are these various syndicates called trusts over there?—A. No; they call them syndicates.

Q. Are they in the nature of what are popularly called trusts in this country?—A. They are what I would call trusts.

Q. (By Mr. JENKS.) The general organization, I infer, is like some of the early pools rather than like the present large combinations.—A. Yes; it is an agreement, signed in some cases by 30, 40, and 50 manufacturers. I have seen some of the agreements.

AN INTERNATIONAL TRUST.

Q. (By Mr. CLARKE.) If you had been able to effect an agreement with them such as was proposed, what would that be—an international trust?—A. I do not know but we should have infringed a little bit, as far as that is concerned; but they talked about putting the prices up pretty high. The Germans wanted to put them higher than I did. I was in favor of putting the prices up about \$10 a ton, and they thought they would stand \$30. The only question was that we could not agree on the percentage.

Q. If you had an international agreement of that kind, how could our Government control it?—A. They could tax us on our profits.

Q. They could tax you, but they could not tax the other fellow?—A. They could make us get a larger percentage—each firm; and we would get it, too, if we had any chance.

TRAVELING MEN DISPENSED WITH.

Q. Will you go back to the question of labor for a moment? Have you, by virtue of your organization, been able to make any material saving in labor by employing less men along certain lines; for example, the traveling men?—A. I think that the only point in these large consolidations that has been harmful has been the wholesale discharge of traveling men. With us, we had practically 200 to 300 men in the constituent companies, and they have been cut down to perhaps 15 or 20. We are working perhaps 30 or 40 per cent more labor than a year ago; but the traveling men are the men that have suffered.

Q. (By Senator KYLE.) Is that a saving to the general public?—A. I think it is; yes.

Q. (By Mr. JENKS.) Do you pay traveling men on the road now as much as you did earlier, or can you get along with a somewhat cheaper grade?—A. We keep pretty good men and pay about the same in salaries. I do not remember any changes that have been made.

HISTORY OF THE FORMATION OF THE AMERICAN STEEL AND WIRE COMPANY.

Q. I should be glad now if you would explain to us the way in which these different companies came together. I understand there were some preliminary movements for a year or two.—A. I was quite a large stockholder in the Illinois Steel Company and the Minnesota Iron Company, which were two of the companies that went to form the Federal Steel. I made up my mind that I had worked hard for a good many years and I would take life easy. After the Federal was formed I disposed of my stock in the Federal and practically made my arrangements to go around the world. I still had my interest in the wire company—in the American Steel and Wire Company, of Illinois—and had been on very friendly terms, and in fact was a director and chairman of that company, but never gave it any attention. Judge Gary, who was before you, was general counsel. I was importuned along in December to see if I could not buy some of these mills, to get up a larger consolidation.

Q. December, 1898?—A. December, 1898. Mr. Isaac L. Ellwood and myself went out and bought a number of mills and paid for them; others we took options on, and others we made partial payments on, until we got along to the point where we saw it was possible to make a larger company. Our field of operations was in the Middle West up to that time. We came on to New York and acquired some more properties by purchase, and turned over all of our properties and contracts to Mr. Voorhees; and I think he in turn made some arrangement for the financing of the operation. Mr. Ellwood and myself had quite an interest in the transaction, and we became the underwriters, to quite an extent, on the same basis that anybody else would—exactly the same. We persuaded the American Company, of Illinois—we advised them to accept one share of new preferred and six-tenths of a share of common for one share of preferred in the old company, which they agreed to do. We offered to exchange our stock on that basis, and I believe the result was that Mr. Voorhees acquired every share of stock of the companies.

Q. With reference to the other companies that came into the combination, was this all done practically by you and Mr. Ellwood, buying them up independently?—A. I think it was in every instance; there possibly might be one or two options in the name of Lambert & Gates, but most of them were in the name of Gates & Ellwood.

Q. Then you say that these were turned over to Mr. Voorhees, and he practically organized the new company?—A. Yes.

Q. And these exchanges were made?—A. Yes.

Q. These exchanges of stocks were made, I suppose, publicly by advertising through Seligman & Co.?—A. Through Seligman & Co., of New York, and the Illinois Trust Company, of Chicago.

Q. Can you furnish us a copy of that advertisement, so that we can put it in our records?¹

¹ *To the preferred and common stockholders of the American Steel and Wire Company:*

During several months past the holders of a large portion of the shares of the American Steel and Wire Company have been carefully considering the advisability of obtaining by purchase or reorganization other leading wire concerns in the United States, among them the Cleveland Rolling Mill Company, of Cleveland, Ohio, manufacturers of pig iron, Bessemer steel, and open-hearth steel, as well as wire in its various forms, and the Washburn & Moen Manufacturing Company, of Worcester, Mass., and Waukegan, Ill.

It is believed that there would result greater economy in management and operation, and thereby be of advantage to all the stockholders of the several companies. After a thorough investigation of the several properties and their values, actual as well as relative, the acquisition of the following plants has been assured upon a just and fair basis:

Washburn & Moen Manufacturing Company, of Worcester, Mass., and Waukegan, Ill.

Worcester Wire Company, of Worcester, Mass.

Cleveland Rolling-Mill Company, of Cleveland, Ohio.

Oliver & Snyder Steel Co., of Pittsburgh, Pa.

Oliver Wire Company, of Pittsburgh, Pa.

Newcastle Wire Nail Company, of Newcastle, Pa.

Pittsburgh Wire Company, of Pittsburgh, Pa.

Cincinnati Barbed-Wire Fence Company, of Cincinnati, Ohio.

Laidlaw Bale and Tie Company, of Joliet, Ill., and Kansas City, Mo.

Consolidated Barb-Wire Company, of Lawrence, Kan., and Joliet, Ill.

Newburgh Wire and Nail Company, of Newburgh, N. Y.

To accomplish the object suggested, the following plan has been agreed upon:

Agreements have been entered into for the organization of a corporation under the laws of the State of New Jersey, to be known as the American Steel and Wire Company. This corporation will have an authorized capital stock of \$90,000,000, of which \$40,000,000 will be seven per cent cumulative preferred stock and \$50,000,000 will be common stock.

This corporation will acquire the above properties either by direct ownership or through the ownership of not less than a majority of the capital stock, where it is not practicable to purchase the properties themselves.

A syndicate has been formed which will furnish the necessary capital for the above purchases, and in addition thereto providing the new company with a working capital of about \$13,000,000, exclusive of the working capital of the several concerns which will enter the new corporation. Whatever may

CAPITALIZATION.

The question has come up a good many times in connection with proposed legislation regarding these larger combinations, as to the financing of these organizations, the question of overcapitalization, the amount that had to be paid the promoters for the making of the organization, and so on. Can you give us an idea with reference to the capitalization of the American Steel and Wire Company, as compared in the first place with the value of the plants, simply as plants, and then also an idea as to the value of patents, good will, and so on that went into the organization? To begin with, what is the capitalization?—A. Of the American Steel and Wire Company? Ninety million dollars.

Q. How is it divided?—A. Forty preferred and 50 common.

Q. Now, with reference to the value of plants, simply as manufacturing plants.—A. I think the plants stand on the books at about \$75,000,000—the working capital. We have made some little money since we came together, and the working capital is perhaps \$16,000,000 or \$18,000,000 over and above that.

Q. Do I understand you to say by that that this working capital has been made since?—A. No.

Q. That was furnished at the time, I suppose?—A. Well, we have bought a great many properties since we went together. We have paid out a good many million dollars; approximately, \$6,000,000 to \$10,000,000.

be necessary of this working capital may be used for the purchase of other properties which may be agreed upon hereafter, the entire amount of capital to be furnished by the syndicate being \$28,000,000.

The syndicate agreements will provide that the New Jersey company shall acquire such of the capital stock of the American Steel and Wire Company of Illinois, not less than a majority thereof, however, as may be offered, on the following basis:

For each share of the preferred stock of the Illinois corporation the holder thereof shall receive one share of the seven per cent cumulative preferred stock of the New Jersey corporation, and in addition thereto six-tenths of one share of the common stock of the New Jersey corporation; for each share of the common stock of the Illinois corporation the holder thereof shall receive one and two-tenths shares of the common stock of the New Jersey corporation. It is further arranged that the banking house of J. & W. Seligman & Co., of New York City, or its agent for that purpose (The Illinois Trust and Savings Bank, of Chicago, Ill.), will exchange the certificates of the American Steel and Wire Company, of Illinois, on the above-named basis, provided the same are presented and deposited at either of the offices above named on or before Tuesday, January 17, 1899; that in event of delay in issuing the certificates of the New Jersey corporation interim certificates will be issued, exchangeable for the engraved certificates when issued. The interim certificates will be issued by either J. & W. Seligman & Co. or their agents (the Illinois Trust and Savings Bank at Chicago).

It is very desirable that the fiscal year of the New Jersey corporation commence on January 1, 1899, and to that end the plan must be consummated at the earliest possible date; therefore the stockholders in the American Steel and Wire Company, of Illinois, are requested to present and deposit their stock promptly, so that the same may be speedily and without delay exchanged and the organization of the New Jersey company facilitated.

Books of transfer of the American Steel and Wire Company, of Illinois, were closed on Wednesday, January 4, 1899, and will not be reopened until about January 25, 1899, and the books of the New Jersey corporation will be opened as soon as the engraved certificates are ready for delivery, not later, however, it is believed, than January 25, 1899.

It is proposed that the new company will declare regular quarterly dividends on the preferred stock of one and three-quarters per cent, beginning about April 1, 1899.

The undersigned, comprising the entire board of directors of the American Steel and Wire Company, of Illinois, after a careful consideration, believing that the consummation of the plan proposed will increase earnings, decrease expenses, result in a more stable cost of manufacture, and more satisfactory results to the stockholders, have decided to exchange their own shares in the Illinois corporation for shares in the New Jersey corporation upon the above-named basis.

JANUARY 7, 1899.

NEW YORK, January 7, 1899.

To the holders of the preferred and common stock of American Steel and Wire Company:

We are now prepared to receive the deposit of certificates of said stock, under an agreement dated January 5, 1899, between John W. Gates and Isaac L. Ellwood and Frederick P. Voorhees, issuing therefor our negotiable certificates of deposit, exchangeable for the stock of the American Steel and Wire Company (new company) when received by us for delivery. All stock certificates to be deposited must be duly endorsed in blank.

New York certificates to be presented at the office of J. & W. Seligman & Co., 21 Broad street, New York.

Chicago certificates to be presented at the office of the Illinois Trust and Savings Bank, Chicago, who will issue certificates of deposit therefor on our behalf.

J. & W. SELIGMAN & Co., Depositary.

Q. When you speak of the value of the plants being in the neighborhood of \$75,000,000, do we understand by that the value of the plants as working plants, including the good will, patents, and so on—everything included?—A. Yes.

VALUE OF THE PLANTS AS PLANTS.

Q. What do you think would be the value of the plants, excluding the good will and the patents—that is, what would be the cost of putting up the plants now?—A. Well, that is a pretty hard question to answer.

Q. Of course we expect only an estimate.—A. They could probably be put up for less than they stand for on the books, but in the meantime the plants in operation would earn a good deal of money before new plants could be put in operation.

Q. Of course.—A. How much less it would be very hard to tell; in the hundreds of engines and thousands of horsepower in boilers, that if you went out to buy them you could not get delivered in the next 18 months. Our plants could not be duplicated and got in operation in 3 years.

Q. Of course the question is not a practical one so far as any immediate change is concerned, but it does form a basis, nevertheless, of estimating the method of capitalization. Granting that it would take 2 or 3 years' time, the question is what it would cost to put them up, in round numbers. We have had some witnesses say that the good will of their business was worth more than their plants.—A. An answer to that would be that J. P. Morgan & Co. employed some engineers and sent the engineers around to appraise part of the plants—not all of them—part of the plants that became part of the American Steel and Wire Company, perhaps 70 per cent in value; and they appraised them, as I remember, at about \$28,000,000. They were appraised at a time when boilers, engines, labor, and everything else would be 60 or 80 per cent less than to-day; so if you were to ask me what was a fair value of the plants of the American Steel and Wire Company to-day I should say probably \$50,000,000 or \$60,000,000. I should say there might be \$10,000,000 or \$15,000,000 of stock issued as good will.

Q. (By Mr. JENKS.) In this valuation that was put upon the plants by J. P. Morgan & Co., what was included? That included also, did it not, the good will?—A. No.

Q. That included some of the patents?—A. J. P. Morgan & Co. picked 3 engineers—in fact, asked me to select 3 engineers, and I selected 3 of the best engineers in America, and they went around and examined the plants, and made a statement to Mr. Morgan as to what the plants could be built for, in their judgment. That was in December, 1897, January and February, 1898, when Morgan & Co. expected to finance the deal.

Q. So that \$50,000,000 or \$60,000,000 would be a fair estimate as to the value of the plants in contradistinction from good will, trade marks, and so on?—A. Trade marks and everything of that kind. We have a good many patents registered all over the world, and trade marks and things of that kind.

Q. I notice in your statement of capitalization you say that \$40,000,000 is preferred and \$50,000,000 is common stock. Was the general plan in the minds of the promoters or the organizers that the bare plants themselves should be represented in the amount of preferred stock, and the good will, patents, and so on, by common stock?—A. I think you would have to ask Mr. Voorhees that question. I do not think I should be competent to answer it. I can not tell you.

CAPITALIZATION SHOULD BE BASED ON EARNINGS.

Q. (By Mr. CLARKE.) Which do you consider the more valuable, the plants or the business that has been built up and made to grow out of it—in short, good will?—A. Well, my answer is that this country is not as well educated on the value of good will as England. In England they value good will much higher than in America. It is hard to place a rule there and show what good will is worth in the United States, but in England they have a pretty fairly fixed rule for the value of good will. I do not know just what it is. I think in round terms they figure, irrespective of the amount of money invested in any specific line of goods, that if it will pay 7 or 8 per cent on the principal, they are willing to capitalize on that basis. That is about my idea. For instance, a concern making \$70,000 would be capitalized at \$1,000,000 or £200,000. That is my idea of good will. England is further advanced in the industrial line than America. They have had more experience and they are older manufacturers. I do not claim that they are better; I do not think they are as good, but they have a better rule.

Q. (By Mr. JENKS.) Your own opinion is that capitalization ought to be on a basis of earnings?—A. That is my idea. If a street-car line running between the Capitol

and Treasury Department shows an earning for 10 years on \$10,000,000 and only cost \$500,000, I would rather buy that street-car line than the one that runs from the Capitol to Baltimore that can not show anything over operating expenses, notwithstanding the fact that it cost \$10,000,000. The earning capacity of a road is what would guide me very largely in making an investment. For instance, the Pennsylvania Railroad, with 5,000 or 6,000 miles of rails, is probably earning two or three times as much as the Atchison, Topeka, and Santa Fe with the same length of line. Therefore, I would say that the Pennsylvania Railroad was worth more per mile from the earning capacity.

Q. From the other point of view you would perhaps suggest that it would be well for Congress to lower the rate of fares on this road that gives so little and that gets so much?—A. I think that in time American competition will equalize rates, or fares, and the price of commodities and anything else.

NATIONAL CHARTERS.

I think the American Congress had better encourage and foster all of what some of the gentlemen in the room would be pleased to term trusts or monopolies, but which I call consolidation; I think we should encourage it. I would be very much in favor of having national charters granted.

Q. (By Representative LIVINGSTON.) How is that?—A. I would be very much in favor of having national charters granted; that any concern that wanted a charter for a company of \$5,000,000 or more, would have to go to Washington and pay a substantial sum for that charter, and a substantial sum per annum thereafter. If the term of the charter was for 99 years, they have got to pay so much for a charter, say \$100,000. I would charge them \$1,000,000 a year for 99 years and say to them: "Now, you put that right in the cost to start with, because you have got to help pay the expenses of the Government to the extent of \$1,000,000 a year." That would stop overcapitalization. It will legalize what some of our friends would term trusts, which are obnoxious to some of us, and it would be a good thing for the country in general. I can not understand why it is fair for a firm that is legally organized under the State of New Jersey or Delaware to be attacked in Illinois, Iowa, or Nebraska, and I think the only way to overcome this is to have national charters, so that when a man gets a national charter he is not subject to attack except here in Washington.

Q. And you would expect also very rigid government supervision?—A. I would make them make money and make them pay their men accordingly. If necessary, I would have a manufacturing commission, the same as the Interstate Commerce Commission.

NO EFFORT TO ELIMINATE COMPETITION.

Q. (By Mr. FARQUHAR.) Is not the spirit of your combination the elimination of competition?—A. No, sir.

Q. In what way do you explain it, then?—A. To the contrary, we encourage every fellow that comes around to go into business. We sell them goods and try to make them all make money. We say to them, "Here are our prices; this is what we are getting for our stuff. There are 20 or 30 concerns in the manufacture of woven wire fence in the United States." If they choose to pay the price, we will sell to them. We have the woven wire fence down to where we can make a clear profit, and they can not manufacture. We have said to them, "Come to us with your woven wire fence orders," and they are buying from us right along, and they are making money. We are not doing anything to discourage the small manufacture, and we do not intend to. We believe that we can make money and we want our neighbors to.

Q. Have they any means of competition otherwise than you allow, seeing that you control such an immense amount of the product?—A. Yes.

Q. In what way?—A. The Federal Steel Company have 3 rod mills. They turn out, I suppose, 600 or 700 tons per day. There are 2 other large rod mills. They can buy rods where they like; buy wire where they like. We do not, by any manner of means, try to control. If a man does not buy our goods, and put them into the finished product, we do not try to control him at all.

IRON AND STEEL AND ORE PRODUCERS OUTSIDE THE FOUR GREAT COMPANIES.

Q. Do not the 4 great iron and steel consolidations now consolidated under the laws of the State of New Jersey, you being one of them, practically control the whole product of the country?—A. No, sir; we do not.

Q. What per cent of the manufactures are outside of your control, for instance?—A. In the iron line?

Q. Yes, iron and steel line.—A. Let us make a distinction. Let us take up iron first, and then take up steel, because steel makers do not make iron and iron makers do not make steel. I do not think 40 per cent of the furnaces of the United States are owned by the Carnegie, Federal, the National, and ourselves. I doubt whether 30 per cent are. There is an answer to your argument right there.

Q. How much steel?—A. Well, I should say in Bessemer steel perhaps 80 per cent is represented by the 4 concerns. In open-hearth steel perhaps 50 or 60; but furnaces are building right along.

Q. How much of the ore product do your 4 great concerns own in this country?—

A. You allude now to the Bessemer ore or basic?

Q. Both.—A. I suppose the 4 concerns own 500,000,000 tons of ore, in round numbers.

Q. Practically your 4 concerns are now mining, transporting, and using nearly all the raw material that enters into the manufacture, are you not?—A. No, sir.

Q. What per cent are you less than the whole?—A. About 40 per cent of it.

Q. Where are these independent mines located?

Q. (By Senator KYLE.) Less than the whole?—A. Yes. Take all the furnaces in the South and there must be 25 or 30 furnaces owned by the Tennessee, and Schloss, and the Woodward and independent interests. Probably 40 per cent of them own their own ore. I am interested in the ore properties in the South personally; not in the company, but personally, several million tons of it. You take the ore of the United States, and it runs into the billions, and of the billions, 500,000,000 is probably owned by the 4 concerns that you named. Now, take the concerns throughout the East, and they are supplied with their ore from the Port Henry mines on Lake Champlain, and possibly are supplied from Cuban ores or Spanish ore, or Southern ores. When you come to the ore product of the United States it is simply enormous. No man can tell within billions of tons what the total ore crop of the United States is until you develop it. Take the Colorado Fuel and Iron Company, the Cambria Iron Company, and the Lackawanna Steel and Iron Company, Jones & Laughlins, and the Wheeling Steel and Iron Company; all large concerns, not anyway connected with any of these consolidations; they are all large makers of rails and plates and users of Bessemer steel and everything in the iron and steel line.

Q. I speak not of the geological situation at all. I am talking about the output of the American mines; how much your 4 concerns control of that annual output.—

A. Annual output of pig iron?

Q. Yes, of ore itself; I want to get at the raw material in immediate ownership or control that would cover all the list?—A. In output?

Q. Yes.—A. Probably 60 per cent.

Q. Sixty per cent. You speak of the Champlain and other mining properties that are away from the great centers of Pittsburg, Chicago, Cleveland, and elsewhere, Birmingham, for instance; but do you not practically control all the great centers of manufacture, through the ownership of the mines, and practically through the transportation?—A. No.

Q. You are safe in saying then that you do control 60 per cent of the annual product at the present time?—A. Of the 1899 output, 60 per cent.

NO COMBINATION BETWEEN THE FOUR GREAT COMPANIES.

Q. As there is no combination on the part of the independent owners of mills and manufacturers, why do you not even get control of the market itself as to price and everything else?—A. You are going on the basis that there is no agreement among the outsiders. Are you sure of that?

Q. It has been generally conceded.—A. I am not willing to concede it.

Q. (By Mr. CONGER.) Was there any agreement between you 4?—A. None at all.

Q. (By Mr. FARQUHAR.) You buy and trade among yourselves?—A. We trade with outsiders as well as they do.

NO ATTEMPT TO THROTTLE COMPETITION.

Q. Certainly; but it is still a matter of comment that while you control your 60 per cent of the annual product you are controlling the independent owners, because if you should control the market price these independents could not.—A. They could control it to the extent of their own output.

Q. Is it not a fact in your business that you name a reasonable price? You say all transactions are based on profit, and you name a reasonable price and the whole country agree to that?—A. I did not say that.

Q. Then they have practically to agree to that?—A. No; I did not say that.

Q. How near will you come to it?—A. I say from 65 to 95 per cent, possibly 95 per cent.

Q. Then you want to make the statement here that the combinations have not in any way made the combination to eliminate competition?—A. I am not talking for any concern except the American Steel and Wire Company.

Q. I mean your own.—A. I say we have not, directly or indirectly, attempted to throttle competition in any manner, or made any agreement whatever as to price.

Q. Have you ever made in your own business any attempt to name prices as far as the mills or manufacturers outside of your own company are concerned?—A. Why, I think, as a broad proposition, the prices being equal, that the large trade would give us the orders.

Q. That is right.—A. I believe that some of my colleagues do not agree with me.

Q. (By Mr. CONGER.) On what basis do you believe that?—A. I believe that because I believe that a large buyer would figure that if it ever should come to a fight in business we would be willing to go as low as the other fellow and a little lower, and when times are good they are willing to buy of us, depending upon our feeling, upon our sense of justice and equity, to take care of them if there ever should come a storm.

Q. In other words, your theory is that the present high prices come from the demand for consumption and not from any agreement?—A. Entirely, entirely; they are very much higher than I wish they were, I will say that.

NO PRESENT DESIGN OF AN INTERNATIONAL SYNDICATE.

Q. (By Representative LIVINGSTON.) Do you desire or purpose to continue your efforts, to renew your efforts with manufacturers in foreign countries to syndicate this business?—A. No; I think we have about given that up and made up our minds to paddle our own canoe. To tell you the truth, I think they would have given me 50 per cent before I left Europe, but I got scared and came home. They had a meeting in Berlin, but I made up my mind not to go to it. I think they would have given me 50 per cent.

WHO ARE COMPETITORS?—WHAT IS RAW MATERIAL?

Q. (By Mr. RATCHFORD.) In reply to a question, you stated, I believe, that it was not the purpose of your company to eliminate competition?—A. That is true. We have been offered nearly every plant that is outside at fair prices, and we declined to buy them.

Q. You have further stated, I believe, that if you were to sell your wire at a price at which you could make a reasonable profit you would drive the small manufacturers out of business, or words to that effect; is that true?—A. Well, the manufacturer that bought his raw material of us—

Q. But prior to the time he bought his material of you. We want to get at that. We assume now that he is manufacturing independently?—A. What do you call his raw material? There are so many definitions. Do you call it ore?

Q. Ore is raw material, I presume; some such substance as that.—A. The fellow that has raw material, his ore would not suffer from anything we could do if we were inclined to.

Q. Would not suffer?—A. No.

Q. The smaller manufacturer has concluded, I believe from the evidence you have given us, in some cases to buy from you and sell to the consumer?—A. Yes.

Q. Feeling that he can do so, of course, more cheaply than he can manufacture?—A. Yes; perhaps that is it.

Q. What effect has that on the former?—A. Perhaps he has not got the facilities for getting ore; perhaps he has to buy a partially finished product and finish that product; he may have to buy plain wire; he may have to buy rods or billets.

Q. If he has not the facilities, he is not a competitor?—A. He is a competitor in the finished line; you can see the various stages.

Q. Yes; but in the strict sense he is not a direct competitor, is he?—A. Yes; in the finished line he is. He is a direct competitor in whatever line he sells to the public. If he is selling wire nails to the public and we are selling wire nails to the public, that man is a competitor of ours, is he not?

Q. Yes, yes; if he is manufacturing wire nails and you are doing the same, he is a competitor.—A. Yes. Now, then, he may buy his wire from us to make those nails, and he may buy his rods, or he may buy his billets, or he may buy his pig iron, or he may buy his transportation from the American Steamship Company, in which I am interested. So the stage cuts a great figure.

ABOUT BUYING ORE.

Q. Now, taking up the subject of the ore in the ground, you made reference to that in the beginning of your testimony.—A. Yes.

Q. The statement made, I believe, was that the value of that ore had increased per ton from 40 cents to \$2 within the last 2 years?—A. Within the last 3 or 4 years. I think in 1894 was the lowest price for ore.

Q. Are those who are operating those ore mines to-day paying that excess cost per ton of ore produced, or are they operating their mines on contracts made prior to the increase of the value of the ore and the cost of the ore?—A. Well, there would be two legitimate answers to that. One is that it depends on when the fellow sold the ore. I got a telegram last night that we just started shipping ore from one of our mines to the Lackawanna Iron and Steel Company. We loaded, I think, 250 cars yesterday. That was the first day of shipment. Now that ore was a recent sale; it will pay a very handsome profit. If we had sold that ore 6 or 8 months ago, there would not have been very much profit in it.

Q. Is it usually bought?—A. (Interrupting.) It is usually bought in the winter months.

Q. Is it bought by the acre or bought on a royalty basis per ton?—A. Well, both ways.

Q. Both ways?—A. Not by the acre usually; usually a man pays so much for a tract. We bought one tract this spring; we paid \$700,000 for it; we had the ore measured up in that tract, and it measures, according to the figures of one of the best experts in this country, 83,000,000 tons of ore. I suppose that ore would sell to-day for 2 or 3 million dollars.

PRICES PAID FOR ORE AND QUANTITY MINED.

Q. Well, the question that I want to bring out directly is this: Is it not a fact that the bulk of the ore purchased in this country has been bought upon the lower-priced contracts?—A. You mean the ore in the ground?

Q. No, the ore that is purchased.—A. The ore that was purchased this year, or most of it, was bought at these high prices—last January's prices.

Q. (By Mr. FARQUHAR.) How high was last year's price?—A. I think it was about \$2.90 for Norrie as a basis.

Q. Now it is \$4?—A. I would be willing to pay \$5.

Q. How much is the increase in the output this year of ore mined compared with what it was in 1898?—A. I think prior to this year—I have not the exact figures with me—but prior to this year the largest amount of ore that ever came out from what is called the Lake Superior district was about 12,000,000 tons, perhaps 13,000,000 tons. I would not be exact, perhaps 12 or 13 I would say. This year I think it will be between 16,000,000 and 17,000,000, and the prospects are that next year, from the present outlook, it will crowd 20,000,000 tons if they have transportation to move it.

Q. Has that increase come through demand and supply alone?—A. Yes.

Q. You know of no arbitrary raise in the price by manufacturers or owners of the product? It has come naturally, you say, by demand and supply?—A. Why, in our line—I am only talking about our line—but in our line it has come entirely from supply and demand. We are behind our orders to-day.

WHY LOWER PRICES WOULD BE BETTER.

Q. (By Mr. CONGER.) A short time ago you stated that the prices of these steel products were higher than you wished they were. I wish you would go into that a little further. Inasmuch as you say you are in business to make money, why do you object to the higher prices?—A. We are quite large buyers of what is known as soft steel, steel from .04 to .10 carbon. There are some higher carbons, .60, .70, .80, or .90. We are quite large buyers of that steel. In the past we have been able to buy that steel at anywhere from \$13.50 to \$16 a ton. We are paying for that steel now—I think our last purchase was \$32. That was some time ago. I think to-day the price would be \$34 or \$36, and of course that pushes up the price of our finished product accordingly. We have paid for steel as high as \$50 a ton this year; bought a good deal of it as high as \$50.

Q. In other words, then, the price of your raw material for making these products has increased more than you have been able to increase the price of the manufactured products?—A. Yes; we have had stuff sold at 2 cents a pound and we paid \$50 a ton, 2½ cents, to make that. It just so happened.

Q. Sold on contract, you mean?—A. On contract to manufacturing concerns. I do not mean to be understood by that that we have been doing a losing business

with our eyes open; but we did not realize that steel was going so high, and we have had to go into the market and buy steel at \$50. We bought a good deal of it at \$48, special carbon and special phosphorus steel that we had to have in our business. We paid the National Steel Company, I think, \$48, and I think we paid Jones & Laughlins, of Pittsburg, \$50, and I think we offered Mr. Carnegie—I know I offered Mr. Schwab \$50 for quite a large tonnage and he told me he could not sell it.

Q. Do you think the managers of any others of these large steel companies agree with you in this idea that their interests would be better promoted if prices were lower?—A. I think so; that is, I recently heard the heads of other concerns regret that the demands and the conditions had forced things to such a high pitch. The amount of it is that the manufacturers have not made nearly as much profit out of this advance as the public has been led to believe. Everything they have had to buy has been proportionately high, their wages and everything else.

WHY PRICES ARE SO HIGH.

Of course, no one will deny that making open-hearth steel at \$50 has been a very profitable business. There has been a great deal of it sold at \$48, but the trouble was that there was not enough open-hearth steel to go around. There were not enough plants in this country to take care of the immense consumption. I believe that until this year there has practically never been any large amount of steel cars made. This year I think they are using nearly a thousand tons of plate a day, iron and steel, in the manufacturing of cars. That is in an entirely new industry. The shipbuilding business has been very active both at home and abroad, and that has consumed a very large amount of plate and angles and channels and that class of material supplied to ships. The consequence has been that a shipbuilder would take an order for 5 boats, and after he had taken the order, perhaps, he would go out to buy his material and he would find it a little bit higher than he expected he would. He would conclude that if he waited a week or two he might get a lower price; and he would wait and the price would go up on him. This has been true of both sides of the water until they pushed up the prices on this, and in pushing them up they have pushed up the price of wages, of the labor that made the plates, the angles, and all that class of labor that is paid on a sliding scale; and they have got higher wages on that account. It has been a very lucky thing for the workmen. It might be unfortunate for the man that took the contract for the ships. I have happened to know of ships that have been built with some material that cost them \$1.10, and the next plate on the same boat cost \$3. It was perhaps no fault of the boat maker. He could not get steel when he wanted it; there was a breakdown, and he had to go out and buy what was necessary, and the iron and steel manufacturers are now from 3 to 9 months behind their orders.

MARKET CONDITIONS IN GERMANY.

Q. Is that true in this country or on the other side of the water?—A. It is more true on the other side than it is here. I think the average iron and steel manufacturer in Germany is sold up until about the middle of 1901, 18 to 20 months. The condition is much firmer over there than it is here, because they go so much further ahead with their sales.

Q. By saying that conditions are firmer, do you mean to say that prices have not advanced here as much as they have over there?—A. Yes.

AMERICAN STEEL AND WIRE COMPANY AS A BUYER OF STEEL.

Q. (By Senator KYLE.) To what extent do you go into the open market to purchase your steel?—A. I bought week before last—I was in New York all last week and week before—I bought 200,000 tons myself for which I have contracted to pay 7 or 8 million dollars; I can not tell you the amount until I figure it up.

Q. Ordinarily do you go into the open market in this way?—A. Yes; we are always buyers.

Q. But particularly in such times as these, with the increase of business?—A. It is perhaps fair to say that we have been always the largest customer of the National Steel Company, the Carnegie Steel Company, and the Federal Steel Company—certainly the Federal and Carnegie. I would not be quite sure about the National, but certainly the Carnegie Steel Company and the Federal. We pay them more money than anyone else; there is no doubt about that. They have told us so.

WHY THE HIGH PRICES WILL NOT CHECK CONSUMPTION.

Q. (By Mr. A. L. HARRIS.) What effect will the present high prices have upon consumption in the future in the steel business?—A. I have thought that they

would check it; but in talking with railroad presidents, I have made up my mind that it would not give much of a check, for the reason that up to two or three years ago the railroads were transporting cars that contained 15 to 20 tons of goods of various kinds, coal, ore, and coke; to-day they are using cars that carry 50 to 60 tons. They have had to strengthen their bridges, tear out the old bridges and put in new ones, tear out the old rails and put in new ones, demolish the old cars and buy new ones; and that transition state is going on, and I think it will continue for the next year or two. Many men that are perhaps better posted than I am think that it will continue for three years. Certain it is that our railroad presidents and men who have made a study of this thing believe that these high prices are going to rule for two or three years, and they give as a reason that we have got 100,000 miles of railroad that is laid with 60 or 65 or 70 pound rails, and we have got to pull out that rail and put in 75 to 100 pound rails. We have got to pull out 4,000 or 5,000 light bridges and put in heavier bridges. We have got to have heavier locomotives. It was only a short time ago that the average railroad man figured that 500 to 800 tons of dead freight was a very large train load. They are now hauling as high as 2,000 tons to a train load. That necessitates heavier equipment, heavier motive power, heavier rolling stock, heavier rails, stronger bridges; and that thing is going on to an extent, the American railroads are making such immense strides over any other portion of the world, that it is hard to tell when this thing will stop. I do not believe any mortal can tell. Some of the wisest men in the iron and steel business have been very greatly deceived.

Q. (By Mr. FARQUHAR.) Are these great purchases of rails by the railroads somewhat predicated on this state of facts that you are now forecasting?—A. Yes; I do not think a railroad could buy 100,000 tons of rails and get delivery of them in 1900. They are all sold up now through the year. It is impossible to get them.

NO CONNECTION OR AGREEMENT WITH THE OTHER GREAT STEEL COMPANIES.

Q. (By Mr. JENKS.) You spoke of the fact that the American Steel and Wire Company was perhaps the largest customer of the National Steel Company and the Federal and the Carnegie?—A. Of the Federal and Carnegie; I am not sure whether they are of the National.

Q. The statement was made here by some of the men connected with the National Steel and the American Steel Hoop Company that while there was no immediate formal connection between the two companies, they had so many directors of one company that were also directors in the other that they worked together in unusual harmony. Is there a similar arrangement between the directors of the American Steel and Wire Company and any of these other companies that you have mentioned?—A. No; the National Steel and the American Steel Hoop and the American Tin Plate are very close together.

Q. Yes; that is what they said.—A. And therefore probably the largest customer of the National for 1900 will be the Tin Plate, and next to them the Hoop. But with the Carnegie and the Federal I am very sure we have always been the largest customer.

Q. As far as the Federal Steel and Carnegie companies are concerned, do you have some directors in both?—A. No.

Q. The boards are entirely independent?—A. Judge Gary was formerly largely interested in the Wire Company and our general counsel. He is now president of the Federal. And Mr. Buffington, who was treasurer of the American Steel and Wire Company, is now president of the Illinois Steel Company.¹ But the interests are not common interests in any way, shape, or manner. We have no arrangement with them whatever. We have no agreements. We have never been in a room with the Carnegie or Federal or National Steel people since we incorporated, as far as I know, and I do not believe any of our people have.

Whereupon at 1 p. m. the commission took a recess until 2 p. m.

WASHINGTON, D. C., November 14, 1899.

The commission met at 2.22 p. m.

John W. Gates again on the stand and examination resumed.

NEW DEMAND—HIGH PRICES AND EXPORTS.

Q. (By Mr. CLARKE.) Just before the recess you had testified as to the great increase in the demand for steel for shipbuilding purposes. Is not that true also of the demand for buildings in cities and for bridges?—A. Yes; that is true.

¹ One of the constituent members of the Federal Steel Company.

Q. Steel cars, steel vessels, steel frames for buildings and bridges—all these constitute a large new development in business?—A. They constitute, in my judgment, Mr. Chairman, as large a tonnage as the total tonnage of the United States in iron and steel 15 or 20 years ago.

Q. Is that business likely to increase rather than diminish?—A. Yes; it is increasing every year.

Q. (By Mr. A. L. HARRIS.) What effect will the present high prices have upon the export trade of the country in the future?—A. If they continue it will have the effect to curtail the exportation of iron and steel, except that manufacturers in some lines will be willing to export a certain per cent of their product at practically cost or possibly a small loss in order to operate their works full.

PLANTS ACQUIRED BY AMERICAN STEEL AND WIRE COMPANY, AND HOW ACQUIRED.

Q. (By Mr. JENKS.) May we go back to the question of organization, and the relations of your company to the different companies that came in; can you give us a list of companies that went together into this combination?—A. I think so.

Q. If you can give us the names of the companies which united, you may do so.—A. The American Steel and Wire Company of New Jersey owns all of the following plants, namely, 12 or 14 plants formerly owned by the American Steel and Wire Company, of Illinois; the Washburn-Moen Company, which had works at Worcester, Mass., Waukegan, Ill., and San Francisco; the Cleveland Rolling Mill Company; the Oliver-Snyder Steel Company, of Pittsburg, formerly called the Hainsworth; the Edith Furnace Company, of Pittsburg; the Oliver Wire Company, of Pittsburg; the wire department of the Shenango Valley Steel Company, of Newcastle; the Pittsburg Wire Company, of Braddock; the Cincinnati Barbed Wire Fence Company, of Cincinnati; the Indiana Wire Fence Company, of Crawfordsville, Ind.; the Consolidated Barbed Wire Company, of Lawrence, Kans., and Joliet, Ill.; the wire department of the Portage Iron Company, of Duncansville, Pa.; the Worcester Wire Company, of Worcester, Mass.; the Schoenberger Steel Company, of Pittsburg; the Puget Sound Wire Nail Company, of Everett, Wash.; the Laidlaw Bale and Tie Company, of Joliet and Kansas City; the Newburg Wire Nail Company, of Newburg, N. Y. I think that is all.

Q. Those are the different companies that united?—A. Some of them were acquired some time afterwards.

Q. In what way were these properties acquired—by the purchase of the plants outright, or by the purchase of the capital stock, agreeing to pay the same price for the minority?—A. In some cases by the purchase outright of the plants themselves, the various concerns settling up their assets and liabilities.

Q. In the cases in which you bought the majority of the stock, or all of the stock, do those companies retain still their independent existence, as is the case, for example, in the Federal Steel Company?—A. In only one instance, I think; that is the Schoenberger Steel Company, of Pittsburg.

Q. In the other cases the separate companies have been dissolved, and you have simply taken their plants?—A. Yes.

PLANTS CLOSED—WHY THEY WERE BOUGHT.

Q. Have you since the purchase of these different plants closed any of the plants?—A. Yes.

Q. What ones?—A. We have closed all of the plants that could not operate economically and increased those that could.

Q. Do you recall how many you have closed—what ones?—A. The one in Newburg, N. Y., was closed when we bought it. The Portage Iron Company at Duncansville we closed and moved the machinery elsewhere. Puget Sound we closed, that is two, Crawfordsville is three, Lawrence, Kans., is four, Cincinnati is five.

Q. Why do you buy a closed plant?—A. In connection with the Newburg Wire and Nail Company plant there were some patent complications that caused our patent counsel to think that it was wise for us to buy the plant. We had a partial list of patents, and we thought it policy to acquire the balance, and we could only do it through the purchase of a plant that carried with it the balance of the titles to those patents.

Q. Your total output, I presume, has been increased?—A. Yes.

Q. Can you give us an idea of what the percentage of increase has been?—A. I should say 15 or 20 per cent over 1898.

Q. (By Mr. CONGER.) Why did you buy those plants that were closed?—A. There were various reasons. I should have to take each individual plant and explain it to

you in a particular way. In the case of the Puget Sound Wire Nail Company—that plant was owned by Mr. John D. Rockefeller. Mr. Rockefeller had a contract with the Cleveland Rolling Mill Company for the purchase of a large quantity of raw material at what we thought was a very low price.

Q. You purchased the plant to get the contract?—A. We purchased that plant to get the contract. If the contract had stood he would have made several hundred thousand dollars out of it; as it was we made the money. I could go on and give you our reasons for purchasing each one.

Q. Similar reasons, then, existed in the other cases?—A. Usually, yes.

Q. (By Mr. JENKS.) Let me ask you about one or two more; take the Crawfordsville company, for instance.—A. Crawfordsville had a contract with our own company, and it was a very arduous contract for us to fill, and we concluded that the cheapest way to fill it was to buy them out. We really got the plant for nothing and made a great saving by buying them out as compared with that contract.

Q. And the plant at Duncansville?—A. The plant at Duncansville had a sliding-scale arrangement with the Carnegie Steel Company; as long as the ownership of the plant remained with A. R. Whitney that sliding scale continued. Mr. Whitney was on particularly friendly terms with the Standard Oil Company, and they were buying their nails of Mr. Whitney, and we thought they were buying them a little too cheap. They were working a sort of a syndicate arrangement, too, and it was a particular nail that could only be driven by machinery, and the Standard Oil people had never given us a fair opportunity, we thought, to demonstrate that we could make that nail just as well as Whitney could. We bought them out and have been selling the Standard Oil Company their nails ever since.

REASONS FOR CLOSING PLANTS.

Q. (By Mr. CONGER.) Is there any general reason given, or that you could give, for the closing of these plants? Was it the lack of economy in their operation?—A. Entirely so. Wherever we bought a plant and found that we could operate it economically and make more money, we have operated it; and wherever we found that we could not, we have shut it down.

Q. Was the fault or defect in those plants one of location, or in the machinery of the plants?—A. Sometimes it was location and sometimes it was badly constructed machinery, and sometimes it was a combination of both.

Q. (By Mr. JENKS.) In times when prices are low and profits low one would suppose that it would be a regular thing to close some of the poorer plants. In times when prices are as high as they are now and increasing rapidly—you say that you can not begin to meet the demand for your product—one would suppose that the plants that are not quite so profitable as the others might still pay.—A. They would if we could get the raw material. We can not get the raw material.

Q. So the closing of plants depends in part on that?—A. Yes; it is a combination of circumstances. If we could get the raw material and sell the stuff we should operate the plants day and night; we should hate to stop one on Sundays.

Q. Have you dismantled those plants, the one at Duncansville and the one at Crawfordsville?—A. Some we have dismantled and shipped elsewhere; others would be able to start up if we could get the material. In Cincinnati I think we could start up at a day's notice. Salem, Ohio, is another one; we may dismantle that and move it somewhere. Findlay, Ohio, is an old plant; I do not think we will operate that; it is not in shape to be operated.

SAVINGS BY CONSOLIDATION.

Q. What would you say were the chief sources of saving that you have made by combining?—A. Well, in the separate maintenance of the various organizations, each concern had to have a president, most of them one or two vice-presidents, a secretary, a treasurer, and auditor, and so on; and we have done away practically with that class of men, and put the operating end of our business in charge of officers in New York and Chicago. The books are kept in two places, New York and Chicago; the operating books.

Q. Do you not need to keep a good part of those same men who formerly were the chief executive officers of these several plants, as superintendents of the different plants, under different names—the same men?—A. Well, I should say we had dispensed with 50 per cent.

Q. (By Senator KYLA.) Of the men or the expense?—A. Of the expense. For instance, we divide it into districts. Our Pittsburg district, I think, has about 10 plants. We have a general superintendent that looks after this entire district; so in

the Cleveland district, and so in the Chicago district; and some of the men that have been important in the management of the individual plants have sold out and taken their money and invested in other lines, or gone abroad and done whatever they saw fit; and such of the valuable men as wanted to stay with the company have had a chance to stay. But I should judge that we have dispensed with perhaps 50 per cent of what I should call the high-priced men.

Q. (By Mr. JENKS.) In that case, then, your chief saving in labor from the combination is the saving in traveling men on the one hand and these high-priced men you had on the other?—A. Yes.

Q. These high-priced men and superintendents?—A. And superintendents.

Q. (By Mr. FARQUHAR.) How many traveling men have you dispensed with.—A. I think we have dispensed with about 200 traveling men.

Q. (By Mr. JENKS.) What other sources of saving have you?—A. Well, the Chicago merchant now gets his goods from the mill nearest Chicago; the St. Louis merchant gets his goods from the mill nearest St. Louis, and so with New York and Cleveland and other parts of the country. We take into consideration the freights.

Q. Save the cross freights?—A. The cross-freight saving is quite an important item. I should think the cross freights would amount to half a million or a million dollars a year. It is a saving in that particular.

Q. Do you think that you make any very material saving by the combination in the common use of patents? You spoke of how exceedingly valuable some of your patents were. Did you acquire them through this combination particularly?—A. Some of them, and some of them we acquired by purchase from time to time. We made this saving in that respect: I venture to say that the companies I have been interested in have paid out in 20 years about a million dollars to lawyers, patent attorneys, on account of patents, and we have saved most of that. We have a general counsel that looks after our business and one man who looks after patents under his instructions.

Q. By owning all the patents you avoid law suits?—A. We do not have very many law suits on patents; we did have a great many.

Q. Do you have any other special source of saving?—A. No; those are the important items.

Q. (By Mr. FARQUHAR.) Is there any other one?—A. Our loss from bad debts is very important, I think.

Q. (By Mr. JENKS.) What have you to say about that?—A. Our percentage of loss from bad debts, I should say, up to date this year, is about one-twenty-fifth of one per cent. Under the old régime I should say it was one-half of one per cent.

Q. How do you manage to make a saving there; how does it come about?—A. If a man does not pay according to terms, we are a little more strict with him.

Q. You are in a considerably better position to stop his source of supply?—A. We do not attempt to stop his source of supply, but we might ask him to send a check or draft with the order the next time. We should be perfectly willing to sell him, but we should like the money.

Q. You, of course, might have done that under the old system. How is it that your power is greater under this?—A. Well, under the old system a merchant might quibble with half a dozen manufacturers, and there might be some one particular manufacturer that he would treat fairly, so that he would feel that he had a port in a storm. And in the commercial term men claim shortage, make unreasonable demands, and we do not find those demands to exist to any such extent as they did before. They claimed a shortage, for instance, of five kegs of nails or five spools of wire, and if we accepted their statement we had to fight it out with the railroad company. We had a check, and we thought we knew we were correct, and now we are pretty apt to be firm. We will always consider their claims, but we will not allow them as freely, perhaps, as we would before; they have to be very thoroughly well founded on fact for us to make an allowance.

Q. And in the line where you control 90 per cent of the product you are in a good deal better position than you were before to bring pressure to bear upon them?—A. We sell our goods on 30 days' time, and the only pressure we could bring to bear would be to ask him to send a draft with the order.

Q. Or refuse to sell him?—A. We never refuse to sell anyone, I think.

Q. Is there any saving that comes from owning these different sources of industry, mines, transportation, and so on, that you did not have before? Are you so much more certain of getting your raw material than you were before that you can count that as a distinct advantage?—A. That is of very great advantage to us. You understand we are less than a year old—that is, the American Steel and Wire Company of New Jersey; but when we have finished the program that is laid out—and that work is being pressed on—we shall be certain of our supplies of raw material; and when we are certain of that, we can always operate cheaper by knowing that we are going

to have our coke and our coal and our ore and our limestone and everything of that kind. We can always operate on a more satisfactory basis than we could if we had to depend on others to buy it.

NO SPECIAL FREIGHT RATES OR REBATES.

Q. Can you make any material saving, not merely in avoiding cross freights, but in freight rates, by virtue of the fact that you are so much larger shippers? For example, you spoke of being so much larger shippers over the line from Cleveland to Pittsburg. Would you not be able to get a much lower rate over that line by reason of having such large shipments than you would if you were only a small shipper?—A. Well, I have made the broad proposition, and my answer is that I think the American Steel and Wire Company of New Jersey have made a fairly satisfactory profit for their goods, and they ought to be willing to allow the railroads a satisfactory profit for running their business. We have gone on the principle of live and let live in regard to that.

Q. (By Mr. CONGER.) You mean by that that you pay the railroads their schedule rates?—A. Yes.

Q. And do not accept or seek for a rebate?—A. If we have a rebate account with any railroad, or anything of that kind, shape, or nature in any of our companies, I do not know it. I will say that, if that is what you are driving at.

Q. (By Representative LIVINGSTON.) Do you ever receive a commission for a certain amount of freight to be delivered?—A. Well, if any of them have ever got it they have not turned it into the treasury, and I would like to catch someone with a commission in his pocket or in the bank. We have been very liberal in our treatment of the railroads, and we believe in it.

NO AGREEMENT WITH WIRE-FENCE MAKERS.

Q. (By Mr. JENKS.) The statement was made some months ago that your company had made an agreement with some 13, I think it was—some quite large number—of leading fence manufacturers, to furnish them material as cheap as they themselves could manufacture it if they were to set up rod mills, and that then they agreed in turn—I do not understand that this was a formal contract—but they agreed to maintain a price that would assure a reasonable profit to all parties concerned. Was there any such price agreement as that with the fence manufacturers?—A. Not that I know of. I think that my statement this morning, that we have no agreement of any kind whatever, to my knowledge, would cover that.

Q. Your statement this morning was not intended, I suppose, to cover the making of contracts at different periods or times with different concerns. I understood that was the nature of this agreement: that you had contracted with these large manufacturers, your leading competitors, to furnish them wire and rods—whatever was needed—at fairly good rates for a considerable period in the future, and that they in turn had given you to understand that they would maintain their prices?—A. The answer to that is that of all the fence—wire fence—made in the United States I presume we make half, perhaps more. The large maker outside of ourselves has recently moved to Pittsburg and started to erect his own works; so that I do not think there can be any contract of that kind. I have never seen any.

Q. That is, he has started to erect his own works for the manufacture of wire?—A. Yes; that is the Page Wire Fence Company.

PROMOTERS' PROFITS AND COMMISSIONS.

Q. I wish to go back again for a moment to the question of the organization, the causes of organizations, and so on. You spoke of having arranged—yourself and Mr. Ellwood—for the purchase of these various plants, and of having turned your contract over to Mr. Voorhees, as I understand, who made the arrangements with the bankers. What arrangements, as regards commissions and costs and so on, were made with the underwriters or the bankers for taking care of that part of the business?—A. We made no contracts with the bankers ourselves. I could not answer what the other people did.

Q. Do you mean by that you do not know?—A. I do not know.

Q. (By Mr. CONGER.) Do you know how many stockholders there are in your company?—A. Why, I should guess there were 1,500. That would be an offhand guess; I do not think I ever counted them.

Q. (By Mr. JENKS.) You, of course, have been quite familiar with the organization, not merely of this company, but of some others. The statement has frequently been made that in these later organizations anywhere from 15 to 20 and 25 per cent,

and in some cases more than that, of the common stock was required to cover the cost of organization. That included the pay of the promoter and the commissions. Would you think that, from your knowledge of the business of this company, as high, we will say, as 20 per cent of the common stock went for the costs of organization to anybody?—A. I can not state what amount. I presume they made money out of it; they assured me that they made money out of it, very kindly, and I take it for granted that they did make money, but the amount of money they made I have not any more idea of than you. To be very frank with you, I never wanted to know.

METHOD OF CONSOLIDATION—VALUATION OF PLANTS.

Q. In the case of a good many organizations that have been made, we have been assured that no one concern knew what was paid for other concerns. Was that true in the organization of this company? When you and Mr. Ellwood, for example, bought out different concerns and took options, was it your regular custom to buy each by itself without a general understanding among them all?—A. We negotiated with each company on as favorable a basis as we could, independent of any other company. We never bought a company that we were not willing to take and pay for irrespective of any consolidation. We went on that principle. I was fairly familiar with the wire business. We had a company for many years, called the Columbia Patent Company, that owned a very large number of patents. I was president of that company, and was president of an association—which was possibly contrary to law—a few years ago that sold the products. We discovered that we were infringing on some of the various trust laws and we discontinued that business. I had a very good idea of what this plant and that plant could earn, and had had a general idea for a good many years. When Mr. Ellwood and myself started out, we started out with the idea that we would buy a certain number of plants, irrespective of whether there was any consolidation or not. We would buy them and pay for them; and we did so without knowing how far we were going; and we did not buy anything that we did not think was cheap—that is, on their money-earning capacity.

Q. As independent plants?—A. Independent plants. For instance, one concern that I call to mind; we knew about what that concern was worth, and we did not ask them to set a price. We told them what we would give them in cash, and they started out by asking us a million dollars more than we offered them. We told them we would not pay them any more than we offered, and if they wanted to accept that we would trade with them and pay them the money in thirty days, and they did so. And another concern, I think we paid a few hundred thousand dollars more than we expected to, but they assured us that they had made a certain amount of money in the interim. You see, I had priced these plants a year before.

Q. In connection with the organization of the American Steel and Wire Company?—A. Of Illinois; so that I was familiar with the value, and I had figures furnished by Morgan & Co.'s accountants of their profits for 3 years.

Q. Do I understand you to say, then, that so far as this organization was concerned no added prices were given, because it was thought that, by virtue of the organization itself, or of the consolidation, it would be possible to make considerably higher profits than could be made if the plants were to be run independently?—A. That is absolutely correct, and I will make a further statement: There is not a plant that we bought that we could not sell out now or could not have sold at any time since we bought it at from 25 to 40 per cent more than what we paid for it. We bought the plants at what they were worth, in every instance, or we did not buy them.

Q. You spoke of buying some of these plants at a cash price or on the basis of cash. We have understood from some other companies that often all of their plants were bought with a distinctly cash option at any rate, and in other cases we understand that they were all bought for stock. Can you make any statement about that?—A. Well, I can not say what our neighbors did. I can say, so far as our own company is concerned, that all purchases made by Mr. Ellwood and myself were spot cash and nothing else. There was no exception in any instance. We paid out several million dollars before we thought it was possible to make any consolidation.

PRICES UNDER CONDITIONS OF MONOPOLY.

Q. Where you control 85 to 90 per cent of the output in any one line, are you not, in your judgment, enabled to keep your prices somewhat, not so very much, but somewhat, higher than would be possible if you were to control only 30 or 40 per cent of the output—that is to say, is there not in the control of that proportion of the output a certain slight, at any rate, monopolistic power?—A. I should like to answer that question by making a general statement first. Since 1890 the companies that I

have been interested in have practically controlled the manufacture of barbed fence wire in the United States and manufactured 85 per cent of all that was made in the world. During that time the price has dropped 50 or 60 per cent. It is a question of policy with a large concern that handles its business in a broad manner not to try and crowd the mourners. That has always been the principle that I have worked on, to try and make money in a legitimate way. While I do not intend to claim to you gentlemen that I am averse to making all the profits that I can make, I think it is bad for a concern to try and make so much money in one 6 months that they would ruin their business for the next 12 or 18 months.

When the manufacture of barbed wire developed in this country, in 1874, I was in the retail hardware business. I paid Mr. Ellwood, who is now my colleague, 20 cents a pound for a carload of barbed fence wire that we have since sold at 2 cents, since we were in absolute control, as he was in control at that time. That barbed fence wire has dropped from 20 cents a pound in 1874 to 2 cents a pound in 1899, 25 years. The wages of the laboring men have continually increased, on account of the improved methods of manufacturing, the increased output, and the fact that most of our men were on a tonnage basis. What we thought was a fair rate per hundred pounds to pay a few years ago has turned out now to be a very high price, on account of the enormous tonnage they can turn out. I can best illustrate that by stating that Mr. George T. Oliver, who is now out of business, one of our directors, stated to the Senate Subcommittee on Finance in 1888, in answer to a question as to what the boss roller of his rod mill got—it being at a time when there was a vacancy in the Chief Justiceship of the Supreme Court and many applicants for it—that he got \$21,000 for his last year's work. Senator Harris, I think it was, of Tennessee, said, "My God, that is more than the Chief Justice of the United States gets;" and Mr. Oliver said, "But there is more timber for Chief Justices than there is for head rollers," and it brought them all down with a laugh. Now, the head roller in a rod mill does not get to-day \$21,000 a year, as he did then. He got then 60 cents per ton, out of which he paid the night roller a certain sum and perhaps some assistants, and the balance of it he put in his pocket. But a head roller of a rod mill 12 years ago averaged to make about \$20,000, and they average to make to-day, probably, on a 30-cent basis, about half that amount, or \$10,000 or \$12,000 a year, and pay out just as much as they did then to their assistants. The reason is that the rod mill that was built originally to roll 100 tons a day will now produce 200, 225, or 250 tons; and while the head roller now has to pay his night roller and his assistants a large sum of money, still his net yearly amount is probably \$10,000 or \$15,000 to-day.

Q. The fact, of course, that there has been a great decrease in prices would not in itself quite cover the question that I have asked. Let me put the matter in still another way. Do you suppose that the prices would have been as low as they are now provided there had been a greater degree of competition along that line? You say that for several years you have controlled—that is, the concern you have been connected with has controlled—85 per cent or upward of that product. Supposing that there had been several different establishments controlling anywhere from 15 to 20 or 25 per cent each, with fierce competition among them all, do you suppose that the price would have gone down still lower than it is?—A. Well, I should think it would have gone lower.

Q. That covers the point, I think.—A. I should think it would have gone lower in the actual instance. But our control has been acquired by patents, which we have either gone and bought in the open market or paid others for, and we have paid out—the wire companies, in their various purchases of patents and in the litigation to establish them in the last 20 years—I should suppose, \$5,000,000 or \$6,000,000. They have paid out millions of money, and if you would eliminate that, I presume that prices might have been lower. I am willing to concede that.

THIS COMBINATION NOT DUE TO STRESS OF COMPETITION.

Q. It has been suggested with reference to several others of the larger combinations that the cause of their coming together was the fierce competition that existed among them and the fact that they were making very little money; that they came together to make these savings in order to increase their profits without increasing prices. What are the chief causes of the formation of your company? Was it this same competition?—A. It was because we wanted to be the wire manufacturers of the world.

Q. You had political ambition?—A. And perhaps a laudable one. I will say that the Consolidated Steel and Wire Company, of which I was a large owner, made in the last 3 years of its existence between 27 and 28 per cent per annum net. So that ruinous competition could hardly be said to be the reason for driving us together.

We believe that there is a great deal in the management of the business. We believe that has as much to do with its success as anything else, and our companies have always made money.

I started in the wire business less than 20 years ago, practically without a dollar, and many of my colleagues are in the same condition. The money we have made we have made out of the wire business, and we have made it by looking after our business closely, working anywhere from 12 to 20 hours per day, and by various improved methods, and pushing for business, and acquiring additional properties, and running our business on what we think were strictly business principles.

Q. (By Mr. JENKS). Do you think you can mention, as a prominent source of saving on the part of these consolidations, that you can secure the best talent more easily than you can in a smaller business?—A. Yes; there is no question about that. It would not be fair for me to say that we have the best talent in the wire business, because it might be contested; but I can say that we have the same men in the wire business that have made their money out of it. Those men are in it to-day.

DIVIDENDS.

Q. I see the statement is made as regards the American Steel and Wire Company that you have already paid dividends on your preferred stock and earned dividends on the common, but have not paid it on account of the fear of legal difficulties. Do the papers state it properly at all?—A. I am afraid there might be a stock speculator in the room. I do not know that there is such a thing in Washington. We have made a dividend on our common stock—a good one. We have not paid the dividend because the directors have not voted to pay it. Perhaps I am as much to blame for not voting to pay it as anyone.

Q. The question was asked particularly with reference to the statement made regarding the legal difficulties. I understood the Federal Steel Company had met some, apparently.—A. We are not willing to state that we are following in the shoes of the Federal Steel Company or anyone else. I will put it on that broad ground that our directors did not think it wise to pay a dividend.

Q. We have had a good deal of evidence with reference to charters under the New Jersey law, etc. That was the reason I asked you the question.—A. I have been opposed myself to payment of dividends on the common stock, for the reason we thought we ought to acquire certain properties, and to put our properties in such shape that, when this tidal wave, which may last 1, 2, or 3 years, has eventually found its level, we can pay dividends in any kind of times after we start.

Testimony closed.

WASHINGTON, D. C., November 14, 1899.

TESTIMONY OF MAX PAM, ESQ.,

Attorney at law, Chicago, Ill.

The commission met at 10.40 a. m., Senator Kyle presiding. At 3.08 p. m. Max Pam, esq., was introduced as a witness, and, being duly sworn, testified as follows: Senator KYLE. You may state your full name and address.—A. Max Pam, Chicago.

Q. (By Mr. JENKS.) What is your profession?—A. A lawyer.

Q. Are you connected with the American Steel and Wire Company?—A. I am the general counsel.

Q. Have you been so connected with the company since its organization?—A. Since the 1st day of July as general counsel. I was counsel in Chicago for the company from its organization until the 1st of July, when I was elected general counsel.

Q. Are you familiar with the process of organization of the company from the beginning?—A. By information and hearsay.

Q. Of your own personal knowledge, with reference to the financial end of the organization?—A. Not as to details; simply as to the general scope; that is all.

Q. Were you or are you familiar with the arrangements that were made with the bankers, J. & W. Seligman?—A. I am not.

Q. You have heard the general testimony given by Mr. Gates. So far as your knowledge goes, do you agree with it?—A. It is substantially correct.

Q. Do you recall any point on which you would care to add any further information?—A. On that subject?

Q. Yes?—A. No, sir.

Q. On anything connected with Mr. Gates's testimony?—A. No; I do not think there is anything further in that respect.

ADVANTAGES OF INCORPORATING IN NEW JERSEY.

Q. I want to ask you to explain the differences between the corporation law of the State of Illinois and that of New Jersey in such matters as are stated in the following

Chicago?—

scope and application to a business that involves as many elements and conditions as this kind of an institution does. They give the power to a corporation to carry on every form of legitimate enterprise in any State of the Union, with the exception of railroads in the State of New Jersey. It excludes the right to operate railroads in New Jersey. The laws of Illinois do not permit, in many respects, the exercise of the powers that are conferred by the charter of this corporation under the laws of New Jersey. Each State has its own corporation laws, and each has the right to say that certain corporate powers are or are not in accordance with its public policy. Therefore, a question may arise as to the power of the corporation to act as it did, or to do the business it has done. The New Jersey act is so broad that the State which gives the corporation life gives it the power to do just what it undertakes to do under the provisions of its charter; and no question can be raised then by any other State, so far as the power of the corporation is concerned, to act under this State charter.

Q. Do I understand you to say that in accordance with the law of the State of Illinois it would be an impossibility to get a charter to permit a company like the American Steel and Wire Company to engage in the mining, transporting, and manufacturing of steel, wire, and so on? Under the laws of the State of Illinois would that include too many lines of business for one corporation?—A. Yes. The laws of Illinois will not permit the exercise of the powers that the laws of New Jersey will. In this corporation, for instance, it is necessary to own coal mines in Pennsylvania. The Pennsylvania statutes provide that no nonresident corporation can own, in fee, more than 100 acres of its land. Now, a corporation like this owns, or rather controls, thousands upon thousands of acres. If organized under the laws of Illinois it would be absolutely powerless in the acquisition of that property, because the laws of Illinois do not permit a corporation of that State to own stock in other corporations. Under the New Jersey act this corporation has a right to own the capital stock of a Pennsylvania corporation, which may acquire property in excess of 100 acres, and in that way it can exercise its ownership.

POWER OF A STATE OVER CORPORATIONS CREATED BY ANOTHER.

Q. What restrictions do the laws of Illinois put upon foreign corporations?—A. None, except that they are subjected to the same duties and obligations, but can have the same rights, as domestic corporations. The right to do business is guaranteed under the interstate commerce act; therefore no State legislation can affect it.

Q. (By Mr. FARQUHAR.) If the corporation, organized under the laws of the State of New Jersey, should do business in the State of Illinois with a grant of greater privileges than any Illinois corporation had, and in the same line of business—a competing company, you may say—would a suit for injunction, or whatever other form in law it might take there, lie against this foreign company from New Jersey, restricting it from doing business in the State of Illinois on a more liberal principle than the Illinois act?—A. If you mean by that, if the foreign corporation undertook to act contrary to the law of that State, unquestionably the State, through its legal officer, would have the right to restrain any exercise of power contrary to the provisions of the laws of the State. For instance, we should have a right under our New Jersey charter to go into Illinois and operate railroads. The Illinois law does not permit a corporation like ours to operate railroads; it must be incorporated especially for that purpose under the act of Illinois. Unquestionably any person injured, as I said, would have a right to stop the corporation from exercising a power which was directly prohibited by the State. That does not involve any question of transaction between the States or between any citizens of States. Of course, nothing could be done by any State which would interfere with their corporate right to do that.

Q. But your company, the American Steel and Wire Company, could acquire in the State of Illinois, by charter, the right to build railroads and operate them there?—A. In accordance with the provisions of that State.

Q. Provisions of the State of Illinois?—A. Of course that would require compliance with every requirement. That is, the corporation, as a corporation, understand me, can not. Individuals could organize a railroad company for the purpose of carrying on the railroad business. A corporation has no such power.

Q. But the incorporators, for instance, or your board of directors, could acquire that right of the State of Illinois of course?—A. Any separate individuals, whether

directors of this company, or of any company, have a right to go into Illinois and organize for the purpose of operating a railroad, pursuant to the laws of that State.

Q. So that even with all the liberality of your charter under the State of New Jersey, you have to conform to the State laws of other States where the restrictions in incorporation are of a more conservative form than they are in New Jersey?—A. I do not think the question has ever arisen as to the extent to which one State can interfere with the exercise of power of a corporation of another State; but I take it, as a broad principle, that a corporation, being purely a creature of the statute, can exercise no greater power than the law-making power gives it, the legislature; and if the legislature of Illinois undertakes to say under what conditions and limitations the corporation may act within the bounds of that State, corporations are confined to them, so long as that in no way interferes with the provisions of the State constitution, or the provisions of the Federal Constitution as to interstate commerce. The legislature has its limitations the same as any other governing body.

NECESSITY OF LIBERAL CORPORATION LAWS—PROGRESS.

Q. You mentioned a minute ago, in answer to Professor Jenks, that your reason for incorporation under the laws of New Jersey was their liberality.—A. I did not say that, if you will permit me. Professor Jenks asked me some of the differences existing between the laws of the two States and I started to give them.

Q. And in your answer, of course, you admitted them to be more liberal?—A. You can not run an institution of this kind, in my judgment, with the different elements—mining, coal mining, and all these different elements that enter into a business of this kind—and make it one whole. It has got to be done under powers broad enough to permit it to be done. Take, for instance, another element, which, while I do not think it affects this corporation in the slightest degree, indicates to you how advantages are gained by such acts as the legislature of New Jersey has enacted, and which I think all States should adopt if they can for the good of the State. The Illinois law, for instance, exempts from taxation the capital stock of purely manufacturing corporations; that is, where they are for manufacturing only. The circuit court of the State has so construed that law that if the company exercises any other power, like mining (which is necessarily a corollary to a manufacturing business like this), it is not exempt from taxation. Now, in Illinois, there are any number of wire companies outside of this company. They are in the same business, and if the capital stock of this company were under the law of Illinois the corporation would be taxed on this \$90,000,000 of stock, while every other corporation there that does not go into the mining business—which does not produce its own ore, as we do—would be exempt from this burden. That would be an inequality and unfairness toward this one company. So, throughout, you will find that there are different elements of disadvantage in narrow legislation. Legislatures, and courts, and executives, and everybody must necessarily make and interpret the law for the good of the whole, in the light of changed conditions as they arise. The State that soonest realizes that position is going to profit by it, beyond question. This country has demonstrated that. England has demonstrated it in connection with restriction of trade, which is very much like this question. I remember some 10 years ago, when there was a question of the decisions in Illinois and other States, if a doctor, for instance, had agreed to stay out of practice, if he had sold his good will for a greater territory than a few miles, the courts would hold that that was an unreasonable restraint and void. They subsequently changed that so that the State line would be regarded as unreasonable—anywhere beyond the State line. You take it now, and the imaginary State line is entirely wiped out, simply because conditions change. The railroad, the telephone, the telegraph, every scientific production, they make practically no difference between them. They have made it so that it is absolutely impossible to restrain contracts, excepting in particular cases. Within the last 10 years that whole situation has changed. That characterizes this situation, too, as purely economical, and as an economical condition arises it must be met legislatively, judicially, and executively. As they are met, they are bound to conduce to the benefit of the whole country.

Q. So that you would say that the laws of New Jersey give capital greater opportunities for centralization than any other State of the Union?—A. I would not say that, because I am not familiar with all, but it certainly gives this—an encouragement to capital to invest and reach out all over the country in the pursuit of an industry that is beneficial to everybody concerned, whether it is the capitalist, whether it is the consumer, whether it is the laborer—everybody gets the benefit of it, unquestionably.

PUBLIC REPORTS AND DECLARATIONS.

Q. (By Mr. JENKS.) Do you think of any other special advantages in the New Jersey law compared with the Illinois law? Is there any difference as regards, for example, the nature of the reports to the State?—A. Yes; New Jersey requires reports and Illinois does not.

Q. In reference to the articles of incorporation, that is, as to the declarations that have to be made regarding the nature of the business, the basis for the issuance of stock, and so on; is there any material difference there?—A. None; if anything, New Jersey requires even a fuller statement.

NATIONAL CHARTERS; DESIRABLE, PERHAPS CONSTITUTIONAL.

Q. Mr. Gates stated that he favored a national incorporation law, providing that corporations of \$5,000,000 of capital stock or upward should be, or at any rate might be, incorporated under the United States law. Is it your opinion that a national incorporation law of that kind would at present be constitutional?—A. Well, of course, that is asking a good deal, but, in my judgment, Congress would have the power of regulation of corporations, which are purely legislative creatures, requiring such limitation in the doing of business as would give it the power to license and authorize. There is some question, I would confess, as to the power of Congress to do that, but I would not say it did not have the power. Unquestionably it would be a good thing if it could be done, because it avoids one great hardship; that is the exercise by each State of its separate right to construe the powers and duties and obligations of each corporation. At the same time another important question would arise, even if a national charter was issued—the question of the taxing power being taken from or vested in the Government or the States separately. It can not be, I am inclined to think.

Q. (By Mr. CLARKE.) The American Steel and Wire Company produces goods for interstate commerce largely, does it not?—A. Yes.

Q. There is no question of the constitutional power of Congress to regulate interstate commerce?—A. None.

Q. Might not that power be extended to the production as well as the distribution of goods for that purpose?—A. Except in so far as it affects the right of any man to control his own property, otherwise called "jus disponendi," I say yes; Congress can suggest, but can not control the right of a man over his own property.

Q. (By Mr. FARQUHAR.) Do you suppose that under the Constitution of the United States, without amendment, national corporations, being brought under a license, the license always carrying a fee, could be incorporated or created under the taxing power of the National Government?—A. Well, I won't say that it can be done under any special department. My impression is rather in favor of the power of Congress now to issue charters. Of course it can not be done under a special act. I think it could be done under special charter business, though.

Q. Special charter?—A. Applying to Congress for a charter to do business over the United States, and Congress could, if it wanted to, give a corporation life, and in doing it make such limitations and conditions as it deemed fit and proper.

Q. (By Mr. A. L. HARRIS.) Under what provision of the Constitution do you base that decision?—A. The general constitutional delegation of legislative power to Congress, of course, the giving of charters and grants.

Q. (By Mr. FARQUHAR.) All rights rather than reserved rights, you mean, do you not?—A. Yes.

Q. (By Mr. A. L. HARRIS.) I was thinking that the rights, or rather reserved rights, went the other way.—A. The Constitution is preventive; that is, Congress is prevented from doing anything contrary to the Constitution. The legislative body has the right to enact any law that is not contrary to a special constitutional provision. It is an inhibitive document. It is prohibitive of legislation and action, and confines legislative action within the provisions of it, and it is the only working constitution that has expressed the limitation that a legislative body can not act.

Q. (By Mr. FARQUHAR.) And under the taxing law itself, even in the cases taken of the oleomargarine bill, which could never become a law, unless a tax was imposed, no matter how infinitesimal the taxing might have been, it did not take away from the State the local taxation of these oleomargarine companies, and their property, real and personal, where they were.

Mr. A. L. HARRIS. The revenue measure.

Q. (By Mr. FARQUHAR.) So you see a double revenue there at once; a license would be in the same line as revenue. Do you not think so?—A. Well, I hardly—that is, it

would not be strictly so. I think the Government certainly has the right to issue a license for proper pursuits, and they have the right to consent.

Q. The right to issue charters as they did for the Nicaragua Canal Company, the American Company of Nicaragua?—A. Yes; so they would have a right to issue charters for railroads under proper regulations. I think it is done in some instances where railroads cover territories—Congress issues special charters to railroad corporations to operate in these territories and extend beyond the confines of those territories.

THE ANTI-TRUST LAW OF ILLINOIS.

Q. (By Mr. JENKS.) Illinois has a special law on the subject of trusts and combinations, forbidding the formation of companies that are supposed to act in restraint of trade?—A. Yes.

Q. In your judgment, has that law been effective in preventing, in the State of Illinois, combinations of capital to any extent?—A. I do not think that law has, no; because no one finds fault with a sound, wholesome law. I think the treatment sometimes given to institutions, pursuing them or attacking them, will ultimately tend to affect the welfare of the State.

Q. In your judgment, then, this law forbidding monopolies, trusts, and so on, is in itself a wise law?—A. Unquestionably.

Q. And as regards any evil that might come from it, it would be in the unwise enforcement of it?—A. Yes; or abuse of it.

Q. Is the law itself drawn in such terms that it would, in your judgment, tend to prevent combinations that might easily result in the savings that have been suggested by Mr. Gates and others?—A. Why, I do not think the law would interfere with an organization or corporation such as ours, because it does not come within any possible suggestion, even, of any of its provisions.

Q. Do you think that the law would forbid the organization of a corporation that would control, we will say, the entire output of any one industry, aside from patents?—A. In other words, can there be such a thing as a corporation that will come under that act?

Q. It amounts to that; yes.—A. Well, I should say, of course that might be done. I have this in mind. For instance, suppose you have a large number of competing institutions, and it is desired to control those competing institutions in their separate organizations, and have them controlled by either a syndicate or a corporation that holds stock in all of these corporations, leaving them intact, and place them in a position where they could deceive the public by leading the public to believe they are competing with each other, when they are not; I can readily see that that would be contrary to the law.

Q. But if one corporation were to buy up all of its competitors until it had substantial control of the market, that, in your judgment, would not be contrary to the law?—A. So long as the motive and purpose is to exercise merely a man's prerogative of doing with his money what will produce the most good, without being necessarily oppressive, by entering into an arrangement in advance to oppress, there certainly could be no objection. Suppose an institution could be successfully attacked; a State could not confiscate the property. It can not take property from them at all. All they can say is that the organization was imperfect and contrary to the letter of the law, and that they have got to return the property to the owners. Now, what are the stockholders going to do with it? It can not be contended for a moment that those stockholders would not have a right to sit right down with the appraisers of their property and say, "We will simply take our property and form a corporation and run our business." Suppose the courts should so far forget themselves as to appoint a receiver for an institution like this, and order the property sold. Would it be said that the men who have the means and who are in a position to hold a large amount of securities would not have the right to go to the receiver's sale and buy that property and save themselves? Would it then be said it was a trust, simply because they undertook to save their own property?

Q. I am asking you in reference to the way in which the law of Illinois is, as a matter of fact, interpreted. Have any of the larger combinations or corporations been held illegal under this law?—A. Well, of course, not in the last year or two. The old Chicago Gas Trust (that is some years back). That was something like what I have stated to you. Really a corporation was formed, holding stock of different gas companies around Chicago, and they were apparently competing with each other, but really were not, and one set of men undertook to control the situation. The Supreme Court held that to be a trust, and very properly. Another case I recall was the California Preservers' Company case.

Q. And the Distilling and Cattle Feeding Company?—A. Yes. The Supreme Court

handed down a decision of the Glucose Company, which went up on demurrer, and in it a petition for a rehearing has been filed. That really did not involve the question. There was never a question substantially whether or not a corporation had the right, or the directors of a corporation had a right, to dispose of its property as a going concern without the consent of all of its stockholders; so that the real question was not before the court.

Q. In the case of the Distilling and Cattle Feeding Company do you recall in what respects that was considered to be more injurious, and consequently to come more directly under the law, than any other very large corporation which controlled a large proportion of the output in any one line?—A. My recollection is that in that case they showed, in writing, agreements and contracts for the control of prices, commodity, and output, and there was not any way for the Supreme Court to do anything else than condemn it.

(Testimony closed.)

THE NATIONAL SHEAR COMPANY.

WASHINGTON, D. C., November 14, 1899.

TESTIMONY OF MR. JAMES C. PEARSON,

Private banker, Boston, Mass.

The commission met at 10.40 a. m., Senator Kyle presiding. At 3.45 p. m. Mr. James C. Pearson, of Boston, Mass., was introduced as a witness, and, being duly sworn, testified as follows:

Q. (By Senator KYLE.) Kindly give your full name and address.—A. James C. Pearson, Boston, Mass.

Q. And your business?—A. Steel, wire, and nails; and, in this capacity, private banker.

ORGANIZATION OF THE NATIONAL SHEAR COMPANY.

Q. (By Mr. JENKS.) Have you had any direct connection with the National Shear Company as regards the manufacturing part of the work.—A. Not at all.

Q. When was this company organized?—A. I do not know the exact date. What was that date, Mr. Stout?

Mr. STOUT. September 7, 1898.

Q. (By Mr. JENKS.) What was the amount of capital stock?—A. Three million.

Q. Do you recollect how that was divided between preferred and common?—A. One million preferred and 2,000,000 common, I think.

Q. Do you recall how many companies united to form the National Shear Company?—A. About five. There was the Clauss Shear Company, of Fremont, Ohio; the William Schollborn Company, of New Haven, Conn.; F. J. Wiss & Sons, of Newark; Seymour Cutlery Company, of Holyoke, Mass., and the Ohio Shear Company, of Elyria, Ohio.

Q. Were you yourself familiar with the contract under which these different companies were taken into the National Shear Company?—A. I was at the time, yes.

Q. In what way were these companies paid for; cash, or in stock, mortgages, notes, or how?—A. All paid part cash and part stock.

Q. You said that you yourself had been connected as banker with this organization?—A. I simply loaned them money. I had no official capacity whatsoever, no more than any national banker would have.

Q. The question is asked whether they came together under a prospectus made public, or in some other way?—A. Private.

Q. It was an entirely private arrangement between the companies?—A. Yes.

TERMS OF LOAN TO NATIONAL SHEAR COMPANY.

Q. You say that you have loaned them money. In what form; by the discounting of notes?—A. By discounting of notes up to \$200,000.

Q. Discounting to the extent of \$200,000?—A. I had agreed to discount to the extent of \$200,000, and it amounts to about \$175,000, I think.

Q. And what special compensation were you to get for that?—A. Six per cent.

Q. Anything further?—A. Conditional.

Q. Conditional?—A. Yes; if I continued the arrangement; if I continued discounting their notes on 4 months' paper, in 2 years they were to give me a certain amount of stock.

Q. That is, there was in the contract a general understanding. You were to discount for them up to the extent of \$200,000, and continue renewing the notes for a period of 18 months, did you say?—A. Nine months was one clause. If I continued for 9 months, they were to give me a certain amount of stock, and for 18 months,

another amount. At 9 months, not being satisfied with the way the concern was doing business, I called it off.

Q. You declined to continue the arrangement?—A. Yes.

Q. Did you receive the compensation that had been suggested for continuing this for 9 months?—A. It was held in escrow by William Nelson Cromwell, of New York, who failed to mail it; for what reason I do not know. There was a certain amount due June 10. That was the expiration of the 9 months. It is positively due, and it may be overlooked.

Q. In what form was this extra compensation to be—in the form of stock?—A. It was to come in stock; yes.

Q. A small amount of preferred stock and a large amount of common?—A. Yes.

Q. For the discounting of this \$200,000, how much was to come to you as extra pay in preferred and common?—A. About \$30,000 preferred and \$225,000 common.

Q. So that for the advancing of the money, the discounting of the 6 per cent notes, you were to receive \$225,000 common and \$30,000 preferred?—A. Yes.

Q. Was it in the contract that you were to receive that providing you carried it out for the 18 months? If you carried it for 9 months it was to be considerably less?—A. Yes.

Q. Do you care to state how much?—A. Less than one-half—a little less than one-half.

STARTED ON BORROWED MONEY.

Q. Do you know whether in the discounting of these notes to this extent or to whatever extent you did, you were furnishing to the company a large part of its running capital?—A. I was satisfied it was a majority of the running capital.

Q. That it was a majority of the running capital?—A. That is, of the cash outside of the stock on hand—working capital—although stock on hand, you know, is always considered working capital.

Q. Yes; I had considered that.—A. About one-half. They had about as much more stock on hand.

Q. So that the company was really raised in this way through you—the money it was using for paying for the stock on hand and furnishing the running capital?—A. Yes.

Q. Was it your understanding that the plants that were taken into the company were to be paid for then largely by stock besides this, or were you furnishing the money?—A. Part of this money was paid to other factories for coming in.

Q. Part of this money you yourself furnished was used to pay for plants?—A. Yes.

Q. And discounting notes of the company?—A. Yes. That is where it was established. The basis they started on, you see, was to borrow the working capital.

Q. I understand, then, that you thought it was really on an unsound basis, and that is the reason why you withdrew?—A. That is right; that is the reason the nine-months clause was put in there.

Q. Because you were in doubt about it before?—A. In doubt about it at the time I loaned it; yes.

Q. If I may sum up, then, the company was organized with \$1,250,000 of preferred stock and \$1,750,000 of common stock, or \$3,000,000 in all?—A. That is right.

Q. And that was used to pay for plant, as you understand—practically all of it?—A. Yes.

Q. Excepting this reserved for you?—A. Yes. Was it all issued, Mr. Stout?

Mr. STOUT. Not all issued.

The WITNESS. I think \$400,000 or \$500,000 has not been issued.

Q. And that the company issued, in addition to that, notes to pay for the plants?—A. Issued besides notes for money to pay for the plants.

Q. Do you know whether their notes, any of them, were issued to pay for the plants or not?—A. You mean the money they got for the notes?

Q. I mean further than that. Whether any of these who came in accepted in payment for the plants the notes?—A. They did; yes.

Q. So that the organization was really started on its credit?—A. Borrowed money.

Q. Even for the plants themselves?—A. For the plants themselves.

Q. I understood that you withdrew from this arrangement after 9 months. Was there issued to you or any of your intimate friends or near relatives, so that it might be supposed to be indirectly to you, this \$200,000 in stock?—A. It was held in escrow by Mr. Cromwell, of New York.

Q. That was in the contract?—A. That was to be held in escrow, to be given to me part in 9 months and the other part in 18 months. If I did not carry the contract for 9 months, I was to have no stock.

Q. Was it in fact issued in the name of some of your friends and put in his hands?—A. It was issued in the name of my friends.

Q. Did your friends receive it or did he receive it?—A. They received it for indorsement and passed it back.

Q. So as a matter of fact he has been holding it?—A. Yes.

Q. And you have received nothing of it?—A. Nothing. The notes are good.

Q. The notes are good as long as the company is?—A. Oh, yes; they are good for that. I am only a banker. Mr. Wiss here is vice-president of the company and a practical man. Really I have told you all I know about it.

(Testimony closed.)

WASHINGTON, D. C., November 14, 1899.

TESTIMONY OF MR. F. C. J. WISS,

Vice-president of the National Shear Company, Newark, N. J.

The commission met at 10.40 a. m., Senator Kyle presiding. At 3.55 p. m. Mr. Frederick C. J. Wiss, Newark, N. J., was introduced as a witness, and, being duly sworn, testified as follows:

Senator KYLE. Give your full name, address, and business.—A. Frederick C. J. Wiss, Newark, N. J.; business, manufacturer and merchant.

Q. (By Mr. JENKS.) Are you vice-president of the National Shear Company?—A. Yes.

Q. Have you been in the National Shear Company from the beginning?—A. I have, nominally.

METHOD OF ORGANIZATION OF THE NATIONAL SHEAR COMPANY.

Q. You can, perhaps, give us definite information with reference to the companies that united to form the National Shear Company. Were there more than five?—A. Only five were taken in; the amount of stock authorized was \$3,000,000, as I understand from the minutes of the company, from information and from the records shown us. Before I go on I must explain that I am vice-president, but not active in the management, so these things I get indirectly, except where I have access to the books on demand; not voluntary information from the company.

Q. You have, I suppose, however, had access to the minutes?—A. Well, any time I have demanded to see them, I could see them, yes. The organization, understand, was purely a matter of contract between the promoter and the bankers, and probably one manufacturer.

Q. Who was the promoter?—A. Mr. J. H. Parks.

Q. Is this Mr. J. H. Parks the man who was formerly president of the wire-nail combination?—A. He was connected with the nail industry, and also, I believe, with several other large concerns.

Q. You say Mr. Parks was promoter in connection with one manufacturer; with whom?—A. With Mr. J. H. Clauss, of the Clauss Shear Company.

Q. Where is the Clauss Shear Company located?—A. Fremont, Ohio.

Q. Will you explain a little more in detail what the method of getting the companies together was, if you please?—A. It was by invitation of Mr. Parks, who apparently was representing capital, as far as we know. He invited the manufacturers to participate in various meetings, and they could come to no agreement. The promoters took it upon themselves to secure options on the factories of the principal manufacturers in the shear line. Some of those options were exercised and some were not. As I stated, the capitalization was \$3,000,000, of which a certain amount was set aside for each of the factories acquired; that is to say, if certain factories were not secured, Mr. Clauss and Mr. Pearson—well, Mr. Clauss and Mr. Pearson were to furnish these factories for a certain amount of stock, and if no factories were furnished of course no stock was issued. According to a copy of the stock book there has been issued \$2,410,000, of which a trifle less than \$1,000,000 is preferred stock, and the balance common. The preferred stock may be \$995,000. It is very near; practically \$1,000,000.¹

COMPANIES UNITED—PROPORTION OF THE BUSINESS CONTROLLED.

Q. Will you be kind enough to name the five companies that did go into the organization?—A. The Clauss Shear Company, Fremont, Ohio; Seymour Cutlery Com-

¹ Mr. Wiss says, in a letter dated November 17, 1899: "Preferred stock of the National Shear Company issued, according to a statement dated June 9, 1899, is \$995,000. Do not believe that there has been any change since that date."

pany, Holyoke, Mass.; William Schollborn Shear Company, New Haven, Conn.; the Ohio Shear Company, of Elyria, Ohio, which may be sometimes known as the Standard Shear Company; I think they have operated under the name of the Standard. It was the Elyria, and then it changed. I think the Standard was formed, two or three months previous to the formation of the National Shear Company. These companies, together with ours, the J. Wiss & Sons, of Newark, N. J., made up the National Shear Company.

Q. Are those concerns, or some of those that came in, say the Clauss Shear Company and your own, the largest manufacturers of shears?—A. Yes.

Q. Do you know what proportion of the entire output of shears is controlled now by the National Shear Company?—A. It is purely a matter of conjecture, and information gathered from various concerns, a good deal based on the general business conditions. I should say, in round figures, 62 per cent, practically two-thirds. I really think it is less than two-thirds; probably 60 per cent.

Q. Had you succeeded in getting in the other 4 or 5 or 6 companies which it was understood to begin with were to come in provided they could make arrangements, what proportion would you have controlled then?—A. Had the National Shear Company succeeded—is that what you mean?

Q. Yes; that is what I mean.—A. Oh, probably, I should say, about 90 per cent.

Q. Which was the largest company that you were thinking of getting in that was left out?—A. R. Heinisch & Sons Company, of Newark, N. J.

Q. Is this the company whose output is regularly as large as yours was?—A. The Heinisch and our former output were very nearly alike. I think the Heinisch probably did perhaps 10 or 15 per cent more business than we did; at times they may have fallen behind us; I do not know; so that really one of the largest manufacturers was out.

Q. Are there any other companies that are not in the combination, anything like as large as yours?—A. No.

Q. They are all small concerns that were left out?—A. Simply. We got options, I think, on 90 per cent. I was mistaken; it was between 80 and 90 per cent.

CASH VALUE OF PLANTS ONE-FIFTH OF THE STOCK ISSUED.

Q. Now, you said there was a contract or agreement made with Mr. Clauss and Mr. Pearson to take these plants for the issuance of a certain amount of stock; if they did not come in, that stock was to remain in the treasury unissued, as I understand it. Did that company come in under that same general plan and arrangement?—A. I believe it did.

Q. I wish to learn the cash value of the plants as compared with the stock that was issued. Now, I understand that there was a provision made for the issuance of \$3,000,000 of stock, and there was, as a matter of fact, \$2,410,000. What was the cash value of those plants, paid for in cash instead of stock, in round figures?—A. Paid in cash?

Q. Paid in cash.—A. There were none of them paid in cash entirely.

Q. No; I asked what you would consider the cash value of those plants?—A. Oh, well, including the quick assets, the net value, I should say, of the companies that have gone into the concern, at the present time, is probably \$500,000; I say the present time. There are two factories which have been closed down and the machinery torn out. There are three now closed down, but up to a recent period there were two of them. The value of the machinery of these closed factories, I consider, is very little after it leaves a fixed place.

Q. So that, as a matter of fact, the capitalization was in round numbers five times the cash value?—A. That is practically so.

Q. As regards your own company, were you paid in stock or in notes, as I think was intimated by Mr. Pearson?—A. We were paid in cash, stock, and notes. It was a pure matter of getting as much and as favorable terms as you could.

Q. I suppose each company dealt separately with the promoters and made the best bargain it could?—A. Each company dealt separately with the promoter.

Q. And made the best terms possible?—A. Yes.

THE COURSE OF PRICES—CONDITIONS BEFORE CONSOLIDATION.

Q. What has been the course of prices in your industry—shears—the last 3 years?—A. During the last three years the prices, up to the formation of the company, had dropped on account of the competition—pure and simple competition. It can not be called legitimate, however, in so far that the competition of 2 concerns was from concerns that failed and paid a mere nominal dividend—one of them, I think,

6 cents on the dollar—6 and a fraction—and the other possibly a little more. In addition to that there were one or two companies that have also failed and have thrown a lot of goods on the market, which never started up again.

Q. So that there really was very fierce competition before the organization?—A. Yes.

Q. Now, since the organization was made have the prices increased materially?—A. They have been advanced to certain customers, but I understand that concessions have been made since then. As I say, I have nothing to do with the prices. I only gather this from what our old customers volunteer and tell us, and what we may occasionally see from bills and other matters sent to J. Wiss & Sons, the old firm, and opened by J. Wiss & Sons, because we have other business interests, and turned over to the National Shear Company if relating to the shears business.

NATURE OF PRODUCT—REASONS FOR ADVANCE OF PRICE.

Q. You were formerly in the Wiss Shear Company?—A. Yes.

Q. You were formerly entirely familiar with the business?—A. Yes.

Q. Since then you have not been the active manager?—A. No.

Q. Will you explain briefly what the main output is—shears and scissors? Is that the main output of this National Shear Company?—A. Yes.

Q. What else do they manufacture?—A. One of the works—the Clauss Shear Company—also manufactures razors, and at one time they manufactured very extensively the serrated bread knives and a few patented specialties.

Q. Is there so much change in your product from the raw material that the raw material itself does not form a very important part of the price? Will the advance, for instance, in the price of steel affect particularly the price of shears?—A. Well, it would make some difference, but the amount of material used is comparatively small; it is labor mainly.

Q. So that the price of the raw material plays really an unimportant part?—A. Taking the year's consumption, it will cut a material figure in any business. It certainly has to be figured in the cost of production and output. The advanced prices were not only due to the pure cessation and doing away with competition. There is a legitimate advance necessarily in the shear industry on account of the low prices which had been prevailing before, due to competition. It did not leave a legitimate profit to the manufacturer. The advanced prices are not only due to that, but also to the advance in material and labor.

Q. What has been the course of wages for the last 2 years? Has there been any advance in wages since there came this advance in prices?—A. Yes.

Q. The National Shear Company has increased wages?—A. Yes; an advance and cut at the same time.

Q. You think, on the whole, that wages are higher than they were before the organization of this company?—A. Averaged throughout, I doubt.

Q. Any single instance?—A. Yes.

ADVANTAGES OF CONSOLIDATION.

Q. You spoke of the fact that one of the companies—the Clauss Shear Company—controlled some patents. Is there in your judgment any decided advantage under the combination by having that control and making them universal through the different companies?—A. There are patents connected with the serrated bread knives, which I had reference to, which have been in litigation for some years; but they have practically been made by outside companies. So that the National Shear Company confine themselves, I am inclined to think, entirely to the making of shears, scissors, and razors.

Q. So that does not count for anything in the company?—A. It does not cut any figure; no.

Q. Has there been, since the organization of this combination, any specialization of the plants so that one plant will give nearly all its time, all of its machinery, and so on, to the manufacture of one kind of goods, and another one to another, so that there has been any saving in that way?—A. Not that I know of.

Q. You think that each one of the establishments runs practically as it did before the combination?—A. Pretty much so.

Q. Can you, yourself, mention any other advantages that come from the combination besides the fact that they avoid this destructive competition?—A. There should be decided advantages in the cost of selling, in office help, and in buying material, and in adopting at the different works the advantages of each other.

Q. Yes.—A. Those are about the main features.

Q. Do you know whether the advantages, as a matter of fact, have resulted along that line that were anticipated?—A. I am inclined to think that they have.

Q. Along very nearly all the lines that you have mentioned?—A. To a very great extent.

Q. So that on the whole the general principle of combination in your industry is one that you would yourself favor?—A. The principle, yes.

THE TARIFF.

Q. (By Mr. FARQUHAR.) Have you any protection under the United States tariff for your business?—A. There is a protective duty on shears, yes; but the shears manufactured in this country are entirely different from those imported. There are some scissors which were almost entirely imported before the tariff, and still are imported, which we do not seem to be able to make here on account of the long-standing experience and the cheap labor on the other side, principally German. The class of scissors that I am speaking of is the scissors, the small articles with 2 round rings $2\frac{1}{2}$ inches up to 6 or 7. Now, probably—I should say, roughly—probably 90 per cent of all the scissors sold that are under 6 inches are imported, although there are some of the larger shears made on the other side. Without a protective tariff I am inclined to think that there would be a great many more of the larger sizes imported than there are at present. The protective tariff was a great incentive to build up the trade and to increase competition, which would materially reduce the price. Prices during the last 15 or 20 years are probably fully 50 per cent less than they were.

Q. Then you would say that the protective tariff, which practically and primarily gave a foundation to your business in this country, at the same time created the ruinous competition among the shears manufacturers of this country which was the cause of your failures in business?—A. Yes.

Q. And also drove you into this combination to save yourselves and your own property?—A. Yes.

Q. And you lay this idea of combining entirely to the fact of the fierce and ruinous competition among American manufacturers, by American manufacturers among themselves?—A. I should say so; yes.

Q. As they were not manufacturers of the fine class of scissors that were imported, of course they do not enter into the competition?—A. No.

Q. And in the making of the American shears and the larger class of what we call scissors or shears that competition was the thing that brought the prices down in this country?—A. Yes.

Q. It was the American competition that brought down the American market?—A. That is right.

Q. And not the introduction of the foreign goods at all, because the foreign goods imported were noncompetitive?—A. To a very great extent, yes.

METHOD OF COMBINATION.

Q. (By Mr. CLARKE.) How do you account for the difference between the cash values of the properties which you purchased and the amount of capital stock which you have issued?—A. Well, that is a question you would have to ask the promoters.

Q. Do you not know what has been done with that stock?—A. The stock?

Q. Yes.—A. Well, the people directly interested, I am inclined to think, took the bulk of the stock to themselves. They voted all the stock to themselves with the proviso that if they did not succeed in turning over certain factories it should revert to the treasury. As I understand, it was formed by the organizing attorneys.

Q. What was the reason for issuing so much stock for so little property?—A. We were not consulted; I do not know anything about it.

Q. (By Senator KYLE.) The purpose of it was to pay a dividend on the whole amount?—A. Well, I do not know.

Q. (By Mr. FARQUHAR.) Was there any promise of dividends by the promoters?—A. Any promise of dividends?

Q. Yes, was there any promise by the promoters themselves?—A. No, I do not know that there was.

Q. Did they not hold forth that if you got a dividend, if you got 5 to 1, you would get a dividend of 2 per cent a year or 3?—A. We were not consulted at all; it was a pure matter of buying and selling. We were approached and they said: "What will you sell your plant for?" We said: "We will sell it for so much cash." We were then approached and told: "We can not raise so much cash; instead of so much cash we will give you so much stock." And speaking for myself, speaking for the firm of J. Wiss & Sons, I said: "That is not satisfactory." Well, there were two or

three dickers made, and we finally struck a bargain by which we secured a certain amount of cash, so much notes, and so much stock in addition, and cash for the merchandise, with an option of stock for all or for any portion of the cash or note consideration.

Q. (By Mr. CLARKE.) Did you get a higher price under the arrangement which you finally made than you offered to take for cash?—A. I got nominally more but practically not; no.

Q. (By Senator KYLE.) They represented to you, of course, that they were going to form this trust corporation at the time they made the bargain with you?—A. Well, they made a good many representations.

Q. Did you not know or understand that the trust was to be formed?—A. I knew that they were attempting to form a combination of the principal shear manufacturers.

Q. And when you accepted the stock you evidently knew that you were going into such a corporation?—A. I knew that I was going in with others, but with whom I did not know.

Q. And they evidently represented to you, did they not, that you would make more by this operation than you had made by your private business conducted in your own private way?—A. Well, I do not know that they particularly represented that. They simply represented how much they could make by the association, and we were led to believe that they had secured options on all the principal manufacturers, and, moreover, that the options would be exercised.

Q. I understood you to say a moment ago that the price of your product had been raised since the formation of your corporation, above what it was before?—A. Yes.

Q. Was not that the avowed purpose of the organization of the trust combination?—A. I suppose it was; they intended to make a profit by advancing prices.

Q. Was it not so represented to you?—A. In the meeting of the different manufacturers the promoters said, we can do so and so; but there was no positive assurance that they would do it.

Q. Is the trust corporation in operation now?—A. The National Shear Company?

Q. Yes.—A. Yes.

Q. And you are still a member of it?—A. Yes.

WAGES, DIVIDENDS, AND VALUE OF STOCK.

Q. And you have not raised the wages to your employees at all, you say?—A. Not to my knowledge, except, possibly, in a single instance. As I say, I have no active voice in the matter of management and have no active interest in the affairs of the company.

Q. (By Mr. JENKS.) Your interest at present remains simply in the question of the payment of these notes and the possible dividends on the stock?—A. Yes.

Q. Have they paid any dividends on preferred stock yet?—A. No.

Q. (By Mr. CLARKE.) Are these stocks listed in the New York market?—A. Oh, no; I guess not.

Q. Are they for sale to the public?—A. Well, I do not think anybody would buy them.

Q. (By Mr. JENKS.) Do you know of any transfers that have been made for a consideration, so that you would have an idea as to the price of them?—A. No.

Q. You said a little while ago that there had been issued \$2,410,000 worth of stock, of which there was about \$1,000,000 preferred; perhaps you can give me the exact figures a little bit later. Can you furnish me the exact amount that was issued of preferred?—A. The amount of preferred I can give you, according to a list given me, which is supposed to be an abstract from the stock book.

Q. It is simply in order to make your testimony perfectly definite on that point that I ask it. Kindly send that in.¹

Testimony closed.

¹ See p. 1043, footnote.

INTERNATIONAL SILVER COMPANY.

WASHINGTON, D. C.,
Wednesday, November 15, 1899.

TESTIMONY OF MR. SAMUEL DODD,

President of the International Silver Company.

The commission met at 11.20 a. m., Chairman Kyle presiding. Chairman Kyle introduced Mr. Samuel Dodd, of Meriden, Conn., president of the International Silver Company, who, being duly sworn, testified as follows:

Q. (By Senator KYLE.) You may state your full name and address and business.—A. Samuel Dodd, Meriden, Conn.; I am president of the International Silver Company.

BUSINESS OF THE INTERNATIONAL SILVER COMPANY—EXTENT OF COMPETITION.

Q. (By Mr. JENKS.) Will you be kind enough to tell us something with reference to the nature of your business—what your raw material is, and what your chief product is?—A. It is what is known to the trade as silver-plated ware—tableware, tea sets, cake baskets, spoons, and forks. The base of what is called hollow ware is pig tin; the base of spoons and forks is what is called nickel silver.

Q. Do you manufacture sterling silver as well as plated ware?—A. Yes; sterling silver.

Q. How large a proportion of the output of the country of plated ware does the International Silver Company control?—A. I do not know; if you want my guess, I could guess.

Q. Please give us as careful an estimate as you can make.—A. Perhaps 55 to 60 per cent.

Q. And about what is the proportion of the output of sterling silver?—A. I should guess 15 per cent; I guess that is high—10 per cent.

CAPITAL NECESSARY.

Q. In this line of business is a large capital needed in order to secure a proper division of labor, so as to carry on the work economically?—A. Yes.

Q. About how much capital would be needed to set up a first-class plant to do this kind of work efficiently?—A. That would depend upon what you want. If you want to combine the sterling silver with the other it would be more.

Q. Say plated ware without the other?—A. It takes a different plant entirely to manufacture spoons and forks. The concern that I formerly managed had nothing to do in the spoon and fork line. That part of it I could not state. I know it requires a large capital to do that. How much I do not know, because I have never had any experience with that.

Q. Take hollow ware. How large a capital would it take to equip a plant to do really first-class work in the best way possible?—A. If you control a large output and have to compete with large concerns, a plant of a million and a half or two million dollars would do it.

Q. You think that a plant of \$2,000,000 would be large enough to give all of the advantages that would come from the division of labor and the large buying of material and so on?—A. I should judge so.

SAVINGS OF CONSOLIDATION.

Q. Will you explain to us what special sources of saving and special advantages there were in bringing the different plants engaged in the same line of work together into one organization?—A. One advantage must be that the administration of 12 or

15 companies would be brought under one head. If there were factories that had more room than the output demanded, you could bring them under one and consolidate them better.

Q. You would say that those were the two chief sources of saving?—A. Yes; I should say those were the two chief sources of saving. The closing of stores and agencies in the different cities that a good many of the plants had would also be a saving.

Q. In the first place a saving would come from better organization for administration. In that way, I suppose, you save the salaries of a good many high-priced officers?—A. Yes; you have all your buying under one head; a thousand and one ways in which money could be saved.

Q. By putting all under one head you can save, of course, the salaries of several different buyers. Can you also buy to better advantage by buying in large quantities?—A. Undoubtedly, yes.

Q. Can you give any estimate as to the percentage of saving that probably would come from buying in that way?—A. No.

Q. You can not fix it definitely?—A. No. Of course, in the silver you can not save anything. A man can buy 1,000 ounces of silver as cheap as he can buy 5,000 ounces. But in all manufacturing supplies used in the factories, people are anxious to sell goods, the people that supply them, and they would like the combined sale to 16 factories rather than 1 factory. Take the base of what we call hollow ware—tin. There is no particular saving in that, because a small concern that wanted 100 pigs of tin could buy it about as cheap as a concern that wanted 1,000.

Q. With reference to the selling of your goods, is there any material saving there in labor; that is, can you dispense with the services of various traveling men, for example?—A. We have not done so, except, as I said, in closing some of these offices or stores in various cities.

Q. About how many traveling men do you employ?—A. I do not state these things as facts, because I was not aware what line the commission wanted of me and I have never gone into these details particularly. Each factory employs about as many traveling men as it ever did.

Q. (By Senator KYLE.) To the best of your knowledge?—A. I should guess there were from 75 to 90 traveling men.

Q. (By Mr. JENKS.) And you keep now about the same number that all the separate companies did before they were combined?—A. Yes, with one exception. There was a concern in New York City, a store there, Rogers & Bros., which I think had 3 traveling men that went from there in some way. We closed that store and we let those traveling men go, although our factory took 1 of them. There were only 2 of them.

Q. You simply transferred him?—A. Yes.

Q. And let 2 go?—A. Yes; laid off 2 traveling men. That is all I know of.

Q. Can you tell us how many stores you were able to close?—A. So far we have only been able to close 1.

Q. That is the one you referred to?—A. Yes; on account of leases and other matters. We closed this store in New York; that is the only store. There is another to be closed there as soon as we can sublet it.

Q. How many do you expect, as soon as your business is fairly running, to close, in order to effect savings in that way?—A. I should say there might be 10 throughout the country.

Q. About how many have you altogether?—A. Perhaps 15.

Q. So you will be able to close more than half?—A. Oh, yes; oh, yes.

Q. You spoke of the saving that would come also from the closing of plants that were taken into the combination. How much have you done in that way?—A. We have closed 2.

Q. How many came together into the organization to begin with?—A. I think there were 14 then. Since I went into the combination there have been 2 added, 2 that were bought.

Q. You spoke of 14 coming in. Did each company have simply 1 plant?—A. Yes.

Q. So that 14 came in and you have 14 now. You have closed 2 and bought 2 since you have been in your company?—A. We took the employees of those that we closed and took their business, their trade-marks, and their salesmen, and made the goods in one factory. We transferred that all to 1 factory because we had lots of waste, spare room, and the other one the same way. Practically the 2 concerns are running, only they are under different roofs from those they were under. The workmen are there and have made the same line of goods that the old companies made.

Q. (By Senator KYLE.) What was your object in closing up these 2?—A. Because we had the spare room in our factories, and it saved power, and lots of expense in

running factories; because we had plenty of bricks and mortar and machinery and another roof to put the men into.

Q. And you saved the room?—A. Yes.

OUTPUT, AND NUMBER OF EMPLOYEES, INCREASED.

Q. (By Mr. JENKS.) You have not lessened the number of employees by closing them?—A. No; we are ready to hire more men if we can find them.

Q. Can you tell us with reference to the number of your employees, how much they have increased since your organization?—A. Oh, I should think we had added 10 or 12 per cent, perhaps, all told.

Q. And how about the quantity of your output; has that increased?—A. Yes.

Q. In about the same proportion, 10 or 12 per cent?—A. Yes; increased more.

Q. About how much?—A. About 20 per cent.

Q. How do you account for that increase more than in proportion—by working your establishments more efficiently?—A. Why, I am talking about the output that the consumers take.

Q. Well, does that mean this, that the demand, on the whole, has increased so that you are working more nearly at full capacity now than you were before?—A. Yes; that is exactly what it means.

Q. Before the organization, some of the plants were not working at their full capacity?—A. No.

Q. And since then you have been pushing them?—A. Yes.

Q. To what do you attribute this increased demand for goods?—A. If I should guess about it, I should guess what the newspapers say—general prosperity.

Q. Is it to be accounted for at all by any reduction in the prices of the goods?—A. I should say not.

HAD NOTHING TO DO WITH THE FORMATION OF THE ORGANIZATION.

Q. When did you form your organization?—A. I had nothing to do with the formation of the organization.

Q. When was the organization formed?—A. The organization was formed, incorporated in New Jersey, November 21, 1898.

Q. When did you yourself become connected with the organization?—A. I became connected with it, I think, in that month. I think it was the 28th or the 29th; along there.

Q. Pretty nearly from the beginning, then?—A. Yes.

Q. Have you been president substantially from the time when you came into it?—

A. From the time I was elected director; at that meeting they elected me president.

Q. That was this same day, was it, November 28?—A. Yes; about that time.

Q. So that you have been familiar with the organization really from the beginning of its main work?—A. Yes; I was not familiar with the organization of the company. There were already a president and directors, a full board, when I came in.

Q. Of the nature that we so often hear of—a dummy board to begin with, for the purpose of organization?—A. That I do not know; they were all very respectable gentlemen.

THE COURSE OF PRICES—1893 TO 1899.

Q. Now with reference to prices, let us go back a little earlier. You were yourself in business independently before this organization was made?—A. Yes.

Q. So that you are familiar with prices throughout?—A. Yes.

Q. Can you give us an indication of the general course of prices of these goods, let us say, through the years 1896, 1897, 1898, up to date?—A. I think there were in those years, in fact from the year 1894—if you want to go back as far as that.

Q. All the better.—A. The year 1894 and the latter part of the year 1893, when we had what we called the panic, prices were becoming less and less all the while.

Q. And about how long did that decrease in prices continue?—A. It continued until—why, all through up to the present time, you might say. No; they did not decrease—they have not decreased since the 1st of September of this year.

Q. Was the decrease marked at all from 1893 on until the middle of this year?—A. Yes.

Q. Can you give us some indication as to the rapidity of this decrease? It seems to me that we ought to have had silver given to us at that rate?—A. Well, we did pretty near—good goods. The fact was that all of us went on a chase to get customers and sell goods at less than cost. We were all selling goods at less than cost, and the way we made money was that we sold so many of them.

Q. If we should take the prices, we will say the average prices of 1894, and compare them with the average prices of 1897, about what percentage of decrease should you say there was?—A. Oh, I should say there was from 7½ to 10 per cent.

Q. In those 3 years?—A. Yes.

Q. And then was there a still further drop through the year 1898?—A. No; that was the drop from 1894.

Q. Down to 1897, when it stopped?—A. Yes.

Q. Then the prices remained about the same through the year 1898?—A. Yes.

Q. Beginning with the time of the formation of your organization in November, 1898, what has been the course of prices from that date up to, say, June of this year?—A. That is the same.

Q. There was substantially no change at all?—A. There was a change in what we call the flat-ware part of it, in February or March.

Q. What was that change?—A. Ten per cent rise; making goods relatively cheaper than they were before, on account of the high cost of the material.

Q. Yes.—A. Goods were relatively cheaper after the 10 per cent rise was made, as far as the manufacturers were concerned, than they were before.

Q. That is to say, this increase of the price of the product did not increase the profits over what they had been before?—A. No, no.

Q. (By Senator KYLE.) What is your raw material?—A. The raw material in the flat-ware business is what we call nickel-silver. The principal part of it is copper; a mixture of copper and nickel.

Q. And the rise in these materials was what?—A. Rise in copper?

Q. What percentage of rise in that time?—A. Well, it must have been about 60 or 70 per cent.

Q. And you advanced the cost of your output?—A. Ten per cent.

Q. Your finished product?—A. Ten per cent, yes; just 10 per cent.

Q. (By Mr. JENKS.) You said there was this increase in prices in February; then I take it from what you said that there was another increase somewhat later?—A. No increase in that. That price remained the same. On the 1st of September we increased the price of what we call hollow ware 10 per cent, and, as I say, the base metal of that is tin. Tin averaged in the year 1898 about 14½ cents a pound, and this year it has averaged something over 30.¹

Q. So that the increase was less in proportion?—A. Yes; and all manufacturing supplies that enter into a factory have increased anywhere from 33½ per cent to 100 per cent; everything that you use.

WAGES—UNION LABOR—CHARACTER OF MEN.

Q. In the manufacture of your goods—we will take the hollow ware, for example, as typical—how large a proportion of the price or of the value is to be found in the raw material, and how much in labor?—A. Oh, in a rough way, about half.

Q. What has been the course of wages during the last 3 years?—A. Well, the last—until we had, as I say, this general prosperity, wages did not increase any. For the last few months the tendency has been upward. Our people are what we call skilled workmen; there is no fixed wage price.

Q. The price varies all through?—A. It varies all through, according to a man's capability or his ability, and it is 10 per cent here and 15 per cent there, if you please. It is a bargain all the time with the individual men.

Q. (By Senator KYLE.) Increase?—A. Increase.

Q. (By Mr. JENKS.) You would say, then, on the average, that since the formation of your organization you have advanced wages on the whole as much as 10 per cent? You think that will run through your factories?—A. I should say that would be a little high; take all, I should say from 5 to 7½ per cent was nearer right.

Q. You spoke of dealing with the individual men. Is there any labor organization among your employees?—A. I think there is a skeleton of one. There used to be one years ago; we have not heard much about it lately.

Q. What union was that?—A. I have forgotten the name of it; it was sort of a local union there in our place.

Q. Have you yourself, in dealing with your men, dealt with the union as such?—A. No, no.

Q. You deal simply with individuals?—A. Yes.

Q. (By Mr. RATCHFORD.) Have you ever been asked by your men to deal with the union?—A. No. Oh, here some years ago, 15 or 20 years ago, in our factories we had a cut-glass establishment, and there was quite a union there, and at one time they asked us something about apprentices; I have forgotten what it was. It was 15 years

¹ Compare the table of prices of tin, p. 868.

ago, I guess; and I said I would not deal with them; I said I would deal with the employees themselves in the shop, but I would not deal with outside people that came from Pittsburg or somewhere else to talk to me about my business.

Q. In other words, you preferred to deal with your men as individuals?—A. Yes.
Q. (By Senator KYLE.) Would you receive a committee from your men?—A. Yes, certainly.

Q. (By Mr. RATCHFORD.) Is that your position at the present time toward the organization of your men, toward treating with the union?—A. I have no position at the present time, because that question has not come up. We have never—in our locality where I live the employers of labor and the laborers themselves have always been on remarkably good terms, and in the last 31 years, since I have been in the town in the manufacturing business, we have had comparatively no disputes and no friction.

Q. (By Senator KYLE.) No strikes?—A. No; nothing that ever amounted to anything. Most of our people are just as good men as I am or anybody else.

Q. (By Mr. FARQUHAR.) What town do you refer to?—A. I refer to the town of Meriden, Conn.

Q. (By Mr. CLARKE.) Most of your employees are long time residents there, I suppose?—A. Yes.

Q. Own their homes?—A. A great many of them do, and lots of them know a great sight more than I do, socially and economically and all other ways, and have more time to read, I guess, than I do.

CAPITALIZATION.

Q. (By Mr. JENKS.) What is the capitalization of the International Silver Company?—A. \$20,000,000 is the nominal capital.

Q. How is this divided into common and preferred?—A. \$11,000,000 of common and \$9,000,000 of preferred.

Q. Is there a bonded indebtedness?—A. Yes.

Q. How much?—A. At the present time \$3,900,000.

Q. What is the nature of the preferred stock?—A. Seven per cent cumulative. The stock is not all issued.

Q. How much has been issued?—A. \$5,111,500 of preferred.

Q. And how much of common?—A. \$9,896,000; \$3,900,000 of bonds issued. We still have \$117,000 of bonds in the treasury.

Q. (By Mr. FARQUHAR.) Is the remainder of that stock every-day treasury stock or is it divisible stock to the stockholders?—A. Why, it is stock that has never been issued at all.

Q. Under your by-laws is that classed as treasury stock, roughly?—A. No.

Q. For the acquirement of other plants?—A. Only; yes, that can be issued for the acquirement of other plants.

Q. Only, you say. That is the condition?—A. Yes.

Q. Of its being in the treasury?—A. Yes.

METHOD OF ORGANIZATION.

Q. (By Mr. JENKS.) Will you give us the general plan of the organization of the company; that is, was it organized through some individuals acting as promoters who secured options on plants, or was it by general agreement among the plants concerned?—A. I can only tell you as far as I know. All my knowledge was through a man by the name of Stewart. I presume he had some arrangement with somebody else.

Q. That is, in the case of your own arrangement you bargained with Mr. Stewart for the sale of your establishment to this company; is that the idea?—A. I bargained with him for the sale of a majority of our stock, with the privilege to the minority to come in at the same price if they wished to.

Q. It was a sale of stock and not of the plant?—A. That is right.

Q. Does the International Silver Company in the main own the plants of the different companies, or does it own the stock of the different companies?—A. We own the plants of all the companies, real, personal, and everything else, with the exception of one small company in Lyons, N. Y., called the Manhattan Silver Plating Company, which the attorneys of our company as yet do not exactly know how to merge into the International Company. They have it in charge. But all the rest of the companies were purely Connecticut companies, concerns in the vicinity, neighbors and friends, and everything was transferred to the International Silver Company.

Q. So that in this case, for example, of your own, where you sold the majority of the stock to begin with, with the privilege to the minority of coming in at the same

rate, since that time the plants have been taken over, so that the International owns the plants directly instead of the stock?—A. There is no such concern as the concern I was formerly in; we own all the plants.

Q. With the exception of this one?—A. With the exception of this one. Oh, no; there is a small plant up in Canada, the Standard Silver Company in Canada, that we propose to take in. We own that stock. There is the same trouble there; the attorneys have not decided how to get this Canadian company in; but we propose, as fast as the attorneys can get it transferred, that it shall be in the name of the International Company.

Q. With reference to the options that were taken on these different plants, were those options taken on a cash basis or on a basis of stock?—A. I could give you no information in regard to that except as to our own plant; the one that I had. I agreed with this gentleman to sell the majority of our stock at so much cash and so much preferred and common stock in the International Company. My connection with the matter was very simple. I simply said to this gentleman, "You bring me a list of the companies that you propose, or that are proposed to be sold out to the International Company. Now, if you will get this certain list, and every one of them is sold to the International Company, I will sell you the majority of our stock at so much cash and so much preferred stock, provided the capitalization of the company, the stock issued, with these companies in, shall not exceed a certain amount." That was just simply the transaction that I had with him.

Q. Yes.—A. Knowing as I did—at least I thought I did; you do not always know what you think—I thought on that capitalization that the concern was all right.

Q. (By Mr. FARQUHAR.) This bonded indebtedness you spoke of, was that contracted before this combination or after the combination?—A. It was contracted—I think the mortgage is dated December 1, 1898.

Q. (By Mr. JENKS.) It was contracted by the International Silver Company itself, after the organization was made?—A. By the International Silver Company, yes.

Q. Did the company take over a bonded indebtedness from different companies it purchased?—A. Yes.

COMPETITORS.

Q. That was issued in part for that?—A. Yes; the International Company, of course, when they bought these plants, assumed all the liabilities and paid the debts. Why, as you might say, this International Company was a sort of family arrangement between a few Connecticut concerns that were all neighbors and friends and knew all about each other. Of course, there are probably 40 or 50 concerns in the same kind of business outside throughout the United States. We did not get after them particularly and they have not been after us. We have got another concern right there in our own town; a competing concern, organized under the New Jersey law.

Q. What concern is that?—A. C. Rogers & Bros., right in a competing line of business. There is a large concern in Cincinnati—Reed & Barton, of Taunton; and I could name you probably 40 different concerns in the same line of business. But our company is, as I say, a Connecticut company, with the exception of this small concern out in Lyons, N. Y.

NO "GOOD WILL" IN THE BUSINESS.

Q. With reference to your own establishment, the International Silver Company, what proportion of the value of your business do you consider is in plants, and what proportion in trade-marks, what proportion in good will—speaking broadly, of course?—A. I do not consider that the International Company has any good will. We have not been in business long enough to have a good will.

Q. When the International Silver Company bought these plants I suppose it bought some good will?—A. It bought the trade-marks; it bought the trade-mark of our concern, and we still manufacture goods under that trade-mark and sell them under the name of the International Silver Company.

Q. Then you do not consider, as far as your own plant was concerned, that your connection with customers and so on, which is ordinarily called good will, had any special value besides the trade-marks?—A. No, no.

Q. In taking the company as it stands, then, what proportion, would you say, of the value of the plants is in tangible property and what proportion in brands, trade-marks, and so on?—A. Well, I have not got those figures; I could not answer here.

Q. You might give a pretty definite estimate?—A. Well, I do not think I could. I do not think that is a question I should like to answer without our balance sheet before me.

Q. Can you, perhaps, send us that information?—A. Yes; I will send it to you very readily.

Q. Very well; I will ask you to do that.—A. Yes; I will do that.

(The following was furnished by the witness November 16, 1899: "In my opinion the proportion of the value of the International Silver Company's property in plants, machinery, merchandise, etc., is from 45 to 50 per cent. I think this is a perfectly fair and correct statement.")

Q. (By Mr. CLARKE.) The establishments which consolidated had an established business, had they not?—A. Yes.

Q. There was good will attached to that business, was there not?—A. No; I should say not; not really what you would call good will. I presume that the history of the concern that I managed was the history of all the concerns. We made and lost customers every day. Human nature is pretty much alike. The trade simply knew that when they got a piece of goods stamped with our name, it was a good piece of goods; but I do not think they cared anything about the manager of the old Wilcox Plate Company or any of the salesmen.

Q. (By Senator KYLE.) It is true that every institution has good will and it is valuable to the institution?—A. Well, I do not think it is as true in these days as it was 20 years ago. The company I formerly managed was called the Wilcox Silver Plate Company. We stamped that name on our goods. Now, if the same salesmen should go out offering goods stamped John Jones & Co., they could not sell them. I say there is no good will about that. They might like the Wilcox Plate Company. But say the good will is the trade-mark. There is a difference between the trade-mark and good will.

Q. (By Mr. CLARKE.) You had, and each of these concerns had, a certain number of pretty regular customers, I suppose?—A. Why, yes; we have probably got men on our books that buy goods of us that bought them of us 15 years ago, 20 years ago perhaps.

Q. It cost something to secure the trade of those customers and to hold it, did it not?—A. Yes; it cost the salaries and expense of traveling men.

Q. Is not that good will?—A. Well, we have these men traveling all through the entire country. I do not know that it is good will particularly. As I say, they would not buy our goods if they were not stamped Wilcox Silver Plate Company. The value is in the trade-mark, and not in the fact that Jones, Brown, or Smith runs the concern or is known as manager of the concern.

Q. Do you not think that when a concern treats its customers with such fairness that they like to trade there and they voluntarily send orders there, there is a good will attaching to that establishment?—A. Yes; I should think so if we sat down in our factories and received orders that way. Then I should think there might be good will.

Q. (By Mr. RATCHFORD.) Do you not think that it is equally true in a case where one salesman is putting your goods on the market, and a salesman representing a rival concern is putting goods on the market, and going and soliciting patronage, and yours is preferred; do you not think the same will hold equally good—the brand on your wares does much towards selling your goods?—A. Yes—that is what does sell our goods

COMBINATION MEANT TO MAKE ECONOMIES AND REPRESS COMPETITION.

Q. (By Mr. FARQUHAR.) You seem to think that there is an open standing competition all the time even against trade-marks and standard goods. What was the purpose of your combination—to repress this competition, or to make economies in manufacturing?—A. That was just what we were trying to do; both.

Q. Both?—A. To make economies and put the thing under one administration, just as I said before. That is about all there is to it.

Q. (By Mr. JENKS.) Do you get also what you consider a decided advantage from the common use of these trade-marks that you had before in separate establishments?—A. Certainly; we get this advantage, that if formerly there was a trade-mark—well, take the factory that I represented, the Wilcox Silver Plate Company—if our man went to sell a man a tea set, and the price of that tea set was \$28, and he was met by the Meriden Britannia's man, who said that he would sell it for \$27.50—of course, the International Silver Company control the prices of all the wares made by them now.

Q. Both?—A. The Meriden Britannia's man and the Wilcox Silver Plate Company's man would not go and cut each other's throats.

Q. Supposing you find that one brand is particularly popular, for some reason or other, do you get any advantage in being able to turn two or three factories on that one brand?—A. Well, I do not know; we have not got along as far as that. We have not tried anything of that kind.

Q. So that you have not found anything of that kind?—A. No.

PRICES NOT HIGHER BY REASON OF CONSOLIDATION.

Q. (By Mr. RATCHFORD.) That combination, if it results in the retaining of prices as between the representatives of the two rival concerns, surely makes dearer silver for the consumer, does it not?—A. They are not in rival concerns.

Q. They were at one time?—A. Yes.

Q. And because of the combination prices are maintained?—A. As far as the product of the International Silver Company is concerned, yes; not as between outsiders, of course.

Q. The International Silver Company represents now both of the concerns of which you spoke a few minutes ago?—A. Yes; those two; yes.

Q. The result to the consumer is what—higher prices?—A. No. As I said before, the consumer to-day is buying his goods relatively cheaper than he was before the International Silver Company. And allow me to say even if that was true before, the consumer—perhaps you will not care to have my particular views here; I did not come here to air them.

INTEREST OF WORKMEN IN SUPPRESSING COMPETITION.

Q. Yes; we do.—A. Even if that was true, when a concern meets this competition and has the same facilities for manufacturing goods and has the same efforts put into the management of the business, and when the struggle of the competitors simply means the survival of the fittest, one of those against the other, who has to stand the brunt of it? It is the man that stands at the bench and makes the goods, every time. He is cut down 5 per cent; he is cut down 10 per cent. Now, I say a fair price to the consumer that would pay a fair percentage on the capital invested is the proper thing for the labor that makes the goods to advocate every time.

Q. Does the man at the bench invariably receive a share of the advance in the prices?—A. I do not know.

Q. That is a very material point. As a manufacturer, it seems to me you ought to know it.—A. I only know I managed one concern for 31 years, and the employees that have been with us for years have always in good times—they always get the benefit of increased business and increased prices.

Q. You said, previously, that the wages during the past year had advanced from 5 per cent to 7½ per cent?—A. Yes; I did say so.

Q. Has that been in proportion with the advance of the wares in the markets?—A. Yes; fully so.

WAGES ARE NEVER RAISED VOLUNTARILY—NUMBER OF WORKMEN—MANAGEMENT OF THEM.

Q. (By Mr. A. L. HARRIS.) Has this advance been voluntary on the part of the company?—A. No, sir; I do not think that is human nature. I think that when a man wants more he comes and asks for it.

Q. My question was whether it was voluntary on your part to raise wages when the prices increased?—A. No, sir; and the employees know it just as well as the proprietors do.

Q. (By Mr. RATCHFORD.) Without an organization among your men, how are wages looked after?—A. As I stated, there is no uniform scale of wages. Take what we call the spoonmakers, or the turners and solderers. One man is worth double what the other is, perhaps; one man is worth 25 per cent more and one man is worth one-third more; it is skilled labor. It is not like wheeling a wheelbarrow or carrying a hod, and one man can do very much better work and very much faster work than another.

Q. (By Mr. FARQUHAR.) Do you pay by the time or piece?—A. Most of the labor is done by time—day work.

Q. Then how are you able to single out the experts among your employees?—A. Why, I think that is very easily done. We have never found any trouble about that. We have never found any trouble about a man soldering up a tea set, if you please, and doing it quicker than another, and nicer.

Q. (By Mr. JENKS.) About how many men do you employ now altogether?—A. In the International Silver Company?

Q. Yes.—A. I can not tell you.

Q. About how many men did you have in your plant before that?—A. I should say we had about 400.

Q. Taking the separate plants that you have in the establishment now, would they run on an average 250 to 400 in a plant—not over 400?—A. I should not think they would average that.

Q. Would they average 300, say?—A. That would be nearer it.

Q. Your idea is that one superintendent, by personal observation, can follow 300 men closely and so can pick out these good men without difficulty?—A. Yes.

Q. (By Senator KYLE.) What proportion is skilled labor?—A. I should say 90 per cent.

Q. That was true in your own private establishment before the organization of this company?—A. Yes.

CASH VALUE OF PLANTS AND TRADE-MARKS.

Q. (By Mr. JENKS.) We will come back for a moment to this question of capitalization. What, in your judgment, at the present time, would be the cash value of your plants and trade-marks?—A. Well, is that a proper question to ask me?

Q. I think so.—A. About the inside of a—you might say—a private corporation?

Q. If you will pardon me, I will give a reason for asking it. We hear a great deal in these late days in reference to the evils that come from overcapitalization. This commission has as one of its chief duties to recommend legislation to different States and to the United States, and that question comes up as a very pertinent one, whether any legislation can be suggested to prevent what is often considered an evil along that line. You yourself suggested that when Mr. Stewart came to you you put down as one condition of your sale that the amount of capital stock should not be over a certain fixed sum. So this question is one that we have asked regularly of many people, and we have had it answered with considerable frankness. Of course, we expect only an estimate, unless you have an opportunity to consult your books. I would just as soon put it in another way, as suggested to a witness yesterday, if you like. How does the capitalization of the company compare with the cash values? A gentleman said yesterday he thought about 5 to 1 in his establishment. Now, if you can give us information in reference to yours we shall be glad to have it.—A. Won't you please state that question again?

Q. Shall I state it in the first or the second form?—A. In the second form. That sounds better.

Q. What proportion of the capitalization of your company, the International Silver Company, do you consider the cash value of the plants and trade-marks to form? Now, you are capitalized at \$20,000,000.—A. Well, I do not think I ought to answer that question. I am inclined to be perfectly willing to give you anything. I have nothing to conceal about our company. As I said, this is all a family matter; but when you come to ask about the details of our business in that way—I can not give it to you here, because I have not any figures anyway, and I do not suppose you would care about opinion or guess particularly.

Q. That is what I want, your personal opinion on the matter.—A. I haven't any. You want to know, as I understand, what the cash value of our assets is.

Q. As compared with your capitalization of \$20,000,000. I would just as soon put it in another way, still, if you like. If we use the word in the ordinary sense, about how much water is there in your stock? I am not sure that I should have asked that question in that form, but ordinarily we have had the former question answered with frankness by most of the witnesses.—A. Well, I can answer that question by saying that it may be a matter of opinion what the trade-marks and patents and this sort of thing are worth. I might consider them worth \$1,000,000 and somebody else might consider them to be worth \$10,000,000. I do not think my opinion is of any particular value to this commission, as I am a private individual, and I do not know that I care to express opinions here. I will give you all the facts I have got.

Q. If you are unwilling to give an opinion, would you be willing—any more willing—to send us the facts after you have an opportunity of ascertaining what they are?—A. What do you mean by that?

Q. You said a while ago that you could only give a bare opinion here until you consulted the books. I thought you would rather give us an opinion than what your books show. The impression was that your opinion would be definite enough for the purpose of the commission. As I explained before, this is a question which is really of much public interest, and the commission has, practically, to express an opinion on this matter, and we have gathered what information we could find from a number of establishments.

Q. (By Senator KYLE.) May I ask what was your answer to the question a while ago as to the value of your plant, as you operated it before the organization of this new combination?—A. We considered our plant worth \$1,500,000.

Q. That is exclusive of good will and trade-marks?—A. Trade-marks, etc.

Q. Everything?—A. I will answer your question by guessing what I consider the trade-marks and patents of the International Silver Company worth. It is personal opinion, not my official opinion.

Q. That is all we care for.—A. I consider it worth \$10,000,000.

Q. (By Mr. JENKS.) You exclude from that the plants?—A. Yes.

Q. And what do you consider, speaking roundly, the value of the plants?—A. I should consider the value of the plants and the merchandise, etc., as much more, perhaps.

Q. So far as your opinion as to the value of the plants is concerned, you consider that a pretty positive one, do you?—A. Yes.

COMPANIES ABSORBED BY THE INTERNATIONAL SILVER COMPANY.

Q. Can you give us the names and locations of the plants that went into this organization?—A. I think I can, most of them: The Wilcox Silver Plate Company, the Meriden Britannia Company, the Meriden Silver Plate Company, in Meriden; the Barber Silver Plate Company, the William Rogers Manufacturing Company, of Hartford, Conn.; the Rogers Brothers and Rogers & Hamilton, of Waterbury, Conn.; the Middletown Plate Company, of Middletown, Conn.; the Derby Silver Company, of Derby, Conn.; the Holmes Edwards Silver Company, of Bridgeport, Conn.; the Simpson, Hall & Miller Company, of Wilmington, Conn.; Simpson Nickel Plate Company, of Wilmington, Conn.; Norwich Cutlery Company of Norwich; the Manhattan Silver Company, of Lyons, N. Y. (that is the concern I spoke of where we simply own the stock); the Standard Silver Company, of Toronto, Canada. I guess that is all.

Q. That is 15?—A. I guess that is all; the Wattrous Manufacturing Company, Warrington, Conn.

WALL STREET POOL.

Q. During the months of March and April the common stock of the International Silver Company was selling in the thirties somewhere; soon after the 1st of May the common stock dropped to below 15, considerably; 11, 12. There was a good deal of talk in the papers at the time about pooling of the common stock. Will you be kind enough to give us a statement as to the circumstances?—A. I can not give you any. The Wall street end I know nothing about; I have nothing to do with that. I can not give you any information in regard to it at all. I can not guess about it, even.

Q. (By Mr. FARQUHAR.) This is listed stock on the New York Exchange, is it not?—A. The common only.

Q. Common?—A. Yes. Well, it is what they call the unlisted; they call it there, but it is not regular; it is in unlisted securities.

TERMS OF SALE OF WILCOX SILVER PLATE COMPANY.

Q. (By Mr. A. L. HARRIS.) When these plants were purchased, in what were they paid for?—A. I do not know, sir.

Q. You were not in there then?—A. No, sir.

Q. You do not know whether it was cash or stock?—A. No, sir; I do not know. With the exception of one plant, I do not know what any of them got.

Q. In the case of that one plant, which was your own, did you receive in payment cash or stock?—A. We received in payment one-third in cash and two-thirds in preferred stock.

Q. Preferred stock?—A. Yes, the preferred stock; also one-half of the preferred in common stock.

Q. Well, you had some idea of what the values of these different companies were, the value of the property that you were obtaining in these different companies, at the time, had you not?—A. As I said, my arrangement was—my proposition was—that if the International Silver Company would obtain possession of these companies—and the Derby Company there and the Middletown Company were left out; these companies we have bought since that—if they would obtain possession of these companies on a capitalization of a certain amount, that I would sell a majority of the Wilcox Silver Plate Company stock to this man; what they were paid I cared nothing about. I said, here is the capitalization of these companies; they are all familiar to me, and my judgment is based on that capitalization; with these companies in, it would be a success; now, you can buy the Meriden Britannia Company for \$1,000 or \$2,000,000 for all I care.

Q. And your plant was taken on that proposition?—A. Yes.

Q. Would you care to state to the commission what that proposition was?—A. I would just as lief as not. As I have stated, if anyone wants to know, I can tell them. For par value of our stock, \$25 a share, our stockholders got \$25 in cash, and \$50 in preferred and \$25 in common stock.

NO GOOD WILL IN THE BUSINESS.

Q. (By Mr. CLARKE.) Now, what did this \$50 in preferred stock and \$25 in common stock represent?—A. It represented the stock of the International Silver Company based on this capitalization which I said I would go in at.

Q. You considered that your stock had become worth that much above par?—A. Yes, I did.

Q. Well, what made it worth that much above par?—A. Our previous earnings, sir.

Q. Well, that is good will, is it not?—A. No, sir.

Q. It is success in business, is it not?—A. Yes.

Q. It is having a line of custom well established, which you think you can maintain?—A. Well, I should differ with you on that. I suppose that is a matter of opinion. As I said before, if the Wilcox Plate Company had remained in business as a separate organization and had stamped our goods John Jones & Co., simply, we could not have sold them. I say it is our trade-mark, and not because the public like us particularly.

Q. Your trade-mark was yours, was it not?—A. Yes.

Q. The trade-mark itself did not cost anything?—A. I think it did. It cost us a great many years of labor, and a great many thousand dollars in money, before we could make the people believe that that trade-mark was a valuable thing.

Q. That is just the point I want to bring you to; whether or not the development of your business had not taken some form that other people call good will; you call it trade-mark; it is the same thing.—A. As I say, that is a matter of opinion. I call it trade-mark, and you simply call it good will.

DIMINUTION OF COMPETITION—COMPETITION REMAINING.

Q. (By Mr. FARQUHAR.) In part of your testimony you said that there was quite a fierce competition between various firms and corporations in your line of business previous to this combination. Has it been your experience that since you have combined you have eliminated a good deal of that competition?—A. No, sir; we have eliminated whatever competition there was between the concerns on that list.

Q. In other words, you have 16 plants here, 15 of which were in direct trade opposition to you in the Wilcox?—A. Yes.

Q. Since you have combined there are 15 competitors that have gone out of business?—A. Yes; that is right.

Q. Now, you answered a short time ago that you simply made the combination on account of economies in manufacturing, and the control, of course, of larger capital; but is it not a fact that one of your main reasons for going into the combination was to stop this ruinous competition, even in your neighborhood, or in the Connecticut manufacture?—A. Certainly it may have been an added reason to those I have given you.

Q. Was it not as good, if not a better, reason than simply the economies of manufacture?—A. I should say not. I should say that the reasons were about equal in that respect.

Q. Could you, if you desired, now under the combination arbitrarily raise prices at any time and force the market up?—A. No, sir.

Q. Is there enough competition outside of your combination to force the prices down and keep them down?—A. Yes.

Q. Is that competition now active against you?—A. Yes.

Q. Are they underselling you in any place?—A. Yes.

Q. Do you maintain as many men on the road as before the combination?—A. Yes; I think more.

Q. (By Mr. JENKS.) Do you meet their cuts in prices?—A. No, sir.

Q. (By Mr. RATCHFORD.) Is it or is it not a fact that the earnings of your combination have been increased more largely by reason of the elimination of competition than by the economy in manufacture?—A. I can not tell you until next February or March, when we take our inventory.

Q. What is your opinion about it? Have you any?—A. No, sir; I can not express any.

Q. (By Senator KYLE.) You stated a moment ago that you knew of about 40 concerns outside of yours?—A. I should say about that.

Q. Are they manufacturing a quality of goods similar to your own?—A. Reed & Barton have been in the business longer than any of the firms, and it is understood to the trade in a general way that they manufacture the very best goods, and have for many years—Reed & Barton, Taunton.

Q. So in your judgment, if you were to force the price of your finished products above a certain point, they would supply your trade?—A. Undoubtedly they would. There are a number of very large concerns that are still in competition with us. As I have already stated, and repeat again, ours is a sort of neighborhood matter, that we thought would be the best thing for friends and neighbors right around us. If you gentlemen were selling goods, you would find out that there was some competition outside of the International Silver Company, I guess.

QUALITY OF GOODS MAINTAINED OR IMPROVED.

The International Silver Company owned the original trade-marks of Rogers plate, which we consider very valuable on spoons and forks. There are about 1,400 Rogers families started up; all sorts of Rogerses.

Q. (By Mr. JENKS.) Is there any special Rogers brand? Any special date which is considered to be the standard, the genuine?—A. Yes; 1847, Rogers Brothers.

Q. You own that trade-mark?—A. Yes.

Q. That is the one you manufacture under?—A. Yes; that is the one we consider very valuable.

Q. Since the International Silver Company has been in business it has, of course, been using this trade-mark. Has the quality of the goods on which that trade-mark is put been kept exactly as it was before?—A. Yes; I will not say that; I think better.

Q. You are positive not poorer?—A. Yes.¹

Q. (By Senator KYLE.) You have added something to the Wilcox brand?—A. We can not add to that; that, Senator, was always up to A1; that can not be added to; the people in the country for these years ask for Wilcox, and they buy it.

WALL STREET POOL (RESUMED).

Q. (By Mr. JENKS.) You said a moment ago that you and the company knew nothing about the Wall street end of the business. I suppose that is so. May I ask one further question along that line? Did you yourself, after receiving your common stock, assign part or all of that to a New York banker or bankers before the 1st of May?—A. Did I myself personally?

Q. You or your firm—the person to whom the common stock was given when you sold out.—A. The common stock was given to—we had ninety-odd stockholders.

Q. Well, personally.—A. That, I think, comes right down to personal matters of Dodd.

Q. I tried to make it pointed.—A. I can not answer that unless you compel me to.

Q. I really think you ought to. I presume there is no harm in it?—A. No; there is no harm, I suppose. I am a law-abiding citizen, and I should not have interfered with the law.

Q. The question is, did you assign it?—A. Why, I do not believe I want to answer that.

Q. I think it is rather an important question, for the purpose of the commission, and that it ought to be answered.—A. Well, I think you are coming down to my private affairs. Have my private affairs anything to do with the public, with a Congressional commission?

Q. The way in which the stock of the industrial combinations of various kinds is dealt with, manipulated and so on, in Wall street, is very important, and the suggestion of legislation that may tend to lessen what many people consider to be those evils is an exceedingly important part of the work of the Industrial Commission. The commission, in consequence, feels it important to have some facts to base recommendations on.—A. Well, supposing I had gone into the market—if you will allow me to go on in an informal way—

Q. Certainly.—A. Supposing I had gone into the market and bought 500 shares of common stock, at market prices in Wall street, and then afterwards put it into this pool that you talk about; would that be a proper inquiry of the commission, if I kept my original stock out of the pool and bought 500 shares on the street, and then put it in the pool? Would that be a pertinent question?

Q. My own opinion is, and I presume it is the opinion of the commission, that any inquiry with reference to a pool in Wall street, in connection with this company, which seemed to have a very decided effect on the common stock, when there was a drop from considerably over 30 to 11, 12, or 13, in a few weeks, is rather a pertinent

¹ See Mr. Rogers, p. 1072.

inquiry and a proper one.¹ I am not asking you the number of shares you assigned, or anything of that kind. The question is whether you did assign stock of that kind to a banker or a firm of bankers in New York before the 1st of May?—A. Well, I can answer that question. I had just as lief freely answer the question that some stockholders did do that thing and that there was such a pool formed.

Q. You know that?—A. That I know from actual knowledge.

Q. That would perhaps answer just as well.—A. Certainly there was a pool formed. Anybody knows that.

Q. Will you be kind enough to give us the condition of the pool, and the nature of the pool?—A. Individuals were asked to put some of their stock in this pool with the understanding that the stock should not be sold for any less than a stated price.

Q. And that stated price?—A. I think that stated price was 30, as I recollect it. It is all gossip, because it is nothing to the officers of the International Silver Company.

Q. That is, as officers?—A. As officers of the Connecticut company they had nothing to do with that. If the stock was not sold it was to be returned to the holders.

Q. That is, if not sold before the 1st of May?—A. Yes; I think that was it; the 1st of May or the 1st of June. Anybody that knows anything about Wall street will give you that information, I suppose.

Q. (By Mr. CLARKE.) What is par of the common stock?—A. \$100 a share. This was a very unsuccessful deal. One gentleman told me within a week that he lost \$11,000 in it.

Q. (By Mr. JENKS.) You know from your own knowledge that such a pool was formed on that condition?—A. Yes.

Q. Now, how much of the common stock was in that pool?—A. That I do not know. I do not know whether it was a million or three million.

Q. That information is as much as I care for.—A. Yes; I know it from the fact that some of our old stockholders came to me, as manager of our company, and wanted my advice whether—they had been asked to put their stock in this pool.

Q. (By Senator KYLE.) This matter is not connected in any way officially with the International Silver Company?—A. No; not in the least.

Q. It is a matter entirely private?—A. Entirely private, with private stockholders. I simply gave them my private advice, and some of them acted on it, and some of them did not. I think the pool was a failure from the beginning to the end, from the gossip I got. I do not know anything about the facts. Never inquired, and do not care to.

TERMS OF SALE OF WILCOX SILVER PLATE COMPANY (RESUMED).

Q. (By Mr. A. L. HARRIS.) When you submitted your proposition to the promoter of this company, or promoters of this company, and agreed to take so much cash and so much in common stock, and so much in preferred stock, was that stock valued at par?—A. Our stock?

Q. The stock you were to take in payment. Was that to be valued at par, dollar for dollar?—A. Yes; so many shares.

¹ QUOTATIONS OF INTERNATIONAL SILVER COMPANY STOCKS.

The common stock was first called on the New York Stock Exchange on February 2, 1899. From that date the price of the common given here is the average of the high price and the low price for the day. Prices of common before that date, and prices of preferred throughout, are averages of bid prices and asked prices, as given by the Commercial and Financial Chronicle.

Q. Was anything added to the value of your plant on account of the payment you were to receive, or was it the actual cash value of the plant?—A. That is what we valued our business at.

Q. Well, I say the plant and the business, good will, etc.?—A. Yes.

Q. Nothing else was added on account of that?—A. Our arrangement was simply the price of our stock. Our stock was put in practically at the rate of 300. It sold in better times for 375, but the bad times, of course, reduced the value of it.

Q. You valued your plant on the value of your stock, really?—A. Yes.

Q. Now, what I want to get at is, whether that was the exact value that you turned your property over to the company at, and received in payment so much cash, and so much common, and so much preferred stock in the new company.—A. That is it, sir. (Testimony closed).

[The following interrogatories were subsequently proposed to the witness, and were answered by him as here shown.]¹

Q. At what time were salaries voted to the officers and directors of the International Silver Company?—A. March 27, 1899, to date from January 1, 1899.

Q. Have the salaries of either officers or directors been increased since that time?—A. No. I would also state that no director receives any salary unless he is the active manager of a factory.

Q. What are the salaries (a) of the president, (b) of the directors, (c) of the treasurer?—A. The president, \$12,000. Four directors, who are members of the executive committee and also managers of four of our largest factories, receive \$10,000 each for their entire services in both capacities. One director, who is also on executive committee and a manager of a plant, receives \$7,500. The treasurer has never been voted a salary and expects none, as he has no duties to perform and has never been inside of the company's office. The assistant treasurer receives \$8,000 per annum.

Q. Has the International Silver Company paid any dividend on its preferred stock?—A. No.

Q. Were the salaries of the officers fixed or increased at a meeting when it was decided to pass a dividend on the preferred stock?—A. We never passed any dividend, as no date was ever fixed either by by-law, act of incorporation, or vote of directors providing for the payment of a dividend.

SAMUEL DODD,

President of International Silver Company.

MERIDEN, CONN., November 22, 1899.

WASHINGTON, D. C., November 15, 1899.

TESTIMONY OF MR. WILLIAM H. WATROUS,

Director of the International Silver Company.

At 12.45 p. m. Mr. William H. Watrous, director of the International Silver Company, Hartford, Conn., was introduced as a witness, and, being duly sworn, testified as follows:

Q. (By Senator KYLE.) Will you state your full name, address, and business?—A. William H. Watrous, Hartford, Conn.

MANAGEMENT OF THE INTERNATIONAL SILVER COMPANY.

Q. (By Mr. JENKS.) Are you connected with the International Silver Company?—A. I am.

Q. In what capacity?—A. I am manager of the William Rogers Manufacturing Company.

Q. Are you one of the officers of the company?—A. I am a director of the company.

Q. You spoke of being the manager of one of the companies. Will you explain how the business is organized, and the position that the managers hold under the directors and under the main officers of the company?—A. The William Rogers Manufacturing Company is known as Factory H of the International Silver Company.

Q. Are the different factories designated in this way, by letters, and a manager appointed on salary to manage each of them?—A. Yes.

Q. Directly under the officers and the directors of the International Silver Company itself?—A. Yes.

¹ See Mr. Rogers, p. 1075; Mr. Watrous, p. 1066.

Q. You have heard the testimony given here by Mr. Dodd?—A. Yes.

Q. Does your own information and memory coincide with that as regards the facts?—A. Yes.

Q. And as regards the estimates that Mr. Dodd gave, would your estimates in the main coincide?—A. Yes.

Q. Did you notice any discrepancies there at all?—A. No more than to call attention to the fact that the \$20,000,000 is not issued.

Q. Mr. Dodd himself called attention to that fact, I believe; that the amount was in the neighborhood of \$15,000,000.¹ Have you yourself any information that you believe to be trustworthy with reference to the amount of common stock that went into this pool that was spoken of?—A. I do not know a thing about it. I have been manager of the William Rogers Manufacturing Company since 1879.

GAINS BY CONSOLIDATION.

Q. So far as the advantages of the combination are concerned, do you think that the advantage that comes from the common use of the trade-marks, of which so much was said, is to be considered one of the chief advantages—perhaps the chief advantage?—A. Yes.

Q. You consider that the chief advantage that comes to the combination?—A. Of course there is economy in running the business.

Q. But on the whole you think this other advantage, perhaps, the greater one?—A. There is economy in buying and economy in selling.

Q. Do you yourself think that the advantage that comes from eliminating the competition among the different firms that came into the combination is an important element?—A. Well, it helps.

Q. Would you consider that as important as any of the economies that you have spoken of?—A. I consider that outsiders set the price, and the nearer we come to that price the more we make; but any little jealousy between Hartford and Meriden, by which the profit is thrown away to throw a contract to that particular factory, is almost eliminated now.

Q. And you consider that the elimination of competition among the neighbors, as suggested there, is the most important saving?—A. No; I do not think it the most important.

Q. (By Mr. FARQUHAR.) Equally important?—A. Take, for instance, the cases that we put up our fancy goods in. We have them all made together by one party. While they were made before by one party, we found one factory was paying 15 and another 19, and 23, and another 14—no better, but all different prices, and scattered all over. Now we can get a box at a fair price and the same grade; and so with a great many other things.

Q. Can you form any estimate as to the saving that comes to the International Silver Company from using these uniform boxes, giving large orders, and putting them all through the hands of one manager?—A. It would be a guess. I do not know much about it, but I should say it would be up in the thousands of dollars.

Q. In a year?—A. Yes.

Q. (By Mr. JENKS.) About what has been the expense per year in your factory for these boxes in which you send out goods?—A. I can not tell you that, I am sure.

Q. So that you can not give any estimate as to the saving to the company, nearer than up in the thousands?—A. Oh, I think the International Silver Company saves thousands of dollars in every case like that. I can not tell you, only my own factory; I can not divide them in any way, but we spent a good deal of money on cases for goods.

Q. And you have saved a good deal by being able to get them in this way, uniform?—A. Well, possibly we were the ones that had the medium price. I do not know what any other companies will say.

TRADE-MARKS—SALESMEN.

Q. (By Senator KYLE.) I should like to know about this trade-mark. Under the International Silver Company, under what brand do you stamp your goods?—A. Just as before, the Rogers Manufacturing Company.

Q. And Mr. Dodd, the Wilcox goods?—A. Yes; we have just as many agents on the road and sell goods just the same way.

Q. (By Mr. JENKS.) So far as you know, the same trade-marks are made now by the same factories as before?—A. Certainly.

Q. There has been no putting of trade-marks from one factory to another at all?—A. No, sir.

¹ See p. 1053.

WORK PEOPLE, MEN AND WOMEN—NO UNION.

Q. (By Mr. FARQUHAR.) Is there much of a uniformity in your scale of prices for your workmen?—A. No, sir; I do not think there is.

Q. In the Rogers factory, do you hire just simply the individuals?—A. Yes.

Q. And pay them according to merit?—A. Yes.

Q. Skill and workmanship?—A. Yes.

Q. Steadiness of habits, etc.?—A. Yes.

Q. Are your employees residents of your town principally?—A. Yes; almost all of them live there, in Hartford.

Q. Are they New Englanders, or are there many foreigners employed?—A. They are what I call New Englanders, although there are some of German descent.

Q. Descent?—A. Native born.

Q. But not immigrants?—A. No, sir.

Q. Have you ever had any labor organization up in your section at all?—A. They have some in the city, but I do not know of any in our factory.

Q. You have never had anything to do, so far as wages are concerned, with any committee of outsiders?—A. No, sir; never had any trouble, and have had men working there for 20 and 30 years without trouble.

Q. Among your mechanics, what is about the highest rate of wages per day? I mean your skilled men; not foremen, but skilled men?—A. We pay from \$4 a day down to \$1.50.

Q. Do you employ female labor in your factory?—A. Yes.

Q. Any child labor?—A. No, sir.

Q. What is the proportion of female labor to male?—A. I can not tell you that exactly; I think it is more than half.

Q. In your business, how long is it since female labor came in?—A. They were there before I began—years ago.

Q. Has there been any increase of the female labor in your experience?—A. No; I think not any more than as the business increases. There are certain parts of the work that women can do.

Q. Since the so-called good times have got here, has there been an increase in wages in the Rogers factory?—A. Just the same as always before. When a man comes in, or a girl, they all begin at a certain price, and then if they improve, and are worth it, they get more, or else we let them go and get someone else that can work up to it. After a girl has been there so long she gets better wages.

Q. (By Mr. RATCHFORD.) Does she get the same rate of wages as men for the same work?—A. No; they do not do men's work.

Q. In any case?—A. No, sir.

Q. (By Senator KYLE.) You characterize your employees, then, as unorganized labor?—A. Yes.

Q. As a whole?—A. Yes; I would, as a whole.

Q. What are the classes of labor you employ?—A. We have in the departments—we have plating, burnishing, buffing, and packing.

Q. About how many men ordinarily are employed in these different classes; that is, in round numbers?—A. In the burnishing machine room there are about 4 machinists and 2 young men, and there may be 20 girls to run the burnishing machines. In the packing room it is almost all women; we just have the boys to bring in the work.

INDIVIDUAL BARGAINING FOR WAGES.

Q. In times of prosperity, when the men consider in their own minds that they want an advance in wages, what is the method of getting an increase? Do they talk among themselves and appoint a committee to see you?—A. They come singly, one at a time, and when one gets a raise then another comes around.

Q. Your plan is to treat all fairly? If there are 10 men in a room and you raise one man's wages, the men doing the same work ought to be raised also?—A. Well, no; they are scattered around doing different work. Take the plating room, for instance; they are not all competent to do the plating alike; some would do a nicer class of work, and they get the best wages.

Q. I presume you regard the state of the market?—A. Certainly.

Q. And raise in proportion?—A. Yes; if a man does the same work he gets the same pay.

Q. In times of general prosperity you expect to have to raise wages of your employees?—A. We have always made a habit of raising whether there was prosperity or not. So long as he is competent, he gets a raise when he does certain work.

Q. (By Mr. RATCHFORD.) Do you regard that as an equitable means of adjusting wages?—A. Yes. If a man came in to work in the machine room, and worked around there, sometimes running nothing but a planer, and was not a good machinist at all, and we should start him at \$2, he would have to be able to do what any other machinist did, if he got \$3. When he could, then he would get it.

Q. You said that your men came to you singly?—A. Yes.

Q. The first one that comes is speaking for himself?—A. And the others; yes.

Q. He is only representing himself, and yet the wages in that department of the factory, all of the factory, depend on the result of his interview with the manager?—A. No.

Q. While he is only representing himself directly, the wages in the factory depend on the result; is that so?—A. No.

Q. If his wages are advanced it will result in others following it?—A. When they are able to do a certain amount, they get a certain amount.

Q. Voluntarily?—A. Yes.

Q. Always fixed by the manager?—A. Yes.

Q. (By Mr. FARQUHAR.) In other words, they get paid according to the promotion; that is what you mean?—A. Yes.

Q. It is skill?—A. Yes.

Q. (By Mr. JENKS.) Do you, as manager of this plant, have the authority to increase wages and hire the men independently now as you did before the combination was made?—A. Yes.

Q. (By Mr. FARQUHAR.) Now, as far as you know, is there any uniformity in this Connecticut neighborhood in wages that are paid in all the factories?—A. I could not tell you.

Q. That is, are they all paid according to skill; is that a common practice with other factories?—A. Yes; I think it is.

Q. (By Mr. RATCHFORD.) If it be an established rule in your factory that men receive wages in proportion to their skill and merit, why is it necessary for one of your employes to come to you and ask for an increase, and be followed by others?—A. That has always been the method; I mean the rule.

Q. But in that we have two rules: First, you claim that men receive pay according to their skill and merit measured by the managers?—A. Yes.

Q. And next, that the men will come and solicit increased wages?—A. Yes.

Q. Now, if they receive pay according to their merit, and their merit is measured by the management, why should they come and solicit it?—A. It has always been the rule for them to come to us; no one else can raise the wages.

Q. Are wages ever raised voluntarily without any solicitation on the part of the men?—A. No; because the work is always—

NEVER REDUCED ANY WAGES.

Q. (Interrupting.) Are they ever reduced on the part of the management?—A. We never have reduced any wages.

Q. What?—A. We have not reduced any wages.

Q. Never have reduced any wages?—A. No.

Q. (By Mr. CLARKE.) Do not men sometimes think they are entitled to an advance before you think they are?—A. Yes. If we are paying \$3 for a certain amount of work and a man thinks he ought to receive more and we do not, of course, he is at liberty to go somewhere else. If that is the rule in the room, and he can not do any more than anyone else, we could not break the rule for that particular party.

MUTUAL RELATIONS OF FACTORIES.

Q. Are some of the other factories in the silver company engaged in producing the same kind of goods that you produce?—A. Yes.

Q. And has there been any decrease in your production, or any increase of it at any time since the consolidation, by orders from headquarters?—A. I do not believe I quite understand.

Q. Well, is the work at your factory diminished and taken to some other factory?—A. No.

Q. Or vice versa?—A. No.

Q. Could that be done in your line of business and make an economy for the whole establishment sometimes?—A. Just now we have all got all we can do. This is the harvest time of the year, the three months before Christmas; but of course in quiet times we could, by keeping all the factories running, push business while one of them might be delayed; it would be economy.

Q. I suppose your factories are practically so near together that nothing could be gained by saving in the cost of distribution. One could supply the market just as cheap as another, as far as freight rates go?—A. Certainly.

EMPLOYMENT OF WOMEN IN DIFFERENT DEPARTMENTS.

Q. (By Mr. JENKS.) Is the work that is done in the plant that you are managing the same in its general nature as that that is done in the other plants of the company, or is it different?—A. Some have both hollow and flat, some all flat, and some all hollow.

Q. What is the special branch of work that is done in your plant?—A. Flat ware—spoons, knives, and forks.

Q. Is it making the base?—A. No; simply plating and putting it on the market.

Q. You say that you do only the plating in your establishment?—A. Yes.

Q. Would you say that the proportion of the women in your plant was about half?—A. I should say it was over half.

Q. Is it as much in the other plants?—A. In this particular department do you mean?

Q. Yes; in this particular department.—A. I should say it was.

Q. How about the company as a whole? Are women employed to any material extent in the plants where they manufacture the base, for example, of spoons and forks?—A. No.

Q. No women at all?—A. Very few.

Q. So that you think that the proportion of women in your plant is perhaps larger than it is on the average?—A. Yes.

Q. Very much larger?—A. Yes.

Q. What special work do the women do in your plant?—A. They run the burnishing machines, burnish the spoons, and they pack.

Q. Packing and getting ready for the market?—A. Yes.

Q. So that in those plants where they manufacture the base on which the plating is done there would be no women employed, would there?—A. Very few. There might be a few to wash up and pack them to ship to us.

Q. But in the main it is only in those factories that do the finishing work that women are employed?—A. Yes.

(Testimony closed.)

Whereupon the commission took a recess until 2 o'clock p. m.

[The following interrogatories were subsequently proposed to the witness and were answered by him as here shown.]¹

Q. At what time were salaries voted to the officers and directors of the International Silver Company?—A. March 27, 1899.

Q. Have the salaries of either officers or directors been increased since that time?—A. No.

Q. What are the salaries (a) of the president, (b) of the directors, (c) of the treasurer?—A. The president gets \$12,000; 4 directors get \$10,000 each; 1 director gets \$7,500; the treasurer, \$8,000; but all directors are managers of factories and as such draw salaries, but no pay for being a director.

Q. Has the International Silver Company paid any dividend on its preferred stock?—A. No.

Q. Were the salaries of the officers fixed or increased at a meeting when it was decided to pass a dividend on the preferred stock?—A. No. We never paid a dividend and never passed a dividend.

WILLIAM H. WATROUS.

HARTFORD, CONN., November 24, 1899.

WASHINGTON, D. C., Wednesday, November 15, 1899.

TESTIMONY OF MR. N. BURTON ROGERS,

Vice-president of C. Rogers & Bros.

The commission met at 2.20 p. m., Chairman Kyle presiding. Mr. N. Burton Rogers, of Danbury, Conn., vice-president of C. Rogers & Bros., of Meriden, being duly sworn, testified as follows:

Q. (By Senator KYLE.) Please state your full name, address, and business.—A. N. Burton Rogers, Danbury, Conn. I am in the silver-plating business.

¹ See Mr. Rogers, p. 1075; see Mr. Dodd, p. 1062.

Q. (By Mr. JENKS.) Manufacturer?—A. Manufacturer, and vice-president of C. Rogers & Bros., of Meriden.

NEGOTIATIONS BEFORE THE FORMATION OF THE INTERNATIONAL SILVER COMPANY.

Q. Did you earlier have any connection with the formation of the International Silver Company?—A. Of what was contemplated at one time.

Q. That is, you did have some dealings, or some proposed dealings, with the promoters of this company?—A. Yes.

Q. Will you be kind enough to explain to us that matter somewhat in detail?—A. We were asked to give an option upon our business to the promoters, which we did, stating the price that we would take for our plants, with a number of other concerns that were enumerated as those that would be willing to sell their plants. Upon condition that they all sold, this option would stand. We submitted—each one submitted to an investigation of their books, which was to be confidential.

Q. That is, between the different concerns and the promoters?—A. And the promoters.

Q. It was not to go to the other concerns?—A. The others were not to know anything about it. It was practically what they call a blind pool. We submitted to an examination of our books, and we all met, we supposed, on an equal basis. At the meeting each company was represented by a director. At that meeting certain gentlemen proposed that they have additional directors for their concerns.

Q. On what grounds did they make that suggestion?—A. On account of their being larger holders, or larger concerns, than some others who were represented by one director. A proportion thought that was not fair, and they asked for an additional director. That was voted upon and carried by one majority, but was afterwards rescinded and no additional directors were added. A committee was appointed to proceed to the formation of this new company, but it was soon given out that the matter had been broken up. Previous to this we had agreed with the promoters upon the price which we were to have for our concern, and we supposed that we came to that meeting with every one in the same condition. Afterwards it fell through. Some of them demanded all cash, because there was an opportunity for them to withdraw on account of all the conditions not being complied with. And then we heard that there was a new combination to be formed, and that this new combination had accurate knowledge from the promoters of almost everything pertaining to the companies which had agreed to go in and had submitted to an examination of their books. In the new formation we were not asked to participate; but it was formed soon after with three or four left out, or more.

Q. Of those who had proposed originally to come in?—A. Those that had proposed to come in originally, and who had gone into it upon the supposition that there was to be a combination, and that they would be enabled to get sufficient from it to pay them. The competition had been so great that there would not be much money in the business if the competition did not cease.

Q. Had it been thought when this combination was first proposed that it would include practically all of the large manufacturers of silverware?—A. Yes; all of the principal ones and a number of the smaller ones were included in this list.

Q. Did the promoters, when they came to you with their offers, have any prospectus, to show you, as they stated, what concerns had given them options, so that you had good reason to believe that all of the large ones were coming in?—A. Yes.

Q. Would you explain to us in some detail the nature of this prospectus, and the nature of the representations that were made to you by the promoters?—A. We generally agreed that if all would come in it would be beneficial; but the smaller ones wanted protection; either that they should be able to manage their business, or that they should hold some position in the new combination either as director or salaried officer. We were not offered anything except a directorship, because we asked nothing. We simply said our plant, if they wished to buy it, we would sell at such a figure, and we finally agreed upon the figure; while others had some provision in their options, either that they should have a director, or other things pertaining to the business.

Q. From the information that you secured at this time with reference to the values of the different plants that went in, or the prices that were paid for the plants—
A. (Interrupting.) We had no knowledge of the price paid or agreed to be paid to the others.

OPTIONS TO DUMMIES.

Q. You had knowledge, of course, of the offer that they made to you?—A. Yes; that was in writing. I wish to say that the mode of operation is that they will take, as in this instance, a clerk in the promoter's office, a man without any financial

responsibility, and to him you give the option; and if all go into that agreement—if they carry it out, they can hold you; if they on their part do not, you have got no one but a dummy to take.

Q. So in the case of the formation of the International Silver Company these options were really taken by a person who was not financially responsible?—A. Not of any financial responsibility whatever; a clerk in the office.

AGREED TERMS OF SALE OF C. ROGERS & BROS.

Q. What was your opinion as to the prices that the promoters were willing to pay for the different plants? Were they, for the sake of forming the combination, paying in your judgment very high prices or simply moderate prices?—A. For C. Rogers & Bros. I can give the exact amount; I do not know what the others were. There was an inventory value, I believe, of over \$600,000; that is, the inventory value without good will or trade-marks or anything.

Q. That was simply the inventory value of the plant and of the stock on hand?—A. Yes; free of all indebtedness; that is the way we made this option.

Q. Of something over \$600,000?—A. Yes; that was the inventory value; but of course there came in the good will. They agreed to pay \$500,000 in cash, \$300,000 in preferred stock, and \$150,000 in common, which we understood was bonus; a bonus which might or might not be worth anything.

Q. (By Mr. CLARKE.) That is to say, the common was?—A. The common.

HOPED PREFERRED WOULD BE WORTH PAR.

Q. (By Mr. JENKS.) At about what figures were you reckoning the value of the preferred; something like 50 cents on the dollar?—A. Well, no; we thought, if the concerns were all brought together—well, that was not knowing how the others would come in. Still, this was the way I reasoned about it: That if they came in on a similar valuation the earning power would make that preferred stock worth par; if anyone desired to sell it before a dividend was declared it might go to even more. It did sell at 80 or 85 at the beginning; now it is offered for 65. But that was about the way we reckoned. The common might bring 30, if they were all in at a fair basis—that is, for profits.

Q. Were you given information at this time with reference to the proposed capitalization of \$20,000,000?—A. Yes.

Q. And from what you had known of the business and from what you yourself could see at the time, it had seemed to you that this \$9,000,000 that was issued in preferred stock was a fair valuation of the plants?—A. Well, of course, these were only impressions at the time. We began to fear toward the end that the capitalization was too large for the basis of regular paying dividends, although we did not know how much the others had been making; we knew there had been a series of very bad years.

PROMOTERS' PAY.

Q. Had you information at the time with reference to the amount that was to be paid to the promoters for their activity in this matter?—A. Yes.

Q. How much was that?—A. That was 3 per cent upon the total capitalization of \$20,000,000.

Q. They were to be paid in cash, were they?—A. No; in common stock.

Q. They were to have 3 per cent of \$20,000,000, but have it in common stock?—A. In common stock.

Q. Were they, out of that, to pay any expenses?—A. They were to pay all the expenses.

Q. All the expenses of organization were to come out of that?—A. Yes.

Q. And they were to have what was left?—A. Yes.

SAVINGS BY CONSOLIDATION.

Q. Now, with reference to the business of the International Silver Company itself, of which you are a competitor, do you judge from the business you have now that there are any material sources of saving from a combination of this kind?—A. Oh, yes.

Q. Will you tell what some of the sources of saving are, as they appear to you?—A. Well, it is a saving in middle men principally. If a concern, one of the concerns in the combination, is making money, they would not close that down unless they could bring it in connection with another, and save the different men that are required to run separate concerns.

Q. You think that, from the organization that was explained this morning, there is quite a material saving in the cost of management?—A. Oh, yes; properly conducted.

HISTORY OF THE ROGERS TRADE-MARKS.

Q. Would you think that there is any special saving to come from the common use of trade-marks in this business?—A. Well, in this case there are several names of Rogers on the market.

Q. Will you be kind enough to explain to us this Rogers trade-mark? Give us something of a history of it, and the way in which it is on the market now.—A. Years ago relatives of ours were in the silver-plate business, back in the 30's and 40's. They first started, I think, one of them, William Rogers, in Hartford, under the name of the William Rogers Manufacturing Company, or William Rogers & Sons. The brothers afterwards—Asa, Simeon, and William—went to Waterbury, and started there the original concern of Rogers & Bros. And to such a state of perfection did they get their goods that they were known as being very valuable and very reliable goods. Other silver-plate manufacturers started in spoons and forks, but they were unable to compete with Rogers & Bros. even at the same price, because the latter were so reliable. But after a time Rogers & Bros. sold out; it became a corporation. They wanted more money, and after a while they went out and sold their property; but the name remained. One of the brothers then went to New York. This was Asa. In connection with my brother, Gilbert Rogers, he started in New York, in John street, under the name of A. & G. Rogers. In the bad times that came on during the war they got a little frightened and stopped. Then the Meriden Britannia Company came forward to my brother Gilbert, and made an arrangement with him to give him 2 per cent, or something of that sort, upon all the goods sold with his name on them.

Q. That is, the Meriden Britannia Company bought from your brother the right to use this trade-mark?—A. Yes; and his compensation was to be $2\frac{1}{2}$ per cent or 2 cents a dozen, I have forgotten which, upon every dozen that was made and sold; and he was to have a position as salesman. Soon after, we heard that they had entered into an arrangement with the original Rogers Bros. to use their name.

Q. The Meriden Britannia Company?—A. That is, instead of Rogers & Bros., the name which the Waterbury concern had, it was Rogers Bros.; and they bought the use of that name, as I understand it, from the original brothers, who were to superintend the manufacturing for 10 years. They then dismissed G. Rogers. Of course there was no compensation to come, because they would not sell any. They had got the Rogers Bros., and they went forward and manufactured and sold those goods. In the meantime they had acquired the controlling interest of Rogers & Bros. in Waterbury.

Soon after their dismissal of G. Rogers my three brothers, Cephas, Gilbert, and William, formed the concern of C. Rogers & Bros. in Meriden, and a while afterwards commenced manufacturing spoons and forks and knives, stamping their name on them. The Meriden Britannia Company at once commenced a suit against them, claiming that they had, under their purchase from the original Rogers Bros., the sole right to use the name Rogers & Bros. After a long litigation the courts decided that C. Rogers & Bros. had a right to use their own name as long as they used it rightfully—that is, provided the goods they sold were equal in quality to those put upon the market by Rogers & Bros.; and that they proved was so, and there was no attempt to disprove it. We do not to-day know by what right the International has used Rogers Bros., 1847. As we understand it, their right to use it expired after the 10 years. In referring to it we have sometimes thought that we had a right to attempt to stop them as they tried to stop us; and the answer was that they controlled Rogers Bros., of Waterbury, and would be enabled to bring it to Meriden, so it would do us no good.

Q. Do you yourself in your own manufacture use the brand Rogers & Bros.?—A. C. Rogers & Bros.

Q. C. Rogers & Bros.?—A. We prefix the C. That was the name of the senior member of the concern, and we have not conflicted with the correspondence, and have abbreviated it as much as possible.

Q. You spoke of the International Silver Company advertising these brands. Do they in advertisements make statements that you think are unjustified by the facts in the case?—A. Yes.

Q. What statements do they make, for example, that you think are unjustifiable?—A. They rented an office in Maiden Lane; we also rented an office there. Each concern put up its name, C. Rogers & Bros. and the International Silver Company, and a notice that it would occupy the premises on such a date. Soon after there

appeared on the International Silver Company's sign, that was stretched across the face of the building, a statement that they controlled all the original Rogers brands or trade-marks for spoons, knives, and forks. That, of course, was not the fact, as no one controlled us but ourselves.

VALUE OF THE TRADE-MARK C. ROGERS & BROS.

Q. How would you consider that the value of those brands that you yourself use compares with the value of your plant itself?—A. In the formation of our present company the trade-mark was put in at \$100,000. In the new corporation of C. Rogers & Bros. the inventory value was \$600,000.

ROGERS TRADE-MARKS OUTSIDE THE COMBINATION.

Q. (By Mr. FARQUHAR.) If the new combination had acquired your plant would they have acquired really all of the Rogers trade-marks?—A. Yes; they would have had them all. There was one man by the name of W. A. Rogers, who was not a manufacturer, who was buying goods or having them made for him and sending them on the market, but it was not considered of very great importance.

Q. But yours was the one that comprised the manufacturing trade-mark?—A. We manufacture from beginning to end under the one name.

SAVING BY CONSOLIDATION—IN ADVERTISING.

Q. (By Mr. JENKS.) Do you consider that a combination like the International Silver Company has any special source of saving in advertising over the independent concerns?—A. They would if they just advertised one brand; but my observation is that there are different branches of manufacture which are still advertising; there are some that are not. Oh, yes; there would be a saving and is a saving, I should judge, to them in advertising.

Q. How do they make a saving?—A. For instance, the William Rogers Manufacturing Company of Hartford used to advertise very extensively; they do not now, and that is only one. I notice Simpson, Hall & Miller's advertisement now occasionally; but the Rogers 1847, the Rogers brand, is being far more extensively advertised than before.

Q. Do you think that they would have any advantage in the cost of advertising by being able to make better terms with advertising agents or with the magazines in which they advertise?—A. I do not. They could; but now there would not be so much advertising, if there were three that advertised before and now only two, unless they increased the space for one, making it equal in cost.

Q. But if there were formerly three advertising and now there is only one advertising, there would be a saving there, at any rate?—A. Yes; where the advertisements were as before.

Q. If the advertisements of all the different houses come through one concern, would they be able to make better terms with advertising agents than they could if they were each dealing independently?—A. Yes; I should judge they would.

Q. They would be able to get better discounts from the advertising agents?—A. Yes.

THE WALL STREET POOL IN INTERNATIONAL SILVER COMMON.

Q. Can you give us any information with reference to the pool in the common stock of the International Silver Company that was spoken of this morning?—A. I know from a very reliable source something in reference to it.

Q. I should be glad to have you state what you know.—A. The stock was, I understood, with Thomas & Post, the bankers who were the promoters in this consolidation; they went to the different stockholders and asked them to place the common stock in their hands.

Q. (By Mr. JENKS.) Assign it to them?—A. Assign it to them to be sold on or before May 1 for not less than 30. If they did not sell it for 30 or more, they were to return the unsold stock to them; and I understood that of the \$11,000,000 of the common they got in the neighborhood of \$8,000,000 or \$9,000,000.

Q. In their hands mostly in this way?—A. That is my information, which I consider reliable.

Q. This pool was to expire on the 1st of May?—A. Yes.

Q. Did you have any information with reference to the amount that was sold, or what the outcome was as regards the amount that they had disposed of?—A. From the same source I learned that the pool had about 800 shares more on their hands at the end of the time than they had at the beginning.

Q. You say that you have this from a reliable source. I suppose, from some man who was himself in the pool or had some interest?—A. I do not know what he had; he was a stockholder; that is, he did have stock.

Q. You understood that he had put his stock into the pool?—A. No; I did not understand that he individually said that. He said that that was the condition of things.

Q. And the source was such that you believe it to be entirely trustworthy?—A. Yes.

PRICES CUT AT FIRST BY THE INTERNATIONAL SILVER COMPANY.

Q. Have there been, since the formation of the International Silver Company a year ago, any changes in price of silverware that you could ascribe to the formation of the company?—A. At first, immediately afterwards, there was a reduction; after the formation of the company there was a vigorous cutting of prices.

Q. Did this cutting of prices come from the International Silver Company or from outsiders?—A. From the International Silver Company. They cut the price on knives, we thought, below cost, and that continued—the cutting in spoons and in forks continued up to the time when material and wages began to advance; then there was a circular issued advancing the prices.

Q. Was that last February?—A. Yes; and previous to that. In the meantime they took all the orders that it was possible to take from different concerns at the lower price, and then advanced the price.

NO FURTHER REQUEST TO JOIN THE COMBINATION.

Q. After they had cut the price or while the prices were held low, was there any further attempt made on their part, to your knowledge, to bring the independent concerns into the combination?—A. That was the most serious attempt. I do not know. We were never approached except in this way, meeting them occasionally, "Well, we must all be together;" but no formal request was made.

Q. Was it the opinion of the trade outside that this cutting in prices was for the purpose of forcing the competitors in?—A. It was for the purpose of injuring them; there was not any profit in it.

Q. (By Senator KYLE.) You stated that you had not been asked to join the combination the second time?—A. No.

PRICES HAD TENDED DOWNWARD, BUT HAVE LATELY RISEN.

Q. (By Mr. JENKS.) What has been the course of prices in your own establishment since 1897?—A. It has been gradually tending downward.

Q. Have you increased the prices of your goods at all within the last year on account of the increase in the price of raw material?—A. Yes; and labor.

Q. About how much? What percentage?—A. From 10 to 20 per cent.

WAGES VOLUNTARILY RAISED.

Q. About what has been the increase in labor in your establishment?—A. Fully as much.

Q. From 10 to 20 per cent?—A. I would not say that exactly. We are getting a little more profit now than we did then. We voluntarily advanced the wages of our employees, of course, before we got the advanced prices. It was dictated by a purpose to avoid any complication; the air was full of good times, and the working men naturally thought they ought to participate, and we voluntarily raised the wages of ours before we got the advanced prices.

PROFITS RATHER LARGER.

Q. About what time was it that you put your prices up?—A. That was early in the year.

Q. Do you find that the competition against you is any more vigorous, or has it been any more vigorous for the last 6 or 8 months, than it was before the organization of the International Silver Company?—A. There seems to be a greater demand for goods.

Q. For goods?—A. For goods, and that allowed us to have plenty to do; but we were not always obtaining the prices warranted by the cost, the increased cost.

Q. You would say that nevertheless, on the whole, your profits are rather larger now since this increase in prices than they were for a year or two before that?—A. Yes.

NUMBER OF TRAVELING MEN—TERRITORY COVERED.

Q. Do you employ traveling men?—A. Yes.

Q. About how many do you have?—A. About 12.

Q. (By Mr. FARQUHAR.) In what sections, what States, do your traveling men usually operate?—A. All over the United States and in Canada.

THE 1847 BRAND HELD UP—THE OTHERS CUT.

Q. (By Mr. JENKS.) Do your traveling men report that they find any more vigorous efforts to take trade away from them by the cutting of prices on the part of the International Silver Company than they met before from representatives of independent concerns?—A. Yes.

Q. They do find more vigorous efforts?—A. Yes.

Q. It is the experience of your company, then, that the International Silver Company is cutting prices against you?—A. Well, not so much lately; there is a little thing that you will have to understand.

Q. Certainly; give what explanation you think best.—A. They have advanced the brand of 1847 and maintain that, while the brand of William Rogers and other Rogerses they debauch.

Q. When you say "debauch," what do you mean by that?—A. Sell it lower than it formerly sold in comparison with the brand of 1847.

Q. The price of 1847 they have held up, but they have cut on the other Rogers brands they own?—A. Yes.

Q. Have they maintained the standard of the brands of Rogers Brothers as regards the quality of the goods?—A. We do not think they have.

Q. Have you made any test so that you feel confident on the matter?—A. Yes; we made tests and found that they did not come up to the standard.

Q. Is that true with reference to the brand of 1847?—A. We have not tested that. We were rather in the belief that they would not do that. Our reason for testing this other was that the price could not be very profitable that they were obtaining for the goods if they had the full value of silver and material in them.

Q. So you made tests of some of these other Rogers brands and found that they were not up to the standard?—A. No; they were not.

C. ROGERS & BROS., AND THE ROGERS SILVER PLATE COMPANY.

Q. How long has your present establishment been in operation?—A. C. Rogers & Bros. has been in operation for 34 years.

Q. How long have you been connected with this concern?—A. About a year.

Q. (By Mr. JENKS.) Will you explain what your business was, or whether you had an independent business, before your connection with this present concern?—A. Yes; the concern which I took up was the Rogers Silver Plate Company of Danbury, and that is about 13 or 14 years old. I was the younger brother, and my other brothers were stockholders in that, and two or three other members of the family. But after this combination was made, the International, we concluded that we would amalgamate, both for our protection as against what might take place and to lessen expenses; and we did so, and it is now a corporation. C. Rogers & Bros. was a partnership at will for 34 years.

TIME AND PIECE WORK—RISE OF WAGES—NO UNIONS—NO STRIKES.

Q. (By Mr. FARQUHAR.) You spoke of your labor, that you had voluntarily raised the wages. How do you employ the men; by time or piece work?—A. Both.

Q. Is that increase general in all your departments?—A. Yes; the raise of wages was almost universal.

Q. And you said the per cent was from 10 to 20?—A. Well, that would be in the Rogers Silver Plate Company of Danbury. There was not so large a percentage in the concern at Meriden.

Q. Have you had any knowledge of organized labor in respect to silver plate in those companies?—A. Not in reference to silver plating, but in reference to hatting. We are the only industry there outside of hatting, and that is almost entirely under labor organizations; the employees are all members of labor organizations.

Q. (By Mr. RATCHFORD.) Do you have any labor strikes?—A. No, sir; I never had any strikes.

Q. Among the silver platers there are no labor organizations in your place?—A. There are no labor organizations in our concern.

COMMON STOCK AS BONUS.

Q. You mentioned the fact that the common stock of this combination was in the character of a bonus. Do you mean by that that it was given over and above the cash and the preferred as a bonus?—A. Yes. If we would take more preferred—for instance, instead of \$300,000, if we would take \$400,000 preferred, we would get \$200,000 common. It was an inducement to take preferred stock instead of cash.

Q. Was this not a fact, too, that when the preferred stock of this company went on the market it was sold at 85? Now, instead of your common stock being a bonus, is it not a fact that the common stock was put in to level up your preferred to par?—A. It was in the hope that it would.

Q. Is not that the business reason, the business view, instead of saying that the common was given as a bonus; that you could not sell an industrial stock of that kind at par?—A. We all hoped that we could get a little more out of the preferred and common.

Q. Jointly?—A. Jointly; we thought it would amount to more than that.

Q. By combining your preferred and common, you would have a premium on the 100 per cent?—A. Yes, it was believed that would be the case, and for that reason I judged many would be induced to take more preferred than cash. Thus they would be enabled to sell on the market. It was to be listed, and they were going to sell it, at will.

SAVING ON LARGE PURCHASES—COMPETITION WITH THE INTERNATIONAL.

Q. (By Mr. RATCHFORD.) Are you a competitor of the International Silver Company?—A. Yes.

Q. Operating independently outside of that company?—A. Yes.

Q. What can you say with reference to the relative cost of raw material as compared with the cost to the International Silver Company? Can you buy your materials as cheaply as they can?—A. On general principles a person buying very large quantities might be able to buy for less than one who bought in smaller quantities. I think that we have been enabled to buy at the same price.

Q. That you can buy at the same price?—A. I think we have, but how long such a state of things will exist in general business activity I do not know. I should judge a larger quantity would be able to be bought better.

Q. As to the selling of your wares, do you receive about the same price that they do?—A. Yes; that is, we are compelled to meet competition.

Q. The competition is rather keen between you, is it not?—A. Yes.

WHY WAGES ROSE MORE IN DANBURY THAN IN MERIDEN.

Q. Mr. Dodd stated this morning that the wages of labor advanced within the last year in the International Silver Company from 5 to 7½ per cent. You have stated now that the wages of labor in your company advanced from 10 to 20 per cent?—A. That is in the Silver Plate Company of Danbury. That is a part of C. Rogers & Bros.

Q. I should judge that the price for labor would be the same, or the advance, with C. Rogers & Bros. in Meriden as it is with the International?—A. Yes.

Q. They are neighbors, I understand? The advance in Danbury is greater than it is in Meriden, is it?—A. Yes.

Q. Can you explain why it is?—A. We do not come under such competition as the Meriden house does.

Q. But the goods that are manufactured in both places— A. (Interrupting.) We manufacture different.

Q. Sell for about the same price to the consumer, do they not?—A. The concern in Danbury make a different class of goods from the concern in Meriden, and there is not the competition in that class of goods that there is in this—in flat ware, spoons and forks, such as the Meriden C. Rogers & Bros. make and the International make in Meriden.

Q. How about the skill and efficiency of the workmen? Are they equally skillful?—A. They do not require in Danbury as skilled workmen as they do in Meriden.

Q. And yet the wages in Danbury have increased more readily than those in Meriden?—A. Yes; and it is not as skilled.

Q. (By Mr. JENKS.) What is the special output of your Danbury establishment?—A. Silver-plated novelties, mirrors, clocks, lamps, mantel ornaments, and a certain line of upholstered goods.

Q. Is the general percentage of profit in goods of that kind larger than it is in articles like spoons and forks?—A. Yes. It is on account of their novelty. As soon as it gets over that point they go lower.

Q. Do I understand by that, then, that you are continually getting up new patterns, new kinds of goods, and so on, that you are putting out?—A. Yes.

EXPORTING TO ENGLAND.

Q. Have you any foreign competition in your business?—A. Yes; that is, we are able to sell in the foreign market now and are exporting a great many goods, particularly mantel ornaments and clocks for mantels.

Q. (By Mr. JENKS.) To what countries are you exporting?—A. England.

Q. (By Mr. RATCHFORD.) Do these foreign goods meet the home goods in these markets to any extent?—A. Not now. They did—it is reversed now. We are able to export, with trade increasing. We have always considered silverware lower in Europe or in England than it is here.

Q. Can you say that the domestic market belongs entirely to domestic manufacturers in your line?—A. Yes.

Q. You are extending your trade abroad?—A. Yes; we excel in finish and are now competing with them in price.

MANNER OF HIRING MEN.

Q. How are wages fixed with your employees?—A. By the piece. We take a young man of 16 or 17, and we will employ him by the day to begin with, in one branch I refer to now—buffing. An experienced buffer—that is, sand buffing on metal—an ordinary buffer will earn about \$2 per day. We are in a locality where we can not draw upon experienced labor—in Danbury; it is away from Meriden and other places where they have other factories to go into, so we take a young man and give him \$4 to \$6 a week and teach him. We pay him that while learning, but of course he does not earn his wages.

Q. You are paying him during apprenticeship?—A. We are paying him during apprenticeship. It may last in this case for 3 or 4 weeks. Then we put him at piece work, and they are able, as I say, to earn from \$6 to \$12 per week; and that is with the young man. I may say that this is possibly exceptional. There are other branches, like casting. There we will take young men and put them to work, and it is of such a nature that they learn very quickly—some do—and they are earning now all the way from \$9 to \$11 and \$12 a week.

Q. What is the number of hours' work?—A. Ten hours per day.

EXPORTS ONE-TENTH OF PRODUCT.

Q. (By Mr. JENKS.) What proportion of your goods do you export?—A. Not more than one-tenth now. It is increasing all the time—possibly more than that.

Q. From 10 per cent upward now you are exporting?—A. Yes.

Q. (By Mr. FARQUHAR.) What country principally do you export to?—A. England. We send to other parts of the world, but I am speaking of England alone; we send to Australia.

BETTER OUTSIDE THE COMBINATION—WALL STREET COMPETITION.

Q. (By Mr. FARQUHAR.) As you stand now, an independent manufacturer, would you just as soon be outside the combination as in it, as a business man?—A. I should prefer to be outside, whereby we don't come in contact with unnatural things, where one is receiving resources from things not pertaining to their business, and they are unable to seriously injure the outside concern.

Q. (By Mr. JENKS.) Will you tell just what you mean by that?—A. I mean this: It is our fear that the competition with the International would not be on a direct business basis of costs; that it would be governed rather by the amount that could be made in the rise and fall of the stock on the market in Wall street.

Q. (By Mr. FARQUHAR.) That is, that the stock market has something to do with the International and its business?—A. Yes; to use a term that will express it, that there are a good many in the International that are what are termed in Wall street "tape worms," or stockholders who are busily watching fluctuations on the market. I am pleased to say that I am on very friendly terms with each one of them, but I say we fear competition from that source, but fear nothing from active business competition.

Q. Fair play?—A. Fair play.

Q. (By Mr. JENKS.) You think then, that while there are advantages that you have yourself mentioned in combination, there are other advantages in being independent, each individual managing his own concern, which would perhaps offset those first mentioned?—A. There are benefits in a good combination, founded upon a good sound basis.

Q. (By Mr. FARQUHAR.) If it does not try to do too much?—A. If it does not try to do too much; but a good independent concern can always take care of itself if properly conducted—if it does not meet with what I have suggested; that is a thing that would be a very dangerous factor under the present condition.

THE INTERNATIONAL—NO DIVIDENDS—SALARIES OF OFFICERS.

Q. (By Mr. JENKS.) Has the International Company paid any dividends on the preferred stock yet?—A. No, sir.

Q. Have you any information with reference to the expenses of the company as regards the salaries of officers, or matters of that kind?—A. I understood, and have it from a reliable source, that they would receive \$5,000, each of the active directors, and \$7,000 for the president, voted at the first meeting. At about the time the dividend was to be declared, that dividend was passed, not paid, you understand, and they advanced the salaries of those who had been receiving \$5,000 to \$10,000, the president to \$12,000, and what the treasurer got, who was the Wall street end of it, I do not know, but I heard he got \$25,000.

Q. This information is from a source that you are certain, from the circumstances of the case, knows the facts?—A. Yes; from a stockholder of the company.

Q. (By Mr. CLARKE.) It is hearsay evidence, is it not?—A. It is evidence I believe I could bring a little proof of.¹

Q. You do not know about it yourself; you are not in the company?—A. Nothing more than what I have been told by a party who is a stockholder in it, and directly interested in it. I think you could have got that information if you had asked one of the gentlemen on the stand this morning.

(Testimony closed.)

¹See Mr. Dodd, p. 1062; Mr. Watrous, p. 1066.

STATE CORPORATION LAWS AND TRANSFER COMPANIES.

WASHINGTON, D. C., October 18, 1899.

TESTIMONY OF MR. JAMES B. DILL,

Attorney at law.

At a meeting of the United States Industrial Commission held at its offices in the Bliss Building at 11 a. m. October 18, 1899, Mr. James B. Dill, lawyer, being duly sworn, testified on the subject of trusts.

THE PROFESSION OF THE WITNESS.

Q. (By Mr. JENKs.) Will you give your name and address to the stenographer, please?—A. James B. Dill, No. 27 Pine street, New York.

Q. Your business?—A. Lawyer.

Q. How long have you been in the business?—A. About 25 years.

Q. Where have you been practicing?—A. In New York and New Jersey.

Q. You are familiar with the corporation laws of New Jersey?—A. Yes.

Q. Have you written or published anything on the subject?—A. In the first place, I was chairman of the State commission to revise the corporation laws of New Jersey relating to financial institutions. I am the author of the official edition of the corporation statutes of New Jersey, and author of Dill on New Jersey Corporations, which is the larger publication on the subject.

Q. Have you been, in your practice, associated with the organization of some of the larger combinations?—A. Yes.

Q. Can you give us any idea as to the amount of work along this line that you have done, the amount of capital organized in your office within a year or two?—A. I suppose this year that we have had charge of the law end of organizations whose aggregate capital would run from \$500,000 to \$1,000,000,000.

TRAMP CORPORATIONS DEFINED.

Q. What do you understand by what is called a tramp corporation?—A. A corporation which, having a charter from one State, assumes to carry on its entire function out of that State and to do business entirely in other States.

Q. Under the New Jersey laws would tramp corporations be possible?—A. Were the New Jersey laws strictly enforced a tramp corporation would be impossible.

Q. Will you mention the points of the New Jersey laws which prevent tramp organizations from being organized in New Jersey?—A. The distinction between what is commonly known as a tramp company and a proper corporation is the fact as to whether or not the stockholders are allowed by law to meet out of the State which creates the corporation. When States simply grant the charters and permit the entire work of the organizations to be carried on outside of the States, they are tramp organizations, in my judgment. The distinguishing features in New Jersey are as follows: First, the stockholders are forbidden by law to meet outside of the State, and secondly, by statute and decisions, any act of the stockholders convened in meetings outside of the State is void.

Q. All stockholders' meetings must be held in the State?—A. All stockholders' meetings must by statute be held not only within the State, but at the registered office; and the courts of New Jersey have held that stockholders assuming to convene outside of the State, and act as such, thereby render themselves liable as copartners for the transaction in question. In the next place, the statutes of New Jersey are more emphatic perhaps than those of any other State, in that a company must not only have but must maintain a principal and registered office in that State.

THE PRINCIPAL-OFFICE FEATURE OF THE NEW JERSEY CORPORATION LAW.

Q. What is meant by this principal office?—**A.** I might say parenthetically that these strict provisions with regard to maintaining an office and registering it are of recent growth—statutes enacted within the last 3 years, in obedience to what seems to be public demand for more publicity on the part of corporations as to maintaining a principal office. There are under the statutes the following requirements:

First. By the act adopted in 1897, every corporation must state, in every paper it files and in every statement it publishes, the street and number of its office in the State, and the name of the person in charge as its agent; and a misrepresentation in this respect renders all of the directors personally liable for all debts of the concern.

Second. The agent must be either a domestic corporation, or, by the statute of 1899, a trust company. This later legislation, which was passed under the banking commission, of which I was chairman, was passed because we recognized in New Jersey the necessity of having all these matters relating to publicity carried on by a corporation which had known responsibility and which was under the direct supervision of the insurance and banking department in the State.

Third. By the statutes of 1896, 1897, and 1898 the corporation is required, as I have said before, to have an agent in charge of that office at all times during business hours. They are also required—this bears directly on publicity—to have a person there who is authorized to transfer stock, and that person, under a penalty of \$200 a day, is required to keep three things: First, a book which shall contain the names and addresses of every stockholder, together with the number of shares held by him; second, a book which shall contain the name, residence, and address of every officer of the corporation in question; and third, by the law of 1898, a daily list, posted to date, which shall contain the names, alphabetically arranged, of every stockholder, the amount of his holdings, whence he derived them, and, when he transfers, to whom, together with his address.

A failure to keep this list on the part of the agent subjects him to a penalty of \$200 a day, and the failure of the officer to produce this list renders him ineligible under the statute to election to any office whatever in the corporation for the succeeding year. Finally, corporations are compelled to send out from this principal office a statement under oath of every addition to the payment of capital stock made by them and to state how much of that capital is cash and how much is property. Let me explain that this does not simply mean that reports must be made as to when all the capital is paid in, but when each and every installment is paid; and a misrepresentation or failure on the part of an officer to do that renders him liable for all the debts of the concern, and in the State of New Jersey is a tort.

PUBLICITY REQUIRED UNDER THE NEW JERSEY LAW.

Q. You say they are compelled to send out a statement under oath. What do you mean by sending it out?—**A.** They must file it in the office of the secretary of state, and inferentially, although not expressly in the statute, they should obtain a certified copy of each of these things and keep it in the office, open to the inspection of the stockholders. Finally, all of these records are, by the amendment of 1898, made open to the inspection of all stockholders of the company at all times during business hours, and the failure to do this on the part of any one of the officers not only subjects him to a penalty, but in my judgment, under the recent penal code, is a misdemeanor, for which he can be imprisoned.

Q. You said in accordance with the statutes of 1899 these agents of corporations must be trust companies?—**A.** Yes.

Q. Is it contrary to the law or illegal for individuals to act as agents?—**A.** There is no prohibition against individuals of full age who are residents of the State. There have sprung up a lot of companies whose responsibility I will not say was questioned, but was not known. There were important functions being carried on by corporations whose responsibility was not known in the State, and therefore that power was expressly taken away from them and expressly conferred on trust companies; the provisions as to trust companies in the State of New Jersey being strict beyond the ordinary.

Q. Did you say this power to act as agents for these corporations is taken away from individuals?—**A.** No; it was taken away from companies other than trust companies.

THE MOVING CHARTER OF WEST VIRGINIA.

Q. In what respects do the laws of Delaware and West Virginia differ from those of New Jersey in this particular?—**A.** West Virginia grants a charter for a fixed sum for any amount with any powers, the only restriction being a limitation of the capital

to \$5,000,000—what is commonly known as a roving charter. The stockholders may meet anywhere on earth. They may have their offices anywhere on earth. They may transact any business they choose outside of the State, and there is nothing that they are obliged to do in the State. Now, the point of that, and all members of the bar will appreciate it, is this: The State which grants that kind of a charter opens the door to fraud. It is a recognized principle of law that the State of New York has no power in its courts to compel a New Jersey corporation, even at the instance of a New York stockholder, to bring its books into New York for examination on the part of that stockholder. The gentleman, who is a member of the bar from New York, will recognize in the late decision of the Supreme Court on that subject that this has been uniformly held. The State of Maryland has not any power whatever, at the instance of a Maryland citizen who is a stockholder of a New York company, to compel the New York company to allow inspection of its books in Maryland. The moment the State of West Virginia permits its corporations to hold their meetings and keep their books anywhere, it at once grants them rights to take their books out of the State of West Virginia and keep them out of the State of West Virginia, and to put them into States where no courts have power to compel an inspection of them. That is what I call a roving charter.

CHARACTERISTICS OF THE DELAWARE LAW.

The law of the State of Delaware, which is a cross between that of West Virginia and that of New Jersey, does not require the keeping of stock and transfer books in the State, but says that duplicates must be kept. It does not have the requirement which is fundamental, namely, that a list shall be kept posted to date all the time, with the actual names, holdings, and addresses of the stockholders. Now, if you and I inspect the Delaware transfer books we can not find a thing, because, as a rule, they just keep a blank book without any names. There is no requirement that the books shall be posted to date. If they are filled up once a year, that is all that is required. Meanwhile the stockholders can not get the information that the law requires.

THE RIGHTS OF STOCKHOLDERS IN NEW YORK.

Q. In what respect does the law of New York differ from that of New Jersey as regards this matter of publicity to the stockholders?—A. There is no statute, but the courts in the State of New York have uniformly granted the fullest license to the stockholders in a company to examine its books, and they have laudably desired to find a law which would enable them to compel tramp organizations to show up in New York; but inasmuch as the courts of chancery have only the powers of the courts of the King's bench in England, that power was not one named, because in those days they did not have tramp organizations, and of course the court of chancery of England was not provided with a remedy against what did not exist.

Q. Then the courts of New York have protected the stockholders of New York corporations to the same extent substantially as the New Jersey laws protect New Jersey corporations?—A. They have as to their own citizens.

Q. That is what I mean.—A. But New Jersey has gone further, and says that the failure to keep that list shall not only subject the man who fails to keep it to a fine, but shall oust the entire board of directors or the entire list of officers at the next board of directors' election.

THE LAW REQUIRING PUBLICITY NOT ENFORCED IN NEW JERSEY.

Q. Have you any information as to the extent to which the corporations of the State of New Jersey comply with this law?—A. Yes; it is my impression that while the laws of the State of New Jersey on the statute books are more severe in the direction of publicity than those on the statute books of any other State as to who makes up the corporation, their enforcement is more honored in the breach than the observance.

Q. What basis have you on which to form an opinion of that kind?—A. The State of New Jersey puts it in the hands of the attorney-general, and the attorney-general alone, to bring suits against corporations for failure to file their annual reports—by annual reports I mean those reports which contain the name of the office and location of office by street and number, the name of the agent, the names of the officers with their addresses, the date when they were elected, and the time which they are to serve. The law prescribes a penalty of \$200, and I have seen the statement made in one of the newspapers of New Jersey that, taking 10,000 corporations at random, not as many as 2,000 of them have filed that one published statement.

Q. What reason have you for believing that this report in the public press is true? Have you any information beyond that general statement?—A. Yes; I see daily a list of every corporation organized in the State of New Jersey, as well as in some other States. In order to be sure about this question, I gave an order for public records at the office of the secretary of state, which any citizen is entitled to have, for every report filed there during the course of a year; and taking the number of corporations and comparing that with the number of corresponding reports, I was led to the conclusion that the gentleman who wrote the article in the newspaper had investigated the facts as well as myself.

Q. Then you formed this opinion largely from the reports that have been sent you from the office of the secretary of state?—A. Yes.

THE OVERCAPITALIZATION OF CORPORATIONS.

Q. From your experience in the organization of some of the large corporations have you been able to form any judgment on the question of overcapitalization, as to whether or not they are in many cases capitalized for considerably more than the real value of the properties put in?—A. If you will let me answer that question in my own way, I will do so by saying that there are corporations and corporations. There are very many corporations, which we will call combines, which are organized on a basis that presents no dangerous aspects to the public; but there are very many also organized with a good deal of capital that, in my judgment, if not intended originally for fraudulent purposes, will become the cause of fraudulent action.

Q. Will you explain that a little more in detail?—A. I assume that there are corporations that are grossly overcapitalized for various reasons and with various purposes. Any corporation that is grossly overcapitalized is presumably organized in the first instance for the purpose of getting the stock to the public. Now, in order to get such stock to the public, there must be either a misrepresentation of facts, or, what in my judgment is just as bad, a concealment of material facts; and in my judgment in many of the so-called combines there is a concealment of material facts.

Q. Do you base that opinion on what has come under your own observation?—A. Yes; if you do not take that answer to mean that I am of that opinion with respect to corporations I have organized myself. I have declined many organizations. Now, without calling names at all, a corporation was brought to my attention—I will say 2 months ago, so as not to bring it too near—concerning which, after a careful examination of the assets, the conclusion was reached in our office that \$500,000 would be a maximum fair valuation. We declined to organize that corporation for \$8,000,000 and float it. I should not want to be brought into any unpleasant position by having you ask the name; but it is advertised before the public to-day at \$8,000,000. Well, I do not know from reading the prospectus that any man could be indicted for making false representations; but I do know it lacks dreadfully in the statement of material facts—facts that the public ought to know.

Q. Does this overcapitalization and misrepresentation, in your judgment, chiefly affect the buyers of stock, or does it affect the consumers of goods through prices?—A. It affects industry in general, and I can not agree with very many of my colleagues, who say that the question of the amount of capitalization is simply a matter of adjustment with the public; because the ordinary company, largely capitalized, does not, as a rule, have the same directors as it has at first. It does not, as a rule, consist of exactly the same men the second year as the first. Now, whoever is in office as a director the first or second year feels it necessary, in order to keep his standing, and especially with concerns that have a Wall street end, either to make a showing of a dividend earned or to declare one that is not earned. In other words, so far as the race with honest competitors is concerned, the fraudulently capitalized company is bound to make an equal showing of honest earnings; and it results either in a robbing of the capital or in a resorting to artificial means to earn that dividend, which artificial means commonly consist, in addition to putting up the price of material, in putting down the price of labor. So, I say, I can not agree with the statement so frequently made, that the question of capital is merely a matter of adjustment. Inflation always, in my judgment, leads to a material error and possible wrongdoing.

Q. What is the provision of the laws of New Jersey with reference to the paying in of the capital stock?—A. The law of the State of New Jersey—and this is strictly enforced in New Jersey—is more stringent even than that of New York; the New Jersey law requires the capital to be paid in either in cash or in property at its fair valuation; the laws of New York, Delaware, and West Virginia permit stock to be issued for that terribly indefinite quantity, namely, services. And there is no one thing that the promoter so desires to capitalize as that; there is no one thing that so

troubles the promoter who is not strictly along proper lines as to know how to capitalize stock otherwise known as services. The moment you allow services to be capitalized, you open the door for the widest possible resulting wrong, because the first valuation of a man's services always comes from himself, and his idea of the value of his services is largely dependent on how much water he wants to put into the stock.

Q. Is there any provision in the law by which a check can be put upon the estimate of the valuation of the property put in?—A. Yes, in case of fraud; in case not of unintentional error or mistake of honest judgment, but of fraud or overvaluation, all the stockholders are held liable for the payment of the difference between what the court finds was the real or actual value and the amount for which stock was issued.

Q. How would that matter be determined?—A. By the courts, and only by the courts.

Q. Who would bring the suit?—A. Any creditor or stockholder. For instance, a case is now pending in the State of Pennsylvania in the supreme court, where the question of the New Jersey statute is at issue. Three promoters got together and agreed to issue—I am not mentioning the true amounts—\$5,000,000 for a piece of property. After the additional directors, who were business men, came in, they found out that that property was worth less than \$150,000. They then turned around and absolutely refused to issue that stock. In order to test that question, the stock having been obtained, they are suing the men who obtained it, or the men in question, for the difference between \$150,000 and \$5,000,000. The courts of other States are very free on that, and the courts of New Jersey are very strict, the chancellor and the vice-chancellors having great powers as common sense men to pass on that question. New Jersey is a very dangerous State to overcapitalize in.

WHY CORPORATIONS ORGANIZE IN NEW JERSEY RATHER THAN IN OTHER STATES.

Q. (By Representative LIVINGSTON.) Why is it, then, if the laws are such as you say, that 60 per cent of all the charters taken out by the syndicates, combines, and trusts are taken out in the State of New Jersey? What is there in the law of New Jersey that induces the whole world to go there for a charter?—A. I am afraid you are leading me into a long discussion, but I will answer you with great cheerfulness. In the first place, corporations go to the State of New Jersey for the reason assigned by a prominent banker in New York, a gentleman who is one of the best known, or represented one of the best known large banking houses there. He was asked at a board of trade dinner at which I was present, why he sent his corporations to New Jersey. Said he, "I, as a New York man, send my corporations to New Jersey for the same reason that I deposit in the City National Bank, the reason being that the State of New Jersey has a financial surplus in its treasury and, therefore, will not be driven to squeeze my corporations to make up a deficiency. The State of New York has a deficiency in its various departments, and its officials sit up nights to see how they can squeeze more money out of my corporations."

Q. That is not very complimentary to New York?—A. That is his opinion; not mine. Now, in the next place, the laws of the State of New Jersey have practically not changed since 1846, excepting in the addition of the restrictive provisions of which I have spoken; and, therefore, a man in going to New Jersey feels that he is going into a State that has had a definite policy for many years. In the next place, the principal thing that draws corporations to New Jersey is, in my judgment, the fact that the taxes are fixed. In other words, they are required to pay one-tenth of 1 per cent—a certain amount, no more and no less, while in other States—

Q. (By Mr. FARQUHAR, interrupting.) You mean a franchise tax?—A. I mean the only tax on corporations in the State.

Q. (By Representative LIVINGSTON.) Is what?—A. It is one-tenth of 1 per cent on the capital paid in on incorporation.

Q. That is the only tax paid by any corporation?—A. That is right. Now, then, the only official you can deal with in that matter is the State board of taxation, and as that position in New Jersey is considered an honorary one, you find a fine class of men whom you go and see and who do not come to see you, and the only question that can possibly be discussed with them as to the amount of your tax is the question of what you have paid in. In other words, in the State of New Jersey you can figure exactly what your tax will be, while in some other States there are three or four boards with half a dozen individuals, all of whom apparently prefer to see you at your room or in your office, rather than at their board meeting, as to what your taxes should be. I do not think that a gentleman, a prominent member of the bar of New York, stated a fact—at least I do not agree with him—when he did say

that in many States the practice of corporation law, especially the practice relating to taxes, had simply become a practice of corruption. There are also other reasons, if you want them.

Q. I want to be very candid with you; I want to understand why it is. I know from the amount of money you mention in your statement that it is no wonder your taxes are low.—A. Yes.

Q. What you get from corporations and syndicates in the way of charters in New Jersey is astounding to me and to the world.—A. That is right.

Q. No wonder you can make a uniform tax of one-tenth of 1 per cent.—A. That is right.

Q. But what astonishes me is to know that, with such restrictions as you throw around corporations and syndicates, holding them down to honesty, they go there so readily.—A. Now, I will give you another reason. I have heard this thing discussed by business men; I have sat in a syndicate, in an actual meeting of a large corporation, where \$5,000,000 was to be paid in and where a discussion arose as to whether they should go to Delaware, where they would have no tax—because certain classes of corporations, as telephone companies, are totally exempt from taxation there—or to West Virginia or New Jersey. West Virginia was turned down without much consideration, because they believe, as I believe, that the Supreme Court of the United States is eventually going to hold that corporations organized with a roving charter and which do not, like a live tree, keep their roots in the soil that created them, are simply partnerships.

Q. Your laws require them to keep open books in New Jersey?—A. Absolutely.

Q. What is the penalty?—A. In the first place the penalty is \$200 a day on the man who refuses; in the second place the failure to do it renders every officer of the company, including directors, ineligible to office at the next election.

Q. Do you know that a great many do not keep open books?—A. I do.

Q. Why do you not push them?—A. Do you ask me, as a New York lawyer, why I do not push them in the State of New Jersey?

THE PLAN FOR PAYING IN CAPITAL STOCK IN NEW JERSEY.

Q. (By Mr. JENKS.) You said the taxes are levied upon the amount of capital paid in. What provisions are made in the New Jersey law to compel the paying in of the nominal capital?—A. The State of New Jersey differs from some other States, in that you first name in your certificate of incorporation the limit to which you may ever issue stock without an amendment of your charter. You then name as your actual capital the amount with which you will begin business. In other words, it will generally read: "The stock which is subscribed to this corporation by the incorporators for the purpose of transacting business is so many dollars, divided as follows." And then there must follow the name of each subscriber, the amount of his capital stock and his residence, which is not required in other places.

Q. That is, the amount actually paid in may be as small as the incorporators please?—A. No; never under \$1,000.

Q. Never under \$1,000?—A. Now, as soon as that thousand is paid in, the incorporators must file a certificate under oath which states the amount that has been paid in, whether it is property or cash; then if they subsequently get \$20,000—call for \$20,000—making their capital thereby \$21,000 authorized, for example, they must file another certificate of similar character; and I may add here parenthetically, in answer to your question, that the statute provides that any officer making a false statement relating to corporations, whether verified or not, shall be deemed guilty of perjury.

Q. Is there any provision as to the amount that must be paid in during the first year?—A. A company can not transact business until it has paid in \$1,000.

Q. That is the only restriction?—A. That is the only restriction.

Q. Is there no provision as to the length of time before paying, or that half or 25 per cent of the stock shall be paid in?—A. Let me answer you another way. The company has no capital stock beyond the amount that is paid in, but as they go up each step of the stairs they have to file a certificate that they are now, for instance, on the third step—that so much has been paid in.

PUBLICITY AS PROVIDED FOR BY THE ENGLISH LAW.

Q. Can you also state the provisions of the English law regarding publicity so far as it differs from the New York and New Jersey laws?—A. The New Jersey law is largely founded upon the English act, but is about 3 years behind it in point of progress. The English law, which in my judgment will have to be passed in all States that desire to stand as proper charter-granting States, is about as follows: All stock issued

by any company, in whosever hands it shall be or shall come, shall be deemed to be held subject to be paid in full in cash, unless before the stock is issued a contract shall have been filed in the office of the company, and open to the public, which shall show which part of the stock has been issued for cash and which for property, and which shall disclose the character and value of the property thus taken. The statute then goes on to provide that anybody may have a copy of that contract on payment of a fixed fee. That is publicity.

Q. In providing that the character of the property shall be named, does the law also require that it shall be located?—A. Now that is just where the English act is lame, and they have got an act in to meet that. That English act was so worded that they could file a document which did not fully disclose; consequently to-day there are two acts pending in England for greater publicity. One is before the House of Lords and the other before the House of Commons. I should have brought them with me if I had supposed the subject would come up; but I will try to describe them. One bill—that before the House of Lords—provides, first, that every statement contained in the promotion scheme shall be deemed to refer to money unless otherwise stated; second, that every director and officer of the company shall be held liable personally for all statements or prospectuses issued by the company, it being borne in mind at this point that under the English law every company is compelled to issue and file a prospectus. The statute then goes on to say that every director elected, whether he resigns or not, shall be held liable as a director and officer of the company until after his resignation has been filed in the register's office and the new director substituted in his place. So that there is somebody liable all the time for either the making of statements or the failure to make them. The bill in the House of Commons is somewhat similar, but adds this clause, which I regard as very important, although likely to give rise to a great deal of litigation: Every director and officer of the company shall be responsible not only for statements made, but shall have the same degree of responsibility if the prospectus fails to state any material fact. Now, that is the advanced English legislation, and this country is rapidly following England in that direction. You will pardon me for not having stated those bills more accurately; but I did not know I was to be asked in regard to them or I should have produced them here.

Q. (By Representative LIVINGSTON.) Do you not think that if that law was adopted in the United States most of these companies would go out of existence?—A. No; I do not; I can not go as far as that with you, because I think there are good companies and bad companies.

Q. Of which are there the most?—A. Well, I think if you and I should check down the list, we should find a good many that would evaporate.

Q. You would find a good many directors that would?—A. You are right there. If you will tie a director on the cowcatcher of the engine of every train, you will never have a front-end collision.

THE RIGHT OF STOCKHOLDERS TO EXAMINE THE BOOKS OF NEW JERSEY COMPANIES.

Q. (By Mr. CLARKE.) Do the large companies, organized under the New Jersey law, with which you have been professionally connected, keep a set of books in New York also?—A. Yes; almost all of them do.

Q. As a matter of practice, which books are most consulted by the stockholders, those in New York or those in New Jersey?—A. Those in New Jersey are consulted by the stockholders.

Q. (By Mr. C. J. HARRIS.) The stockholder could not consult the books in New York except as a matter of courtesy, could he?—A. As a matter of law he could not, and as a matter of courtesy it would very much interrupt transfers of property for everybody to come to see them at the New York office; therefore in New Jersey they have either wired or mailed to them every day every transfer, and in the large companies that I have had to do with those transfers are absolutely balanced every day at 3 o'clock.

Q. (By Mr. CLARKE.) As a matter of practice, is there a constant or even a frequent examination of stock ledgers and transfer books by stockholders in these corporations?—A. Do you speak of the companies that I represent?

Q. Yes.—A. Yes; there is. You would be surprised at that. Just before a dividend was declared by one of these companies there were 77 inquiries in 8 hours in one afternoon, and the day does not go by that we do not get requests—telegrams and letters—as to what this man holds or that man holds. The only question we ask is whether you are a stockholder. If you are, you are entitled to it.

Q. In case of the neglect of the stockholder to comply with the law of New Jersey, and of the neglect of the New Jersey official to enforce the law, is there anything to prevent a stockholder residing in another State from obtaining a remedy or relief in the

courts of the United States?—A. The question as to whether a United States court which is situated in another place than where the principal office of the company is located has jurisdiction, has never yet been determined. I should say that the rules of the United States courts as to jurisdiction of defendants would govern that; but the United States court of the district embracing New Jersey would have jurisdiction at the instigation of any stockholder. And there is a provision in the law of the State of New Jersey that the chancellor may, on application by any stockholder and without any notice to the other side, compel the books to be brought to a designated place and kept there; and the failure to obey that order for 10 days vitiates the charter.

CLASSES OF STOCK OF NEW JERSEY COMPANIES.

Q. Have you been or are you familiar with the capitalization of the several companies organized under the laws of New Jersey with which you have been professionally connected?—A. Yes.

Q. Most of those companies have two classes of stock, I suppose?—A. Yes.

Q. Preferred and common?—A. Yes.

Q. In your opinion, does the common stock represent cash or property actually paid in?—A. That varies greatly. I could tell you of an instance where the preferred stock consisted simply of the working capital contributed by outside parties and where the common stock represented the plants put in, without any element of good will. I have always considered that the safest method of capitalization.

Q. Is good will, or the opportunity to do business, considered an element of capitalization in these companies?—A. I regard it in a majority of instances as worth more than the bare plant. I know of a house in New York of national reputation which failed 3 years ago. Its assets have all been disposed of excepting its good will. For that good will \$1,000,000 in cash was offered within the last month, although it was a defunct organization.

RIGHT OF STOCKHOLDERS TO SEE BOOKS RESUMED.

Q. (By Representative LIVINGSTON.) Do you remember the Ramapo case, where Mr. Hearst asked to see the books, and was, I think, refused, upon which he bought stock, but is still, I see from a newspaper statement, refused permission to see them? Is that the condition in New York? Do you have to take out a mandamus in order to see the books? Was that statement in the papers a fair representation of the condition of affairs?—A. I have not seen it; but almost any corporation that does not want to let you see their books will send you to the courts for the privilege.

Q. Is the Hearst case an example of the practical working of your New York law?—A. Well, without taking the newspaper account of it, I think that if a corporation does not want you to see its books, you will have to go through quite as much litigation in New York. There is no such thing in New York as the simple one-man power that exists in New Jersey to compel it. If that case had occurred in New Jersey they would simply have gone and got an order from the chancellor, which would not be appealable, and which would have designated a place where within 24 hours those books would have been brought and opened wide. The failure to do it would be followed by an absolute annulment of the charter. The only question in such a case would be, are you a stockholder? There is no such law in New York.

Q. (By Mr. JENKS.) Suppose the case of a member of a competitive company who buys a few shares of stock for the purpose of getting information. Is not that person, under the laws of both New Jersey and New York, entitled to that information?—A. There, you see, the burden shifts from the individual on to the corporation. If a man should purchase a few shares of stock with an intent which I felt confident I could show to the court was bad, I would go into court and get an injunction against him before he could get at me with a demand. Then the burden is on me, representing the corporation, to show that he is bad. Because in New Jersey, in this case, presumptively every man is guilty until he has been declared innocent, and the burden is on the man to show that he is innocent, as he is presumed to be guilty. It is otherwise in most of the States.

Q. You say that under the laws of New Jersey the chancellor can at any time order the books of any corporation to be brought into the State and exhibited to the stockholders?—A. Yes.

Q. Is not that in itself a sufficient protection for most of the stockholders where the real business of the corporation is carried on, we will say, in New York City, and where the books themselves are kept in New York City?—A. You and I will not confuse the meaning of the word "books." First, there is the stock book and the transfer book and the list of stockholders that must never go out of the State. Now,

if for any reason a stockholder desires to see the books of account, he goes direct to the chancellor, who sits in a very informal way, and gets an order. So we will not confuse the word "books." I understand you to mean documents, vouchers, and papers which do not relate to so much of the publicity of the company as respects stockholders.

Q. Suppose we ask the same question, however, with reference to the stock and transfer books. Would it not be a sufficient protection for the stockholders if the books could, in that way, be brought into the State?—A. No.

Q. Why? Is it not for the information and benefit of the stockholders that the books are kept there continually?—A. That is the difference between New York and New Jersey. But I maintain that those books should be like water at the bottom of the pump. If your pump is there, you do not want to get a mandamus before you can get the water. Now, a stockholder who has got two shares of stock ought not to be compelled to hire a lawyer and get out a mandamus in order to know who his associates are. The boot should be on the other fellow. They do not generally wish to pay that. In case of failure the corporation should pay \$200 a day, and not compel the stockholder to pay \$200 a day to get a lawyer.

THE TREATMENT OF FOREIGN CORPORATIONS DOING BUSINESS IN NEW JERSEY.

Q. (By Mr. FARQUHAR.) I should like to read you section 101 of the general corporation act of New Jersey, and ask your opinion about it.—A. Am I to be silenced with my own book?

Q. (Reading.) "When, by the laws of any other State or nation, any other or greater taxes, fines, penalties, licenses, fees or other obligations or requirements are imposed upon corporations of this State, doing business in such other State or nation, or upon their agents therein, than the laws of this State impose upon their corporations or agents doing business in this State, so long as such laws continue in force in such foreign State or nation, the same taxes, fines, penalties, licenses, fees, obligations, and requirements of whatever kind shall be imposed upon all corporations of such other State or nation doing business within this State and upon their agents here; provided, that nothing herein shall be held to repeal any duty, condition or requirement now imposed by law upon such corporations of other States or nations transacting business in the State." Now, the question is, by what process can you make that retaliatory upon the State of Wisconsin, Minnesota, Illinois, Missouri, or Ohio?—A. In my judgment, that is a provision that ought to be passed by every State in the Union. It answers the question so often asked, why should New Jersey grant charters to do business in the State of Illinois, where it is forbidden to a domestic corporation to do it. Now, the States of New York and New Jersey, and many others, have passed that provision, which means just this: So far as fees and the powers to do business are concerned, every foreign corporation must be subject to all the restrictions to which domestic corporations are. In other words, they stand on just the same footing; and, in my judgment, if that law was passed in every State, we should hear an end to the discussion as to whether Delaware corporations ought to go to New York and New York corporations to Delaware, or elsewhere, because then they would all be placed upon an equality, it being, as I understand the law, that a New Jersey company may have all its powers, under the law of comity, in Illinois in the absence of a statute bringing a foreign corporation down to the same level as a domestic. But the moment that statute is passed in a State the law of comity disappears. We passed that law in New Jersey, if you desire to know the reason for it, because the laws of New Jersey are very strict as to building and loan associations and other corporations which attempt to gather in the money of the poorer classes. We found that foreign building and loan associations were coming into New Jersey, over which the commissioner of banking and insurance had no power, and were gathering money from our farmers, wage earners, mill help, and other people of equal means, and were not subject to any other supervision. Therefore we passed that act to drive out and keep out of our borders financial institutions concerning which we knew nothing, of which we could find out nothing, and which we considered fraudulent.

Q. Have there been any suits under this retaliation act?—A. Yes. You notice that the last clause of the act takes it out of the retaliation class, because it excepts all obligations. There has been an injunction granted by the court of chancery of New Jersey against one of the national building and loan associations coming in, although I may say, and it is fair to the chancellor to add, that it was shown not only that they were a foreign corporation, but that they were not in a solvent condition. We thought it wise to show both facts and not rely upon the bare statute. We found that a great many Italian bankers, driven out by the laws of New York, had come

over to Jersey City and put up the name "banker." When we drove them out under our banking laws, they went to New York and founded a corporation, using the word "trust." Now under the laws of New York you can form the Washington Trust Company, although under the act it may be without any trust feature at all. In New Jersey you can not use the word "trust" unless you are under the banking act, have paid in your \$1,000, and received the approval of the banking commissioner. Now, those Italians would go to New York and organize a New Jersey Trust Company, then turn around and open a little place right near the ferry, and get their fellow-countrymen as they came off the steamers and fleece them. Under that act just as soon as an Italian attempted to do business as a trust company in the State of New Jersey we locked him up, and they all went back across the river again. That was another intention of that act. I am free to say that I believe if the laws of New Jersey are carried out they are as restrictive as any others in the Union, although there might be some additions made to them.

THE LIABILITY OF HOLDERS OF STOCK.

Q. (By Representative LIVINGSTON.) If I buy stock at 50 per cent, can you assess me under the laws of New Jersey for 100 per cent?—A. Of the company?

Q. Yes.—A. If you actually bought of the company and paid the money into the company to the extent of 50 cents on the dollar you can only be called upon to pay up the other 50. There is no double liability, as there is in Kentucky, Ohio, and some other States.

THE TAXATION OF NEW JERSEY CORPORATIONS.

Q. (By Mr. FARQUHAR.) Part of section 203, after providing for an annual license fee and franchise tax, says (reading): "That all other corporations incorporated under the laws of this State, and not hereinbefore provided for, shall make annual return to the State board of assessors of such information as may be required by said board to carry out the provisions of this act, and shall pay an annual license fee or franchise tax of one-tenth of 1 per centum on all amounts of capital stock issued and outstanding up to and including the sum of \$3,000,000; on all sums of capital stock issued and outstanding in excess of \$3,000,000 and not exceeding \$5,000,000 an annual license fee or franchise tax of one-twentieth of 1 per centum, and the further sum of \$50 per annum per \$1,000,000, or any part thereof, on all amounts of capital stock issued and outstanding in excess of \$5,000,000." Now, can you give any particular reason why such a sliding scale as that was adopted, giving the great moneyed interests an advantage over those with less capital?—A. I will answer that by saying that when that statute was passed we built the house for the boy and that the man has afterwards grown up. In other words, New Jersey is confronted by a new condition. When that statute was passed we never dreamed of \$59,000,000 corporations. I can remember the time when I took in a \$1,000,000 corporation and was proud; to-day I sneak in at the back door because it is so small. The legislature has not had time to meet and pass on this question; it is new. We have not changed the laws; we have not had time. It simply created a furor in the secretary of state's office when we filed the charter of the Federal Steel Company for \$200,000,000. That act was passed when corporations were at their normal size. That day has passed. Now, what the legislature of New Jersey will do with the new situation I do not know. It is a boy's clothes that the man is now wearing.

Q. I want to know whether you think that is an adequate and proper discrimination in any franchise tax? Why should a great corporation with \$30,000,000 or \$40,000,000 be taxed less heavily than one with \$2,000,000 or \$3,000,000?—A. My experience has always been that if you buy a man's suit you have got to pay more for it than for boy's clothes; and I do not see why the same reasoning does not apply to the State.

Q. (By Representative LIVINGSTON.) To put it for the sake of illustration, it is cheaper at wholesale than retail.

Q. (By Mr. FARQUHAR.) That was the question I was going to ask. Why put the relationship of wholesaler and retailer on your public franchise that controls such large amounts of money of that kind? These large amounts of money always go into the stock markets; we can not escape it. There are only one or two great corporations that can hold their own and that do not care whether they go into the stock market or not, like the Chemical Bank in New York and others we know. We know that this money is held within 10 or 12 families in this nation—the consumable capital. I do not know whether there is any prospect of an amendment of this. I want to know whether New Jersey discriminated in favor of great capi-

tal.—A. She discriminated before she knew great capital to exist; a new condition of affairs is confronting her.

Q. Still, this very premium that is placed on it is an invitation for great companies to come into New Jersey?—A. No. The Federal Steel Company paid the State of New Jersey \$40,000 for the privilege of coming in and pays about \$17,000 a year tax, when it could have gone to Delaware with reduced capital for \$50. It is an inducement, yes; but that it is a controlling inducement I do not know.

Q. At the same time you must take into account that Delaware chartered stock would not sell equally well with New Jersey stock; consequently where you would gain in the beginning you might lose in the end.—A. I fully agree with you, and am glad to hear so frank an opinion.

THE POWER OF THE FEDERAL GOVERNMENT TO REGULATE CORPORATIONS.

Q. (By Mr. CLARKE.) I should like to ask if you have considered the subject of a Federal corporation law.—A. Yes; I think there are only two alternatives for this country. I think that your commission is confronted to-day with the same situation that existed in early times when the question of banks arose, even so far back as the time of Alexander Hamilton. The question, as has been said here to-day, of corporations has, in my judgment, gone so far as to come under that clause of the Constitution of the United States which refers to public welfare. The subject to-day has got beyond being a State question; it is a national question; and you have got to get down to one of two things. You have got to come down to a statute in each State that will place a foreign corporation on the same level as a domestic, or else go higher up and grant a Federal charter to those corporations which are truly and in the widest sense Federal companies. I notice the tendency to-day of corporations to organize under such names as the Federal Steel Company, the Federal Telephone Company, and the United States and the American. If they are truly what their names designate, they should be under the laws of the United States, and I believe that Congress has the power under the Constitution to pass a law creating national corporations.

Q. (By Representative LIVINGSTON.) And regulating the manner and methods of doing business in the States?—A. Yes; if I understand your question. And I believe further that if you will pass such a law wisely, first, with safeguards in every direction; second, with liberality on unimportant matters, giving each corporation as to its internal management that does not affect the public a right to do as it sees fit, you will find the larger corporations will be seeking the advantages of the national act, just as to-day the State banks and national banks are distinguished by their size and importance. That is the only remedy for the existing condition.

Q. You think that, under the Constitution of the United States, considering the power reserved to the States, that can be done? You have looked into it?—A. I have looked into it. I should consider the assumption of any such power by Congress as dangerous from the point of view of those who are opposed to greater centralization and less State power. As to whether or not an amendment of the Constitution would be required in order to pass certain national corporation acts, I believe that facts can be shown sufficient to bring the subject under the public welfare clause, which, as was said in the Marshall case, would leave it entirely to Congress to decide whether or not it was a proper measure, and Congress having in its judgment decided that it was, the United States Supreme Court would be bound to sustain it, because they are the sole judges of the law and the fact in that respect.

Q. (By Senator MALLORY.) I do not like to engage in a constitutional argument, but I should like to ask a question on the subject of the general welfare clause. There are two parts of the Constitution in which the words "general welfare" are used. One is in the preamble, and the other is the taxing clause where Congress is authorized to impose taxes for certain purposes, winding up, "for the general welfare." Now, as I understand it, you contend that the expression "general welfare" in that part of the Constitution—for that is the only one to which it is applicable—would give Congress power to do anything which, in its judgment, is for the general welfare?—A. Permit me to retire behind the plea that I had no expectation, when I came here, of delivering an opinion on that subject; but I was really candidly giving my individual conviction. In the First National Bank case the United States Supreme Court decided, as I understand it, that, under the general welfare act, because the question of finances had become of universal interest, Congress had power to pass a corporation act. The decision then went on to hold that, inasmuch as it was found by Congress that the question of banking was a national question and a matter of public welfare, the court—having found affirmatively in the first place that Congress could create certain corporations—would not interfere with the judgment that Congress had passed on the subject.

Q. Was it not rather on the ground that the national banks as authorized were instrumentalities of government?—A. You are right, and that brings us right down to the point of discussion.

Q. The national banks were authorized on the ground that they were instrumentalities of government, and the incorporation of the Pacific Railroad, which is the only other instance, I believe, is on the same ground. They were at the time regarded as necessary instrumentalities of government; but when it comes to the pure ground of general welfare, it seems to me that this is a new doctrine that I am listening to now.—A. It was so held in the Pacific Railroad and bank cases, that are in my possession to-day; and it is my opinion that trusts and industrial corporations are just as much a matter of public welfare as was the incorporation of the Pacific Railroad.

Q. The question is not so much whether they are a matter of public welfare as whether they are instrumentalities of government.—A. I am only advancing a private opinion. I am not a very deep student of the subject.

Q. (By Mr. FARQUHAR.) The Maritime Canal Company got a charter from the State of Vermont which it was claimed was not wide enough in its provisions. One of its purposes, as you know, was to build the Nicaragua Canal. They then came to Congress and asked for and got a charter. Was not that charter granted because Congress felt that the company was simply a representative of this country in building a canal in a foreign land through concessions under treaty of a foreign and friendly power?—A. Yes.

Q. And that is as far as Congress has ever gone in respect to charters?—A. I think that is right. But I think Congress has the power to say to-day "This question has become a national question." If Congress assumes to state as a fact that they are the judges of the propriety of legislation, and pronounce it proper legislation, I do not think the United States Supreme Court can get away from the Marshall decision or the Alexander Hamilton opinion.

Q. In other words, you think the commercial and economic forces rule. Take a proposition like that of the unconstitutionality of a river and harbor bill. They are now perfectly constitutional and normal?—A. Yes; that is right.

Q. And yet, according to the solemn vetoes of Presidents and the authority of attorneys-general they were always unconstitutional?—A. That is right. Congress is just as much confronted with the new situation to-day as the State of New Jersey, and if it becomes too big for the State of New Jersey, there is only one power to take it up, and that is Congress.

THE TRANSFER OF STOCK IN NEW JERSEY CORPORATIONS (RESUMED).

Q. (By Mr. KENNEDY.) I believe a gentleman connected with one of these corporations testified yesterday that they kept transfer books in Chicago, New York, and East Orange, N. J.?—A. Yes.

Q. And, under the law of New Jersey, the transferring should be done in New Jersey. I should like to ask you if that is just a formal matter, while the real transferring is done either in New York or Chicago?—A. I noticed that the gentleman did not make himself clear. There is no law in the State of New Jersey that compels a corporation to do all the transferring in the State. It compels them to have a known place in the State where you and I can take our single shares and get them transferred. They have a perfect right to transfer all the rest of their stock in a half dozen other places if they want to, but every day they have got so to report their transfers that you and I can go there with our single shares and ascertain who all the rest are and where they are.

Q. (By Mr. FARQUHAR.) No matter where they are transferred?—A. They have got to be posted that day in New Jersey. The reason is that very many large corporations desire to have the public own the stock but do not want them to have any voice in the management. Therefore, if you and I own only 10 shares apiece in some company, and we do not know who the stockholders are, but the officers do, they can go and get votes and proxies enough to get themselves reelected; whereas, if the others are known, if we can go to the stockholders of the organization, we can win, or at least hold down an election. That is the objection to it. That is the way it is in the Delaware and West Virginia laws; men can perpetuate themselves in office. That is where you and I can not do anything about it; we are gone.

RECENT ACTION OF CORPORATIONS EXPLAINED.

Q. Do you know that many of these large corporations have not even attempted to comply with that law, but that, owing to a recent opinion of a New York judge, McAdam, I believe, they have taken their transfer books across the river to Jersey

City and other places?—A. In the first place, the decision of Judge McAdam was 10 years ago, in *Cruse v. Dusenberry*, 1 City Court.

Q. It has been quoted recently.—A. In the next place, I am going to assume that a great many corporations have not complied with the law. Inasmuch as that decision of Judge McAdam held that all the officers would be liable as partners, and inasmuch as it was an announced fact that this Industrial Commission was going to examine into that condition and that it might make them liable as partners, they were naturally induced to use transportation a little. I do not carry any freight and I have not sat on any box, yet I do not know but what if I was in that condition I should ship everything into the State as soon as I could, and come here and frankly state to the commission, "We put it there day before yesterday." With the investigation you have made, I should not attempt to say we have been there all the time.

I should like to say one thing more for New Jersey, and that is that it preserves the integrity of the laborers' lien beyond any State in the Union. Every dollar due for labor must first be paid over and above everything else. And they draw a line in New Jersey that they do not in New York; they do not include officers of the company in the class of labor liens. They protect labor liens ahead of mortgages, and things of that sort.

Q. Do those books [indicating books on the table] belong in New Jersey?—A. They are a part of the books. They belong to somebody else, to show you how the thing may be done correctly in four or five cities and yet be done every day.

(Testimony closed.)

WASHINGTON, D. C., October 18, 1899.

TESTIMONY OF HOWARD K. WOOD,

Assistant secretary of the Corporation Trust Company of New Jersey.

The commission met on Wednesday, October 18, 1899, Mr. Clarke presiding. Mr. Howard K. Wood appeared at 2.10 p. m., and, being duly sworn, testified as follows:

THE CORPORATION TRUST COMPANY OF NEW JERSEY.

Q. (By Mr. JENKS.) Will you give us your full name?—A. Howard K. Wood.

Q. Your residence?—A. No. 60 Grand street, Jersey City.

Q. Your business?—A. Assistant secretary of the Corporation Trust Company of New Jersey.

Q. Does this Corporation Trust Company act as the agent of corporations?—A. It does.

Q. Can you furnish us with a list of the corporations this trust company represents?—A. We can, if necessary.

Q. You have a list with you?—A. I have a list.

Q. Will you kindly furnish us with a copy in a day or two or leave one with us?—A. I will send you one.¹

ITS RELATION TO THE CORPORATIONS IT REPRESENTS.

Q. Do you receive from these companies you represent any written authority to represent them?—A. We do; in each instance we require it.

Q. In what form is that authorization given ordinarily?—A. It is usually a printed form, which follows the statute pretty closely, showing the requirements of the law and directing us to comply with them for the company.

Q. Perhaps you would be kind enough to read the form of authorization?—A. (Reading:)

"Ordered, (1) That, in compliance with the laws of the State of New Jersey, this corporation have and continuously maintain a principal office and place of business within the State of New Jersey, have an agent at all times in charge thereof, and upon which agent process against this corporation may be served, and in said office keep the stock and transfer books for the inspection of all who are authorized to see the same and for the transfer of stock. That the books in which the transfers of stock shall be registered and the books containing the names of the shareholders shall be

¹ Sent, and on file.

at all times, during the usual hours of business, open to the examination of every stockholder at said principal office.

"That the name of this corporation be at all times conspicuously displayed at the entrance of its principal office in this State.

"And be it further ordered, until this resolution be duly rescinded,

"(2) That such office and place of business be in and at the Corporation Trust Company building, 60 Grand street, Jersey City, N. J., and that this company be registered with the said trust company.

"(3) That the Corporation Trust Company of New Jersey be, and hereby is, appointed the agent of this corporation for all of the aforesaid purposes, and the agent of this company upon whom legal process against this corporation may be served within the State of New Jersey, and also the transfer agent of the stock of this company."

We require that in each instance.

NUMBER AND CAPITALIZATION OF COMPANIES REPRESENTED.

Q. Can you file with us copies showing just the authorization you have read there?—A. I have between 600 and 700 of these authorizations, one from each of the companies we represent.

Q. You require that form from all the companies you represent?—A. Yes.

Q. About how many companies do you represent?—A. Between 600 and 700 at the present time.

Q. Can you tell us about how much capitalization that represents?—A. I should say between one and two billion. It is something over a billion, but I can not give the exact figures; I know it is over a billion, but we have not figured it recently.

THE WORK PERFORMED BY THE TRUST COMPANY.

Q. Have you displayed, in accordance with the terms of the law, before your office, in a conspicuous place, signs of each one of these companies that you represent?—A. Yes; on the outside of the building, where they can be read easily by anyone.

Q. Do you keep in your office the stock and transfer books of every one of these companies?—A. Yes.

Q. You yourself are personally authorized to make the transfer of stock of these companies?—A. Yes.

TRANSFERS OF STOCK MAY BE MADE IN OTHER STATES.

Q. May I ask whether any of these companies have transfer offices in other States?—A. A few of them have.

Q. Where?—A. New York City principally; quite a number in Boston, and some in Chicago.

Q. Where there are transfer offices in other States what record do you keep in your office?—A. We keep the transfer books in our office and the stock register as required by law. I can show you that now.

Q. (By Mr. FARQUHAR.) Have they any authority under their charters to have these stock books elsewhere than in New Jersey?—A. They do not keep the stock books outside of the State; they merely make the transfer.

Q. They have authority under their charters to make transfers in offices outside of the State of New Jersey?—A. The statute does not say they shall have only one office. The transfers must be kept in New Jersey and are sent there every night.

Q. Why do they have transfer offices in other States?—A. For the convenience of stockholders.

Q. (By Mr. JENKS.) You have in your office a list that is corrected up to date?—A. Yes.

NATURE OF THE INFORMATION SOUGHT BY STOCKHOLDERS.

Q. (By Representative LIVINGSTON.) You always exhibit that list on the demand of any stockholder?—A. I do not know that that list is asked for. We can show that to the stockholders.

Q. (By Mr. JENKS.) If any stockholder asks to see the list, with the holdings of each, you show it to him?—A. Yes.

Q. Are requests of that kind frequently made by stockholders?—A. Requests are not frequently made to see the list; they ask more often about individual stockholdings.

Q. They give you the name of a stockholder and ask as to his holdings?—A. Or a number of stockholders, but not simply to see the list in general.

Q. When such a question is asked, you show the list?—A. If we are satisfied he is a stockholder.

Q. (By Mr. FARQUHAR.) Do not the questions generally asked relate to the pending negotiations with respect to transfers?—A. Largely, yes.

Q. (By Mr. JENKS.) Do you furnish information of that kind to stockholders who send in their requests by mail or telegram?—A. We do not do that unless we happen to know the signature of the stockholder.

Q. You want to be perfectly sure it is a stockholder?—A. We want to be perfectly sure. If we are familiar with the signature and he writes us on his letter head, we will give it.

Q. Or if you get a telegram from the office where he is you will answer the telegram? You want merely to be satisfied as to the genuineness of the request?—A. Yes.

SOURCE OF INQUIRIES ABOUT STOCKHOLDERS.

Q. (By Representative LIVINGSTON.) Do inquiries of that class frequently come from Wall street gentlemen?—A. Not so frequently; more often from out-of-town stockholders who want to know something of the stockholders. We do not get them very frequently from Wall street.

Q. You get numbers of them from Wall street?—A. They come from all over the country. We have so many stockholders in various companies, they come from all over the country.

THE WORK OF THE TRUST COMPANY EXPLAINED.

Q. (By Mr. JENKS.) You speak of the stock and transfer books; do you include in that the stock-certificate book?—A. That is a different book and does not have to be kept in New Jersey.

Q. You do not keep that in your office regularly?—A. No.

Q. Do you know whether the stock-certificate book gives the name and address of your company as transfer agent?—A. Sometimes it does and sometimes it does not; usually it does.

Q. If you will be kind enough to explain what your method is?—A. (Showing book.) This applies to one of the largest companies, which has a transfer office outside of the State. This is the transfer sheet on which the transfer is actually made by the attorney of the person making the transfer, and is sent to our office every night and filed there, and from this sheet is written up the stock ledger. This ledger is really an alphabetical list of the stockholders, showing the date of the transfer, the number of shares of stock, the name of the stockholder, from whom transferred, and to whom.¹ When the transfer is made it shows the whole.

Q. That is kept and balanced up every day?—A. Yes.

Q. For each company you represent?—A. Yes. Very frequently we have to work nights to keep these books up.

THE TRANSFER OF STOCK LOANED OR DEPOSITED AS COLLATERAL.

Q. (By Representative LIVINGSTON.) Do you ever loan these stocks for the time being to bankers, jobbers, and brokers?—A. Loan the stock? We do not keep the stock: as a rule, the stock is returned to the registrar.

Q. I will ask you if it is not done?—A. You mean the stock or the transfer sheet?

Q. I mean the certificate of stock. Suppose a man oversells his Federal Steel and wants to borrow, can he?—A. We have nothing to do with that.

¹ Name, _____, Address, _____

[illegible]

Q. It is not lawful under your charter to do it?—A. I do not know about that. The stock simply comes to us to be transferred and we send it to the registrar.

Q. What arrangements have you made for borrowing or loaning the stock?—A. Absolutely none. If done, it is done outside by the owner of the stock.

Q. (By Mr. JENKS.) You are the registration agent?—A. We are the registration agent.

Q. You keep a record of every transfer that is made—a list of sales?—A. Yes.

Q. (By Representative LIVINGSTON.) Then if I, as a stockholder, should loan my stock and not recover it, how is that transfer carried on the books? Suppose I borrow money from the Fourth National and deposit my stock as collateral; suppose I am never able to recover it, how would that stock be transferred?—A. So far as we are concerned, the stock would be lost; there would be a record showing you to be entitled, say, to 100 shares of stock, and if the stock is pledged as collateral, we should not know anything about that. Of course, if you could not reclaim the stock, you would have to assign to the bank and we should make the transfer to them.

Q. Suppose I did not do it?—A. It is the bank's fault if it is not transferred to them.

Q. The bank takes that risk when they borrow the stock and you are not in it?—A. We know nothing about it. If the bank brought in the stock we would not transfer it. The stock would remain in your name unless you directed us to transfer it.

Q. (By Mr. FARQUHAR.) Or the showing of a power of attorney to transfer it?—A. Yes.

Q. Either the party in person that owns the stock or one holding the power of attorney to make the transfer?—A. Yes.

METHOD OF KEEPING THE TRANSFER BOOKS.

Q. (By Mr. JENKS.) What other books do you keep besides this ledger?—A. This is the stock ledger, which, of course, is kept in slightly different forms to meet the requirements of each company, but generally the book is covered by this one form.

Q. Do you, in connection with this business, keep other books of a different nature?—A. We keep the stock ledger and the transfer books.

Q. Will you kindly let us see the form of the transfer books, or the form in which they are kept?—A. It shows the date of the transfer and the number; "For value received I, ———, do hereby sell, assign, and transfer to ——— shares capital stock of the ——— Company, standing in my name on the books of the company." It is signed by the party and by the Corporation Trust Company, by the officer whose duty it is to make the transfer.

Q. (By Representative LIVINGSTON.) You do not require a valuable consideration? Is that left out?—A. That is shown on the book certificate; it is there, "for value received."

Q. (By Mr. JENKS.) The amount of value received is not stated?—A. It is the usual form, "for value received."

Q. These two books and the way they are kept show substantially all of your business?—A. Yes; that is, as regards stock.

Q. What other business do you have as a registration or transfer company?—A. We maintain the actual business office, putting up the signs you mentioned. The office is kept open during business hours, and there is always an agent on whom process can be served, and it is customary to keep such papers as may be necessary.

ANNUAL REPORTS KEPT ON FILE BY THE TRUST COMPANY.

Q. What other papers do you ordinarily keep on file? Do you keep, for instance, all the annual reports they are required to make to the secretary of state?—A. We keep copies of the annual reports.

Q. Is it one of the requirements of your contract that the reports shall be filed with you?—A. It is. We see that they are filed.

Q. Suppose the annual report of one of the companies you represent ought to be filed on some date and you do not receive it by that time; what do you do?—A. We go after them personally or by letter and make them file it. If they refuse absolutely to comply with the law we terminate our contract with them. We do not care to represent them unless they comply with the law.

Q. (By Mr. FARQUHAR.) Is there a liability attaching to your company as a trust company, provided the corporation does not comply with the law?—A. Yes; we hold ourselves out to the world as being determined to see that they comply with the law, and so we see that they do comply with it.

Q. It is your custom to see that the regular annual reports are filed, and if they do not file them you terminate the contract. Can you say with perfect certainty that all the companies you represent have complied with the law in that particular?—A. Yes.

Q. Can you state, as a matter of fact, that you have terminated contracts because the companies have not complied with the law?—A. We have; yes. I can not give you the names at the moment, but I can furnish you with a list of the companies which we have discontinued.

Q. Will you be kind enough to do so?—A. Yes.¹

Q. Can you give us an estimate of the number of companies with whom you have discontinued the contract?—A. I do not think I can.

Q. Are there several of them?—A. Several of them. Of course, they hardly ever go as far as that, so there would not be very many.

Q. Can you furnish us before you leave to-day the blank forms you use, a blank page of the ledger and transfer book?—A. Yes.²

METHOD OF REGISTERING TRANSFERS (RESUMED).

Q. (By Senator MALLORY.) I do not understand your method of noting the transfers. How is your attention called to the fact that there is a transfer of shares from A to B?—A. The assigned stock certificate is handed in showing the transfer on the back.

Q. That is the only evidence you have?—A. Yes.

Q. You do not have anything else?—A. We do not have anything else.

Q. The original certificate signed by the parties who transferred the stock is the only evidence you have?—A. Yes.

Q. How long do you keep that certificate, as a rule?—A. Usually it is handed in to us one day and goes to the registrar the next day.

Q. To the registrar?—A. To the trust company which is registrar of the stock.

Q. Do you not register it yourselves?—A. We can not and comply with the requirements of the stock exchange where we are the transfer agent. The stock is registered by another company.

Q. (By Mr. JENKS.) Kindly explain to us the full process by which the stock is sold, how it goes through the hands of the registrar and your company and back again.—A. I would rather have that explained by the auditor; he is more familiar with it perhaps. I should have said the stock is returned to the owner instead of to the registrar.

Q. (By Senator MALLORY.) The stock is presented to you in Jersey City?—A. Yes.

Q. What do you do with it? What is the process you put it through?—A. We make the entry on the transfer book, post it in the ledger, then countersign the new certificate, cancel the old one, and return the new certificate to the party authorized to receive it.

Q. (By Mr. JENKS.) And file the old one?—A. If we are the custodian of the stock-certificate book we file it, otherwise we return it to the company to be filed in the stock-certificate book.

NO REASONS GIVEN FOR FAILURE TO FILE ANNUAL REPORTS.

Q. When you have companies who have failed to comply with this law in the matter of filing annual reports, what reasons have been given for their noncompliance with the law, or have they given any reasons?—A. Usually no reasons; usually the attorney says: "It is none of your business."

Q. Whether they file the report or not?—A. Yes; we know what that means; that there are reasons, and we terminate the contract because we do not care to have contracts of that kind.

Q. (By Mr. FARQUHAR.) Are the reasons usually given by the company?—A. They usually give no reasons why they do not care to file this report.

THE PENALTY FOR FAILURE TO FILE ANNUAL REPORT.

Q. Can parties in case of noncompliance with the law recover \$200 a day against them?—A. They can; yes.

Q. Is that done that you know of?—A. I do not know of any instance personally.

Q. So you do not know whether the law is carried out or not in that respect?—A. Not absolutely; I do not know of any case.

¹ Not filed.

² See p. 1061, footnote, for stock ledger.

Q. But they are all aware of the penalty attached to the law?—A. They are all aware of the penalty; yes.

THE COMPENSATION OF THE TRUST COMPANY.

Q. (By Mr. JENKS.) Doing this work for these various companies you expect some compensation, of course?—A. Usually; yes.

Q. What is the method by which you receive pay from them; is it so much an entry or so much for a period of time?—A. So much for a period of time, so much per month, or so much per year.

Q. The amount you charge depends on the amount of business done?—A. The amount of work actually done.

Q. You make a contract as to what the compensation will be when they first register with you?—A. Commonly at the end of 3 months, because it is usually almost impossible to tell how active their stock will be.

Q. You take them on trust for the first months and afterwards make a regular contract as to what the charge shall be?—A. Yes.

Q. (By Mr. KENNEDY.) Have you received a large number of books within the past few days from New York City or any of these companies?—A. None that I know of beyond the ordinary business.

Q. Do you know anything about a large shipment of books of this kind to the offices of these companies in Jersey City and other points?—A. Nothing beyond what I have seen in the papers. I know we have received none beyond the books due to come; on account of companies being organized, of course, we get books every day.

(Testimony closed.)

WASHINGTON, D. C., *October 18, 1899.*

TESTIMONY OF MR. FRANK R. HANSELL,

Secretary of the New Jersey Corporation Guarantee and Trust Company.

The commission met on Wednesday, October 18, 1899, Mr. Clarke presiding; Mr. Frank R. Hansell appeared at 2.37 p. m., and, being duly sworn, testified as follows:

THE NEW JERSEY CORPORATION GUARANTEE AND TRUST COMPANY.

Q. (By Mr. JENKS.) You may give us your full name and address?—A. Frank R. Hansell, 419 Market street, Camden, N. J.

Q. That is your business address?—A. Yes.

Q. What is your occupation?—A. Secretary of the New Jersey Corporation Guarantee and Trust Company.

Q. What is the business of this corporation?—A. Representing corporations in New Jersey and maintaining an office as required by the corporation laws.

Q. Is the method of doing business in your office substantially the same as, or is it different in some particulars from, that which we have had explained in the case of another company?¹—A. It is practically the same.

NUMBER AND CAPITALIZATION OF COMPANIES REPRESENTED.

Q. About how many companies do you represent?—A. About 500.

Q. How much capital is represented?—A. Well, at least \$500,000,000.

Q. Have you, in or on the outside of your office, signs displayed for every company you represent?—A. Every company; yes.

Q. Can you furnish us with a list of the companies you represent?—A. I can give it to you now; yes.

Q. The figures as to the capitalization of the different companies also?²—A. Yes.

Q. (By Mr. KENNEDY.) Showing the common and preferred stock?—A. No; the authorized capital.

¹ See testimony of Howard K. Wood.

² Filed.

RELATION TO COMPANIES REPRESENTED.

Q. (By Mr. JENKS.) Do you receive from these companies any written authorization to do this business for them?—A. We do; yes. I have nearly 500 here now from different companies we represent.

Q. Is it your practice to insist on this authorization?—A. Always. We do not consider that we really represent a company until it is signed and in our possession.

Q. Does the form of authorization differ in any particular from the one just read?—A. It is exactly the same.¹

THE WORK OF THE GUARANTEE AND TRUST COMPANY.

Q. You keep in your office the stock and transfer books?—A. The stock ledger and transfer books of all of them.

Q. The method of transfer is the same as explained before?—A. Yes.

Q. Do you keep also the alphabetical list of stockholders and the amount of holdings?—A. Yes.

Q. That is kept up every day?—A. Yes.

Q. What methods do you adopt with reference to the companies registered with you as to their compliance with the law regarding the filing of the annual reports?—A. We write them, or when they come into the office and hold their annual meeting we say, if the proper officers are there, we should like to have them sign the report before they go. If they leave without holding a directors' meeting and electing officers we wait a few days and then ask them to sign it, and keep on until we get it and see that it is filed.

Q. Do the stock sheets of all these companies give your name and address as transfer agent?—A. Many of them do; nearly all of them do.

Q. Do you yourselves sign the transfers of stock as transfer agent?—A. Yes.

METHOD OF REGISTERING THE TRANSFER OF STOCK EXPLAINED.

Q. Can you explain in a word or two the method you follow where stock is transferred out of New Jersey—in New York City, let us say—and the certificate is sent to you?—A. Yes. It is sent to the transfer agent in New York City and he forwards us a transfer sheet of this kind; these are smaller, but are the same thing as the larger, giving the names and the number of transferred shares. These are entered on the stock ledger.

Q. Does the stock ledger differ in form from the one shown to us before?—A. It is practically the same. It simply shows the stock here transferred to Crossen from the company, who has since transferred to another party. [Exhibiting certificate.]

Q. You enter from this sheet the details that come to you every day?—A. Yes.

Q. They are taken from that?—A. Yes.

Q. You post up the alphabetical list of stockholders and their holdings every day?—A. Yes.

Q. (By Senator MALLORY.) What becomes of the preceding certificates of stock?—A. Where certificates are sent to us for transfer?

Q. No. When you are notified of the fact that transfers have been made and the certificate of transfer is sent to you, what becomes of the old certificate?—A. That certificate of stock has been delivered to the company's office, and there a new certificate is made out as desired and signed by the proper officer. It then goes to the registrar, and after they are through with it both certificates are usually returned to the company's office, because that is where the brokers' boys come for them quite often. Sometimes they will go directly to the registrar. The old certificates are returned to the company, and, as a rule, pasted to their proper stub in the certificate book, so that when all the certificates are returned you have a full book of canceled certificates.

Q. You have nothing to do with the old certificates?—A. No.

TRANSFERS SOMETIMES MADE IN THE OFFICE OF THE GUARANTEE AND TRUST COMPANY.

Q. Do you ever receive them?—A. Sometimes the companies out of town will leave the certificate book in our office and ask us to keep it for them, saying, "We make very few transfers, and the proper officer will come and do it under your supervision." In that case we do it for them.

¹See testimony of Howard K. Wood, p. 1089.

Q. As a rule you know nothing about that old certificate?—A. Not as a rule, where the transfer is made out of our own office; where they come to the office we insist on seeing it and having the certificate guaranteed.

COMPANIES REPRESENTED BY THE GUARANTEE AND TRUST COMPANY COMPLY WITH THE LAW.

Q. (By Representative LIVINGSTON.) Have there been many violations of your State law in regard to these companies?—A. Well, of course I am only in a position to answer as to our own companies, and it is our boast that we keep them in good shape and see that they comply with the law.

Q. Have any of the 600 companies you represent ever failed to comply with the law of the State?—A. As to holding meetings, no.

Q. For any purpose?—A. Not to my knowledge. Of course, when a company will not do as we wish we cancel our contract with it. We do not care to have it.

Q. (By Senator MALLOY.) How long has your company been in existence?—A. About 4 years.

(Testimony closed.)

WASHINGTON, D. C., *October 18, 1899.*

TESTIMONY OF MR. JAMES MARWICK,

No. 27 Pine street, New York.

At a meeting of the United States Industrial Commission held at its offices in the Bliss Building October 18, 1899, Mr. James Marwick appeared at 3.45 p. m. and, after being duly sworn, testified on the subject of trusts.

BUSINESS OF THE WITNESS.

Q. (By Mr. JENK.) Will you kindly state your full name and business address?—A. James Marwick, 27 Pine street, New York.

Q. What is your business?—A. I am a chartered accountant and the auditor of the Corporation Trust Company of New Jersey.

Q. What is the nature of your work as auditor of this trust company of New Jersey?—A. I supervise all the work connected with the transfer business in New York.

Q. In New York City?—A. Yes, sir.

PURPOSE OF THE NEW YORK OFFICE OF THE TRUST COMPANY.

Q. Will you explain to us just what the nature of your work is in New York City, or how it is connected with the work of the trust company in Jersey City.—A. The office of the trust company in New York was established to receive certificates—to facilitate the work of the New York Stock Exchange. The broker sends the certificate to the office—

Q. That is, to your New York City office?—A. Yes; to our office, properly signed and stamped. We give in exchange for it a small slip, so that he can recover the new certificate when it is issued.

Q. The small slips that are issued are substantially receipts?—A. Just receipts; yes; so that he can identify the new certificate. We then make the transfer and make out the new certificate and have it recorded and properly signed in our new-certificate book. The following morning we deliver it to the registrar, who delivers it to the broker.

RELATION TO THE NEW JERSEY OFFICE.

Q. Then what relation exists between your office and the work you do there and the work that is done in the New Jersey office?—A. We receive the certificates and send the transfers over to the New Jersey office on the forms which you have been shown.

Q. When you speak of making transfers you mean you receive the certificates and send them to the transfer office and transfer them and they are returned to you?—A. We receive the certificate, which is in blank, and write out the transfer and send it over to New Jersey.

Q. And then in New Jersey they make the transfer on the books?—A. Each day our sheet is added to the transfer book, which is afterwards bound up; it is complete in every respect; every day shows the total up to date; it is signed and makes a complete record, and the best record we can have.

Q. And then you say the certificates are returned to the New York office; and to whom—to you?—A. We send the old certificates with the new certificates to the registrar, who cancels the old certificates and issues the new ones; then he returns the old certificates to us in New York, so we can answer any inquiry made by the New York Stock Exchange.

OLD CERTIFICATES FILED IN THE NEW YORK OFFICE.

Q. And you keep the old certificates in your office?—A. We file every certificate. I can show you any certificate filed in our office that has been out of the office and come back again.

Q. So that, as a matter of fact, these old certificates are all of them kept on file in your office?—A. Yes; if any question is asked by the New York Stock Exchange in connection with these certificates we can reply to it. We hold them instead of the company holding them, for the convenience of the brokers.

KIND OF BOOKS KEPT IN THE NEW YORK OFFICE.

Q. Now, in regard to the books that you use in this transfer business, do they differ in any respect from those already shown?—A. [Showing book.] This is my record book, or transfer book. I make a record of the transfer that I send over to New Jersey; this is my record here; this is written up in the corporation office in New York, as a record of what we send over to New Jersey. Then this is posted in a ledger. We post this in New York and balance up with the New Jersey office every 3 months or so; we have an exact list in both places.

Q. I suppose the ledger you keep in the New York office is exactly the same in all particulars as that kept in the New Jersey office?—A. They differ to a slight extent, but this is the latest form, a self-balancing ledger.

RELATION OF THE EASTERN OFFICES AND THE CHICAGO OFFICE.

Q. How do some of those companies that have transfer offices, not simply in New Jersey and New York, but also in Chicago, keep in touch with the Chicago office? You have explained about the New Jersey office; how about the Chicago office?—A. We send them a note of every transfer that is made.

Q. Do you make daily reports to them?—A. Yes; in the case of one of the large companies, we send a complete report of every transfer in our office, so that they know exactly every transfer that is made.

CORPORATIONS REPRESENTED AND THE AMOUNT OF WORK REQUIRED IN THE BUSINESS.

Q. You represent corporations, of course, of different sizes—small corporations and large ones?—A. No small ones in New York.

Q. Those you represent in New York are substantially those that you represent on the New York Stock Exchange?—A. Yes.

Q. Can you give us some estimate as to the amount of work required to do the business for a large company; for instance, the Federal Steel Company?—A. How do you mean?

Q. How many clerks?—A. I could not undertake to do the work with less than 6 clerks; but of course the work is not the same at all times; sometimes it would not require so many.

Q. You mean 6 for one company?—A. Yes; I have been called on to issue in one night \$9,000,000 of securities. I have closed my office at 3 o'clock in the afternoon for receiving transfers, but every security was out and new certificates issued by 10 o'clock the next morning for over \$9,000,000.

Q. How much time do you have to make this transfer on the Stock Exchange?—A. From 3 o'clock in the afternoon until 10 o'clock in the morning.

Q. So that for every sale made on the New York Stock Exchange you must have a report made up by 10 o'clock the next morning?—A. Yes; of course we post our books after that.

Q. You say that in the case of a large company, like the Federal Steel, it requires 6 clerks to do the work?—A. When I tell you that we have had to get out nine millions of securities in one night you can easily see what it means.

Q. Of course the amount of work will vary daily with the conditions on the Stock Exchange?—A. Yes; but we have to be prepared for big days.

Q. And so you keep the force employed regularly in order to do that work?—A. Yes.

Q. (By Representative LIVINGSTON.) Who pays for it?—A. The company that the Corporation Trust Company represents.

(Testimony closed.)

WASHINGTON, D. C., October 18, 1899

TESTIMONY OF MR. JAMES S. GARVIN,*Assistant Secretary of the New Jersey Registration and Trust Company.*

At a meeting of the United States Industrial Commission, held at its offices in the Bliss Building, 11.10 a. m., October 18, 1899, Senator Mallory presiding, Mr. James S. Garvin appeared at 2.55 p. m., and, after being duly sworn, testified as follows on the subject of trusts:

THE NEW JERSEY REGISTRATION AND TRUST COMPANY.

Q. (By Mr. JENKS.) Will you kindly give us your name and address?—A. James S. Garvin, New Jersey Registration and Trust Company, No. 525 Main street, East Orange.

Q. What is your occupation?—A. Assistant secretary.

Q. Of this company you have just mentioned?—A. Yes.

Q. About how many companies does this trust company represent?—A. Between 275 and 300.

Q. About what is their capitalization?—A. Between \$300,000,000 and \$400,000,000, I believe.

Q. Have you written authorization from these companies?—A. We have.

Q. Do you receive any companies without this written authorization?—A. We do not.

Q. Do you keep signs displayed, for all these companies, before your office?—A. We do.

Q. Can you furnish the commission a list of the corporations that you represent, with their capitalization?—A. Yes.

Q. You have a copy with you now?—A. I have one, but not alphabetically arranged, and I would rather send one.

Q. Will you within a day or two?—A. I will.¹

Q. Do you keep in your office the stock and transfer books of all of these corporations?—A. Yes.

BUSINESS METHODS THE SAME AS THOSE OF OTHER COMPANIES.

Q. Does your method of doing the work differ particularly from the methods that have been explained here by the two previous witnesses?—A. No, sir; it is substantially the same.

Q. And the forms of your record books are about the same?—A. Almost exactly.

Q. You can perhaps furnish us with the blanks you use?—A. Yes, sir.

Q. What measures do you take to see to it that the companies that you represent comply with the law as regards the filing of their annual report?—A. We keep a record of the dates upon which their meetings should be held, and we notify them of the approach of that meeting; we also, immediately after that date, notify them that the report has not been received, if such is the case, and continue to do that every 2 or 3 days until it is either received or we conclude that they do not intend to file it; in which case we notify them of the penalty attached to such an omission, and notify the secretary of state simultaneously that we have ceased to represent them.

Q. Have you terminated your relation with any companies for that reason?—A. I have not, personally, but I believe the company has.

Q. How long have you been in this office?—A. Just about 10 days. But I might add that I find the system exactly as stated by the other witnesses. I find we are supplied with exactly the same material, and the same form is being followed by the corporation since I have been there.

Q. You do not find that there is any essential difference between your methods of doing business and those of the others?—A. I might say they are exactly the same. They are formulated on the same lines and carried out in the same way.

Q. You also keep this list of stockholders with their holdings, alphabetically arranged, and posted up to date?—A. Yes.

Q. And you furnish information to stockholders who inquire for it?—A. Yes.

IDENTIFICATION OF STOCKHOLDERS.

Q. What measures do you actually take to identify stockholders?—A. I have not yet been required to secure the identification of any, but I should take the ordinary precautions; and if the stock was not in the proper hands as stated, and I could not get the ordinary identification that would be required by a bank, I should hold the certificate over until I could identify the man. In other words, I would not give the information unless I was sure I was giving it to the proper person.

NUMBER OF REGISTRATION COMPANIES IN NEW JERSEY.

Q. Can you give us any information as to how many of these trust companies of the nature of yours there are in the State of New Jersey—have you any idea?—A. I have been told there are 7 or 8 of them.

Q. Seven or 8 of them?—A. That is, of these registration companies.

Q. Can you give any information as to the number of authorized agents there are representing corporations in the State of New Jersey?—A. No, I can not.

Q. Under the laws of New Jersey, is an individual permitted to represent a corporation, or must it be a trust company?—A. I have been told that in some cases individuals do represent them, and it was owing to the unsatisfactory representation that the necessity for these trust companies arose.

NEW YORK OFFICES OF COMPANIES.

Q. Have you a New York office?—A. We have; yes.

Q. Where is your New York office?—A. No. 27 Pine street.

Q. Is your New York office the same as the one just spoken of by Mr. Marwick?—A. For some companies, yes; we maintain a separate New York office as well.

Q. Your address, I notice, is the same?—A. It is the same building, but not the same office.

Q. Is the matter of the New York office, as compared with the New Jersey corporation office, left to the company concerned?—A. Yes.

Q. The companies in some cases have one and sometimes two New York offices, both dealing with you?—A. Yes.

Q. Do you keep your records with the different New York offices up to date in substantially the same form as to all of them?—A. Yes.

Q. How many offices do you have in New York representing the different companies?—A. Well, we only have the two—our own office and Mr. Marwick's office. (Testimony closed.)

WASHINGTON, D. C., October 18, 1899.

TESTIMONY OF MR. DENNIS B. RYAN,

Attorney-at-law.

At a meeting of the United States Industrial Commission, held at its offices in the Bliss Building, October 18, 1899, Senator Mallory presiding, Mr. Dennis B. Ryan, of No. 1 Montgomery street, Jersey City, N. J., after having duly affirmed, at 3 o'clock p. m., testified on the subject of trusts.

BUSINESS OF THE WITNESS.

Q. (By Mr. JENKS.) Will you give your name and address to the stenographer?—A. Dennis B. Ryan, No. 1 Montgomery street, Jersey City, N. J.

Q. What is your occupation?—A. Attorney-at-law.

Q. Are you the registry agent in New Jersey for any corporations?—A. Yes, for some of them.

Q. About how many do you represent?—A. It may be from 10 to 30—that is, I mean to say by 10 to 30 that I am representing 10 to-day and 30 to-morrow.

Q. Will you kindly explain?—A. After they have been organized I simply resign from them, and tell them to secure offices elsewhere.

CONNECTION OF WITNESS WITH COMPANIES

Q. Will you explain why that is; what the circumstances are under which you resign?—A. They often come in with papers all prepared, and ask me if they may use my office, and I tell them they may; they ask me if I care to represent them as their New Jersey agent, and if they come to my terms, I do; often I simply say good day.

Q. Can you furnish to the commission a list of the corporations you have represented within the last 30 days?—A. I think I could. I do not keep a record of them; they come in and organize and get out, and I do not bother about it.

Q. They come in and organize, and appoint you as agent and pay you a fee, and get out?—A. Not in all cases.

Q. And you resign the next day?—A. Where a payment is made I do keep a record of it, but where they appoint me, they might have a business in New Jersey and have their office in their factory.

Q. Why in that case should they ask you to be their registered agent; if they have an office elsewhere in the State, and wish you to be appointed simply for the use—

A. I do not know why they should ask me.

Q. But if they come in and ask you if you will take the position as registered agent, you say yes; and they ask you to resign, and you resign the next hour?—A. Yes; I do that, and frequently without being asked.

Q. Then you will furnish us a list of the companies you have represented, for which you have been registered agent within the last 30 days, with the dates of your taking the position, and the length of time you held it?—A. Yes.

Q. You will make that complete?—A. Yes.¹

Q. (By Mr. FARQUHAR.) What do you mean by resignation? The certificate of incorporation is there, and you stand as an officer representing the corporation, do you not?—A. Well, they have their own subscribers to the stock and organize themselves; it is not necessary that I should be the organizer.

Q. But do you not stand as the representative, as far as the law in New Jersey is concerned, of the corporation?—A. Do I not stand as what?

Q. As the New Jersey representative of the corporation under the law.—A. Yes; in some corporations I do.

Q. Just a minute ago you said you would resign?—A. Yes.

Q. Now, in what condition is the company left when you resign?—without a representative?—A. I do not concern myself about where they stand.

Q. (By Mr. JENKS.) When you appear as the registered agent of the company, are you not so named in their articles of incorporation, and will not your name so stand?—A. I should think that way.

Q. Your name should appear as the registered agent of the company?—A. Yes.

Q. Then if you held that position for a day, and then resigned, the company would be left without any agent, unless it took the pains to get another in the State?—A. Yes.

Q. And if it wants to do that, you say that is the business of the company, and not yours?—A. That is where I stand.

Q. Where you hold this position for an hour you hold the position for the company that they give you?—A. Yes.

Q. And you think you have done the work they have asked you to do, and that ends it so far as you are concerned?—A. That ends it, and I quit.

Q. The rest is their business?—A. Exactly.

Q. (By Mr. FARQUHAR.) Is the character of your work that of a brokerage or judiciary agent?—A. No; it is just like anyone else coming into my office to effect any company's organization.

Q. Just like a client coming in on an assault and battery case?—A. Yes; I have no knowledge.

Q. In cases of that kind what is your relation to the company? Will you explain it?—A. Well, they seem to be satisfied to have me do that, and I do not inquire very deeply into them.

CHARACTER AND CAPITALIZATION OF COMPANIES REPRESENTED.

Q. What class of companies are you speaking of?—A. Manufacturing companies.

Q. Of how much capital?—A. Some of \$100,000 and some of \$200,000.

Q. (By Mr. JENKS.) When you furnish us a list of the companies, will you also state their capitalization?—A. Yes.

¹ Not furnished, though a list obtained elsewhere was partly checked by Mr. Ryan.

Q. You have records so you can do that?—A. Well, I can not say definitely; I may have some of them and I may not; as I say, any papers I have been connected with I have turned over to the company; I just simply keep the name of them in many cases.

Q. You have the names of all the companies?—A. Yes.

Q. Where you have the names of the companies, have you also the names of the incorporators; do you take them down?—A. In most cases I do.

Q. You take down the names of the officers as they appear?—A. No.

Q. You have simply the names of the incorporators?—A. Simply the incorporators, because they may only hold the stockholders' meeting in my office and the directors' meeting may be in other offices.

Q. You do not keep any list of the directors or officers that they elect?—A. No.

Q. Do you collect your fees before they leave the office?—A. Well, if I know them I do not; if I do not know them I generally like to get paid in advance.

Q. I was thinking you might want to know their address, if you did not collect the fee in advance?—A. Yes.

DESCRIPTION OF SOME COMPANIES REPRESENTED BY WITNESS.

Q. (By Mr. KENNEDY.) I should like to have the names of a few of those companies?—A. Well, I have been trying to think of them for 15 minutes, but I can not. Q. Let us have the names of some of the companies that you have represented simply for a few minutes in this way?—A. Well, the Wigwam Publishing Company.

Q. Of where?—A. Of New Jersey.

Q. (By Mr. JENKS.) Do you know where the main office of that company is?—A. I do not; they are all dead. All the incorporators died in about a month.

Q. (By Representative LIVINGSTON.) Give us one where they have not all died.—A. It is either a dead corporation or a dead man; it is oftentimes the man.

Q. I do not understand that?—A. If they cease to take an interest that is when it goes up.

Q. After the stock is sold?—A. No, sir; the stock is oftentimes not sold at all; in that case they did not sell a dollar's worth of stock.

Q. (By Mr. JENKS.) Will you give us the history of this Wigwam Company, as far as you know it?—A. A gentleman came in and had a book which he called the "White Indian," a picture book for children, which he was publishing; he had 2 gentlemen with him, and had the papers regularly drawn, and I organized him right then and filed the certificate. The next I heard was from his brother-in-law, who came and asked if I had anything belonging to him. I said I had nothing except the certificate of incorporation. He said his brother-in-law had died. A short time after that some gentleman inquired about the company, and said that all the men connected with it had died. I thought I was rather lucky.

Q. (By Mr. KENNEDY.) What was the capital stock of that company?—A. As far as I can recollect, \$100,000.

Q. (By Mr. JENKS.) Would you mind telling us what fee you ordinarily charge for incorporation, when you expect to resign immediately?—A. If I do not have much work to do I charge \$5; if there is considerable work I charge considerably more.

Q. Do you have any scale at all according to the amount for which they are capitalized?—A. No.

Q. For example, if capitalized for \$1,000,000, you would do it just as cheap?—A. Oh, no; oftentimes when they come in, if I am not familiar with the matter, they do all the work and I simply stand around.

Q. You simply let them have your name?—A. Yes.

Q. And give your office as their principal office in New Jersey?

Q. (By Mr. KENNEDY.) What is the largest capitalization of any company you have organized?—A. As far as I can recollect, half a million.

Q. What fees did you get in that case?—A. In that case I had nothing to do at all.

Q. You got a fee?—A. Yes; about \$10.

CONNECTION WITH PROMOTERS IN NEW YORK.

Q. (By Mr. C. J. HARRIS.) Have you any connection with a New York office?—A. I have no New York office.

Q. Are you connected with some promoters there?—A. I am.

Q. (By Mr. JENKS.) Who are the promoters?—A. Peter Whitney, No. 100 Broadway.

Q. (By Mr. C. J. HARRIS.) Do you know Noblett?—A. I have not been connected with him for about 6 months.

Q. Is your business of such a pressing nature that you do not follow them after they are incorporated? Do you keep the transfer books in your office in some cases?—A. Yes; such as they are.

Q. (By Mr. JENKS.) How many companies are there of which you are really the permanent New Jersey agent? Do you pretend to keep the work up in those cases?—A. I can not tell you that exactly until I look them up.

Q. Are there 10?—A. Hardly 10.

THE MONTGOMERY TEXTILE COMPANY.

Q. Will you give the names of some of those now?—A. The Montgomery Textile Company.

Q. For how long a time have you been agent of that company?—A. A year.

Q. (By Mr. KENNEDY.) Of Montgomery, Ala.?—A. No; of North Wales, Pa.

Q. (By Mr. JENKS.) What is the capitalization of that company?—A. I can not tell you; I do not remember.

Q. Do you know where their home office is?—A. North Wales, Pa.

Q. Their factories are there?—A. Yes.

Q. In preparing that list, will you include also a list of the presidents?—A. As far as I have them.

Q. Now, as regards this Montgomery Textile Company; you say you represented them about a year?—A. About a year.

Q. Did that company file an annual report?—A. I believe it did.

Q. Did you get a copy of that annual report yourself, so that you have it in your office?—A. Well, I can not say definitely, but I believe I have.

Q. Inasmuch as you have not the information at hand, but have it in your office, will you also include that in the information you send, making it complete with respect to all that you have represented long enough so that they have had to file an annual report? Do you, yourself, take pains to notify the few companies that you are representing in a permanent way when their annual report is due?—A. Well, I tell them when they come when it is first due, and afterwards—

Q. You think that is their business?—A. Yes.

Q. And you pay no further attention to them?—A. No.

DISPLAYING THE SIGNS OF COMPANIES.

Q. Do you keep the names of these companies on signs before your office?—A. Well, I have had them on tin signs, but I have taken the tin signs down for a short time.

Q. So that you have no signs now?—A. We are painting one sign for all.

Q. Why did you not leave them up until the other was completed?—A. It was a matter of neglect, I suppose.

Q. Is it not a matter of noncompliance with the law?—A. Well, we should have had the signs displayed at the entrance to the office.

Q. In all cases?—A. Yes.

Q. So if you took the tin signs down and are not ready to put the other up, you are, as agent, violating the law?—A. No; I hardly think that, or I should not do it.

LISTS OF STOCKHOLDERS.

Q. Do you keep a list of the stockholders of these companies?—A. In some cases I do; in others I do not.

Q. Have you in your office a full list of the stockholders of any of the companies that you represent?—A. I think I have.

Q. Of what company?—A. I can not say offhand.

Q. Do you think you have a complete list of the stockholders of the Montgomery Textile Company?—A. Yes; I think I can name them offhand. There are about six.

Q. Do you have any written list of them?—A. Well, some of them I took from the stock book, and the secretary prepares me an alphabetical list.

Q. How often?—A. About once a year.

Q. That is, he prepares that a while before the time of the annual meeting?—A. That is according to the by-laws; 3 weeks, and sometimes a month.

Q. Do you recollect whether the law of New Jersey has any provision with reference to the preparation of this list before the annual meeting?—A. It is required, if my recollection serves me right, that the alphabetical list be prepared before the election.

- Q. Do you recollect how long a time before election?—A. I think 10 days.
- Q. Do you recollect whether a copy of that list is to be posted in the office for 10 days before the election?—A. Yes.
- Q. Have you seen to it that you have had the list for 10 days before the election in the case of all the companies that you represent?—A. Only one of the companies has ever had an annual meeting.
- Q. Which one was that?—A. The Montgomery Textile Company.
- Q. They have had more than one?—A. They have had two.
- Q. But you have never represented any other company which has had an annual meeting in your office?—A. That is the only one.
- Q. Do you know whether the law at present considers it sufficient to have the list out 10 days before the meeting, or whether it requires it to be kept up to date continuously?—A. I do not think the law requires that it be kept up to date continuously; simply before the books close; 10 days before the election.
- Q. You think that is all that is required?—A. Yes.
- Q. And the matter will then lie over until the next annual meeting?—A. After the meeting of the Montgomery Textile Company I direct the secretary to make up a written list to date.
- Q. That is right after the meeting?—A. Yes.

THE TRANSFERRING OF STOCK.

- Q. Do you yourself make the transfers of stock of any of the companies that you represent? Have you ever made any transfers of stock?—A. Yes, a few.
- Q. For what companies?—A. For the Davis International Telegraph and Telephone Company, I think.
- Q. You are the regular accredited agent of that company now?—A. No.
- Q. You were, earlier?—A. Yes.
- Q. And during the time you made transfers of stock?—A. Yes.
- Q. Why did you sever your connection with that company?—A. Well, in the first instance, they did not think they were making enough money, and one man was putting out too much; he discontinued, and I, of course, discontinued also; he was paying me himself, not the company.
- Q. This was an individual matter, as far as the company was concerned?—A. It was an individual matter between him and myself.
- Q. Is that company still in existence?—A. No.
- Q. Do you regularly keep the transfer books in your office, of all the companies that you represent for a period, we will say, of 3 months?—A. Well, some of them use the stock book, that is, the stock certificate book, for that business; not having many stockholders. That gives, of whom bought and to whom transferred.
- Q. In that case do you keep the stock certificate book in your office?—A. I have several of them.
- Q. Have you kept stock certificate books regularly in your office?—A. When I get them from a company I keep them continuously.
- Q. And then are the transfers of stock made in your office?—A. Sometimes. In one or two instances I recollect of several coming who held stock certificates and giving me a letter.
- Q. And asking you to make a transfer?—A. Yes. I write usually in red ink across the old certificate, "Canceled," and put on the date. Then I draw another certificate and forward it to the office of the company, either to the president or secretary, and they sign their names there.
- Q. And you call that making a transfer in your office?—A. Yes.
- Q. (By Representative LIVINGSTON.) About how many of these books have been sent over to New Jersey to your office within the last 30 days that you are not in the habit of keeping there?—A. None at all.
- Q. You have not received any books lately?—A. Not in the last 30 days.
- Q. (By Senator MALLORY.) Do you know whether the class of companies you have been acting for do much transferring of stock, as a rule?—A. No, they do not.
- Q. Very little of their stock is transferred?—A. Very little.
- Q. (By Mr. JENKS.) Have you been authorized to make transfers of stock for these companies?—A. Yes.
- Q. For all the companies for which you have kept stock books?—A. Where I have held the books I generally get a letter from them; very frequently when they have been there I ask to have resolutions passed directing me.
- Q. And in that case you keep a copy, I suppose, of the resolutions?—A. I have not any of them on file; I get that list from the secretary of state; he sends it to me, a certificate every day.

INFORMATION GIVEN TO STOCKHOLDERS.

Q. (By Mr. C. J. HARRIS.) Does the stockholder often not know anything about the standing of the company? Suppose there should be a stockholder who wished to investigate, could he get any information in your office in New Jersey?—A. If I was satisfied that he was a stockholder I would tell him all I knew about it.

Q. Well, would that be much of anything?—A. Oftentimes he would know far more than I would.

Q. (By Mr. JENKS.) You think you would be willing and able to tell, in almost every case where you were still the authorized agent, the names of the stockholders?—A. That is too general a question to answer; sometimes I could tell by the certificate books to whom the stock was issued. That is as far as I could go; I could not trace the holdings of it.

Q. You could not trace the holdings?—A. Oh, no.

Q. Have you kept a stock certificate book in every case where you have remained the permanent agent?—A. Yes.

Q. In every case?—A. Yes. I say that, because I can not tell offhand how many I have resigned from; but it is my usual method to do so; I keep a stock book or the certificates themselves.

WITNESS HAS NO OFFICE HELP.

Q. (By Mr. KENNEDY.) Is a very large force of clerks required to do all the work done in your office?—A. No, sir.

Q. How many do you have?—A. I have none.

Q. You are your own clerk, are you?—A. Yes.

Q. (By Mr. JENKS.) I understood you to say that the number of transfers made in the companies you represent is very small?—A. Very small; oftentimes there are no transfers at all. A good many people hold their stock right along.

Q. It is substantially a private company, you think?—A. Yes.

Q. Do you represent any companies where the stock is bought and sold on the New York Stock Exchange?—A. Not that I know of.

Q. So that the matter of transfers of stock would not ordinarily occupy more than an hour or two a week?—A. Oh, no; in the case of this company it would not take 5 minutes to make out a new certificate and cancel the old one.

Q. (By Representative LIVINGSTON.) You deal with the little fish?—A. You can make a company as large as you want. You can make it a million as well as a hundred thousand. It does not take any longer to say a million than a hundred thousand.

Q. (By Mr. JENKS.) But in some of the companies which were incorporated for \$500,000 would the transferring of stock, in your judgment, be very slight?—A. Well, I can not answer as to that now.

NATURE OF COMPANIES ORGANIZED FOR NEW YORK PROMOTERS.

Q. (By Mr. C. J. HARRIS.) How many companies have you organized for that New York man, Peter Whitney, within the last year?—A. I should say about 25.

Q. What is the nature of these companies—are they public or private corporations?—A. Public corporations.

Q. Are they organized with an idea of putting the stock on the market?—A. By that you mean putting the stock on the exchanges for sale?

Q. Yes, to float it about?—A. Well, I can not answer that question. Of course, my experience has been with the same man holding the stock and continuing to hold it.

Q. (By Mr. JENKS.) In the case of the companies organized for Mr. Whitney, have you ordinarily resigned promptly?—A. Yes.

Q. You have simply acted as agent for the moment?—A. Yes; many of them are New Jersey people and have their own places; they simply come to me to start the companies; after they are started they leave and afterwards proceed by themselves.

Q. That has been true practically of all of the companies organized for Mr. Whitney?—A. I should say of a large number of them.

Q. I will ask you also, when you send in that list, to name the companies you have organized for Mr. Whitney?—A. Yes.

Q. (By Mr. FARQUHAR.) How many companies have you represented since you commenced the business?—A. Well, you mean since I have been an attorney?

Q. Since you commenced this business of representing companies, how many have you represented?—A. Well, I might say 75.

Q. How many do you represent now?—A. I can not tell you that offhand.

Q. (By Representative LIVINGSTON.) Who pays the State fees of these companies in New Jersey?—A. The incorporators.

Q. Do you know that they do pay them?—A. Well, they could not get the certificate if they did not.

NATURE OF WORK DONE BY WITNESS.

Q. (By Mr. FARQUHAR.) Do you think the method you have described here to-day, that of representing a company for less than 24 hours and then surrendering it, is a fair and legal way of doing business?—A. I am afraid you misunderstand me. For the purpose of organizing they come in with a certificate of organization secured from the secretary of state before I see it, and hold their organization meeting in my office.

Q. In other words, your work consists simply in placing with the secretary of state that certification?—A. No; I have nothing to do with that. That is all done before I see the gentlemen.

Q. Then it is simply to use your name?—A. They do not use my name.

Q. (By Mr. KENNEDY.) It seems to me they get organized before they name an agent.—A. No; they may have my name put in the certificate.

Q. Then they do not use your name for unlawful purposes?—A. No; since I acquiesce afterwards I do not see that it is unlawful.

Q. (By Mr. JENKS.) Do I understand that you have, substantially, an arrangement with Mr. Whitney whereby he may use your name in an organization scheme so that, when they go into your office with your name printed as agent, you officially work for them by letting your name stand as the New Jersey agent?—A. No; I do not know of any such arrangement as that. He makes use of my office; he must pay for all clerical work and attend to that himself. I am oftentimes not in the office when it happens.

Q. You say you are often not in the office when he comes there to do this work, but your office stands there as the New Jersey office for the time being?—A. Yes; it is kept open all day long.

Q. So that the provision of the law requiring the office to be kept open during business hours is complied with?—A. Yes; there is always somebody there.

Q. You suggested that you had organized a good many companies for Mr. Whitney. What other men have you organized companies for; Mr. Noblett, for instance?—A. Yes.

Q. Can you tell about how many you have organized for him?—A. Possibly 30 or 35.

Q. And in these cases you have ordinarily resigned immediately afterwards?—A. Yes.

Q. Can you give us the names of some you have organized for him?—A. Well, I can not answer that offhand.

Q. When you send in the information we have asked for, will you kindly include them also?—A. Yes.

WITNESS HAS COMPLIED WITH THE LAW.

Q. (By Mr. FARQUHAR.) Section 43 of the corporation law of New Jersey says: "Every certificate, report, or statement, now or hereafter required by any law of this State to be made to any officer or department of this State, or to be published, filed, or recorded, by any corporation, domestic or foreign, shall, in addition to the other matter required by law, set forth the location (town or city, street and number, if number there may be) of its principal office in this State, and the name of the agent therein and in charge thereof, and upon whom process against the corporation may be served."

Q. Have you complied with that?—A. Yes, I think I have.

Q. Not "think," but have you complied?—A. Yes.

Q. (By Mr. KENNEDY.) What is generally the amount of the capitalization, \$40,000, \$50,000, or \$100,000?—A. It runs from \$50,000 and \$100,000 up to \$200,000.

Q. In the incorporation of the Montgomery Textile Company, it seems to me you ought to have some record of your connection with it?—A. Well, I did not say that I had not. I simply say I make the memoranda at the time. I do not pretend to commit the names of the companies to memory.

Q. You have a list of all of these companies that you have organized?—A. Yes, I have one.

Q. (By Mr. JENKS.) Will you give a complete list of all of them within 30 days?—A. I will give you the names of all the companies I know anything about, with which I have had anything to do.

Q. (By Senator MALLORY.) In speaking of resigning, did you mean that you make a formal resignation?—A. I did not exactly mean resigning, but severing my relation with the company. I simply say, "Have you got an office elsewhere, or do you desire this one?" Sometimes they say, "We have one." Of course that settles the business with me.

Q. Do you always know when the corporation wishes to regard you as representing them? Is that always understood between you and them, or does it drift along without your being positive that you are or are not representing them?—A. Yes, I know when I do; they may think I do not, but I do. For instance, I ask them to do certain things, and they do not do them, and if they are not done, I am not and will not until they do them.

(Testimony closed.)

WASHINGTON, D. C., November 13, 1899.

TESTIMONY OF MR. CHARLES N. KING,

Secretary and general manager of the New Jersey Corporations Agency.

The commission met at 10.55 a. m., Chairman Kyle presiding. Mr. Charles N. King, of Jersey City, N. J., was introduced, and, being duly sworn, testified as follows:

Q. (By Senator KYLE.) What is your name?—A. Charles N. King.

Q. (By Mr. JENKS.) And your address?—A. 243 Washington street, Jersey City.

Q. What is your business?—A. I am secretary and general manager of the New Jersey Corporations Agency.

BUSINESS OF NEW JERSEY CORPORATIONS AGENCY.

Q. Will you tell us what the business of this corporations agency is?—A. It is organized for the purpose of furnishing corporations with all of the facilities for complying with the laws of the State of New Jersey.

Q. What are the special provisions of the laws of New Jersey that are to be carried out by this corporations agency?—A. Furnishing them with an office, the keeping of their transfer and stock books, the filing of their papers as required by the statute.

Q. What papers are required?—A. They have to file annually a report of their officers and directors, and they have to make a statement to the State yearly regarding their capital issued, for the purpose of taxation.

Q. How many different corporations are represented by your office?—A. I could not tell you exactly, but there are several hundred.

Q. Can you give us an estimate as to the total amount of capital represented by those companies?—A. No; but it is several hundred millions.

Q. Please mention the names of some of the more prominent ones that have their offices with you.—A. The Amalgamated Copper Company is one, with a capital of \$75,000,000; the American Car and Foundry Company, with \$60,000,000; the American Thread Company; the Pressed Steel Car Company; the American Soda Fountain Company.

Q. That is perhaps sufficient. Could you have prepared in your office and file with the commission a list of the companies that you represent, with the capitalization of each, and will you be kind enough to do so?—A. You could get all that at Trenton; their certificates are filed in Trenton, and their capital.

Q. With the name of the agent?—A. Yes.

Q. Is it a fact or not that this requirement of the law that the name of the resident agent shall be filed with the secretary of state is carried out?—A. Yes, it is with our company.

Q. In every case, then, where you have been mentioned as agent, that will appear in the records at Trenton?—A. Yes, in every report that is filed there it is stated. We have regular printed reports, and it states who the agent in charge is. It may be me personally or it may be our corporation.

Q. Do you know whether that provision of the law is invariably carried out in the secretary of state's office?—A. Only so far as relates to our company; we see that it is.

Q. You see that it is?—A. There is a penalty for failure to file that report.

Q. In the case of a company that you represent, you are certain that either the name of the company or your own name as agent does appear in the records in the office of the secretary of state?—A. Yes.

Q. The commission would like to have you file a list of the companies you represent, with their capitalization. I might perhaps give the reason why. It is quite possible that there may be in that list a number of large corporations that we might wish to know something further about, and in this way we could get the information as to what they are—what their capitalization is—more conveniently than by

sending a clerk to the office of the secretary of state.—A. Do I understand that you want a complete list or the large companies?

Q. Supposing we say the companies with a capitalization of \$250,000 and above that.¹

Q. (By Mr. FARQUHAR.) Is there not a system of illegitimate certification in the State of New Jersey by irresponsible agents, lawyers, and others, who, for a small fee, get the certification of certain companies, and under that certification have issued stock and sold it in New York City?—A. Well, such a thing may happen; it is never done with our concern.

Q. I did not speak particularly of you, but of your own knowledge.—A. No; not of my own knowledge; I could not state.

STOCK AND TRANSFER OFFICE.

Q. (By Mr. JENKS.) With reference to these hundreds of companies that are registered in your office, do you in every case keep the stock and transfer books of these companies in your office?—A. Yes.

Q. In the case of transfers of stock, are the transfers regularly made in your office?—A. The statute provides that every corporation shall maintain a principal office in the State, where they can have their stock transferred. We transfer that stock or see that it is transferred. Those books are delivered to us, and they are coming and going all the while. We let them out to be written up. Now, take small corporations; they may not have any transfers at all, and others have them every day. There is a list furnished to us, either daily or weekly, by the large corporations, and we keep the books posted; but they do have transfers—the statute permits it—in other States.

Q. Yes. Of course, then, with reference to these larger companies, where there are frequent transfers of stock, as I understand you, you have transfer books of all these in your office. If they make transfers, say in New York City, those transfers are reported to you at least as often as once a week, and you post your books up as often as once a week?—A. You say where they transfer every day?

Q. No; where they occur right along?—A. No; some of these are taken monthly. It just depends on the activity of the stock and how much time it takes to keep it up.

Q. In case the stock is not very active, in case there are only a few transfers every day, in some cases you post those books once a month?—A. In some cases, but we have slips and keep them there right up.

Q. So that on any day it would be possible for a stockholder of one of those companies, who should prove to you clearly that he was a stockholder, to see just what the list of stockholders of that company was on that day, and what the holdings of each stockholder were?—A. Yes; he could ascertain who is a stockholder and what his address is and how many shares he holds.

Q. He could do that any day in your office?—A. Yes, generally.

DISPLAY OF NAME—ANNUAL REPORT—LIST OF STOCKHOLDERS.

Q. With reference to this other provision of the New Jersey law, that before the principal office there shall be kept a sign giving the names of the corporations represented there, is that provision of the law carried out by you regularly?—A. Yes.

Q. Invariably?—A. Yes.

Q. What provisions do you make with reference to seeing that the corporations represented by you comply with the provision of the law requiring the making of annual reports?—A. The notices from the state board of assessors or the comptroller are sent to us, and we see that they get to each corporation, and the reports are made back to us and we send them to Trenton. From the time they start until they finish they probably go through our office half a dozen times.

Q. That is, in case there is any delay on the part of the corporation that seems to be so much that it is really violating the spirit of the law, you notify the corporation, of course, and see to it that they are kept up thoroughly?—A. Yes.

Q. (By Mr. FARQUHAR.) What is the penalty for not making a report?—A. On the officers and directors I think it is \$200 for each offense, and I do not know but the directors are liable too.

Q. (By Mr. JENKS.) Do you keep regularly also in your office, for the use of the stockholders, an alphabetical list of the stockholders of each corporation, so that that can readily be consulted, or do they have to inquire from the clerks or the books?—A. Well, the statute requires that that alphabetical list be posted 10 days before the annual meeting, and we hammer them until we get it.

¹ Not filed.

Q. You say it is ready at the election?—A. Yes.

Q. But has not that law been amended so that at the present time it requires that this list shall be kept up regularly?—A. No, sir; not to my knowledge. Your stock ledger or transfer book is accessible to any stockholder at any time.

Q. Ten days before?—A. Yes; the alphabetical list is required to be filed 10 days previous to the annual meeting.

ADVANTAGES OF NEW JERSEY CORPORATION LAW.

Q. What special advantages does New Jersey offer to foreign corporations to incorporate in that State as compared with other States, New York for example?—A. Well, there are a great many of them; I do not know just what one to touch on.

Q. Please enumerate the ones that have occurred to you.—A. Well, in the first place, I think they can get a more liberal charter in New Jersey than they can in New York.

Q. In what particulars?—A. I think that besides that the stockholders, and directors, and officers of the company are better protected under New Jersey.

Q. Can you mention the particulars?—A. As I understand it, in New York—supposing 5 men associate themselves into a corporation under our laws they can pay—and New York, too—a certain amount, a certain percentage of the par value of that stock. Supposing they call for 50 per cent of that stock and it is paid in; they run along and do not require any more. They are both subject to 50 per cent whenever it is called.

Q. (By Senator KYLE.) That is in New York State?—A. In both States. Well, if there did come a time when they required more capital and they called upon them, each man would be liable for his other 50 per cent. In New York State if 4 men are no good, fail in the meantime, I believe the fifth man is liable for it all. I think so.

Q. (By Mr. JENKS.) Do you think of any other provisions that are specially favorable to corporations in New Jersey?—A. Yes; it allows a corporation by a two-thirds vote of the stockholders to consolidate with other corporations, and one man can not block the consolidation.

Q. Is not a merger of different corporations possible in New York also?—A. No; I do not know whether it is or not on a two-thirds vote.

Q. Do you think of any advantages that New Jersey gives in the line of taxation, license taxes, and so on?—A. On filing a certificate in New Jersey, you pay what they call a filing fee. In New York you not only have to pay a filing fee, but you have to pay one-eighth of 1 per cent on the authorized capital. In New Jersey you pay one-tenth of 1 per cent yearly up to \$3,000,000; one-twentieth from \$3,000,000 to \$5,000,000, and \$50 a million over \$5,000,000.

Q. So that New Jersey really encourages the incorporation of companies with very large capital by lessening the taxation as the capitalization increases?

Q. (By Mr. FARQUHAR.) On a sliding scale?—A. Yes; it would be a sliding scale.

Q. Is it on the authorized capital or the paid-up capital?—A. On the capital issued and outstanding. But New York, as I understand it, taxes the nominal capital one-eighth of 1 per cent. A company with \$1,000,000 capital, when they file a certificate in New York, would have to send \$1,250 to the secretary of state.

DESIRABILITY OF HAVING A LIST OF STOCKHOLDERS IN A REGISTERED OFFICE.

Q. (By Mr. JENKS.) How long have you been engaged in this business that you have now, in connection with this trust company?—A. I think since 1895 in this company; but I first embarked in this business in 1891 or 1892.

Q. In another company?—A. Another company; yes.

Q. With reference to these smaller companies, where transfers of stock are comparatively seldom made, do you consider it a matter of importance in the law that the stock and transfer books be kept in a public office of this kind, in order that the stockholders may be able to see at any time who their fellow stockholders are?—A. Well, yes and no. If they had a list there, that would be sufficient; and if they did not, why I think the books ought to be kept there.

Q. So that they can be found at any time?—A. So that a stockholder can ascertain who the stockholders of that company are, their addresses, and the number of shares they hold.

Q. In the case of the smaller private corporations, where there are, we will say, from 5 to 15 stockholders, where there are practically no transfers of stock, what is the reason for having this list there? Is there any reason particularly, or is it simply for uniformity?—A. Supposing 14 of that company know all about that corporation and the fifteenth man does not know how much the holdings of the other 14 are; the principal office in this State is the only place where he can ascertain that under our laws.

Q. So that you think even in the case of these smaller private corporations it is quite important that the provision of the law be lived up to rigidly?—A. I think so; yes.

IS THE PUBLIC BETTER PROTECTED?

Q. (By Representative LIVINGSTON.) You said a moment ago that you thought that in New Jersey the officers are better protected than in New York and other States, and that is one reason why there are so many charters taken. Is the public better protected in New Jersey at the same time?—A. Yes; for the reasons that I state. If I am right in the amount that these men pay on their stock, and if the fifth man, as I stated there, is liable for the other four, that is not so in New Jersey, and that is one great protection.

Q. Better protection to the stockholder. The question I asked you was this: Is the public better protected? If these trusts and combines are an evil, you have to take it for granted that they are antagonistic to the interests of the common people. If they were chartered in New York, would the public be better protected there than in New Jersey?—A. I do not think so.

Q. Is there any protection to the public any way in the whole business?—A. Under the New Jersey law?

Q. Or any other laws authorizing these combines and trusts—is there any protection to the public?—A. Yes; I think the public are better protected under our laws.

Q. You may state to the commission how.—A. Well, when you speak of the public do I understand the stockholders?

Q. No; indeed you do not. They are anything else but the stockholders. I mean a man that does not own any stock at all; that does not know anything about the company and can not know anything about it.—A. Well, wherein would he be hurt?

Q. Where do you make your money if you don't make it out of the public? You don't rob each other and make it out of each other, I hope?—A. Well, if the public become stockholders in that corporation, they participate in the earnings of the company.

Q. I understand. Take the steel trust, take any trust that you are agent for, all their money is made out of the public?—A. Yes.

Q. But how is it that the public is protected under the laws of New Jersey if the stockholders and officers are better protected, as you stated, in New Jersey than in any other State? How is the public protected, if at all?—A. Well, the only answer that I can give you to that—

Q. (Interrupting.) Wait a moment; may be you will understand. Now, then, if the laws of New Jersey are more favorable to money making by that process than those of any other State, then it must be for a selfish, purely a selfish reason that they take their charters there. Then it would seem a natural inference that New York cares more for the public than New Jersey, as she does not have the same statute?—A. The New Jersey statutes have been pretty well adjudicated, and there corporations know just how much protection they get and where they stand; and in a great many of these other States they do not.

Q. (By Senator KYLE.) Your statement was that in case of debts, in the State of New York, the one man, the fifth man, would be holden for it all?—A. That used to be the law, and I do not think it has been repealed.

Q. But in New Jersey?—A. Each man is only liable for the amount of stock that he holds. I think that is a just law.

SHOULD THE ANNUAL REPORT INCLUDE A BALANCE SHEET?

Q. (By Mr. JENKS.) You spoke of the annual report that had to be made by these corporations. Can you state what is contained in that annual report?—A. A list of the officers and directors, and when they were elected, and how long they are elected for.

Q. With the addresses, I suppose, of the officers?—A. Well, yes; they have to give their business address.

Q. They may give as their business address your office?—A. If the corporation is located with us they can give their business address with us, and all communications that come to our office for any stockholder or director or officer of the company are forwarded to him.

Q. Do you yourself think that it would be a greater protection to the public—that is, to the purchasers of the goods of these companies—if they were required to give, in addition to these facts, in their annual report also a balance sheet showing the condition of the business, so that would-be competitors would be able to judge somewhat better whether it would be worth their while to engage in competition with them?—A. No; I do not. I think that would be giving away the business of the concern to the competitor.

Q. The assumption is, of course, that if a report of that kind were required a similar report would be required from all of the competitors, so that no special advantage would be given to one over the other in that particular. Do you think that this would be giving more than the public interests would require?—A. I do; yes.

Q. (By Representative LIVINGSTON.) You have got a public franchise granted by the sovereign State of New Jersey. Why not give the citizens of New Jersey all and any information that will better their condition? Why do you want a public franchise and then want a private corporation? What is there right about that?—A. The citizens of New Jersey may not be dealing with that corporation at all, and why should they want any information regarding it?

Q. Why do you want any franchise at the hands of the people if you are not willing to give the people all the information they ask? Practically you get this franchise from the people through their representatives?—A. That is right.

Q. Now, then, when the people ask for information, why not just give it? You say because it would be giving away your private business. Well, you did not think of that when you went to the public for your franchise, did you?—A. The public may not be your competitors; but you may have competitors, and in giving it to the public you would have to give it to your competitors.

SHOULD THE ARTICLES OF INCORPORATION DESCRIBE ANY PROPERTY OR SERVICES RECEIVED FOR STOCK?

Q. (By Mr. JENKS.) The suggestion has been made here that it would be a protection to the public if, when a corporation filed its articles of incorporation, it were required to state not merely the amount of capital stock, but also for what that capital stock was issued. That is to say, a certain proportion of it would be issued for cash paid in; a certain proportion for property. It has been suggested that the amount be named that is represented by property, and that there be added to that a list of the properties with their location. In the State of New York it is provided also that stock may be issued for services performed. It has been suggested that the amount issued for services— A. (Interrupting.) You can not do that in our State.

Q. I know you can not. That the nature of the services and the amount paid for those services should also be named. Would you favor any addition of that kind?—A. No, I would not; and I will tell you why. You organize a company to take over a patent. Now, until that patent is exploited, nobody knows really the value of it. The vendor or owner of that patent may think it is worth millions, like Colonel Sellers, and it may turn out to be worth millions and it may not. So how would you do? Our law requires that when this stock is issued and fully paid a statement be filed showing how much is paid in in cash and how much in property, and that has to be filed within ten days after that stock is issued.

Q. But you would not favor making a further proviso that when it states how much is represented by property the property itself should be named?—A. No; I would not.

Q. With its location?—A. That would be a hard matter to get at in the case of patents.

Q. In the case of a patent, this suggestion has been made to us—it might simply say so many hundreds of thousands, so many millions, stand for such a patent?—A. Or patents?

Q. Or patents. In that case the idea is, it should name the specific patents that it stands for.—A. Some of them would be required to file a pretty big statement.

Q. True enough, a pretty big list; why not?—A. But I think, if you will pardon me, I think that if any stock is issued for services it should be stated.

Q. The amount that is issued for services and to whom paid?—A. Yes.

Q. In the State of New Jersey no stock is issued for services?—A. Under our law I believe you can not do that.

NEW JERSEY NOT THE MOST "LIBERAL" STATE.—WHY IT GETS MOST CORPORATIONS.

Q. (By Senator KYLE.) Is not New Jersey more liberal than any other State in the Union in regard to granting charters to such corporations?—A. Oh, I don't know.

Q. What other States are as liberal?—A. I have understood that West Virginia is a pretty liberal State. They are so liberal that they don't require anything down there; but I have always been given to understand that corporations organized in West Virginia have considerable difficulty in placing their stocks and bonds.

Q. Why is it that so many are incorporated in New Jersey?—A. I mentioned the better protection that New Jersey gives to the stockholders and directors.

Q. (By Mr. RATCHFORD.) If the laws of West Virginia are as liberal as those of New Jersey, how do you account for the fact that 90 per cent of the corporations are organized in New Jersey?—A. Because West Virginia limits them to \$5,000,000.

Q. Then in that particular sense the law is not as liberal; is that right?—A. That is as I understand it.

Q. (By Senator KYLE.) West Virginia is just as liberal as regards the liability of stockholders?—A. I guess they are more so, because they do not require anything; and I do not know what more you want than that.

NAME OF RESIDENT AGENT CAN ALWAYS BE FOUND AT TRENTON

Q. (By Mr. FARQUHAR.) Are there parties in New Jersey that secure corporations and are nominally agents, that go to Trenton and file the papers, and cease to be agents within 24 or 48 hours after the filing of the papers of certification?—A. I think that is possible.

Q. (By Representative LIVINGSTON.) That is pretty liberal, is it not?—A. Well, when they file that report of their officers and directors, it shows who the agent is, and he must be a resident of that State, or a corporation.

Q. If this agent, within 48 hours after the articles of incorporation have been filed, resigns his position as agent— A. Excuse me one minute. He could not resign until after that corporation was organized.

Q. (By Mr. FARQUHAR.) It is organized before you file them.—A. No; not under our statutes. You can organize, but you can not do any business until after you have filed that certificate with the secretary of state.

Q. (By Mr. JENKS.) After the certificate has been filed the agent may then resign?—A. Yes; but they would have to amend their certificate to state who the agent is, or file an appointment of a new agent.

Q. Do you know, as a matter of fact, if the names of the agents do always appear in the papers that are filed in the office of the secretary of state?—A. The statute requires them to state in their certificate the principal office and their agent.

Q. I asked you if you had any definite information that, as a matter of fact, that law is carried out in that particular?—A. Oh, I am pretty certain that it is.

Q. You think that in the office of the secretary of state it is invariably possible to find the name of the resident agent who is at that time acting agent?—A. Yes.

Q. And not the man who was first appointed as agent?—A. Yes.

Q. A question asked a moment ago was not answered, as to whether you have any definite information regarding people in the State of New Jersey who permit their names to be used as agents of corporations and then immediately afterwards resign as agents?—A. I have no definite knowledge of that, but I have heard so.

Q. You have heard that is so, but you have no definite knowledge?—A. The first information I had of it was a report from a party that was down here before your commission. I did not think it was possible that a man would do that sort of thing.

INCOME OF NEW JERSEY FROM CORPORATION TAXES.

Q. (By Mr. RATCHFORD.) Have you definite information as to the amount that accrues to the State annually from the organization of corporations?—A. I believe in the statement of the last fiscal year it was \$558,000 or \$528,000 filing fees.

Q. (By Mr. FARQUHAR.) Filing fees?—A. Filing fees. The State charges 20 cents a thousand, but in no case less than \$25.

Q. But you have no knowledge of what the State gets through the taxation of stocks?—A. No.

(Testimony closed.)

WASHINGTON, D. C., Monday, November 13, 1899.

TESTIMONY OF MR. ANDREW PARKER NEVINS

Attorney at law.

The commission met at 10.55 a. m., Chairman Kyle presiding. At 11.40 a. m. Mr. Andrew Parker Nevins was introduced as a witness, and, being duly sworn, testified as follows:

Q. (By Senator KYLE.) State your full name and post-office address.—A. Andrew Parker Nevins; 149 Broadway, New York City.

Q. (By Mr. JENKS.) What is your business?—A. I am a lawyer.

Q. Are you connected in any way with any West Virginia trust company with

which West Virginia corporations are registered?—A. I am counsel for the Corporation Trust Company of West Virginia.

Q. Where is this corporation trust company located?—A. Its principal office is in Charleston, W. Va.

Q. And they have a branch office in New York?—A. We have an agency in New York.

Q. And you represent them?—A. Yes.

WEST VIRGINIA CORPORATION LAW—REPRESENTATIVE—LIST OF STOCKHOLDERS.

Q. What are the provisions of the West Virginia law regarding representation by some agent within the State?—A. Within 30 days after the agreement for incorporation is filed with the secretary of state, the company must file with the secretary of state a power of attorney, sworn to by the president of the company, designating some person residing in the county in the State of West Virginia in which the certificate of incorporation is filed; said person to be the legal representative or agent of the company in that State.

Q. Each corporation is required to have an agent in the State?—A. If it does not have one the charter is liable to forfeiture.

Q. What are the requirements with reference to this principal agent, or principal office, as to the business that it shall do, the reports that it shall keep in the office, etc.?—A. The power of attorney appointing the agent is recorded in the office of the county clerk, as I said before, of the county in which the certificate is filed, and also in the office of the secretary of state of West Virginia. His specific function is to accept process in case process is necessary against that company. You will bear in mind, gentlemen, that his business is especially with reference to companies which are organized under the laws of West Virginia, but doing business elsewhere. To a certain extent, therefore, his function is similar to that of the Corporation Agency which Mr. King has testified about, and also other companies situated in New Jersey.

Q. In the State of West Virginia this agent of the corporation must keep in his office a list of the officers of the corporations, so that he can communicate with them at any time?—A. He does so; whether by the law he is required to I do not know; I do not think he is.

Q. Is there any requirement in the laws of West Virginia with reference to the keeping of the stock and transfer books of the company within the State?—A. No.

Q. Is there any provision with reference to the keeping of a duplicate list of stockholders within the State?—A. I believe there is not. The list of incorporators, of course, appears in the original certificate of incorporation and also in the charter.

SITUS OF A COMPANY.

Q. Is it also possible under the law of the State of West Virginia for a company incorporated in that State to have its business carried on outside entirely, and the list of stockholders kept outside entirely, in such a way that a stockholder residing in West Virginia would have no means of finding out who his fellow-stockholders were and the amount of their holdings?—A. The method of obtaining such information by such a stockholder as you suggest would be to consult the certificate of incorporation and find out just where the legal situs of the company is. The legal situs is either that situs which is directly specified in the agreement itself or it is where the actual business of the company is carried on.

Q. The place where the actual business of the company is carried on is also filed in the articles of incorporation?—A. No.

Q. How can you find that out?—A. It is supposed to be where it is specified in the charter, and it usually is.

Q. But not necessarily?—A. Not necessarily. For example, you can have a company organized under the laws of West Virginia whose principal place of business is in the city of New York. Now, that company is not limited in its corporate activity and transactions to the State of New York or the city of New York. It can do business in any State.

Q. When the articles of incorporation are filed, is it necessary that it should be stated therein that its principal office is in the State of New York?—A. It is necessary that its principal office be stated.

Q. Supposing that we were to take this case that you have stated, where the actual place of business is in New York City, and the articles of incorporation stated that its principal place of business was in Austin, Tex.; is there any penalty for that falsification?—A. I should not consider it a falsification, because it may be the intention of the incorporators at the time to have the place of business in Austin, Tex. But as

I said before, the laws of West Virginia are not specific as to whether the actual place of business determines the legal situs or whether the specification of agreement does; but in most cases, as far as I know, it is where it is specified in the charter.

Q. It is fair to presume it would be?—A. Yes.

Q. The question is this: Supposing that the incorporators have formed their corporation largely for the purpose of speculating in the stock, and that it would be a desirable thing for themselves not to be readily located—not to have their place of business readily located—is there any way by which the laws of the State of West Virginia will prevent them from any such fraudulent action?—A. I do not know of any—possibly by quo warranto proceedings.

TAXATION.

Q. What are the provisions of the laws of the State of West Virginia regarding the taxation of corporations; in the first place, regarding the preliminary tax when the articles are filed?—A. There is no tax on the stock, as such, under the statute of West Virginia. If the company is a thoroughly domestic company—that is to say, if it is doing business exclusively in West Virginia, they pay an annual license fee to the secretary of state of \$10 a year. They are not to do business out of the State. If, however, the company has its principal place of business, let us say, in New York, in that event the company must pay, upon the filing of the certificate of incorporation, \$50 to the secretary of state. That is its fee.

Q. (By Mr. FARQUHAR.) And how much thereafter?—A. That \$50 is paid every year as an annual tax.

Q. Regardless of the capitalization?—A. Regardless of the capitalization. The maximum capitalization is \$5,000,000.

MEETINGS—LIST OF STOCKHOLDERS—REPORTS.

Q. (By Mr. JENKS.) Is there any provision regarding the holding of the meetings of the directors or the meetings of the shareholders?—A. The meetings of a corporation organized under the laws of West Virginia may be held in any State, provided the majority of the stock is represented, and provided the meeting is held not less than 21 days after the filing of the agreement of incorporation.

Q. It is understood, then, that the first meeting of the shareholders must be within the State?—A. No.

Q. Not even the first one?—A. Not unless there is a mutual agreement.

Q. What provisions are made with reference to the keeping of a list of stockholders for the information of the stockholders themselves, at the annual meeting or otherwise?—A. I think there is no record kept. There is a provision, however, which is not mandatory, that a list of the stockholders be kept in the office of the representative agent there. This is simply suggestive; it is not mandatory; there is no penalty if it is not obeyed. There is no provision there that the name of the company shall be posted in a conspicuous place, which is a very prominent provision of the New Jersey law.

Q. There is no provision that a list of the stockholders shall be kept and there is no penalty if it is not kept?—A. No.

Q. Is there any provision requiring reports to stockholders by directors at their annual meetings?—A. I think that is usually provided in the by-laws. If you would like to see a uniform copy of the by-laws—

Q. Is it compulsory?—A. I believe not.

Q. Can you furnish to the commission any papers or articles or blanks which will show what these customary by-laws are?—A. I should be very glad indeed to furnish you with copies of the forms of our minutes. We have copies of the usual by-laws.

Q. (By Mr. CONGER.) I would like to inquire if the company for which the witness is counsel is incorporated under the laws of West Virginia?—A. It is.

Q. Do the laws of West Virginia require any reports to be filed with the State officers?—A. No.

Q. Are you doing business in New York City?—A. A little business; yes. I should like to explain the general object of this company.

Q. Well, I should like to inquire first if you are compelled to file or do file any reports with the secretary of state of the State of New York?—A. No; we have not done so so far.

Q. Do not the laws of the State of New York require you to do that?—A. If they do require it, I have not received notice; and as soon as I receive notice I shall file the necessary report.

Q. How long have you been doing business in New York City?—A. About 10 months.

Q. Not a year yet?—A. Not a year yet.

METHOD OF INCORPORATION—REPRESENTATION.

Q. That is all.—A. Now, the object, gentlemen, of this corporation is not quite as extended as that of the New Jersey companies. The proximity of New Jersey to the city of New York renders possible the great popularity of New Jersey. I make that in the way of a suggestion. Perhaps not. This company is organized to facilitate the organization of corporations under the laws of West Virginia. For example, we must have five incorporators to obtain a charter. If they want to organize under the laws of West Virginia, and if they happen to hear of our company, they come to me and tell me the objects for which they wish to incorporate. Necessarily they inquire about the expense. I give them what information I can. I keep blank forms there, and we draw up the charter. We send it down to the representative of the company, Mr Harrison B. Smith, Charleston, W. Va., and he attends to seeing that these articles of agreement are filed and that the charter is obtained. The charter is sent to me and I hand it over to the company. It is a very simple matter.

Q. (By Representative LIVINGSTON.) Where do they organize; in your office?—A. Not necessarily.

Q. (By Mr. JENKS.) They may organize in your office or wherever they please under the laws of the State of West Virginia?—A. Certainly; I hand them back the charter and they take a copy of the minutes and hold a meeting.

Q. (By Mr. CONGER.) Anywhere?—A. Anywhere they please.

Q. Anywhere in the United States?—A. Yes.

Q. Usually hold it in your office?—A. No, not in my office; in the office of the lawyer whom they may have.

Q. In the office of a New York lawyer?—A. Yes.

Q. (By Mr. JENKS.) You keep convenient blanks and forms of articles and charters, etc., in your office?—A. Yes.

Q. Your company supplies them for the use and convenience of customers?—A. The forms I have used I get from the secretary of state.

Q. From the secretary of state?—A. Yes.

Q. So that you are sure that the forms you have are approved under the laws of the State?—A. Yes; the secretary of state represents a great many of these companies.

Q. Will you explain a little further about that?—A. As I said before, we must have a representative down there in West Virginia; and if any man here should write down for information with reference to the corporation law of West Virginia, you would naturally write to the secretary of state. He will furnish you with the necessary blank forms, perfectly correct, and he will act as your attorney of record down there if you so wish.

Q. (By Mr. JENKS.) And he will, in addition to the usual fee for filing the articles of incorporation, charge you a special personal fee for acting as your personal legal representative?—A. Yes.

Q. Under the laws of the State of West Virginia any individual, I suppose, may act as this agent?—A. Yes.

Q. As well as any company?—A. In our case Mr. Smith usually appears as attorney of record for the company.

Q. Instead of the company as such you have the secretary of the company appear?—A. Yes. Mr. Smith is not secretary; he is president.

Q. In the State of West Virginia the secretary of state is very frequently appointed as State agent?—A. So I understand.

CORPORATIONS AND TRUSTS—CAPITAL LIMITED.

Q. (By Mr. RATCHFORD.) Do we understand you to say that this company is organized for the purpose of facilitating the organization of other companies under the laws of the State of West Virginia?—A. That is true.

Q. In other words, to make it plain, your company is organized for the purpose of encouraging the organization of trusts and corporations under the laws of West Virginia?—A. I would use the word "corporation;" I would not like to put myself on record upon the subject of trusts, because I think there is a decided difference between trusts and corporations.

Q. (By Senator KYLE.) What facilities are there with reference to the formation of trusts in your State?—A. The formation of trusts under the laws of West Virginia I am not familiar with.

Q. I thought you were. It was said by the preceding witness—you were in the room at the time—that the laws of New Jersey permitted by a two-thirds vote of the stockholders the consolidation of these corporations. That means trusts?—A. Yes.

Q. What are the features of the West Virginia law along that line?—A. I do not know, but I can find it out for you.

Q. (By Mr. JENKS.) You say that the capitalization of the West Virginia corporations is limited to \$5,000,000?—A. Yes; that is the maximum capitalization.

Q. Can you state whether there is any provision under the laws of West Virginia for the merging of corporations?—A. I can not state that offhand; I will let you know that.

NO REPORTS REQUIRED.

Q. (By Mr. FARQUHAR.) When you incorporate a company, that company can change its principal place of business and its general office at will; and there is a bare possibility that the incorporators are dummies. What control has the secretary of state, or has your office, or has any person, over the stock of that company 6 months after its organization?—A. The record is to be found, as I said before, in the articles of agreement. I think the secretary of state, or the proper official in West Virginia, should keep a record of the change of address of the company.

Q. (By Mr. JENKS.) But he is not compelled to do so under the law?—A. No.

Q. (By Mr. FARQUHAR.) And there is no charter issued by the State of West Virginia that demands a report to the State of West Virginia one day after you have organized?—A. I think not, sir.

Q. (By Mr. JENKS.) I understood that you would yourself favor an amendment to the laws of West Virginia providing that such a record be kept in the office of the secretary of state?—A. I think that would be a very advisable and salutary measure indeed, sir.

Q. Are you willing to furnish to the commission a list of the corporations represented by your company?—A. I should be most happy to furnish you with a complete list of all companies, together with the capitalization and the names of the directors, if you would like it.

Q. I should be glad to have that, if you will kindly do that.

LIMIT OF CAPITAL—TIME LIMIT OF CHARTERS—LIABILITY OF STOCKHOLDERS.

Q. (By Senator KYLE.) What is the object of your State legislature in limiting the amount to \$5,000,000?—A. Well, what was in the minds of the legislators when they enacted that provision I do not know; but I think it was a very wise thing to do. If you put a limitation on the capitalization you have one chance of determining what the capital of your company is. You must have some.

Q. What is the limit in New Jersey?—A. I think there is no limit there.

Q. (By Representative LIVINGSTON.) Is there any time limit to a charter in West Virginia?—A. Fifty years is the statutory limitation.

Q. There is none in New Jersey?—A. None.

Q. (By Mr. CLARKE.) In regard to the liability of stockholders, what is the provision of your law?—A. The liability of stockholders is simply the liability for stock which they own, except in case of money corporations, where, I believe, they are liable for that amount multiplied by 2.

Q. (By Mr. RATCHFORD.) Do you believe it is advantageous to the State to limit the capitalization of companies to \$5,000,000?—A. I do.

Q. Why?—A. Because I think that the ordinary company does not need a much larger capitalization than that. If you are going to have a company with hundreds of millions of capitalization, then there is a State provided for it.

WATERING OF STOCK—PAYMENT OF CAPITAL.

Q. Is there any limit to the watering of stock under the laws of West Virginia?—A. May I ask what you mean by watering the stock?

Q. What do we mean by it?—A. Yes; I ask for my own information.

Q. I shall answer it in this way: Is there any limit under the laws of West Virginia to the creation of fictitious values or securities?—A. Well, when a company is organized there is a blank form, partially blank, for an application for a charter under the laws of West Virginia. "Any number of persons not less than 5 desiring to become a corporation for the purpose or business designated in the second section, except for road purposes, shall sign an agreement to the following effect: 'The undersigned agree to become a corporation by the name of _____ [here insert the name by which it is intended a corporation shall be known], for the purpose of _____ [here describe fully and particularly the purpose for which the corporation is to be formed, and the kind of business to be carried on by it], which corporation shall keep its office or

place of business at —, in the county of —, and is to expire on the — day of — (presumably 50 years unless otherwise mentioned), and for the purpose of forming the said corporation we have subscribed the sum of — dollars to the capital thereof, and have paid in on said subscription the sum of — dollars.”

Now, the amount of money, actual money, which must be paid in before you can get your charter must be 10 per cent of the amount subscribed for in your charter, so that in that respect, if I may make a comparison, I think we have quite an advantage over the new laws of Delaware.

Q. And the other 90 per cent would be paid when?—A. Well, that may be paid later on.

Q. It must be paid sometime, must it?—A. Yes; just allow me to continue: “And desire the privilege of increasing the said capital by the sale of additional shares from time to time to — dollars in all. The capital so subscribed is divided into shares of — dollars each, which are held by the undersigned respectively as follows; that is to say, by — [here insert the name of each incorporator, with his residence, and the number of shares held by him] and the capital to be hereafter sold is to be divided into shares of like amount.”

Now, there comes in your authorized capital; the maximum amount is \$5,000,000.

Q. (By Mr. FARQUHAR.) But the paid-in capital need not be the same as the authorized?—A. No.

Q. The paid-in capital has got to be how much? What is the least amount of paid-in capital under the laws of the State of West Virginia?—A. I do not know what the least amount is. I think that most of the companies start in with a rather small amount to begin business. If they have an enterprise, the value of which they are perhaps in doubt about, they do not want to start in with an enormous capitalization; I mean with an enormous subscription. They simply want to organize and go ahead with their business.

Q. Is it not the usual rule in West Virginia that the company starts in with 10 per cent?—A. Ten per cent of the amount subscribed for must be paid in; that is statutory.

CONSOLIDATION OF COMPANIES.

Q. (By Representative LIVINGSTON.) Under the West Virginia law can corporations possibly consolidate if the consolidation will amount to over \$5,000,000?—A. No; I do not see how they possibly could.

Q. They would still be limited to a capital of \$5,000,000?—A. I do not see any reason to put a different construction on the statutes in that respect.

Q. (By Mr. FARQUHAR.) Can not one board of directors run five, ten, or twenty of these companies?—A. That I do not know.

Q. No law against it?—A. No law against as many companies as you want.

PROPERTY AND SERVICES FOR CAPITAL—TIME OF PAYMENT.

Q. (By Mr. JENKS.) In what form must this capital be paid in—cash, property, or services, or what?—A. The law in that regard is that property can be accepted for cash.

Q. May services also?—A. I think services may be. I think we have no decision in direct opposition to such a proposition.

Q. The value of this property that shall be taken is determined by the board of directors at their will?—A. I presume so.

Q. Will you be kind enough to file with the commission here the blanks that you use, so that it will show in detail the methods of incorporation of these companies?—A. Yes, I will do that, and I will furthermore send you a blank form already filled out.

Q. (By Mr. RATCHFORD.) I do not think you have answered the question as to the time in which the remaining 90 per cent of the capital shall be paid in?—A. I think that is a matter of discretion with the board of directors.

Q. A matter of discretion?—A. I made that answer, not in reference to the West Virginia corporations, but to any corporation.

Q. (By Mr. CONGER.) Is it not a fact then that if a company is organized for 50 years they may wait 49 years and 11 months before paying the additional 90 per cent?—A. I should think it quite likely, but I do not see how they could do any business unless they had money in the company.

Q. They might do it with the 10 per cent?—A. Certainly.

Q. In other words, it is entirely possible to do business with 90 per cent water and 10 per cent paid in. On the payment of this 10 per cent, is it customary for the incorporators to meet and issue this stock?—A. I think it is, but I do not care to say positively. I think they do it.

INTERSTATE COMITY.

Q. (By Mr. A. L. HARRIS.) Do I understand that a corporation chartered under the law of West Virginia can do business in any other State of the Union? In your opinion they can?—A. Well, there is always the implied condition that the State in which they are going to do business gives them the right to do that.

Q. Then each State can protect its own citizens if it desires to?—A. Yes; I think the Supreme Court of the United States held that a corporation is not a person in the sense of an individual; so they can restrict a foreign company, and the company that does business in another State does it at the sufferance, through the amity and the comity, of this other State.

Q. Then you do not claim by virtue of having a charter in the State of West Virginia that you can go into a State and do business in opposition to the laws of that State?—A. No; we can not confer rights upon a corporation to do business in any State which are at variance with the law of that State.

Q. (By Mr. FARQUHAR.) The title of your company is the Corporation Trust Company of West Virginia?—A. Yes.

Q. Are you incorporated under the laws of the State of New York, or under the State of West Virginia?—A. West Virginia. The principal place of business is West Virginia. As I said, in that case we pay an annual license tax of \$10. If we had designated New York as the place of business we should have had to pay \$50. The suggestion may have occurred to you that a great many companies would like to pay \$10 instead of \$50. They can not do that; they have got to swear to a very strong, positive, and unequivocal affidavit that when they do pay the license fee of \$10 they are not doing it to avoid paying \$50. I will furnish you a copy of that affidavit.

Q. Will you also furnish, through the secretary of state of West Virginia, a new form of by-laws that corporations have formed under?—A. Yes.

Q. Issued some 6 months ago, possibly?—A. Yes; I am under the impression that I have those, but whether or not they are the ones that the secretary of state authorized, I do not know. I got some about 5 months ago from Mr. Smith, copies of which I have with me.

ADVANTAGES OF WEST VIRGINIA LAW.

Q. (By Mr. JENKS.) Have you any further suggestions you care to make in reference to the corporation laws?—A. No, except I would like very much to draw the attention of the commission to the rather sweeping statement regarding there being no limitation whatever to the West Virginia law. I think the chief characteristics of the corporation law of West Virginia are the simplicity of it and the publicity; and perhaps the last explains its popularity. The fees are moderate, but they are not as low as New Jersey in some cases, and not as low as Delaware.

Q. (By Mr. A. L. HARRIS.) You said the publicity. What do you mean by that? Publicity as to the workings of the corporation after it organizes its business?—A. I mean the publicity of the organization.

Q. (By Mr. FARQUHAR.) How much capital does this incorporation law bring into the State of West Virginia as working capital among its own people?—A. I do not know, sir.

Q. Have you any idea?—A. I think comparatively little.

Q. Then the State is simply used as a creative power for foreign companies elsewhere at small fees?—A. Very largely.

Q. And the working capital of these companies is not utilized in the State of West Virginia at all, but entirely outside?—A. It may be.

(Testimony closed.)

[Submitted later in reply to questions whose answers were reserved.]

CAPITALIZATION.

The policy of the State of West Virginia in regard to the capital stock of joint-stock companies has been quite different from most of our other States. In almost every other State, before a charter is filed by the secretary of state, a certain taxation must be paid, the amount of said tax being based upon the total authorized capitalization as contained in the agreement of incorporation. For instance, in New Jersey the fee for incorporation is 20 cents for each \$1,000 of the total amount of capital stock authorized, but in no case less than \$25; so that in New Jersey a company can obtain its charter, with an authorized capital of \$125,000, upon the payment of the sum of \$25. The fee for each additional \$1,000 is 20 cents likewise. Under the recently enacted corporation law of Delaware the fee is 15 cents for each \$1,000 of the total authorized capital, and in no case less than \$20. West Virginia, however, had

adopted a different principle in its initial organization charges. It levies no organization tax on the capital authorized in the agreement of incorporation, but in lieu thereof imposes a fixed annual license fee irrespective of the capitalization. This fee is \$50 per annum when the principal office or principal place of business of the company is to be located outside of the territorial limits of the State of West Virginia. This fee must in all cases be paid before a charter is issued. If the corporation is to be exclusively a domestic West Virginia concern, the principal office or place of business of which is to be in the State, the annual license tax is \$10 a year; so that, for example, if a company is organized under the laws of West Virginia and designates New York City as the location of its principal office or place of business, such a company must pay the State of West Virginia annually the license fee of \$50; but if its principal office or place of business is Charleston, let us say, it would be required to pay only an annual license fee of \$10.

The maximum capitalization for all corporations organized under West Virginia statutes, with the exception of railroad and canal companies, is \$5,000,000. Under the Code (ch. 53, sec. 26) no stock in a corporation shall be regarded as taken, or the person subscribing therefor considered entitled to the same, until the first installment is paid. And under section 25 of the same chapter it is expressly provided that at least 10 per cent of the par value of each share shall be paid at the time of subscription. The payment of this 10 per cent upon the shares subscribed for naturally prevents and checks reckless subscriptions. Whether or not the value of a certificate of stock is actually realized depends entirely, in the last analysis, on whether the enterprise for which the company was organized is a success or not. The disposition of stock subsequent to organization is a matter which the company, usually through its directors, regulates in accordance with what it deems the best interest of the corporate enterprise.

Whether or not a corporation organized in West Virginia has the right to take property in payment for its capital stock has been questioned, and this point was inquired into with some degree of particularity by the Industrial Commission. There is no provision in the statutes expressly requiring that stock shall be paid for in cash; and the authorities seem united in the view that unless the statutes prohibit a corporation from doing so it may sell its stock for property (2 Thompson Corp., secs. 1604, 1605; *Clark v. Beavers*, 139 U. S., 89-112; *Fogg v. Blair*, 139 U. S., 119). It has even been held that where the stock is fully paid in cash or property there must be actual fraud in the transaction to enable even creditors to assail it (119 U. S., 345). The inference, therefore, in view of the fact that the West Virginia statutes do not prohibit payment for stock in property, and there is no mandatory provision for payment in cash, is that property can be legally deemed payment for stock. The common-law rule that the transaction must be one of good faith must of course be observed. If the corporate officers act according to their best judgment, without fraudulent intent, the selling of stock for property is legitimate and regular.

CORPORATION REPRESENTATION IN WEST VIRGINIA.

One of the most important features of corporate regulation under the laws of West Virginia is the provision requiring that companies doing business outside of West Virginia shall keep a representative or agent in West Virginia and duly empowered so to act. A corporation organized in West Virginia and having its principal office or place of business in another State must have a registered agent in West Virginia to accept service of process in behalf of the company.

The necessity and practical expediency of such a provision is obvious. The statute, furthermore, on this requirement is not directory, but absolutely mandatory. In view of the erroneously published reports on the testimony given before the commission on November 13, 1899, in regard to this provision, it will not be inappropriate to cite section 24, chapter 54, of the Code of West Virginia, reading as follows:

"Every such corporation having its principal office or place of business in this State shall, within 30 days after organization, by power of attorney duly executed, appoint some person residing in the county in this State wherein its business is conducted, to accept service on behalf of said corporation, and upon whom service may be had of any process or notice; and to make such return for and on behalf of said corporation to the assessor of the county or district wherein its business is carried on as is required by the forty-first section of the twenty-ninth chapter of the code. Every such corporation having its principal office or place of business outside this State shall, within 30 days after organizing, by power of attorney duly executed, appoint some person residing in this State to accept service on behalf of such corporation, and upon whom service may be had of any process or notice, and to make return of its property in this State for taxation as aforesaid.

"The said power of attorney shall be recorded in the office of the clerk of the county court of the county in which the attorney resides, and filed and recorded in the office of the secretary of state, and the admission to record of such power of attorney shall be deemed evidence of compliance with the requirements of this section.

"Corporations heretofore organized may comply with said requirements at any time within 3 months after the passage of this act. Any corporation failing to comply with said requirements within 6 months after the passage of this act shall forfeit not less than \$200 nor more than \$500, and shall, moreover, during the continuance of such failure be deemed a nonresident of this State; and its property, real and personal, shall be liable to attachment in like manner as the property of nonresident defendants; any corporation failing so to comply within 12 months after the passage of this act shall, by reason of such failure, forfeit its charter to the State, and the provisions of section 8, chapter 20, acts 1885, relative to notice and publication, shall apply thereto."

It will clearly appear from this statutory requirement that it is absolutely obligatory that every company have a legally qualified representative in West Virginia. By this arrangement a means of direct communication between the State and its corporations can readily be effected. In every agreement of incorporation, furthermore, the location of the principal office or place of business of the company must be expressly stated. In fine, West Virginia insists on keeping a record of its companies, (1) by having within the State some person directly and legally representing the company, and (2) by always having on file the registered address of the company. It is quite true that West Virginia has not imitated New Jersey in imposing regulations that the name of the company must be displayed in a "conspicuous position" in the office of its resident agent. It is submitted that such a provision, while it may apparently evidence great paternal vigilance and precaution on the part of the State, is in practical operation usually an absurdity. The names of hundreds of corporations displayed on so many streets in New Jersey seem to

MERGER.

The most popular State for the organization of immense industrial combinations or trusts is certainly New Jersey. The law in that State permits merger to a generous limit. Their statute says: "Any two or more corporations organized or to be organized under any law or laws of this State for the purpose of carrying on any kind of business of the same or similar nature may merge or consolidate into a single corporation, which may be either one of said merging or consolidating corporations or a new corporation to be formed by means of such merger and consolidation," etc. Inasmuch as there is no limitation on the capitalization of New Jersey corporations, the industrial consolidators naturally go there. In West Virginia the statutory limit of \$5,000,000 necessarily prevents such combinations. In fact, there is no provision in the West Virginia law with reference to merger or consolidation except that railroad unions can be effected under certain conditions and limitations.

WASHINGTON, D. C., November 13, 1899.

TESTIMONY OF MR. J. ERNEST SMITH,

Attorney at law.

The commission met at 10.55 a. m. November 13, 1899, Senator Kyle presiding. At 12.20 p. m. Mr. J. Ernest Smith was introduced as a witness, and, having duly affirmed, testified as follows:

Q. (By Mr. JENKS.) Will you kindly give your name and address?—A. J. Ernest Smith, Wilmington, Del.

Q. And your business?—A. Attorney at law.

CHANGE IN INCORPORATION LAW OF DELAWARE.

Q. You are the author of the book on the Law of Private Companies, relating to business corporations of the State of Delaware?—A. I am.

Q. Will you state the provisions of the corporation laws of the State of Delaware that seem particularly advantageous to corporations, as compared with the laws of

New Jersey, let us say, or West Virginia?—A. I am not familiar with the laws of West Virginia. I have studied the law of New Jersey. Delaware's law is very largely modeled after the New Jersey law; many of the provisions of the Delaware law are taken almost entirely from the New Jersey law. Prior to the passage of the present corporation law of Delaware we had a general incorporation law, passed in 1883, which was very limited in its scope, and applied to comparatively few organizations, like manufacturing companies and building and loan associations. Our new constitution, adopted in 1897, authorized the legislature to formulate a new corporation law. The new law was drawn up by a committee of the two branches of the legislature, aided by counsel. It was submitted to the legislature, and by both branches of the legislature unanimously passed. Prior to that time all charters of all kinds were granted by special act of the legislature, except as above mentioned. The necessity of getting through so many private bills was considered a very bad thing; so that the constitutional convention deemed it better to pass a general act. Our act was based very largely upon the New Jersey act; really there are comparatively few differences between the two. What is good in the New Jersey act is also good in Delaware; probably what is bad in New Jersey is just as bad in Delaware.

Q. At what time was this general corporation law of the State of Delaware passed?—A. In March, 1899.

COMPARISON OF DELAWARE AND NEW JERSEY LAW.

Q. If you can, enumerate some of the differences between the two that were put in by the legislature, and state the apparent purpose.—A. Well, I hardly know how to answer your question. If you can give me some idea of any particular point you desire, I shall be pleased to answer.

Q. How can you compare the original incorporation tax of the two States, New Jersey and Delaware?—A. As regards the tax, I think New Jersey charges 20 cents on every \$1,000 for its incorporation tax, whereas Delaware charges 15 cents. On its franchise tax New Jersey charges one-tenth of 1 per cent and Delaware one-twentieth of 1 per cent up to \$3,000,000. New Jersey one-twentieth of 1 per cent to \$5,000,000, and Delaware one-fortieth. Over \$5,000,000 New Jersey charges \$50 a million and Delaware \$30 a million.

Q. (By Senator KYLE.) You have a slight advantage?—A. We have a slight advantage.

Q. A sort of a cut rate?—A. A sort of a cut rate.

Q. (By Mr. JENKS.) What is the provision of the Delaware law with reference to holding stockholders' meetings?—A. The stockholders' meetings, after the first meeting, can be held anywhere, if the charter so provides.

Q. And need not be held in the State?—A. No; but the first meeting should be held in the State of Delaware.

Q. What is the provision of the Delaware constitution with reference to the repeal of Delaware charters by the legislature?—A. There is none, except that revocation must be by general, not special, act.

Q. May they be repealed by the legislature?—A. They can not by special act.

Q. How is it in New Jersey?—A. They can be.

Q. So in that particular again the Delaware law is considered somewhat more favorable to corporations?—A. It might be considered so. It is out of our power by our act, if the legislature makes a contract in the nature of a charter with a corporation, to repeal it. Our late general corporation act can be repealed by the legislature, but each particular charter granted under the act can not be repealed. New Jersey can suspend, alter, amend, or repeal any charter it grants.

Q. What provision is made in the Delaware law regarding the keeping of stock and transfer books in the State?—A. It is very similar to the New Jersey law. All stock books or transfer books, or duplicates of them, are required to be kept in the principal office in the State of Delaware, subject at any time to examination by any stockholder, and, at the time of the meeting of the stockholders, a list is to be prepared in alphabetical order, and submitted to the stockholders at least 10 days prior to the time of the meeting.

Q. Is it necessary that the original transfer books be kept in the State, or may duplicates be made up?—A. It is not; duplicate transfer books and stock books may be kept in the State of Delaware, and those duplicate stock books are accepted by our courts of law under the charter as of the same validity as the original stock books. I suppose the reason of that law was this: Where corporations are operating largely out of the State of Delaware it is more convenient for them to have the original books outside of the State.

Q. With reference to the corporations of Delaware whose original transfer books are kept out of the State—say in the State of New York—is there any provision that requires that the duplicate stock books shall be kept up to date? How long a time

may elapse after the transfer has been made in New York before it must be recorded in these duplicate books in Delaware?—A. Our law is very new; we have had no test of it in our courts whatever.

Q. Not at all? Do you know what the custom is in that particular; whether these duplicate books are written up every month or every week?—A. I do not know. I have no knowledge of that at all.

Q. What form of annual report is required in the State of Delaware?—A. During January the secretary or the president, secretary and treasurer are required, I think, under oath to make a return to the secretary of state of the officers composing the organization, the residences of the officers, the situation of the principal office, the name of the agent in charge thereof on whom process may be served, and also an absolute statement of the amount of stock issued by that corporation and outstanding at the time this report is made.

CAPITALIZATION AND PAYING IN OF CAPITAL.

Q. How much of the capital must be paid in at the time the corporation organizes its business?—A. No charter can be granted for less than \$2,000, and no corporation can commence business unless \$1,000 of that is subscribed. Upon subscription of that \$1,000 the charter can be sent to the secretary of state and he will issue a certificate. The company then can start its organization.

Q. There is no limitation as to the amount that must be actually paid in by the company?—A. No limitation.

Q. What are the provisions with reference to the method by which it may be paid in? Must it be paid in cash or property, or may it be paid in services?—A. Our constitutional convention took that matter up, and probably I can tell you that more quickly in the words of the constitution itself than anything else. "Section 3, article 93: No corporation shall issue stock except for money paid, labor done, or personal property or real estate, or leases thereof, actually acquired by such corporation, and neither labor nor property shall be received in payment of stock at a greater price than the actual value at the time the said labor was done, or property delivered, or title acquired."

Q. Who is it that determines what the actual value of the labor or of the property acquired is?—A. That question as to what is the actual value has not been determined in our State. Our legislature in a certain section has undertaken to say that the judgment of the directors, in the absence of fraud, shall be final. How far the legislature can go in expounding the constitution you gentlemen know as well as I. That is to say, it is entirely a question for the courts to determine. I should say, when it comes to the question of actual value, it would depend very materially upon the facts covering each particular case.

Q. The law itself provides, if I understand you, that the judgment of the directors shall be conclusive?—A. Yes.

Q. And the matter has not yet been decided in the courts as to whether that provision is constitutional or not?—A. It has not.

PENALTIES.

Q. What penalties are provided in Delaware for failure to file these annual reports, for failure to keep the stock and transfer books in the State, and so on? If you do not recollect the exact amounts, state whether they are substantial money penalties.—A. Practically the same as New Jersey. But each misstatement and fraudulent statement made by the directors on any statement issued, inducing other people to go in, is perjury. That is a very strong point of the law. When a false statement is made by the directors of any corporation, inducing investment—I do not mean a mere verbal statement, but an announcement issued under their direction—that subjects them to the charge of perjury, which is a very serious matter.

NO LIMIT OF CAPITAL OR OF TIME.

Q. Is there any maximum limit upon the amount for which a company may incorporate?—A. No, sir.

Q. What is the provision with reference to the time for which they may incorporate?—A. It can be made for 1 year, 5 years, or perpetual, as the incorporators select in their charter.

Q. It may be perpetual?—A. Yes. Prior to that, under our general corporation law of 1883, all corporations expired in 20 years time unless specifically changed by the legislature. That was a very great detriment. Twenty years passed away quite

rapidly and corporations acquired a large amount of property. I found it a very great difficulty. Sometimes it would lapse; it would be overlooked by the directors, and then would come the question of whether your franchise had not been lost—whether the personality had not gone to the State and the realty back to the original grantors; and a company would be left in a very serious condition. That was talked over very carefully by the constitutional convention, and it was concluded that it was better to allow them to select a certain number of years or perpetuity, whichever they might prefer.

SITUS—TAXATION.

Q. For the purpose of taxation, do you know whether the capital stock is to be considered personal property; and if so, where the situs of the capital stock is to be?—A. The capital stock is considered personal property, and the situs of it, for purposes of attachment and garnishment and assessment and taxation, is in the State of Delaware.

Q. So that if a corporation is incorporated, we will say, for \$50,000,000, is doing all of its business out of the State, is holding its stockholders' and directors' meetings outside of the State—if the State of Delaware wishes, it may tax this capital stock itself as if it was in the State?—A. Unquestionably; and by that law, having the situs of the capital stock in the State, the State of Delaware has a larger control over its corporations and the charters granted by it, I think, than any other State in the Union. It is generally admitted everywhere, and it is the general law, by various decisions, that the situs of the stock is where the domicile of the company is, in the State where its charter is granted. Delaware has simply put that into its statute which the general decisions have determined to be the fact.

Q. Does the State of Delaware levy any tax upon the capital stock?—A. As it is issued; oh, yes.

Q. Any other than this license tax that you have spoken of?—A. No. Delaware is a very conservative State. It has no State debt whatever. It has assets of quite a considerable amount of money, and it taxes its companies very lightly, and I see very little prospect that the franchise tax will be at any time greater than now. In all probability the franchise tax in Delaware will be very greatly reduced in a few years, if we are as successful in obtaining new corporations as they have been, because we have apparently no need for money.

Q. (By Senator KYLE.) They have no State debts?—A. No State debts. There may be some contingent debts—guaranties to one railroad, I think, but that railroad has thoroughly good assets to meet all indebtedness. I mean that the good assets of the State are greater than its debts, and Delaware is practically free of debt.

REPORTS—PAYMENT OF CAPITAL.

Q. (By Mr. JENKS.) Does the certificate of incorporation in Delaware show the number of shares of capital stock subscribed by the incorporators?—A. It does not necessarily.

Q. How is it with reference to New Jersey?—A. In New Jersey I think the subscribers have to designate the number they take.

Q. And the name and residence of the incorporators are required?—A. Yes; and we make affidavit that the facts as stated in the certificate of incorporation are true. I understand the New Jersey certificate does not require this.

Q. What are the forms of the annual reports of these corporations, and what do they contain?—A. The report varies with the kind of company. Railroad companies, telephone, electricity, gas, heat and light, and power companies are all specifically taxed and have to make a specific report to the secretary of state; he returns that report to the State treasurer, who makes the collections. General companies, such as you might term private companies, have only one report, as to the total amount of the stock issued and outstanding, upon which to base their taxable ratio.

Q. (By Mr. CONGER.) I understand that the minimum capital stock is \$2,000, and that at least \$1,000 must be subscribed?—A. Yes.

Q. Is that percentage required in case of an organization organized for a larger amount, say \$1,000,000?—A. The same percentage applies.

Q. Under your laws it would be entirely proper for these subscriptions to the capital stock to be paid in services, would it not?—A. Yes, at their fair actual value; or property, or leases.

GAINS TO DELAWARE.

Q. (By Mr. FARQUHAR.) What is the immediate or prospective benefit which your State derives from liberalizing its corporation law?—A. There are two benefits that were hoped for: First, to induce capital to come to Delaware and locate its factories there; second, to have a return in money for the issuance of its charters.

Q. Do you think that the industrial prosperity of Delaware is likely to be increased by a law of this kind; or is it not a fact that the liberal law of Delaware has invited foreign corporations to be incorporated there which do business elsewhere and handle their capital elsewhere?—A. I do not know what the effect of that will be. I can only speak of the few things I know of—that is, that I know of several corporations, quite large ones, that have located in Delaware with foreign capital.

Q. Under this law?—A. Under this law.

Q. Induced through this law to settle in Delaware?—A. Induced through this law to settle in Delaware.

Q. In what branches of industry?—A. In the iron industry.

Q. (By Mr. CONGER.) Do you mean, then, that organizations would seek that location and build factories there?—A. Yes. That is the main object of the law. That is the main argument that was used before the legislature—that it would probably induce a larger number of corporations to come to the home of their creation ultimately, because of adverse laws which might be used against them when they held a foreign charter. This has already commenced to operate. Several large corporations with foreign capital have located in our State.

(Testimony closed.)

WASHINGTON, D. C., November 13, 1899.

TESTIMONY OF MR. CHARLES E. EDGERTON,

Ithaca, N. Y.

The commission met at 10.55 a. m., November 13, 1899, Senator Kyle presiding. At 12.50 p. m. Mr. Charles E. Edgerton, of Ithaca, N. Y., was introduced as a witness, and, being duly sworn, testified as follows:

Q. (By Mr. JENKS.) Will you state your name and address?—A. Charles E. Edgerton, Ithaca, N. Y.

OBSERVANCE OF NEW JERSEY LAWS—EXHIBITION OF CORPORATE NAMES.

Q. Have you lately visited different lawyers and different officers in the States of New Jersey and Delaware to see their customs regarding the administration of the New Jersey and Delaware laws?—A. I have.

Q. Will you be kind enough to state in your own way what the result of this examination has been? Of course you may omit all reference to the business of any witnesses who have already appeared here, but in reference to anything you have learned we shall be glad to hear you.—A. My inquiry was particularly as to the enforcement or observance of those New Jersey corporation laws which are meant to secure some degree of publicity; such as the requirement that the name of a corporation be conspicuously posted outside of its principal office in the State, and that the stock and transfer books of a corporation be kept at its principal office in the State. With regard to the posting of the names, that requirement, I believe, is quite generally observed. It is physically impossible to make each name conspicuous when 500 or 600 companies are represented in one office. The names are generally posted in legible form, rarely outside of the building, but generally in the public hallway of the building. There are instances in which the requirement is not observed; cases in which an attorney represents a moderate number of companies—half a dozen or a dozen, perhaps in some cases 35 or 40. One man represents possibly 40 or 50 companies, and has not at any time had their names posted. His name appears as representative in the certificates of incorporation of 40 or 50 companies filed in Trenton this year. The signs are not posted, and he himself told me that they had not been posted at any time.

Q. (By Senator KYLE.) Not any of the signs?—A. Not any of the signs.

Q. (By Mr. JENKS.) You found several instances of that kind?—A. There were several instances in which I did not find any names posted at the time of my visit.

Q. (By Mr. RATCHFORD.) Where did you find them?—A. In Jersey City. In two instances at least it was said to me that the names had been posted, but were temporarily removed for the purpose of having a new sign made.

STOCK AND TRANSFER BOOKS AT NEW JERSEY OFFICE.

With regard to the keeping of the stock and transfer books at the principal office in the State, my belief is that the larger companies, those which have a considerable number of transfers of stock to make, comply in general with that law. Such companies, I think, are generally represented by concerns which make a business of the

local representation of New Jersey companies in that way. My belief is that these concerns which make a business of the representation of companies do undertake to see that the law is closely complied with, and in consequence the larger companies do comply with the law. A considerable number of the smaller companies of the State, however, are represented by individuals, generally attorneys; and the following of these features of the law is a matter which such men, chiefly occupied with other matters, naturally pay less attention to. I find it to be quite a general feeling among the attorneys of the State who do that business that these requirements of the law are of a simply formal character. They are felt to be desirable, no doubt, for those companies which are strictly public companies, in the sense that the number of stockholders is relatively large and the number of transfers of stock somewhat great; but in the case of companies which have only a few stockholders, where there are few transfers, if any, from year to year, it is thought that the keeping of the stock or transfer books within the State would be a purely formal matter. It is considered a matter with which the public has no real concern, and therefore it is not felt to be essential that the letter of the law be complied with. In accordance with that view, I found generally among the attorneys of New Jersey whom I saw that the observance of these features of the law is lax. Of some 15 attorneys that I saw and talked with on this matter only 1 told me, in such a way that I took it to be literally true, that all the companies he represents do, in fact, at all times have their stock and transfer books in his office.

Q. (By Mr. JENKS.) You think, then, in the great majority of cases where one man represents but a few companies, and those are private companies—close corporations—that the stock and transfer books are not kept within the State?—A. I think that is probably true.

Q. You base your opinion upon the direct statements made to you by lawyers themselves who were agents of these corporations?—A. Yes.

Q. And out of these 15 you mentioned probably 10 or 12 told you they did not keep the stock and transfer books of the companies that they represented in their office?—A. Yes. In almost every case the attorneys spoke of the matter with perfect frankness, and sustained their position, I think, substantially as I have explained it. In their judgment, it is not reasonable to require that all the books be kept in a New Jersey office, because the public has no real concern in the matter.

Q. Although they know the law requires it?—A. Yes; although they know the law requires it. One attorney went so far as to say to me that he advised his clients regularly that the law was sufficiently complied with if the books were brought into the State if at any time it was desired or requested. That was not, however, the attitude that I generally found. Sometimes attorneys would say that they advised their clients what the law was, and if the clients did not choose to take the trouble to comply with the law, of course that was a matter of their own and at their own risk. But frequently the position seemed to be that it was not really necessary—that it was a formal matter, and not a matter of real interest and real importance that the letter of the law be observed.

Q. Did any of these men whom you visited say that they would send over to New York to get the transfer books in order to exhibit them to anyone who had the right to know?—A. Yes; that was said.

Q. You would say that was the general feeling among those representatives of smaller companies, that in case a real need should arise they would meet that need by sending for the books?—A. Yes. I asked in a great many cases this specific question: Whether they ever did have inquiries from stockholders for such information. The answer I received was quite uniformly either that they never had or that it was an exceedingly rare thing. One corporation, which is in the business of representing companies in that way, a Jersey City corporation, started, I believe, last March, had, I think, 54 companies on its books. The treasurer of that corporation told me that, so far as he knew, his corporation had never had such an inquiry from a stockholder.

As to the man who told me he had never had posted outside of his office any of the names of the companies which he appeared as the representative of, the fact was that he had simply permitted a certain firm of promoters in New York to make use of his office for the holding of organization meetings of these several companies, and the name of the occupant of the office had been inserted as the New Jersey representative of such companies. The nominal representative had in fact had nothing whatever to do, as he himself informed me, with the organization of these companies, but had merely permitted the use of his office for that purpose.

Q. Do you recall what the charge was for the use of his office and for the use of his name in this way?—A. No; I did not inquire that.

Q. Did he say to you himself that he was in the habit of letting his office out and the use of his name, without taking any active part at all?—A. Yes.

Q. This attorney, as I understand, made no pretense of keeping the stock and transfer books?—A. No; he had had nothing to do with the companies whatever; he had never had any stock or transfer books of these companies in his office.

Q. Have you any further information along that line with reference to the filing of the annual reports and the care that was taken by these attorneys who were simply individual representatives of the small companies? Did you learn whether they were in the habit of securing the annual reports of the corporations they represented, or of paying any attention to it at all?—A. Some of them, when the annual meeting is held in their office, make out the annual report and forward it.

Q. Did you learn from some of them that they have paid no attention to that at all, or did you not ask that question specifically?—A. I do not know that I did learn that from anyone.

Q. Would you say, then, as a result of this investigation, that individuals who represent the smaller private close corporations usually pay little attention to these special features of the law that have been mentioned? First, as regards the posting of names; second, as regards the keeping of the stock and transfer books in their office, and, third, as regards looking after the filing of the annual reports?—A. I think that is true, so far as the keeping of the stock and transfer books and the filing of the reports is concerned. The names, I take it, are generally posted.

Q. Although there are several exceptions to that?—A. There are several exceptions to that.

(Testimony closed.)

WASHINGTON, D. C., November 16, 1899.

TESTIMONY OF MR. W. L. SAWYER,

Secretary of the Corporation Trust Company of Delaware.

The commission met at 11 a. m., Senator Kyle presiding. At 3.40 p. m. Mr. W. L. Sawyer, secretary of the Corporation Trust Company of Delaware, No. 52 Broadway, New York, was introduced as a witness, and, being duly sworn, testified as follows:

Q. (By Senator KYLE.) State your full name, address, and business.—A. W. L. Sawyer, secretary of the Corporation Trust Company of Delaware, No. 52 Broadway, New York, or Dover, Del. We have offices in both places.

BUSINESS OF THE CORPORATION TRUST COMPANY OF DELAWARE.

Q. (By Mr. JENKS.) What is the business of this company?—A. The business of our company is to furnish the means of meeting certain requirements of the Delaware law. Under the Delaware law every company must maintain a principal office within the State, must keep a corporate sign exhibited on its office, and must have a representative there during the usual business hours; and one of the board of directors must be a resident of Delaware. That is what we furnish the various companies which we organize.

Q. You furnish them with a home and facilities for doing that part of the business?—A. Yes.

Q. Is it necessary that the stock and transfer books of a company be kept in the principal office of the company in Delaware?—A. The law is that either the original or a copy be kept there.

Q. What is the usual custom with your company; is it to keep the original books in Delaware?—A. No, sir.

Q. To keep the duplicates there?—A. Yes.

Q. Where are the original books usually kept?—A. Kept in the offices of the various companies.

Q. Wherever they happen to be?—A. Yes; unless we act as transfer agent of the stock, in which event of course as a rule they are always kept in the main office of the company, and as they issue stock they send over for our signature.

Q. In case of some of the larger New York companies that you represent, that have transfer offices in New York City, are you in the habit of making transfers for them daily, substantially, or very frequently?—A. Yes; quite frequently.

Q. In those cases how often do you send a report to your Dover office of the transfers that have been made?—A. We try to keep them up as near to date as possible.

Q. How much does that amount to in the case of a large company that is making transfers, we will say, daily, substantially? Do you send reports to your Dover office as often as once a week?—A. Oh, yes, as nearly as possible.

Q. As often as that, do you think?—A. Yes.

Q. In the case of companies where transfers are made less often, you send monthly reports?—A. Yes.

Q. Or have you any regular time?—A. We have no regular time. There are a number of companies that have not issued any stock. It is our intention as far as possible to have them all comply with the law, and we put ourselves out a good deal to have them do that and keep the duplicate books there. The Delaware law has only been in existence since March 10. We really did not begin to do business until along in May, and there are a number of the companies that have not these reports completed; but they have been coming in more of late than during the summer. I think by the 1st of January the greater portion of them will be in.

Q. Is there any requirement in the law of Delaware that a list of stockholders shall be kept up to date, alphabetically arranged, or is the provision only that a complete list shall be made a short time before the annual meeting?—A. A list of the stockholders must be posted 10 days before the annual meeting.

Q. And there is no requirement that it shall be kept up to date any nearer than that?—A. No.

Q. Is it a part of the business of the Corporation Trust Company to see that different corporations which they represent file annual reports properly?—A. Yes; we take care of it. That will be the second Tuesday of January next.

Q. For the first annual report?—A. For the first annual report. You see we have had no annual report yet.

Q. About how many companies does the Corporation Trust Company represent?—A. We represent from 150 to 175.

Q. Have you any idea as to the amount of nominal capitalization represented by those companies?—A. I have not figured it out. I suppose between \$400,000,000 and \$500,000,000.

Q. How many of these companies are there in the State of Delaware that have been organized for the purpose of facilitating the operation of the law?—A. I know there are one or two.

Q. Besides your own?—A. Yes; one or two. One is the Delaware Trust Company, Wilmington. I believe we have a few competitors in the field, but we were there rather early.

Q. When was your company organized?—A. The 10th of March.

Q. Organized the day the law went into effect?—A. Yes; just after it passed.

Q. From your knowledge of the way in which this law is being carried out, judging from your own experience, do you think the corporations organized under the Delaware law are regularly represented by agents who are careful about the observation of the details of the law? That is, do the agents regularly keep the names of corporations posted before their doors?—A. Yes.

Q. Are they regularly in the habit of keeping the stock and transfer books or copies of them in their office?—A. As far as I have seen them; yes.

Q. That is true with reference to your organization?—A. Yes.

Q. Do you know whether regularly it is true with reference to corporations organized in the State of Delaware?—A. In other words, whether our representative there does his duty?

Q. Not at all. We have had evidence to the effect that very many corporations organized in New Jersey appoint some local lawyer as agent, who frequently is utterly careless with reference to performing the duties which that position implies; who does not put out the name of the corporation which he represents before his door; does not see to the filing of the annual reports; pays practically no attention to the stock and transfer books, and so on.—A. Yes.

Q. Now, what knowledge have you with reference to the proper enforcement of the Delaware law in general, outside of your own corporation?—A. Of course I do not know, where they are represented by other attorneys. I know nothing about those other companies.

Q. You have no information about that?—A. No, sir; all I know is as to our company. I am quite strict about that and have it done at once, because, as I said, I want to be in a position always to say that the corporations organized under the Delaware law comply so far as we can make them.

Q. (By Mr. A. L. HARRIS.) What proportion of the companies that you represent, organized under the laws of Delaware, have located in Delaware to do business?—A. I do not suppose that any we represent do business there to any extent; very few, of course. There are a number of Delaware companies, of course, that have their own offices there, and of course would not need our services.

Q. (By Mr. JENKS.) A trust company like yours is only for foreign corporations generally?—A. Yes.

Q. (By Senator KYLE.) These corporations, 150 to 175, have all been organized since the 10th of last March?—A. Yes.

Q. And all under the Delaware law?—A. Yes.

Q. How many other companies are operating besides yours?—A. I know of the existence of 2 others.

Q. Do they have about an equal amount of business?—A. No, sir. The highest, I believe, is 15 companies, or something of that kind.

Q. Are they within the limit of 200?—A. Of course we have done a good deal in that particular line. I have devoted my life to the work. I want to make a success of the company, and I suppose I got a little ahead of them. That was because it is the only thing I do. I am an attorney by profession, but I do not get much chance to attend to law practice, and I am devoting all of my time to the interest of the company. We have gone into it for the purpose of making it a success. I do not want to be misunderstood about the keeping of these books there. As I said, there are a number of companies that have not issued any stock. As compared with the total number, I suppose I might say comparatively few have done so; but as I did say, by the 1st of January I think it will be done. I keep at them all the time and keep writing them that if they have not filed duplicate books as required by the laws of the State of Delaware, it should be done at once.

(Testimony closed.)

BOSTON, MASS., July 20, 1899.

TESTIMONY OF MR. JAMES J. MYERS,

Member of the legislature of Massachusetts.

At a meeting of the subcommission on manufactures and general business, held at Boston, July 20, 1899, Chairman Smyth presiding, Mr. James J. Myers, member of the Massachusetts State legislature, appeared at 2 p. m., and, being duly sworn, testified concerning the "antistock-watering laws" of Massachusetts.

Q. (By Mr. SMYTH.) What is your address?—A. 53 State street, Boston.

Q. What is your occupation?—A. Lawyer by profession, and chairman of the committee on judiciary in the house of representatives for the last 5 years.

Q. Do you desire to make a statement to the commission?—A. I received a very kind invitation from the commission to come before it, and state some of the facts connected with the passage of the antistock-watering laws of Massachusetts. I regarded that invitation as equivalent to a command, coming from this commission, with its far-reaching and wide scope of duty, and also because of its coming from my friend Mr. Clarke.

Colonel Clarke very kindly called my attention to the topical plan of inquiry of the subcommission, and I saw at once that it was possible to state just what I proposed to, and I conceive that it comes under Nos. 53, 54, and 55. And as a further limitation, I shall, perhaps, confine myself to the formation, consolidation, and capitalization of corporations; and I shall incidentally, perhaps, say a few words at the end about that organization which has grown up—a trust with certificates of shares issued by trustees.

I think I can possibly deal with this question by stating what the law of Massachusetts is, and by saying also that I have taken some pains since your invitation came to see whether or not either our commissioner of corporations, Mr. Endicott, or the chairman of our board of railroad commissioners, Mr. Sanford, had any suggestions to make. I have consulted them both carefully. Mr. Endicott, commissioner of corporations; has to do practically with the organization of all corporations, except railroad and street railway corporations, in this State.

SUPERVISION OF CORPORATIONS IN MASSACHUSETTS.

The laws of Massachusetts provide—and I have here a summary of them—for a careful organization of all manufacturing—we will say of all private business corporations; and they provide also, by what is called the "antistock-watering laws of 1894," more carefully than ever before, for the public-service or quasi-public corporations, which, in this State, include railroads and street railway companies, electric light, telegraph and telephone, water and aqueduct companies. In the West there are one or two others, such as irrigating companies; but with us these are all that can be called quasi public.

NATURAL MONOPOLIES.

And right here I want to make a distinction which was much dilated upon and made the basis of much of the agitation of 1894, which culminated in the antistock-watering laws.

These quasi-public corporations, or public-service corporations, were conceived to be doing a business which was naturally done by a monopoly. They are called by some of the scientific writers the "natural monopoly" lines of business, because they are best done in that way. It is obvious at a glance that it is not for the interest of any community, no matter what our opinion may be regarding manufacturing—it is not for the interest of any community that it should have several gas companies tearing up its streets and competing; likewise with street railways obstructing the streets with their lines; likewise with electric-light companies, telephone companies with their poles, telegraph companies, water companies, and that whole group I named. They belong to the natural monopoly corporations—those which can do the business best, as it seems to us, when there is but one organization—a monopoly.

OVERCAPITALIZATION—HOW DEALT WITH.

Massachusetts found in 1894 that while her private corporations were safeguarded in respect to their issue of capital stock and there was no overcapitalization, there were some cases of overcapitalization, her business men believed, in the case of these quasi-public corporations, and there bid fair to be a great deal more of it. Special charters for certain classes of corporations, street railways and occasionally others, were becoming quite common in the legislature; applications for them, I mean. The business men thought there had been overcapitalization in some cases, and that more of it was threatened; and the agitation of 1894, which culminated in our antistock-watering laws, was aimed particularly at preventing overcapitalization. It did not, as you gentlemen will see, deal at all with this question that is now looming up, of business monopoly and the danger of it, because we were dealing with that class of corporations which were recognized as monopoly corporations. What we were aiming at solely was the prevention of overcapitalization, and it is to that I must address all my testimony, so far as it deals with actual facts in Massachusetts.

Now, what are the laws of Massachusetts? For I think Massachusetts is justly proud of her corporation laws. What are her laws with respect to capitalization? How has she prevented this immense overdevelopment of capitalization, which, at least in many cases, compels the community to pay a dividend upon two or three times the amount actually paid into the enterprise?

I think the fundamental idea is supervision, by some trustworthy government officer, of all issues of stock and bonds, and the payment in of the full par value of each bond and each share of stock.

MASSACHUSETTS CORPORATION LAWS BEFORE 1894.

Now, gentlemen, I believe that in any community, any State, where this is done, overcapitalization can not occur. Massachusetts has for a long time had on her statute books a careful provision as to the organization of her private business corporations, which made it necessary for any gentlemen who proposed to start in any private corporation to take certain steps that were carefully watched by the officers of the State. I have here a set of blanks, such as would be used in the organization of any of our business corporations. They provide, to begin with, just like the incorporation blanks of any State, I suppose, for a statement of the amount of the capital stock and the names of the incorporators. Then when they have made their form of organization complete, they bring that to our commissioner of corporations, and if he finds it all right, he simply certifies that the organization is correct and he approves the organization. Then the gentlemen go to our secretary of state and get their charter, with an authorized capital stock of anything you please, not exceeding \$1,000,000. Prior to this present year, a corporation could not be organized for any of these purposes in Massachusetts with a capital of over \$1,000,000 without a special act. This year a law was passed permitting a larger capitalization of any amount; but on talking with the commissioner of corporations, I find there has been no application to do anything of that kind since the law was passed. On examination I find there has only been a limited number of companies in Massachusetts in which there was a capital stock of over \$1,000,000.

NO DOLLAR OF STOCK WITHOUT A DOLLAR OF CASH OR ITS EQUIVALENT BEHIND IT.

Now when that charter is issued, the thing with us is not ended at all; something still remains to be done, and it is this: The certificate must be filed and sworn to by a majority of the directors, certifying that the whole amount of the capital stock—no matter what—has actually been paid in. If it is in cash, of course that is the end of it; but if they do not wish to pay it in in cash, they must pay it in property

which is satisfactory in value to the commissioner of corporations; and not until they have satisfied him that they have paid in every dollar in cash, or in value in actual property, do they get a further certificate showing the payment in of the capital, which is as follows: "I hereby certify that I am satisfied that the valuation given within is a fair and reasonable valuation for the property described, and I hereby approve the within certificate." When this is filed they are entitled to do business as a corporation; when every dollar is inside the coffers of the treasury of the corporation. They must file that within 30 days of beginning to do business, or there is a personal liability of every stockholder.

So you see that every one of these corporations—and that has been the case for many years—must start with actual value behind every dollar of stock that goes out. There is no escape from it unless they wish to incur personal liability as partners in a firm. Our courts have so held.

NO PREFERRED STOCK.

There is a provision for the issuing of special stock—we have no such thing as preferred stock and common stock. Our court has once intimated that it might be done, but the commissioner of corporations tells me he has never permitted it to be done, because it was a mere suggestion that it might be done. We had a provision for the issue of special stock, and that provision is this: That as long as any special stock is outstanding, the common stockholders are liable for every debt of the corporation; so that practically it is almost never done. It is a provision simply for convenience, or a temporary measure.

AGITATION AGAINST OVERCAPITALIZATION OF QUASI-PUBLIC COMPANIES.

Now in that condition we found the law of Massachusetts in 1894, when the business men's organization said, "We are going to have our great transportation, light, communication-by-electricity corporations heavily overcapitalized unless we do something. That means trying to earn dividends on money never paid in; and since these are natural monopoly corporations, the rates will not be kept down by competition." Then they said, "Something must be done if we are going to put quasi-public corporations on just as safe and sound a basis as private corporations." Gentlemen, the phrase won: "Where competition ceases, supervision should begin."

That agitation began in 1893, when the boards of trade, merchants' associations, and other business men's organizations established a committee to sit during the recess of 1893-94, which made a certain report to the legislature in 1894. Upon that a special committee of the legislature was appointed on that question of capitalization of quasi-public corporations. The business men came before us and said, "Something must be done now to guard against this threatened evil." There was an agitation and there were a great many hearings of that kind, which I will not bother you gentlemen with, but as the outcome of it certain laws were passed. These are called our "antistock-watering laws."

THE ANTISTOCK-WATERING LAWS OF 1894—STOCK AND SCRIP DIVIDENDS.

In cleaning the thing up we tried to begin at the bottom. We were dealing with the monopoly public-service corporations; we found the others substantially safe as they were. We first said this:

"No telegraph, telephone, gaslight, electric light, steam-railroad, street-railway, aqueduct or water company, established under the laws of this Commonwealth, shall declare any stock or scrip dividend, or divide the proceeds of the sale of stock or scrip among its stockholders; nor shall any such company create any additional new stock or issue certificates thereof to any person unless the par value of the shares so issued is first paid in cash to its treasurer."

Then we provided:

"All certificates of stock or scrip issued in violation of the preceding section shall be void; and the directors of the corporation issuing the same shall be liable to a penalty of \$1,000 each, to be recovered by indictment in any county where any of them reside; but if any such director proves that before such issue he filed his dissent therefrom in writing with the clerk, or was absent, and at no time voted therefor, he shall not be so liable."

We passed three acts, exactly alike in their methods, but dealing with different classes of corporations. We passed one act that dealt with gas and electric light companies (Acts of 1894, chap. 450); another that dealt with those companies engaged in transmitting intelligence by electricity (Acts of 1894, chap. 452); and in that bill

we also dealt with aqueduct and water companies. We had another bill that covered railroads and street railways (Acts of 1894, chap. 472).

Now, it is a study of this last that will show just how we undertook to guard against any overcapitalization there; and I asked Mr. Sandford, chairman of the railroad commission, if he had any suggestions of any amendments to that act, and he said he did not think he could suggest any essential change. I think he believes that under the wise and conservative administration of the public officials that have supervised the issue of stock in this State there have been no abuses, no overcapitalization, since the laws were passed. I do not think anybody believes there has been.

ISSUE OF STOCKS AND BONDS OF QUASI-PUBLIC COMPANIES—STATE CONTROL.

Q. (By Mr. FARQUHAR.) What do they provide, briefly?—A. Take chapter 450, which relates to the issue of stock and bonds by gas and electric light companies. It provides that "gas and electric light companies, whether such companies are organized under general laws or special charters, and however authorized to issue capital stock and bonds, shall hereafter issue only such amounts of stocks and bonds as may from time to time, upon investigation by the board of gas and electric light commissioners, be deemed and be voted by them to be reasonably requisite for the purposes for which such issue of stock or bonds has been authorized." That is, the amount of the issue is kept under the eye of the commission. This board announces its decision within a certain time, and "the vote of the board approving such issue shall specify the respective amounts of stock and bonds authorized to be issued for the respective purposes to which the proceeds thereof are to be applied." This decision is to be in writing. "A certificate setting forth the vote of the board shall, within 3 days after said vote, be filed in the office of the secretary of the commonwealth before the certificates of stock or the bonds are issued; and no company included in the terms of this act shall apply the proceeds of such stock or bonds to any purpose not specified in such certificate." There is also a provision for the penalty, that "any member of the board of directors, or any treasurer or other officer or agent of any gas or electric light company, who knowingly votes to authorize the issue of, or knowingly signs, certifies, or issues stock or bonds contrary to the provisions of this act, or who knowingly votes to authorize the application of, or knowingly applies the proceeds of such stock or bonds contrary to the provisions of this act, or who knowingly votes to assume or incur, or knowingly assumes or incurs, in the name or behalf of such corporation, any debt or liability, except for the legitimate purposes of the corporation, shall be punishable by fine not exceeding \$1,000 or by imprisonment not exceeding one year, or by both such fine and imprisonment." This made it absolutely incumbent on the officers of that class of corporations to get the consent of the commissioners. The commissioner certifies the purpose to which the proceeds are to be applied, and any officer of the company who goes out of that track is liable to the penalty. There is a further section, which provides that "Any court having jurisdiction in equity may, on the application of the board of gas and electric light commissioners, or of the attorney-general, or of any stockholder, or of any interested party, enforce all lawful orders of said board made in pursuance of the provisions of this act, and all provisions of law herein contained respecting such companies." Now, we feel that this was very necessary to be done. We know, if the judgment of the commissioners is correct, that it has prevented any overcapitalization in Massachusetts.

The next act, chapter 452, dealt with the telephone and telegraph companies. The provisions were the same, except as to the board. As the supervising state authority, we used the commissioner of corporations, because it was to him that they must eventually turn. It came under his duties, but the provisions were exactly the same.

Then we came to the railroad companies, and chapter 472 deals with the question of the issue of stock and bonds by street-railway companies; but the provisions are exactly the same as chapters 450 and 452. There is the same careful supervision of the issue, however the company may be organized, special charter or otherwise, capital of no matter how much; it shall not issue until the railroad commissioners have heard it and investigated it, and voted it is reasonable and requisite for the purpose for which it is authorized. There, again, is the same provision for the issue, the same steps of filing certificate, and prohibition of the use of the money for any purpose not designated. There is the same penalty on the board of directors if they fail in any particular or misappropriate the money to any other purpose, or issue any stock or bonds for any purpose not distinctly provided, or if they knowingly incur risks and obligations in violation of the spirit of this section; the same provision regarding the court of equity.

FOREIGN CORPORATIONS.

Now you will see that provided for a pretty careful supervision of the issue of all the stock and bonds of these companies, but there were other steps necessary to make it still safer. This is a somewhat incidental matter, but still I think it should be dealt with right here. We feared there might be some abuses through foreign corporations. Suppose some foreign corporation got possession of one of our local corporations and then issued its own obligations on the faith of these underlying obligations; call them debentures or what you will.

Q. (By Mr. CLARKE.) When you speak of foreign corporations you mean any organized outside of the State?—A. Yes; so that we do not have our hand on their organization. You see we did not have to deal with the whole question of monopoly, but with only one or two phases of it. We were guarding against our people having to pay dividends on overcapitalization.

The best we could do is found in chapter 476 of the acts of 1894, and it is in this form. We made it narrow in its application, but so far as we went tried to cover the ground. It was deemed a little drastic at the time.

"If any foreign corporation which owns or controls a majority of the capital stock of a domestic street-railway, gaslight, or electric-light corporation"—we only needed to deal with these three—"shall hereafter issue stock, bonds, or other evidence of indebtedness, based upon or secured by the property, franchise, or stock of such domestic corporation, unless such issue is authorized by the law of this Commonwealth, the supreme judicial court, sitting in equity, may, in its discretion, dissolve such domestic corporation." That was all there was to it. It was a little more drastic than that when it came to us, and I think there was a provision that they should be dissolved. We felt that it might happen that the majority of the stock might get into the hands of speculators, who might want to break it up, and innocent stockholders might suffer; so we said the court may, "in its discretion, dissolve such domestic corporation."

Section 2 said: "It shall be the duty of the attorney-general, whenever he is satisfied that such issue has been made, to institute proceedings in said court for the dissolution of such domestic corporation and the proper distribution of its assets."

Now, I believe that has absolutely protected us against any attempt to do that thing in this State.

THE LAW EVADED BY MEANS OF TRUSTS.

I ought to say right here that it is true, lately, seeing they could not put the majority of the shares of a gaslight or street-railway company or of an electric-light company into a foreign corporation, issuing new stock on the shares, they have resorted to the device of trustees, who take the stock of several street-railway companies or several gas companies, put them in a pot, and issue certificates, giving the organization a certain name. It is of course an evasion, right or wrong I do not undertake to say, but it is an evasion of the law which I was just speaking of. It does accomplish through the medium of trustees what could not be accomplished directly by the foreign corporation, and it does make it possible to issue \$5,000,000 of certificates on \$2,000,000 of securities. That is a method of evasion that will trouble you gentlemen a good deal to deal with when you come to frame legislation. I think it would be possible to frame legislation. I am not sure that it would not be a pretty delicate matter to do it constitutionally, but I think legislation could be framed to meet the difficulty.

PURCHASES, SALES, AND LEASES.

Then we found that there might be overcapitalization, or, what is equivalent to overcapitalization, an overcharge on the public by means of consolidations or leases or purchases and sales, particularly between railroads and street railroads. Accordingly, we found ourselves obliged to pass another act, which provided that no purchase, sale, or lease of the franchises or property of that class of corporations, whether such lease, sale, or purchase was authorized by general laws or special act, should be valid or binding until the consolidation should have been approved by the board of railroad commissioners after a public hearing, of which due notice should have been given. That was to guard against any overcharge; for instance, in the case of a street-railway company making a lease to another street railway, the latter company paying, to illustrate, 10 per cent instead of 6 per cent as a rental, and then, of course, having to collect it. It becomes a fixed charge and has to be collected out of those who are carried, and results in loading 4 per cent upon the public. It is not an overcapitalization exactly, but it is the same thing; it is an overcharge for the benefit

of those holding the securities. Such a purchase and sale is not permitted to go on without the approval of the railroad commissioners.

There was a hearing yesterday before the railroad commission on the consolidation of 5 of our street-railway companies. Everything has to be done in a most painstaking manner. An expert values the property, and each of these 5 companies is permitted, their assets having been shown up and their earnings having been shown up, to go into that consolidation and receive shares in the new company. But the railroad commissioners say, "so many and no more." As a matter of fact, in this case it is share for share or substantially that; but no shares are allowed to issue without the value behind them.

There is one further act that may be spoken of. There was a special act permitting the issue of stock by a street-railway company for the purpose of changing its motive power; but that, again, had to be supervised by the railroad commissioners.

Now, I think, gentlemen, that we have covered everything in the way of our anti-stock-watering legislation, strictly so called, which guards against the issue of a share of stock without a full dollar behind it. It is all we have in Massachusetts. These laws I have referred to will show you, when you come to study them, better than I can do what the work of our business men, our boards of trade, and our railroad commissioners has accomplished after more than a year of agitation. It is all found embodied in these acts to which I have referred you, and it has resulted as I tell you in Massachusetts. I think our law is spoken of everywhere as accomplishing that result.

NEW STOCK ISSUED BY OLD COMPANIES NOT TO BE SOLD FOR LESS THAN MARKET VALUE.

There is one further topic that we legislated on. It was touched on in 1893, and it is coming up now in another form in industrial matters.

Massachusetts has for several years had a policy of insisting upon sales at auction of stock issued by an existing railroad corporation. She said, after a good deal of agitation, that if railroad stock was selling at 170 she would not allow the corporation to issue shares at par, because that is really not giving the community the full benefit. Now, that is somewhat different from anti-stock-watering laws; they have been slightly confused, but it is a very different matter to say that you shall not issue a share of stock for less than 100 when you are starting, and to say that after you have started a company and run it well for years, and by reason of good management and saving have accumulated capital so that the stock is selling, with a value behind it, as high as 150, you shall not issue shares at 100. That is not stock watering. It is capitalizing accumulated earnings not divided. Still, Massachusetts has said in the act, chapter 472, of the year 1894 that in case a corporation "owning or operating a railroad or railway, whether such railroad or railway is operated by steam or other power, or a gaslight, electric-light, aqueduct or water company, or a corporation established for and engaged in the business of transmitting intelligence by electricity, increases its capital stock, the new shares to the number necessary to produce the amount necessary for the purposes for which such increase is authorized shall be offered proportionately to its stockholders at not less than the market value thereof at the time of increase, as shall be determined by the board of railroad commissioners in the case of a steam-railroad or street-railway company, by the board of gas and electric-light commissioners in the case of a gaslight or electric-light company, and by the commissioner of corporations in the case of an aqueduct or water company or a corporation established for and engaged in the business of transmitting intelligence by electricity, taking into account previous sales of stock of the corporation and other pertinent conditions. The directors shall cause written notice of such increase to be given to each stockholder," who has a chance to come in and bid. If an increase of capital stock is to take place in one of these quasi-public corporations, it has to go under the hands of the board, and they see to it that the corporation gets in an amount of money equal to the real fair value of that stock. To illustrate, it may be 140. If so, it will take less shares, and there will be less shares out on which the corporation will be earning dividends by charges for transportation. That is the theory on which it goes. It is a very different thing, as you will see, from overcapitalization at the outset; but we attempted to deal in that way with any attempt to capitalize any actual accumulated profits. Now, of course, if accumulated profits are dealt with in that way, the community must get the benefit by selling the stock at auction. She would be pretty sure to say that opportunities for business and expectation of profits could not be capitalized. She would be pretty sure to say, if the question came up in that way, "The most we will allow to be done is to capitalize these accumulated profits. We will not allow the capitalization of opportunities and expectations." That is what she does say. The railroad commissioners when they are considering

valuations for the consolidation of these street railways do not capitalize opportunities. They do not capitalize expectations. They proceed on the theory that the capital stock should be limited to the value paid in, actually existing.

THE POSSIBILITY OF OVERCAPITALIZATION A CHIEF INCENTIVE TO COMBINATION.

Now, a question comes up which goes a little beyond guarding against overcapitalization, which was the one evil that Massachusetts was dealing with in these anti-stock-watering laws, and that is the alleged evil of excessive combination, amounting to monopoly. What light do our laws throw upon that point? Suppose that every State would do as Massachusetts has done, and suppose that every State could be provided with just as careful and intelligent public officers to supervise the issue.

I want to make this suggestion. I appreciate fully that there is a fundamental advantage in the reduction of cost, and that reduction of cost is secured often by consolidation and combination; but the desire for cheaper production, economy of production, is not the motive power in what is now going on. The motive power, the mainspring, is not the desire for economic production, but it is the desire to get possession of the overcapitalized securities; and if the opportunity to get possession of the overcapitalized securities was taken away, which is the same thing as saying if you supervise the issue of the securities so that there could not be this overcapitalization, you at once take away the real mainspring of much of what is now going on, wisely or unwisely. For if you say to the gentlemen who are making any great trust you please, "You can only issue stock to the extent of the actual values that are paid in," no matter whether in New Jersey or Massachusetts, you at once take away the principal inducement to them to do the business. They say, as a reason for inducing capitalists to aid the enterprise and financiers to finance it, it is going to effect a reduction in cost. That is true, and so far as that is the motive I myself doubt whether it would ever be desirable to interfere with it. But so far as the real motive is overcapitalization, simply using the other as an argument to get people into it, I have a feeling that it is somewhat doubtful. I have a feeling that if a remedy for this great amount of combination that is going on is to be sought, it may be sought, among other things, in doing away with inducements; in other words, by making it impossible for them to get that reward. Then only such combination will grow as is inspired by the desire for cheapness of production, and not that which is inspired largely by the desire to make two shares of stock where you put in one—one of preferred and one of common—unload both on the community, and let the community suffer the consequences; combining more and more, and thus producing some of the alleged evils of this excessive trust development that is going on now.

Of course, the trust, so far as it is an organization made up of certificates issued by trustees, has to be dealt with on a different basis; but so far as the great New Jersey corporations are concerned, it seems to me if New Jersey said to the corporations formed there, "You may issue capital stock, preferred or common, to the amount of the actual values as found by our trusted officers and no more," that very many of the great organizations that are now made would never be made. They would not do it for their own health, and they are not public spirited enough to do it for the sake of economic production. They are doing it to get two shares where they put in \$1; that is the motive. I believe that the tendency can be checked if it is possible to get the States to say that so far as corporations go the State will not give this bonus to promoters by permitting them to issue shares far beyond values. I believe that if that power is taken away from them altogether, including the opportunity to accomplish it by trust, if that can be done, substantially all, or a very great part at least, of the objectionable development would be terminated.

NO LONGER ANY LIMITATION OF CAPITAL STOCK, PROVIDED IT REPRESENTS ACTUAL ASSETS.

- Q. (By Mr. SMYTH.) You say the limitation of capital to one million has been removed, and by general statute the amount can be made larger?—A. Yes.
 Q. Is there any limit to the amount in Massachusetts?—A. None at all.
 Q. It must be a show down of hands that the assets are there?—A. Yes.
 Q. Who appoints the commissioners you speak of?—A. The governor.

RESULTS OF DIFFERENCES BETWEEN THE LAWS OF DIFFERENT STATES—MASSACHUSETTS LOSES SOME TAXES.

Q. Now, have you found that the restricted requirements with reference to charters have tended to drive the formation of corporations away from Massachusetts?—A. Of course, so far as our own quasi-public corporations are concerned, they practically must

be incorporated here under the laws as they stand. It is perfectly true that a great many of our business men, when they wish to form corporations for certain purposes, legitimate enough, but do not wish to pay in their capital stock, go elsewhere. They go to Maine, New Jersey, New Hampshire. It does drive them away when they are going into any enterprise where they do not wish to pay in the full value of the capital stock, and that gives a loss of income to Massachusetts; but if all the States applied the same law it would work equally fair to all.

Q. These other corporations, such as textile corporations, can have a factory in this State with a charter from another State?—A. Oh, yes; we allow corporations from other States to do business here by filing certain papers agreeing to admit service of process here and to appoint an agent.

Q. So these restrictive acts have tended to lessen the income of the State of Massachusetts?—A. I suppose that it has a very little. I do not know how much it has tended to lessen the income. We get a certain small income from foreign corporations doing business here; the property is here to be taxed, and, of course, all the property which they own in this State is taxed, no matter if they are outside. Probably it does lose us something; I have not considered that enough to say.

Q. To make the Massachusetts laws fully successful would require the enactment of similar laws in all the States?—A. To make it entirely equitable, it would be fair that every State should do the same thing.

NEW JERSEY GETS A LARGE INCOME BY MAKING CORPORATIONS.

Q. (By Mr. FARQUHAR.) From the fact that other States do not follow the example of Massachusetts, it may be assumed that they desire Massachusetts capital or restricted capital of other States to come in there under their more liberal laws?—A. I do not know. I have heard it suggested that New Jersey liked the large income that came to her treasury from having the large corporations organized there.

Q. (By Mr. SMYTH.) Has it not resulted in New Jersey in lowering the tax rate?—A. It has resulted in giving them a large income from corporations.

Q. (By Mr. FARQUHAR.) Have they not more revenue than is necessary for their State expenses?—A. I understand so.

THE GENERAL INTEREST BEST SERVED BY STRICT REGULATION.

Q. If this commission was to recommend repressive legislation, such as now obtains in Massachusetts, to the State of Illinois, and the State of Illinois said, "We want all the capital we can get, and do not intend to pass repressive legislation," how could you hope to get the Western people, who desire capital, to make any change in their laws, for the sake of the uniformity you speak of as being so desirable?—A. I think that a sound, healthy view is that in the long run the interests of the State are best served by having the whole corporate business done upon a sound basis, and that if you could once get the business men of Illinois and their organizations well waked up, as the business men and their organizations were in Boston in 1894, they would see that while it was for the interest of a certain limited number to go on in this way, the interest of the whole people would be better served by that satisfactory and juster treatment of the capitalization question.

Q. Now, at the present time your Boston papers are filled with the advertisements of the American Writing Machine Company. It offered to sell over eight millions of stock, if I recollect right. Is it understood that that corporation is to be inside the State of Massachusetts, or where?—A. I do not think there is any application for anything of that kind. Mr. Endicott told me there had been no application since the law was passed for the incorporation of any company with more than \$1,000,000 of stock. I think it is a corporation established under the laws of New Jersey; but possibly not; possibly a trust arrangement, just as was the case with certain railways.

TRUSTS.

Q. Your laws would not permit a trust, of course?—A. We can not prevent putting the stock of companies in the hands of individual trustees and issuing certificates of stock upon these shares. You could not put these shares of a domestic corporation in the hands of a foreign corporation; that would be obnoxious to this act; but when that act was passed this development of the trust, the putting of the stock in the hands of trustees, had not appeared upon the horizon, and we did not guard against having the shares of 6 companies put in the hands of 3 gentlemen as trustees.

Q. Was not this after the decision of the court of appeals of New York in the case of the American Sugar Refining Company, whereby they set aside the whole trust

matter?—A. I am not sure whether that is so or not; but at any rate we did not undertake to go beyond the case of foreign corporations, and not mere trustees, getting control of the stock of our corporations. We did not go beyond the requirements of the case.

INVESTMENT AND SPECULATION.

Q. Wherever this American Writing Machine Company is incorporated, in New Jersey or elsewhere, it is outside of the State of Massachusetts; but they come and advertise inside your State. You are permitting in Massachusetts stock gambling, irrespective of your laws. Can you shut them out?—A. We have never tried it. Whether we can or not, I prefer to hope the other States will take wise action rather than call on us to enact exclusive kinds of legislation. That would be something I should wish to consider very carefully before, as a lawyer, I expressed any opinion as to how far you could interfere with doing business in that way. If 3 gentlemen see fit to buy up the stock of several corporations and own that stock, I do not see a very easy way of dealing with it. If, having bought it up with money of 20 gentlemen, these 3 gentlemen see fit to issue shares of proportionate interest, as we do here in companies that we form, for instance, it is pretty hard to frame any way of dealing with them that would be legal or meet the approval of our business men. I think it would have to be the subject of a regular public crusade, so to speak; a public uprising, as the antistock-watering laws were.

Q. Your statement as to the laws of Massachusetts is instructive and interesting, but if the corporations of every other State can come in and sell, it is no protection to your people?—A. We recognize that our people, as investors, are exposed, but it gives me a chance to say to you, gentlemen, that our laws were framed not so much with a view of protecting our investors, though that was an incidental question, as for the purpose of guarding our great communities against excessive charges for transportation, or for such necessities as light or electric communication. It is to guard them against that subtle overcharge which comes from overcapitalization. The men who were in this were largely people who patronized the great railroads and did not want to pay excessive rates of freight, and who patronized gas companies; and the investor side was not so much in question. We realized it, but we never have sought to protect our people against the consequences of their own folly, if they see fit to go into speculation.

OVERCAPITALIZATION AS LEADING TO OVERCHARGE.

Q. You seem to argue, or it is implied at least, that overcapitalization becomes a burden on the people. The street railway, for instance—that where they attempted to make a dividend of 12 per cent where legitimately they ought to have 8, it is 4 per cent taken out of the people themselves?—A. That was the view which prevailed. That was the expression in the movement. In stating the matter to the commission, I was really trying to be the witness, and state the facts with perfect candor; not desiring to color it at all, until I made two or three suggestions in the last moment or two.

Q. Take a street railway in the city of New York capitalized at two million; that street railway has extended its equipment and track to almost twice what it was when it was capitalized at two million, but still remains at the same old figure. The railway, of course, does now three times the amount of business; its dividends—no one knows what they are, and it did not need to overcapitalize to mulct the public, because it held its original capital and is now probably giving three times the dividends it gave at first. Look at the Chemical Bank of New York to-day; see the enormous rate of their shares; and yet you can not change the capitalization by law or anything else. So a company may hold its capitalization, without extra capitalization, and still draw from the people this patronage and have the heavy dividends. Does that stand as a business proposition on both ends?—A. Our corporations are all required to make sworn returns to the commissioner of corporations. We therefore know just what dividends they pay under all circumstances, and the presumption was that the people, in the case of quasi public corporations, would by public opinion compel, in a way, by their discontent and clamor, a reduction of rates if the rate of dividend became very, very high. When the rate of dividend on any of our public-service corporations—gas companies, for instance—gets up toward high-water mark, immediately the consumers begin to complain, and our laws provide that they may go to the Massachusetts electric light commissioners and file a petition for a reduction of rates; and the commissioners, having the supervising power, would go pretty far in that; and the gas company, if it has made large profits, or the electric light company, may be requested to name lower figures. Our railroad commissioners, while they have

not absolute control, have advisory power, and as a matter of fact I do not know that the advisory power has ever been disregarded. They may advise regarding rates. They even do advise regarding workmen's trains; and their advice is usually equivalent to a command, for if their advice was disregarded the probability is the next year would see a bill in the legislature calling attention to that, and perhaps aimed at the corporation in such a way that it would seek to accomplish as much or more for the community in some other way. I make this reply only by way of explanation and without any intention of arguing the other side, but to state it as the gentlemen stated it to us.

Q. Have you any means of knowing the actual earnings of your street railways in Massachusetts?—A. We have the railroad commissioners' report, which shows the earnings of every street railway in the State and a careful summary of everything.

MUNICIPAL OWNERSHIP OF NATURAL MONOPOLIES—HONEST, INTELLIGENT SUPERVISION SOMETIMES BETTER.

Q. Have you any municipal ownership of your natural monopolies in Massachusetts?—A. Especially of water companies. I think Massachusetts probably leads all the States in her municipal ownership of water plants, and lately we have established not municipal but metropolitan ownership of a great plant that is to cost about \$30,000,000, to supply water from Worcester County (and it is contemplated to run over into Hampshire County) for this great metropolitan district. My own city of Cambridge owns her water plant, has a water board, and collects special water rates. The most of our large cities have municipal ownership of water. There have been a few attempts at municipal ownership of gas and electric light. We have no municipal ownership of transportation or telegraph or telephone that I know of; I think it is limited to water and to some cases of light. We have a general law that provides that municipalities may go into the electric-lighting business.

Q. Do you think in municipal ownership there is an opportunity to counteract overcharging by private or quasi-public companies?—A. A great deal, a very great deal, has been urged upon us. Perhaps I am not one of those who get very enthusiastic. I have been inclined to think that, as a rule, with judicious supervision of rates, with supervision as to all the issues of the capital stock, so that there is not a fictitious dollar to earn interest on, and with careful supervision of the returns, and power to supervise charges and rates, it would be well to go slow in respect to actual ownership. If you are going to hand these over to unrestricted monopoly or ownership, it is another thing; but in the case of the public-service natural-monopoly corporation, I believe that with honest and intelligent supervision by the State, monopoly is not a menace. But that supervision must be intelligent and must be honest; for where this monopoly begins, and it begins at once in the natural-monopoly corporations, here competition ends and supervision should begin. The two should together cover the field.

MUNICIPAL OWNERSHIP GOOD, IF GOOD, HONEST SERVICE CAN BE GOT—SUCH SERVICE IS GOT IN MANY MASSACHUSETTS CITIES.

Q. It is quite evident that these natural monopolies of cities must yield more than almost any other business, because the greatest capital of this country is engaged in them. Now, provided there is more money in that, is it not a probability that there should be municipal regulation and possibly municipal ownership?—A. It has always seemed to me the moment you get good, honest, economic service, then municipal ownership is a very desirable thing in these natural monopolies; but since you are not able to get honest and intelligent public service, but are obliged to have a good deal of log rolling and political pulling in order to handle things, it has seemed to me there is strong argument for supervision instead of absolute ownership. I should come to absolute ownership, perhaps, just as soon as I got honest and intelligent public service in the administration of these monopolies; but if you are going to have a great monopoly of that kind, with its vast amount of money and large number of employees, used for political ends, it would be a menace to the people and not a help.

Q. You say it would be a danger, then, to have the public service a subject of political control?—A. No; to my mind there is that danger always attending public ownership unless you get the thing well cleared up beforehand. I do not mean to say there are not many of our communities where it could be done satisfactorily; it is certainly done with absolute safety in my own city; it is done safely with the great metropolitan system of Boston. I do not think there is a commission more free from political influence than the water commission. I do not think the water board of my own city is in the least to be charged with anything political. I think public ownership should come slowly and in a way not to demoralize.

Q. (By Mr. SMYTH.) Do you know of any instances outside of those you have mentioned where they have been safely and economically administered?—A. The city of Boston has had its own water supply for a long time and I have never heard of any scandals. And there was the Mystic Water Company, which supplied water to several of these cities on the north of Boston.

Q. Your experience is altogether with water supply?—A. Entirely.

Q. No street railways, or anything of that kind?—A. No.

Q. The other field would become much more hazardous?—A. I mean to speak only of water and the very few cases of light that I know of in this State; but there is a constant tendency to take more and more of the water companies. Within a few years there was the case of Newburyport and Gloucester, and, I think, Wakefield.

Q. The larger the number of employees the greater the doubt of the propriety of public administration?—A. It would seem so.

Q. In other words, the city may run the waterworks department economically, but it is different in respect to running the street railway department with its thousands of employees?—A. There may be some danger, but that is one of the things that each man approaches with a little of his own natural bias. I think when one is inclined to favor public ownership of these instrumentalities it is easier for him to believe there will not be trouble; if he is pretty skeptical about it he is apprehensive of trouble.

PROTECTION OF INVESTORS; IF MEN WILL BUY, THEY WILL.

Q. (By Mr. FARQUHAR.) A few minutes ago we called your attention to the fact that with your restrictive laws you could not safeguard your citizens from being taken in by these overcapitalized corporations of other States; what protection could you offer, do you think?—A. I have found it pretty hard to prevent people from being foolish enough to buy what they want to buy. If every State in the Union will see to it that these mischievous and misleading influences are not created, well and good; and if they create them, I do not see any way of preventing a careless man from buying shares in some fake copper mine organized in some far-away State, or in some fake manufacturing scheme that will go all to pieces for lack of sound management, or for lack of market, or for lack of capital enough paid in. As a lawyer, I do not see how you are going to prevent a man's spending a hundred dollars of his money for a pretty piece of engraving, unless it is an absolute, palpable fraud, if he is so foolish as to do it.

Q. It may be your view that the only way to save the public from great harm in that is to have several of these trusts go to pieces and discredit the whole system before the people. Is that your idea?—A. It may be that will be the only way to teach the lesson.

Q. (By Mr. SMYTH.) You think experience will be the best teacher?—A. So far as the investing public is concerned I confess I do not see anything to prevent them from buying. I see ways of guarding the public generally against the indirect consequences of overcapitalization, as I have said, so far as overcharges are concerned, and, incidentally, so far as undesirable combination is concerned; but when it comes to guarding them against buying and selling, I do not see any way of doing it.

THE TENDENCY TO COMBINATION IS NATURAL, BUT IS UNDULY STIMULATED WHEN A PROFIT CAN BE MADE BY OVERCAPITALIZATION.

Q. Do you think for the last 15 or 20 years it has been the trend of matters, with the exception, of course, of 1892 to 1895, to run into this combination?—A. Very much.

Q. Men do it as a natural tendency in business rather than something artificial?—A. I think it is both. I think it is a natural tendency of business, and I think that natural tendency is unduly stimulated by the opportunities of the corporate or trust organization. As far as it would naturally go, in the interests of business and cheap production, one would hardly care to object to it. It is only when its speed is greatly accelerated by men anxious to secure overcapitalization and profits that it is a bad thing.

INVESTORS CAN NOT WELL BE PROTECTED IF STOCK IS PERMITTED TO BE WATERED.

Q. (By Mr. CLARKE.) Since the public have so largely become investors in the stock or securities of private business corporations, do you not think the time has come when some way ought to be contrived to protect investors as well as purchasers of the things produced by these corporations?—A. I always welcome every move-

ment toward protecting the community against oppression and fraud in the purchase of valueless things, yet I do not easily see the way to do it.

Q. You think it is a consummation devoutly to be wished?—A. I do; but I think if the stuff is once permitted to be created it is going to be more difficult to find a way to forbid anybody who wishes to spend his money in that way to buy it. Prevent it from being issued in the start and turn on the light, but leave the free American citizen to buy if he will. If he wants to be gulled, I do not think it is going to be easy for the legislature to prevent him.

DIFFICULTIES OF STATE REGULATION.—INTERSTATE COMMERCE.

Q. I suppose you recognize the great difficulty of bringing all of the 45 States of this Union up to the high standard of preventing overcapitalization?—A. I do not see how it is going to be possible to do it short of a miracle in the way of public opinion.

Q. I presume you recognize that it will be extremely difficult for the authorities of any one State to efficiently supervise the issues of stock in corporations whose business is in some remote part of the Union. For example, if Florida in the southeastern part of the Union should undertake to grant a charter and supervise the issues of stock to a company like the Federal Steel Company, whose property is in Illinois, Ohio, and Minnesota, do you think the State officers in Florida, however efficient, able, and honest, would be able to grapple with the problem?—A. I very much fear they would not always. Of course some of the far Western States would be in even a worse predicament, because they are not as well equipped perhaps with men competent to deal with it in some of these States as Florida.

Q. Since the business of these great combinations of business is so largely concerned with interstate commerce (I have in mind companies which own railroads as a mere incident to their manufacturing, but these railroads extend over more than one State) has your attention been given to the idea that the very extent of the business of these private corporations might make them amenable to Federal legislation under the interstate-commerce law or something of that sort?—A. I have never undertaken to get at the bottom of the present constitutional power. I do not believe the matter will ever be dealt with satisfactorily by 45 or more different States. If it is to be dealt with in any wholesome or healthy way, I do not believe it can be done by getting the different States to do what Massachusetts has done, because when several have done it the temptation will be so great to some small State to stand out and get all the reward.

Q. (By Mr. FARQUHAR.) Just as New Jersey did?—A. Suppose all except Delaware and Idaho had done it and the efforts of all the combinations were brought to bear on Delaware and Idaho; we should never get such legislation through, in my opinion. (Testimony closed.)

LEGISLATION—PUBLIC CONTROL.

WASHINGTON, D. C., December 12, 1899.

TESTIMONY OF MR. JOHN R. DOS PASSOS,

Attorney at law, No. 20 Broad street, New York.

The commission met at 10.35 a. m., Vice-Chairman Phillips presiding. John R. Dos Passos, esq., was introduced as a witness, and, having duly affirmed, testified as follows:

MR. PHILLIPS. Governor Harris, of Ohio, has kindly consented to be in the chair to-day. I shall be pleased if Governor Harris will take the chair.

Q. (By Mr. JENKS.) Will you kindly give your full name and address?—A. John R. Dos Passos, New York, No. 20 Broad street.

Q. What is your profession?—A. I am a lawyer.

Q. I understand that you have already prepared some general statement that you would like to make to the commission with reference to legislation?—A. An oral statement; yes.

Q. We shall be glad if you will give that in your own way.—A. Thank you.

LAWS SHOULD BE PREPARED BY COMMISSIONERS—TOO MANY LAWS.

MR. CHAIRMAN AND GENTLEMEN OF THE COMMISSION: I appear before you this morning to make some observations upon the legal and historical aspect of the question of the aggregation of capital, whether that capital be represented in money, in goods, or in labor. Because of its immaturity, I am here to endeavor to rescue this subject from the domain of law, where it does not belong, and place it in the field of speculation and thought and political economy, where it does belong.

I appear here as the representative of no corporation, of no aggregated interest, or of no individual, and the opinions and views which I shall have the honor to express are entirely my own; I alone am responsible for them. They are made without consultation with anybody, and whatever criticism may arise from the observations which I shall address to you must therefore fall upon me alone.

I congratulate the country that this great and interesting, not to say absorbing, question has fallen at last into a legitimate place of discussion, and that this commission, composed of individuals chosen from all the walks of life, is to sit here and to hear everything that anybody wishes to say, and to report their conclusions upon the facts in shape for definite action. I regard it as of the greatest importance to this country that questions of this kind should primarily pass through the ordeal of a commission. If they are left in the hands exclusively of politicians very much is said of an extravagant, emotional and sensational character, and the results which accrue from such a method of inquiry and examination are, in a general way, unsatisfactory to the reasonable, thinking people and the important business interests of the country. Whatever is filtered through this commission, I believe, after its exhaustive and laborious study of the questions involved, will be of service to the whole country. And permit me to remark at the outset that, in my opinion, it would have been very much better for the interests of this country if, instead of passing the interstate-commerce law, the Congress of the United States had, in the first instance, appointed a commission to inquire into the needs and necessities of the transportation and railroad interests before they rushed to pass a bill, which is the most remarkable piece of legislation that has ever emanated from any parliamentary or congressional body, and from which the corporate interests involved in that field have only been saved from destruction by the exceedingly conservative management which has characterized the actions of the gentlemen who have had charge of the Interstate Commerce Commission.

It is a lasting reproach to this country that during the passage of that bill many gentlemen in the United States Senate arose in their seats and practically said: "We know nothing about the bill, but we believe the country wants it, and therefore we shall vote for it."

Now, I assert that that law should never have been passed; the matter should have been submitted to a commission such as is here, and then if the commission felt that the necessities of this country required a law, they would have prepared one which would have been consistent with the public interests and which would have done justice to all persons interested in the great problem of railroad transportation.

Another observation in respect to this commission, to which, it seems to me, I should be ungrateful and remiss if I did not allude. It is not often that I am in the position to commend legislation, but I can commend this statute not only in its substance but in the language used therein. Certainly the language of the act under which you are appointed and are working is most admirable. It is brief and charges you with the two great propositions that arise out of this great subject, namely:

"Sec. 2. It shall be the duty of this commission to investigate questions pertaining to immigration, to labor, to agriculture, to manufacturing, to business, and to report to Congress and to suggest such legislation as it may deem best upon these subjects.

"It shall furnish such information and suggest such laws as may be made a basis for uniform legislation by the various States of the Union in order to harmonize conflicting interests, and to be equitable to the laborer, the employer, the producer, and the consumer."

Yet is not this act an extraordinary commentary upon the way laws are made in this great country, which we in our moments of admiration and enthusiasm are prone to-day to call the leading nation of the world in its civilization, in its progress, and in all the elements which make up a great nation? Is it not a remarkable comment upon that civilization that 9 or 10 years after a law has been passed by the Congress of the United States a commission is created for the purpose of inquiring whether any and what laws are necessary upon the subject? Making the laws first and inquiring into the subject and necessity afterwards. Plutarch states that a Lorian stood up in the temple with a rope around his neck, prepared to be strangled if his proposed law was not adopted.

I say to you to-day, not in any spirit of sensationalism, but from a sincere belief and conviction, that if the laws of this country could be piled together in some place capable of holding them—the laws which have been enacted since 1848, when, under the guise of law reform, ill-considered codification was introduced into this country and a weed planted into our judicial and legal system which has overgrown and hidden from view the real and simple purposes of justice and law—I say that the man who could put a match to this accumulation of verbiage, duplication, and multiplicity of laws would be entitled to a monument at the hands of the American people for ridding them of statutes and useless books (not excluding two that I have written myself) and bringing them back to a condition where they could look upon the question of making laws in the serious aspect in which it should be considered when legislation is contemplated.

Let me make one more observation before going into the questions which I shall discuss. The great question, or the great cry, rather, when public matters are discussed in this country, is "legislation," "legislation," "we want laws;" and the inquiry is pushed in that line until each political party is in a race to outdo the other in making statutes—and this is called legislation; and these statutory enactments are made in order to appease what they consider to be the predominating sentiment of the hour. In this aspect one party is no worse than the other. They are both the same, and standing here as an independent critic, as I do, careless of all political consequences to myself, I say that one party is as bad as the other in the general method of treating public questions and in their superficial mode of legislation.

THE SOCIAL COMPACT—NATURE OF LIBERTY AND OF LAWS.

Now, it is necessary for me to suggest what legislation is. Legislation requires that one who undertakes to draw a statute and have it passed through a legislative body should thoroughly understand the subject-matter involved. We must, in order to have complete and thorough legislation, go back to the basis of social organization, and no legislation can be satisfactory unless it is examined in that aspect. You must understand the relation that a citizen occupies to the government before you can legislate, and you must be perfectly convinced that legislation is necessary.

These views are didactic, but it is necessary to treat questions of this description in that way in order that we may arrive at a proper result, and I call to your atten-

tion this morning—I call to your minds the contemplation of the original creation of society, which is the basis of all law, the structural social conditions that exist.

No one can trace back to its origin human society, but we all have defined views upon the subject, which are deduced by writers like Montesquieu and Burlamaqui and others who have paid attention to questions of the spirit and nature of laws.

A man is born into the world and it is assumed that he bargains with some government for citizenship; that is the accepted origin of society. He says to the government, "I will give you my allegiance, I will give you my fealty in return for protection," which organized society, a necessary condition of human existence, accepts and affords him and his property protection. This is a crude description of the social compact.

Now, what does this compact mean? It is called political or civil liberty, which a celebrated authority defines to be "the natural liberty of mankind so far restrained by human laws as is necessary for the good of society." Here is a distinct and clear contract on the part of the government not to intrude upon or molest the natural liberty of man except in cases of plain and paramount necessity.

Now, mark you. Every law that you make is, as it were, a nail in the coffin of natural liberty. The object of government is not to make laws; the object of government is to avoid making laws—the very reverse to-day of a legislator's habits. And no law should be or can be made which looks to the combined interests of the citizen and the government unless these primary principles are adhered to. First, you must be convinced that a real necessity requires a law to be made. You must examine into the causes; you must know the mischief that you seek to avoid and prevent before your hand takes the pen to write a law which takes away the natural liberty of mankind.

If these principles were only thought of, and all questions which were to be the subjects of law should be impartially and thoroughly considered, much unnecessary legislation would be avoided, and the condition of this country, so far as its legal affairs are concerned, would be very much better.

Gentlemen, but one more word preliminarily to the main subject, which I shall now touch.

MEANING OF "TRUST."

Before we discuss any subject it is necessary that we should understand each other as to terms—we should agree as to the issue involved—the primary matter which we are brought together to consider, and hence there is a necessity to have a definition. A definition is an absolute prelude, a *sine qua non*, to a discussion understanding of any subject, whether it is legal, moral, religious, or otherwise, because without definitions men could never get together. They would not understand each other.

Now, there is the word "trusts," used in the discussion of the question of aggregated capital, and that word is used so frequently in this country that it has become a synonym for aggregated capital—has become a phrase representing all of the forms of combined capital.¹

We must exclude from this discussion words and phrases that are useless and meaningless or we can make no intelligent progress. A trust, according to Judge Story, an authority on equity jurisprudence, is an equitable interest which a man has in personal or real property; and the history of trusts, if anybody is disposed to go back to study the origin of them, will be found to have arisen out of an evasion of some of the principles of the feudal law. But in the sense in which a trust has been used, so far as it has been technically and legally used for the last two hundred years, it means, as Judge Story has said, an equitable right in personal or real property. That is, it assumes that the trustee, who is the person controlling or the physical custodian of the corpus of the real or personal property, is the legal owner and the real owner, while the person really interested is called the *cestui que trust*, or the beneficiary. He, the latter, is the actual owner. The trustee is the one given the legal title, but he has no duty except to carry out the terms of the trust, whereas the actual owner is the beneficiary; and although the title is not in him, he can call upon the trustee at any time, according to the terms of the trust instrument, to account for and fulfill the mission of the trust.

In applying that word "trust" to the question of aggregated capital, about which I shall speak, it means this: Assume that six persons desire to become the owners of six companies; they get together and they make what is called a trust deed or a trust agreement. That trust agreement recites the terms under which the securities are held; that is, the stock, the shares of these six constituent companies, are taken and placed in the hands of a trustee, who has no actual or real ownership, except that he is the custodian—the shares belong, accordingly, to the trustee, to administer the trust. That was the object of a trust, so far as it applied to corporate transactions. Let me

¹ See Mr. Allen, p. 1178.

try to make this perfectly clear. All of the stock of the six corporations is deposited with, say, one person, and that person issues a receipt, called a trust certificate, by which the person receiving the trust certificate is entitled to a defined interest, as therein stated, in the properties of those six companies, whose shares have been lodged with the trustee.

A trust was not a novel proposition when it was introduced into dealings in corporation shares. It was the application of an old principle of law to new conditions. The object of it was this: To keep people who had no business to know from knowing the secrets of that trust. That is the object of a trust (a perfectly innocent and a perfectly laudable object, in my estimation).¹ If they had formed one corporation and put the six constituent companies into one corporate body, it would have been heralded to the world, and the world would have had the right to go into the county clerk's office, or the office of some officer entitled and authorized to receive those papers, and to look at them. The object of the creation of the trust was to avoid that publicity, and therefore they had a trust agreement, which was deposited in the safe of the trustee, and nobody knew anything about it, except the beneficiaries—that is, the persons holding the trust certificates.

Now, if the learned chairman here had had an interest in one of these companies, he would have received a stock or a trust certificate, and that trust certificate would have entitled him to receive, at the proper time, dividends, and ultimately to receive his proportion of the principal. That would have been the right of the holder.

The beneficiary, or the *cestui que trust*, or holder of the trust certificate, had at all times the right to walk into a court of equity and demand that all of the business conducted by the trust should be opened to his eyes and should be accessible to his inquiries.

The only two large industrial corporations which resorted to that system, which I will call ancient procedure and ancient law, were the Standard Oil and the Sugar Trust.² Through the enforced decrees of courts, which declared such trusts monopolies and against public policy, they gave up the form of trusts and they assumed the form of corporations, and when the Sugar Trust divested itself of this exterior garment, and when the Standard Oil Company divested itself of its exterior garment known as a trust, it did not affect the vital body, it did not affect the corpus; it did not affect the real, substantial objects involved in the trust, but they simply put on other suits of clothes, and appeared in the community in the new garments.

The word "trust" must therefore be discarded in the discussion of these questions, now and forever; because the courts have set their seal of condemnation upon it, and they require that people who have in view the aggregation of capital shall now consummate it through the instrumentality of a corporation; and in discussing these questions we must dismiss this word "trust" as meaningless and useless.³

HOW GREAT A CAPITAL IS PERNICIOUS?—IN WHAT HANDS?—PUT TO WHAT USE?

We then arrive at the question as to what was the meaning and intent of Congress in the appointment of the commission, and what is the meaning and intent of the public discussion, which has gone on from one end of this country to the other, upon the question of aggregated capital. It means, so far as I comprehend the question—and I want to state it as broadly as possible, so that not even the most dilettante critic can find fault with the definition—that certain organizations, or certain people, or certain writers, contend that the aggregation of capital is pernicious or detrimental to the public welfare and the public good, and they therefore ask this commission, as they have asked the courts, under the legislation which is already existing, to come forward and help to forever stifle this evil.

Now, gentlemen, I want you to observe that the advocates of legislation against aggregated capital have not put their views into definite form, and there is the difficulty in discussing the question. Let me try to give to their vague theories a "local habitation and a name." Let me strive to make a postulate for the people who oppose aggregated capital that will form a basis of discussion—historic, moral, legal, or religious, if you please. Let me create an issue.

Aggregated capital is wrong, is pernicious. What is meant by that? There are three things that must be looked into in approaching this question; namely, (1) the amount of capital intended, (2) the person in whose hands the capital is vested, and (3) the use to which the capital may be put.

Now, let us follow this arrangement and see whether there is any intelligent basis made by these advocates, and I will put them all in one class—newspapers, political organizations, writers, and everybody else; is there any intelligent or sufficient information vouchsafed which covers these three important points?

¹ See Mr. Allen, p. 1173.

² See the plan of organization of the Whisky Trust, p. 136. As to the National Lead Trust, see p. 136. As to reorganization of the American Cotton Oil Trust, see Von Halle, Trusts or Industrial Combinations in the United States, p. 249.

³ See Mr. Allen, p. 1173.

First, the amount of the capital; second, the person who is to use the same; and third, the use to which the capital is to be put.

Now, let us see as to the amount of the capital. How much capital is pernicious? Is a million dollars capital, aggregated in the hands of a corporation, pernicious; or is 2 millions; or is 5 millions; or is 10 millions; or is 50 millions; or is 100 millions?

You can not discuss questions of proposed legislation unless you have fixed principles, and information to go by. You, sitting here as intelligent inquirers into the truth, going to the bottom of things, must have facts. You can not predicate legislation upon doubt and uncertainty. You must be able to say that a million dollars is pernicious, or 5 million dollars, or 20 millions, or 50 millions, or 100 millions. Which is it?

Those who oppose aggregated capital have never yet, so far as my observations are concerned, or so far as my research has gone, answered that question intelligently, or answered it at all. In fact, that is a problem which this body is left to solve upon mere hypothesis.

Then the second one; the person in whom the capital is vested. Is 100 millions of dollars more pernicious in the hands of a corporation than in the hands of a partnership; is 50 millions of dollars more pernicious in the hands of a partnership than in the hands of an individual? Will the opponents of aggregated capital answer these questions to this commission? They need not trouble themselves with answering them to me. Will they answer them to this commission?

Are you prepared to say, gentlemen, that you will allow an individual in this community to have 100 million dollars, but will deny the same right to a corporation? Now, let us see where that will lead you to. Let us follow this question down to a legitimate business result, and that is all I ask. Don't let us get into the realm of speculative discussion because I am here to "talk facts." Are you prepared to say that you will give an individual the right to hold 100 million dollars in his one pair of hands and you will deny that right to a corporation? Now, let us see where that would lead, if you have reached such a conclusion, which I do not believe that you have. The capital of a corporation is divided into many parts—shares and bonds, or one or both. The corporation capital would not be owned by 1 person; it would not be owned by 10 persons; it would not be owned by fewer than 1,000 persons; in many cases it would be owned by 10,000 persons—10,000 shareholders or bondholders of small capital and small means, who put their money into that concern for the purpose of reaping a reasonable rate of interest through the instrumentality of dividends, and in their belief that the aggregation should result in something profitable. Now, suppose you deny 10,000 people the right to participate in aggregated capital, and you afford that right to 1 individual who can congregate in his hands that vast and enormous sum of money. Would that be just or logical? I am giving no expression of my own humble opinion about these questions; I am simply opening up this subject, and showing you how difficult your mission is—to propose laws in the absence of such vital knowledge.

Very well; now, let us go another step: Third, what is the use to which the money can be put? Is it pernicious that 100 million dollars should be invested in railroads? Is it pernicious that 100 million dollars should be invested in transportation, canal companies, insurance companies, banks, and real estate; is that what they say? We have no light on this question. Has anybody appeared before this honorable commission who advocated laws which were calculated, as they say, to choke to death this modern monster called "aggregated capital" without giving some information upon this point? Has anybody come before this commission and given it data which will enable the reasonable mind to come to an honest conclusion in respect to the use to which capital should be limited? Will you say that a corporation can not put 100 million dollars in the organization of a manufacturing business? Will you say that it shall not put 100 million dollars in real estate? Will you say that a corporation formed in New York with 100 million dollars for the purpose of irrigating the lands in Texas or in Arizona is illegal, and at the same time allow 100 million dollars to go into the banking business or into the insurance business? Where is the line of demarcation to be drawn; where will you begin with the chalk, as Mr. Burke says, and mark the line that separates the pernicious from the commendable or proper employment of capital?

These vital points are not answered, so far as I have been able to see, and they must be answered before you can make any intelligent law; and the reason—and I shall approach that hereafter—why similar laws have not been executed is that they never were comprehensively studied by the legislators and the subjects profoundly discussed; but the legislators madly dashed to the work, threw ink upon paper, and called it a statute and legislation, and they asked the courts to enforce it—enforce a statute based upon doubt and guess and speculation and against the natural laws of trade and business.

I wish to impress upon this commission that I am searching for truth, as they are. I have no other motive; I will not allude to that again; but I have no other motive in addressing this commission except to get at the exact truth. Personally, it is immaterial whether you legislate against aggregated capital or whether you do not; it is utterly immaterial, so far as my personal interests are concerned. But I am here before you to-day as a citizen of the United States, proud of the country, desirous of doing everything to preserve its institutions intact, in their original spirit, to advance it in the estimation of the world, and in our own estimation.

AGGREGATED CAPITAL NOT PERNICIOUS UNLESS ACCOMPANIED BY MONOPOLY.

Now, let me again try to formulate some postulate for these people. They say that aggregated capital held by a corporation for the purpose of manufacturing or business or commerce is pernicious and detrimental to public interests. I can not undertake to give the language which has been used by some of the orators in portraying the dreadful future which is in store for this country if aggregated capital is permitted to exist. Adopting this formula: "Is aggregated capital in the hands of corporations detrimental to the interests of society?" On what grounds?¹

Q. (By Mr. JENKS.) Can you give us any authority in writing or any book, or cite us to any law of any State, that will uphold that proposition you have just laid down?—A. Which proposition?

Q. That aggregated capital in corporate form for manufacturing purposes or commercial uses is detrimental to society?—A. I can only say they do not put that in the statute, but if you will go back to the speeches anterior to the Sherman Act you will find that was the aim.

Q. The question was this, Whether in any statute passed by any of the States, or the United States, this proposition seems to be upheld? There may have been some speeches beforehand in which it was, but in all these statutes was not the proposition laid down that this aggregated capital must in itself become a monopoly?—A. I am going into that.

Q. (By Mr. FARQUHAR.) Is that not covered in the Texas case?—A. Yes, the Texas case; but let me answer. The legislation is drawn in general terms, but the theory of the authors of the legislation does not appear. Heaven forbid! Because there would not be room enough in the law libraries to put it in; but if you will go to the language of the courts which construe the statutes, and if you will go to the language of the legislators when they passed them, then you will find an answer to that question; and if you will go to the platforms of the various political parties, and if you will go to the speeches of the various political orators, you will find a perfect answer to that question.

Q. (By Mr. JENKS.) Can you cite us to any decision of any court that attacks aggregated capital in corporate form used for manufacturing or commercial purposes, unless the court goes further and finds that this capital is employed for the purpose of securing a monopoly?—A. No, I do not recall; but I do recall this, that one of the objects of your deliberation is to furnish the means by which the aggregated capital shall be forever squelched. That is what I am arguing about. Never mind the past. I will show you that the present laws do not amount to very much; not that I am speaking contemptuously of them, but I mean that these very laws, which I shall show you, are aimed against the laws of nature. When you legislate against the moon, you are getting a pretty difficult proposition to carry out—when you ask an injunction to compel it to rise a little earlier or to go down a little later. No, sir; I do not find any cases which hold that aggregated capital is pernicious to society, unless it carries in its train a monopoly, and that is just where I am going now.

Q. (By Mr. STIMSON.) The corporation statutes of a great many States do limit the amount of capital of corporations under the theory that the large amount is not taxed?—A. Yes, that is true; that is exactly true.

MEANINGS OF "MONOPOLY."

It is said that aggregated capital is pernicious because it creates a monopoly, and therefore we must advance one step further in the discussion, and try to discover what a monopoly is.¹ Definitions are the thing that you gentlemen want; they are like the landmarks on a dark night when you see the white stones along the road as you are driving your horses through perilous paths difficult to discover without some mark to go by. But if you allow yourselves to be overwhelmed in a sea of speculation, without any chart, without any definite notion of where you are going, simply drifting around, you will accomplish nothing. Therefore, arguing this matter as a lawyer, I am looking upon questions of definition as of primary importance.

¹ See Mr. Allen, p. 1179.

Now, "monopoly" has a legal, it has a grammatical, and it has a historical meaning. The legal and grammatical meaning of the word monopoly is the same; it must be. A monopoly, according to the dictionary, is the exclusive privilege of traffic—"the exclusive possession of anything as a commodity or a market." It is an exclusive privilege, resting in the hands of one person or corporation, to the exclusion of everybody else; and to comprehend a monopoly, you must be able to understand that there can exist no monopoly unless it is exclusive. That is the whole basis of it. This word monopoly received a significance, and a great emphasis, in the time of Elizabeth. She gave out, as Hume will tell you—and I am not going into that part of history, except to refer to it, so that if anybody wishes to pursue the subject he can do so—Hume tells us that Queen Elizabeth gave out these exclusive monopolies to various courtiers in return for favors. She did not incorporate companies; they were not heard of, not thought of, not dreamed of in her time; but she took John Smith and John Jones, and she said, "Hereafter, you are to have the exclusive privilege of manufacturing or selling tobacco in the Kingdom of England, and nobody else can do it;" and every dictionary will tell you that that is the present meaning of monopoly.

We lawyers, brought up on the milk of Blackstone, absorbed a prejudice against monopolies to such an extent that when you mention monopoly to a lawyer it is precisely like waving a red flag before a bull. It is a fundamental basis of a lawyer's education to oppose monopolies. But there have existed in this country, with but few exceptions, to which I shall refer, no monopolies since its organization, and therefore the use of the word monopoly, in the legal and in the grammatical sense, must be discarded from this discussion; it has no business here; it has no technical meaning when applied to aggregated capital.¹

But there are two monopolies which may still exist. There is a monopoly in patents. The people of the United States have seen fit to say that when a man invents a process, which goes through the ordeal of the Patent Office, and is regarded as being a practical invention, he shall have the privilege for 17 years of using it for his own sole and exclusive benefit.

In all their furious denunciations, in all the extreme criticisms to which the opponents of aggregated capital have gone, I have not seen any suggestion that we should repeal the patent laws. So that if someone were to discover a process by which he could make a loaf of bread out of a stone for 1 cent, and he would ruin every baker in the world and ruin every miller in the world, there is not one voice which would be raised against the granting of such a patent. And yet the patentee would, Jove-like, armed with thunder, have in his hands all that tremendous power, directly from the Government of the United States itself; before which power the monopolies granted by Queen Elizabeth to her favored courtiers would sink into absolute insignificance.

That is the kind of monopoly that exists; and in your deliberations, gentlemen, you must very carefully weigh this question—as to how far you can restrict the use of capital in the aggregated form on the one side; and at the same time allow these extraordinary patents, becoming more and more extensive as science advances, to be issued by the Government on the other.

There is another species of monopoly, and that is a monopoly in the form of a special charter granted by a legislature or by the National Government. That is a monopoly in a certain sense. But it is of no great importance in this discussion, because, by force of constitutional provisions, every special charter which has been granted within the last, I should say, 25 or 30 years—I do not want to be put down as if I were actually accurate, but within the last 25 or 30 years—I think every constitution has given the legislature absolute authority to peremptorily revoke charters, so that no great detriment can occur to the community through their instrumentality.² And, as a matter of fact, almost every State, if not all, has laws which enable people to become incorporated companies through their general laws; and it is unnecessary to apply to the legislatures for special charters, except in extraordinary cases and when a special application seems to disclose a peculiar merit in the enterprise. So there is nothing to call for special remark about special charters.

We come, therefore, to the consideration of another kind of monopoly—one growing out of existing conditions, and the meaning of which one can not find in his dictionary; and we must discard legal, grammatical, and historical monopolies from this part of the discussion. Driven out of the position that aggregated capital is a technical monopoly, its opponents have assumed another one, and there has been created what I shall call a resulting monopoly, a monopoly in fact, and that I would define to be this—that while aggregated capital or individual wealth or partnership wealth

¹ See Mr. Allen, p. 1180.

² As to the power of the legislature of Delaware, see Mr. Smith, p. 1120.

was not seeking, through the instrumentality of a license or a special prerogative from the Government, to exercise certain privileges, to the exclusion of all other people, yet that the influence of their wealth was so great that it amounted to a virtual monopoly. This is a monopoly in fact—a monopoly which results from a condition of things existing. Now, that is the monopoly with which we have to deal, and which you have to discuss, and about which you have to undertake to legislate. That is a monopoly in fact, a new monopoly not alluded to by any legal writers so far as I remember, or so far as I have been able to find, but a new meaning to the word "monopoly" which has grown out of this modern cry against corporate capital, and it is claimed that if the aggregation of corporate capital is accomplishing the same thing as a technical monopoly, it ought to be suppressed.

HISTORY OF PARTNERSHIPS, LIMITED PARTNERSHIPS, CORPORATIONS.

This brings me to another proposition, and that proposition is this. That the aggregated capital of which I have just spoken is the natural result of commercial conditions; not only the natural result, but the necessary result of existing conditions. And when you undertake in your deliberations to legislate about this monopoly in fact, remember that I claim here—I may be wrong, my individual judgment may be wrong—but I am going to give you the reasons for it, and you will see whether they appeal to your judgment or not. I claim that aggregated capital is the necessary and natural handmaid of advancing commerce; that we should never have reached the colossal developed condition in which we find ourselves unless the instrumentalities of aggregated wealth had aided it.

Now, that is my argument, and I am going to prove it in this way. I am going to show you the history of general and limited partnership; I am going to show you the history of corporations. I am not talking at random; I am talking by the book. I am talking by the card of history. If history misjudges; if we can not consult history with any degree of safety, then all of my argument must fall to the ground, and the fabric which I am endeavoring to raise here must crumble into dust.

The question of partnership is the one which I will first discuss. The communion of goods among two or three or more men can be found clearly and satisfactorily so far back as Grecian history. You will find that in Greece they had what was called a communion of goods. Two men figured that their individual efforts would be made more satisfactory by the combination of putting their goods together, and they formed what was called the communion of goods; that is the equivalent of the Greek word in English, "communion." Partnerships existed and held their way down through the various gradations of universal history and society until we reach our English history, from whence we draw all our laws and our customs and institutions, and, in fact, almost everything else of value in our national life. These partnerships answered their purpose as long as partnerships were found to be fit and proper instrumentalities; and when they did not why something else was discovered. A partnership was all very well so long as it could furnish nutriment for advancing mercantile and commercial affairs; but you can see at once, when I explain the disadvantages of partnerships, that when we began to develop and unfold this colossal country (and this development is alone answerable for all the alleged sins of aggregated capital), when we got to large affairs the partnerships would not answer.

There were three distinct characteristics in every general partnership. In the first place, each partner was liable for the debts; that fact circumscribed its operations and utility. John Jones and John Smith entered into a partnership, and John Smith was answerable for all the debts, so that John Smith might have put \$100,000 into the partnership and John Jones would bring the firm in debt to the amount of \$500,000, and John Smith was liable; that was one of the disadvantages of partnership.

Another disadvantage was this, that when one of the partners died the business was at an end. Death dissolved the partnership, just as it does marriage, and although the firm might have been in the midst of a flourishing business, the death of one of the partners immediately canceled it and stopped it, and prostrated the business.

Of course, I remember that lawyers have undertaken to provide for the continuation of a partnership after the death of one or more of the partners, but about this attempt at continuation the average man argues in this wise: "Well, I don't want to continue after my death; I have a widow and children," and all that; and there were innumerable difficulties that you gentlemen understand yourselves from practical experience. Of course, when you undertook to grapple the problems of advancing American commerce with the instrumentalities of a partnership capital it would not answer at all.

Then there was another element against the partnership, and that is that you could not bring a suit against the partnership without suing each of the parties, which was very disadvantageous. You could not sue one partner only for a partnership debt; you had to join them all, and serve them all, if you wanted an individual judgment. These disadvantages and the increasing demands of commerce required us to advance a step farther, which we did.

In Pennsylvania, I think, the first step was taken toward the introduction of a new and expanded system of capital, and it was called a "limited partnership." These were originally drawn from the customs and laws of Italy, and then transplanted into France, where they were known under the name of *en commandite*, and they were subsequently introduced into the United States.

Let me explain what a limited partnership was. I do not mean that you do not know, but I want to explain it as a part of this discussion. A limited partnership was a method by which a man entering into a commercial or manufacturing business could limit his liability. If two gentlemen wished to enter into a partnership, and one did not want to engage in active business, he could advance, say, \$100,000 to his associate, who was the general partner, and escape liability, by filing a certificate in the proper clerk's office that he was a special partner, and making a publication in the newspapers and having it put on the sign that he was a special partner. The result of which was that he was enabled to engage in a business without individual liability beyond the sum that he advanced in the inception of the enterprise, and the whole responsibility was thrown on the general partner.

Now, in France, and in Pennsylvania also, to a certain extent, I believe, they allowed shares—certificates of stock—to be issued against the interest of the partners, so that this partnership became a species of quasi corporation. The limited partnership only existed for the time mentioned in the articles of copartnership, but the interest of each partner might be segregated into shares and negotiated in the form of a certificate of stock. They allowed them to be issued very largely in France, and there were some very extensive litigations there, which you will find recorded in *Troubat* (Law of Limited Partnership), if anybody has a desire to investigate the subject. Yet you can see that the system of limited copartnership furnished but a very meager contribution to the advancing wants of commerce.

The ingenuity of the Americans was great enough for the occasion, and out of those necessities there came the commercial corporation. The commercial corporation as it exists to-day was never developed in any substantial form previous to the year 1850.

You will find that the first book on corporations was published in 1793 by Kyd. But it was altogether limited to questions of municipal corporations; and if you take the books of Watkins and Grant on corporations, and all the other literature on corporations, you will find that up to and even in the first American book of Angel & Ames, which was published in 1831, there is hardly an allusion to our commercial corporations; and it was not until about 1850, when commercial corporations came in vogue, that one discovers any legal literature upon this subject. The first manufacturing act in the State of New York was passed in 1848; it was known as the "Manufacturing act." I think that in Pennsylvania there was an act passed a few years later, and in Massachusetts there was also a general manufacturing act. I do not know the date, but about that time.

When the railroad system of the country was introduced and began to be used we discovered that the commercial and manufacturing corporations gradually came into vogue, the one following closely in the wake of the other; and, through the instrumentality of general laws, 3 or 4, or 10 or 12, or any number of persons, might get together and file a certificate and become a corporation. The tendency of corporations, or the tendency of legislation, was at first to narrow the limits of a corporation; that is, the amount of capital which they were allowed to have; and you will find, if you consult the law, that in almost every instance previous to 1860, when the war broke out, the several States placed limitations upon the amount of corporate capital. That restriction gradually disappeared until to-day, in most of the States, in almost all of what we call the commercial States, there is an unlimited amount of capital allowed, so that several individuals may now get together and form a corporation and do business with an unlimited capital.

Now, one of the most important elements in the discussion of this question is to understand what a corporation is, and therefore I come to another, the third definition, I think, which I have used this morning, and I will take Blackstone's: "A corporation is an artificial person created for the preserving in perpetual succession certain rights, which being conferred on natural persons only, would fail in the process of time."

ADVANTAGES OF A CORPORATION.

Let us see what the essence of a corporation is and how capital and business shifted from a general partnership, at first into a limited partnership, and from a limited partnership into a corporation. Take the legal history of partnerships, limited partnerships and corporations, on the one side; take the history of commercial expansion; take the history of territorial expansion; take the history of railroad expansion, on the other, and you will see what necessary aids they were to each other, and how, as handmaids, they marched together toward the goal of commercial, territorial, literary, moral, and religious development which the Almighty has destined us to reach in this country.

A corporation has certain functions, and let me show you what they are:

First. It has perpetual succession; that is, its existence is unbroken and uninterrupted down to the time when it is to expire by limitation. You can now incorporate a company for 1,000 years, if you wish, or 50, which is the period generally followed. A corporation may consist of 1,000 individuals; many of them do. To-day the New York Central and the Pennsylvania have each many thousands of stockholders. They die; their descendants die, but the corporation is unifying. This result of copartnership could not accomplish, neither a general nor a limited one.

What is the second? The second quality of a corporation is that a stockholder is not liable for the debts of the corporation. This was, therefore, as you gentlemen can see, one of the most attractive forms of carrying on business. It enables you, Mr. Chairman, it enables Mr. Phillips, and enables every gentleman in this room to agree to go into a business and to put in five or ten or fifteen, a hundred thousand dollars, or any other sum, and you know the limit of your liability. This was the feature that appealed to business men. They knew that when they went into a corporate enterprise their responsibilities were limited, which could not be in the case of partnership.

And another thing, which was of the highest importance, was the transmutability of their interests. They could sell or transfer their interests in the corporation to others. Every contributor to the capital stock of a corporation received a certificate of stock; that certificate of stock he put in his pocket; it was personal property, and he sold it in the markets or he gave it to his children, but it was there in a tangible, neat, and easy form, for him to use as an admission that at all times he had an interest there, and that his liability was fixed by that certificate of stock. This could not be done in a copartnership. A sale could not be made, because it was predicated upon personal and peculiar reasons. In the development of large enterprises certainly nothing could be happier than the conception of a corporation; certainly nothing could be better. The men who originally went into them, who were the pioneers in the formation of our commercial and our manufacturing corporations, and our railroad corporations, and our insurance corporations, who have all long since passed away, were shrewd, bright and skillful merchants. In adopting this system of business it enabled each man to sleep easily; it enabled each man to limit his liability; it enabled him to have his certificate of ownership in his pocket, and enabled the corporation itself, which was an entity, a legal entity, to carry on a great enterprise, without any regard to who the stockholders were, or whether they were dead or alive, except as they contributed to its success through the instrumentality of choosing proper boards of directors and officers to manage its concerns.

Now, in regard to the capitalization. They raised their capital by the issuing of shares of stock and bonds.

In this connection I have to speak about something that is of the utmost importance in this discussion and its effect upon your labors—something that I regard as one of the greatest and cleverest devices ever created by man to collect and aggregate capital. I allude to railroad and corporation mortgages, by which thousands of persons poured their money, small or large, through various channels, into one common treasury of the company; all the vast capital necessary to run these great enterprises being the aggregated contributions of many small and large amounts.

If you will reflect, there is no individual who is capable of loaning a very great amount of money on mortgage, to one or more persons, or to a corporation; or, in a word, to make one large individual loan. If it were possible for him to do it, it would not be good policy, and the largest mortgage, I think, that has ever been created—the highest individual mortgage in the United States—was not greater than \$3,000,000, and that money was loaned on real estate, I think, in New York, by one of the large insurance companies. A man with \$4,000,000 or \$5,000,000, or with \$20,000,000 or \$30,000,000, does not care to put that amount of money as a loan in one place on one piece of property; as they say, it is putting too many eggs in one basket. He would go to a million—probably he would go to two millions—but when you get up to four or five millions it is not a practical thing.

Now, see what the ingenuity of man has accomplished, and an American, too, because I believe that the first railroad mortgage secured by bonds as collateral emanated from Philadelphia. It is necessary to know what a railroad or corporation mortgage is, and how it is arranged. A company makes a mortgage, say, for \$50,000,000 on its property to a trustee. Who would, or could, advance \$50,000,000 in one transaction? Why, the wealth of the Astors, the Vanderbilts, the Rockefellers, and Pierpont Morgan, and all those families, and men whose wealth has now become common talk, and is spoken of every day as being so colossal, even the combined wealth of all of these families would be but a drop in the bucket, as it were, if they should undertake to carry out without other aid the gigantic corporation enterprises developed in this country. Hence they create a corporation mortgage, which secures bonds: one mortgage of, say, \$100,000,000; you will find plenty of them now; bonds are made, sold, and distributed all over; 500 in your hands, 500 in his, 10,000 here and 10,000 there, and through that instrumentality—of a railroad bond or a corporation bond—all this colossal capital is raised, which enables us to carry on these extraordinary railroad, industrial, and commercial enterprises, using the money of the many and not of the few.

OVERCAPITALIZATION—WHAT IS IT?

And in this connection I wish to speak on the subject of overcapitalization. In reading a book, which is supposed to contain the proceedings of the Chicago Trust Conference (a conference held in Chicago this autumn), I find that a great deal has been said about the subject of overcapitalization. Capitalization is of two kinds; there is a capitalization based upon the actual value of the property and a capitalization based upon the earning power; these are the two methods. You will find two classes of people in this country—one in favor of the former method and one in favor of the latter. They both have their adherents. I confess that my mind is somewhat of a blank about the matter, because arguments can be made in individual cases that prevent the adoption of any uniform rule, and with the experience that I have had in creating corporations and in putting them in legal shape I have no opinion defined, certain, and fixed of the question as to how the capitalization should be based; because I say that each case presents peculiar circumstances, which absolutely make it impossible to adopt an unvarying rule. If you capitalize a property for what it is worth, a manufacturing business or a railroad business, the appraisers whom you will appoint enable you to fix the value of that property at, say, \$50,000,000. Now, on the other hand, you have a property that is worth only \$5,000,000, but by what is called good will and trade-marks, or individual skill, etc., it earns more money than the property of \$50,000,000. You gentlemen have seen that illustrated in your daily business lives.

Now, how shall these two interests be capitalized? You have been asked to lay down an arbitrary principle and rule by which capitalization is to be predicated upon the actual value and there is to be no water. Well, it is so easy for men to get up and make statements on a political platform; they are under no obligations to anybody but their consciences, and they can cut themselves loose from history and experience; they can sail off into the clouds and lay down any proposition, no matter how difficult, vague, and impracticable.

INFLATED CAPITALIZATION SOMETIMES NECESSARY.

Much complaint has been made against overcapitalization of railroads. Let me give you a little bit of history in regard to railroad building in this country. Some of these railroads were partially subsidized by the Government—the Pacific roads, for example—but all of these vast transcontinental lines, which made it possible for us to reach California and the far West in a very short period, were built by English capital; and when I say English capital, I mean the financing was done through the English houses, with their German and other foreign connections; but it was not American capital; we did not have the money, and we could not build the railroads.

Now, sirs, as you sit in your chairs in judgment fixing a basis of capitalization, you must remember the contemporaneous history which surrounded these large operations. Now that the roads are built, now that the country is developed, now that you have these flourishing cities all over the continent growing larger every day, it is very easy to forget the past; but when you speak of the enormous capital of the railroads, the enormous capital of these transcontinental lines, remember how they were built, and tell me if there was any other method of building these roads than the plan adopted by the railroad builders or contractors of this country, situated as they were at these times? And what was their situation? Here was, say, a contemplated line from New York to Chicago, 25 or 50 years ago, or from New York or

Chicago to San Francisco, or to New Orleans, or wherever your imagination will lead you; how were you to raise the money? Not from the Government. It was not the policy of this Government to give the money. The savings banks would not lend you the money; besides, at those times they did not have it. It was raised by private subscription. And how could you get the money? What did you do? You had to go around with the engineer's maps and with the estimated earnings that were to be produced from the operations of your road. And how did you approach capital? Would I come to you, sir, as a capitalist and say, "Will you take 10,000 of these bonds at par," on an incomplete road, when you did not know whether it would earn one dollar of interest or not? No, sir. Put yourself in the position of the railroad contractors of this country when you are talking about inflated capital, and see how it could have been avoided. What did they do? Why, they offered a hundred shares of common stock as a bonus, or some other bonus, and they sold the bonds at 50, and 60, and 40, or whatever they could get for them. And there was no other way of doing the business. And unless they had sold the bonds your country would not have been developed.

Now, before you dissolve, call before your commission the men who talk about overcapitalization, and examine them; get at the facts; go to the bottom of things, and then tell the people of this country how this overcapitalization came to be made, and the exact facts and circumstances that existed and surrounded the creation of our railroads, and don't forget to tell them what these railroads have done for the development and advancement of this country and the American nation.

I am not defending inflation. I am speaking of the facts. I am giving you the facts, and I am showing you that there was no possibility of money being raised except through the instrumentality of these large bonuses. Well, many of these railroads that were given away almost have now reached a success far beyond the dreams of the original founders. They have been recapitalized, and recapitalized again, and are paying handsome profits on each investment. The development of the country has been so great, the business has been so enormous, that people who invested in these securities in early times have amassed colossal fortunes. If you take engineers, and go over the track of the New York Central and the Pennsylvania Railroad, why, they may perhaps tell you they can build the roads for less money than they are capitalized at. Perhaps they can. They may build either line for one-half, but they could not have done it at the time the roads were built, nor could they build a railroad to-day upon an actual hard cash basis. You can draw a projected railroad line; you can project a railroad from one point of this country to another, but you can not get people to invest money in it when it is new and undeveloped unless there are extraordinary temptations to them. You will not put your money into a railroad that has not been built and pay par for the bonds, even if they carry 6 per cent interest. Now, be practical in your deliberations; don't be less human than your fellow human creatures, and you will get at the right results.

I think that that is an answer, that is an explanation, which shows the origin, the accretion, and the development of capital. I have given you the history of it from its beginning down to the present time.

THE LAWS OF NATURE ARE ENOUGH TO PREVENT A LASTING MONOPOLY.

I come, then, to the gist of the subject, and that is the question as to whether these corporations for manufacturing purposes, or for commercial or industrial purposes, whichever you may prefer, are monopolies. I have shown you their development. And I claim, as a matter of fact, that they are not monopolies. I say, in the first place, that unless you license and give superior privileges to a corporation, that corporation is not a monopoly or enabled to be a monopoly. You may put your hand, perhaps, upon one or two corporations—large, gigantic corporations—in this country that to-day are monopolies in fact. Are they given superior facilities to accomplish that result? Have they received accommodations which are denied to other people? Are they thriving upon any national or State law which protects them as against others in the same business class? Are they the possessors of franchises through the instrumentality of contracts with railroad companies which are denied to others? If they are, a law which would put everybody on an equality—and that is what people want—would not in my judgment be wrong. If any corporation in this country occupies a superior position, stands on a higher eminence, than any other corporation or any other body of men, the privileges which belong to it should be taken away from it, if it does not involve the right of contract, which is a sacred right. I do not know what has transpired before this commission. You may have evidence in your possession which shows that discriminations have been made, that discriminations exist. If they do, why, I think it is within your province to suggest some remedy.

I have two or three more propositions upon this question of monopoly in fact, or resulting monopoly. They are not theories of political economy, but are facts—because I do not intend to enter into the sphere of political economy in this discussion; it is not my province. The province of a lawyer is to keep to the facts as far as it is possible, and that is what I am trying to do.

First. The natural laws of trade, the natural laws of commerce, form a sufficient and perfect barrier to prevent or break up most monopolies. That, I say, is not a proposition of political economy; it is a proposition of fact, which I shall prove, otherwise it is entitled to no weight. Every effort—and I know of several within my own knowledge—that has been made to "corner" an article of commerce, has failed. You remember the pools in wheat and corn. Two colossal attempts to corner the breadstuffs of the world were made in very recent years; and you know the result. Men can choke the arteries of commerce for the time being, but the natural stream of trade will soon overflow their plans, and even when they think they are in possession of the supreme power, the laws of trade are taking it away from them.

Before you undertake, therefore, to legislate against monopolies, be sure that you have defined what a monopoly is, and be sure that you do not overlook the historical facts, which show that every attempt ever made to corner or monopolize breadstuffs or any other article of commerce, of this, or any other country, has failed, and reacted upon its authors, and they have been ruined. Leave the natural laws of trade alone, and they will take care of themselves. You may be in the hands of a monopolistic power for a little while, but the revulsion will come, and when you make general laws, aimed to strike at a single and isolated case, you do more harm to the community than a temporary monopoly works, formed by bad men with the evil design to throttle the commerce of the country. "Hard cases make bad laws."

Second. There is another principle to which I invite your attention in regard to monopolies—that wherever business is conducted in such a way as to cease to be conservative it becomes a mark for other capitalists, and the legislator can leave it alone to the outside world to take care of.

Do I make myself plain? Here is a vast corporation, with a capital of \$50,000,000, and it owns every business of that kind in the world, or in this part of the world. If the managers undertake, with all that power in their hands, to depart from conservative principles—if they undertake to raise prices, the outside capital which is at hand will respond. That capital is invited into the field, and you have the competition which the opponents of aggregated capital regard as essential to just business conditions. Take one—perhaps the most remarkable instance of this view—the so-called "sugar trust." It owned pretty much everything when it started, and what was the result? First one refinery and then another sprang up, until you find a bitter and deadly fight and competition going on which must satisfy the bitterest opponents of aggregated capital. Is there not the most murderous warfare going on in that industry? Are there not new refineries springing up, and isn't it impossible to keep them from springing up? Do you want laws to effect results which nature brings about so well? While you are thinking of making statutes, the natural laws of trade are silently working and pulling things to pieces. I am constantly reminded of the compactness and strength of the Standard Oil Company. I admit that good management, brains, and skill have kept it compact and strong; but it has not yet run its full course. If it is a monster of oppression, wipe it out. But remember that you are legislating, not against its leaders, who can take care of themselves, but against the thousand innocent people who constitute its stockholders.

Again, industrial aggregations need no legislation to-day.

Their creation is temporarily stopped by natural conditions. Can you raise money to-day for these industrials? No. Why? Because the market is overcharged.

Legislate! Why, you may as well undertake to regulate the tide of the Potomac River as to fix by principles of law the rules of supply and demand, which operate in regard to monopoly. Keep the money market as it is to-day, and you will have no more industrials built on old lines. You will become *functus officio* by virtue of natural conditions. Your commission will cease to be necessary by virtue of the very laws of trade which you are asked to guide and control.

Not that I wish to see you go out of existence; I would continue you and your successors forever. A commission of inquiry is the instrumentality that stands between extravagant and demagogic demands and good, sensible, business judgment, and the true interests of the people. It is the tribunal through which every question of currency or interstate commerce, and other great public subjects, should pass. Conclusions filtered through a commission must be based upon facts and not speculation; and when this period arrives, the people will not see any Sherman antitrust acts, or multitudes of other laws which exist unexecuted, upon the statute books, and make the law a byword and a reproach. The inability of courts to carry them out and

give them effect is because they are not based on any reasonable or sensible principle of legislation.

Again, nor do you, gentlemen, want to interfere with combinations of capital, made successful by ability, skill, and good business judgment. If a combination, through good management of its directors, without violating any law, either moral, religious, or civil, is able to reach success in business, you don't want to be urged on by feelings of envy or prejudice to cut it down or to uproot it. If you find, in considering this question, that the combination of skill and good judgment in business has brought about a successful result, I say all things prompt you to encourage it, rather than to discourage it, and if you can do nothing better, you should let it alone.

THE NATURAL LAWS OF COMMERCIAL RELATIONS DEFY HUMAN LEGISLATION.

There is another proposition which I wish to suggest to you, that it is neither within the power nor is it the policy of the Government at this stage of development to seek to put down or impede aggregated capital. As to its power, I shall say a few words later on. As to its interest and policy, I contend that the Government should encourage every organization, every combination, and every individual whose efforts are used toward the benefit of commerce or business, or which directly or indirectly ameliorate the burdens of life. It is not true business judgment to pull down industrial structures at the bidding of a few—shall I call them speculative politicians?—who have no actual business experience, who have no accurate knowledge of the laws of finance, economy, or commerce, but whose whole stock in trade consists of a pack of vituperative epithets and a string of generalities, which they use to encourage demagogism among the masses of the people.

And this brings me to another point, viz, the futility of legislation made against the natural laws of trade or business.

I maintain that the history, the legal and judicial history, not only of this country, but of England, shows that all laws that have been made to prevent combinations of labor, to prevent combinations of manufactures, to prevent combinations of produce or breadstuffs, or to prevent what I may in a word call the free and unlimited exercise of commercial relations, or to prevent speculation in cereals or stocks, have been ineffectual and abortive, every one of them, and I defy anybody to point me out in English or American history any statutes, which have been passed to prevent these combinations, that have proved effective. And the simple reason is that the laws of trade, the natural laws of commercial relations, defy human legislation; and that is all there is in it. Wherever the two clash the statute law must go down before the operations of those natural laws. I could begin back as far as the reign of the Edwards in English history, and trace the statutes that have been passed against combinations of labor, against the combinations of the owners of produce, combinations of the purchasers of or dealers in breadstuffs, and I can show you that in every instance these laws have been abortive. Whoever has the desire can find plenty of these instances in history. I will select a few examples of the truth and foundation of my remarks.

First. The laws against forestalling, regrating, engrossing:

The offense of forestalling was described by statute passed in the reign of Edward VI to be the buying or contracting for any merchandise or victual coming in the way to market, or dissuading persons from bringing their goods or provisions there, or persuading them to enhance the price when there, any of which practices makes the market dearer to the fair trader.

Regrating was described by the same statute to be the buying of corn or other dead victual in any market and selling it again in the same market or within 5 miles of the place. This was supposed to enhance the price of provisions, as every successive seller must have a successive profit.

Engrossing was the getting into one's possession or buying up large quantities of corn or other dead victuals with intent to sell them again. These offenses are all described in Blackstone's Commentaries, and are thoroughly familiar to the legal profession. In respect to the offense of engrossing that author says: "This must of course be injurious to the public by putting it in the power of one or two rich men to raise the price of provisions at their own discretion."

All the statutes of Edward VI in regard to regrators, forestallers, and engrossers, as well as many other similar statutes which infringed upon the freedom of commerce, were repealed in 1772 as detrimental to trade by a statute of George III, the preamble and substance of which is shown in the following extract:

"Whereas it hath been found by experience that the restraints laid by several statutes upon the dealing in corn, meal, flour, cattle, and sundry other sorts of victuals by preventing a free trade in said commodities have a tendency to discourage the

growth and to enhance the price of the same, which statutes, if put into execution, would bring great distress upon the inhabitants of many parts of this Kingdom, * * * be it therefore enacted that an act made in the third and fourth year of King Edward the Sixth, entitled an act for the buying and selling of butter and cheese; and also an act made in the fifth and sixth year of King Edward the Sixth, entitled an act against regrators, forestallers, and engrossers; and also an act made in the third year of Philip and Mary, entitled an act for keeping milch kine, and for breeding and rearing of calves; and also an act made in the fifth year of Queen Elizabeth, entitled an act touching badgers of corn and drovers of cattle to be licensed; and also an act made in the fifteenth year of King Charles the Second, entitled an act to prevent the selling of live, fat cattle by butchers, and so much of an act made in the fifth year of Queen Anne, entitled an act for continuing the laws therein mentioned relating to the poor, and to the buying and selling of cattle in Smithfield, and for suppressing of piracy, as relates to butchers selling cattle alive or dead within the cities of London and Westminster or within 10 miles thereof, and all the acts made for the better enforcement of the same, being detrimental to the supply of the laboring and manufacturing poor of this Kingdom, shall be, and the same are hereby declared to be, repealed."

And in this connection, I beg to call your attention to what was known as the "Bubble act," which was passed in the reign of George I.¹ The "Bubble act" grew out of the South Sea speculation, and in some aspects it was one of the most remarkable instances of speculation in the world, almost outrivaling Law's famous French scheme. The "Bubble act" was passed about 1718, and it undertook to prevent a recurrence of the losses to the English nation sustained through the instrumentality of the South Sea bubble. I won't stop to explain what the South Sea bubble was. You gentlemen know, or if you do not, it is easy to find a history of it in any ordinary library. But the statute, the bubble act, was passed to prevent prospectuses being issued of a kind which would seduce capital into speculation. It was supposed that so many people had lost money through the instrumentality of these prospectuses, which were gotten up in the most glaring form, that it was necessary to have a law; and they passed that law of George I, in which they made it a crime for anybody to print and publish or circulate any descriptions of enterprises for the purpose of alluring capital to subscribe. That statute remained in existence more than a hundred years. I think it was repealed in 1837.

There was but one application made to the court under it, and that was made to Lord Ellenborough in 1808. I have brought the law report here because it illustrates the first trust, what they call a trust, a common-law trust, which was the method followed in that instance. The attorney-general, at the solicitation of a private person, asked the court for an information, which is a criminal process in the nature of an indictment, issuing at the instance of the attorney-general. It seemed in that case that the "promoters" of the enterprise were endeavoring to raise money to float the "London Paper Manufacturing Company," a concern that would answer to what they now call the "Paper trust," and also the "London Distillery Company for making and rectifying genuine British spirits," which would answer to the present combination popularly called the "Whisky trust." These were perfectly legal occupations and perfectly legitimate industrial enterprises; but the prospectuses were contrary to the "Bubble act," and some person, prompted by feelings of malice or envy or what not, some illegitimate influence operating upon him, applied to the court to put in existence that statute 87 years after it had been passed. It had never once been heard of before, had become a dead-letter statute, and Lord Ellenborough said substantially, "Well, the people of this country have forgotten all about the existence of that statute, and the complainant comes into court in such a peculiar position that I will not grant him any relief;" and that was the last that was ever heard of that statute, which was the culmination of the South Sea bubble.

The crime that these men were charged with, or attempted to be charged with, was this: that they claimed in the prospectus that every person who subscribed to the capital would get a share which was transferable, and relieve him from all liability beyond the amount of his subscription; and as there was no corporation act in England at that time, the representation was false, because they were all partners, and that was the basis on which an application was made to the court.

This case in 1808 illustrates that the stage of commercial progress had not been reached which justified the creation of corporations, and, being in advance of commercial necessity, it was stamped as illegal, although the businesses involved were perfectly legitimate. It was sought to be carried out through the form of a trust, but neither the courts nor the statute condemned that form; they merely condemned

¹ 19 East's Reports, p. 517

the transaction because the age had not yet sanctioned stock certificates. The age had not yet learned to look upon the importance of transferring interests in industrial enterprises, one of the most important and necessary elements of commercial affairs, without which to-day the wheels of finance would be stopped. Mark the importance and interest of that case. The "trust" was not attacked—now the sole cause of discontent—but the transferability of shares—now universally acquiesced in.

Second. Combinations among victualers or artificers to raise the price of provisions, or any commodities, or the rate of labor, were also in many cases severely punished by particular statutes. (See 2 and 3 Edw. VI, c. 15.) All of these statutes were repealed as futile and contrary to the true commercial progress of England.

Third. Monopolies were also attacked. Queen Elizabeth granted them, but in the beginning of the reign of James I Sir Edward Coke boldly and justly assailed them, and in consequence a statute was passed in the same reign declaring monopolies to be contrary to law and void. The Queen granteth and the Parliament taketh away; and blessed is the name of that Parliament.

Fourth. I now call your attention to "Sir John Barnard's act," which grew out of an enormous speculation in stocks. After the East India Company had gotten under way and the Bank of England was established there was an enormous speculation in stocks, and Sir John Barnard's act was passed for the purpose of preventing these speculations. Well, that act was to forever rid the English nation of the curse of speculation. A lovely and commendable purpose. But, what was the result? Speculation increased. There was not a solitary conviction ever had under it, so far as I can ascertain, and it remained on the statute books down to the early part of the reign of the present Queen, when it was repealed, and I quote the preamble to the repealing clause to show what a confession the British Parliament was forced to make as to the inefficacy of such legislation:

"Whereas an act was passed in the seventh year of the reign of King George the Second, chapter 8, to prevent the practice of stockjobbing, and by another act, passed in the tenth year of the said King's reign, chapter 8, the said first-mentioned act was made perpetual; and whereas the said acts impose unnecessary restrictions on the making of contracts for the sale and transfer of public stocks and securities, and it is therefore expedient to repeal the same: Be it enacted * * * the same are hereby repealed."

Statutes prohibiting stock speculation were also adopted in New York and Pennsylvania, but have long since been repealed, after lingering ineffectually upon the statute books. The law in New York, which was in existence from 1812 to 1858 without any deterrent effect upon the supposed evils it was passed to prevent, was not only repealed in the last-named year, but the repealing law, recognizing the necessity to commerce of stock trading, went further and absolutely legalized "short sales."

Fifth. The most notable example, however, of this species of legislation is to be found in this country, and it grew out of speculations in gold which caused an enormous agitation and excitement in Wall street, as you gentlemen can remember from history, perhaps some of you personally. This speculation in gold finally collapsed on what we know over in Wall street as "Black Friday." The effect and influence of the speculation in gold, it was thought, was so detrimental to the interests of this country that Congress was invoked to pass a statute to prevent it, and they promptly did it; they passed a statute in 1864, in June of that year, which you will find in the United States Statutes, by which it was made a crime for any person to sell and deal in gold unless he was the owner of the coin.

Now, what was the effect of that statute? So absolutely ineffectual, futile, and absurd was the legislation that gold went up 30 points the next day, and 15 days afterwards, by the same Congress, the act was repealed because it was regarded as being absolutely detrimental to the interests of the country. Some enthusiasts, if you will call them by that mild name, saturated Congress with the idea that there must be legislation. "Give us legislation" was the cry, and Congress succumbed into the arms of her new love, with the effect that gold advanced, and they repealed the law in 15 days. A legitimate effect of legislation against the comet.

QUITE STATUTES ENOUGH—THE COMMON LAW SUFFICES.

Sixth. Now, I bring you down to our own immediate legislation—what I call our own legislation—against aggregated capital, and I draw your attention again to the antitrust act of 1890.

That act was passed in 1890. Now, I am not going to analyze or discuss it. Why are you here? Why are you gentlemen sitting here and deliberating if you have

already on the statute books an act, drawn by an astute statesman, which illegalizes all combinations, making it a misdemeanor to have combinations in restraint of trade? Why do you want more legislation? Isn't that statute enough? Will you vary the language of that statute? If yes, how will you vary it, and what amendments will you make to that legislation which will conform to the principles of Federal jurisprudence and the principles which appertain to this Government in its relation to the different States?

Again, you have the State statutes against "trusts." I won't cite them; I put them on the record before you. Examine them and you will see their inconsistencies; you will see how one State murders one industry and encourages another, how one undertakes to separate labor from capital, pats agriculture on the back, and kicks industrials and manufactures.

These vast aggregations of labor, and aggregations of money, and aggregations of goods are in principle the same. You must not shrink from the responsibility that is upon you. If you determine that we must have more legislation, you must also legislate against, or at least in respect to, labor. Labor is at least as important as capital, and the man who undertakes to separate the two will involve and perplex this important economic subject. If it be wrong to combine industrials or aggregate capital, it is equally heinous to combine labor.

And I also call your attention to this fact: There have been seven judicial decisions, at least, of the courts on questions of industrial combinations. We have had a decision in the courts of New York which condemned the "sugar trust;" we have had one in Ohio which condemned the Standard Oil. The biscuit trust has been declared illegal and the whisky trust has been declared illegal, and three others. Every time that these questions have come up before the courts they, on principles of common law, or by virtue of statute, or both, have declared the combinations illegal. The courts are clothed with ample power under the common-law rules of public policy and the doctrine of restraint of trade to guard the interests of the public against combinations dangerous or hurtful to public interests.

And, therefore, I say no legislation is required to meet the new and as yet unknown quantity of industrial combinations.

In fact, permeated by the influences of a prevailing public sentiment, to which all human nature is susceptible—and judges are human—the courts have already pushed the rules of the common law to the verge of reason.

Are you here to fight against mere form? If you are, I have wasted my time in appearing before you and you have wasted yours in sitting here as a commission. Do you care what form aggregated capital assumes—whether it is in the form of the old common-law trust, or whether it is in the form of a consolidation or a partnership or corporation? What is to be the object of this commission if you are to legislate that corporations may not form a partnership between themselves; what effect does that have on the question? If you legislate that all trusts, common-law trusts, are illegal, that goes to the form. The substance of the transaction, be it remembered here, means the extirpation of the carefully evolved commercial system of this country, and it means nothing less. I say the fight against aggregated capital has so far been a vain fight against mere form, and when it assumes a serious position, when it gets to a point that it means to earnestly attack the substance, then the contest will be to wipe out the commercial system of this country; and I ask if there is any man in this room, or any man in this country, who is ready to go to that extent? That is the proposition; I do not care whether you allow aggregated capital to exist in the form of a trust; I do not care whether you allow it to be in the form of a partnership or corporation—if it is bad, it is equally as bad in the last form as it is in the two others. And you are confronted with the question, if you mean to legislate, if you must legislate, of wiping out and extirpating a system under which this country has grown and developed and become as prosperous as it is, because without the corporations, without the instrumentalities of such aggregations of capital, you never would have reached the remarkable condition of commercial and physical prosperity which you now enjoy, to the envy of the balance of the world. Of course it is easy to remedy the supposed evils of aggregated capital. You can, if you are prepared to take such a step, wipe corporations from the statute books of this country, or so cripple them, by curtailing their inherent powers, as to make them impotent. But he is a bold man who will advocate such revolutionary measures.

If corporations were bad, if aggregated capital were pernicious, if it distilled poison into the veins of the commerce and labor of this country, the time to have acted was to have throttled the corporation in its cradle 40 years ago; but now, when it is twined around every branch of your commercial development, your industrial prosperity, and your financial body, you are not apt to listen to a demand to destroy it, to cut it down. The destruction of corporations means the end of your present commercial system.

Q. (By Mr. PHILLIPS.) Do we understand you to state that this commission is asked to cut this down?—A. I say that if your legislation results in your saying this, that you believe that aggregated capital can exist in a corporation, but you would not allow it to exist in a trust, then you are accomplishing nothing. That is what I mean.

WHAT ARE THE MISCHIEFS TO BE REMEDIED?

I was about to make two more suggestions. We are taught by men who have made a study of those natural laws, which furnish the foundation for human legislation, that there are three things to be considered when you are about to make a new statute.

The first is that you must consider the old law. What is the old law?

Second, what is the mischief that the old law does not prevent?

And third, what is the remedy proposed?

First. You know that courts of equity, under the principle of the doctrine of public policy, possess the right to stop these commercial organizations or aggregations of capital when they are considered pernicious. You have the Sherman statute; you know its history; you have the statutes of the various States, and you know their histories.

Then what is the mischief which is to be supplied or is to be remedied? That is the question that this commission must address itself to. What is the mischief which you wish to remedy? Are you to-day satisfied that since the inauguration of these industrialists they have been pernicious and detrimental to the people of this country? Can each member of this commission put his hand upon his heart and say, as a good citizen, that the records of this commission are full of evidence which show that these industrial enterprises are evil? Can you, in face of the extraordinary commercial development of this country, in face of existing favorable financial and industrial conditions, say that you are convinced that there are evils which spring from these industrialists? If so, you must stop them. I say to-day that there has not been a specific statement which an intelligent man could answer, pointing out in a concrete manner the supposed evils which have flowed from the inauguration of these enterprises. You say overcapitalization; well, that is a question of detail, that is a question about which men may possibly disagree. If you think that corporations should be capitalized upon the basis of the actual value, why you will find a great many people who will agree with you. If you find, on the contrary, that they should be capitalized on the basis of the profits, you will find many more people who will agree with you. If you think this question should remain untouched, to be left with the parties themselves who are making the organizations, because you believe that this question of capitalization, one way or the other, is not a fundamental question, but is influenced and controlled by the operation of natural laws and of particular conditions, then leave it alone. But these are questions of detail that do not go to the substance or root of this matter.

Perhaps it will be said that individuals have appeared before you who have suffered from aggregated capital. That may be. The individual cases may be serious, they may be grievous, they may appeal to our sympathies, but in the great progress of commercial development some must go under, some must suffer, some must be crushed, and that has been an inevitable rule from the beginning of the world. If you had sat as a commission years ago, when the sewing machine was introduced, you would have had hundreds of supplicants coming before you asking legislation against it. Individuals do suffer and must suffer from the consequences of the general march of commercial and manufacturing development. In that war, the batteries of science and skill and commercial development wound and kill their own countrymen and allies.

A great philosopher, Jeremy Bentham, was the author of the phrase and the expounder of the great principle of "the greatest good for the greatest number"—the only way by which you can successfully carry on government. Society is so constituted that some must suffer. It is the sacrifice that the few are forced to make for the good of the whole. Take the police and the school relation, in which you are interested. A man lives in a village, and has his own governors to teach his children, and also has his own man in the house, and he says to the authorities of the village: "You impose a tax on me for public schools; I don't need them; nor do I want your police; I have a man who does that very well for me, and I don't need the police and I won't pay the tax." Well, where does such a man stand? He must go under, because the general needs of the country require common schools, and they require a police force; and there is no principle of legislation that can be formulated without your stepping upon the toes of some innocent people, who must suffer for the good of the whole. Undoubtedly some individuals—perhaps a great many—must suffer

from the establishment of industrial combinations. The little grocer, the small haberdasher, the middleman, the salesman, the traveler, may have just cause of complaint; but the Government is not made to adjust these things or to remedy such evils. We are not living in the millennium. We are not governed by abstractions, nor is the State influenced by sympathy.

CHICAGO TRUST CONFERENCE—CONCLUSIONS OF ITS CHAIRMAN.

There was a conference in Chicago some time ago called the Chicago Trust Conference. It was supposed to have assembled before it all the leading thinkers on these subjects. They had before them two of the most eminent of our oratorical speakers, and they each gave their views. And what was the result? It is contained in a red-colored little pamphlet which I have before me. I have read that book industriously to find light on this great subject.

As chairman of that conference there was an able lawyer, Mr. Howe, whom I have the pleasure of knowing, a lawyer from New Orleans, a clean-cut, tried, careful, prudent man; and let us see how the results of those deliberations were filtered through his brain. As chairman he stated what the results of that conference were, and see what he has announced.

He says: "It seems to me—simply as an individual, of course—that almost every paper or address we have heard has made some admissions or concessions which may form a basis for some conclusions, and if you will allow me I will formulate some of them, as follows:

"1. That combinations and conspiracies in the form of trusts or otherwise in restraint of trade or manufacture, which by the consensus of judicial opinion are unlawful"—see how carefully that is stated—"which by the consensus of judicial opinion are unlawful, should be so declared by legislation."

Why, the sugar trust was an illegal creation in New York and was judicially declared so. With what result? It walked over to New Jersey, put on a new suit of clothes, came back to New York as a foreigner, and there it is flourishing, and in face of your antitrust act of 1890 and a tremendous antitrust statute in New York. With the New York statute staring it in the face and the awful hand of the Sherman Act pointing at it, why, we see the sugar trust calmly attending to its usual business as if nothing had happened.

Now, the chairman of that trust conference declared that the consensus of opinion was that all combinations contrary to public policy are unlawful, and that it should be put in statutory form. I have no objection to that; I don't think any man has, because that is simply doing what they call codification; that is what I call intelligent codification.

But I go on. "—which by consensus of judicial opinion are unlawful, should be declared so by legislation with suitable sanctions, and if possible by a statute uniform in all jurisdictions, and that such a statute should be thoroughly enforced, so that those who respect it shall not be at a disadvantage with those who disregard it."

I say amen to that.

Mr. Howe, the learned chairman, then proceeds:

"2. That the organization of trading and industrial corporations, whether under general or special laws, be permitted only under a system of careful Government control, also uniform, if possible, in all jurisdictions, whereby we think that many of the evils of which complaint is now made will be avoided."

I shall endeavor to show you hereafter that the Government, National or State, has already full control of corporations, but I will postpone criticizing that. But here is a lawyer making a clear postulate that presents a basis for fair argument. Men may differ; he may be right and I may be wrong in my opinions on that subject, which I will submit to you in a few minutes.

Then he says, in the third place: "The objects of the corporations should be confined within limits definite and certain. The issue of stock and bonds, which has been a matter of so much just criticism and complaint, should be guarded with great strictness. If mortgage bonds seem to be required, they should be allowed only for a moderate fraction of the true cash value of the property that secures them."

I dissent from that because it will throttle the operations of corporations without a resulting benefit to the public. As a rule of protection for investors and creditors I think it is superfluous. But I may be wrong in this view.

"As for issue of stock, they should be safeguarded in every possible way. They should only be allowed either for money or for property, actually received by the company, and dollar for dollar." (That, I say, is all right. This principle is already well established.) "And when the property is so conveyed it should be on an honest appraisal of actual value, so that there may be no watering of stock."

"4. And finally there should be a thorough system of reports and Government inspection, especially as to issues of bonds and stock and the status and value of property. Yet at the same time, in the matter of trading, business, and industrial companies, there are many legitimate secrets which must be respected by the general public.

"In short, we need frankly to recognize the fact that trading and industrial corporations are needed to organize the activities of our country, and they are not to be scolded or be belied, but controlled, as we control steam and electricity, which are also dangerous if not carefully managed, but of wonderful usefulness if rightly harnessed to the car of progress."

Now, here is an intelligent formulation, the results of the Chicago Trust Conference, expressly called together for the purpose of giving an expression of views upon this grave subject of aggregated capital.

The mischief, gentlemen, which results from combined corporate capital is pointed out and defined in these four statements, and one can argue on the basis of them. They are clear and conservative statements and present ground for fair argument and discussion. They are not so radical in their terms and consequences that if adopted in toto any material or substantial impediment would result to commercial expansion or development.

HASTY LEGISLATION MISSES ITS MARK.

I have two more views to suggest, one in regard to the jurisdiction and one in regard to the remedies that already exist.

No man who is a student of the history of this country and who is a lover of the form of government which prevails here can look without great solicitude upon the remarkable development of capital which has appeared to us so vividly in the last 10 or 15 years. I do not mean to assert to you, gentlemen, that aggregated capital is an unmitigated virtue, without accompanying vices. What I have been endeavoring to impress upon you is the necessity of going slowly in your acts. I have been endeavoring, by invoking historical analogies, to show you how easy it is to make hasty legislation, and that the fruits of hasty legislation not only bring the courts of justice and the administration of the law into reproach, not to say contempt, but fail to accomplish the purpose at which the legislation is aimed.

Now, what can more forcibly illustrate the strength of that remark than the anti-trust law of the United States? I do not suppose that the author of that law ever conceived the idea or intention of affecting by that piece of legislation the railroad interests of the country. And yet we have this remarkable result, that the industrial and manufacturing corporations, as contradistinguished from the railroad corporations, have escaped the law, as we see in the case of Knight,¹ the sugar refining case from Philadelphia, where the court held that, although the effect of combining sugar-refining businesses was to create a monopoly in the manufacture of a necessary of life, yet it could not be suppressed under the Sherman Act of 1890, because it was not a restraint of interstate trade or commerce.

But, strange to say, the railroad corporations, which, I think, were not intended to be embraced in the law, were made the sufferers by that legislation. And in the two decisions in the Missouri case, and in the freight cases about which you know, and to the reports of which I need not refer, the Supreme Court held that the language of the act of 1890 applied to railroads, and contracts which were generally conceded to be fair and beneficial to the public were set aside as illegal. I have no criticism to make on these decisions. But see the paradoxical result! A scheme of legislation which aimed at manufacturing and industrial corporations is declared not applicable to them, and railroad corporations, which were not intended to be covered, are held to be within the language and spirit of the statute. This shows what results accrue from hasty, ill-considered legislation.

I do not claim here that there are not great and grave questions surrounding the aggregation of capital, in any form it may assume, whether it is held by an individual, a partnership, or a corporation. It is a matter of profound solicitude to every citizen of this country, a matter of profound importance in the development of this country, in all its operations; but I say that the subject has not approached a ripe and mature condition. I say that if you take the vague, indefinite, and crude thoughts which up to this time characterize the discussion of this question, and put them in the crucible of legislation, nothing tangible, practical, and beneficial to the people will come from the experiment. That is all. You must keep your eyes upon this modern octopus, whether it is in individual or corporate form; but until aggregated capital commits some indisputable blow against the liberties of the people, until it strikes at

¹158 U. S. Reports, 1.

the foundation of our institutions, or until it interferes with the administration of justice or legislation in some positive way, I say that it is futile and unnecessary to enact any laws, because you have no defined, fixed, intelligent purpose in view, and without such purposes you are absolutely at sea, and the very laws that you make will strike at people whom you never contemplated they would reach, and probably, if not certainly, permit the aggregations of capital, intended to be reached, to entirely escape.

LEGISLATIVE AND JUDICIAL CORRUPTION.

It may be that the effects of combinations, or the effects of the aggregation of wealth or capital, may affect and corrupt the legislative and judicial powers of the Government. There is the great danger, in my opinion. But no law that you can frame can reach this supposed evil by anticipation, because you do not know what form it may take. For direct corruption, the existing penal laws of the nation and the States are amply sufficient, and need nothing in the form of newer laws.

Judicial or legislative corruption, however, is often provoked by demagogism, which presses corporations to seek for their just rights by illegitimate means. It is a public saying, unfortunately, in this country, that no corporation can get proper and necessary privileges without a lobby. I wish you, gentlemen, to ponder deeply over that aspect of the question. A corporation goes to a municipal legislative body and wishes a certain privilege, which, if granted, will benefit the public, yet the railroad men and the men who control corporations will tell you that it can not be obtained by legitimate methods. Now, there is no use disguising the fact that occult influences are used sometimes by large corporations, of necessity, to obtain things which are of the greatest importance to the public; and if you can stop that end of it, you remove one great temptation to judicial or legislative corruption.

If demagogism is eliminated from the discussion of these questions of aggregated capital, there is no doubt that a solution will be found entirely satisfactory to the true progress and interests of the country.

In concluding this branch permit me to repeat, that it appears to me that all we have to-day to found legislation upon is the opinions of men who are not qualified to speak with any intelligent authority; we have the vague and indefinite criticisms of people who have not studied these questions from the standpoint of actual experience or the honest conviction resulting from deep research. Whenever these critics appear before this commission, if they will hazard that step, if they undertake to make statements, you are likely to insist upon proof, upon statistics, upon real arguments and facts, and that is the way you can build the foundation for a law which will be satisfactory all around.

IF NEW LAWS ARE NEEDED, WHAT JURISDICTION SHALL THEY COME FROM?

Assuming that you gentlemen should come to the conclusion that some further law was necessary, you are confronted with a question as to the jurisdiction—as to whether it should be a national or a State law. This involves some study as to the nature of our Government and the true relation of the States to it. This Government is not a national government. It is a federative government. Whatever powers this federative government has are given to it by the Constitution. The Constitution of the United States may be divided under two great heads, namely, that part which we carried almost bodily from the English law and that part which resulted from the purpose of a federation.

If you will take occasion to study this great instrument you will find that the expressions of individual rights in Magna Charta are almost copied in the Constitution of the United States. And if you examine the three foundations of the English Government to-day—the Magna Charta, the Petition of Right and the Bill of Rights—you will discover that all of our rules of liberty, justice, and right have been drawn from these sources. Whatever is new in our Constitution is the result of the association of the 13 States, by which they agreed, for the purpose of mutual and perpetual union, to delegate to the General Government certain specified powers.

The idea of the Constitution of the United States was that the General Government should never interfere with any of the internal affairs of the States. The Government wanted just power enough to protect itself from exterior influences and to hold the States together, and it did not propose to interfere with the rights of the States to govern themselves as to their internal affairs any more than the respective States undertook to interfere in the domestic relations or private affairs of any of its citizens. If you keep that idea in mind you can intelligently approach the question whether the Federal Government has the right to interfere in the general questions of aggregated capital.

The necessity for some such provision as the present "commerce clause" in the Constitution was the real cause for calling the convention which led to the adoption of our present Constitution. When we separated from England the great difficulty was the want of uniformity in the commerce and navigation laws.

In the Articles of Confederation, which preceded the Constitution of the United States, there was nothing which made commerce free, open, and uniform between the States; and when they received their independence the question of an untrammelled commercial intercourse between the States of the Union was one of the principal subjects which confronted the people. That clause of the Constitution of the United States by which Congress was given the power to regulate commerce—I say this with great confidence—was never intended as an absolute authority for the General Government to interfere or meddle with the internal affairs of the States.

The phrase "regulate commerce" does not mean to restrain commerce, and never was intended to have such meaning. There was no thought of interfering with the development of the country in placing this language in the Constitution. The framers only undertook to say this: That the States should not deprive each other of that free and absolute intercourse between themselves which must necessarily exist for the purpose of accomplishing the purposes of the Union. That was the intention. They said all of the navigable waters must be open to all the States—no impediments placed in the great highways and roads, and no restrictions made upon trade and commerce as between them. The citizens of South Carolina, so far as the navigable waters and roads and everything that appertained to commerce were concerned, should enjoy the same equalities and privileges that a citizen of New York possessed.

In the first case which arose in the Supreme Court of the United States—*Gibbons v. Ogden*¹—under this commerce clause of the Constitution, the question was this: Livingstone and Fulton, who were then applying steam to water navigation, had received from the legislature of New York a grant for the exclusive use of steam in the navigable waters of New York State for a term of years. Well, that was a privilege that nobody envied, because Livingstone and Fulton were applying a new and great discovery to the propulsion of boats, and the State gave them the sole privilege of enjoying this valuable invention. But they had no sooner obtained this grant from the State of New York than another individual started a line of steamboats from New Jersey and ran over to New York, and he was seized. He was under a license of the United States Government regulating the coasting trade, and the question arose in the Supreme Court of the United States whether the State of New York had the power to grant such an exclusive privilege to the exclusion of citizens of other States navigating under coasting licenses. The opinion of Chief Justice Marshall delivered in this case has been universally read and studied, and he held that it was one of the objects of the commerce clause of the Constitution to open the navigable waters to all citizens of other States, and that the grant to Livingstone and Fulton was inoperative. "The genius and character of the whole Government seem to be that its action is to be applied to all the external concerns of the nation and to those internal concerns which affect the States generally, but not to those which are completely within a particular State, which do not affect other States, and with which it is not necessary to interfere for the purpose of executing some of the general powers of the Government. The completely internal commerce of a State, then, may be considered as reserved for the State itself." This language of Chief Justice Marshall furnishes the keynote to this much-discussed clause of the Constitution.

Of course, the Supreme Court of the United States—I say it with great regret—has been remarkably harassed and annoyed in its decisions upon this clause. I do not think any man can sit down and study the decisions of that court upon the interstate-commerce clause without rising from the reading with a feeling that they are very inconsistent in some respects; and Judge Bradley, in one of his decisions²—and certainly Judge Bradley was a very able lawyer—expressed a regret that the court had strayed so far away from the principles of *Gibbons v. Ogden*, from which I have just quoted.

The judges of the Supreme Court of the United States are human, and they are more or less susceptible to the influence of outside opinion and discussion, as others are. Law, after all, is nothing but the expression of custom. Despite the fact that legislatures undertake to put in statutory form laws for the government of the people, that which is the great law and that which is the universal law is the law of custom; and the Supreme Court judges, like all other human beings, are susceptible to the influences that prevail at the time they write their decisions—honest, high-toned, intelligent, proud of their position in every way, but still human, as you can see if you take the legal-tender cases, where they made two decisions, one in favor of

¹ 19 Wheaton's Rep., 1.

² *Lecloup v. Mobile*, 127 U. S. Rep., 643.

legal tenders and one against them, and if you take the income-tax cases and other instances—few, I am glad to say—you will see that that court is influenced very largely by the prevailing popular opinion. They breathe the same air, they sleep in the same air, they live under the same influences as other people do; and when a question of law is presented there they are susceptible, more or less, to the atmosphere which prevails, and everybody must recognize that.

I say, therefore, that Congress should not put upon that court unnecessary burdens, as they have done by the Sherman Act. It was a crude piece of legislation at best, and that court has endeavored, in an honorable and conscientious way, to extricate itself from it, as much as it can; but it would have been much better, in my judgment, if that law had never been enacted, because it unnecessarily attempts to deprive the State of power which they alone should exercise; it is another innovation of the General Government—it is another unnecessary step toward centralization.

Gentlemen, the strict States' rights doctrine has been largely obscured since the war of 1860, because many issues which were involved in it disappeared, when that unhappy epoch in our history closed.

But the subject of the relation of the Federal Government to the States is one of the profoundest importance, and it should always be kept alive and green before us, when legislation of the kind involved in this discussion is contemplated.

I do not assert these views as the result of political and partisan bias, but they are influenced by independent thought and conviction. As Mr. Gladstone says, the fabric of our Constitution is one of the greatest that has ever been devised by human minds. If we can preserve it, as it has been handed down to us, there is not "the slightest doubt about our political equality and our progress and development."

States' rights is not a party question. It has disappeared from the realm of partisan politics, and when you are inquiring into the legality of business carried on by manufacturing corporations incorporated under State laws, and the question of restricting or limiting them, you must be warned not to encroach upon the authority of the various States; and it is very important that conscientious study should be bestowed upon this important subject before Federal legislation is granted. It is unfortunately true that lately we are tending to nationalization. It is true that in great emergencies people are turning to the National Government for help, for assistance and support; but it is equally true, in my humble judgment, that such appeals should be disregarded, and that the fabric of this Government never can be sustained, in its pristine vigor and glory, unless we keep the identity of the State governments perfectly established as against the Federal power. And now that that great bone of contention, slavery, has disappeared, we have a chance to look at the question from an independent and unbiased standpoint, uninfluenced by sectional or partisan politics.

The question of States' rights involves the whole theory of our Government, and the perpetuation of our republican institutions. It is essential, in considering the subject of making laws, to endeavor at all times to maintain the individual autonomy of citizenship. We begin with the household, family and domestic affairs, and we say to the village, or town, or city, or State, whichever undertakes to invade the privacy of these relations, "You must keep your hands off." As citizen members of villages, towns, cities, or municipalities, we claim the general right to legislate for ourselves, with only so much interference from the State as is necessary for the general good of the whole people; and when we come to State citizenship we claim that the Federal Government has no power over us except that which has been delegated to it by the Constitution. In any legislation inaugurated by the Federal Government it is therefore essential that there should be no encroachment upon the rights of the States as they are preserved in the Constitution. In State legislation, as against municipalities, cities, towns, and villages, it is equally important that the rights of these smaller communities should not be invaded, and the same reasoning applies to the invasion of individual, domestic, family, or business affairs by the National or State Government, or any of the minor municipalities.

Looking at the subject, therefore, in the light of every fact which I have been able to discover, I see no reason why there should be any national legislation in respect to this question of aggregated capital.

In regard to State legislation, you are charged with suggesting a basis for homogeneity of laws upon this subject. Nothing appeals to me so strongly as that proposition. The draftsman of the act which created your commission had in view the possibility of your reaching a conclusion upon which you could not conscientiously recommend national legislation, and he has carefully given you the power to make recommendations by which homogeneity on this subject between all the States could be established—similar laws framed on the same line—the States to take up this great question and legislate in a uniform way. A recommendation emanating from this

commission ought to have the profoundest weight in all the States, especially if it is accompanied by reasoning which appeals to intelligent men.

Therefore I submit that if you recommend legislation at all, it can only be in the shape of proposals to the different States. And if it is true that any corporation in this country—I do not care which corporation it is—is in possession of franchises, or is in possession of rights, or is the holder of privileges which are not shared by other corporations or individuals, then I say if you are satisfied of that fact, level your legislation against it specifically, and do it clearly, and the people will applaud you and the courts can intelligently sustain you.

As I see the subject, without having the whole light before me as you have, sitting here patiently, as you have been, for months, and gathering in all the statistics, facts, and opinions, it seems to me that the legal remedies in the various States are ample to-day to redress all grievances which may exist, and about which I now wish to talk.

THREE INTERESTS, THE PUBLIC, THE STATE, THE STOCKHOLDER.

There are three classes of persons who are interested in the remedies appertaining to aggregations of capital: First, there is the public; second, the State; and thirdly, the stockholders, and creditors who may be classified with the stockholders, because their rights are somewhat similar.

Now, let me first take up the question of the public. There has been much talk, and it has received sanction from the very respectable authority of Judge Howe, in his formulation of the results of the Chicago Trust Conference; there is a strong demand in favor of more publicity in respect to these industrial corporations.

Well, let us inquire what interest the public has, in what I shall now term corporate wealth and corporate interests. The public—and I mean by the public those persons who have no pecuniary or contractual interest in the corporation—is that class of persons who are interested in corporations, and solely and because corporations are created by public statutes, and whose interests can not extend beyond knowing that the corporation is faithful to its charter—to its obligations to the State.

I take issue with the advocates of publicity here, and I deny that it is necessary in the broad sense in which it is demanded. I say that no man who is not interested in a corporation has a right to know anything about it. It is none of his business. I put that proposition very boldly. I may be wrong, but my views are definite—subject to change, but at this time well fixed. I repeat, that if you guard the rights of stockholders and persons who have contractual relations with corporations, and the State continues its paramount authority over the corporations—as I shall show you it possesses—and that the corporation keeps its contract with the State by strictly following its charter, then, and in such events, the public has no more business in its private concerns than it has in the private affairs of your household, Mr. Phillips; or your fortune, or your own business.

Q. (By Mr. JENKS.) Are you using the word "right" there in its legal sense?—A. Or contractual.

Q. When you said that they had no more right than a private individual, you meant right in the strictly legal sense?—A. I use "right" as distinguished from authority. I mean, as a question of morals and as a question of ethics, they have no right, any more than you have to inquire into my private business.¹

Q. You are not using it, then, in the strictly legal sense?—A. No, no; I am not. I see what is on your mind.

Q. (By Mr. PHILLIPS.) Will you allow me a question now? Then would a corporation have a right to offer its stock to the public?—A. (Interrupting.) I will come to that; I will take care of that. I do not have any apprehension. I will take care of that part of it, and I am glad you asked the question.

Q. I am asking for information, you understand.—A. I will come to it; I will give it.

The line between the exercise of governmental rights—now I am speaking as if the State were offering to make a law controlling corporations—I say that the questions as to where and when the State should legislate, and where and when it should not; as to when private rights intervene and the State should withdraw; where the State's right to intervene is paramount and the private rights must yield, are questions of the greatest delicacy. And I do not know that I can do better than to quote to you from Mr. Burke, who, in my opinion, is an authority on any subject which he has touched, at any time and in any place. But it is clear that when you come to the question as to whether the State shall legislate about what concerns your domestic or business relations, I say, unless the necessity is overwhelming, it ought to keep its

¹ See pp. 1167, 1168, 1171, 1177; Mr. Allen, p. 1189.

hands off. You ought to allow the autonomy of household affairs and the autonomy of business to be run in accordance with the wishes of the individuals concerned, and the Government has no more right to interfere with your business than it has to go into your house and ask you what you are eating or to dictate what you shall eat. The line between where the Government comes in and where the State—the citizen goes out is clearly put by Mr. Burke¹ [reading]: "It is one of the finest problems in legislation," says Mr. Burke, "and what has often engaged my thoughts whilst I followed that profession, 'what the State ought to take upon itself to direct by the public wisdom and what it ought to leave, with as little interference as possible, to individual discretion.' Nothing, certainly, can be laid down on the subject that will not admit of exceptions, many permanent, some occasional. But the clearest line of distinction which I could draw, whilst I had my chalk to draw any line, was this: That the State ought to confine itself to what regards the State or the creatures of the State, namely, the exterior establishment of its religion; its magistracy; its revenue; its military force by sea and land; the corporations that owe their existence to its fiat (this phrase undoubtedly means public corporations, as private corporations were not, at the time this was written, in existence); in a word, to everything that is truly and properly public, to the public peace, to the public safety, to the public order, to the public prosperity. In its preventive police it ought to be sparing of its efforts and to employ means, rather few, frequent and strong, than many, and frequent and, of course, as they multiply their puny politic race, and dwindle, small and feeble. * * * They ought to know the different departments of things; what belongs to laws, and what manners alone can regulate. To these, great politicians may give a leaning, but they can not give a law."

Now there are a great many things that the State has no right to regulate. There are a great many things that the State has no right to go into at all; about which it has no right to dictate. It has no right to dictate to me what religion I shall follow, what I shall eat, what I shall wear, or what business I shall engage in. Mark you, I do not lay down this as an absolute proposition, an unqualified one. What I mean is this, that unless there is some overwhelming necessity, some apparent and powerful moving cause and mischief at hand, the State should keep its hands off; that is what I mean. But if the mischief is plain, if you feel that overwhelming cause forcing itself upon you, then you are justified in legislation, and you will find plenty of authority for it under the police power and under every other power.

I come back, then, to the question of publicity, and I assert that the public is amply protected by existing laws. So far as the general public is concerned, if it is influenced or damaged or defrauded by any act of a corporation, or its directors, or its promoters, or anybody associated with the enterprise, there is a criminal and a civil legal remedy, full, complete, and absolute. Let me illustrate: If a corporation were to issue a circular, a prospectus, which is now becoming the method of introducing new organizations to the public and getting subscriptions, if there is put in that prospectus any statement which is false and fraudulent, it is a foundation for a criminal indictment. Here is a perfect remedy existing under the laws of every State in the Union. You do not have to guard the public in that respect. No excuse can be found in this respect for the intervention of the State. If a man puts his money into a corporation through the representations contained in the prospectus, he has a civil remedy for damages in addition to his criminal remedy. So that there is no possibility of anybody being defrauded or cajoled or influenced out of his rights or property by anything that the corporation, or any of its surrounding associates, or persons interested in it, can do, without an appropriate, full, and perfect remedy.

Q. (By Mr. PHILLIPS.) Would that follow the dividends and the management of the business through a series of years, offering to the public—A. Yes.

Q. Without their privilege of examining to know whether those statements were correct or not?—A. Yes. So far as dividends are concerned, if they declare a dividend which has not been earned, it is a misdemeanor in our State. It is a crime; and if they do that they are civilly liable to anybody who buys on the faith of the declaration of the dividend.

Q. Can you conveniently ascertain that fact unless the public has access to the books?—A. What do you mean, the stockholder or the creditor?

Q. A stockholder.—A. A stockholder has the right. I will come to that in a minute. I am taking it up now in a regular way. I am dealing now with the outside public before they get into the corporation, and I affirm that it is utterly impossible for you to conceive of a case where the public is swindled or where the public loses money by corporate action unless there are adequate civil and criminal remedies.

¹ Burke on the Thoughts and Details of Soeretty, at p. 416, Rivington edition of 1808.

Whether they are enforced or not is another question. Now, so much for the public. If the solicitude of those opponents of aggregated capital is based on the fact that they wish to protect the public, then I say to them that the public is amply protected; they can wish no further protection.

Now, let us go a step further. Take the stockholder: What are his rights? The stockholder of a corporation has the absolute right to open the books. You need no law on that subject. The directors of a corporation are trustees for the stockholders, and the books of the corporation can be opened to them, through the instrumentality of a court of equity, under the powers that a court of equity inherently possesses, or a court of common law, or under statutory power, at any reasonable time after any reasonable demand. Their rights are fully protected, and while there may be isolated cases where stockholders have failed to get at the books, if you will examine the cases you will discover the grounds of the failure. Persons sometimes buy stock for the purpose of finding out what is going on in a certain corporation, and for no other object. Lord Ellenborough said to a man who was in court in this case which I cited from East's Reports: "You have not clean hands; you came into this suit speculatively; you have bought into this corporation for the purpose of making this examination;" and in such instances as these the courts refuse to allow examinations of corporate books to be made. But every bona fide holder of stock has the right to open the books of the corporation, and every court in this country will aid him to do it, and if they do not, if there is anything incomplete in the remedy in that respect, I say make it so, make it so; it ought to be so; but if you study the question I say that you will be satisfied that a complete remedy already exists. If you want homogeneity in the rules of the different States, make it.

Therefore, so far as the stockholder is concerned, his rights are amply protected at law or in equity.

Now, let us come to the State. Here is where the principal question arises, and I will not differ with the most radical exponent of the doctrines of antiaggregation of capital upon this question. The State is the creator of the corporation. The State dictates the terms upon which the corporate charter is granted. The charter makes the corporation a quasi-public body. The State has the absolute right not only to make examinations, but it has the right to extinguish the charter, as you would extinguish the flame of a candle. It can destroy the life of a corporation at any moment, because the condition in the constitution of all the States now is that the States reserve the right to revoke all charters. Not only that, but the State has what we call in equity a visitatorial power. It has the power through its attorney-general of visiting a corporation, inquiring into its methods of doing business, and making a thorough examination of its books and of its accounts and its business, if sufficient justification exists to warrant such a course. So that the States are not deficient in power, and the cry of publicity, in my estimation, is entirely unwarranted by the law and facts. But if you were to make a law by which the whole public could pass through the office of a corporation and look at its affairs as you would pass through a street and look through the windows into an office to discover what was going on there—I say that such a license to the general public would be infringing the rights of the corporation—it would be infringing individual rights; you would be guilty of transcending the power of government, unless you had, as I say, some overwhelming, powerful, good, substantial motive to do it. With the law as it is to-day, giving the State transcendental powers over corporations, protecting stockholders and creditors and the public as well, I believe that the cry of publicity has no foundation to rest upon.¹

THE GREAT CORPORATIONS ARE OWNED BY THE MEN OF SMALL MEANS.

Now, one more thought. Some persons, I think, have an idea that these aggregations of capital should be extinguished—wiped out. They make a warfare against capital, and their idea is apparently to exterminate it as being something not only offensive to the smell, but to the eye and to the touch, something repulsive to the senses, something which should be blotted out of existence, as unholy and pernicious, and vile and evil. Where will such legislation lead to, gentlemen? Have they thought? Certainly they have not, or they would not for one moment dream of legislation of that kind. Why, who constitutes the corporations, and where would such legislation lead? Legislating against corporations! You are legislating against yourselves. To-day every large corporation in this country has thousands of stockholders, and every substantial blow aimed against corporations is a blow aimed against the middlemen, the men of small means, the conservative men, the thousands and thousands of stockholders who have invested their money in these corporations, the

¹ See p. 1168.

young and old, the widow and the infant, the trustee and the executor. Do these people imagine for one instant that they strike a blow at the millionaire, in battering down corporations? Do they imagine that they are stripping these great millionaires of their wealth when they legislate against corporations? Never! The millionaires can take care of themselves, and do it. They do not hold their millions and millions of dollars in these large corporations.¹ And when you hear of this banking house, or that banking house, taking 10 or 15 or 20 millions of bonds or stocks, why, it only means that that is the source through which the things reach the public.

The great banking interests, the great promoters of these commercial enterprises, retain but comparatively small interests in these colossal industrial corporations, and when legislation is made against them, remember that you are striking at your fellow-citizens whom you are meeting every day; the man of conservative wealth, or the man who has put his little savings into corporations to enable him to support his family and children. It is a cruel mistake, not to say blunder, to discuss these questions upon the lines of wiping out capital and exterminating it. This is as senseless as impossible.

One more thought and I shall close. In connection with this crusade against aggregated capital, it is fashionable to cry out against individual wealth. There is not in the political history of this country any appeal so demagogic, unnatural, unfounded, and unsustainable, as that which is made against wealth. The instinct of envy, or the worst passions of prejudice, or demagogism and ignorance, lie at the base of such appeals. Because you and I have not been fortunate enough to accumulate wealth is no reason why we should undertake to criticise and find fault with those who have gotten it legitimately, much less seek to deprive them of it.

Respect for the goods and property of others is the basis of human society. It is demanded by social duty; it is inspired by good manners; it is inculcated by divine rule, and should be rigidly enforced by civil law and authority. The professional politicians of this country should understand that the free and unlimited opportunities, inducements, and openings of businesses and wealth to its individual citizens constitute one of the strongest arguments in favor of a republic, and is at the same time one of its main foundations. The incentive to wealth is an honorable and useful ambition for the citizens of any government to possess, because acquisition of wealth requires intelligence, shrewdness, conservatism, and the exercise of all those human qualities and functions which are beneficial to society. It is a primary object of every well-founded government to encourage the acquisition of individual fortunes, as it is one of its most sacred duties to guard them for its possessors when they have been lawfully and honestly earned. To encourage man to toil and labor, in all the fields of human industry, means the development and prosperity of the nation; it means the opening of new fields of occupation to the poor, needy, and unemployed; it encourages men to tremendous and sometimes superhuman efforts of skill and energy. The consciousness that the rewards they reap as the result of their own exertions, whether in money or in any other kind of property, will be carefully guarded by the State for their own benefit and the benefit of their posterity, is the great motive which impels men to strive mightily in the different fields of business activity. Nor should wealth be driven from an active participation in the political life of the nation. As a matter of right and justice and policy, it should have its proper place in the councils of the Government.

As Mr. Lecky² says: "The indissoluble connection of the enjoyment and dignity of property with the discharge of public duties was the preeminent merit of feudalism, and it is one of the special excellencies of English institutions that they have in a great measure preserved this connection, notwithstanding the necessary dissolution of the feudal system."

It constitutes one of the greatest elements of stability, conservatism, and intelligence, and while I have the contempt that is shared by most of my fellow-citizens for the ostentatious display of fortunes, the flaunting of wealth before the public with brutal vulgarity, I do contend that most of the individuals who have acquired wealth in this country are entitled to be respected, and it is not only their right but it is their duty to insist upon exercising a fair and proper share in the government of the country. The road to fortune is open to us all, and if we have not individually been fortunate enough to acquire a great amount of property we should not seek to belittle the men who have been more fortunate, or seek in any way to deprive them of it or diminish its importance or enjoyment. The lives and achievements of the men who have acquired wealth in this country form one of the most interesting chapters of history. Who are the men who occupy the elegant residences on Fifth Avenue and on other avenues of the great cities of the country? Not men who were born

¹ See p. 906, and footnote.

² Lecky's History, England in the Eighteenth Century.

into the world with large means, but men who from their infancy were thrown out upon their own resources, and by hard work, skill, and luck have acquired fortunes. It should be a matter of pride to point out these men as types of American citizenship and as proper incentives to young people of the present age. Any onslaught, premeditated or otherwise, made upon the property of such a class of people is not only senseless and ridiculous, but it aims at the whole root of the social organization.

The American nation is neither in its decline nor in its dotage. Men may climb into prominence on the steps of temporary argument and unfounded appeals to passion and prejudice; demagogism may temporarily capture the multitude; but the American people can not always be deceived. Those who seek to allure the laboring and agricultural classes, or others, into the approval of schemes which have not the sanction of good sense, history, judgment, and constitutional law will sooner or later come to grief.

Now, gentlemen, I think I have trespassed enough on your time, and I will now close, with my sincere thanks for the patient manner in which you have listened to me.

SPECULATIVE ORGANIZATION—OVERCAPITALIZATION.

Q. (By Mr. JENKS.) You have been speaking particularly of the corporations that you think have been organized for the carrying on of legitimate business for the benefit of the public at large, as well as of the stockholders and managers?—A. Yes.

Q. In your judgment, are there corporations that are organized primarily for speculative purposes instead of for legitimate purposes?—A. Not any of the large ones.

Q. It is your opinion that there are some that are organized for that purpose?—A. I think there are a great many men who have gotten together these various manufacturing interests and have made large sums of money by doing it—if that answers your question—and who have had no interest in the business previous to bringing them together.

Q. And who cease to have any interest in the management of the business if it is continued?—A. I could not say positively as to that. I should not suppose it would be good business to keep them.

Q. There is, then, you think, a class of men who have made it their chief business to promote the organization of those larger combinations simply for the sake of the profit they can make in getting them together?—A. Yes; I think that is so.

Q. Do you think that in the organization of these larger combinations there has been enough of this speculative activity on the part of the promoters to form anything like a serious menace to the financial stability of these corporations?—A. I do not want to reflect, of course, upon any corporations—

Q. (Interrupting.) Certainly not.—A. Which have been formed.

Q. And not upon any individual?—A. No. I think this, that the aggregations of corporations are like partnerships. If they are not formed on a conservative basis, they will go down, and you will have failures on the part of many of these corporations which have already been formed, because of overcapitalization.

Q. You think, then, that within the last 2 years there has been so much overcapitalization that it is likely to result in the near future in something like a speculative Wall street crisis?—A. I think this: Of course, there can not be a failure of a corporation which is organized on a basis of preferred and common stock, because preferred and common stock give the stockholder no right as a creditor, and as long as the corporation can go on and pay its debts it is all right. But while there may be no failures in the sense of bankruptcy—technical, legal bankruptcy—there would be a failure on the part of the owners of the preferred and common stock to receive dividends.

PUBLIC STATEMENTS OF WHAT IS RECEIVED FOR STOCK WILL NOT DIMINISH SPECULATIVE PROMOTING, BUT WOULD GIVE INVESTORS SOME PROTECTION.

Q. You stated that, in your judgment, it was fair and proper that stock should be issued for cash, as I understood it?—A. Yes.

Q. And also for property, and also for patents, for trade-marks, brands, and for good will. Do you see any harm in having the articles of incorporation state how much is issued for each of these things?—A. In most cases, no; in some cases, yes. In England they require that everything should be stated in the prospectus under the companies act. For instance, the man who promotes the company must state how much he makes; it must be stated how much the owner received in shares, in stock. And I do not know of any reason why that should not be done here.

Q. Do you think that if that were done here it would tend to diminish the formation of speculative companies?—A. Not in the slightest. They form 10 over there where we form 1; and if you will go into a London solicitor's office, where I have been many times, you will find a class of men there who will draw up a prospectus in a way that will simply make you dizzy, as the boys say; and they find means to beat that devil around the bush. So that by one subterfuge or another, pardonable, legal, they arrange everything just as they want it. But, as a matter of fact, as you know, the prospectus under the companies act must state everything, so that the public knows just as much about the interior as the men who are putting it out; and I frankly say, I see no reason why it should not be done here.

Q. You think, however, that the making clear to the public just what the nature of the organization is will not protect the honest, legitimate, well-meaning investor?—A. It will not protect him when the enterprise itself is not good. Of course, you can not devise any plan by which the State can guarantee every man that goes into a stock speculation that he is going to make money. If you can, I should get at that, because I have been caught myself so often that I should like to be reimbursed. But I mean that so far as keeping the public out is concerned, if you have methods which prevent fraud, which we have here, and enable you to punish the authors criminally and civilly, you have gone about as far as you can go. For instance, you may get out a prospectus to-morrow for a gold mine. You and I look at it, and then I say, that is going to be a great thing; you say, it is not. I will go in and you stay out. I may make money, or I may not, and you do not make the gamble. After they have gone 100 feet down, they strike nothing but mud, or they may strike a great bonanza.

Q. With reference to a manufacturing business, which is quite different from the mining business in many ways, the statement of the valuation that is placed upon the plants, which are running plants, and which anybody can inspect, the amount that has been paid for patents, for trade-marks, and so on—if these were stated in the prospectus, would, it enable an investor who wished to put in considerable money to form a better judgment, in many cases, than he can now as to the probable future of the stock?—A. Yes; I think it would.

Q. In that way you think it would be something of a protection?—A. I think it would; I do not see any objection at all to that.

PROTECTION OF STOCKHOLDERS.

Q. Is it a fact, as is so frequently stated, that a large proportion of the corporations as they are now organized can be so managed, and are so managed, that the majority stockholders are really at the mercy of the minority, because the minority of the stock is concentrated in a few hands, and the majority is largely scattered, and the directors are able to prevent the majority stockholders from getting together?—A. That is often the case.

Q. You think that condition an evil?—A. No; because of the indifference. If there are 100,000 shares of stock, and 25,000 of it are in the hands of the clique, and the balance of it scattered, they start in the field with 25,000 shares settled in their hands. If they have got the management, and the management is fairly good, the stockholders as a rule do not take enough interest in the corporation to interfere with them. I had, in my experience, a man, a very prominent man—you knew of him—who had possession of one of the largest railroads in the United States and only had 100 shares of stock. I was very much surprised when he put his stock upon the table, and I found out that he had only 100 shares out of the \$40,000,000.

Q. Supposing that the management of the company has been fairly bad. Is it possible for it to be made difficult for the majority of the stockholders to get together and to control that body?—A. No; not at all. It is the easiest thing in the world.

Q. Is it true, as has been stated here at different times, that in the case of a large proportion of the corporations that are organized there is no office to which the stockholders can go to get information with reference to their fellow-stockholders and their holdings?—A. That is absolutely unfounded. In fact, under the laws of New Jersey, or New York, and under the laws of most of the States where I have knowledge, the stock books, ledger, and all books of the corporation are open to the inspection of every stockholder.

Q. That is the law?—A. That is the law.

Q. Do you know whether the law is lived up to with strictness by most of the corporations in the State of New Jersey?—A. That you can only tell by applications to the court which have been made. I know that wherever an application has been

made to the court by a bona fide stockholder, not brought in for speculative purposes, the court has opened the books to him at once.

Q. The statement is frequently made that in the case of some of the larger corporations it is for the interest of the directors at times that the books should not be opened to the stockholders, and that, in consequence, a man who holds but a few shares of stock, and who has but little means, will not be able in all probability to get the books opened to him, even though he is a bona fide stockholder, because of the legal obstacles put in his way by the directors, who have much more money at their disposition than he has. Is that legitimate?—A. That happens not by legitimate litigation. It is not more fair to them than anybody else. If you have a claim against a man, a very rich man, and you want to pursue him in law, he can resort to all methods in law, all methods of delay, to prevent you from getting it. That is true. If a man with a small amount of money faces a large body of capitalists, if they wish to thwart him and postpone his rights, they can do it; but if he is persevering and indefatigable he will succeed; there is no doubt about it.

FULL REPORTS TO STOCKHOLDERS—TO THE PUBLIC.

Q. Do you think that hardship would be prevented at all by this degree of publicity in regard to organization, which you have already approved, added to some greater publicity in regard to reports to stockholders, if annual reports or semiannual reports were required?—A. I believe myself that every company should have an auditor, and I believe that that auditor should make monthly statements. I think that is an admirable thing and ought to be done.

Q. And that those statements should be sent to every stockholder?—A. Yes; and published if necessary.¹

Q. Would you be kind enough to go a little more into detail as to the facts that you think should go into the auditor's statement?—A. Yes. I think that the auditor's report—of course, I say monthly; probably for some large businesses that would not be possible; say quarterly report—should show the amount of business that has been done, the amount of money on hand, the amount of liabilities, without stating to whom, and the nature of the liabilities. Of course it would not do to publish the names of individuals that owe a business concern, because it would affect their credit, but you can have an auditor's report which will give everybody the fullest information.

Q. You do believe, then, in a degree of publicity that would require the publication of a fairly detailed balance sheet quarterly?—A. Such as is followed in England, I think, would be of very much benefit to our corporations. To that question of publicity—what I mean by publicity—I do not mean that every Tom, Dick, and Harry who had no interest in the corporation could go in there and say, "Open your books," any more than I could go into your banking house or office and say, "I want to know how your business is going on."

Q. (By Mr. PHILLIPS.) Do you think it is proper and right for the Government and the State to have examinations of the national banks, State banks, and private banks?—A. Yes. Every bank that receives deposits of money should be subject to rigid examination. That I believe.

Q. Do you make a wide distinction, then, between them and these large corporations serving the public in a great capacity?—A. Yes. I do not see what publication you need in the case of a private corporation.

Q. Would you object, instead of having the auditor do this, to having the auditor make a statement to the public official for the public, as bank examiners do?—A. Yes, I do; because of the obvious difference. In the one place you have a stockholder who can get all the information he pleases. On the other hand, you have a person holding himself out as a banker to the public, and you have as depositors workmen, women, and children going past, who see it as a banking house and go in and put in their money. It has been the policy everywhere, it has been the theory of all well-regulated laws, to compel absolute statements, detailed statements. A man deposits his money in a bank and he wants to know something about it, because he has positively an interest there; he has credit. That is the distinction.

Q. Would you not have a sworn officer of the Government make the examination?—A. I do not think that is necessary. If you had an auditor, who was a sworn officer, if he made a statement you could rely upon it, precisely as you do on a statement made by the Comptroller of the Currency for a national bank.

Q. Should that be by one of the employees themselves?—A. Certainly; that is

¹ See pp. 1162, 1177.

what is done in England and what is done here. You get an auditor and very rarely do you discover an attempt to defraud anybody. It is the rarest thing in the world.

Q. (By Mr. JENKS.) Unless you were strongly of the opinion that the auditor could be trusted, even though he were appointed by the directors, I think you would agree to Mr. Phillips's suggestion that the auditor appointed be some person who is not interested.—A. Yes, sir.

Q. So that one could be absolutely sure of the trustworthiness of the report?—A. Yes. But you must observe the distinction, which you will find between the banking business and manufacturing business, because the bank is held out to the public as a responsible place. You go in and deposit your money; you have got no interest except to draw it out.

Q. Would you think that in the case of a very large corporation, whose stocks are listed on the stock exchanges for investment by the general public, that fact that they are going to the general public for investment would put them in a somewhat similar category?—A. No, I do not think so, because no man need buy stock if he doesn't want to.

Q. Need he deposit his money in the bank?—A. Yes, he has to do it; prudence would dictate to him to do it; because it would not be prudent for him to carry around his money. The first thing he thinks of is to go and deposit it. But people who have money enough to invest in securities on exchange can go and see the annual reports, for I think there is enough information there.

POWER OF GREAT COMBINATIONS TO RAISE PRICES—NATURAL LAWS.

Q. There has been some testimony here to the effect that some of these larger corporations, by mere virtue of their size and the extent of their capital, have enough monopolistic power to keep the prices of their products above ordinary competitive prices. Would you consider that the public had an interest in that which might justify legislation, provided any wise legislation could be found?—A. I should suppose that if you could find that the operations of a corporation were absolutely detrimental to the public, that the operations were so conducted that people were injured, and that they had no legal remedy, you might take a step in that direction, but it is hazardous, because, as I say, you can leave these things to the operation of natural laws, which would overtake them.

Q. It has been asserted that these large corporations do as a matter of fact keep prices somewhat above competitive rates. It is stated further that if their businesses were made somewhat more public than it now is, that publicity would be merely aiding natural laws by encouraging competition. What would you say to that?—A. I think you can find people here that are better qualified to give you an answer. You take some merchant in that business and he will give you an answer; some manufacturer; some man who knows his business. My answers are necessarily hypothetical. I would not be sure. I want to give you, if I can, views that will really aid you. I do not think that would. I would not ask you to pass any measure on any opinion of my own.

Q. You lay down the general proposition that there ought not to be legislation against natural laws?—A. Yes.

Q. You would, however, assent to the assertion that if the natural laws seem to be hampered by the action of aggregated capital, any legislation that would tend to lead back toward natural laws and aid natural laws would be useful and wise?—A. I think that is so.

Q. Do you consider that the principle of competition is a natural law of trade?—A. That is a speculative proposition. You know that better than I do. I will take your answer on that.

Q. I had understood you to attempt to lay down for us some of these natural laws,¹ and so I am asking you for natural laws.—A. No, I was simply saying that there were certain facts, natural facts. I tried to keep away from your temptation because I knew I should get caught.

Mr. JENKS. Possibly I might venture to say that as far as my information goes most economists object to the expression "natural law," and deny that there is any such thing as "natural law;" and I was struck by your use of the phrase.

The WITNESS. I do not believe I could give you any more light than I have given already.

¹ See pp. 1151, 1252, and p. 1169, above.

OVERCAPITALIZATION—POWER TO RAISE PRICES (RESUMED).

Q. I understood you to say a moment ago that you believed there was a great evil growing from overcapitalization?¹—A. No.

Q. In some of those more speculative enterprises?—A. No.

Q. Did I misunderstand you?—A. Yes; you misunderstood that argument. I did not mean to say that. Do you mean in response to a question?

Q. It was in response to a question of my own.—A. Oh, in response to a question of your own?

Q. Yes.—A. Yes; the evil of overcapitalization will result in adversity to the corporation, I think.

Q. May I ask just what you mean by overcapitalization? That is the reason I suggested it.—A. I mean capitalization based upon water. For instance, how would you raise money to-day? Now, assuming that you had a magnificent manufacturing property, a number of plants, and they earned 10 per cent on a capitalization of \$50,000,000; that would be \$5,000,000 you could show they earned. You go to Wall street, and you say, "I want to put up these plants; I want \$50,000,000." The Wall street man would say this: "I will give you that money if you give me, with each 100 shares of preferred, 100 shares of common as a bonus." The 100 shares of common stock which you would give as a bonus would be water; but it is necessary to create water to get money, and wherever you see bonuses given, or common stock, for the subscription of preferred stock at par, you may make up your mind that there must be a bonus. The bonus is predicated upon what will be the results of the combination. For instance, a man says, "I am making \$5,000,000, I am making 10 per cent, but if I combine, the effect of the combination will enable me to make \$5,000,000 more." The great secret of all manufacturing combinations is the economies they effect.

Q. In your judgment is it true—it is often asserted—that in addition to the saving that comes from the economies there is also an additional source of profit in their added power over prices—the power to raise prices?—A. Well, I think the very minute they go to raising their prices they invite competition. You have that assurance. If you will look at it and study it you will find that is the case.

Q. The sugar combination has been at work 12 years and more. Do you know during how many of those years there has been active competition?—A. I think within the last 4 or 5 years there has been active competition of some kind. There have been two or three competitors. That is a matter of public history, though, and easily gotten at.

Q. The reason I asked the question is this: You spoke as if you thought this competition would come in so readily and so promptly that the people would not be likely to be injured. If we can judge from the testimony given here, during something like 3 or 4 years out of 12 there has been active competition, but more than half of the time the competition has been very slight. I use this illustration because you have used it.—A. Yes.

Q. In the light of these facts, do you think we could rely upon competition alone as a sufficient regulative for too high prices?—A. I think that with conservative management, with the fact before every man that if he put prices up he would invite it, that would be sufficient to control the management.

PATENT MONOPOLIES.

Q. You have spoken also of the fact that there is a monopoly wherever a patent has been issued, and as if in a good many cases that monopoly might demand very high prices. Would you suggest any amendment to the patent laws to prevent that kind of monopoly?—A. No, I would not; because I do not see the value. I know this, that the poor, unfortunate man who invents a patent rarely reaps the benefit of it.

Q. Should you be inclined to think, then, that a law which should not permit any monopoly in a patented article, but should give to the patentee simply a royalty on every article manufactured under that patent, no matter by whom, would be wise or proper?—A. No; I do not. I do not see any reason why you should take away the incentive which the patent law gives by dividing the amount which the man is to receive by placing before him that royalty. My idea is never to tear down an old house unless you feel pretty sure that you are going to put up a better one.

Q. Do I understand you to say that it is ordinarily true that the man who patents an article does not himself reap the reward?—A. Sometimes, I think. My experience has been that before the patent has become developed the profits have disap-

¹ See p. 1166.

peared. All the large machines that have taken so long to develop. A man gets a patent, you know; the machine is really for the first time given birth; they begin to mount it, begin to get it in practical working order, and by the time the thing runs, well, he disappears. You could have bought the old Bell telephone, if you had been in the market, for \$10,000 or \$15,000, right in the city of Washington here, a number of years ago.

Q. Those who advocate the measure I suggested are of the opinion that a certain royalty to the person that takes out the patent, which must be paid by anyone, no matter who the manufacturer is, would be likely in the long run to give larger returns to the man who took the patent out than this present system.—A. I never heard that before; my present opinion is that it is best to leave it alone.

THE INTEREST OF THE LABORING MEN.

Q. If the evidence should show that these larger corporations had much greater power over their workmen than the smaller corporations or individuals had, do you think that fact would justify any special legislation in the interest of the workman, to protect him as against corporations?—A. I think if the workmen convince you that they are suffering they will get the law changed; but I do not know enough about it. My opinion is hardly worth anything on that.

Q. The matter would be summed up, then, as I understand you, substantially in this way: That the burden of proof rests upon the man who asks a change in the law?—A. Yes.

Q. But that if he can show a fairly clear case in favor of any modification of a conservative nature it would be sufficient justification of the change?—A. I believe that would be so.

Q. (By Mr. PHILLIPS.) Would not the large aggregations of capital—say of \$25,000,000, \$50,000,000, and \$100,000,000—tend to make a capitalistic class? Would they not, in fact, destroy individualism a very great deal so far as labor is concerned?—A. That is a question that I say is not developed sufficiently for us to form a judgment about. I can not say—I honestly can not say.

Q. Do you think that the opportunity of the laboring class to accumulate wealth would be as great under this system as it would be under one of smaller capitalization, such as we used to have?—A. I think if you consult the savings banks and life-insurance companies you will find that the laboring men to-day have the controlling wealth in this country—you will find that they hold it.¹

NATURAL RIGHTS OF ARTIFICIAL PERSONS—RIGHTS OF THE STATE.

Q. (By Mr. STIMSON.) I want to ask a few questions, not by way of criticism or necessarily of disagreement, but because your answers have been very suggestive to me, and I want to follow out one or two points a little further. It is mainly in the interest of your fundamental principle, which I agree with, that the burden of proof is always upon the advocate of lawmaking—that all law is necessarily, at least, in partial restraint upon individual liberty. I want to call your attention in the first instance to this, which seems to me to be a fact, that the corporation, which, as you say, we are now discussing—because the technical trust is extinct; and we are considering large corporations—that the corporation itself is the creature of law; it is not a natural thing; it is not the result of natural law, and it rests entirely on the statute law. And as you said, a corporation is an artificial person, to which I cordially agree; I add that an artificial person has no natural rights, and therefore it seems to me that that part of your argument which says that the large trusts, these corporations, have a kind of natural right not to be interfered with like that which an individual has, is not quite correct at the start; because a corporation itself is artificially created, and the same power which creates the corporation, which gives it being with all its powers, has the right to destroy it. Therefore, there are 3 or 4 questions I want to ask. I want to bear in mind, if you agree with me, that we start with the position as to these great corporations being creatures of the State; that the State can not recall their being, possibly, but can regulate them even to destruction if it chooses?—A. That is absolute; they differ from persons. That is, a father would have no right to kill his child. He had at one period in Roman history. He ought to have the right now in some cases, when he is worthless.

Q. Now, you speak of three great advantages that corporations have as distinguished even from partnerships, and still more that they have over individuals; three greater facilities for doing business. I will mention only one; that is what we call perpetual succession—a better word would be immortality. A corporation is, or may be, an immortal being, which is certainly an extraordinary thing. Now, I want

¹ Compare Mr. Stetson's statement that "nine-tenths of the corporations are controlled by boards of directors which either own or absolutely represent a large majority of the stock;" p. 972.

to ask you whether you thought it was quite true, therefore, that the corporation had no advantages in aggregation of wealth or capital that an individual has not? Take, for instance, this particular one; all individuals are mortal. When they die their assets are divided up. They pass to their executors. They depend upon new hands to manage. But a corporation is really an immortal being. That does give them some advantage over the individual, does it not?—A. In that sense it undoubtedly does; that is one of the main purposes of the aggregation. Yes, you are right.

Q. Then, I understand that you do not disagree with those who hold that in view of these things, the immortality, the freedom from individual liability, in view of the fact that the State has created this extraordinary power, you don't look askance upon the State's accepting the responsibility of regulating and controlling that extraordinary thing which it has so created and clothed with these extraordinary powers?—A. No; on the contrary, I think the State should hold its grip on corporations, just as it does. I would not relax the grip in any way.

SPECIAL TAXATION OF LARGE CORPORATIONS.

Q. I want to be quite clear on the point of aggregated capital. You said the later tendency has undoubtedly been in the direction of allowing almost unrestricted capital to corporations. The older laws, as we have them, favored the limitation of the amount of capital allowed. The later laws usually have no such limitation. You approve of this?—A. I think as long as they are continued in the present form; yes.

Q. Now, some people have suggested to me that the advantages which accrue to companies from very large aggregations of capital—which is one of the points of your argument—that this is a special advantage in these large aggregations; and in view of the gift of these extraordinary powers, the immortality of existence and the freedom from liability, which the State has given them, that corporations might well be taxed on their capital in a greater pro rata proportion than the ordinary individual. Suppose 100 individuals, with \$1,000,000 each, went into business and could earn 50 millions a year, and suppose one corporation with 100 millions of capital, adding to its profit the advantages which you have pointed out and which arise from that very aggregation, is able to produce 75 millions a year, or 50 per cent more than the individuals. People I have talked with have advised that the State should put something like a graduated tax on that very large capitalization; basing its propriety on the ground that there does arise increased productiveness from the aggregation of capital alone.—A. If I were ambitious I would begin the study of the question of taxation. It is the one question about which there is a great deficiency of real learning. The question of corporate taxation is one of the most involved, and one of the most delicate, and yet it is one which ought to be studied. Now, I would encourage that in a reform. You there run across a few of these points. You take a corporation like the Pennsylvania Railroad; when you tax the Pennsylvania Railroad you are taxing thousands and thousands of people. You see the Pennsylvania is a political entity. It has those corporate rights which make it an entity. And it ought to be taxed in the same proportion as taxes are levied on anybody else. But the difficulty with that is that we have the Constitution of the United States, which requires uniformity, and you have to run across the question how far you are to tax individuals who own the stock of the corporation.

Q. It does not require uniformity in the case of an excise tax?—A. An excise tax?

Q. That would be an excise tax, would it not, a tax on the capital of the corporation?—A. No. I do not think that would be covered by an excise tax.

Q. I have heard it argued that it would be an excise tax.—A. No; we have never regarded it so. We got our principles of corporate law on the question of excise from England, and that appertained to different things altogether.

Q. The charging of the license fee, for instance, on the formation of corporations in the first instance; that is virtually regarded as an excise tax, is it not, and not a tax upon property?—A. Oh, in that sense, yes; it was originally; yes, you are right there.

Q. Now, those individuals of the Pennsylvania Railroad are individuals, I agree with you; but suppose they are enabled by that aggregation or entity, known as the Pennsylvania Railroad Company, to earn more proportionately than they could as individuals, ought they not to be taxed on those increased earnings?—A. Well, if you can show that; you will have some difficulty in proving it, I should imagine.

PROPRIETY OF STATE REGULATION.

Q. The next is a little out of the order of your remarks; but Burke himself, in your quotation, says: "It is one of the finest problems of legislation, and what has often engaged my thoughts whilst I followed that profession, what the State ought to take

upon itself to direct by the public wisdom, and what it ought to leave, with as little interference as possible, to individual discretion.' Nothing, certainly, can be laid down on the subject that will not admit of exceptions, many permanent, some occasional. But the clearest line of distinction which I could draw, whilst I had my chalk to draw any line, was this: that the State ought to confine itself to what regards the State, or the creatures of the State, namely, the exterior establishment of its religion, its magistracy, its revenue." Now, if we levy a large tax on corporations in one form or another, either property or excise tax, is not the State entitled, and ought it not, to inquire pretty closely into their affairs, even to the point of publicity, in order to see that the tax is fairly levied? Is not that a reason for the State's exacting publicity?—A. Why, they do that now.

Q. They do that now?—A. They do that now in all States. You can not escape the tax collector. In a corporation he has the right to open your books, and he levies a tax and you are compelled to pay; there is no way of escaping him.

Q. Well, I should fancy it is not quite as burdensome in all States as it is in some. I do not suppose any uniform law can yet be recommended by Congress or by this commission that would establish any new principles, but rather one to bring all States up to the highest standard?—A. Yes.

Q. And then Burke also says in that quotation: "Its military force by sea and land; the corporations that owe their existence to its fiat; in a word, to everything that is truly and properly public, to the public peace, to the public safety, to the public order, to the public prosperity." It is the very point I would make. Corporations are a fair subject for the State to meddle with.—A. Undoubtedly..

PARTIAL RESTRAINT OF TRADE IS AGAINST THE COMMON LAW.

Q. You then mention at another point—I want to go into the law of restraint of trade. What you said, if I am right, was that there is no such thing as monopoly now in the world in a strictly common-law sense, and then you said that even in a practical sense there is no monopoly. There are some, however, that are in incomplete restraint of trade. The courts do not only concern themselves with a complete restraint of trade; and this is the thing I want to ask, if the common law did not put down combinations that were only partially in restraint of trade.—A. Yes; on the ground of public policy. In the Addyston Case, which has just been decided, the acts would have been held illegal under the common law, and it did not need that statute at all. Anybody interested in the Addyston Case could see that, because that was the most absurd—I may say to the gentleman who drew the agreement that it was a flagrant violation of public policy—that agreement.

Q. That case was exactly what I had in mind. I had it noted down here. Now, in both the common law and by our Supreme Court, recently, the principle has been reaffirmed that a combination which is only partially in restraint of trade is nevertheless obnoxious to the common law?—A. Yes.

Q. But that being so, it is urged by the opponents of trusts, if it is true that there is a practical—I do not say complete monopoly, but a practical partial monopoly, practical partial restraint of trade, resulting from some of these large combinations, it is not only the duty of the legislatures to pass laws to prevent it, but is it not already the right of the courts to apply these principles as of common law?—A. Well, they do.

Q. Exactly; they do that. You did not say, I believe, that there was not one of these large combinations now in existence which did secure even a partial restraint of trade?—A. I do not think they do; they are in corporate form now.

Q. (By Mr. JENKS.) I understood you to say in regard to the decisions that had been against these combinations that they were all under the common law?—A. Yes.

Q. This Addyston pipe case, I believe, was under the Sherman antitrust act technically?—A. Yes.

Q. The case in Ohio against the Standard Oil Company, the case in Illinois against the whisky company, and the late case against the Glucose Sugar Refining Company were all under statutes, were they not?—A. Some of those were. I can not answer that; I looked them over, but it has escaped my mind.

Q. Your opinion was that the common law was sufficient in any case?—A. Yes, where there is no actual corporation; I think the common law is perfect.

Q. That is the point, as to whether the common law was perfectly sufficient even though the decision may have been under statutes in these States.

CONSTITUTIONAL POWERS OF CONGRESS.

Q. (By Mr. STIMMON.) I would like to take up there several questions on the Sherman Act. I noted down what you said of the Sherman Act, that it "makes illegal all

acts in restraint of trade." Those are your words; and then you asked how would the opponents of trusts propose to amend it.—A. Yes.

Q. You did not add the words, however, which made illegal "all actions in restraint of trade between the several States." Those words you left out.—A. Not intentionally. Of course there can not be any legislation unless they were there.

Q. Now, I suppose that if you say that the Sherman Act has not been effectual, has not, in fact, gone beyond the common law, and ask how it can be amended to do more than that, to bring about increased effect, to become a drastic act instead of a very mild one, the extremists would say, Why, you could very easily leave out those words "between the States," leave out the interstate part of the Sherman Act, and let it read simply as you did read it, so as to make illegal all acts in restraint of trade. What would you ask the gentlemen of the commission to say if anyone came here proposing that amendment?—A. I would say unconstitutional, exactly. Will you let me interpolate there something I omitted, and right on that line? If you wish to limit or nullify the power of corporations, it is very easy to do it. If you take away from them perpetual succession, if you take away from them the nonliability, if you compel them to be partners, in other words, you can accomplish the business. There is no difficulty in destroying. You can cut their heads off with a single blow; but I have not seen the man who is brave enough to advocate that step yet.

Q. I am afraid you will say that I have no right to ask you conundrums, which I very much need an answer to. I want to close by asking two or three questions which arise under the Sherman Act, to see how they strike your mind.—A. All right.

Q. I should like to ask whether you think that a single interstate contract made by parties within two States, parties of different States, comes under the constitutional provision of the interstate-commerce clause. You know what I mean by that, of course?—A. Yes.

Q. Can not Congress legislate upon a contract because it is a contract made between a man in Massachusetts and a man in New York? Does the interstate act clause go as far as that?—A. It has no connection with such a contract as that.

Q. Can you as to individual persons?—A. No.

Q. Now, take it as to corporations in different States, which of course may be excluded arbitrarily from doing business in any one State. Corporations from another State may be excluded arbitrarily. Now, does that make any difference in the law? Is it any more possible under the Constitution than it was in the case of two individuals?—A. No. The Supreme Court of the United States, the Federal courts, held that as to corporations. You will find all these decisions.

Q. Have they not done it under the fourteenth amendment?—A. Yes.

Q. Have they done it under the clause which says that the citizens of each State shall be entitled to all the privileges of the citizens of the other State?—A. No; I do not recall that that has been done under that section. No; I do not recall any decisions under that section.

Q. I have tried very hard to find that.—A. No; I do not recall it. If you wish, here is a little brochure I have on the commercial branch of it, and I do not think anything of that kind is here.

Q. It has been proposed, I know, to the commission, or to members of it, that the Federal Government might create corporations, trading corporations, manufacturing corporations, primarily on the ground that they were supposed to do either entirely or in part interstate business. Do you know that such a law would be constitutional?—A. No, sir; I thought that the Government went as far as it could when it incorporated the Nicaragua Canal. I was in Europe at the time, and I was retained for the interests. Associate counsel acting with me went before President Cleveland and made an argument in opposition to that on the ground that it was not within the power of Congress to make it; but Mr. Cleveland signed the bill. It is a very good measure, but the Constitution is strained sometimes to support these things. The Nicaragua Canal measure is perhaps the limit it could go to.

Q. Do you think that if there is a doubt about the constitutionality of a bill a commission like this, which approved it otherwise, ought to consider the doubt at once before considering the measure?—A. Yes, absolutely.

"CORPORATION STOCK TRUSTS."

Q. There is another kind of trust that is rather rare, but is very strong when it happens, and that is what for the sake of a better word I will call the corporate trust or the corporation stock trust. Suppose three or four large holders got together and induced the holders of half the stock in a corporation, plus one share, to put that slight majority of that stock of this railroad, we may say, in a trust with three trus-

Then these three trustees issued trust certificates representing only the beneficiary right of income of that stock and no right of control of the management, until the trust is terminated, which may be 5 years or which may be perpetual. Those trust certificates, which have no power of control, are passed from one hand to another, and are regarded by the general public very much as if they were stock in the corporation. Then go a step farther. Suppose you have the Maryland Railroad, which is a real railroad, and you get up the Maryland Company and you put into the treasury of that company half the shares of the Maryland Railroad, and the control goes to the directors of the Maryland Company. It is not a railroad, but a company, and of course controls the Maryland Railroad. Then you go a step further and you put half the shares of the Maryland Company again into the trust of three individual trustees. Those three individual trustees have half of that, plus one share. Will they not control the real property which represents the value, that is, actually, the Maryland Railroad?—A. Yes; that has been done in two instances recently, one of which is fast going out and the other is just being considered. I know of two corporations and I think it a very good thing, for the reason that it makes the management permanent and leads them to have a permanent policy.

Q. But that is a question of merely 2 and 2 make 4; and they could go on and make new companies after new companies, just like Chinese boxes, one inside of the other, until you got at first one-half, then one-fourth, one-eighth, one-sixteenth, finally one thirty-second of the stock of the real corporation to control it. That could be done?—A. Yes; and if the stockholders show as little interest in properties as they do now, it will continue to be done, and if you go to a stockholders' meeting you will find that it is so.

Q. You do not think there is any reason for any law attempting to regulate it?—A. On the contrary, it is very beneficial to have permanent uniform management.

Q. For instance, it is possible, of course, to pass a statute that you can not give irrevocable proxies—that is, you can not separate the voting power of stock from the real ownership.—A. That exists already in some States.

Q. That does in the simple case of proxies; and so that rule in regard to the transfer of stock under trust. You would not be in favor of any such restriction?—A. I would not.

FREIGHT DISCRIMINATIONS—POOLING IS THE REMEDY.

Q. (By Mr. KENNEDY.) Many witnesses who have come before this commission have spoken about freight discrimination. Railroad presidents have admitted the evil. Some of the witnesses claim that these trusts have been built up through the benefits they receive from these railroads in the way of rebates, freight discriminations, etc. I should like to hear from you as to a legal remedy?—A. I think so far as discrimination is concerned it ought to be abolished, and I think if you will grant to these railroads what they want—the right to pool—and give them the right to operate their roads in a reasonable way, that those things will disappear. That seems to me to be a practical way of remedying that evil, and I believe railroad men are in favor of that view.

Q. You concur with the railroad people, then?—A. Yes.

Q. (By Mr. A. L. HARRIS.) Under what restrictions would you grant that privilege?—A. Well, I have not thought exactly about that. I should have to study that over. It depends on the form of the contract largely.

ADDYSTON PIPE CASE.

Q. (By Mr. CLARKE.) In your opinion has the decision of the Supreme Court in the Addyston pipe case turned upon the illegality of corporation partnerships, or aggregations of capital, or does it turn upon the abuses of the powers of that particular corporation?—A. It was not a corporation. It turns upon an agreement; that was the question there. If you will read the decision—I have not had time to read it entirely; I have it in my hands—you will find that the decision of the court rests upon the construction of that agreement. There was no partnership; simply an agreement to share business in certain territories, and do it in a way offensive to the common law. That I understand to be the agreement.

Q. Well then, in your opinion, the decision is against their undertaking to do things which were unlawful at common law?—A. Yes.

Q. Rather than upon the fact that they combined?—A. Yes; and under the fact that they combined to do it, because the court held it was clearly within the Sherman Act; that was a proceeding instituted by the United States under the Sherman Act.

Q. You see nothing unlawful in combining to do a legitimate business?—A. No, I do not. I do not distinguish between combining to do business and capitalizing themselves and combining into one corporation. It would be a question of form.

EXISTING LAW GIVES REMEDIES ENOUGH FOR SPECULATIVE PROMOTING.

Q. (By Mr. FARQUHAR.) Do you believe that there is an industrial stock on the New York Stock Exchange that does not carry water with it to-day?—A. Well, I do not know; I suppose some do.

Q. What do you think of a corporation with 100 millions of capital that gave away 10 millions to the promoter, and in making the corporation took 15 to 17 concerns that had not paid 2 per cent before they were taken in (that was the statement of the prospectus, supposed to be truthful, before that promotion was made)—do you think anybody would invest in it?—A. That is a hypothetical question; I could not tell; I do not think I should myself.

Q. Do you think it is possible, in a practical business view, that any aggregation of capital of 100 millions could afford to pay 10 millions for simply getting together 15 or 25 concerns, when none of them was paying before they went in?—A. I think the economies and benefits of combination would have to be very great to justify it.

Q. And the profits?—A. And the profits.

Q. Who is going to pay for this 10 millions in the long run? The poor, innocent person that buys this stock, by the wiping out of all common stock at last?—A. It depends upon its history, as I say. If it is not capitalized on a rational business basis, it is bound to go.

Q. Do you think there is any remedy in common law for abuses of the public in this way or stock gambling of this character?—A. Certainly, there are remedies at common law and statute law. If the public is deceived in any form, it has a remedy criminally and civilly, as I have explained; a perfect remedy.

Q. You do not believe that there is a necessity of strict publicity secured either by the State or by the nation, to save the public harmless from these stock gamblers?—A. I do not think that the nation is charged with the care of its citizens in respect to contracts which they make.

Q. Unless it is a creature of the nation itself by incorporation. You have mentioned one a moment or two ago.—A. Yes.

Q. The nation I mean; the nation did not take great care of that child.—A. But if you follow out the suggestion of Professor Jenks and have an auditor appointed and have a prospectus based on the English form, stating how much is paid and all the details which are put into an English prospectus, you would have provided as ample remedies as you could.¹

Q. Is not every single aggregation of capital you are speaking of now, whether or not incorporated by the United States, a movement toward control, toward a monopoly?—A. I do not know; it would be a great assumption on my part to say that.

Q. How near does it approach that definition?—A. I do not know. They may have monopolistic purposes in view, but they can not be carried out unless you give them special privileges.

Q. If the promoter gets \$4,000,000 or \$5,000,000, that money must be made somewhere; that stock is carried in men's pockets, put on the stock market, or, as the expression is, shunted on to friends or relatives. Is it bad for the whole people that we do not have regulative laws to take in hand that class of gambling? Would it not be remiss on our part not to explore that and apply the remedies for that?—A. I think you have all the remedies you can possibly want to correct the evils of false representation, the evils of misrepresentation or misstatement; they are ample to protect the public, because if you are going to undertake to supply them with brains—

Q. (Interrupting.) We do not want to undertake that.—A. And guarantee that all the citizens shall be protected if they go into investments, why, that is another question.

Q. (By Mr. JENKS.) You have spoken of misrepresentation; do you want to add the word "nonrepresentation?"—A. Nonrepresentation, yes; the suppressio veri and the suggestio falsi, both. The suggestion of falsehood and the suppression of truth are equally reprehensible in morals and in law.

Q. (By Mr. FARQUHAR.) For instance, a great iron corporation makes a combination with transportation corporations and with iron miners, and ultimately comes into ownership of the mines. You would call those actions monopolistic?—A. Well?

Q. Or are they what you call fair competitive business?—A. I do not know, it would depend; you would have to give me the exact circumstances to justify an opinion.

Q. Well, one company, the Federal Steel Company, owning four of these great corporations of that kind?—A. Yes.

Q. Owning from the point of production to the perfect output of the structural steel?—A. It is indicative of having greater opportunities.

Q. And owning the first ones?—A. Those are speculative, hypothetical questions. My opinion is not worth any more than that of anybody you can take on the street.

¹ See pp. 1166, 1167, where the suggestion is made by Mr. Dos Passos.

Q. But in the evidence you gave this morning you advised all the people to go to common law for a remedy. We find statute law in New Jersey and Delaware and West Virginia and elsewhere that Congress will have to take care of in the process of time.—A. I do not think it will. I think those laws to which you refer simply authorize all people to go there and become corporations; that is all.

Q. So that the remedy is that people ought to place the matter in a million hands and take the chances?—A. Well, that is right. If you go in and there is any fraud you can arrest the people, and you can recover damages from them. I think I have explained that. The remedies are ample.

Q. You would not, then, state it as a broad proposition that the Sherman law, that prevents the restrictions of trade, is a good law?—A. If I had my own way I should never have passed it, for various reasons.

Q. Do you not think that under the two or three decisions that we have already gotten under that law the public are better educated up to what is in the law and what power the corporations may have than they ever were before?—A. No; I think not. I think that since the Sherman law there have been a great many corporations formed of the largest kind; Federal Steel, American Steel and Wire, all those corporations were formed afterwards. It had no effect at all—a dead letter, like that statute of George I that I spoke of.

Q. You state it, then, as a broad proposition that it does not matter how great the aggregation of capital, there is no harm in it?—A. I do not.

Q. How near do you come to that?—A. I can not tell except in the light of particular circumstances. I think aggregated capital may be very dangerous—very dangerous indeed.

REPORTS MIGHT WELL BE PUBLISHED.

Q. (By Mr. SMYTH.) In your argument you suggested the publication of reports of corporations as one means of informing the public. How far would you have that publication given—simply to the officers of the State, or to the newspapers?—A. There would not be any objection to having it in the form of a report published, as we had once in the annual reports of New York.

Q. You mean published in the newspapers?—A. Published in the newspapers.

Q. You would not be satisfied that it simply be filed in the office of the secretary of state?—A. I should be satisfied. I say that if you thought, after you had reflected about it, that it was well to publish it, I do not see how anybody could complain. I think, as I explained before, that it is a reasonable request that nobody should deny who wants to do a legitimate business.¹

(Testimony closed.)

Whereupon, at 4.50 p. m., the commission adjourned until to-morrow morning at 10.30 o'clock.

WASHINGTON, D. C., January 6, 1900.

TESTIMONY OF MR. CHARLES CLAFLIN ALLEN.

Attorney at law, St. Louis, Mo.

The commission met at 11 a. m., Vice-Chairman Phillips presiding. Charles Claflin Allen, esq., was introduced and, after being duly sworn, testified as follows:

Q. (By Mr. JENKS.) Will you give your full name and address, please?—A. Charles Claflin Allen, St. Louis, Mo.

Q. Please state your business.—A. I am a lawyer.

Q. How long have you been practicing law?—A. Something over 22 years.

Q. You have, I understand, a statement and argument prepared to present before the commission. You will make that, please, in your own way.

The WITNESS. Mr. Chairman and gentlemen of the commission: I wish to state that while in some respects it would have been more agreeable to make my argument in an extemporaneous form, as is my custom in making legal arguments, I felt that the importance of this question necessitated that I should endeavor to place my ideas as far as possible in writing. I have therefore prepared a written statement of my views, which, with your permission, I will now present.

When the telegram from Mr. Sackett, the secretary of your commission, was handed to me 3 weeks ago, and I read your invitation to make an argument concerning the legal aspect of trusts, my hesitation in accepting the honor thus conferred upon me was not influenced by any disinclination, except such as arose from my realization

¹ See pp. 1162, 1168.

of the great importance of the question involved and the seeming impossibility of making adequate preparation within the time allowed me under the terms of my invitation. This statement is made, not by way of apology, which has been defined as only egotism wrong side out, but that you may realize the difficulties connected with the preparation of an argument upon this subject and may make allowance for inaccuracies, especially with reference to matters of fact, concerning which lack of time has prevented verification. Indeed, I approach this argument strictly from the standpoint of the lawyer, and, like the lawyer in the daily practice of his profession, I shall be compelled to use for facts the testimony of other people.

The whole scope of human law is summed up in the first definition of Justinian's Institutes, which I shall give both in Latin and in English, in order that it may have the beauty of the coloring derived from each of these languages: "*Justitia est constans et perpetua voluntas ius suum cuique tribuendi*;" "Justice is a constant and perpetual wish of rendering to each man his due." It is because men so often fail to appreciate this definition of justice, and because they hold to the cold letter of the law as it is written, that so many illustrations are found of injustice. Times and conditions change, and human agencies vary to meet the necessities of human wants; but the principles of truth and justice are eternal. And so the definition of justice made by the learned lawyers of Justinian 1,500 years ago is like a lamp which, though old in form, sheds an effulgent light to all within the reach of its rays. It is in that spirit that I ask your leave to place the lamp before us, so that its light may shine upon all our thoughts and words in the consideration of this grave subject.

I have seen a copy of an argument made before the commission December 12, 1899, by Mr. John R. Dos Passos, of New York. If I were to attempt merely to reply to the argument of Mr. Dos Passos, I should find considerable difficulty—first, because Mr. Dos Passos says many things with which, as he says them, I entirely agree; second, because in his statement of the propositions against which he intends to argue he defines an issue as that of his opponents for which I do not contend, and for which, as I believe, very few people do contend; third, because from my point of view Mr. Dos Passos, in stating his issue, has omitted or evaded the essence of the whole question.

I can not agree with the first statement of Mr. Dos Passos, to the effect that the word "trusts," so frequently used in this country, "has become a synonym for aggregated capital—has become a phrase representing all the forms of combined capital."¹ His reference of the name "trust" to the definition, "an equitable interest which a man has in personal or real property," also seems narrow. That the history of trusts in equity jurisprudence shows that the law upon this subject arose out of the evasion of some of the principles of feudal law is not without force. But it is a significant fact that the law of trusts had its inception in the propensity of large corporations to absorb and hold perpetually all of the best property of the realm of England.

Blackstone thus describes the history of that legislation (2 Comm. star p. 268):

"Alienation in mortmain—in mortua manu—is an alienation of lands or tenements to any corporation, sole or aggregate, ecclesiastical or temporal. But these purchases having been made chiefly by religious houses, in consequence whereof the lands became perpetually inherit in one dead hand, this hath occasioned the general appellation of mortmain to be applied to such alienations and the religious houses themselves to be principally considered in forming the statutes of mortmain; in deducing the history of which statutes it will be matter of curiosity to observe the general address and subtle connivance of the ecclesiastics in eluding from time to time the laws in being, and the zeal with which successive Parliaments have pursued them through all their finesses; how new remedies were still the parents of new evasions; till the legislature at last, though with difficulty, hath obtained a decisive victory."

In observing the analogy between the ancient trust corporations and the modern trust corporations, it is to be hoped that the remarkable capacity of the new for imitation of the old, in escaping new remedies through new evasions, may be followed by corresponding capacity of the modern legislatures to imitate the ancients in obtaining a decisive victory.

THE OBJECT OF "TRUSTS."

Mr. Dos Passos makes a somewhat startling statement concerning the object of trusts. He says that the object was "to keep people who had no business to know, from knowing the secrets of that trust. That is the object of a trust; a perfectly innocent and a perfectly laudable object, in my estimation."²

¹ See p. 1141.

² See p. 1142.

The difficulty with this proposition is that it states an incident for a cause. The main object of the trust was to carry out the combination agreement whereby prices were to be fixed and production limited. These purposes being strictly contrary to the law, it is highly probable that the members of the trust agreement desired to keep their proceedings a secret, since the public knowledge of them would lead to a dissolution, by law, of their combination, and might lead to more serious consequences, on the criminal side of the court, to the individual participants.

But Mr. Dos Passos, having stated that only two large industrial corporations resorted to that system which he calls ancient procedure and ancient law,¹ says: "The word 'trust' must therefore be discarded in the discussion of these questions, now and forever; because the courts have set their seal of condemnation upon it, and they require that people who have in view the aggregation of capital shall now consummate it through the instrumentality of a corporation; and in discussing these questions we must dismiss this word 'trust' as meaningless and useless."²

Oh, that we might dismiss the problems surrounding the "trusts" as easily as Mr. Dos Passos dismisses the word from his argument. But, like Banquo's ghost, it will not go down; because, like Banquo's ghost, it is the spirit of an evil deed. Even the word will not disappear. The statute books contain it, the court records use it, the newspapers are full of it, political platforms are based on it. There is an essential idea contained in it which Mr. Dos Passos ignores.

AGGREGATED CAPITAL NOT PERNICIOUS IN ITSELF.

Having stated that his opponents are very vague in their definitions of their position, he says: "Let me create an issue." And he then states the issue as follows: "Aggregated capital is wrong, is pernicious."³ That is an issue which I am unable to meet because I do not believe that aggregated capital is necessarily wrong. Nor can I argue concerning the limitation of capital which persons may have. For the present at least, and for the purpose of this argument, I have no suggestions to make concerning the limitations of capital, either to individuals or corporations. Though I am unable to agree with the general argument made by the learned gentleman, to the effect that because corporations have shareholders, and some of them many thousand shareholders, the State ought not to impose any limitations upon its corporations. The individual shareholder is not to be compared with a natural person, because, first, the wrong, if any, is done by the corporation, the artificial being created by the State, i. e., by all the people, and it has only such rights as all the people choose from time to time to bestow. The people can give, and they can take away at will, having due regard for vested rights. The natural individual, on the other hand, has ethically, as well as constitutionally, all rights of personal liberty not expressly prohibited by law.

Again, Mr. Dos Passos says: "Now, let me again try to formulate some postulate for these people. They say that aggregated capital held by a corporation for the purpose of manufacturing, or business, or commerce is pernicious and detrimental to public interests. I can not undertake to give the language which has been used by some of the orators in portraying the terrible future which is in store for this country if aggregated capital is permitted to exist. Adopting this formula, 'Is aggregated capital, in the hands of corporations, detrimental to the interests of society?' On what grounds?"⁴

I can not answer the question. I never heard anyone say that aggregated capital in the hands of corporations was necessarily detrimental to the interests of society. I certainly never said so myself, and do not say so now.

Continuing, he says: "It is said that aggregated capital is pernicious because it creates a monopoly, and therefore we must advance one step further in the discussion, and try to discover what a monopoly is."⁵

I do not know that anyone has undertaken to say that all aggregated capital is pernicious because it creates a monopoly. All aggregated capital does not create a monopoly. There are undoubtedly many aggregations of capital amounting to very large sums which not only do not create a monopoly, but do not even tend, perceptibly, toward a monopoly. It is important to me that my position on that point should be clearly understood in order that my distinctions may have their intended effect; for while I can not agree with the last statement of the learned gentleman, or take issue with it in its present form, it trenches upon the essence of the subject under discussion.

MONOPOLIES EXIST, AND HAVE BEEN RECOGNIZED AS EXISTING BY THE COURTS.

Mr. Dos Passos continues: "Therefore, arguing this matter as a lawyer, I am looking upon questions of definition as of primary importance. Now, 'monopoly' has a

¹ See p. 1142. See footnote 2 on that page for references to other combinations which resorted to this system.

² See p. 1142.

³ See p. 1144.

legal, it has a grammatical, and it has a historical meaning. The legal and grammatical meaning of the word 'monopoly' is the same; it must be. A monopoly, according to the dictionary, is the exclusive privilege of traffic—the exclusive possession of anything, as a commodity or a market. It is an exclusive privilege, resting in the hands of one person or corporation, to the exclusion of everybody else; and to comprehend a monopoly, you must be able to understand that there can exist no monopoly unless it is exclusive. That is the whole basis of it. * * * We lawyers, brought up on the milk of Blackstone, absorbed a prejudice against monopolies to such an extent that when you mention monopoly to a lawyer it is precisely like waving a red flag before a bull. It was a fundamental basis of a lawyer's education to oppose monopolies. But there have existed in this country, with but few exceptions, to which I shall refer, no monopolies since its organization, and therefore the use of the word 'monopoly' in the legal and in the grammatical sense must be discarded from this discussion; it has no business here; it has no technical meaning when applied to aggregated capital."¹

The monopolies which he excepts from his exclusion are, first, patents; second, special charters; and, third, what he calls a monopoly in fact, or resulting monopoly, which he says is not alluded to by any legal writer so far as he remembers.

Unfortunately for his position, the statements that there have been no monopolies in this country, and that a monopoly in fact, or a resulting monopoly, has not been alluded to by any legal writer, are not borne out by the law books. On the contrary, there have been numerous instances in which not only the supreme courts of the several States, but the Supreme Court of the United States, have recognized the existence of monopolies in fact, or "virtual monopolies," arising out of combinations in restraint of trade, and held them to be void on the same grounds and under the same authorities which the courts of England have recognized for declaring void special grants of monopoly by the Crown.

Having summarily dismissed "trusts" from the discussion, Mr. Dos Passos now eliminates "monopolies" with equal ease. With these two words discarded, and the essential idea which they suggest eliminated, I should have but little to say in opposition to the arguments of Mr. Dos Passos, and that little would refer to incidental and unessential things. My reply to his argument, therefore, must be predicated, not upon the issue which he has in form raised by his statements of the issues, but upon the issue which he has expressly eliminated by refusing to consider or discuss the essence of the whole question.

Having thus stated the position of Mr. Dos Passos, as I understand it, and my own position with reference to it, I shall endeavor to present my argument upon what I believe to be the problem now under consideration by this honorable commission, and to present it in as impersonal a way as possible.

DEFINITION OF "TRUST."

The first and most important point in the discussion is to understand the subject of discussion. To this end it is important, if not necessary, to define the subject. Considering the great number of persons who have spoken or written upon the subject of "trusts" in the legislatures, through the press, and on the stump, it seems remarkable that no clear definition has been given of the term. The subject is usually referred to by concrete description rather than by definition. It is not without hesitation, therefore, that I attempt to define it. But taking the word in its popular significance I submit the definition for the consideration of the commission. Whether it be accurate or not for the uses of others, I shall adopt it for the purposes of this argument, and shall take the position that any corporation or combination, or aggregation of capital in the hands of individuals or groups of individuals, which does not come within its terms, is not a "trust." This is the definition:

A trust is a combination of financial interests, formed with the intention of creating a monopoly.

1. A trust must have in it the element of combination. Its history shows that it was the natural resultant of the idea contained in the old law prohibiting general restraint of trade. The earlier cases of the larger combinations in this country, which were formed before the adoption of the trust idea by combinations of business enterprises, were decided upon the basis of the old common-law rule against general restraint of trade, and the authorities were of the class of English cases which decided that the village doctor or the village blacksmith could sell out his business under an agreement not to do business again within the limits of the village; but could not make a binding contract not to carry on his business anywhere within the realm. Such combinations were at first called pools; but the necessity for avoiding the deci-

¹ See pp. 1144, 1145.

sions of courts, and the tendency to legislate against pools, soon led to the invention of the trust, or rather, to the application of the principle of trusts to the large aggregations of capital which were intended to monopolize the market by fixing prices and limiting the output. To accomplish this result it was necessary to combine all of a given class of manufactures, or so nearly all that those within the combination would be able to buy out or crush out those who had the temerity to stand against them. But as the trusts, strictly speaking, were speedily demolished by the courts, so far as the validity of their legal form was concerned, those engaged in the enterprise found it necessary to adopt some other form for their combination. Some of the States, notably New Jersey, furnished such easy facilities for incorporation, and so few limitations upon the power of corporations, and granted such large powers under their general corporation laws, that the plan of "trusts," technically speaking, was merged into the combination of all of the old corporations into the form of one huge corporation. But whatever its form there was always, in the class of industrial organizations now under consideration, a combination.

WEAKNESSES OF POOLS.

Q. (By Mr. JENKS.) Will you permit me to interrupt you? You made a statement a moment ago that such combinations were first called pools, but that the necessity for avoiding the decisions of the courts, and the tendency to legislate against pools, soon led to the invention of the trust. This abandonment of the pool for the trust—is that considered entirely from the legal side, or did you intend your statement to cover the whole question? The statement has been made at times by corporation men themselves that they abandoned the pool form and went into the trust form because they found the pool was not suitable as a business form, since they could not hold the different parties to the agreement they had made; and that was the business reason for abandoning the pool and going into the trust. I wondered whether in your statement you intended to confine yourself strictly to the legal side, or whether you intended to cover the whole ground; because if you intended the latter, I should be glad to hear your statement in reply to these arguments?—A. I am speaking in that particular as in all others, essentially as a lawyer. It is not always easy to separate the characters in which one may endeavor to speak. I did not intend to give an accurate history. I made the statement in passing. I believe, notwithstanding what may be said by the gentlemen as to the reasons, and being willing to admit that there may have been many good reasons for their change of form, that they were fundamentally trying to get a form of organization which the law recognized.

Q. Do you know whether as a matter of fact there has been serious difficulty in holding the different parties to pools up to their agreements, either railroad pools, or business pools, or anything of that kind?—A. I think there is no doubt that there was considerable difficulty both as to manufacturing pools, and unquestionably as to railroad pools; for that history is public, and I do not wish to be understood as assuming that the only reason was to escape the law. Men always act from complex motives, not from single motives, and I have not the slightest doubt that in what the members of the older pools did, they were governed by the desire to get into a stronger position from every point that affected their interests; but I say again, I believe that the tendency of the courts to declare all pools unlawful as in general restraint of trade, under well-known common-law principles, was the foundation stone.

DEFINITION OF "TRUST" CONTINUED.

2. The combination forming a trust is necessarily of financial interests, whether those engaged in the combination are individuals owning their own property or corporations acting officially, or the stockholders of corporations acting on their own account for the corporations. The definition may also include organizations of laborers in the form of trade unions or otherwise, since their combinations are formed especially for the financial interests of their members.

3. The combination constituting the trust is formed with the intention of creating a monopoly. Beyond doubt this is true of all that class of combinations which, upon a fair consideration of the circumstances under which they are formed, could be classed as trusts. And this classification undoubtedly includes the vast majority of those organizations which have recently been formed in such large numbers and with such immense capital, including industries scattered all over the United States. This statement seems so nearly indisputable as not to require amplification. A company owning a plant in St. Louis does not go into a combination with all of the other companies in the same industrial line in St. Louis, and all of the same kind in Chicago, and Cincinnati, and Philadelphia, and New York, and perhaps smaller towns between, until practically all of the manufacturing establishments in that line of business are included,

except with the defined intention to be able to control the market by fixing prices and limiting output. Such a company would not enter upon what, upon its face, appears so incongruous a business compact in the ordinary, incidental, everyday way in which a man would go into partnership with some other man in his own town, in order to carry on a business in the usual way, and with free, fair, and open competition with others in a like class of business.

The purpose of such a combination is to fix prices and limit output. These acts have been declared to be illegal by the "antitrust" laws in the several States, and are in contravention of the common law against "monopolies" as interpreted by the courts.

Q. (By Mr. JENKS.) May I interrupt you again for a moment? You would exclude, then, by your definition, such a combination as the Federal Steel Company, which is made up of a union of different corporations, one engaged in mining, one in transporting ore from the mine to the smelting works and the rolling mills, then the rolling mills themselves, and so on. The Federal Steel is made up of corporations which were not engaged in the same line of business, but were in different lines of business dependent one upon the other. But of course it is an immense corporation—100 millions of capital stock issued—and is often called a trust. Would your definition exclude that?—A. It would not, sir. It would include it, and if I were to argue along the line suggested by the question, I should say it would include it with much more force than combinations of persons engaged only in the same line of business. I will endeavor to say a few things later on in the paper concerning what seems to me the danger of the monopolization of different kinds of business, going from the source of supply to the consumer.

Mr. JENKS. Perhaps I had better postpone the questioning on that line until we come to it.¹

The WITNESS. I have not discussed it at great length, but I have made suggestions as to its being a danger, and under that suggestion I would consider that I was trying to answer your last question.

Mr. JENKS. Yes.

The WITNESS (continuing reading.) If in the natural and ordinary course of events a group of individuals, whether in corporate form or not, enter into business relations in such a way as merely to carry forward an industrial pursuit in the open market, it would not come within the definition above given of a trust. But out of the myriad groups which have been formed into combinations to control all, or nearly all, of the manufacturing plants or other industrial properties, under such circumstances as naturally and necessarily resulted in the fixing of prices and the limitation of outputs, there are few, if any, which would not come within the definition, which is now repeated: A trust is a combination of financial interests, formed with the intention of creating a monopoly.

DEFINITION OF MONOPOLY, AND SKETCH OF ANTIMONOPOLY LAW.

But what is a monopoly? In the sugar case in the supreme court of New York, in 1889 (same case on appeal, 121 N. Y., 582), Judge Barrett described a monopoly as "A combination, the tendency of which is to prevent competition in its broad and general sense, and to control and thus at will enhance prices to the detriment of the public. * * * Nor need it be permanent or complete. It is enough that it may be even temporarily and partially successful. The question in the end is, Does it inevitably tend to public injury?"

Antipathy toward monopoly is deeply rooted in the human heart. It is a natural expression of human nature that man should resent the privileges which other men obtain of alone controlling the sources of supply. And so far as this human impulse is concerned, it is quite immaterial whether the monopoly exists through royal grant or arises from the unlawful control of a few, or of one, over that in which the many, or all, have an interest. In the consideration of subjects of this kind men are likely to be more or less limited by the shortness of their own horizon lines, so that they judge of general principles from the limited conditions which surround them. But legal principles, like the rules of ethics, are old, and the conditions which surround men, while they change in external form, are wonderfully similar in their general character. To solve the problems of the present it is of great importance to look into the history of the past.

Antimonopoly laws are of ancient origin. By the *lex julia de annona* the Romans prohibited, under penalties, any interference with transportation, or preventing the free carriage of grain. By the statute of Zeno, the man who ran a "corner" in staples was subject to punishment and confiscation of goods. (2 Wharton Crim. Law, 9th ed., sec. 1849.) Monopolies were prohibited at common law, and combinations in restraint of trade are held to be conspiracies. A criminal conspiracy at com-

common law has been defined to be "Any combination between two or more persons to accomplish an unlawful purpose, or a lawful purpose by unlawful means."

The books from the earliest days are full of reiterations of this definition. Hawkins, in his *Pleas of the Crown* (Book 1, c. 27, s. 2), lays it down that "there can be no doubt but that all confederacies whatsoever wrongfully to prejudice a third person are highly criminal at common law, as where divers persons confederate together by indirect means to impoverish a third person."

In an anonymous case in 12 *Modern* (248, case 427, 1698) leave was given to file an information against several plate-button makers for combining by covenants not to sell under a set rate, and Chief Justice Holt said, "It is fit that all confederacies by those of a trade to raise their rates should be suppressed." In *Bolton's Justice* (vol. 2, p. 16) it is declared that any such conspiracy is an offense at common law. So in 1 *Keble* (850, report of *Rex v. Sterling*) Chief Justice Hyde says that the very conspiracy, without an overt act, to raise the price of pepper or other merchandise is punishable.

It will be noticed that these cases relate to those engaged in trade; yet they are cited as leading authorities in support of prosecutions against laborers for combinations to raise wages, as our own "antitrust" law was first invoked against strikers.

But the most notable illustration of the biblical assertion that "there is no new thing under the sun," is found in the *Liber Assisarum*, 27 *Edw. III* (pp. 138, 139), 5 years after the first of the "statutes of labourers," where, among other conspiracies directed to be investigated by the inquests of office, is that "of merchants, who by covin and alliance among themselves, in any year put a certain price on wools, which are to be sold in the country, so that none of them will buy, or otherwise pass in the purchase of wools beyond the certain price which they themselves have ordained, to the great impoverishment of the people."

More than 500 years ago our English ancestors were faced with the problem of "trusts," and legislated against them. Whether the inquest of office was more successful in 1354 than in 1900 history is silent.

A case decided in 1602 contains a statement of the common law on the subject of monopoly, and an explanation of the reasons for the law on that subject, which is so clear an exposition of the subject that it might well be applied to any of the many cases of well-defined "trusts" in the United States to-day. Practically the only difference necessary to make in the application of the case is to make a statement of facts of the modern conditions in place of those which existed at the time. The case was entitled *D'Arcy v. Allein*, and was known as "The Case of Monopolies." (8 *Coke's Reports*, part XI, star page 84.) The facts were these:

Queen Elizabeth, by letters patent, granted to Edward D'Arcy, esqr., the sole privilege of manufacturing and importing playing cards for a period of years, and imposed a penalty upon any other person who manufactured, imported, bought, or sold any cards within the realm.

Plaintiff, D'Arcy, sued defendant, Allein, for damages for having manufactured and sold cards contrary to the form of the letters patent and in contempt of the command of the Queen.

The court, speaking through Popham, chief justice, rendered the following decision: "That the said grant to the plaintiff of the sole making of cards within the realm was utterly void, and for two reasons: 1. That it is a monopoly, and against the common law. 2. That it is against divers acts of Parliament. Against the common law for four reasons: 1. All trades, as well mechanical as others, which prevent idleness (the bane of the commonwealth) and exercise men and youth in labor for the maintenance of themselves and their families and for the increase of their substance, to serve the Queen when occasion shall require, are profitable for the commonwealth, and therefore the grant to the plaintiff to have the sole making of them is against the common law, and the benefit and liberty of the subject, and therewith agrees Fortescue in *Laudibus legum Angliæ*. Cap. 26. And a case was adjudged in this court in an action of trespass inter Davenant and Hurdia, Trin. 41 *Eliz. Rot.*, 12, where the case was, that the company of Merchant Taylors in London, having power by charter to make ordinances for the better rule and government of the company, so that they are consonant to law and reason, made an ordinance, that every brother of the same society, who should put any cloth to be dressed by any cloth worker not being a brother of the same society shall put one-half of his cloaths to some brother of the same society who exercised the art of a cloth worker, upon pain of forfeiting 10 shillings, etc., and to distrain for it, etc., and it was adjudged that the ordinance, although it had the countenance of a charter, was against the common law, because it was against the liberty of the subject; for every subject, by the law, has freedom and liberty to put his cloth to be dressed by what cloth worker he pleases, and can not be restrained to certain persons, for that in effect would be a monopoly; and therefore such ordinance, by color of a charter, or any

grant by charter to such effect, would be void. 2. The sole trade of any mechanical artificer, or any other monopoly, is not only a damage and prejudice to those who exercise the same trade, but also to all other subjects, for the end of all these monopolies is for the private gain of the patentees; and although provisions and cautions are added to moderate them, yet, *res profecto stulta est nequitiae modus*, it is mere folly to think that there is any measure in mischief or wickedness; and therefore there are three inseparable incidents to every monopoly against the commonwealth. sc. 1. That the price of the same commodity will be raised, for he who has the sole selling of any commodity may and will make the price as he pleases. * * * And the poet saith, *Omnia Castor emit, sic fit ut omnia vendat*. * * *

"The second incident to a monopoly is, that after the monopoly granted the commodity is not so good and merchantable as it was before: for the patentee having the sole trade regards only his private benefit and not the commonwealth. 3. It tends to the impoverishment of divers artificers and others, who before, by the labour of their hands in their art or trade, had maintained themselves and their families, who now of necessity will be constrained to live in idleness and beggary; *Vide Fortescue ubi supra*; and the common law in this point agrees with the equity of the law of God, as appears in Deut., cap. xxiv, ver. 6, *Non accipies loca pignoris inferiorem et superiorem molam, quia animam suam apposuit tibi*—you shall not take in pledge the upper and the nether millstone, for that is his life; by which it appears that every man's trade maintains his life, and therefore he ought not to be deprived or dispossessed of it no more than of his life; and it agrees with the civil law.

* * *

"3. The Queen was deceived in her grant; for the Queen, as the preamble appears, intended it to be for the weal public, and it will be employed for the private gain of the patentee, and for the prejudice of the weal public. * * *

"4. This grant is *præsumptiva*, for no such was ever seen to pass by letters patent under the great seal before these days, and therefore it is a dangerous innovation, as well without any precedent or example as without authority of laws or reason."

MONOPOLIES BY PUBLIC GRANT IN THE UNITED STATES.

But, Mr. Dos Passos says, and a great many people honestly and earnestly contend, that there are no monopolies in the United States. To the extent that there are no royal grants of special privileges to manufacture or sell goods, this is conceded; but it is difficult to understand wherein a royal grant differs in fact, or in legal effect, from the more than royal grants which have been in times past bestowed by the United States Government, and by the States, and by municipal corporations, in the form of franchises for street railroads, conduit companies, and companies using or vending electricity for what is called a public use. If illustrations are needed, bear in mind the subsidies granted by Congress to railroads; or turn to the laws of Missouri of 1890, and see the statute in direct contravention of the general policy of the State, as otherwise expressed in its laws, whereby all except one of the street railroads of St. Louis, whose estimated value at their highest basis of estimate prior to consolidation was \$30,000,000, were consolidated under such a scheme that bonds were issued for \$45,000,000, and stock for \$45,000,000, making a total capitalization of \$90,000,000. And this was in a State which bears the reputation, outside its borders, of having the most pronounced antitrust legislation. Or, for illustration of municipal franchise monopolies, note the case of the National Subway Company of St. Louis, which was granted the privilege of using the streets of the city for its conduits, and given the privilege of renting those conduits to others, with nothing reserved to the city except a petty franchise payment, and without power in the city to regulate or control its exercise of its public franchises. And this was approved by the supreme court of Missouri as a contract with the city which could not be violated, although the laws of the State, as interpreted in other cases, prohibited the use of public highways in the city, or private ownership in what was in the streets, except subject to the municipal regulations.

OTHER MONOPOLIES RECOGNIZED BY THE COURTS AS EXISTING.

But while these monopolies, derived from public franchises, abound in all parts of the country, it is unnecessary to refer to them in order to show that the existence of monopolies in this country has been repeatedly recognized by the courts, both State and national. Fortunately for this country, its jurisprudence is founded upon the common law, whose elasticity and whose strength have always proved equal to reaching and holding new conditions within the fundamental principles of law embodied within its system. So, when it was shown to the United States Supreme

Court, in *Munn v. Illinois* (94 U. S., 113), that 14 warehouses in Chicago, controlled by about 9 business firms, charged prices which were agreed upon between the different elevators, the Supreme Court held that this was a "virtual monopoly," and Mr. Chief Justice Waite, speaking for the court, in its opinion said: "Looking, then, to the common law, from whence comes the right which the Constitution protects, we find that when private property is 'affected with a public interest, it ceases to be *juris privati* only.' This was said by Lord Chief Justice Hale more than 200 years ago in his treatise *De Portibus Maris*, 1 Horg. L. Tr., 78, and has been accepted without objection as an essential element in the law ever since. Property does become clothed with a public interest when used in a manner to make it of public consequence, and affect the community at large. When, therefore, one devotes his property to a use in which the public has an interest, he, in effect, grants to the public an interest in that use, and must submit to be controlled by the public for the common good, to the extent of the interest he has thus created."

Efforts have been made to minimize the influence and effect of *Munn v. Illinois*, and it has been criticised in some respects, but in spite of slight and criticism it is the law of the land to-day. It has been approved in two cases (*Budd v. New York*, 143 U. S., 517, involving the New York grain elevator law, and *Brass v. North Dakota*, 153 U. S., 391, involving the Dakota warehouse law). In spite of the storm and the stress which has been raised in the efforts to reduce its effect, for the benefit of private interests, it still stands like a light-house on a rocky shore. It illustrates more clearly, perhaps, than any other case in this country, the perpetuity of the common law.

Mr. Spelling, in his work on Trusts and Monopolies, section 130, says: "In the case of *State v. Standard Oil Trust* (Ohio, 30 N. E., 279), much was said in favor of the objects of the Standard Oil Trust and what it had accomplished. But the court remarked that it might be true that it had improved the quality and cheapened the cost of petroleum and its products to the consumer; but such was not one of the usual or general results of a monopoly; and it was the policy of the law to regard not what might but what usually does happen. Experience shows that it is not wise to trust human cupidity where it has the opportunity to aggrandize itself at the expense of others.

"The claim of having cheapened the price to the consumer is the usual pretext on which monopolies of this kind are defended, and it is well answered in *Richardson v. Buhl*, 77 Mich., 632 (43 N. W., 1102). After commenting on the tendency of the combination known as the 'Diamond Match Company,' to prevent fair competition and to control prices, Champlain, J., said: 'It is no answer to say that this monopoly has, in fact, reduced the price of friction matches. That policy may have been necessary to crush competition. The fact exists that it rests in the discretion of this company at any time to raise the price to an exorbitant degree.' Monopolies have always been regarded as contrary to the spirit and policy of the common law."

Some of the clearest and at the same time strongest utterances concerning the existence and character of monopolies in this country are to be found in the decisions of the Supreme Court of the United States.

In *United States v. E. C. Knight Co.*, 156 U. S., 1 (1894), Mr. Justice Fuller, writing the majority opinion, though holding that the American Sugar Refining Company did not violate the antitrust law of 1890, because the monopoly was a monopoly in manufacture and not in interstate commerce, nevertheless concedes the existence of a monopoly (p. 11), and says (p. 16): "All the authorities agree that in order to vitiate a contract or combination it is not essential that its result should be a complete monopoly; it is sufficient if it really tends to that end and to deprive the public of the advantage which flows from free competition."

In the same case, Mr. Justice Harlan, in a very exhaustive and learned dissenting opinion, says (p. 25): "But a general restraint of trade has often resulted from combinations formed for the purpose of controlling prices by destroying the opportunities of buyers and sellers to deal with each other upon the basis of fair, open, free competition. Combinations of this character have frequently been the subject of judicial scrutiny, and have always been condemned as illegal because of their necessary tendency to restrain trade. Such combinations are against common right and are crimes against the public."

Mr. Justice Harlan cites and analyzes a number of cases from other States, which sustain the proposition above quoted. Among them are: *Morris Run Coal Co. v. Barclay Coal Co.*, 68 Pa., 173, 8 Am. Rep., 159; *Arnot v. Pittston & E. Coal Co.*, 68 N. Y., 558, 23 Am. Rep., 190; *Hooker v. Vandewater*, 4 Denio., 352, 47 Am. Dec., 258; *Stanton v. Allen*, 5 Denio., 434, 49 Am. Dec., 282; *Saratoga Bank v. King*, 44 N. Y., 87; *Central Ohio Salt Company v. Guthrie*, 35 Ohio St., 666; *Craft v. McCaughy*, 79 Ill., 346; *People v. Chicago Gas Trust Co.*, 8 L. R. A., 497, 130 Ill., 269;

India Bagging Asso. v. Kock, 14 La. Ann., 168; *Santa Clara Mill and L. Co. v. Hayes*, 76 Cal., 887; *Richardson v. Buhl*, 6 L. R. A., 457, 77 Mich., 632.

Indeed, wherever the issue has been squarely presented, whether in the Federal courts or in the State courts, and where the purpose and tendency of the conditions found to exist in the case were toward a "virtual monopoly," the same principles of the common law have been applied, and the combinations found to be in restraint of trade have been declared to be illegal and void.

These decisions have sometimes been rendered on common-law principles alone, and sometimes in cases arising under special antitrust statutes. But it is believed that it is not too broad a statement to make to say this: Wherever the court had jurisdiction of the subject-matter, and the facts presented showed a combination of financial interests, formed with the intention of creating a monopoly, the court, State or national, whether acting under a statute or upon common law principles alone, has always declared such a combination to be illegal and void.

THE NATIONAL LEAD COMPANY CASE.

One of the most recent and important decisions out of the courts, bearing on this topic, was rendered by the St. Louis court of appeals, in the case of the National Lead Company v. S. E. Grote Paint Store Company, on May 2, 1899. It appeared in that case that the National Lead Company was incorporated under the laws of the State of New Jersey, as the successor of the National Lead Trust, and pursuant to articles of agreement among those interested, authorizing the trustees to have such incorporation perfected.

Q. (By Mr. JENKS.) May I interrupt you a moment? Can you tell us where the text of that decision can be secured?—A. I will furnish it to you. I have a copy with me. It is not in this room now.

Mr. JENKS. Afterwards will do; just so that we can have it on file.

THE WITNESS. Those who undertake to say that the decisions of the courts have no effect upon the operation of trusts are referred to the testimony of President Thompson, in that case, in giving his reasons for the dissolution of the old trust. He says: "Mainly because there have been laws passed by the United States, and a number of States, that were inimical to that form of organization, and the great public prejudice had been aroused, which seriously affected the values of the shares of the trust, and we had a great desire to conform to all of the laws of the country, and to the views which were taken by the public of that form of organization."

The National Lead Company is a tremendous concern. It is made up of more than 30 corporations and business concerns, any one of which would formerly have been considered large. The case decided by the St. Louis court of appeals was a suit by the Lead Company against a customer for a bill of goods sold to the customer. The defendant set up, as a special defense, a statutory provision entitling the defendant to plead in defense to the suit the special antitrust act, which provided that any purchaser from a trust within the meaning of the act should not be liable for the price of the goods purchased from the trust. The court of appeals held, Judge Bond delivering the opinion, that the corporation as formed was an illegal combination, and violative of the antitrust law of Missouri; that the foreign corporation was not entitled to engage in business in Missouri, contrary to the laws of Missouri, and that to obtain a charter for the purpose of evading the laws of a foreign State, under cover of the rule of comity, would be a fraud upon the State granting the charter; and to attempt to act under such a charter in a foreign State would be a fraud upon the latter. And it was also held that the defense set up was a valid defense.

The attorneys for the defendant in the National Lead Company case, Messrs. S. T. G. Smith and Thomas S. Meng, have so admirably stated in their brief the points involved, and have supported them with such a multitude of authorities, that the principal points are here appropriated as applicable to all cases of that class.

1. The agreement known as the National Lead Trust agreement was illegal and against public policy, at common law, because its tendency, purpose, and effect was to create a monopoly and suppress competition, and thus to fix prices and regulate production. Therefore the combination of corporations and stockholders under said trust agreement was illegal.

2. But it is not the particular form which the organization or combination may assume, but the fact that the purpose, tendency, and effect of such organization or combination is to create a monopoly and suppress competition, which is against public policy and illegal. The Missouri statute is broad enough to cover all combinations of whatever kind or nature which have this purpose, tendency, or effect, and to this extent it is declaratory of the common law. Therefore, notwithstanding the change of the form of plaintiff combination from that of a self-styled "trust" to that

of a self-styled "corporation," it is still illegal, the purpose, tendency, and effect of the combination being still the same.

3. All combinations, associations, contracts, or agreements in restraint of trade, or which tend to create monopoly, or to suppress competition, are against public policy and void.

4. The National Lead Company is itself such a trust or combination as is prohibited by the Missouri statute.

5. A corporation has no right to enter into a partnership or other combination whereby the control of the corporation is placed in the hands of some other corporation or unincorporated body.

6. A corporation is merely an association of the individuals who are its stockholders, united together for a common purpose, and having as such association certain privileges, powers, and liabilities.

7. A corporation has no standing as such outside of the State in which it is incorporated. The laws of a State can have no extraterritorial effect. Therefore one State can not confer upon an association of individuals, when doing business in another State, certain franchises, privileges, and powers and limitation of liability in their associated capacity. By the rule of comity foreign corporations are recognized and their rights enforced. But a corporation organized in one State for a purpose which is against the public policy of another State will not be recognized as a corporation in such other State.

Q. (By Mr. JENKS.) Is that decision a final decision, or is the case still pending?—A. The case is still pending in this way: It was reversed and remanded in order that certain errors in the course of the trial might be corrected in a new trial; but the principle of law was laid down, and was, so far as the courts of Missouri are concerned, final, unless it is subsequently reversed by some court or goes into the supreme court on a constitutional question.

Q. (By Mr. STIMSON.) There is no higher court in Missouri than the court of appeals?—A. Not unless there is a larger amount involved, or unless, as said, a constitutional question was involved, or unless upon division of opinion there is a certification of the case to the supreme court.

Q. Supreme court of Missouri?—A. Yes; supreme court of Missouri.

POWERS OF FOREIGN CORPORATIONS.

Q. Since you are on that last proposition, may I ask—there are decisions in the Federal courts, are there not, that take the other side entirely on that last proposition? Are there not decisions which state that unless a State has affirmatively excluded a corporation of any State from doing business in it by some statute, the corporation of such other State coming into it, though clothed with powers by the State creating it which are against the policy of the State where it wishes to do business, may, nevertheless, under the doctrine of comity, act as a corporation?—A. I think there are. I do not think the decisions of the several States can be in all respects harmonized with some of the Federal decisions. I understand the Federal decisions to have originated primarily in the natural tendency of those courts, perhaps, to take jurisdiction of these questions, in cases which determine that a corporation of another State was entitled to go into the State where a suit was brought, as a foreign corporation. Then there are other decisions which tend to hold that the corporation of one State is for some purposes a citizen of that State and entitled to the same rights in another State; but I contend, and I have not had time to make a brief upon that subject, that the cases are not fundamentally inharmonious, because I do not think that the Federal courts have ever attempted to give to the corporation all the rights, privileges, and immunities of the individual.

Q. That is one of the most important points, and I do not think it is a waste of time to have a word upon that, in order to make that part of your argument a little bit clearer. A very clear example of what I mean, perhaps, is best taken from what occurred in my own practice. The State of Massachusetts forbids corporations for distilling or brewing purposes. They are absolutely forbidden. The general law does not permit them, and consequently it is against the policy of the State of Massachusetts to have such corporations do business in it at all. A foreign—that is, an English—brewing company in this case wished to come in and do business as a brewing company in Massachusetts. They had a charter from Parliament, which, of course, gave them full powers to carry on the brewing business, and they had in fact bought \$9,000,000 worth of property of brewers in Boston—a trust, in other words—and they came to me to ask whether they were safe in taking title. I took the ground that it was doubtful. I was not willing to advise that they could take title to land without question, for the reason that you have expressed, that they were a cor-

poration which was against the policy of the State of Massachusetts, and that consequently, although the State of Massachusetts had not by express statute excluded foreign brewing companies from doing business, yet I was afraid of the implication, and that the courts might hold, as your St. Louis court has held, that being counter to the spirit of the Massachusetts law the doctrine of comity might not be allowed. But I am bound to say that I could find very few authorities on that position; only, in fact, two cases. It was before the St. Louis case had been decided. I had only one or two cases; one in the circuit court of the United States from Colorado¹ that seemed to me rather on the other side, which says, for instance, that this brewing company having come into the State to do business under the doctrine of comity, with its foreign powers, at a time when it was not yet expressly prohibited, it was too late for the court to say that they could not act with all the powers that the charter gave them.—A. May I say, in answer to the question and the statement which has been so clearly put by Mr. Stimson, that from my point of view it is not of so great consequence to determine the precise status of a decision on that subject, because it is partly, at least, in the power of the State to determine the question by express prohibitive legislation; and if there be any defect in that direction the power is supplemented in Congress, at least to the extent that so far as interstate commerce is concerned it has clearly the power of determining what regulations shall be included under the interstate-commerce clause of the Constitution.

Q. (By Mr. CLARKE.) Has any Federal question been raised in the Missouri case which is now pending?—A. No; not that I am aware of.

ANTITRUST LAW OF 1890—ADDYSTON PIPE CASE.

The most interesting evolution of the law concerning "trusts" is found in the history of the antitrust law of the United States passed in 1890, sometimes called the "Sherman Act." Though clearly designed to prevent dangerous combination of capital engaged in interstate commerce, it was allowed to slumber as an ineffectual piece of legislative machinery until the great Chicago strike of 1894, when it was successfully invoked against combinations of laborers, and was interpreted by the Supreme Court of the United States in *re Debs* as prohibiting such combination. The Trans-Missouri case followed, in which the great western railroad combination was held to be unlawful. And only a month ago, on December 4, 1899, the Supreme Court held the statute effective in the case of *United States v. Addyston Pipe and Steel Company* and others. In that case Mr. Justice Peckham said: "We have no doubt that where the direct and immediate effect of a contract or a combination among particular dealers in a commodity is to destroy competition between them and others, so that the parties to the contract or combination may obtain increased prices for themselves, such contract or combinations amount to a restraint of trade in the commodity, even though contracts to buy such commodity at the enhanced price are continually being made. Total suppression of the trade in the commodity is not necessary in order to render the combination one in restraint of trade. It is the effect of the combination in limiting and restricting the right of each of the members to transact business in the ordinary way, as well as its effect upon the volume or extent of the dealing in the commodity, that is regarded."

VON HALLE'S CLASSIFICATION OF MONOPOLIES.

Ernst von Halle, in his work on trusts in the United States, has classified the various kinds of combinations existing in this country into four classes: 1. Natural monopolies. In this class he includes commodities which only exist in quantities locally limited or are manufactured from materials so limited. 2. Quasi-natural monopolies. In this class he includes certain plants which everybody can establish, but which once introduced are practically beyond competition because they require an enormous amount of capital; and he adds, "By the mere fact of their existence they become nearly as powerful as natural monopolies." He instances railroads, telegraph companies, waterworks, gas works, and other quasi-public enterprises. 3. Legal monopolies, which definition includes patents and copyrights. 4. An undefined group, including a vast number of combinations, the cause for which can only be found to a limited extent in the conditions described, and which spasmodically appear and often as quickly disappear.

EXTENT OF COMBINATIONS AND INCORPORATIONS.

In an appendix to his work Mr. Von Halle gives a list covering 10 pages of fine print, alphabetically arranged, of trade combinations in commodities in the United

¹ *Conwell v. Colorado Springs Co* 100 U. S., 55. See also, as perhaps more directly in point, *Christian Union v. Yount*, 101 U. S., 352.

States at the time of the publication of his book in 1895. Since that book was published the progress in the formation of trusts has been so rapid that it is practically impossible to keep track of them at all.

Dr. Hadley, president of Yale University, in an article in *Scribner's Magazine* for November, 1899, stated that in 1898 the new companies formed in the United States for the purposes of industrial consolidation had a capital of over \$900,000,000. It is further stated that in the earlier half of 1899, according to the careful estimate of the *Financial Chronicle*, the capital of the new companies of this character was \$3,100,000,000, or more than three times that of the whole year preceding.

“RIGHTS” OF CORPORATIONS AND PUBLIC DANGERS FROM THEIR POWER.

This is stupendous. Doubtless in this large number of consolidations there are many which have only followed a natural normal tendency under economic laws. So far as this is so they are of course unobjectionable. It is a favorite argument at the present day of those who, like Mr. Dos Passos, believe that no limitations should be put upon aggregated capital, that it is useless to attempt by legislation or by law, in any form, to check the tendency of the times toward these tremendous consolidations. They say that it all represents an economic development. Having grown up in an age of corporations they blandly talk about the rights of consolidation and the rights of corporations, as if corporations were entitled to the presumptions concerning liberty of action and liberty of contract which are guaranteed by our constitutions, State and Federal, to the natural person.¹ They seem to forget altogether that the corporation is the creature of the State; that is, in a republic, of all the people of a State. They forget that every so-called right of a corporation is merely a privilege, a license, granted by the public, and within the control of the public in that respect. The State, i. e., the public, may give its franchise to the corporation to such extent as the State thinks best. It may limit it as much as it pleases. It may impose upon it such conditions concerning its exercise as it sees fit.

If present conditions were dependent upon combinations of natural persons only, the danger would be reduced to a minimum. A few men might, under peculiar circumstances, acquire large fortunes; though it is doubtful if any man, without the aid of corporate franchise, could acquire in so short a time, in this country, any one of the vast fortunes of the day. But a combination between such men could probably be easily broken up. Each man would also be financially, as well as morally, responsible for what he did. And at the worst each of those in the combination would die within a short time, and their fortunes would go to others, who might not possess their skill. It is the corporate form that cloaks the danger. The laws upon this subject, relaxed for the purpose of encouraging commercial enterprise, have, by looseness of statutory provisions and the implied powers conferred by judicial assistance, acquired a power to get what they want and a skillfulness in eluding responsibility for their misconduct, which is in itself a factor in the present dangerous tendencies toward unlawful combinations and monopoly. Do not understand that in saying this it is intended to make any general attack upon corporations as such. Quite the contrary. It must be recognized that they have in the past been potent factors in the development of the wonderful commercial progress which has been made by this country; a progress which has brought the United States to a position where it is threatening the manufacturing industries of nearly every European nation, and where it may claim, in many respects, if not in most, to be the leading nation of the world. One of the difficulties in taking a position against unlawful combinations is the possible danger of an assumption concerning the basis of the existing evil, which, if acted upon, might tend to interfere with legitimate development. Nevertheless, the fact remains that as the statutes stand to-day, and as they are interpreted by the courts, the corporations, even the private corporations, though the creatures of the State, are too far independent of the State and too little within the regulation and inspection of the State. If this be true of private corporations, how much more forcibly does the criticism apply to quasi-public corporations, such as railroads, telegraph and electric companies, street railroad companies, and others whose basis of success rests upon a public franchise. Here will be found a most potent factor in the dangerous conditions which face us. Quasi-public corporations, operating under municipal franchises, which they obtain for nothing—so far as the public treasury discloses—have the right to occupy public highways. They are usually incorporated under general statutes very indifferent in their description of the powers to be conferred; they get from the public their privilege, and yet are usually greater than the public in any contest which arises.

¹ See Mr. Dos Passos, p. 1162.

THE POWER OF TRUSTS RESTS ON THE POWER OF RAILROADS.

It is in the railroad companies that the greatest danger lies. Having obtained from the respective States the power of eminent domain, and having established under their public franchises what the courts have denominated public highways, and all this because they are run theoretically in the interests of the public, they have become a principal medium of establishing the greatest trusts in the United States.

Look at the history of the Standard Oil Company in connection with the railroads, as it is disclosed in public proceedings of various sorts—the courts of Ohio, investigations of legislative bodies, and of Congress. Who could not acquire a large aggregation of capital if his only competitor were required to pay 35 cents a barrel for the transportation of oil, of which 25 cents a barrel was to be turned over to him? It is impossible to go into a consideration in detail of the acts, even of the Standard Oil Company, in connection with railroad rates, to say nothing of the action of numberless other trusts or attempted trusts in the same regard. Much of that history is before this commission in the form of evidence. Other phases of it can be ascertained in the reports of the Interstate Commerce Commission. It is certainly a safe assertion to make that there is not one large shipper in fifty in any of the great cities of the country, or in any industrial locality, who has not made a large part of his success in placing his goods upon the market through special rates given to him by a railroad, or several railroads, lower than the established tariff rate published under the law, and therefore in contravention of the law. Yet this act on the part of the shipper, and of the agent of the railway company, is by law a crime, and the reputable members of the community who make themselves parties to the unlawful agreement for the discrimination in rates are either too ignorant, or more often too indifferent, to realize either their legal or their moral turpitude.

It is currently reported that a leading business man of one of the principal cities of the country said to this commission something to this effect: It takes both money and brains to move the wheels of commerce in this country, and I have both. This story may not be true; but it is true of the gentleman concerning whom it is told, that when he was asked by the Interstate Commerce Commission to disclose certain facts concerning the rates which he received from the railroad companies, he repeatedly refused to answer because his answers would incriminate him, thereby in effect admitting his criminality. That this latter statement is true is proved by the records of the published opinion of the Supreme Court of the United States.

Mr. A. B. Stickney, president of the Chicago and Great Western Railway, says in his work on *The Railway Problem* (p. 33): "The average business man feels strong enough and acute enough to cope with his competitors on equal terms, but here is a power he can not compete with, and he can not avoid. This power, like a government, has authority to make tariffs, and enforce their collection. It claims a right, which no civilized government claims, and no sovereign has dared to exercise for centuries, of rebating a portion of its tariff, and thus discriminating between its subjects in the collection of its revenues."

The terrible extent to which railway discriminations have gone is disclosed in the woeful confession made by the Interstate Commerce Commission in its report for 1899. After referring to repeated recommendations in former reports for further legislation, and the failure to obtain it, the report continues as follows: "Meanwhile the situation has become intolerable, both from the standpoint of the public and the carriers. Tariffs are disregarded, discriminations constantly occur, the price at which transportation can be obtained is fluctuating and uncertain, railroad managers are distrustful of each other, and shippers all the while in doubt as to the rates secured by their competitors. * * * Enormous sums are spent in purchasing business, and secret rates accorded far below the standard of published charges. The general public gets little benefit from these reductions, for concessions are mainly confined to the heavier shippers. All this augments the advantages of large capital and tends to the injury and often to the ruin of small dealers."

From all this it appears that the conditions which exist in the commercial world are largely, if not chiefly, dependent upon rates of transportation, and that the wealth and power possessed by the large trusts or combinations are derived from discriminative rates contrary to law. The political economist may argue that the rate of freight is a part of the price of goods to the consumer, and, therefore, an important part of the economic problem to the manufacturer. Abstractly stated, this is true. But if the one manufacturer grows rich through unlawful, unreasonable, and unjust discriminations in his favor, granted to him by the railroad, which has its franchise from the public, it must be apparent that the rule of political economy invoked on

¹ See Mr. Rice, pp. 706-709; Mr. Archbold, pp. 556-559.

behalf of the wealthy manufacturer has been influenced by the unlawful and unjust act of the railroad company, in which the manufacturer participates. Therefore, practically speaking, the quasi-public corporation upon which the public has bestowed its franchise for the public weal, has disturbed pro tanto the laws of political economy in a natural state. Furthermore, several of the largest trusts, notably the Standard Oil Company and the coal companies, have, by combination, obtained a practical monopoly of the source of supply by owning a large proportion, if not nearly all, of the valuable coal mines. In this class of cases the discrimination in rates has been most marked. And in furtherance of the tendency toward combination, these coal companies have not only had the benefit of special rates, but they have combined with the railroad companies themselves in such a way that the railroad companies have in many instances become the virtual owners and operators of the coal mines. This in itself is a terrible menace. Here is a railroad company organized under defined statutory provisions as to its powers to act as a railroad company alone. It is not a coal-mining company, and under the law has no right to be. Yet in one form or another the railroad company owns or controls the coal mine. Consider the natural consequence of this. The same dead hand holds the source of supply and the means of transportation. And this dead hand is galvanized into a power to hold anything by the free donation from the public of the franchise. Yet the friends of trusts, including Mr. Dos Passos, would try to make this commission believe that there is no right in law or ethics to withdraw the galvanic battery and relax the grasp of the dead hand.

The man who owns the soil naturally controls the price of the products of the soil within the limits of his market. But if that market is dependent upon transportation by other agencies, it is the transportation agency which practically controls the price. Because, if the one farmer, or the one miner, has a rate which is less than another farmer, or another miner, it is the one with the less rate who controls the price of the product in the market.

Extending this principle, if the owner of the soil gets a lower rate than all of the other owners within the limit of his market, if he can make that rate prohibitive, he will have a monopoly. The reason why railroad companies and other corporations with public franchises should not be allowed to go beyond the powers conferred by their charter is well expressed by the vice-chancellor in *Attorney-General v. Great Northern Railroad Company* (1 Drewry and Smale, 154). In that case the railroad company was found to have engaged in selling coal from mines along its line. And the vice-chancellor says: "Now, why has the rule been established, that railway companies must not carry on any business other than that for which they were constituted? It is because these companies, being armed with the power of raising large sums of money, if they were allowed to apply their funds to purposes other than those for which they were constituted, might acquire such a preponderating influence and command over some particular branch of trade or commerce as would enable them to drive the ordinary private traders out of the field, and create, in their own favor, a practical monopoly, whereby the interests of the public would be most seriously injured."

If the development of the railroad company into a mine-owning company were the only form of acts *ultra vires* of which railroad companies were guilty, the situation might perhaps be endured with a certain degree of equanimity. But when the public see the same hands, the same capital, the same power which controls the railroad company controlling the sources of supply in oil or minerals, or both, and see that same management and control extend to the banks which furnish the funds and control the money market, and to the quasi-public corporations which furnish public utilities, such as gas and water, the public, not unnaturally, pause and reflect, and wonder how long it will be before the creature is more powerful than the creator.

POWER GIVES POWER—MONOPOLY BREEDS MONOPOLY.

On December 23, 1899, the St. Louis Post-Dispatch published an article which stated in effect that the Standard Oil Company was responsible for the recent panic in Wall street, which cost innocent stockholders \$80,000,000 in one day and forced the great American Government to come to the rescue. According to the account, Mr. Anthony N. Brady, representing the New Amsterdam gas interests, was opposed to the Standard Oil control. This tremendous financial fight was represented as being made by the Standard Oil people in order to force their rivals to throw over the New Amsterdam Gas Company by attacking the stocks of all the corporations in which Mr. Brady and his friends were interested. It was stated that in order to accomplish the purpose certain banks were used to effect an artificial money stringency, and that foreign exchanges were juggled by the same financial agencies. Whether or not this

report was true is of less consequence than the fact that such a report was possible. If not true, it at least illustrates what might, and perhaps may yet, come to pass in a much more exaggerated form. To the thoughtful reader it must have suggested the idea that a comparatively few men, with their enormous wealth, could make and unmake fortunes in a day, and could do more than the Government itself can do in determining values and fixing the rate of exchange. It pointed to the possibility that the Standard Oil Company, or the combination of interests which have derived their power chiefly through public franchises, by whatever name it may be called, could be greater than the Government itself, for some purposes at least.

I should like to be permitted right here to say that after preparing this paper, and while coming from St. Louis to Washington on the train, I bought a copy of the Philadelphia Press, of January 4. I had some misgivings about using a mere newspaper article as a basis for any part of my argument, especially when it might be considered by some people that the paper from which I quoted sometimes had tendencies toward sensationalism. But I was very much struck by the fact that in a 2-column article in the Philadelphia Press (which I understand is neither avowedly against trusts nor specially sensational) a substantial verification of the item from which I have quoted was contained. If I have your permission I will read from that in order to indicate that, so far as newspaper opinion goes, it would appear as though what the Post-Dispatch treated as a fact about the Standard Oil people and the New Amsterdam people had had its effect. I take certain excerpts from the Philadelphia Press, as follows:

"NEW YORK, January 3.

"Some of the officers of the gas company of this city, which is identified with the Standard Oil interests, give a qualified corroboration of the report that has prevailed here for some days that this corporation has bought the interests of the Whitney syndicate in the corporation which practically controls the electric light, heat, and power franchises in this city. What the motive of the Whitney syndicate in selling their interest to the Rockefellers may have been no one pretends to say authoritatively. But there are all kinds of rumors, the most interesting or dramatic of them being associated with Mr. Whitney's name."

Passing on to a further point in the article—

"The probability is that it was deemed to be the business advantage of both interests involved in the deal that the Rockefellers, through the gas company, which they control, should obtain the majority interest in the electric company. The electric company is of recent organization. Some of its achievements a little over a year ago were very brilliant. In a few weeks, by the most skillful generalship, it obtained control of nearly all the electric light companies in the borough of Manhattan, as well as the absolute control of one subway and partial control of the remaining one in this borough. It increased its capital to \$36,000,000 for the purpose, as reported, of buying out the electric storage battery corporation of Philadelphia, and it made a contract with the street railway corporation, with which Whitney is identified, to furnish to it its surplus power. It was in position ultimately to take in all the gas companies of this city, provided they could be obtained at fair price, and it is in all probability due to this purpose that the corporation has passed into the control of the gas company with which the Rockefellers are identified. This company is one of the giant organizations of New York. It has nearly 40 millions of capital, and was organized 16 years ago upon a plan of financing similar to that which characterized almost all of the modern industries. It took in 6 companies, and it unquestionably aimed absolutely to control the entire market for gas, not only in Manhattan, but in the entire city of New York.

"Its purpose was exactly that which Governor Roosevelt especially condemned in the message which he submitted to the legislature to-day. It expected to possess the absolute monopoly of selling gas to New York customers. Recently a very bitter, somewhat damaging, and exceedingly interesting contest has been in progress between this corporation and other gas companies, and all the strategy that modern business genius can suggest has been employed by both sides in this battle, and yet neither side is the victor. Russell Sage is defiant, although it is said that his chief reason for this quality is that he is of the opinion that the other interests are trying to get possession of his company at a price that represents much less than its real value. Not Wall street opinion, but Metropolitan Club opinion, which upon many things is of more value than that of Wall street, is that this colossal deal is simply a move on the part of the Rockefellers in the great battle their gas company has been carrying on with others in this city for supremacy. The possession of the electric company gives them an almost impregnable fortress, and no doubt we shall hear in the course of a few days that the corporation has acquired control of the electric corporation, which has practical monopoly in the borough of Brooklyn."

(By Mr. KENNEDY.) Is that article signed "Holland?"—A. "Holland;" yes, sir. I do not know the gentleman. I am not able to substantiate, of course, the facts. You gentlemen have it in your power to get the evidence as to the specific facts.

Q. (By Mr. FARQUHAR.) Nor you could not know definitely where this article stands on the stock list, bear or bull?—A. Not at all. I have absolutely no information about it. I simply quote from two newspapers of different political faith, in different parts of the country, to show that there is at least in the public mind, as influenced by the newspapers, a strong basis for the assumption that there is now an effort on the part of those who have now great power to obtain still greater power, and that these facts tend to support my assumption that all of this class of combination tends toward monopoly.

STATUTES ARE NEEDED, BUT CAN NOT REPLACE THE PRINCIPLES OF THE COMMON LAW.

What can be done to remedy the existing evil of unlawful combinations? That is a difficult question to answer. It is always easy enough to point out an evil. It is not so easy to suggest a remedy. The situation is peculiar, and the conditions so varied, and the interests so vast, that any remedy suggested must of necessity be more or less tentative and experimental. Nevertheless, while principles are perennial, legislation is necessarily local and temporary and designed to meet existing conditions. As Burke says: "In effect, to follow, not to force, the public inclination, to give a direction, a form, a technical dress and a specific sanction to the general sense of the community, is the true end of legislation. * * * It would be terrible, indeed, if there was any power in the nation capable of resisting its unanimous desire, or even a desire of any very great or decided majority of the people. The people may be deceived in their choice of an object, but I can scarcely conceive any choice they can make to be so very mischievous as the existence of any human force capable of resisting it."

Undoubtedly the people of this country suffer from too much legislation, or rather, to limit that statement, too much haphazard and incomplete legislation. There are many occasions when a judicial application of well-understood principles of the common law would operate much more satisfactorily than the interpretation of an ill-considered statute. Nevertheless, in the complex civilization existing in this country, with the manifold forms of government, national, State, county, and municipal, and with the courts of 45 States and of the United States interpreting all of those statutes for themselves, separately, it is impossible to do without much and frequent legislation. Besides, statutes are the concrete expression of the opinions of the people concerning laws as related to concrete conditions. Yet in framing or suggesting statutes, especially with reference to industrial conditions, one is faced with the difficulty of the undertaking. As was said by Sir William Erle, in his essay on trade unions, concerning the right to contract freely and the efforts to regulate restraint of trade forcibly: "An attempt to adjust them by statute may succeed if the authors and interpreters of the statute understand the principles of the common law and in some degree incorporate them. Without that process the interpretation of the words of a statute merely by a dictionary leads often to unsatisfactory results. Even if the statute is well drawn society soon progresses beyond it, and the need of the principles of the common law is constantly renewed."

SUGGESTIONS FOR LEGISLATION.

With these rules in mind, the following recommendations are made as to methods by which some of the existing evils may possibly be cured or checked. They are made simply as suggestions, not as completed plans for legislation, but in the hope that among them may be found at least one thought which is worthy of consideration and of practical application when developed. These are the suggestions:

1. Each State should make a stricter classification of corporations, under its general corporation statutes; and by statutes, and through the courts, express and enforce more strictly the doctrine of *ultra vires*, and thus keep each corporation within its legitimate functions. Penalties should be imposed, including forfeiture of charter, for acts *ultra vires*.

2. Each State should so readjust the laws regarding all corporations, private as well as quasi-public, that their corporate functions shall be exercised under as much and as careful official inspection as will make them fairly answerable to the public, and prevent them from exceeding their charter powers, and from violations of law, unknown to the public.

3. Each State can provide that no foreign corporation shall do business within its borders without conforming to its laws.

4. Each State can provide that the stockholders of a local corporation shall not combine, by agreement with the stockholders of any other corporation of the same or any other State, and sell or exchange their shares in the old corporation for shares in the new corporation, when the effect of such agreement, and the formation of the corporation thereunder, is in general restraint of trade and tends to produce a "virtual monopoly."

5. Let Congress provide by statute that a corporation organized under the laws of one State, under conditions which violate the laws of another State, as being in restraint of trade and commerce, or tending to create a monopoly, can not engage in interstate commerce between any other State and such prohibitive State. To obviate the effect of such cases as hold that the corporation of one State is a citizen of that State, as, for instance, those giving jurisdiction to Federal courts on that ground, let Congress, by statute, declare that foreign corporations have no right, as citizens of one State, to do business in another State.

6. Let Congress provide that no State shall be allowed to grant incorporation to any corporation or association which is formed for the purpose of restraining interstate commerce, or establishing and maintaining a monopoly in any commodity or thing, to be sold to the citizens of the several States; and if such corporation is formed, and engages in business for any of such unlawful purposes, the Attorney-General, or any district attorney under his direction, shall apply for an injunction restraining such corporation or association from carrying on any such business. And jurisdiction should be given to the United States circuit court, as a court of equity, to enjoin such corporation or association, and all persons acting for it or under contract with it, from exercising its functions in another State and from sending its commodities into any other State.

My attention has been called to the paper of Hon. Francis G. Newlands in the Report of the Chicago Conference on Trusts (p. 305), and his principal suggestion of a remedy for the trust evil has so much force that it is adopted in this argument as a recommendation in addition to those already given, viz:

7. Let Congress exercise the power of taxation vested in the Federal Government; a more far-reaching power than that exercised under the interstate-commerce section of the Constitution.

As a practical suggestion for a beginning, Mr. Newlands says: "The first step should be the organization of a bureau of industry, somewhat resembling that of the Bureau of the Comptroller of the Currency, to which report should be made by all corporations, showing the amount of their capital stock, their bonds, their income, their transactions, the number of operatives employed, the wages paid, and all the other data which in time will present a mass of statistical information that will aid and guide legislation. Publicity itself will do much in the way of correcting evils, for definite statistics will suggest definite remedies. The tax at first inaugurated should be moderate. It should reach at first only those great organizations whose evil effects upon modern individualism are conceded, and reliance should be placed upon the statistics accumulated later on to furnish suggestions for additional tax legislation."

With reference to the first suggestion above made little need be said by way of explanation. It merely relates to well-defined powers of the State, concerning the classification of corporations, which are now constantly exercised. The demand is for a stricter exercise of that power. The doctrine of *ultra vires* is well established, and has been frequently enforced with strictness; notably by the Supreme Court of the United States in the case of *Central Transportation Company v. Pullman's Palace Car Company* (139 U. S., 24), and in other leading cases both before and since that case was decided, including the case of *De La Vergne Refrigerating Machine Company v. German Savings Institution* and others, decided October 30, 1899.

As to the second proposition, concerning greater publicity in the affairs of corporations, and State inspection, the power is unquestioned. Already the people have felt the necessity for this publicity in certain classes of corporations, and for a number of years there have been laws providing for inspection and publication of the affairs of such corporations. No one objects to the inspection of national banks by the Government of the United States, or to the inspection of banks generally, and the publication of their annual financial statement. There is even now a demand for a closer inspection of trust companies in some States, where the laws do not provide for such inspection. Recent legislation has provided for inspection of building and loan associations. There is no reason, therefore, why a certain amount of publicity should not be required of every corporation, since it is only the creature of the State. The objection really comes from persons who, having been trained under a system of corporation laws which enable a merchant to incorporate his business, and thereby limit his liability, while giving to his business comparative perpetuity, have carried

on their business substantially as if it were unincorporated, until they have come to think that they have an inherent right to the secrecy and independence to which they are accustomed.

That each State has the power to impose the conditions upon which a foreign corporation may do business in its territory is practically undisputed. Mr. Edward Keasbey, in an article in the 12 Harvard Law Review, page 1, says: "The Supreme Court has * * * repeatedly decided that a State may impose such conditions as it pleases upon the doing of any business within its borders, and that unless the condition be complied with the prohibition is absolute." (Citing *Allgeyer v. Louisiana*, 185 U. S., 578.)

The fourth proposition above suggested is based upon the idea that the way to prevent combinations is to reach the people who enter into them. After all, while the corporate entity is the thing to which the law technically looks in dealing with a corporation ordinarily, the stockholders are the living representatives of the fictitious being. Furthermore, the combinations which are in restraint of trade, and which tend to create a monopoly, necessarily imply individual intent. There is in the idea always the suggestion of a moral factor, a living being, capable of thinking, and feeling, and acting upon his thoughts and feelings.

In dealing with boycotts the courts have always held them to be essentially conspiracies within themselves. The term "boycott" is equivalent to conspiracy. If this be true concerning laborers, who conspire by boycott to injure other laborers or other people, it is quite as indisputable that a combination among capitalists, for the purpose of fixing prices and limiting outputs, and thereby depriving others of their respective rights, is a conspiracy. If, then, the effect of that conspiracy is in general restraint of trade and tends to produce a virtual monopoly, the laws should be so framed as to interfere with those who, having stocks in local corporations, enter into agreements contrary to the law.

The fifth suggestion is predicated upon the power of Congress to legislate concerning interstate commerce. Plainly, a State has the right to prescribe upon what conditions foreign corporations shall do business within its territory, except as that right is limited by the interstate commerce clause. Now, a corporation having no natural rights, a foreign corporation has no inherent right to do business in another State. That it may now ship goods into such other State, under the interstate commerce clause of the Constitution, is due to the existing acts of Congress, or to the silence of Congress on the subject, and the inferential rights that arise therefrom. But if Congress speaks, and prohibits such corporations from going into the State prohibiting them, what legal right of such foreign corporation is infringed, and under what constitution?

In the Original Package Case (*Leisy v. Hardin*, 135 U. S., 100) it was decided that a statute of Iowa, which prohibited the importation and sale of intoxicating liquors within the State, was in contravention of the interstate commerce clause of the Federal Constitution. Mr. Chief Justice Fuller, in stating the grounds upon which the decision was founded, said: "Whenever, however, a particular power of the General Government is one which must necessarily be exercised by it, and Congress remains silent, this is not only not a concession that the powers reserved by the States, may be exerted as if the specific power had not been elsewhere reposed, but, on the contrary, the only legitimate conclusion is that the General Government intended that power should not be affirmatively exercised, and the action of the States can not be permitted to effect that which would be incompatible with such intention."

In other words, the Supreme Court of the United States decided in that case that the silence of Congress was reservation of the power, and any action of the State during that silence which affected interstate commerce was so far void.

Congress having passed an act to remedy the disturbance of the State police power caused by the Original Package decision, that act came up for consideration in the case of *In re Rahrer* (140 U. S., 545). The act provided that liquors transported into a State should be subject to the operation and effect of the laws of such State, to the same extent as though produced in such State. Mr. Chief Justice Fuller in that case said: "The Constitution does not provide that interstate commerce shall be free, but, by the grant of this exclusive power to regulate it, it was left free, except as Congress might impose restraint. Therefore it has been determined that the failure of Congress to exercise this exclusive power in any case, is an expression of its will that the subject shall be free from restrictions or impositions upon it by the several States. (*Robbins v. Shelby Taxing District*, 120 U. S., 489.) And if a law passed by a State in the exercise of its acknowledged powers, comes into conflict with that will, the Congress and the State can not occupy the position of equal opposing sovereignties, because the Constitution declares its supremacy, and that of the laws passed in pursuance thereof."

So also in the recently decided case of *United States v. Addyston Pipe and Steel Company*, Mr. Justice Peckham said: "Under this grant of power to Congress, that body, in our judgment, may enact such legislation as shall declare void and prohibit the performance of any contract between individuals or corporations where the natural and direct effect of such a contract will be, when carried out, to directly, and not as a mere incident to other and innocent purposes, regulate to any substantial extent interstate commerce."

The Supreme Court having thus so clearly laid down the rule that interstate commerce is not necessarily free, but is subject to regulation and limitation by Congress, there is no reason why the plan suggested in point 5 above may not lawfully be carried into effect.

The same argument applies to the sixth suggestion, but in addition it may be said that the right to enjoin that which is by statute of the United States declared to be unlawful has been repeatedly recognized by Congress. In the interstate commerce act of 1889, the antitrust act of 1890, and the tariff act of 1894, Congress empowered courts of equity to restrain violations of the statutory prohibitions against monopolies and trusts.

In addition to these statutory precedents there has always existed a power in courts of equity to enjoin acts *ultra vires*, at the instance of the Attorney-General, when such acts were injurious to public right. An instance has already been cited, in the English case of *Attorney-General v. Railroad Company* (1 Drewry & Smale, 154), where the chancellor enjoined the railroad company from carrying on a coal business as being contrary to its charter and in violation of public right. And the authority is well settled by a number of decisions, English and American.

That Congress has wide and ample powers to legislate concerning matters which affect interstate commerce can not be doubted. Said Mr. Chief Justice Marshall, in *McCulloch v. Maryland* (4 Wheat., 400): "The Constitution of the United States has not left the right of Congress to employ the necessary means, for the execution of the powers conferred on the Government, to general reasoning. To its enumeration of powers is added that of making 'all laws which shall be necessary and proper for carrying into execution the foregoing powers and all other powers vested by this Constitution in the Government of the United States or any department thereof.'"

* * * * It must have been the intention of those who gave these powers to insure, so far as human prudence could insure, their beneficial execution. This could not be done by confining the choice of means to such narrow limits as not to leave it in the power of Congress to adopt any which might be appropriate, and which were conducive to the end. * * * To have prescribed the means by which Government should, in all future time, execute its powers, would have been to change entirely the character of the instrument, and give it the properties of a legal code."

Gentlemen of the Industrial Commission, you have before you a difficult and delicate task. You have had under consideration a variety of topics besides the subject of trusts, but surely you have had none of greater importance. Notwithstanding the able argument which you have heard in favor of aggregated capital, it must be apparent to you that there is something in the question of trusts which was not covered by that argument. How far that omission has been supplied and how far the objections have been answered is a matter of small consequence if out of this argument you can derive one thought or suggestion which helps you to reach the true solution of the problem confronting you.

In what has been said there has been but little effort to consider the future of trusts from a strictly economic or commercial point of view. Doubtless, the remark attributed to Attorney-General Griggs is true, and, in an immediate, direct, financial sense investors in many of the so-called trusts will be the worst sufferers. Some of the trusts are already shaking, and the explosion which is almost certain to come in a year or so is likely to be loud and disastrous. But this temporary and local condition does not affect the main question. Those which explode first are likely to be the least dangerous.

But, if the position taken in this argument is true, the temporary success or failure of individual organizations is of little concern, compared with the vital question of the wrong done to the public by combinations, which are unlawful, or which, in the furtherance of justice, should be made unlawful. The laws of trade are more potent than the statutes of the State. Political economy will ultimately evade the effect of judicial decisions. But if the public are willing to create artificial beings with power to disturb the laws of trade and the rules of political economy, they must be prepared to suffer the fate of the maker of the Frankenstein, which used its senseless, unfeeling power to destroy its maker.

That this argument has been so largely made up of quotations is not accidental. An examination of the authorities discloses such a wealth of ideas, expressed in the

choicest and most accurate language, by judges of the greatest distinction, speaking *ex cathedra*, that no one could hope, by the expression of his own ideas merely, to furnish a fitting substitute for the originals. Besides, that which is quoted stands not as the opinion of an individual, but as the recorded wisdom of the judiciary, binding upon all men alike. From those decisions it is obvious that there is such a thing in this country as a trust, within the definition first stated in this argument; that there is such a thing as a monopoly, which the courts condemn and declare void; and that there is, in the language of statutes and in the principles of the common law, sufficient vitality to meet and cope with unlawful combinations. If some unlawful combinations have continued to thrive, in spite of adverse decisions, it indicates that there are shrewd lawyers off the bench as well as learned judges on the bench. Nevertheless, the history of antitrust legislation and litigation shows, that while the trust evil has not been overthrown, the trusts themselves have been driven to adopt ever-changing forms to escape detection and punishment. The laws were first formed to encourage aggregations of capital in the hands of corporations. The aggregations of capital have advanced beyond the design of those who first created the corporation laws. The laws are following close after them. In so far as the aggregations of capital are the result of natural economic laws, legislation ought not to interfere with them; but in so far as they are essentially unjust and oppressive, they will ultimately be crushed by the slow-moving power of public authority as the expression of public opinion.

Whereupon at 1.05 o'clock the commission took a recess until 2 o'clock p. m.

WASHINGTON, D. C.,
Saturday p. m., January 6, 1900.

The commission met at 2.20 p. m., Vice-Chairman Phillips presiding.
Mr. CHARLES CLAPLIN ALLEN again on the stand and examination resumed.

MONOPOLY DOES NOT NECESSARILY IMPLY CONTROL OF NEARLY THE WHOLE PRODUCT OF THE COUNTRY.

Q. (By Mr. JENK.) You stated in your argument that an organization like that of the Federal Steel Company, which was made up of corporations not engaged in the same line of industry, but of corporations that contribute one to another in the way of furnishing raw material, did come under your definition of a trust.¹ I wish you would explain that somewhat more fully, because that did not seem to me clearly brought out. Let us suppose that no one of these corporations, before the combination, produced more than 30 per cent of the total output of the country. Now, if half a dozen of them—mines, steamship companies, rolling mills, wire mills—we will say, combine, do they come under your definition?—A. They do.

Q. Will you explain why and how?—A. I define a trust as being a combination of financial interests formed with the intention of creating a monopoly. I used the word "intention" instead of "purpose" because the word "purpose" has to my mind a suggestion that there is in the conditions of formation or the articles of agreement of formation an expression of that purpose. I sought to get beyond the formal expression of the purpose in the constituting instruments.

Q. Would you consider that an organization that did not control over 30 per cent of the output would come under your definition of a monopoly?

ANSWER: I think it is the intention of creating a monopoly, and does not come within my definition of a trust. I want to add, however, that, hypothetically, if I saw a great railroad company forming a combination with the original producers of an entire region, though only a part of the entire country, and with a steamship company whose facilities were necessary for the continuation of the shipment from the source of supply to the point of consumption, and especially if I saw added to that various financial combinations which collaterally aided in the combination, I should say that for the purposes of my definition that was a trust.

Q. You would think that it would be possible then that, although the output of this combination did not exceed 30 per cent of the total output of the country, it nevertheless would control so large a part within the locality that there would be a virtual monopoly of the product, would you?—A. Yes. If you will permit me to

¹ See p. 1182.

go back of the days of trusts and illustrate by something in my own experience, and give you the results of my investigation at that time, I can, perhaps, illustrate what I mean. In a certain manufacturing line, before the word "trust," in its later sense, was, so far as I know, invented, facts were presented to me upon which it appeared that in a particular industry in which my clients were engaged it was desired to combine for mutual interest, under such conditions that those engaged in the manufacturing industry, in the particular line, included all of what we may call for brevity the Mississippi Valley. By a usage of the business, as it appeared, these particular manufacturing companies never invaded territory east of the Allegheny Mountains. There were other manufacturing industries of the same kind east of the Allegheny Mountains whose market was within that limit; but the market of my clients and that of those with whom they wished to combine was completely within the limits which we will call for brevity between the Alleghenies and the Rocky Mountains; and there was in existence besides this a trade usage, which did not amount to an agreement, that those east of the Allegheny Mountains would not invade any territory west of the Allegheny Mountains, and those west of the Allegheny Mountains would not invade any territory east of the Allegheny Mountains. The effect, however, was undoubtedly to create a pool, as those combinations were then called, which was in general restraint of trade by controlling prices and limiting output, and I so advised.

Q. The matter did not get into the courts?—A. Did not get into the courts. I use that not to state what I have done, but merely to illustrate what I believe to be the underlying principles, irrespective of the modern statutes and irrespective of the mere use of the word "trusts."

ARE TRADE UNIONS MONOPOLIES OR TRUSTS?

Q. Did I understand you to take the position in your argument that the attitude of the courts had been substantially the same as regards monopolies, without material change, for the last 2 or 3 centuries?—A. That is my understanding of the authorities from my investigation.

Q. You called attention to the fact that within your definition would be included trade unions?—A. Yes.

Q. And you called attention to some of the earlier English decisions in which trade unions were considered monopolies and were forbidden?—A. Yes.

Q. Do the courts still in either England or the United States take that attitude with reference to trade unions?—A. The attitude of the courts in this country and the attitude of the courts in England, as I understand it, have not been entirely harmonious in that particular. There has been, I believe, an unmistakable tendency toward the recognition of the necessity if not the legality of the combination of labor, and it is predicated upon the conditions which exist by reason of the combination of capital. I remember, incidentally, that Mr. Justice Holmes, in the well-known case of *Vegeahn v. Guntner*, in the 167th Massachusetts, in a dissenting opinion on the question of the extent to which it is necessary for strikers to go in the matter of boycott, delivers quite an interesting essay on the tendency of the times as being toward the conflict of the two great forces, and he declines to recognize the illegality; but it is to be noted that Mr. Justice Holmes's decision was a dissenting opinion.

Q. Is it not nevertheless true that the courts both in England and the United States do recognize that trade unions are legal combinations for the protection of their members, for the purpose of securing higher wages than could be secured without the protection of the union?—A. I think there are statutes in England, and the courts have certainly trended that way. There are also some statutes in America which are inclined to exempt trade unions from the statutes which declare invalid and, in some cases and for some purposes, criminal, combinations in restraint of trade.

Q. Have the constitutionality of those statutes been called in question?—A. I am not clear in my recollection. I have a faint recollection at the moment that there has been some adjudication upon that in Illinois, but I am not sure and I am unable to answer that question; generally speaking, they have not been.

Q. (By Mr. FARQUHAR.) Isn't there a wide difference between the trade union, regarded with its trust features, and a capitalistic combination, in one or two very radical points? First of all, can not a trade-unionist or a workingman join a trade union without regard to the amount of capital that he contributes, and has he not one vote and only one?—A. Yes; but will you permit me to qualify that answer? I look upon capital as stored labor.

Q. I am looking more to the status, to find out where the workingman stands and the capitalist stands. First of all, is there not an open door for a man to join a trade union, where he has an equal voice with all others in the union?—A. There are so

many phases of trade unionism with which I am not in detail familiar that it is very difficult for me to answer that. I should assume that in most trade unions there was an equality of vote.

Q. He is one man and has no privileges over his brother in the union?—A. I think not, generally speaking.

Q. Is there not an intention, purpose, or whatever expression you may make, to combine workmen as a combination of the weak against the strong?—A. Oh, undoubtedly.

Q. Is not that sufficient vindication for the formation of these organized bodies of workmen?—A. I am not attacking organized bodies of workmen; I am inclined to agree with the view that trade unions or combinations of labor, by whatever name they may be called, are absolutely bound to exist and must exist in the condition of the centralization of capitalistic interest.

Q. Now, under another definition, is not the essential feature of all trusts monopoly?—A. I have tried so to express the idea.

Q. Then every man who is in a trade union is simply a unit; he has not the command of more votes to defend his own capital than the man who has less capital put in. They are placed on the same equal ground; the door is open for every good workman to come into that union and join hands in expanding its wage power. Now, why can the word trust be applied to organized labor?—A. Because I look upon the trust as being the combination of financial interests. The right of the individual to pursue his calling is clearly laid down in the Case of Monopolies from which I have read, taken from the 6th of Coke. Whether it applied to unions of laboring men or unions of capitalists seems to me to make no essential difference, if there be in the act itself the deprivation of an individual right. Does that answer the question as you put it?

Q. Yes; that leaves it a little more open than the first part of your answer before. In other words, is it not a fact, that divesting the idea of the simple assemblage of men in the trade union, they are just exactly like the citizens who come together without or with political action and express for their own welfare, through that union, through the rules and discipline and regulations, that which is best for their welfare and the welfare of their families and the welfare of the community?—A. There again I should have to answer by saying that there seem to be very different kinds of trade unions. That some organizations of labor do interfere with the individual liberty of the workman and of others, I think, is beyond question. There seems to have been a great difference in different organizations, and some of the labor organizations have been led by minds which show a high degree of intelligence, and they have comported themselves with great discretion, and I am inclined to think in the concrete have resulted in no substantial injury to others; but there are organizations which have exercised whatever power they had in a way other than by simply coming together and voting, because they have undoubtedly exercised the power of exclusion to a point where others were deprived of a privilege.

Q. Only in the exclusion feature; simply modified by the apprenticeship law or something of that kind?—A. They have, sometimes.

Q. Is there a union in the whole United States that has not got its open door to the good workman and the fair man to come in? That is the point I wish to get at. There is no close monopoly in the union; it is not the syndication of wealth to control the rights of other parties and every man's rights. Are they not subserved in the organization itself and every man a unit in voting?—A. I do not think the rights are always subserved.

Q. Oh, human nature, of course, fails sometimes; I grant it.

Q. (By Mr. RATCHFORD.) Do you hold that the trade union is a combination of financial interests?—A. It may be and it may not be. I should say that if it is formed with the intention of creating a monopoly, it is a trust.

Q. Admitting for the time being that one of the purposes of a trade union is to increase wages, there are still other purposes—the purpose of shortening the hours of labor, the purpose of providing for the sickness and death of its members, the purpose of affording a decent burial to its members, the purpose of founding a home for disabled members, etc., all intended to improve the social and moral condition of its members. Taking all of those things into account, do you still hold that the trade union, even though its purpose be to increase the rate of wages, is a combination of financial interests?—A. I am not quite able to go so far as you do. I did not mean to say so. The mere increasing of wages is not in my judgment sufficient of itself to create a monopoly. The other elements which you have mentioned are absolutely not only not objectionable, but most praiseworthy, and should be encouraged in every particular; that is to say, taking care of the sick, burial, the educational ele-

ments, all those things which come from the combination of men to make men better, to promote the brotherhood of men; everything in the combination that does that ought to be encouraged. But in so far as they have used the power to injure others, I say it tends to create a monopoly. Now, I do not specify this or that trade union, because there are too many of them, and I have not their constitutions and by-laws before me and I am not attempting to pass judgment on them, just as I have been unable to attempt to describe all of the combinations of capital. But I do say that if it comes within the definition which I have given, it is a trust.

COMBINATION IS NOT WRONG IN ITSELF, BUT MONOPOLY IS ALWAYS UNLAWFUL.

Q. (By Mr. CLARKE.) Have not the decisions of the courts, whether directed against trade unions or combinations of capital, been confined to the abuses resulting from or incident to combination, rather than going to the extent of branding combination as such?—A. Of course. No court that I am aware of has ever said that mere combination between individuals was wrong. A combination to do a lawful act by lawful means is clearly right. The combination whose abuse of legal rights is checked. You will please bear in mind that I have never said that mere combination was wrong, either in law or morals. I have sought to show why I reduced my definition to the briefest and tersest terms of that, and that is which I was capable.

Q. (By Mr. JENKS.) Did I understand you, however, to say that monopoly was unlawful regardless of the use that was made of it?—A. I believe it is a fair deduction from the common-law decisions, irrespective of statutes.

HOW FAR MAY WE EXTEND THIS NOTION, "AFFECTED WITH A PUBLIC INTEREST?"

Q. In your argument, as I understood you, you made no distinction between the different classes of monopoly so far as legality is concerned, although you enumerated several classes. You spoke of natural monopolies; you spoke of those that are often called capitalistic monopolies; but the illustrations that you gave were taken rather more from the so-called natural monopolies, to use that term, than from those that are ordinarily called capitalistic monopolies. Have the courts regularly taken the same position with reference to both, or have they assumed that the public had more power of control over these quasi-public corporations than over what are more frequently called private corporations?—A. Oh, beyond question. The courts have been chiefly engaged, until a very recent time, with the quasi-public corporations. The distinctively private corporation has developed as an ordinary incident of business life, and for the most part in a harmless way, until the recent developments have brought about such conditions as have led you gentlemen to meet here to consider the evils growing out of that. But excluding one or two statutes, I mean statutes in the States and by Congress, I think it may fairly be said that they were almost all directed at quasi-public corporations.

Q. You used this expression in your discussion, that "When property is clothed with a public interest,"¹ when used in a manner that makes it of public consequence, so that it affects the community at large, then the courts will make a special effort to control these corporations and see that they do not injure people. Has that expression, that property is clothed with a public interest, been applied by the courts themselves to any of these corporations excepting those of a quasi-public nature?—A. I think not.

Q. (By Mr. FARQUHAR.) The Addyston case?—A. That was not a corporation; that was an agreement between a number of persons.

Q. (By Mr. JENKS.) That expression was not used.—A. No, they did not use that; but I want to say that the application of the *Munn v. Illinois* case was carried to very great lengths, it seems to me, in the *North Dakota* case, *Brass v. North Dakota*, was it not?

Q. Yes.—A. You remember that in the case of *Munn v. Illinois* much of the argument of the court in applying its rule was based upon a state of facts which disclosed that there were some 14 warehouses and elevators in the city of Chicago which were so blended with the conditions of commerce as to have become an integral part of them, and to be associated both with rail transportation and lake transportation, and it was under those circumstances that the justice delivering the opinion applied the law to the facts. And subsequently in the *North Dakota* case, as I recollect the facts, the situation was this: An individual was the owner of a moderate-sized elevator in a little town—a little village of only about 100 inhabitants. He in his pleadings set

¹ See p. 1125.

feet that he used the elevator almost entirely for the purpose of storing grain which he had purchased, but did from time to time purchase grain to ship to Chicago and sell in the market under contracts previously made. He did, however, engage in the warehouse business to the extent of taking grain for storage when other persons offered it and he had room. Under the statute, which was very general in its terms, and which was to the effect that any owner of a warehouse who stored grain for compensation should be subject to the regulation of 2½ cents, I think, provided under the statute, his warehouse was subject to regulation because he had applied it to the public use under the general statute. Notwithstanding the peculiar facts of that case, which would seem to be a very extreme application of *Munn v. Illinois*, *Munn v. Illinois* was sustained by a majority of the court.

Q. It has been substantially uniformly held, if I understood you, that it is within the power of the legislatures so to control the railroads, street railways, telegraph lines, and so on, all of these quasi-public corporations, as even to fix rates for them?—A. Yes.

Q. But if I understand you, in these elevator cases, all of them, it is simply an extension of the principle to elevators because elevators are supposed also to be transporting agencies?—A. Precisely.

Q. Now, the expression that I called up was, "When property is clothed with a public interest." Would you judge that this late Dakota case would justify the extension of that expression to corporations that should have so nearly a monopoly of some necessary of life that the public were very much interested in it, as for example sugar, so that a statute fixing a maximum price of sugar would be upheld by the courts as constitutional on this principle?—A. I can not go so far as your illustration. In the application of law to facts, I doubt whether that would be held to be constitutional; but if out of the complexities which environ the situation there can be derived a state of facts which makes plain to the minds of the court that there is a public interest in the exercise of the functions of the corporation, I think they will extend the principle and ought to extend the principle to that extent. In any specific enumeration of the circumstances I am not prepared to answer the question.

Q. Your line of argument would seem to show this, that if it can be shown that one corporation controls, we will say, 90 or 95 per cent of the output of a necessary of life like sugar, that does in itself constitute a virtual monopoly; and, if I understood you, you thought that the courts under the common law would probably stand ready to dissolve that corporation because it was a monopoly, and to hold it an illegal combination?—A. That is carrying the idea of the common law to an extreme extent. I should hesitate somewhat to go quite so far. If the corporation is legally organized and is conducting its business lawfully, it is a serious question whether the courts have a right to dissolve that corporation.

THE INTENTION TO CREATE A MONOPOLY IS ESSENTIAL TO THE IDEA OF A TRUST, AND IS TO BE SHOWN BY EVIDENCE.

Q. How are you going to draw the line between lawful and unlawful corporations? You used such expressions as unlawful corporations, unlawful monopolies, and so on, a great many times, and your words seemed to involve an assumption that all corporations that were large enough and controlled enough of the output to have a virtual monopoly were, merely by reason of that fact, unlawful. Did you intend to take that position?—A. I think if you will analyze what I said a little more closely you will find it does not go quite so far.

Q. That is what I wanted to find out.—A. The idea I had in my mind is very well defined in the Missouri case which I have referred to, where it is possible to trace into the incorporation itself the intent to create a monopoly. There the facts were different from what they would subsequently be made, no doubt. If the intent can be shown evidentially, I think the ultimate conclusion follows of the right to disregard the incorporation, to annihilate it, as contrary to the law against combinations. That was shown in the Lead Company case by the fact that the constating instrument or agreement between stockholders, whereby they vested all their rights in the trustees, conferred upon them specifically the right, and instructed them, as I recollect it, to form a corporation to carry out the purposes of the trust. There was the evidence furnished that the corporation was a continuance of the trust. No doubt many corporations might be formed which would not have in them the evidences of a trust, and therefore the court could not reach that element, which seems to me to be an essential part of the case; that is, the intent to create a monopoly; but I should consider that rather as evidential than as fundamental. Much of what I said had in view this idea first. It must necessarily be that in many cases existing abuses can not be corrected, because rights have become fixed; but for the purposes for which

I am addressing this commission that makes no difference to me, because this commission is asking for methods by which those abuses can be corrected for the future; and therefore whether or not the courts to-day will reach a little further than a given line is of less consequence, from my point of view, than whether they can be made by any form of law, even by constitutional amendment if necessary, to reach that further point, which is essentially a question of a fundamental abuse of power.

Q. (By Mr. CLARKE.) I judge, by what you have said in this answer, that you consider the intent in some of these corporations inferential from the existence of the combination itself, even when it is not declared in the articles of agreement. Is it not your understanding that the decision of the Supreme Court in the Addyston pipe case turns upon the abuses which were clearly set forth in the agreement itself?—A. Yes; it was plainly a decision based upon a specific agreement which the court held to be in restraint of trade between the States, and as limiting the supply and increasing prices in connection with interstate commerce.

Q. You have said that you would consider the Federal Steel Company a trust. You have no evidence that there is anything in their articles of agreement that proposes to set up a monopoly or to control production or prices, either or generally within a limited field, have you?—A. I am quite sure that you will find nothing in any answer of mine that pretends to have any personal knowledge of anything connected with the Federal Steel Company. I was answering a hypothetical case in which Professor Jenks made use of illustrative terms; and even in that case I think I discriminated somewhat. I have nothing to say with reference to the Federal Steel Company, because I have not adequate information.

Q. The mere fact, then, that a corporation carries on a variety of business, the different kinds being contributory and helpful to each other, does not in your judgment constitute a monopoly or a trust?—A. Not necessarily, as you stated.

Q. (By Mr. A. L. HARRIS.) As to the drawing of the line between the lawful and the unlawful combinations of capital, is not that largely a question of fact?—A. Absolutely.

WHAT IS INTERSTATE COMMERCE?

Q. (By Mr. JENKS.) So far as I am able to judge, the differences of opinion with reference to the powers of the United States courts over interstate commerce turn almost entirely upon the definition of the term. You have used the expression several times and have cited several cases in connection with it. Will you go into the matter a little further than you did in your argument? Will you tell us just what you mean by interstate commerce?—A. I will try, though you have opened up a field that might lead to my reading you a longer paper than I read you this morning if I were to attempt to cover the whole topic. I understand the formation of the Constitution of the United States to have been based upon two necessities: First, the necessity and the overwhelming demand of the people at that time that State sovereignty should not be given up; and on the other hand, the recognition by the framers of the Constitution that it was not possible to have a United States in fact without so defining the powers as to make a unified body for all purposes for which one nation was needed. The evils which had been found in the original Confederation were principally derived from the want of central authority. It was manifest even in the days of the formation of the Constitution that to organize what were then 13 States, with possibilities of more, and to let each have control of commerce between the States, would be to make 13 independent sovereignties which would fall apart as the members of the original confederation had fallen apart. Therefore, the clause known as the interstate-commerce clause, giving Congress jurisdiction over interstate commerce and all commerce with foreign nations and the Indian tribes, was made a part of the powers specifically conferred upon Congress, that there might be one nation for the purposes of commerce. I understand the interpretation of that clause by the Supreme Court of the United States to have followed along a line which interpreted the power to be absolute in Congress the instant the question became one of commerce between two States. Now, commerce between two States may go on in a great variety of ways, and I could not attempt to enumerate them from memory, but I will endeavor to express myself by saying that everything which is held to be distinctly within the purview of commerce between the States is held by the Supreme Court of the United States to be retained in the powers of Congress until Congress specifically releases the limitation and itself defines regulations.

CONGRESS SHOULD DEFINE INTERSTATE COMMERCE.

Q. In your fifth suggestion you say that Congress should provide by statute that a corporation organized under the laws of one State under conditions which violate

the laws of another State, as being in restraint of commerce or tending to create a monopoly, can not engage in commerce between any other State and such prohibitive State. In framing a statute along the lines of your suggestion, would it, in your judgment, be possible to define in the statute itself what was meant by interstate commerce in a way that might guide the courts?—A. You ask me another difficult question. I am not in the position of a legislator. The qualities which go to make up a legislator are somewhat different from those of the lawyer. Nevertheless I believe that the safe way to do would be to make definitions in the preliminary legislation cautiously and a step at a time, so that experience might determine that which is wise and discriminate it from that which is unwise, even though it should not in the first instance cover all cases which might appear to be dangerous. In other words, I believe in cautious and gradual legislation about such important matters; but with that statement I should say it is possible to express in each statute within reasonable limits what is to be covered by that statute. Do I make myself plain now?

Q. If I understand your answer, it would mean this: That a statute drawn in accordance with your suggestion filed here would enumerate two or three specific things that were understood by Congress itself as being interstate commerce. Those definitions would be put into the statute itself with the expectation that the courts would follow that suggestion as to what was meant by interstate commerce?—A. If you are asking me my opinion of the powers of Congress—

Q. (Interrupting.) It is not a question of powers; it is a question of judging the wisdom— A. (Interrupting.) The wisdom of framing a statute of that kind. On the line of wisdom I always believe in going very cautiously and very slowly. A attack each evil as you meet it, but do not legislate hypothetically or on mere abstract principles.

Q. There have been a good many statutes that have used that expression "interstate commerce." Bills are now pending before Congress forbidding certain things that are connected with interstate commerce; but if I may judge from your own answer a moment ago, nobody knows exactly what interstate commerce is. The question is whether Congress can aid in clearing up that matter in its legislation itself?—A. Oh, undoubtedly. I believe that the particular function of Congress at this time is to clear up doubt by saying what it means and leaving unsaid what it does not mean.

Q. That is, when it is legislating with reference to interstate commerce, it should define in the statute itself precisely what it means by interstate commerce for the purposes of that statute?—A. That is what I mean.

Q. You think that it will attempt to define interstate commerce on that principle?—A. Oh, undoubtedly.

WHAT IS INTERSTATE COMMERCE (RESUMED).

Q. (By Mr. STIMSON.) When a man in New York sells goods to a man in Pennsylvania which are paid for in New York, is that interstate commerce?—A. The sale is made in New York, the goods are shipped from New York to Pennsylvania, the payment is made in New York; my recollection is that the cases tend to hold that that is a contract made in New York to be executed in New York; but for the purposes of my point here it ought to be interstate commerce.

Q. A man in New York sells goods to a man in Pennsylvania, but payable in Pennsylvania; in other words, the title only passes in Pennsylvania. Does that make any difference in your mind? Is that more clearly interstate commerce than the other?—A. Under existing decisions, I think it is; from my point of view it ought not to make any difference.

Q. I do not think so.—A. But under existing law it is, as I understand it.

Q. Under existing law, of course.—A. I understand there is a distinction.

Q. Then the law to-day is that the test is whether the title passes after or before it leaves the home State?—A. Yes, I believe that is the main test.

Q. (By Mr. PHILLIPS.) Is an individual or a corporation engaged in interstate commerce in manufacturing goods in one State and shipping them to another?—A. Yes; yes, that is interstate commerce.

STATUTES ARE VALUABLE, EVEN IN ENFORCING PRINCIPLES OF THE COMMON LAW.

Q. (By Mr. STIMSON.) You said that combinations of corporations in the same line of business always tend to create a monopoly—that is, they seek, they have a tendency, to maintain prices and limit output—and such you said have been declared illegal under the trust statutes and also under the common law concerning restraint of trade; that is substantially the sentence boiled down?—A. Yes.

Q. Do you know of any case in any State where any court has yet held such a combination unlawful under any trust statute that it might not also have held unlawful under the common law in restraint of trade, leaving out for the moment this late St. Louis case?—A. I think not. If there is any point of discrimination between cases decided at common law and cases decided under statutes, it is descriptive rather than fundamental, expressive of the language of the statute; but the decision is in nearly every instance founded on well-defined common-law principles.

Q. (By Mr. JENKS.) Would that answer of yours imply this, that the antitrust statutes of the different States that have been passed are practically unnecessary, and that the citizens and their rights would be protected as efficiently and as well under the common law as under these statutes?—No; I do not think so. I tried to show in my written statement that concrete conditions called for concrete statutes which shall so describe the objects sought to be reached that it will not leave the decision to antiquated forms.

Q. (By Mr. STIMSON.) And does that amount after all to more than codifying common law?—A. Well, it is pro tanto codification, if you will; but while I am not an advocate of general codification, I am a believer in a certain amount of codification to carry out that same idea which I just sought to express, namely, that if you want to have the courts intelligently determine what the law shall be about the system of elevators in Chicago, it is wiser to define the obligations of the managers or owners of the elevators than to leave the courts to probe back to Coke's time and find a little wharf case to apply or not to apply, according to the individual judge's view of whether it fits the case or not. But on the other hand, I have sought in my written statement to emphasize the fact that the strength of the common law lies in the fact that when the statutes are silent the courts will go back to those primeval times and, taking a case based upon the simple methods of that time, will apply it to the complex methods of these times.

Q. In other words, such antitrust laws are valuable for the purpose of informing the public as to what the law is, and possibly of informing not too deeply educated lawyers or judges what the law is?—A. That is one way of putting it; but I am unable to separate the judges from the public.

Q. I am not attacking the trust statutes, but I simply want to know whether you think they have yet succeeded in getting any new principle?—A. No, I do not; but what I did want to say, following what I said a moment ago, was this: If the public, as you call it, needs education to understand a concrete condition, I am unable to deduce from my experience the conclusion that the judges do not need the same education; because, without wishing in that remark to slight either the learning or the ability of our judges, it is an undoubted fact that the judge is after all an expression of the public on all matters which relate to public concerns and which are not strictly technical, along lines of individual interests.

RESTRAINT OF TRADE 700 YEARS AGO.

Q. Just to supplement what you said about how old this law is, you went back 300 or 400 years. I find here this case, which you probably remember, but did not quote—the Abbot of Lilleshall, in England—which goes back to 1221, I think; it was only printed a few years ago; that is nearly 700 years, is it not, and that applies to this, does it not?—A. Yes; and I shall be very much obliged to you if you will refresh my memory by reading.

Q. (Reading.) "The Abbot of Lilleshall complains that the bailiffs of Shrewsbury do him many injuries against his property, and that they have caused a proclamation to be made in the town that none be so bold as to sell any merchandise to the Abbot or his men on pain of forfeiting 10 shillings." That is the case substantially.—A. Yes; I remember it in connection with the work I did once before, which involved an examination of that.

EVIDENCE WHICH MAY SHOW THE INTENTION TO CREATE A MONOPOLY.

Q. Now, to go from the oldest to the newest—this Missouri statute, which does seem to me to come as near as any antitrust statute to giving a new principle under the law—I want to ask just the clause of that statute under which the lead trust was declared to be a trust obnoxious to the law. I see section 1 of the statute says in substance, "No corporation organized under the laws of this or any other State for transacting any kind of business, etc., who shall create, enter into, become a member of, or a party to any pool, trust, agreement, combination, confederation, or understanding with any other corporation, etc., to regulate or fix the price of any article of merchandise, etc., or to limit the amount or quantity of any article manufactured, etc.,

shall be deemed guilty of conspiracy and subject to this act." That, I presume, was the section under which this corporation was found guilty?—A. Yes.

Q. Now, there are two other questions I want to ask on that. In the first place, if you think on the question of fact, whether that corporation was under the prohibition of the statute, if it had gone to a jury it would have been decided as a fact that it was a corporation, as did this case?—A. That case did go to a jury and was reversed on the ground that certain errors had occurred, with orders to remand the case, as I recollect, for a new trial.

Q. Now, my difficulty is one that you had in your mind, as appears from your using the word "intention." The only word in this statute which you can get that under is the word "understanding," perhaps. "Confederation or understanding." Those last words might include the intention—mere intention without the expressed purpose to create a partial monopoly, I presume?—A. Yes, but I think if you will follow down you will find just such language with reference to limiting output or raising prices as being taken in connection with the word combination—that is the definition I have given.

Q. You mean from the decision or in the law?—A. From the first section from which you have read almost at length: "Who shall create, enter into, become a member of or a party to any pool, trust, agreement, combination, confederation, or understanding, with any other corporation, partnership, individuals, or any other person or association of persons, to regulate or fix the price of any article of merchandise, or commodity, or shall enter into, become a member of, etc., any combination or confederation to fix or limit the amount or quantity of any commodity or article." I think those words necessarily carry the idea of fixing that which is to result in an injury to others, the fixing of prices or the limiting of the output, as tending to monopoly.

Q. They do so far as the intention is expressed clearly, and I agree with you that they also do probably if the intention is not expressed, but can be read into a series of transactions, but the point I am coming to is in the case you put yourself. Suppose a combination of persons, a combination absolutely legal in all respects on its face, where there is no increase even of capital stock, where there is nothing whatever in any part of the transaction to indicate the fact of a combination, to create a monopoly, to raise prices and limit the output; but as men of sense, you and I know that they combined in order to do that, and that that would be the result. How can you reach that by any statute that you can devise?—A. You can not, any more than you can prove a man guilty of murder by making a statute on him.

Q. In other words, if you charge a person under this or any statute with being a party to an obnoxious trust, solely because you say you are willing to assume that the result of his actions will be to create a partial monopoly, is that a thing of which the law can take cognizance until it has happened?—A. The way you state it, I think not, sir. In other words, you must prove the elements for the cause of action, or your cause of action is demurrable; and if upon a good petition you fail in your proof you go out of court on a demurrer to the evidence.

Q. To put the case at the strongest, then, suppose that all corporations, partnerships, and individuals in a certain industry in the United States combine into one corporation which has an absolute practical monopoly, a 100 per cent monopoly; there might be nothing in the by-laws or correspondence or anything you can see in the writing to indicate any intent to create a monopoly. Do you mean to say that they can not be reached under this statute, or any statute that could be drawn, or do you not? I do not wish to put it in a leading way.—A. If I were sitting as a judge, sir, I should probably have to decide that they did not come within the designation of the facts as you state them; but I should want very much to be a legislator to make some legislation that would bring them within something which did reach them.

Q. Take that very case; is it quite so certain as that? Can not the judge leave it to the jury with instructions to find from the acts what the jury believe to be their intentions, although not expressed in writing, or on paper, or in any article or by-laws?—A. If I understand your hypothetical question, you have given me a case in which there is no evidence of the cause of action; therefore, the court has no right to submit the case to the jury, for as a matter of law there is no evidence before the court.

Q. Then, my difficulty is to see—I understood you to say that there are many trusts formed where the intention is not expressed, as in the Addyston case, but where on its face it is a mere combination, although the motive and intention and the probable result are to create monopoly. I understood you to say that that could be met by legislation as it was perhaps met in Missouri.—A. It is pretty hard for me to segregate all I have said, or remember what I said exactly as you state it to

me. Legislation can not cure all evils. I tried to say that legislation is the expression of the public will applied to concrete conditions; it must be general. To prove a case you must have your facts within your legislation; that is, you may pass any number of statutes, and if you can not prove the facts the courts can not enforce the statutes. I did not mean to be understood as saying that every combination in existence to-day which might have in it the elements of the virtual monopoly could be reached, because you must be able to prove your case; and if I seemed to say that every combination of that kind—

Q. I said some.—A. Well, everything I said as to what could be done with a combination in the courts was necessarily predicated upon proof of what formed the gravamen of the thing charged.

Q. Perfectly clear. But perhaps I can make clearer my difficulty by stating it in this way: I understood that you were advising remedies to cure trusts, and that you thought it was possible to devise remedies by statute which would help the case, and I also understood you to say—these are my own words, perhaps—that the most insidious form of trusts was the one where many corporations or individuals combined with the intention of monopolizing their trade, but were careful not to show by anything in their articles, charters, franchises, by-laws, or correspondence that they had that intention. We are now talking about trusts which are at the beginning obnoxious to the law—I mean in their organization primarily, before they sell goods. Now, that is a theoretical position, and if you can not punish the intention of monopoly you can not punish anything, it seems to me, provided they have not shown their design in organizing their corporations.—A. I am sure, sir, that as a very able lawyer you will remember that the courts are full of cases, from early common-law times to the latest reports, in which there have been actions brought both in law and in equity involving elements of fraud, and the courts have invariably declined to define fraud; but if they have had facts from which they could deduce the conclusion, as a matter of law, that there was a fraud, they have found on the petition or the bill in equity, as the case might be, in favor of the complainant. Now, the idea I have in my mind is closely analogous to that. You can only make your law with definitions which mean something, when there are facts that substantiate it, and you can not prove a case against a corporation when you have no facts.

Q. I understand you to mean that although you may have merely this case, that all or most of the corporations or firms in the line of business deeded over all their property to a new corporation absolutely, and although you had no facts, that nevertheless the court, or the jury, acting under the court's instructions, could infer fraud from these facts; that is, I mean could infer the intention of monopoly from these facts?—A. I have been trying to answer your question in general terms. If you will permit me to answer it in what I conceive to be the practical aspect, as I sought to make it in my written statement, I will state this: I find it difficult to imagine that that which is what you and I, as you have stated, understand or know to be a trust could be formed of competing concerns between St. Louis and New York without somewhere in that long chain a link that we might get hold of, if we were attorneys endeavoring to present the case.

STATE SUPERVISION.

Q. If I may ask two or three questions on the recommendations. As to the second one, "Each State should so readjust the laws regarding all corporations, private as well as quasi public, that their corporate functions shall be exercised under as much and as careful official inspection as will make them fairly answerable to the public and prevent them from exceeding their charter powers, and from violations of law, unknown to the public." There you mean State supervision solely?—A. Yes, I had reference entirely to the States, and I endeavored in my further explanation of that so to state.

A CORPORATION OF NATIONAL EXTENT CAN ONLY BE DEALT WITH ON NATIONAL GROUNDS.

Q. "Each State can provide that no foreign corporation shall do business within its borders without conforming to its laws." That the States, of course, can do. Do you think that the United States itself, with an act of Congress, could provide that a corporation of Delaware could not do business in Massachusetts without conforming to the laws of that State?—A. That is a very difficult question to answer. It is right upon the dividing line of State and Federal jurisdiction, rather at the ultimate point, if I may say so. Believing as I do that there are defined powers given to Congress, with all powers implied necessary to enforce them, but that notwithstanding the ulti-

mate sovereignty was reserved to the States respectively and to the people—I do not wish to go too far in that suggestion, but the utterances of the Supreme Court of the United States have gone so far that I am inclined to think that where legislation is a part of the inherent powers of Congress nothing can stop them; they will again in the future be declared to be, as they have been declared in the past to be, supreme; and I want to add that I believe that the tremendous concentration and centralization of the industrial combinations from all parts of the country is going to be a very potent factor in developing that class of public sentiment which finds expression in judicial sentiment, that if one corporation can control all of the output of the country there is only one power that can deal with it. The corporation becomes in effect national, and it can only be dealt with on national grounds.

Q. The latter part of your fourth suggestion brings out much the same point. We have already spoken of the substantial facts. You suggest that the States should provide that stockholders of local corporations should not combine by agreement, etc., with the stockholders of other corporations out of the State when the effect of such an agreement and the formation of the corporation thereunder is in general restraint of trade and tends to produce a virtual monopoly. There also, I suppose, that would be determined by a jury, would it not? Whether the effect of such an agreement was in general restraint of trade would be a question of fact?—A. Yes, a question of fact; yes. It would depend upon the nature of the action whether it would be determined by a jury or not.

FOREIGN CORPORATIONS SHOULD BE EXCLUDED ONLY ON THE GROUND OF GENERAL RESTRAINT OF TRADE.

Q. Your fifth suggestion seems to me to go to the length of stating implied authority in Congress to provide that the corporations of one State shall not do business in another State when they are for various reasons objectionable and obnoxious to the law. Do you mean to go as far as that?—A. I am going to stand on the definition, sir. I realize it is rather an extreme ground, but I expressed it along the lines which I have just been following as being, in my judgment, a matter which is properly construed a function of the National Government; of the United States Constitution—under proper legislation, you understand.

Q. Will you carry that beyond the case of being a trust? What I mean is, your statute in Missouri, as we have just read, provides that a corporation of another State which is a trust within the meaning of the law of Missouri, or belongs to a trust, shall not do business in Missouri and shall not enforce its contracts in Missouri. Now, suppose that the laws of Missouri require that stocks shall be paid for at par, in cash, and that stockholders shall be individually liable for debts, and that the laws of Maryland do not contain either of these provisions; would you recommend that the State action should go also to the extent of going into that and seeing what was the organization of the corporation that was coming in to do business? I see Senator Hoar has recommended that in public and private very frequently of late, and that is why it is in my mind.—A. The fact that Senator Hoar recommended it would give it very great weight with me in the first instance. I think it ought to have in it, sir, those elements which I tried to express, as I remember, in my fifth point of general restraint of trade. Is that not it?

Mr. STIMSON. Yes.

A. In every single corporation for home use, or for the many purposes for which a corporation may be formed; but if the intent, or purpose, or the effect—if you will get away from the mere intent or purpose—is to be in general restraint of trade, I would have it in that way.

GRADUATED TAXATION—THE POWER TO INVESTIGATE AS DERIVED FROM THE POWER TO TAX.

Q. Then on the seventh and last recommendation—"Let Congress exercise the power of taxation vested in the Federal Government; a more far-reaching power than that exercised under the interstate-commerce section of the Constitution." In the first place, I beg to ask whether you think that a tax by the United States upon State corporations, determined, let us say, by the amount of their capitalization, would be constitutional?—A. I think it would.

Q. And then, going a step further; inasmuch as an advantage is gained, as all arguments show, by an aggregation of capital, would it be found constitutional to have something like a graduated tax?—A. I do not think that makes a particle of difference, if you apply it to corporations which are to be formed. As to whether or not it

could be applied to every corporation already formed I have some doubt, which I can not solve at this moment, because of the rights which might be claimed by a corporation under existing laws and its present legal privileges. But I would like to eliminate that, because the main question is not what exists right now, but how to legislate generally. Putting that question aside, the power to do that I believe to be absolute, because the corporation can have imposed upon it any conditions which the State or nation may determine—that is, the public, the lawmaking power—provided that be attached when they become a corporation. I will not go so far as to say it could always be done in every instance to an existing corporation.

Q. And finally, would that power of taxation vested in the Federal Government authorize Congress to require any amount of investigation of the affairs of the corporation, in your judgment? I mean not simply the return of the amount of capital stock and the indebtedness, but should it go into the question of the amount of profits they made in the preceding year, etc., and wages they pay, anything more than enough merely to fix their capitalization?—A. About that, I have some doubt, for this reason: The power of taxation has generally been construed to exist for the purpose of raising revenue primarily. Therefore if it be imposed as taxation under the general taxing power, it should be for the purpose primarily of raising revenue. If it be imposed at the creation of the corporation as a condition of corporate existence, it may be anything you choose, because it is no longer a tax as a tax, and is not properly referable to the taxing power of the State, but is a condition imposed, and which is within the power of the State, by which the State receives the consideration. I think that is the point of definition.

Q. That is clear; but, still, let us take corporations already existing. There are a great many, and it is possible that they could be approached if any taxing law was passed. How is the Government to determine what the amount of tax should be unless it can go beyond the mere paper amount of stock and debt; how can it tell what the value of the corporation stock and franchise is unless it goes into the earnings, for instance?—A. I fear I misunderstood you. Are you asking whether they can get information from the corporation?

Q. I am asking whether the taxing power of the Government would authorize it to establish a bureau, or officer, or commissioner, with authority to enforce collection of the tax and returns from corporations, not only on the amount of stocks and bonds, but on their wages, profits, earnings, etc.—A. I believe they could. I did not quite understand your question. I thought you referred to the amount of taxation which might be imposed.

Q. (By Mr. A. L. HARRIS.) When does the control of the State leave off and the control of the Federal Government begin, in your opinion, upon goods manufactured in one State and contracted for in another State?—A. I think the dividing line is the delivery to the representative of the purchaser, whether that representative be the purchaser himself or his agent, or, in the ordinary uses of trade, a common carrier.

Q. Delivered to the common carrier to be transmitted?—A. Yes.

Q. And not necessarily have to pass into the other State?—A. No, sir.

Q. Or even in transit?—A. I think it is in transit, sir, in the common sense of the law, the instant it is delivered to the common carrier.

Q. (By Mr. SRIMSON.) Your question suggests one question that I want to ask. In your Missouri trust case, which has been decided against this corporation, if it is sustained on appeal, that corporation will be practically shut out from doing business in Missouri. But is there, even under your Missouri statute to-day, anything to prevent that corporation from selling these same goods in question to an individual in some other State where the corporation is established, or that individual from carrying the goods into Missouri?—A. No, sir; and that is why I make the suggestion that under statutes to be enacted any point that is against the corporation itself should hold against any person acting by or for it or under contract with it. In other words, it is a very easy thing to elude such a law as that by just simply selling to somebody in the same town, if you will, a factor, or anybody; but I would have the law go back to the intent itself.

Q. And you think you could get behind them, do you?—A. Yes; I do, sir.

Q. In the case of a factor, as you say, and there would be more than one factor in the town, of course—20 or 30—and some days the American Sugar Trust sells to one factor and some to another, and when he comes to Missouri with the sugar, do you think you could reach back to that factor?—A. I believe you could. I want to say some of my opinions are not predicated upon mere adjudicated cases. The question of the power of the courts, of the Congress of the United States, and of the States, is not easy of solution on any one question, to say nothing of so many questions as are here involved; but I observe that, although it has been supposed that Congress could not create corporations—I always believed it could not create corporations—I may

say that when they wanted to find a way to subsidize the Union Pacific road they found a way to do it, and whenever they wanted to do various things of that kind, which do not immediately occur to me, but which have been in effect the creating of corporations, they have succeeded in doing it.

Now, the question we have been discussing, or that I have been meaning to discuss, has had in it primarily industrial conditions which can never be segregated into States. I believe that Congress has gone so far and the Supreme Court has gone so far in construing the acts of Congress that they can not stop short of the exercise of all the power that is necessary to make the Government in fact, what it is in name, in all the functions which appertain to the Federal Government under the Constitution of the United States; and so I have sometimes said things which I did not have authority for.

Q. (By Mr. A. L. HARRIS.) Would it need a constitutional amendment, in your opinion, to give to Congress the power to grant charters for interstate corporations?—A. I am conservative on that point; I think it would.

Q. (By Mr. STIMSON.) One step further. Suppose the buyer does not even buy in Missouri, but he or his buyer goes into Pennsylvania, where we may say sugar is, and buys his goods there of the objectionable corporation; can you reach that by any process of law?—A. And ships it to Missouri, you mean?

Q. I may say ships it to himself in Missouri.—A. Under the existing law I do not think that can be done, sir; but I should be disposed to say, frame a law by which it could be done.

Q. Your Missouri buyer bought his goods in Pennsylvania. Hasn't he a constitutional right to carry his own property into Missouri?—A. Yes; and as you state the proposition, I think I want to modify what I said. You can not reach it unless upon a basis of intent under some statute, and you can not, to my mind, supply the intent; but if that element be added, you could reach it.

Q. (By Mr. PHILLIPS.) If such were the habit in Missouri, to buy in Pennsylvania, or other States, from all or a very large number of these trusts, and ship there, would it come under the Missouri statute by intent to evade the law?—A. There you get what I mean as to intent; the custom would hardly cover it. Each case must stand upon its own proof; custom might possibly tend to show what they intended to do, but I think it would be evidential only. As I said, the custom alone would not be a sufficient basis to make a case.

Q. (By Mr. FARQUHAR.) You speak of State legislation in respect to the remedies. State legislation could not give an effectual remedy unless it was similar in form all over the country, could it?—A. If by that you mean to say that its effects would be uniform, undoubtedly. The State law has no force outside of its own domain. It might, however, under certain conditions, help Missouri, considered by itself, to have a statute—even though Illinois, across the river, did not have it; it might effect a partial benefit, although that might not reach the root of the evil.

Q. At any time since the organization of the Government, has uniformity of State legislation ever been secured?—A. Absolutely not; but I undertake to say there never will be, notwithstanding the very admirable efforts made by the commission and the committees of the American Bar Association to produce it as near as possible, the difficulty being that, if you had the legislatures of the 45 States adopt the same law to-day, the following legislature is not bound by the act of its predecessor, and would be very prone to change it according to its own fancies. If by that I seem to discourage the idea of trying to get uniformity, I want to say I am far from that attitude. On the contrary, I think a partial or approximate uniformity may be created. Every word that has been uttered along these lines is valuable for that purpose, because it is all educational. It tends to form better, more thoughtful, and well-considered legislation, so that people will be satisfied, not merely because it is uniform—for they will not care for that in several States—but because it is the best.

Q. Is it not somewhat of an anomaly that only a forty-fifth part of the State sovereignty of the United States can create a corporation that can command, and possibly control, a national market as well as an international?—A. It is not only an anomaly, but it is a very serious danger.

Q. That leads to the question whether the privileges that are granted to a corporation in the State of New Jersey can invade the State of New York against the well-being of that State, and what remedy the State of New York has against the State of New Jersey?—A. I have endeavored in my suggestions to cover the two forms of that. First, let New York legislate for that which is properly a matter of State legislation, and exclude corporations which she does not wish. Let that action be supplemented by Congress to such an extent that New York shall not be invaded under any plea of rights under the United States Constitution.

Q. (By Mr. KENNEDY.) Governor Roosevelt recently complained that the convict-

made goods of other States are carried by interstate commerce into the State of New York to the detriment of New York working people, they having taken the convict-made goods of their own State off the market; and he calls for national legislation to remedy that evil, forbidding the carriage of convict-made goods into the State of New York. Is it competent for Congress to pass a law to prevent the carrying of convict-made goods of one State into another State?—A. I have no doubt of it.

Q. (By Mr. PHILLIPS.) That has been discussed very fully, and there is a difference of opinion in regard to it. It has been before the Labor Committee for years in the House, and I think the consensus of opinion is with Mr. Allen that it would be competent for the United States to do that.

Q. (By Mr. STIMSON.) I suppose that the first sale of convict-made goods can be regulated; but suppose they are sold in Ohio to another man, a private citizen, and then he tries to go to New York. Do you go so far as to say that that also can be prevented, if the title has passed out of the original manufacturer and out of the State?—A. Mr. Chief Justice Fuller says that under the United States Constitution there is not a right to an absolute free interstate commerce, but that this is a matter subject to the regulation of Congress. If you will remember the original-package case, the Supreme Court said that under the silence of Congress the right was reserved to the United States to control the commerce in packages going into that State, liquor or otherwise, and that the law of the State of Iowa was void as to any packages going in that way. That case, you remember, was followed by the statute, to which I have made reference in my written statement, which provided that packages of liquor that are taken into that State should be made subject to the laws of that State, and from that time on they were so subject and so held in *re Rahrer*. There was affirmative legislation by Congress declaring that that which was the subject of interstate commerce could be brought by Congress within the purview of the State laws.

Q. Do you think there is any distinction due to the fact that it is intoxicating liquor, which is universally subject to police regulation, and perhaps somewhat obnoxious inherently in the minds of many people?—A. A fortiori, to the contrary under the decision in the original-package case. They put up the police power of the State on the one hand, the strongest power the State has, and on the other the Federal power over interstate commerce; and they said, bearing in mind the limitations of the State police power and the necessity for enforcing it to the furthest point, the law of the United States was predominant as to that which was interstate commerce. And this would apply, I think, much more strongly where there was no police power involved.

Q. (By Mr. RATCHFORD.) Assuming that uniform laws were passed by all the States, is there not great danger that the supreme courts would pass upon these laws adversely in some cases?—A. Oh, yes; the danger of their overthrowing the uniformity, if that is what you mean; undoubtedly, sir. Different courts in different States would interpret them each for itself, and each would be supreme within its own jurisdiction.

Q. That danger seems to be perhaps as great a danger as any, does it not?—A. Oh, yes.

Q. So far as uniform laws are concerned by the States?—A. Yes.

Q. (By Mr. STIMSON.) In connection with the commissioners of the States, I have been for years the commissioner of Massachusetts, and have been vice-chairman and secretary. I have not found that so much of a difficulty as either of you gentlemen think. And another thing, we have not found that it is difficult to hold a uniform law when it is once established. We have now, in 21 States, I think, a uniform law upon bills and notes, and it has been attempted to modify it in probably half of them since it was passed, in slight particulars, and universally, with the exception of Massachusetts, the argument for uniformity prevailed. The people and the legislators were intelligent enough to see that uniformity was a greater thing than a slight local objection, and they have defeated every proposition to amend any uniform law that we have had passed, except one, and that was in Massachusetts on the 3 days of grace, which they did not like for various reasons, last year. We also find that decisions of the courts are uniform, because they cite each other. They know the law is uniform, and the court of Missouri will regard the court of Massachusetts as practically of the same State. It knows it has the same law, and it has been previously interpreted, and it will be followed. There has not yet been an instance where a uniform law has been set aside by the courts of one State in its interpretation.

Q. (By Mr. RATCHFORD.) To show the force of my question, I have a case in mind, and I want an opinion from the witness and Mr. Stimson, either of them. Is it not a fact that similar laws have been passed in two or more States, and that in some of the States where they have been passed they have been declared unconstitutional?

tional, while they have stood and are still in operation in other States?—A. Undoubtedly, sir. Mr. Stimson, I see, nods his head in agreement.

Mr. STIMSON. But when the State has a guide, when it is under the provisions of an agreement, this uniform law, which the United States and all States are adopting in order to meet the conditions, then it seems that when a strong hint is given that it is a national affair these laws are not likely to be held unconstitutional, because we do not recommend them except in matters about which there is very little difference of opinion, so that the question which you have just mentioned is not practical.

Q. (By Mr. A. L. HARRIS.) And the courts, as a rule, follow the decisions of courts in other States in the absence of conflicting decisions?

Mr. STIMSON. They do, as a rule.

The WITNESS. That is, they follow about as near as they follow their own decisions.

Q. (By Mr. A. L. HARRIS.) In general, I mean?—A. Yes.

(Testimony closed.)

CONSTITUTIONAL ASPECTS OF THE FEDERAL CONTROL OF CORPORATIONS.

By Prof. ERNEST W. HUFFCUT, of Cornell University.

[Submitted on request of the United States Industrial Commission.]

It seems to be generally conceded that there is need of a stricter control than now exists of the large corporate combinations, monopolistic in tendency and dominating in fact, which are the most striking feature of our present industrial and commercial development. How this stricter control shall be attained is partly a question of constitutional power and partly a question of political and economic expediency. The problem concerns itself with two classes of corporations—those engaged in interstate commerce and those not engaged in interstate commerce. Most of the corporations of both classes are the creations of State legislation, and normally would be within the control of the State that created them. But most corporations having any considerable business pass beyond the borders of their own State and into the territory of sister States, and when within the territory of another State they become subject to the laws of that State or of the United States, so far as those laws may constitutionally operate upon and affect them and their business undertakings. Thus the problem of corporate control may involve three factors—the State that creates the corporation, the State into which it goes, and the United States.

Briefly stated, the result is this: If the corporation is not engaged in interstate commerce, it is subject to control by the State of its creation, subject to the constitutional prohibitions against impairing the obligation of contracts and depriving it of its property without due process of law. It becomes subject to the laws of any other State into which it goes, and that State may regulate its operations even to the extent of prohibiting it from doing any business there whatever. What a State may do with corporations of its own creation it may do with such foreign corporations admitted within its territory. (*Hoper v. California*, 155 U. S., 648; *New York State v. Roberts*, 171 U. S., 658; *Orient Ins. Co. v. Daggs*, 172 U. S., 557.) If, on the other hand, it be engaged in interstate commerce, then the third factor—the United States—must be introduced, for since the Federal Constitution gives to Congress the power to regulate interstate commerce no State may usurp that power either by denying to the corporation the right to conduct business in the State (*Pensacola Telegraph Co. v. Western Union Telegraph Co.*, 96 U. S., 1; *Crutcher v. Kentucky*, 141 U. S., 47) or by regulating or taxing such interstate trade (*Brown v. Maryland*, 12 Wheat., 419; *State Freight Tax*, 15 Wall., 232; *Gloucester Ferry Co. v. Pennsylvania*, 114 U. S., 196).

If the corporation be one employed by the National Government for some end of its own, still less may the State deny to it necessary privileges or regulate its business. (*Stockton v. Baltimore and N. Y. R. Co.*, 32 Fed. Rep., 9; *Horn Silver Mining Co. v. New York State*, 143 U. S., 805.)

The result of this distribution of powers under the Federal Constitution has been to leave the States largely helpless to remedy evils which are thought by the people of the States, or of some of them, to be a menace to their welfare. In yielding control of interstate commerce to the Federal Government there has been naturally some serious loss to the States in general governmental power, quite distinct from the mere inability to regulate commerce. In the desire to avoid the evils of separate

and antagonistic control of trade and commerce the States have deprived themselves of the power to control their own internal affairs whenever those affairs are connected in any direct way with commerce between the States or with foreign nations.

In this situation of affairs the question naturally arises, What is the appropriate remedy? Laying aside all suggestions of change in the organic law, it would seem that there are three possible solutions:

First. The present system of dual control may be maintained with an increased harmony of action among the States and between the States and the National Government, such harmony of action being directed toward the stricter control of monopolistic combinations.

Second. The National Government may, by Congressional action, give to the States a larger, perhaps an exclusive, control of corporations engaged in interstate commerce.

Third. The National Government may take to itself a larger, perhaps an exclusive, control of corporations engaged in interstate commerce.

The first proposition demands an examination of the constitutional provisions by which the relative powers of the State and Federal Governments are determined and of the effect given to these provisions by judicial decisions.

Three provisions of the Federal Constitution confer upon Congress the extensive powers "to regulate commerce with foreign nations, and among the several States and with the Indian tribes;"¹ "to lay and collect taxes, duties, imposts, and excises;"² "to establish post-offices and post-roads."³

The exercise of these comprehensive powers may be said to be subject to these limitations: "Direct taxes shall be apportioned among the several States * * * according to their respective numbers;" "no capitation or other direct tax shall be laid, unless in proportion to the census or enumeration hereinbefore directed to be taken;"⁴ "no tax or duty shall be laid on articles exported from any State;"⁵ "no preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another, nor shall vessels bound to or from one State be obliged to enter, clear, or pay duties in another;"⁶ "no person shall be * * * deprived of life, liberty, or property without due process of law;"⁷ "the citizens of each State shall be entitled to all privileges and immunities of citizens in the several States."⁸

The above powers and limitations have been the subject of a very large number of decisions by the Supreme Court. As thus interpreted the provisions may be said to measure the power of Congress over interstate commerce and the extent to which such control has been taken from the States. The conclusions may be stated first in general terms and afterwards in the form of specific applications. In general terms these conclusions are warranted: In the matter of interstate commerce the United States are but one country. (*Robbins v. Shelby Taxing District*, 120 U. S., 489, 494.) What is commerce is to be determined by the usages of the commercial world and not by the declaration of a particular State. (*Bowman v. Chicago & N. W. Ry.*, 125 U. S., 465; *Leisy v. Hardin*, 135 U. S., 100.) The reasons which may have caused the framers of the Constitution to repose the power to regulate commerce in Congress do not affect or limit the extent of the power. (*Leisy v. Hardin*, 135 U. S., 100; *Addyston Pipe & Steel Co. v. United States*, 20 S. C. R., 96.) When Congress has not acted its inaction is to be taken as an indication of its will that commerce shall be free from any restrictions. (*Robbins v. Shelby Taxing District*, 120 U. S., 493.) State laws passed to regulate interstate commerce are invalid. (*Gibbons v. Ogden*, 9 Wheat., 1.) State laws passed with another intent or in the reasonable exercise of the police power, but which incidentally affect interstate commerce, are valid if local in operation and reasonable in their incidental effect upon such commerce. (*Wilson v. Blackbird Creek Marsh Co.*, 2 Pet., 245; *Mayor v. Milns*, 11 Pet., 102; *Cooley v. Board of Wardens*, 12 How., 299; *County of Mobile v. Kimball*, 102 U. S., 691; *Morgan Steamship Co. v. Louisiana*, 118 U. S., 455; *Plumley v. Massachusetts*, 155 U. S., 461; *Hennington v. Georgia*, 163 U. S., 299; *Patapsco Guano Co. v. North Carolina*, 171 U. S., 345; *Lake Shore & Mich. So. Ry. v. Ohio*, 173 U. S., 285.) But State laws which unreasonably affect interstate commerce, although passed for local purposes or in the exercise of the police power, are invalid. (*Passenger Cases*, 7 How., 283; *Welton v. Missouri*, 91 U. S., 275; *Walling v. Michigan*, 116 U. S., 446; *Wabash, etc., R. v. Illinois*, 118 U. S., 557; *Robbins v. Shelby Taxing District*, 120 U. S., 489; *Leisy v. Hardin*, 135 U. S., 100; *Schollenberger v. Pennsylvania*, 171 U. S., 1.)

The application of these general conclusions to specific cases enables us to appreciate the comparative impotence of the States in the matter of controlling interstate commerce or the persons or corporations engaged in it. A State can not exclude a foreign corporation engaged in interstate commerce. (*Pensacola Telegraph Co. v.*

¹Art. I, § 8.
²Art. I, § 8.

³Art. I, § 8, 1.
⁴Art. I, § 8.

⁵Art. I, § 7.
⁶Amend. V.

⁷Art. I, § 9.
⁸Art. IV, 2, 1.

⁹Art. I, § 4.

Western Union Telegraph Co., 96 U. S., 1; *Crutcher v. Kentucky*, 141 U. S., 47.) A State can not tax a corporation upon its interstate commerce (*Brown v. Maryland*, 12 Wheat., 419; *State Freight Tax*, 15 Wall., 232; *Gloucester Ferry Co. v. Pennsylvania*, 114 U. S., 196), not even though created under its own laws (*Philadelphia, etc., Steamship Co. v. Pennsylvania*, 122 U. S., 326). Nor can it tax the agents of such a corporation or of a natural person for the privilege of doing business in the State. (*Walling v. Michigan*, 118 U. S., 446; *Robbins v. Shelby Taxing District*, 120 U. S., 489.) A State can not fix the toll on a bridge connecting it with a sister State and owned by one of its own corporations. (*Covington, etc., Bridge Co. v. Kentucky*, 154 U. S., 204.) A State can not fix a rate for carrying interstate commerce. (*Wabash, etc., Rwy. v. Illinois*, 118 U. S., 557.) A State can not absolutely fix the rates for the carriage of domestic (intrastate) commerce, for if its rate be held unreasonably low the legislature deprives the carrier of property without due process of law. (Fourteenth Amendment; *Smyth v. Ames*, 169 U. S., 466.) A State can not require carriers to sell 1,000-mile tickets at less than the usual rate fixed for other tickets. (*Lake Shore and Mich. S. Rwy. v. Smith*, 173 U. S., 684.) A State can not exclude oleomargarine (*Schollenberger v. Pennsylvania*, 171 U. S., 1; *Collins v. New Hampshire*, 171 U. S., 30); nor intoxicating liquors (*Bowman v. Chicago and N. W. Rwy.*, 125 U. S., 465; *Leisy v. Hardin*, 135 U. S., 100; *Scott v. Donald*, 165 U. S., 58); nor immigrants (*Henderson v. New York*, 92 U. S., 259); nor even "lewd and debauched women" (*Chy Lung v. Freeman*, 92 U. S., 275).

In the exercise of its police power a State is permitted to legislate for local purposes affecting the health, morals, safety, or convenience of its people, provided the legislation does not directly or unreasonably affect interstate commerce. A State may pass local pilotage laws (*Cooley v. Board of Wardens*, 12 How., 299); harbor improvement laws (*County of Mobile v. Kimball*, 102 U. S., 691); quarantine laws (*Morgan Steamship Co. v. Louisiana*, 118 U. S., 455); laws forbidding the heating of cars with stoves (*New York, etc., R. v. New York*, 165 U. S., 628); laws forbidding the running of Sunday freight trains (*Hennington v. Georgia*, 163 U. S., 299); laws

163 U. S., 142); laws requiring the prompt delivery of telegrams (*Western Union Tel. Co. v. James*, 162 U. S., 650); laws to prevent fraud in the sale of oleomargarine (*Plumley v. Massachusetts*, 155 U. S., 461); reasonable inspection laws (*Potapscow Guano Co. v. North Carolina*, 171 U. S., 345); but not if unreasonable or a cover for the regulation of commerce (*Minnesota v. Barber*, 136 U. S., 313; *Brimmer v. Rebman*, 138 U. S., 78; *Scott v. Donald*, 165 U. S., 58).

While the States are thus restricted and limited in their control of interstate commerce and of persons and corporations engaged in it, the United States are equally circumscribed in their control of nontrading enterprises and of corporations not engaged in interstate commerce or in some business over which the Constitution gives Congress authority. As was held in the *Knight* case (156 U. S., 1), the antitrust law does not extend to a combination for the manufacture of sugar, because manufacture is not trade or commerce. Congress, therefore, could not suppress a monopoly for the manufacture of sugar, while the States could not suppress a monopoly for the interstate sale of sugar. The States could exclude the manufacturing corporations, for since a corporation is not a citizen within the meaning of Article IV, section 2, subsection 1, of the Constitution, it is not entitled to the privileges and immunities of citizens in the several States. (*Blake v. McClung*, 172 U. S., 239; *Orient Ins. Co. v. Daggs*, 172 U. S., 557.) But the States could not exclude the trading corporations, for the States can not regulate interstate commerce. If, then, the corporations are both manufacturing and trading corporations, how are they to be dealt with? It is obvious that the product of the sugar combination is to go largely into interstate commerce and will pass beyond the control of the States. If one State offers a refuge to the manufacturing corporations, the other States are powerless. Forty-four States may pass uniform laws to control such combinations; the forty-fifth may render this combined action in large part nugatory by chartering and protecting the very combination which it is the object of the forty-four to suppress. In such case it would require a harmony of action among the States to prevent a monopolistic manufacturing combination and cooperative action on the part of the United States to prevent a monopolistic trading combination. In other words, forty-six distinct jurisdictions must work in concert in order to protect all the people of the United States from combinations formed to control the prices of raw material and the output and price of the finished products.

Under its power to regulate commerce Congress has thus far passed but two acts calculated to aid the States in the control of monopolistic enterprises, namely, the interstate-commerce act of 1887 and the antitrust act of 1890.

The interstate-commerce act was passed to regulate interstate transportation rates after it had been decided (*Wabash, etc., R. v. Illinois*, 118 U. S., 557) that the States could not regulate such rates within their own territory. This act, as interpreted by the courts, places upon interstate carriers a prohibition against unjust or unreasonable rates and against unjust discrimination, but otherwise leaves them as free as they were at common law to make special contracts looking to the increase of business, to classify traffic, to adjust and apportion rates so as to meet the necessities of commerce, and generally to manage their own business in their own way. (*Interstate Commerce Commission v. Railway Co.*, 167 U. S., 479.) The commission appointed under the act is charged mainly with the duty of investigating questions as to the reasonableness of the rates established or questions as to unjust discriminations, and is not authorized to fix rates. (*Interstate Commerce Commission v. Alabama Midland Rwy.*, 168 U. S., 144.) To this end it may require the attendance of witnesses and the production of books and papers. (*Interstate Commerce Commission v. Brimson*, 154 U. S., 447; 155 U. S., 3.) But its powers as thus defined are not extensive, and perhaps the criticism of Mr. Justice Harlan (168 U. S., 176) is justified that "it has been shorn by judicial interpretation of authority to do anything of an effective character."

The antitrust act (26 Stat. L., 209) was passed to prohibit monopolistic combinations in restraint of interstate or international commerce. It has been the subject of several adjudications by the Supreme Court, and from these it is possible to deduce the following conclusions as to the effect of the legislation: (1) A restraint of business not included in the category of interstate commerce is not within the prohibitions of the act (*United States v. E. C. Knight Co.*, 156 U. S., 1); (2) a combination which, although affecting interstate commerce, does not restrain it—that is, does not exclude the operation of competition—is not within the act (*Anderson v. United States*, 171 U. S., 604); (3) any combination which restrains interstate commerce, whether such restraint be illegal at common law or not, is illegal under the act and may be enjoined at the suit of the United States, although the rates fixed by the combination may be reasonable and fair (*United States v. Trans-Missouri Freight Ass'n*, 166 U. S., 290; *United States v. Joint Traffic Ass'n*, 171 U. S., 506; *Addyston Pipe and Steel Co. v. United States*, 20 S. C. R., 96).

The importance of the last decision rendered by the Supreme Court under this act, accompanied as it is by the rare spectacle of a unanimous court, justifies more than a passing reference. In *Addyston Pipe and Steel Co. v. United States* a combination of iron-pipe manufacturers was enjoined from carrying out a contract the purpose of which was to exclude competition among the parties to the contract. From the opinion of Mr. Justice Peckham, concurred in by the whole court, we gather these instructive conclusions as to the powers of Congress under the commerce clause of the Federal Constitution and the extent to which it is deemed to have exercised those powers in the passage of the antitrust law:

(1) The reasons which may have caused the framers of the Constitution to repose the power to regulate interstate commerce in Congress do not affect or limit the extent of the power itself.

(2) The power is not limited or restricted by the constitutional guaranties of private rights, such as the liberty to enter into contracts, under the provision that "no person shall be deprived of life, liberty, or property without due process of law."

(3) On the contrary, the provision regarding the "liberty" of a person is itself limited by the commerce clause, and the power of Congress to regulate interstate commerce carries with it the right to enact laws forbidding persons to enter into private contracts which directly and substantially (and not merely indirectly, remotely, incidentally, and collaterally) regulate to a greater or less degree commerce among the States.

(4) Under the antitrust act any combination which directly restrains the purchase, sale, or exchange of commodities among the several States is illegal, and if it destroys competition it must be held to restrain trade. The reasonableness of the restriction is of no consequence.

This establishes a radical rule concerning the power of Congress over interstate commerce and a radical rule in the application of the provisions of the antitrust act. It may be said to mark the decisive line between the rights of the individual under the Constitution and the rights of the public to control the individual for public ends. Happily it gives full force and effect to Congressional legislation intended to protect the people from monopolistic combinations and points the way toward future constitutional legislation.

We must not, however, lose sight of the division between State and Federal authority. Taking the *Knights* case (156 U. S., 1) at the one extreme and the *Addyston* case (20 S. C. R., 96) at the other, we see how nicely the State control and the Federal

control of monopolistic combinations are balanced, and how difficult it may be to adjust the balance in such a way as to prevent all the evils aimed at and at the same time keep within the constitutional power of each government. Congress could not regulate the sugar monopoly; the States could not regulate the iron-pipe monopoly. If now, in either case, the combinations were to take the form of a corporation and not a trust the difficulties might be increased. To be sure, if neither a State nor the United States would charter the corporation the scheme of corporate monopoly would fail. But too many States are bidding for such corporations to enable us to entertain the hope that a corporate combination can not somewhere find a congenial and fostering home. And should every State refuse to welcome the corporation, there yet remains the possibility of securing corporate charters in foreign countries. I note, for instance, in the New York Tribune, for January 7, that Quebec is the latest bidder for corporate consideration, and that a representative of that Province says that, "In case of the development of drastic 'antitrust' legislation in the United States, to go to Quebec will be the easy and perhaps only solution for many of the large industrial combinations in the United States." No State can forbid the entrance of such a corporation for international or interstate trade, although probably the United States could do so, unless restrained by some treaty provision. On the other hand, the United States could not forbid its entrance for manufacturing or nontrading purposes, although any State could do so. Hence a very harmonious scheme among the governments of the States and the United States would be necessary to prevent the successful operations of such corporations.

The joint control of corporations by the States and the National Government, while it has led to a good many inconveniences, has not heretofore seemed wholly inadequate to meet existing conditions. But with the present marked tendency to consolidate competing interests into one corporation, and with the present marked tendency to offer to such corporate aggregations a favorable habitat, the question becomes a practical and pressing one whether the dual control heretofore exercised ought not to make way for an undivided control—not of interstate commerce, for that is already solely in the hands of Congress—but of corporations engaged in interstate commerce, either by giving to the States, if that be possible, full power over corporations engaged in interstate commerce, or by reserving to the Federal Government, if that be possible, full control over them.

Turning now to the second possible solution of the problem we are met at the threshold with these questions: May Congress delegate to the States full control over corporations engaged in interstate commerce? May it place such corporations in the same position as concerns their right to do business in a State as that occupied by nontrading corporations? May it enact constitutionally that a corporation engaged in interstate commerce shall upon entering the territory of a State be subject to the laws of that State, and that its right to enter the territory of a State shall depend upon the laws of that State?

There is no direct authority known to me upon this point. But such authority as there is casting light upon the problem seems to support the thesis that Congress may grant to a State regulative power over interstate commerce, which, in the absence of such legislation, the State would not possess. Thus where the Supreme Court had held invalid a State law authorizing a bridge over the Ohio because such bridge obstructed navigation, it thereafter held that a subsequent act of Congress declaring such bridge to be a lawful structure superseded its former judgment and validated the State legislation. (*Pennsylvania v. Wheeling and Belmont Bridge Co.*, 18 How., 421.) Again, after the Supreme Court had decided (*Leisy v. Hardin*, 135 U. S., 100) that State legislation forbidding the sale of intoxicating liquors imported into the

liquors should . . . of its power to regulate commerce, and that the State laws thereafter operated upon and affected such liquors (*In re Rahrer*, 140 U. S., 545). It is true that the court is careful to say that Congress did not delegate thereby to the States its power to regulate interstate commerce, nor use terms of permission to the States to act, but that it simply removed an impediment to the enforcement of State laws created by the absence of a specific indication of the will of Congress. It is familiar doctrine that where Congress has not acted its silence is to be taken as an indication of its will that commerce shall be free. By speaking in this case Congress repelled this presumption and indicated how, and to what extent, interstate trade in a particular article of commerce should be restricted. But this it did by subjecting the article to the laws of the various States. It is obvious that Congress thereby gave to every State power to regulate interstate traffic in intoxicating liquors to the extent of prohibiting a resale in the original package.

In the recent case of *Scott v. Donald* (165 U. S., 58, 107), arising under the South Carolina dispensary law, it was held that the law was invalid so far as it forbade the shipping of liquor into the State for the use of the consignee, because the Wilson Act did not authorize the State law to operate until the liquor was in the State and at its destination. In *Rhodes v. Iowa* (170 U. S., 412) it was held that the Wilson Act did not permit the State to stop the liquor at the State line or to operate upon it until it was in the hands of the consignee. In *Vance v. Vandercook Co.* (170 U. S., 438) it was held, under the South Carolina dispensary law, that the law as amended, was valid so far as it forbade the sale of original packages, although the State did not prohibit the sale of such liquors altogether, but merely regulated it.

Another example of Congressional delegation of power to the States over interstate commerce is found in the act (U. S. Rev. Stat., sec. 4280) subjecting explosives in transit through a State to the laws of the State and authorizing States to prohibit the introduction of such explosives for sale or use at their discretion. A very early example of the same sort of legislation is found in the act of February 28, 1803 (2 Stat. L., 205), forbidding the importation from abroad of negroes into any State whose laws forbade such importation. In the same way State quarantine laws (1 Stat. L., 619) and State pilotage laws (U. S. Rev. Stat., 4235, 4236) have by Congressional action been made operative upon international and interstate commerce. So also Congress has yielded to the States power to tax the shares of national banks (U. S. Rev. Stat., 5219).

There is at present a Federal statute forbidding the importation of convict-made goods (30 Stat. L., 211, § 31). A similar State law forbidding the introduction into the State of convict-made goods has been declared unconstitutional because regulative of interstate commerce (*People v. Hawkins*, 157 N. Y., 1). But if, following the suggestion of Governor Roosevelt in his last annual message, Congress should enact that the laws of a State shall operate upon and affect convict-made goods brought from another State equally with those made and sold in the State, would not this be a valid method of regulating commerce within the decision based upon the Wilson Act (*In re Rahrer*, 140 U. S., 545)?

The civil-rights laws of the States have been held invalid so far as they regulate interstate commerce (*Hall v. De Cuir*, 95 U. S., 485). But if Congress should provide that such laws shall operate upon and affect interstate commerce, would not such a law fall within the same doctrine?

If, now, Congress may enact that the laws of a State passed to restrict the sale of intoxicating liquors, or the dangers arising from the transportation and use of explosives, shall operate upon and affect interstate commerce, and if, as suggested, Congress may enact that the laws of a State concerning convict-made goods or civil rights, etc., shall operate upon and affect interstate commerce, is it not reasonable to hold that it may enact that the laws of a State concerning foreign corporations shall operate upon and affect those engaged in interstate commerce equally with those engaged in insurance (*Paul v. Virginia*, 8 Wall., 168) or bill brokerage (*Nathan v. Louisiana*, 8 How., 73) not held to be engaged in interstate commerce? It must be remembered that a corporation is not a citizen within the meaning of Article IV, section 2, of the Federal Constitution, and all that prevents a State from controlling a foreign corporation is the commerce clause. If, in the exercise of its powers under that clause, Congress should remove the impediment to State regulation of such corporations, there would seem to be no reason why the States could not protect themselves by their own laws against the operations of monopolistic combinations. They may do so now as to combinations, whether in the form of corporations or "trusts," created for nontrading purposes. They could do so then as to trading corporations, and thus a very complete scheme of State control over corporations could be worked out.

To sum up: A corporation has no inherent right to go into another State than that of its origin. The only corporations that escape this rule are those engaged in interstate commerce (or those chartered by Congress, which are not now under consideration). Congress, in the exercise of its powers to regulate commerce among the States and with foreign nations, may remove the impediment to the operation of State laws upon such commerce. It may, therefore, remove the impediment to the operation of State laws upon corporations engaged in interstate or international commerce. This would commit the control of all domestic and foreign corporations in any State to the legislature of that State.

Turning now to the third possible solution of the problem, we face the inquiry whether the United States may, under the Federal Constitution, limit the right of corporations to engage in interstate commerce to corporations created by Congress, and thus take to itself the entire practical control of such corporate enterprises.

There are, perhaps, three ways in which Congress could effectively exercise a power to restrict or destroy the business of State corporations engaged in interstate

commerce. (1) It might forbid to such corporations as fall within a definition of monopoly the use of the mails. (2) It might tax State corporations upon their interstate commerce. (3) It might directly prohibit State corporations from engaging in interstate commerce.

Congress has exercised the right to exclude from the mails letters or circulars concerning lotteries or other enterprises in which there is the element of chance (act of September 19, 1890; 26 Stat. L., 465), and this legislation has been held constitutional. (*In re Jackson*, 96 U. S., 727; *In re Rapier*, 143 U. S., 110.) It has exercised the right to prohibit the carriage of indecent publications and articles in the mails or by interstate carriers. (25 Stat. L., 496; 29 Stat. L., 512.) It has forbidden the transportation of diseased cattle or meat which has been exposed to infection. (23 Stat. L., 31; 26 Stat. L., 1089.) All of these acts are a proper exercise of the Federal police power. But it is now clear that the police power is not confined to the protection of health or morals or safety, but extends to the protection of the reasonable and convenient exercise of private rights. (*Lake Shore & Mich. So. Rwy. v. Ohio*, 173 U. S. 285.) Why, then, may not Congress denounce monopolistic combinations, whether in the form of corporations or not, as a hindrance to such rights, and deny to such combinations the use of the mails? If it may denounce gambling contracts into which persons voluntarily enter, and forbid such contracts to be made or executed by the use of the mails, a fortiori it may denounce a monopoly which compels the people at large to buy the necessities of life at a price fixed by the monopoly, and may deny to it the use of the mails.

In like manner, Congress has exercised its power of taxation to render impossible, because unprofitable, the continuance of a business by a State corporation over which Congress desired to assume the control vested in it by the Federal Constitution.

When the National Government determined to suppress the evils arising from the want of uniformity and adequate control in the laws of the various States authorizing or permitting the issue of circulating notes as a medium of exchange, it resorted to the expedient of providing for the formation of banking corporations under a Federal law and the reorganization of State banking corporations under the Federal law, and supplemented this legislation with a tax on the issues of State banks which rendered it impossible for them to continue their issues at a profit. This legislation was sustained as within the constitutional powers of Congress. (*Veazie Bank v. Fenno*, 8 Wall., 533; *National Bank v. United States*, 101 U. S., 1.) And it was held that it required no concurrent action on the part of the States to enable the State corporations to reorganize as Federal corporations. (*Casey v. Galli*, 94 U. S., 673.)

The logical result of this decision was recognized by the court. Mr. Justice Nelson, in dissenting from the judgment of the court in *Veazie Bank v. Fenno* (p. 556), pointed it out very distinctly in these words: "It is true that the present decision strikes only at the power by create banks, but no person can fail to see that the principle involved affects the power to create any other description of corporation, such as railroads, turnpikes, manufacturing companies, and others."

The legislation in question, supplemented by the decision that it is a valid exercise of the Federal power, suggests the method of securing a uniform Federal control of corporations engaged in interstate commerce. A national act which should provide for the incorporation of trading companies and the reorganization of State trading corporations under the Federal act, supplemented by a tax upon the interstate business of the State corporations, would lead to a uniformity similar to that attained in the case of banks of issue, and would place all such interstate business, so far as it is carried on by corporations, strictly within the control of the Federal power.

But would such legislation be constitutional? I believe that it would, and for the following reasons:

First. The power to regulate interstate commerce is unquestionably confided exclusively to Congress, and is restricted, if at all, by Congressional acquiescence in the exercise of a concurrent power by the States so far as that operates for merely local purposes and is not designed to regulate, and does not directly regulate, such commerce. (*Gibbons v. Ogden*, 9 Wheat., 1; *Brown v. Maryland*, 12 Wheat., 419; *Cooley v. Port Wardens*, 12 How., 299; *The License Cases*, 5 How., 504; *County of Mobile v. Kimball*, 102 U. S., 691; *Bowman v. Chicago & N. W. Ry.*, 125 U. S., 465; *Leisy v. Hardin*, 135 U. S., 100; *In re Rahrer*, 140 U. S., 545; *Addyston Pipe & Steel Co. v. United States*, 20 S. C. R., 96.)

Second. Where Congress is given a power it is given the supplementary power "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers" (Const. Art. I, sec. 8, subs. 18), and this includes the power to create such corporations or agencies of the Government as may be deemed necessary. (*McCulloch v. Maryland*, 4 Wheat., 316; *Luxton v. North River Bridge Co.*, 153 U. S., 525.) In the exercise of this power Congress has created banking corporations

(1 Stat. L., 191; 12 Ib., 666; 13 Ib., 99; 21 Ib., 66; 22 Ib., 162; Rev. Stat., p. 992); railroad and telegraph companies (12 Stat. L., 489; 13 Ib., 365; 14 Ib., 292; 16 Ib., 573; 17 Ib., 59); bridge companies (26 Stat. L., 268); the Nicaragua Canal Company (25 Stat. L., 673); savings and trust company (13 Stat. L., 510); insurance company, though perhaps this was while acting as a legislature for the District of Columbia (13 Stat. L., 428; 27 Ib., 29), and perhaps other corporations.

It has been held that the States can not tax such corporations without the consent of Congress (*California v. Pacific R. R. Co.*, 127 U. S., 1), and that under the act of March 3, 1875, they are entitled to remove their causes into the Federal courts (*Pacific Railroad Removal Cases*, 115 U. S., 2), though doubtless Congress could deny them this right if it thought fit.

Such corporations might, and probably would, do a domestic business within the States, but if so they would be subject to the rule that where Congress creates a corporation and remains silent as to its merely domestic business, its silence is equivalent to a declaration of intention that the corporation should be subject to State laws as to such domestic business. (*Reagan v. Mercantile Trust Co.*, 154 U. S., 413; *Smyth v. Ames*, 169 U. S., 466, 519-522.)

Third. A tax upon the commercial operations of corporations engaged in interstate commerce is not a direct tax, for it is not a tax upon real or personal property, or upon the income derived from real or personal property. In *Pollock v. Farmers' Loan and Trust Company* (158 U. S., 601, 637) the majority of the court, while holding a tax on the income of realty and personalty a direct tax, are careful to state that "we do not mean to say that an act * * * might not lay excise taxes on business, privileges, employments, and vocations." In *Nicol v. Ames* (173 U. S., 509) the court held the stamp tax on sales made at an exchange or board of trade to be an indirect tax or excise, and not a direct tax on the property sold or on the members who engaged in the business, although the tax is measured by the value of the property sold. The same case held further that the tax was not objectionable for want of uniformity. It is true the court places its decision upon the ground that it is a tax upon the facilities offered at exchanges, and suggests that a tax upon a sale made in any place would be practically a tax upon property, because taking no notice of any kind of privilege or facility. But the privilege or facility offered to a corporation to engage in interstate commerce is of two kinds: First, the privilege to be a corporation, which is derived from the State and can not be taxed by the Federal Government, and, second, the privilege to engage in interstate commerce, which is beyond the control of the States and within the control of Congress, and may therefore be taxed by the power that confers or permits it. This offers, it seems to me, the basis of classification which is necessary to the laying of such a tax and brings the case into harmony with the leading cases on Federal taxation. (*Veazie Bank v. Fenno*, 8 Wall., 533; *National Bank v. United States*, 101 U. S., 1; *Scholey v. Rew*, 23 Wall., 331; *Pollock v. Farmers' Loan and Trust Company*, 157 U. S., 429, on rehearing 158 U. S., 601; *Nicol v. Ames*, 173 U. S., 509.)

Practical difficulties might arise in determining when an article sold by a corporation has become a part of interstate commerce, and so the transaction one subject to the privilege tax; but this difficulty is no greater than that now experienced in determining the same question where the right of a State to tax or regulate interstate commerce is questioned. (*Brown v. Maryland*, 12 Wheat., 419; *Brown v. Houston*, 114 U. S., 622; *Cole v. Errol*, 116 U. S., 517; *Leisy v. Hardin*, 135 U. S., 100; *Pittsburg, etc., Co. v. Bates*, 156 U. S., 577; *State v. Engle*, 34 N. J. L., 425.)

Probably Congress might, if it saw fit, act directly by prohibiting State corporations from engaging in interstate commerce. It must be remembered that a corporation has no rights outside of the State of its origin except such rights as the State into which it goes is pleased to grant to it, except that the State into which it goes can not deny it the right to engage in interstate commerce, because the State has no power over such commerce. In other words, it is not the strength of the corporation but

: power to regulate

commerce. It therefore may do what the State may not do, forbid a corporation to engage in interstate commerce. It can not be that in the division of powers anything has been lost. If the State has lost, the nation has gained. If the corporation could have been prevented from entering another State before the Constitution was in effect, the power to prevent it must still be lodged somewhere, unless it has been expressly denied by the Constitution to both State and nation. No such denial of the power can be found in that document. Therefore, since the States have no longer the power to prevent a corporation from engaging in interstate commerce, the nation must have become the recipient of the power by the very terms of the pro-

vision that impliedly denied it to the States. I am unable to see any escape, therefore, from the conclusion that Congress, under the power to regulate commerce among the States, may fix the terms on which corporations may conduct such business or may prohibit them from engaging in it at all. If this be not true, then a single State may create an artificial being that is not a citizen of any State (save merely for jurisdictional purposes) or of the United States, and which no other State or States nor yet the United States can control when it passes outside of the State of its origin. It is impossible to hold that one State can thus foist upon the other States and upon the United States an ungovernable creature of this sort, a legalized and irresponsible Frankenstein.

Whether, finally, we are to go on under the present system of dual control, or whether we are to have a system of exclusive State control, or whether we are to have a system of exclusive Federal control, seems to be within the province of Congress to decide. The present system rests upon a long development and commends itself to the conservative and the cautious. Whether it is satisfactory or can be made so is for the economists and statesmen to determine. The system of exclusive State control would doubtless lead to different results in different States, and while it might create some confusion and inconvenience, and even hardship, it would eventually furnish a basis for a comparative study of the differing experiments. Whether this loss in uniformity would overbalance the gain from diversity I do not pretend to say. I merely point out that such diversity would furnish the data for a later movement looking toward uniformity in case such a movement should later seem desirable. The system of exclusive Federal control would seem, perhaps, the logical outcome of the constitutional provision giving to Congress the power to regulate interstate commerce. I am even disposed to think that it will be the ultimate solution of the present problems. Whether the time is now ripe for it, or whether we need rather to proceed first with tentative experiments under one of the other two methods, is a question upon which we may well hear more before we make haste to decide.

APPENDIX.

CHARTERS AND BY-LAWS.

NOTE.—The trust agreement of The Sugar Refineries' Company (the so-called Sugar Trust) can be found on page 3 of the report of the Bacon Committee of 1888 (report in relation to the Sugar Trust and the Standard Oil Trust by the Committee on Manufactures, House of Representatives, Fiftieth Congress, first session. House Reports, vol. 9). For the trust agreement of the Distillers' and Cattle Feeders' Trust (the so-called Whisky Trust), see page 198 of the present volume. For the articles of incorporation of the Distilling and Cattle Feeding Company, see page 218. See also the report of the Whisky Trust investigation of the Fifty-second Congress, second session (1893), H. R. No. 2601, vol. 3.

THE STANDARD OIL TRUST AGREEMENT.

This agreement, made and entered upon this second day of January, A. D. 1882, by and between all the persons who shall now or may hereafter execute the same as parties thereto, witnesseth:

I. It is intended that the parties to this agreement shall embrace three classes, to wit:

(1) All the stockholders and members of the following corporations and limited partnerships, to wit:

Acme Oil Co. (New York), Acme Oil Co. (Pennsylvania), Atlantic Refining Co., of Phila.; Bush & Co. Limited, Camden Consolidated Oil Co., Elizabethport Acid Works, Imperial Refining Co., Limited, Chas. Pratt & Co., Paine, Ablett & Co., Limited, Standard Oil Co. (Ohio), Standard Oil Co. (Pittsburg), Smith's Ferry Oil Trans. Co., Solar Oil Co. Limited, Sone & Fleming Mfg. Co., Limited.

Also all the stockholders and members of such other corporations and limited partnerships as may hereafter join in this agreement at the request of the trustees herein provided for.

(2) The following individuals, to wit:

W. C. Andrews, John D. Archbold, Lide K. Arter, J. A. Bostwick, Benj. Brewster, D. Bushnell, Thomas C. Bushnell, J. N. Camden, Henry L. Davis, H. M. Flagler, Mrs. H. M. Flagler, H. M. Hanna, and George W. Chapin, D. M. Harkness, D. M. Harkness, trustee; S. V. Harkness, John Huntington, H. A. Hutchins, Chas. F. G. Heye, O. B. Jennings, Chas. Lockhart, A. M. McGregor, Wm. H. Macy, Wm. H. Macy, jr., estate of Josiah Macy, jr., Wm. H. Macy, jr., executor; O. H. Payne, O. H. Payne, trustee; Chas. Pratt, Horace A. Pratt, C. M. Pratt, A. J. Pouch, John D. Rockefeller, Wm. Rockefeller, Henry H. Rogers, W. P. Thompson, J. J. Vandergrift, Wm. T. Wardwell, W. G. Warden, Joseph L. Warden; Warden, Frew & Co., Louise C. Wheaton, Julia H. York, George H. Vilas M. R. Keith, Geo. F. Chester, trustees. *

Also all such individuals as may hereafter join in this agreement at the request of the trustees herein provided for.

(3) A portion of the stockholders and members of the following corporations and limited partnerships, to wit:

American Lubricating Oil Co., Baltimore United Oil Co., Beacon Oil Co., Bush & Denslow Manuf'g Co., Central Refining Co., of Pittsburg; Chesebrough Manuf'g Co., Chess-Carley Co., Consolidated Tank Line Co., Inland Oil Co., Keystone Refining Co., Maverick Oil Co., National Transit Co., Portland Kerosene Oil Co., Producer's Con'd Land and Petroleum Co., Signal Oil Works, Limited, Thompson and Bedford Co. Limited, Devoe Manuf'g Co., Eclipse Lubricating Oil Co., Limited, Empire Refining Co., Limited, Franklin Pipe Co., Limited, Galena Oil Works, Limited, Galena Farm Oil Co., Limited, Germania Mining Co., Vacuum Oil Co., H. C. Van Tine & Co., Limited, Waters-Pierce Oil Co.

Also stockholders and members (not being all thereof) of other corporations and limited partnerships who may hereafter join in this agreement at the request of the trustees herein provided for.

II. The parties hereto do covenant and agree to and with each other, each in consideration of the mutual covenants and agreements of the others, as follows:

(1) As soon as practicable a corporation shall be formed in each of the following States, under the laws thereof, to-wit: Ohio, New York, Pennsylvania and New Jersey; provided, however, that instead of organizing a new corporation, any existing charter and organization may be used for the purpose when it can advantageously be done.

(2) The purposes and powers of said corporations shall be to mine for, produce, manufacture, refine, and deal in petroleum and all its products, and all the materials used in such business, and transact other business collateral thereto. But other purposes and powers shall be embraced in the several charters such as shall seem expedient to the parties procuring the charter, or, if necessary to comply with the law, the powers aforesaid may be restricted and reduced.

(3) At any time hereafter, when it may seem advisable to the trustees herein provided for, similar corporations may be formed in other States and Territories.

(4) Each of said corporations shall be known as the Standard Oil Co. of _____ (and here shall follow the name of the State or Territory by virtue of the laws of which said corporation is organized).

(5) The capital stock of each of said corporations shall be fixed at such an amount as may seem necessary and advisable to the parties organizing the same, in view of the purpose to be accomplished.

(6) The shares of stock of each of said corporations shall be issued only for money, property, or assets equal at a fair valuation to the par value of the stock delivered therefor.

(7) All of the property, real and personal, assets, and business of each and all of the corporations and limited partnerships mentioned or embraced in class (1) shall be transferred to and vested in the said several Standard Oil companies. All of the property, assets, and business in or of each particular State shall be transferred to and vested in the Standard Oil Co. of that particular State, and in order to accomplish such purpose the directors and managers of each and all of the several corporations and limited partnerships mentioned in class first are hereby authorized and directed by the stockholders and members thereof (all of them being parties to this agreement) to sell, assign, transfer, convey, and make over, for the consideration hereinafter mentioned, to the Standard Oil Co. or companies of the proper State or States, as soon as said corporations are organized and ready to receive the same, all the property, real and personal, assets, and business of said corporations and limited partnerships. Correct schedules of such property, assets, and business shall accompany each transfer.

(8) The individuals embraced in class second of this agreement do each for himself agree, for the consideration hereinafter mentioned, to sell, assign, transfer, convey, and set over all the property, real and personal, assets, and business mentioned and embraced in schedules accompanying such sale and transfer to the Standard Oil Company or Companies of the proper State or States, as soon as the said corporations are organized and ready to receive the same.

(9) The parties embraced in class third of this agreement do covenant and agree to assign and transfer all of the stock held by them in the corporations or limited partnerships herein named, to the trustees herein provided for, for the consideration and upon the terms hereinafter set forth. It is understood and agreed that the said trustees and their successors may hereafter take the assignment of stocks in the same or similar companies upon the terms herein provided, and that whenever and as often as all the stocks of any corporation and limited partnership are vested in said trustees the proper steps may then be taken to have all the money, property, real and personal, of said corporation or partnership assigned and conveyed to the Standard Oil Company of the proper State on the terms and in the mode herein set forth, in which event the trustees shall receive stocks of the Standard Oil Company equal to the value of the money, property, and business assigned, to be held in place of the stocks of the company or companies assigning such property.

(10) The consideration for the transfer and conveyance of the money, property, and business aforesaid to each or any of the Standard Oil Companies shall be stock of the respective Standard Oil Company to which said transfer or conveyance is made, equal at par value to the appraised value of the money, property, and business so transferred. Said stock shall be delivered to the trustees hereinafter provided for, and their successors, and no stock of any of said companies shall ever be issued except for money, property, or business equal at least to the par value of the stock

so issued, nor shall any stock be issued by any of said companies for any purpose except to the trustees herein provided for, to be held subject to the trusts hereinafter specified. It is understood, however, that this provision is not intended to restrict the purchase, sale, and exchange of property of said Standard Oil Companies as fully as they may be authorized to do by their respective charters, provided only that no stock be issued therefor except to said trustees.

(11) The consideration for any stock delivered to said trustees as above provided for, as well as for stocks delivered to said trustees by persons mentioned or included in class third of this agreement, shall be the delivery by said trustees, to the persons entitled thereto, of trust certificates hereinafter provided for, equal at par value to the par value of the stocks of the said Standard Oil companies so received by said trustees, and equal to the appraised value of the stocks of other companies or partnerships delivered to said trustees. (The said appraised value shall be determined in a manner agreed upon by the parties in interest and said trustees.) It is understood and agreed, however, that the said trustees may, with any trust funds in their hands, in addition to the mode above provided, purchase the bonds and stocks of other companies engaged in business similar or collateral to the business of said Standard Oil companies on such terms and in such mode as they may deem advisable, and shall hold the same for the benefit of the owners of said trust certificates, and may sell, assign, transfer, and pledge such bonds and stocks whenever they may deem it advantageous to said trust so to do.

III. The trusts upon which said stocks shall be held, and the number, powers, and duties of said trustees, shall be as follows:

(1) The number of trustees shall be nine.

(2) J. D. Rockefeller, O. H. Payne, and Wm. Rockefeller are hereby appointed trustees, to hold their office until the first Wednesday of April, A. D. 1885.

(3) J. A. Bostwick, H. M. Flagler, and W. G. Warden are hereby appointed trustees, to hold their office until the first Wednesday of April, A. D. 1884.

(4) Chas. Pratt, Benj. Brewster, and John D. Archbold are hereby appointed trustees, to hold their office until the first Wednesday of April, A. D. 1883.

(5) Elections for trustees to succeed those herein appointed shall be held annually, at which election a sufficient number of trustees shall be elected to fill all vacancies occurring either from expiration of the term of office of trustee or from any other cause. All trustees shall be elected to hold their office for three years, except those elected to fill a vacancy arising from any cause except expiration of term, who shall be elected for the balance of the term of the trustee whose place they are elected to fill. Every trustee shall hold his office until his successor is elected.

(6) Trustees shall be elected by ballot by the owners of trust certificates or their proxies. At all meetings the owners of trust certificates who may be registered as such on the books of the trustees may vote in person or by proxy, and shall have one vote for each and every share of trust certificates standing in their names; but no such owner shall be entitled to vote upon any share which has not stood in his name thirty days prior to the day appointed for the election. The transfer books may be closed for thirty days immediately preceding the annual election. A majority of the shares represented at such election shall elect.

(7) The annual meeting of the owners of said trust certificates for the election of trustees and for other business shall be held at the office of the trustees in the city of New York on the first Wednesday of April of each year, unless the place of meeting be changed by the trustees, and said meeting may be adjourned from day to day until its business is completed. Special meetings of the owners of said trust certificates may be called by the majority of the trustees at such times and places as they may appoint. It shall also be the duty of the trustees to call a special meeting of holders of trust certificates whenever requested to do so by a petition signed by the holders of 10 per cent in value of such certificates. The business of such special meetings shall be confined to the object specified in the notice given therefor. Notice of the time and place of all meetings of the owners of trust certificates shall be given by personal notice as far as possible and by public notice in one of the principal newspapers in each State in which a Standard Oil Co. exists at least ten days before such meeting. At any meeting, a majority in the value of the holders of trust certificates represented consenting thereto, by-laws may be made, amended, or repealed relative to the mode of election of trustees and other business of the holders of trust certificates; provided, however, that said by-laws shall be in conformity with this agreement. By-laws may also be made, amended, and repealed at any meeting, by and with the consent of a majority in value of the holders of trust certificates, which alter this agreement relative to the number, powers, and duties of the trustees and to other matters tending to the more efficient accomplishment of the objects for which the trust is created, provided only that the essential intents and purposes of this agreement be not thereby changed.

(8) Whenever a vacancy occurs in the board of trustees more than sixty days prior to the annual meeting for the election of trustees, it shall be the duty of the remaining trustees to call a meeting of the owners of the Standard Oil Trust certificates for the purpose of electing a trustee or trustees to fill the vacancy or vacancies. If any vacancy occurs in the board of trustees, from any cause, within sixty days of the date of the annual meeting for the election of trustees, the vacancy may be filled by a majority of the remaining trustees, or, at their option, may remain vacant until the annual election.

(9) If, for any reason, at any time, a trustee or trustees shall be appointed by any court to fill any vacancy or vacancies in said board of trustees, the trustee or trustees so appointed shall hold his or the respective office or offices only until a successor or successors shall be elected in the manner above provided for.

(10) Whenever any change shall occur in the board of trustees, the legal title to the stock and other property held in trust shall pass to and vest in the successors of said trustees without any formal transfer thereof; but if at any time such formal transfer shall be deemed necessary or advisable it shall be the duty of the board of trustees to obtain the same, and it shall be the duty of any retiring trustee, or the administrator or executor of any deceased trustee, to make said transfer.

(11) The trustees shall prepare certificates, which shall show the interest of each beneficiary in said trust, and deliver them to the persons properly entitled thereto. They shall be divided into shares of the par value of \$100 each, and shall be known as "Standard Oil Trust certificates," and shall be issued subject to all the terms and conditions of this agreement. The trustees shall have power to agree upon and direct the form and contents of said certificates, and the mode in which they shall be signed, attested, and transferred. The certificates shall contain an express stipulation that the holders thereof shall be bound by the terms of this agreement, and by the by-laws herein provided for.

(12) No certificates shall be issued except for stocks and bonds held in trust, as herein provided for, and the par value of certificates issued by said trustees shall be equal to the par value of the stocks of said Standard Oil Companies, and the appraised value of other bonds and stocks held in trust. The various bonds, stocks, and moneys held under said trust shall be held for all parties in interest jointly, and the trust certificates so issued shall be the evidence of the interest held by the several parties in this trust. No duplicate certificates shall be issued by the trustees except upon surrender of the original certificate or certificates for cancellation, or upon satisfactory proof of the loss thereof, and in the latter case they shall require a sufficient bond of indemnity.

(13) The stocks of the various Standard Oil Companies held in trust by said trustees shall not be sold, assigned, or transferred by said trustees, or by the beneficiaries, or by both combined, so long as the trust endures. The stocks and bonds of other corporations held by said trustees may be by them exchanged or sold and the proceeds thereof distributed pro rata to the holders of trust certificates, or said proceeds may be held and reinvested by said trustees for the purposes and uses of the trust; provided, however, that said trustees may from time to time assign such shares of stock of said Standard Oil Companies as may be necessary to qualify any person or persons chosen or to be chosen as directors and officers of any of said Standard Oil Companies.

(14) It shall be the duty of said trustees to receive and safely to keep all interest and dividends declared and paid upon any of the said bonds, stocks, and moneys held by them in trust, and to distribute all moneys received from such sources or from sales of trust property or otherwise by declaring and paying dividends upon the Standard Trust certificates as funds accumulate, which in their judgment are not needed for the uses and expenses of said trust. The trustees shall, however, keep separate accounts and receipts from interest and dividends, and of receipts from sales or transfers of trust property, and in making any distribution of trust funds, in which moneys derived from sales or transfers shall be included, shall render the holders of trust certificates a statement showing what amount of the fund distributed has been derived from such sales or transfers. The said trustees may be also authorized and empowered by a vote of a majority in value of holders of trust certificates, whenever stocks or bonds have accumulated in their hands from money purchases thereof, or the stocks or bonds held by them have increased in value, or stock dividends shall have been declared by any of the companies whose stocks are held by said trustees, or whenever from any such cause it is deemed advisable so to do, to increase the amount of trust certificates to the extent of such increase or accumulation of values and to divide the same among the persons then owning trust certificates pro rata.

(15) It shall be the duty of said trustees to exercise general supervision over the affairs of said several Standard Oil Companies, and as far as practicable over the other

companies or partnerships, any portion of whose stock is held in said trust. It shall be their duty as stockholders of said companies to elect as directors and officers thereof faithful and competent men. They may elect themselves to such positions when they see fit so to do, and shall endeavor to have the affairs of said companies managed and directed in the manner they may deem most conducive to the best interests of the holders of said trust certificates.

(16) All the powers of the trustees may be exercised by a majority of their number.

They may appoint from their own number an executive and other committees. A majority of each committee shall exercise all the powers which the trustees may confer upon such committee.

(17) The trustees may employ and pay all such agents and attorneys as they may deem necessary in the management of said trust.

(18) Each trustee shall be entitled to a salary for his services not exceeding twenty-five thousand dollars per annum, except the president of the board, who may be voted a salary not exceeding thirty thousand dollars per annum, which salaries shall be fixed by said board of trustees. All salaries and expenses connected with or growing out of the trust shall be paid by the trustees from the trust fund.

(19) The board of trustees shall have its principal office in the city of New York, unless changed by vote of the trustees, at which office, or in some place of safe deposit in said city, the bonds and stocks shall be kept. The trustees shall have power to adopt rules and regulations pertaining to the meetings of the board, the election of officers, and the management of the trust.

(20) The trustees shall render at each annual meeting a statement of the affairs of the trust. If a termination of the trust be agreed upon, as hereinafter provided, or within a reasonable time prior to its termination by lapse of time, the trustees shall furnish to the holders of the trust certificates a true and perfect inventory and appraisal of all stocks and other property held in trust, and a statement of the financial affairs of the various companies whose stocks are held in trust.

(21) The trust shall continue during the lives of the survivors and survivor of the trustees in this agreement named, and for twenty-one years thereafter; provided, however, that if at any time after the expiration of ten years two-thirds of all the holders in value, or if after the expiration of one year 90 per cent of all the holders in value of trust certificates shall, at a meeting of holders of trust certificates called for that purpose, vote to terminate this trust at some time to be by them then and there fixed, the said trust shall terminate at the date so fixed. If the holders of trust certificates shall vote to terminate the trust as aforesaid, they may, at the same meeting, or at a subsequent meeting called for that purpose, decide by vote of two-thirds in value of their number the mode in which the affairs of the trust shall be wound up, and whether the trust property shall be distributed or whether part, and if so, what part shall be divided and what part sold, and whether such sales shall be public or private. The trustees, who shall continue to hold their offices for that purpose, shall make the distribution in the mode directed, or, if no mode be agreed upon, by two-thirds in value as aforesaid, the trustees shall make distribution of the trust property according to law. But said distribution, however made, and whether it be of property, or values, or of both, shall be just and equitable, and such as to insure to each owner of a trust certificate his due proportion of the trust property or the value thereof.

(22) If the trust shall be terminated by the expiration of the time for which it is created, the distribution of the trust property shall be directed and made in the mode above provided.

(23) This agreement, together with the registry of certificates, books of accounts, and other books and papers connected with the business of said trust, shall be safely kept at the principal office of said trustees.

(Signatures.)

SUPPLEMENTAL AGREEMENT.

Whereas in and by an agreement dated January 2, 1882, and known as the Standard Trust agreement, the parties thereto did mutually covenant and agree, *inter alia*, as follows, to wit: That corporations to be known as Standard Oil Companies of various States should be formed, and that all of the property, real and personal, assets, and business of each and all of the corporations and limited partnerships mentioned or embraced in class first of said agreement should be transferred and vested in the said several Standard Oil Companies; that all of the property, assets, and business in or of each particular State should be transferred to and vested in the Standard Oil Company of that particular State, and the directors and managers of each and all of the several corporations and associations mentioned in class first were authorized and directed to sell, assign, transfer, and convey, and make over to the Standard Oil

Company or Companies of the proper State or States, as soon as said corporations were organized and ready to receive the same, all the property, real and personal, assets and business of said corporations or associations; and whereas it is not deemed expedient that all of the companies and associations mentioned should transfer their property to the said Standard Oil Companies at the present time, and in case of some companies and associations it may never be deemed expedient that the said transfer should be made, and said companies and associations go out of existence; and whereas it is deemed advisable that a discretionary power should be vested in the trustees as to when such transfer or transfers should take place, if at all: Now, it is hereby mutually agreed between the parties to the said trust agreement, and as supplementary thereto, that the trustees named in the said agreement and their successors shall have the power and authority to decide what companies shall convey their property as in said agreement contemplated, and when the said sales and transfers shall take place, if at all, and until said trustees shall so decide, each of said companies shall remain in existence, and retain its property and business, and the trustees shall hold the stocks thereof in trust, as in said agreement provided. In the exercise of said discretion the trustees shall act by a majority of their number as provided in said trust agreement. All portions of said trust agreement relating to this subject shall be considered so changed as to be in harmony with this supplemental agreement.

In witness whereof, the said parties have subscribed this agreement this 4th day of January, 1882.

(Duly signed by the same parties.)

BY-LAWS OF THE TRUSTEES OF THE STANDARD OIL TRUST.

ARTICLE I.—*Election of trustees.*

Trustees shall be elected by ballot by the owners of trust certificates or their proxies.

Elections of trustees to succeed those already appointed shall be held annually, at which election a sufficient number of trustees shall be elected to fill all vacancies occurring either from expiration of the term of office of any trustee or from any other cause.

All trustees shall be elected to hold their office for three years, except those elected to fill a vacancy arising from any cause except expiration of term, who shall be elected for the balance of the term of the trustee whose place they are elected to fill. Every trustee shall hold his office until his successor is elected.

The annual meeting of the holders of trust certificates and the election of trustees shall be held at the office of the trustees in the city of New York, on the first Wednesday in April of each year, unless otherwise ordered by the trustees, and the said meeting may be adjourned from day to day until its business is completed.

Special meetings of the holders of trust certificates may be called by a majority of all the trustees at such time and place as they may appoint.

Special meetings shall also be called by a majority of the trustees whenever requested so to do, by a request signed by the holders of 10 per cent in value of trust certificates.

The business of such special meetings shall be confined to the objects specified in the notice given therefor.

Notice of the time and place of all meetings of owners of trust certificates shall be given by a personal notice, as far as possible, and shall also be advertised in one of the principal newspapers published in each State in which a Standard Oil Company exists, at least ten days previous to the time of meeting.

At all meetings the owners of trust certificates, who may be registered as such on the books of the trustees, may vote in person or by proxy, and shall have one vote for each and every share of trust certificates standing in their names, but no such owner shall be entitled to vote upon any share which has not stood in his name thirty days prior to the day appointed for the election.

The transfer books may be closed for thirty days immediately preceding the annual election.

A majority of the shares represented at such election shall elect.

At all elections of trustees the board of trustees shall be the judges of the qualification of voters; shall prescribe rules and regulations for voting, appoint tellers to direct and count the votes, and cause the result of the election to be entered in full on their minutes.

The trustees may commit their powers in this matter to a committee of their own members.

The election shall be held on a day designated for that purpose, unless prevented by accident, in which case the trustees shall designate another day for the election.

ARTICLE II.—*Board of trustees.*

The board of trustees at their first meeting after their annual election shall elect by ballot from their own number a president, vice-president, treasurer, and secretary, and such officers shall hold their offices during the pleasure of the board. Whenever a vacancy occurs in the board of trustees more than sixty days prior to the annual meeting for the election of trustees, it shall be the duty of the remaining trustees to call a meeting of the holders of the trust certificates for the purpose of electing a trustee or trustees to fill the vacancy or vacancies.

If any vacancy occurs in the board of trustees from any cause within sixty days of the date of the annual meeting for the election of trustees, the vacancy may be filled by a majority of the remaining trustees, or at their option may remain vacant until the annual election.

The board may also appoint an assistant treasurer, assistant secretary, auditor, and such additional officers, agents, executive and other committees as it may deem advisable, and remove the same at its pleasure.

In the absence of the president and vice-president the board may appoint a chairman pro tempore; during a prolonged absence or inability of the president or any other officer, the board may appoint substitutes pro tempore, and on the death or resignation of the president or other officers, it shall fill the vacancy.

A majority of the trustees shall be required to constitute a quorum for the transaction of business, but less than a quorum may adjourn from time to time and from place to place.

Regular meetings of the board of trustees shall be held on the first Wednesday of January, April, July, and October of each year, unless the same shall be a legal holiday, in which event the meeting shall be held on the day following.

ARTICLE III.—*The president.*

The president shall preside at all meetings of the owners of trust certificates or trustees if present; appoint or remove all officers and agents other than those elected by the owners of trust certificates or the board of trustees; call meetings of the board of trustees, when requested by a majority of the trustees in writing; sign all certificates of shares, and have a general care, supervision, and direction of the affairs of the trust. He shall have power to call meetings of the board from time to time when he shall think proper; to sign certificates of shares in blank and leave them with the treasurer in sufficient numbers to provide for the prompt transfer of shares.

In the event of the death, absence, or inability of the president to perform the duties imposed upon him by these by-laws and the orders of the board of trustees, the vice-president may exercise his powers and perform his duties, subject to the control of the board of trustees or executive committee.

ARTICLE IV.—*The secretary.*

It shall be the duty of the secretary to notify the members thereof of all meetings of the board of trustees, when required by the president or by a majority of the trustees in writing; to attend such meetings when practicable, keep true records of the proceedings; attest such records after meeting by his signature; safely keep all documents and papers which shall come into his possession, and truly keep the books and accounts of the trust appertaining to his office, so as at all times to show the real condition of the trust affairs, and shall present statements thereof when required by the board. He shall keep books in which transfers of shares may be made by any owner of trust certificates or his attorney duly constituted in writing; also a share ledger and certificate book; prepare new certificates upon the transfer of shares and surrender of the old certificates, and keep a register of all the certificates issued.

On the day of the annual election the secretary shall furnish for the use of the inspectors an alphabetical list of the names of all the owners of trust certificates who shall have been registered as such for thirty days prior to said election. The assistant secretary shall perform such of the duties of the secretary as may be required of him by the board of trustees.

ARTICLE V.—*Treasurer.*

It shall be the duty of the treasurer to keep and account for all moneys, funds, and property of the trust which shall come into his hands, and he shall render such

accounts and present such statements to the trustees and executive committee as may be required of him.

Disbursements shall only be made by him under resolutions of the board of trustees, or by the executive committee, or upon vouchers approved by the proper officers.

He shall sign certificates of shares when presented to him after they shall have been signed by the president.

The assistant treasurer shall perform such of the duties of treasurer as may be required of him by the board of trustees.

ARTICLE VI.—*Executive committee.*

The executive committee shall possess and exercise by a majority of all its members all the powers and duties of the board of trustees, but only when the board shall not be in session. They shall keep a record of all their proceedings, which shall be certified by the secretary under his hand, which record shall be read at the next ensuing meeting of the board of trustees. The secretary shall call meetings of this committee on the requisition of the president of the board or of any of its members.

ARTICLE VII.

The fiscal year of this trust shall be the calendar year.

ARTICLE VIII.

Those by-laws may be altered, amended, or repealed at any meeting of the owners of trust certificates by a vote of majority in value of all the owners represented, provided, however, that all by-laws relative to formal meetings and formal duties of the trustees and officers may be altered by the board of trustees.

REVISED CHARTER OF THE STANDARD OIL COMPANY OF NEW JERSEY.

Resolved, That it is advisable to alter the charter of this company to read as below stated, and that a meeting of the stockholders be called to meet at the principal office of the company in Bayonne, New Jersey, on the 14th day of June, 1899, at 11 a. m., to take action thereon, notice of such meeting to be signed by the president and secretary and given to each stockholder in person, or mailed to his proper post-office address, at least ten days previous to the time of meeting, as provided by the by-law.

First. The name of the corporation is Standard Oil Company.

Second. The location of the principal office in the State of New Jersey is at the company's refinery in the city of Bayonne and county of Hudson. The name of the agent therein and in charge thereof, and upon whom process against this company may be served, is J. H. Alexander.

Third. The objects for which this company is formed are: To do all kinds of mining, manufacturing, and trading business; transporting goods and merchandise by land or water in any manner; to buy, sell, lease, and improve lands; build houses, structures, vessels, cars, wharves, docks, and piers; to lay and operate pipe lines; to erect and operate telegraph and telephone lines and lines for conducting electricity; to enter into and carry out contracts of every kind pertaining to its business; to acquire, use, sell, and grant licenses under patent rights; to purchase or otherwise acquire, hold, sell, assign, and transfer shares of capital stock and bonds or other evidences of indebtedness of corporations, and to exercise all the privileges of ownership, including voting upon the stocks so held; to carry on its business and have officers and agencies therefor in all parts of the world, and to hold, purchase, mortgage, and convey real estate and personal property outside the State of New Jersey.

Fourth. The total authorized stock of the corporation is one hundred and ten million dollars, divided into one million and one hundred thousand shares of the par value of one hundred dollars each. Of said stock the one hundred thousand shares now issued and existing shall be preferred stock, and the increase of one million shares shall be common stock. Said preferred stock shall entitle the holder thereof to receive out of the net earnings a dividend of and not exceeding one and one-half per centum quarterly before any dividend shall be paid on the common stock. Common stock may, at the discretion of the company, be issued in exchange for preferred stock, and all preferred stock so received by the company shall be canceled. Common stock may also be issued in payment for such property as the company has authority to purchase. Holders of preferred and of common stocks shall have like voting power.

Fifth. The names and post-office addresses of the incorporators and the number of shares subscribed for by each shall remain as set forth in the original certificate of incorporation.

Sixth. The duration of the corporation shall be unlimited.

Seventh. The corporation may use and apply its surplus earnings, or accumulative profits authorized by law to be reserved, to the purchase or acquisition of property, and to the purchase or acquisition of its own capital stock from time to time, to such extent and in such manner and upon such terms as its board of directors shall determine; and neither the property nor the capital stock so purchased or acquired, nor any of its capital stock taken in payment or satisfaction of any debt due to the corporation, shall be regarded as profits for the purpose of declaration or payment of dividends, unless otherwise determined by a majority of the board of directors or a majority of the stockholders.

The corporation, in its by-laws, may prescribe the number necessary to constitute a quorum of the board of directors, which may be less than a majority of the whole number.

The number of directors at any time may be increased or diminished by vote of the board of directors, and in case of any such increase the board of directors shall have power to elect such additional directors, to hold office until the next meeting of stockholders, or until their successors shall be elected.

The board of directors shall have power to make, alter, amend, and rescind the by-laws of the corporation, to fix the amount to be reserved as working capital, to authorize and to cause to be executed mortgages and liens upon the real and personal property of the corporation, and from time to time to sell, assign, transfer, or otherwise dispose of any or all of the property of the corporation; but no such sale of all of the property shall be made except pursuant to the votes of at least two-thirds of the board of directors.

The board of directors, by resolution passed by a majority of the whole board, may designate three or more directors to constitute an executive committee, which committee, to the extent provided in said resolution or in the by-laws of the corporation, shall have, and may exercise, the power of the board of directors in the management of the business and affairs of the corporation, and shall have power to authorize the seal of the corporation to be affixed to all papers which may require it.

The board of directors from time to time shall determine whether and to what extent, and at what times and places, and under what conditions and regulations, the accounts and books of the corporation, or any of them, shall be open to the inspection of the stockholders; and no stockholder shall have any right of inspecting any account or book or document of the corporation except as conferred by statute or authorized by the board of directors or by a resolution of the stockholders.

The board of directors shall have power to hold its meetings, to have one or more offices, and to keep the books of the corporation (except the stock and transfer books) outside of the State, at such places as may be from time to time designated by them.

I certify that the above resolution was adopted by the board of directors of the Standard Oil Company at a meeting held on the 26th day of May, A. D. 1899, a majority of directors being present and voting in favor thereof. Witness the seal of said corporation.

[CORPORATE SEAL.]

L. D. CLARKE, *Secretary.*

BY-LAWS OF THE STANDARD OIL COMPANY OF NEW JERSEY.

ARTICLE I.—*Meeting of stockholders.*

The annual meeting of stockholders and the election of directors shall be held at the office of the company in Bayonne, New Jersey, on the second Tuesday in January in each year, and said meeting may be adjourned from day to day until its business is completed.

Special meetings of the stockholders may be called by a majority of all the directors at such times and places as they may appoint.

The directors shall also call a meeting of stockholders within ten days after a written request so to do signed by a majority of the stockholders.

The business of such special meetings shall be confined to the subject specified in the notice therefor.

Notice of the time and place of all meetings of stockholders shall be signed by the secretary and be given to each stockholder in person or be mailed to his proper post-office address at least ten days previous to the time of meeting.

At all meetings stockholders who may be registered as such on the books of the company may vote in person, by agent, or by proxy, and shall have one vote for each and every share of stock standing in their names, but no shareholder shall be entitled to vote upon any stock which has not stood in his name ten days prior to the day appointed for the election.

The transfer books may be closed for ten days previous to the annual election.

At all elections the directors shall be the judges of the qualifications of voters, shall prescribe rules and regulations for voting, appoint inspectors to collect and count the votes, and cause the result of the election to be entered in full on their minutes.

The board may commit its powers in this matter to a committee of its own members.

The election shall be held on the day designated for that purpose unless prevented by accident, in which case the board shall designate another day for the election.

A majority of the stockholders present at any meeting shall constitute a quorum.

ARTICLE II.—*Board of directors.*

The board of directors shall consist of thirteen persons, who shall hold their office one year and until their successors are elected.

The board of directors at their first meeting after every annual election shall elect a president, four vice-presidents, a treasurer, and secretary, and such officers shall hold their offices during the pleasure of the board. One person may be both secretary and treasurer.

In case of any vacancy in the board of directors by death, resignation, or otherwise, the board shall have the power to fill for the unexpired term such vacancy by ballot.

The board may also appoint one assistant treasurer, one assistant secretary, and such additional officers and agents as they may deem advisable, and remove the same at their pleasure.

In the absence of the president and vice-president, they may appoint a chairman pro tempore.

During a prolonged absence or inability of the president, or any other officer, they may appoint substitutes pro tempore, and on the death or resignation of the president, or other officer, they shall fill the vacancy.

Five of the directors shall be required to constitute a quorum for the transaction of business; but less than a quorum may adjourn from time to time and from place to place.

The board of directors may at their option hold their meeting at any place outside of the State.

Dividends upon the capital stock of the company, when earned, shall be declared by the board of directors on the first Tuesday of February, May, August, and November in each year, the same to be payable on the 15th of the succeeding month. The board shall have power to fix the amount to be reserved as working capital.

ARTICLE III.—*President.*

The president shall preside at all meetings of the stockholders or directors, if present; sign all certificates of stock and have a general care, supervision, and direction of the affairs of the company. He shall have power to call meetings of the board from time to time when he shall think proper, or when requested by a majority of the board.

In the event of the death, absence, or inability of the president to perform any duties imposed upon him by these by-laws and the order of the board of directors, the vice-president may exercise his powers and perform his duties, subject to the control of the board of directors.

ARTICLE IV.—*Secretary.*

It shall be the duty of the secretary to notify the members thereof of all meetings of the board of directors when required by the president, or when required by a majority of the directors in writing; to attend such meetings when practicable; keep true records of the votes at elections and all other proceedings; attest such records after every meeting by his signature; safely keep all documents and papers which shall come into his possession, and truly keep the books and accounts of the company appertaining to his office; and shall present statements thereof when required by the board. He shall keep books upon which transfer of stock may be made by any stockholder, or his attorney duly constituted in writing. He shall prepare new certificates upon the transfer of shares and surrender of the old certificates and keep a register of all certificates issued. The assistant secretary shall perform such of these duties as the directors may require.

ARTICLE V.—*Treasurer.*

It shall be the duty of the treasurer to keep and account for all monies, funds, and property of the company which shall come into his hands, and he shall render such accounts and present such statements to the directors as may be required of him. He shall deposit all funds of the company which may come into his hands in such bank or banks as the directors may designate; he shall keep his bank account in the name of the company, and shall exhibit his books and accounts to any director upon application at the office during ordinary business hours; he shall indorse for collection the bills, notes, checks, and other negotiable instruments received by the company; he shall sign all bills, notes, checks, and other negotiable instruments of the company; and shall pay out money on the business as the corporation may require, taking proper vouchers therefor, provided, however, that the directors shall have power by resolution to delegate any of the duties of the treasurer to other officers, and to provide by what officers all bills, notes, checks, vouchers, orders, or other instruments shall be signed. The assistant secretary shall perform such of these duties as the directors may require.

ARTICLE VI.—*Corporate seal.*

A corporate seal shall be prepared and shall be kept by the secretary in the office of the company.

The impression of the seal may be made and attested by either the secretary or an assistant secretary for the authentication of contracts and other papers requiring the seal and bearing the signature of the president or one of the vice-presidents.

ARTICLE VII.—*Fiscal year.*

The fiscal year of this corporation shall be the calendar year.

ARTICLE VIII.—*Amendments.*

These by-laws may be altered or amended by a vote of the directors at any meeting.

CERTIFICATE OF INCORPORATION OF FEDERAL STEEL COMPANY.

[Internal-revenue stamp, 10 cents, canceled.]

[Registered office with the Corporation Trust Company of New Jersey, 60 Grand street, Jersey City, N. J.]

First. The name of the corporation is Federal Steel Company.

Second. The location of its principal office in the State of New Jersey is at No. 60, Grand street, in the city of Jersey City, county of Hudson. Said office is to be registered with the Corporation Trust Company of New Jersey. The name of the agent therein and in charge thereof, and upon whom process against this corporation may be served, is the Corporation Trust Company of New Jersey.

Third. The objects for which, and for any of which, the corporation is formed, are to do any or all of the things herein set forth, to the same extent as natural persons might or could do, and in any part of the world, viz:

Mining of all kinds; manufacturing of all kinds; transportation of goods, merchandise, or passengers, upon land or water; building houses, structures, vessels, ships, boats, railroads, engines, cars or other equipment, wharves or docks; constructing, maintaining, and operating railroads (other than railroads within the State of New Jersey), steamship lines, vessel lines, or other lines for transportation; the purchase, improvement, or sale of lands;

To manufacture, purchase, or otherwise acquire, to hold, own, mortgage, pledge, sell, assign and transfer, or otherwise dispose of, to invest, trade, deal in and deal with goods, wares, and merchandise, and property of every class and description;

To acquire and undertake all or any part of the business, assets, and liabilities of any person, firm, association, or corporation;

To apply for, purchase, or otherwise acquire, and to hold, own, use, operate, and to sell, assign, or to otherwise dispose of, to grant licenses in respect of or otherwise turn to account any and all inventions, improvements, and processes used in connection with, or secured under letters patent of the United States or elsewhere, or otherwise; and, with a view to the working and development of the same, to carry

on any business, whether manufacturing or otherwise, which the corporation may think calculated directly or indirectly to effectuate these objects;

To enter into, make, perform, and carry out contracts of every kind with any person, firm, association, or corporation;

To have one or more offices; to carry on all or any of its operations and business; and unlimitedly and without restriction to hold, purchase, mortgage, lease, and convey real and personal property in any State or Territory of the United States, and in any foreign country or place.

In general to carry on any other business in connection therewith, whether manufacturing or otherwise, with all the powers conferred by the laws of New Jersey upon corporations under the act hereinafter referred to.

Fourth. The total authorized capital stock of the corporation is two hundred million dollars (\$200,000,000), divided into two million (2,000,000) shares of the par value of one hundred dollars (\$100) each.

Of such total authorized capital stock, one million shares, amounting to \$100,000,000, shall be preferred stock, and one million shares, amounting to \$100,000,000, shall be common stock.

From time to time the preferred stock and the common stock shall be issued in such amounts and proportion as shall be determined by the board of directors, and as may be permitted by law.

The preferred stock shall be entitled, out of any and all surplus net profits, whenever declared by the board of directors, to noncumulative dividends at the rate of, but not exceeding, six per cent per annum for the fiscal year beginning on the first day of January, 1899, and for each and every fiscal year thereafter, payable in preference and priority to any payment of any dividend on the common stock for such fiscal year. In addition thereto, in the event of the dissolution of the corporation, the holders of the preferred stock shall be entitled to receive the par value of their preferred shares out of the surplus funds of the corporation before anything shall be paid therefrom to the holders of the common stock.

The common stock shall be subject to the prior rights of the holders of the preferred stock, as herein declared. If, after providing for the payment of full dividends for any fiscal year on the preferred stock, there shall remain any surplus net profits of such year, any and all such surplus net profits of such year, and of any other fiscal year for which full dividends shall have been paid on the preferred stock, shall be applicable to dividends upon the common stock, when and as from time to time the same shall be declared by the board of directors and out of any such surplus net profits, after the close of any fiscal year, the board of directors may pay dividends upon the common stock of the corporation for such fiscal year, but not until after the dividends upon the preferred stock for such fiscal year shall have been actually paid or provided and set apart.

Fifth. The names of the incorporators (the post-office address of each is No. 60 Grand street, Jersey City, N. J.) and the number of shares of common stock (ten) subscribed for by each, the aggregate of which being three thousand dollars (\$3,000), is the amount of capital stock with which the corporation will commence business, are as follows:

Name.

Charles C. Cluff.....	Ten shares common stock.
Charles MacVeagh.....	Ten shares common stock.
Benjamin C. Van Dyke.....	Ten shares common stock.

Sixth. The duration of the corporation shall be unlimited.

Seventh. The corporation may use and apply its surplus earnings, or accumulated profits authorized by law to be reserved, to the purchase or acquisition of property, and to the purchase or acquisition of its own capital stock from time to time, to such extent and in such manner and upon such terms as its board of directors shall determine; and neither the property nor the capital stock so purchased and acquired, nor any of its capital stock taken in payment or satisfaction of any debt due to the corporation, shall be regarded as profits for the purposes of declaration or payment of dividends, unless otherwise determined by a majority of the board of directors or a majority of the stockholders.

The corporation in its by-laws may prescribe the number necessary to constitute a quorum of the board of directors, which number may be less than a majority of the whole number.

The number of directors at any time may be increased by a vote of the board of directors, and in case of any such increase the board of directors shall have power to elect such additional directors, to hold office until the next meeting of stockholders, or until their successors shall be elected.

The board of directors shall have power without the assent or vote of the stockholders to make, alter, amend, and rescind the by-laws of the corporation, to fix the amount to be reserved as working capital, to authorize and to cause to be executed mortgages and liens upon the real and personal property of the corporation; and from time to time to sell, assign, transfer, or otherwise dispose of any or all of the property of the corporation, but no such sale of all of the property shall be made except pursuant to the vote of at least two-thirds of the board of directors.

The board of directors, by resolution passed by a majority of the whole board, may designate three or more directors to constitute an executive committee, which committee, to the extent provided in said resolution or in the by-laws of the corporation, shall have, and may exercise, the power of the board of directors in the management of the business and affairs of the corporation, and shall have power to authorize the seal of the corporation to be affixed to all papers which may require it.

The board of directors from time to time shall determine whether and to what extent, and at what times and places, and under what conditions and regulations, the accounts and books of the corporation, or any of them, shall be open to the inspection of the stockholders; and no stockholder shall have any right of inspecting any account or book or document of the corporation, except as conferred by statute or authorized by the board of directors, or by a resolution of the stockholders.

The board of directors shall have power to hold its meetings, to have one or more offices, and to keep the books of the corporation (except the stock and transfer books) outside of this State at such places as may be from time to time designated by them.

It is the intention that the objects above specified in article third, except where otherwise expressed in said article, shall be nowise limited or restricted by reference to or inference from the terms of any other article, clause, or paragraph in this certificate.

The undersigned, for the purpose of forming a corporation in pursuance of an act of the legislature of the State of New Jersey, entitled "An act concerning corporations" (Revision of 1898), and the various acts amendatory thereof and supplemental thereto, do make, record, and file this certificate, and do respectively agree to take the number of shares of stock hereinbefore set forth, and accordingly hereunto have set our hands and seals.

Dated Jersey City, N. J., September 9, 1898.

CHAS. C. CLUFF. [SEAL.]
CHARLES MACVEAGH. [SEAL.]
BENJAMIN C. VAN DYKE. [SEAL.]

In presence of—

JAMES B. DILL.

E. H. GARY.

FRANCIS LYNDE STETSON.

STATE OF NEW JERSEY, *County of Hudson, ss:*

Be it remembered that on this ninth day of September, A. D. eighteen hundred and ninety-eight, before the undersigned personally appeared Charles C. Cluff, Charles MacVeagh, and Benjamin C. Van Dyke, who, I am satisfied, are the persons named in and who executed the foregoing certificate, and I, having first made known to them, and each of them, the contents thereof, they did each acknowledge that they signed, sealed, and delivered the same as their voluntary act and deed.

JAMES B. DILL,

Master in Chancery of New Jersey.

[10c. internal-revenue stamp cancelled.]

Received in the Hudson County, N. J., clerk's office September 9th, 1898, and recorded in clerk's record No. —, on page —.

JOHN G. FISHER, *Clerk.*

(Endorsed:) "Filed September 9, 1898. George Wurts, Secretary of State."

FEDERAL STEEL COMPANY—BY-LAWS—SEPTEMBER 9, 1898.

I.

1. The title of the corporation is Federal Steel Company.
2. The principal office is at 60 Grand street, Jersey City, New Jersey.
3. The corporate seal of the company shall have inscribed thereon the name of the corporation, the State (New Jersey), and the month and year of its creation (September, 1898).

II.

DIRECTORS.

4. The property and business of the corporation shall be managed and controlled by a board of directors, who shall at all times be stockholders. They shall hold office for one year, and until others are elected and qualified in their stead. The number of the first board of directors shall be three; but at any time the number may be increased by vote of the board of directors, and, in case of any such increase, the board of directors shall have power to elect such additional directors to hold office until the next meeting of stockholders, or until their successors shall be elected. If the office of any director becomes or is vacant by reason of death, resignation, disqualification, increase in number, or otherwise, the remaining directors, by a majority vote, may elect a successor, who shall hold office for the unexpired term or until his successor is elected.

III.

MEETINGS OF STOCKHOLDERS.

5. The annual meeting of stockholders shall be held on the first Monday of April in each year if not a legal holiday, and, if a legal holiday, then on the day following, at the registered office of the company in the State of New Jersey, commencing at 11 o'clock a. m., when they shall elect by a plurality vote by ballot the full board of directors to serve for one year, and until their successors are elected or chosen and qualified, each stockholder being entitled to one vote in person or by proxy for each share of stock standing registered in his name on the 10th day of the month preceding the election; provided, no stock shall be voted which has been transferred within twenty days of the time of the election.

A majority in amount of the stock outstanding shall be requisite to constitute a quorum for an election of directors or the transaction of other business.

The polls for such election shall be open at twelve o'clock noon and closed at one o'clock in the afternoon.

Notice of the annual meeting may be published in a newspaper in the city of New York once each week during the calendar month next preceding the meeting; but a failure to publish such notice or any irregularity in the publication or notice shall not affect the validity of the said meeting or the proceedings therein.

Special meetings of stockholders shall be called by the secretary by mailing a notice at least five days prior to the date of meeting to each stockholder of record at his last-known post-office address, on the request in writing, or by vote, of a majority of the board of directors or executive committee, or on demand in writing by stockholders of record owning a majority in amount of the entire issued capital stock of the company.

IV.

MEETINGS OF DIRECTORS.

6. The board of directors shall meet at the office of the company in New York immediately after the adjournment of the annual meeting of stockholders and elect the officers of the corporation for the ensuing year.

Regular meetings of the directors shall be held at the office of the company in New York, or by order of the directors elsewhere, on a day and at an hour to be fixed by resolution of the board.

Notice of regular meetings shall be mailed to each director at his last-known post office address by the secretary at least three days previous to the time fixed for the meeting.

While the number of directors remains at three, a majority shall be necessary to constitute a quorum for the transaction of business; but if the number of directors shall be increased to fifteen, then six shall constitute a quorum for the transaction of business.

Special meetings of the board may be called by the president on one day's notice to each director, delivered to him personally or left at his residence or usual place of business; or such special meetings may be called in like manner on the written request of three members.

COMPENSATION OF DIRECTORS AND EXECUTIVE COMMITTEE.

7. Directors and members of the executive committee as such shall not receive any stated salary for their services, but may be allowed \$10 each for attendance at each regular or special meeting if present at roll call, and until adjournment, unless excused.

- VI.

INSPECTORS OF ELECTION.

9. The board of directors, at a meeting held prior to the annual meeting of the stockholders, shall appoint two stockholders to act as inspectors and conduct the election of directors at the ensuing annual meeting of stockholders. Inspectors of election shall not be eligible to the office of director. If any inspector of election fails to attend the election, a successor may be appointed by the stockholders in attendance.

VII.

ORDER OF BUSINESS.

10. The order of business at the meetings of the board of directors shall be as follows:

- (1) A quorum being present, the chairman shall call the board to order.
- (2) The minutes of the last meeting shall be read and considered as approved if there be no amendments.
- (3) Reports of officers of the company.
- (4) Reports of committees.
- (5) Unfinished business.
- (6) Miscellaneous business.
- (7) New business.

VIII.

OFFICERS OF THE COMPANY.

11. The officers of the company shall consist of a chairman of the board, president, first vice-president, second vice-president, secretary, general counsel, treasurer, auditor, and such other officers as may from time to time be elected or appointed by the board of directors.

One person may hold more than one office.

IX.

12. The directors shall elect from among their own number a chairman of the board, a president, a first vice-president, and a second vice-president; and shall also appoint a secretary, treasurer, auditor, and general counsel.

X.

DUTIES OF THE CHAIRMAN.

13. It shall be the duty of the chairman to preside at all meetings of the board of directors and to give such counsel and advice as from time to time may by him be deemed essential to the best interests of the corporation to the executive committee or to the president.

XI.

DUTIES OF THE PRESIDENT.

14. It shall be the duty of the president, in the absence of the chairman of the board, to preside at all meetings of the board of directors; to have general and active management of the business of the company; to see that all orders and resolutions of the board are carried into effect; to execute all contracts and agreements authorized by the board; to keep in safe custody the seal of the company, and when

authorized by the board or executive committee, to affix the seal to any instrument requiring the same, which seal shall always be attested by the signature of the president and of the secretary or the treasurer. He may sign certificates of stock.

He shall have the general superintendence and direction of all the other officers of the company, except the chairman of the board, and shall see that their duties are properly performed.

He shall submit a complete report of the operations of the company for the year and the state of its affairs on the 31st day of December to the directors at their regular meeting in April and to the stockholders at their annual meeting in April of each year, and from time to time shall report to the directors all matters within his knowledge which the interests of the company may require to be brought to their notice.

He shall be *ex officio* a member of all standing committees, and shall have the general powers and duties of supervision and management usually vested in the office of the president of a corporation.

He shall in a general way be familiar with and exercise supervision over the affairs of the other corporations in which this corporation may be interested.

He shall freely consult and advise with the chairman of the board and also the executive committee in relation to the business and interests of the corporation.

XII.

FIRST VICE-PRESIDENT.

15. The first vice-president shall be vested with all the powers and required to perform all the duties of the president in his absence. He may sign certificates of stock; and he shall perform such other duties as may be prescribed by the board of directors.

XIII.

16. The second vice-president shall be vested with all the powers and required to perform all the duties of the president in the absence of both the president and the first vice-president; he may sign certificates of stock, and he shall perform such other duties as may be prescribed by the board of directors.

XIV.

PRESIDENT PRO TEM.

17. In the absence of the president and first vice-president and second vice-president, the board may appoint a president *pro tem*.

XV.

SECRETARY.

18. The secretary shall be *ex officio* secretary of the board of directors and of the standing committees; he shall attend all sessions of the board; shall act as clerk thereof, and record all votes and the minutes of all proceedings in a book to be kept for that purpose.

He shall perform like duties for the standing committees when required.

He shall give notice of all calls for installments to be paid by the stockholders, and shall see that proper notice is given of all meetings of the stockholders of the company and of the board of directors, and shall perform such other duties as may be prescribed by the board of directors or president.

He shall be sworn to the faithful discharge of his duty, and shall give such bond as may be required by the board of directors.

The assistant secretary, if one is appointed, shall be vested with all the powers and required to perform all the duties of the secretary in his absence, inability, refusal, or neglect to act.

XVI.

TREASURER.

19. The treasurer shall keep full and accurate accounts of receipts and disbursements in books belonging to the company, and shall deposit all moneys and other valuable effects in the name and to the credit of the company in such depositories as may be designated by the board of directors or executive committee.

He shall disburse the funds of the company as may be ordered by the board, taking proper vouchers for such disbursements, and shall render to the president and directors at the regular meetings of the board, or whenever they may require it, an account of all his transactions as treasurer and of the financial condition of the company, and at the regular meeting of the board in April annually a like report for the preceding year.

He shall give the company a bond in form and in a sum and with security satisfactory to the board of directors or the executive committee for the faithful performance of the duties of his office and the restoration to the company, in case of his death, resignation, or removal from office, of all books, papers, vouchers, money, or other property of whatever kind in his possession belonging to the corporation, and containing such other provisions as the board of directors or executive committee may require.

Certificates of stock, when signed by the president or first vice-president or second vice-president, shall be countersigned by the treasurer. He shall keep the accounts of stock registered and transferred in such form and manner and under such regulations as the board of directors may prescribe.

The assistant treasurer, if one is appointed, shall be vested with all the powers and required to perform all the duties of the treasurer in his absence, inability, refusal, or neglect to act.

XVII.

AUDITOR.

20. The auditor shall have supervision over all the accounts and account books of the company and see that the system of keeping the same is enforced and maintained.

He shall direct as to forms and blanks relating to books and accounts in all departments, and no change shall be made without his consent or the consent of the president or executive committee.

He shall see that there is kept in the bookkeeping department a set of books containing a complete record of all business transactions of the company pertaining to accounts.

He shall, when requested, furnish the executive committee or president a statement of the earnings and expenses of the corporation or any other company in which this corporation may be interested for any given time, and shall keep books and records for the purpose of furnishing such statistics.

He shall verify the assets reported by the treasurer or his assistant at least twice a year and make report of the same to the executive committee.

He shall cause the books and accounts of all officers and agents charged with the receipt or disbursement of money to be examined as often as practicable, or when requested by the president or executive committee, and shall ascertain whether or not the cash and vouchers covering the balance are actually on hand.

He shall render such assistance and advice as the president or executive committee may desire concerning the books and accounts and system of financial transactions of all other corporations in which this corporation is interested and furnish to the president or executive committee such statements concerning the same as may be requested by them.

In case of a default within his information at any time he shall at once notify the president and chairman.

XVIII.

GENERAL COUNSEL.

21. The general counsel shall be the legal adviser of the company and shall perform such services and receive such compensation as may be determined by the board of directors or the executive committee.

XIX.

DUTIES OF OFFICERS MAY BE DELEGATED.

22. In case of the absence of any officer of the company, the board of directors or the executive committee may delegate his powers or duties to any other officer or to any director for the time being.

XX.

STANDING COMMITTEE.

23. There shall be an executive committee of five directors, selected by the board, who shall meet at regular periods, or on notice to all by any of their own number. They shall advise with and aid the officers of the company in all matters concerning its interests and the management of its business; and when the board of directors is not in session the executive committee shall have and may exercise all the powers of the board of directors.

The executive committee, unless otherwise provided by the board of directors, shall fix the salaries or compensation of all officers.

The executive committee shall keep regular minutes, and cause them to be recorded in a book kept in the office of the company for that purpose, and report the same to the board of directors whenever required by them.

XXI.

TERM OF OFFICE.

24. Each officer shall hold his office only during the pleasure of the board of directors, unless otherwise provided by special agreement in writing signed by a majority of the executive committee.

XXII.

TRANSFER OF STOCK.

25. All transfers of the stock of the corporation shall be made upon the books of the company by the holder of the shares in person or by his legal representative; but no transfer of stock shall be made within 10 days next preceding the day appointed for paying a dividend.

XXIII.

CERTIFICATES TO BE CANCELED.

26. Certificates of stock surrendered shall be canceled by the transfer agent at the time of transfer.

XXIV.

LOSS OF CERTIFICATE.

27. Any person claiming a certificate or evidence of stock to be issued in place of one lost or destroyed shall make an affidavit or affirmation of that fact and advertise the same in such newspaper and for such space of time as the board of directors may require, describing the certificate, and shall furnish the company with proof of publication by the affidavit of the publisher of the newspaper, and shall give the board a bond of indemnity in form approved by the board, with one or more sureties, if required, in double the par value of such certificate, whereupon the president and treasurer may, one month after the termination of the advertisement, issue a new certificate of the same tenor with the one alleged to be lost or destroyed, but always subject to the approval of the board of directors.

XXV.

CONTRACTS AND AGREEMENTS.

28. No agreement, contract, or obligation (other than a cheque) involving the payment of money or the credit or liability of the company, for more than \$5,000, shall be made without the approval of the board of directors or of the executive committee.

XXVI.

CHEQUES FOR MONEY.

29. All cheques, drafts, or orders for the payment of money shall be signed by the treasurer and countersigned by the chairman of the board or president or first or second vice-president.

No cheque shall be signed by both the treasurer and chairman or president or a vice-president in blank.

XXVII.

30. The books, accounts, and records of the company shall be open to inspection by any member of the board of directors at all times; and stockholders may inspect the books of the company at such times only as the executive committee or board of directors may by resolution designate.

XXVIII.

ALTERATION OF BY-LAWS.

31. The board of directors, by a vote of a majority of the members present at any meeting, may alter or amend these by-laws, but no alteration shall be made unless proposed at a meeting of the board and considered at subsequent meetings.

XXIX.

None of the shares of the capital stock of the Minnesota Iron Company, the Illinois Steel Company, the Lorain Steel Company, or the Elgin, Joliet and Eastern Railway Company shall hereafter at any time or times be sold, assigned, transferred, pledged, mortgaged, or incumbered by the directors of the Federal Steel Company without making at least sixty days' previous publication in two prominent daily newspapers published in the city of New York of the intention to make such sale, transfer, assignment, pledge, mortgage, or incumbrance; and also, at the date of the first publication, filing a similar written notice with the chairman and secretary, respectively, of the said committee on stock lists; and also obtaining the consent of those holding a majority in amount of the shares of stock of the Federal Steel Company, by vote at a meeting regularly called and notice mailed to each stockholder at his usual or last known place of business or residence at least thirty days before the time of meeting.

The shares of the capital stock of the said Minnesota Iron Company, Illinois Steel Company, Lorain Steel Company, and Elgin, Joliet and Eastern Railway Company shall be placed and held in the name of some person or persons designated by vote of the directors of the Federal Steel Company to act as trustee therefor, and the certificates for said shares shall provide by endorsement thereon that they are issued and can be transferred only in pursuance of the provisions of this by-law.

This by-law shall never be repealed, amended, or modified except by consent of a majority of the stockholders of the Federal Steel Company obtained by vote at a meeting held pursuant to notice, stating the time, place, and object of the meeting, and mailed to each stockholder at his usual or last known place of business or residence at least thirty days before the time of meeting.

This first board of directors of the Federal Steel Company hereby distinctly waives, abrogates, and relinquishes, both for themselves and their successors, all rights and powers conferred by the articles of incorporation of Federal Steel Company which may not be in accordance herewith, either as to amendment of by-laws or disposition of above-named property.

XXX.

The following specific days are hereby fixed for declaring dividends upon the common and preferred stock of the Federal Steel Company, namely: The second Tuesdays in January, February, March, April, May, June, July, August, September, October, November and December in each and every year, providing, however, that no dividends shall be declared except as permitted by law and by the provisions of the certificate of incorporation of the company; and provided further, that no dividends shall be declared or paid except from accumulated profits excluding the sum or sums reserved as working capital.

AMERICAN TIN PLATE COMPANY.

[10-cent internal-revenue stamp, canceled.]

CERTIFICATE OF INCORPORATION.

[Registered office with the New Jersey Registration and Trust Company, East Orange, N. J.]

First. The name of the corporation is the "American Tin Plate Company."

Second. The location of its principal office in the State of New Jersey is at No. 525 Main street, in East Orange, county of Essex, and is to be registered with the New Jersey Registration and Trust Company. The said trust company is the agent herein and in charge thereof, and upon whom process against this corporation may be served.

The corporation shall have power to conduct its business in all its branches and have one or more offices, and unlimitedly to hold, purchase, and convey real and personal property, both within and without the State of New Jersey, and in all other States, Territories, and colonies of the United States, and in all foreign countries and places.

The officers of the corporation shall have no power to mortgage its real property except upon the consent in writing first obtained of the holders of a majority of the issued preferred stock hereinafter described, or upon the affirmative vote of a majority of the holders of the said preferred stock at a meeting duly called for that purpose, and upon such consent so obtained, or upon such affirmative vote so had, and not otherwise, the corporation shall have like power to mortgage its real property to secure an issue of bonds or otherwise.

Third. That the objects for which, and for each of which, this corporation is formed are:

To manufacture, buy, sell, deal in and deal with tin, terne, black plates, steel sheets, and all like or kindred products; to mine, manufacture, prepare for market, market, and sell the same and any articles or product in the manufacture or composition of which metal is a factor, including the acquisition, by purchase, mining, manufacture, or otherwise, of all materials, supplies, and other articles necessary or convenient for use in connection with and in carrying on the business herein mentioned, or any part thereof.

In furtherance, and not in limitation, of the general powers conferred by the laws of the State of New Jersey it is hereby expressly provided that the company shall have also the following powers, that is to say:

(a) To manufacture, purchase, or otherwise acquire, hold, own, sell, assign and transfer, invest, trade, deal in and deal with goods, wares, and merchandise and property of every class and description, and to do both mining and manufacturing of any kind.

(b) To the same extent as natural persons might or could do, to purchase or otherwise acquire, to hold, own, maintain, work, mine, develop, to sell, convey, or otherwise dispose of, without limit as to amount, within or without the State of New Jersey, and in any part of the world, real estate and real property, and any interest and rights therein.

(c) To acquire the good will, rights, and property of all kinds, and to undertake the whole or any part of the assets and liabilities of any person, firm, association, or corporation, and to pay for the same in cash, stock of this corporation, bonds, or otherwise.

(d) To apply for, obtain, register, purchase, lease, or otherwise acquire, and to hold, own, use, operate, introduce and sell, assign, or otherwise dispose of, any and all trade-marks, trade names, and distinctive marks, and all inventions, improvements, and processes used in connection with or secured under letters patent of the United States or elsewhere, or otherwise, and to use, exercise, develop, grant licenses in respect of, or otherwise turn to account any such trade-marks, patents, licenses, concessions, processes, and the like, or any such property, rights, and information so acquired, and with a view to the working and development of the same; to carry on any business, whether mining, manufacturing, or otherwise, which the corporation may think calculated directly or indirectly to effectuate these objects.

(e) To make and enter into contracts of every sort and kind with any individual, firm, association, corporation, private, public, or municipal, body politic, and with the Government of the United States, or any State, Territory, or colony thereof.

(f) To do all and everything necessary, suitable, or proper for the accomplishment of any of the purposes or attainment of any one or more of the objects herein

enumerated, or which shall at any time appear conducive or expedient for the protection or benefit of the corporation, either as holders of or interested in any property, and in general to carry on any business, whether manufacturing, mining, or otherwise.

(g) To do any or all of the things herein set forth to the same extent as natural persons might or could do, and in any part of world, as principals, agents, contractors, trustees, or otherwise.

It is the intention that the objects specified and causes contained in this third paragraph shall, except where otherwise expressed in said paragraph, be nowise limited or restricted by reference to or inference from the terms of any other clause of this or any other paragraph in this charter, but that the objects specified in each of the clauses of this paragraph shall be regarded as independent objects.

Fourth. The total amount of the capital stock of said corporation is to be fifty million dollars (\$50,000,000), divided into five hundred thousand (500,000) shares of one hundred dollars (\$100) each. Of the said stock two hundred thousand (200,000) shares, amounting at par to twenty million dollars (\$20,000,000), are to be preferred stock, and three hundred thousand (300,000) shares, amounting to thirty million dollars (\$30,000,000), are to be common stock.

The rights, privileges, and conditions following shall attach to the shares aforesaid, that is to say:

(1) The common stock shall be subordinate to the rights of the preferred stock, except that both preferred and common stock shall have equal voting powers.

(2) The corporation shall not be at liberty—

(a) To create or issue any other or further shares ranking in any respect *pari passu* with or in priority to the aforesaid issue of two hundred thousand (200,000) preference shares;

(b) Nor to create any charge, except as herein provided, upon the net profits of the corporation which shall not be subordinate to the rights of the preference shares;

(c) Nor to reserve a surplus fund which shall not be chargeable with the payment of the accrued dividends on the preference shares.

(3) The said preference shares shall carry a fixed cumulative preferential dividend at the rate of, but never exceeding, seven per cent. (7%) per annum on the par value thereof, and such dividends shall be declared quarterly on the second days of January, April, July, and October in each year, or at such other time as the board of directors or the executive committee shall see fit and determine.

If in any year dividends amounting to seven per cent. (7%) per annum shall not be paid on such preferred stock, the deficiency shall be a charge on the net profits and be payable, but without interest, before any dividends shall be paid upon or set apart for the common stock.

(4) The balance of the net profits of the corporation, after the payment of said cumulative dividend at the rate of seven per cent. (7%) per annum to the holders of the preferred stock, may be distributed as dividends among the holders of the general or common stock, as and when the board of directors or the executive committee shall in their discretion determine.

(5) In the event of the liquidation or dissolution of the corporation the surplus assets and funds thereof shall be applied in the first place in repaying to the holders of the aforesaid cumulative preference shares the full amount of the principal thereof, and the accrued dividends, if any, charged before any amount shall be paid upon the common stock, and after such payment in full to the holders of said cumulative preference shares the surplus assets and funds shall belong to and be divided among the holders of the other shares.

From time to time the preferred and common stock shall be issued in such amount and proportion as shall be determined by the board of directors, in accordance with the laws of the State of New Jersey.

Fifth. The directors of the corporation shall be divided into five classes, equal in number, in respect to the time for which they shall severally hold office. The first class shall be elected for a period of five years, the second class for a period of four years, the third class for a period of three years, the fourth class for a period of two years, and the fifth class for a period of one year; and at each annual election after 1898 the successors to the class of directors whose terms expire in such year shall be elected to hold office for five years, so that the term of office of at least one class shall expire in each year.

If the number of directors be increased, the directorships thus created shall be and be construed as vacancies to be filled by the board.

Sixth. The names and the post-office address of the incorporators, and the number of shares of common stock subscribed for by each, the aggregate of which (\$10,000)

is the amount of capital stock with which this corporation shall commence business, are as follows:

Name.	Post-office address.	Number of shares of common stock.
James B. Dill.....	27 Pine street, New York	90
Howard K. Wood	525 Main street, East Orange, N. J.	5
Duncan T. McLaren.....	525 Main street, East Orange, N. J.	5

Seventh. The duration of the corporation is to be perpetual.

Eighth. 1. The board of directors shall have power without the assent or vote of the stockholders to make, alter, amend, and rescind the by-laws of this corporation, and, subject always to the payment of the dividends on the preferred stock, to fix the amount to be reserved as working capital.

2. With the assent in writing or pursuant to the vote of the holders of two-thirds of all the stock, irrespective of class, issued and outstanding, the directors shall have power and authority to sell, assign, transfer, convey, or otherwise dispose of the property and assets of this corporation as an entirety on such terms and conditions as the directors shall deem fit, right, and just.

3. The board of directors, and, when the board is not in session, the executive committee, in addition to the powers and authorities by statute and by the by-laws expressly conferred upon them, are hereby empowered to exercise all such powers and do all such acts and things as may be exercised or done by the corporation, but subject, nevertheless, to the provisions of the statute, of the charter, and to any regulations that may from time to time be made by the stockholders: *Provided*, That no regulations so made shall invalidate any provisions of this charter, or any prior acts of the directors or executive committee which would have been valid if such regulations had not been made.

4. There shall be an executive committee of five members, who shall be elected by the stockholders from the directors and hold office as hereinafter provided. The said committee shall have and exercise all the powers expressly conferred upon it by this certificate of incorporation, and also all the powers of the board of directors whenever a quorum shall fail to be present at any stated or other meeting of the board, and as well at all times whenever the board shall not be in session, and shall have power to affix the seal of the corporation to all papers which they may deem to require it.

The committee shall have power to make rules and regulations for the conduct of its business, and to determine how many members thereof shall constitute a quorum.

The officers of the committee shall be a chairman, a vice-chairman, and a secretary, who shall hold office during the term of their office as members of the committee, and shall be elected by the stockholders.

At all meetings of the committee all questions shall be decided by a majority of votes, and in case of an equality of votes the chairman, and, in his absence, the vice-chairman, and, in the absence of both, the secretary, shall have a second and deciding vote.

The stockholders shall, at their first meeting, elect by ballot the said committee of five members from the directors elected at such meeting, and the said officers thereof.

The stockholders shall determine and fix the compensation to be paid to the members of the committee and to any of the officers thereof as such.

At every annual meeting after the first meeting, whenever the term of office of any member or officer of the committee shall expire, the stockholders shall elect a successor. Any member of the committee may be elected to succeed himself.

Any director, irrespective of class, is eligible to election as a member of the executive committee.

The term of office of each member of the committee shall be coextensive with the term of his office as director, unless the stockholders at the time of his election shall fix a shorter period or term of office, which they shall have power to do. Any member of the committee who shall cease to be a director of the company shall *ipso facto* cease to be a member of the committee. Members of the executive committee shall not be subject to removal for any cause by the board of directors or otherwise, and shall hold office until their successors are elected and qualify.

All vacancies in the executive committee shall be filled for the unexpired term from the directors by the remaining members of the committee.

5. The directors shall from time to time determine whether, and to what extent,

and at what times and places, and under what conditions and regulations, the accounts and books of the corporation, or any of them, shall be open to the inspection of the stockholders; and no stockholder shall have any right to inspect any account or book or document of the corporation except as conferred by statute of New Jersey, or authorized by the directors.

8. The directors shall have

of the legislature of New Jersey entitled, "An act concerning corporations (Revision of 1896)," and the various acts amendatory thereof and supplemental thereto, do make, record, and file this certificate, and do respectively agree to take the number of shares of stock hereinbefore set forth, and accordingly hereunto set our hands and seals.

Dated East Orange, N. J., December 8th, 1898.

In the presence of:

JOHN R. TURNER.

JAMES B. DILL.

HOWARD K. WOOD.

DUNCAN T. McLAREN.

JAMES B. DILL,

Solicitor, 27 Pine street, New York City.

STATE OF NEW JERSEY, *County of Essex, ss:*

Be it remembered that on this eighth day of December, A. D. eighteen hundred and ninety-eight, before the undersigned personally appeared James B. Dill, Howard K. Wood, and Duncan T. McLaren, who, I am satisfied, are the persons named in and who executed the foregoing certificate, and I, having first made known to them, and each of them, the contents thereof, they did each acknowledge that they signed, sealed, and delivered the same as their voluntary act and deed.

FRED'K SEYMOUR,

Master in Chancery of New Jersey.

[10-cent internal-revenue stamp, canceled.]

Received in the clerk's office of the county of Essex, on the thirteenth day of December, A. D. eighteen hundred and ninety-eight, and recorded in Book No. 15 of incorporated business companies for said county, page 164.

WILLIAM O. KUEBLER, *Clerk.*

Endorsed: "Filed December 14, 1898.

"GEORGE WURTS, *Secretary of State.*"

AMERICAN TIN PLATE COMPANY—BY-LAWS.

[Adopted by the stockholders December 15, 1898.]

TITLE—LOCATION.

1. The title of the corporation is the "American Tin Plate Company."
2. The principal office in New Jersey shall be and be registered with the New Jersey Registration and Trust Company, 525 Main street, East Orange, New Jersey. The corporation may also have an office in the cities of New York, New York; Pittsburg, Pennsylvania; Chicago, Illinois, and also offices at such other places as the board of directors may appoint or the business of the corporation may require.

DIRECTORS.

3. The property and business of the corporation shall be managed by a board of directors, fifteen in number. They shall be divided into five classes, equal in number, in respect to the time for which they shall severally hold office. At the first election of the corporation the first class shall be elected for a period of five years, the second class for a period of four years, the third class for a period of three years, the fourth class for a period of two years, and the fifth class for a period of one year, and at each annual election thereafter the successors to the class of directors whose

terms expire in such year shall be elected to hold office for five years, so that the term of office of at least one class shall expire each year.

The number of directors may be increased or decreased by amendment of this provision of the by-laws.

4. If the office of any director, or of the president, vice-presidents, secretary, treasurer, assistant secretary, assistant treasurer, or auditor, one or more, become vacant by reason of death, resignation, disqualification, removal or otherwise, the remaining directors, although less than a quorum, by a majority vote, may elect a successor or successors, who shall hold office for the unexpired term: Provided, however, That until the first day of January, 1899, the power to fill any vacancy or vacancies in the board of directors shall be vested exclusively in the stockholders, who shall exercise such power at a special meeting held for the purpose.

5. Any director, or other elected officer, may resign his office at any time. The acceptance of a resignation shall not be required to make it valid.

STOCKHOLDERS.

General provisions.

6. All meetings of stockholders shall be held at the principal office of the company at East Orange, New Jersey.

7. A majority of the stock issued and outstanding, irrespective of class, shall be requisite at all meetings of the stockholders to constitute a quorum.

8. There shall be an annual meeting of stockholders, beginning in the year 1900, to be held on the third Tuesday of January in each year, at the principal office of the corporation in East Orange, New Jersey, at ten o'clock a. m., when they shall elect, by plurality vote of the stock present, irrespective of class, a class of directors to succeed the class whose term shall expire at that time, which directors, thus elected, shall hold office for five years, and until their successors are elected, or chosen and qualified, each stockholder being entitled to one vote, in person or by proxy, for each share of stock, irrespective of class, standing registered in his or her name on the thirtieth day preceding the election, exclusive of the day of such election.

Notice of the annual meeting shall be published in a newspaper in the county in New Jersey where the principal office is located, and also in a newspaper published in the city of Chicago, and in a newspaper published in the city of New York, once a week for three weeks during the month of December next preceding the meeting.

9. Such election shall be conducted by two inspectors appointed by the presiding officer of the meeting, which inspectors shall be duly sworn, and shall in writing certify to the returns.

10. The inspectors, or the stockholders, by a majority vote of those present, may require any proxy to be permanently filed with the secretary before being voted upon.

11. Special meetings of the stockholders to be held at the principal office of the company at East Orange shall, on a vote of the majority of the board of directors, be called by the secretary by mailing a notice stating the object of and business to be transacted at such special meeting, at least ten days prior to the date of meeting, to each stockholder of record at his post-office address, as the same appears on the records of the corporation.

12. Upon the adjournment of the annual meeting of the stockholders for the election of directors, the board as constituted after such election shall forthwith convene without notice, and if a quorum of the the board be present the said board shall proceed to elect by ballot the officers for the ensuing year. If a quorum be not present, then at the first meeting thereafter when there shall be a quorum, the said election shall take place.

The officers to be chosen shall be as follows: A president and one or more vice-presidents, to be designated first vice-president, second vice-president, and the like, and who shall rank in such order, from the board of directors, who shall hold office for one year and until their successors are elected and qualified.

The board of directors shall also annually choose a secretary and a treasurer, and may choose an assistant secretary and an assistant treasurer, who need not be members of the board, or one person to act in more than one capacity, and an auditor, who shall hold office for one year and until their successors are elected, unless sooner removed by the board, which the board shall have the power at any time to do with or without cause.

MEETINGS OF DIRECTORS.

13. Stated meetings of the directors shall be held quarterly, without notice, on the 2d day of January, April, July, and October in each year, at the office of the corpo-

session in the city of Chicago, at ten o'clock in the forenoon, or by order of the board elsewhere, at a time and place to be fixed by the board, and of which time and place this changed notice of at least ten days shall be given to each director.

A majority of the directors in office shall be necessary to constitute a quorum, and a majority vote of the entire board shall be necessary to transact any business or to effectuate any resolution or order, except to adjourn, and except where otherwise expressly provided in these by-laws.

14. Special meetings of the board may be called by the executive committee on three days' notice to each director.

15. The directors may hold their meetings and have an office and keep the books of the corporation (except the stock and transfer books) outside of the State of New Jersey, at the cities of New York, Chicago, Pittsburg, or such other place or places as they may fix upon.

POWERS OF THE DIRECTORS.

16. The board of directors shall have management of the business of the corporation, and in addition to the powers and authorities, by these by-laws expressly conferred upon them, may exercise all such powers and do all such acts and things, as may be exercised or done by the corporation, but subject, nevertheless, to the provisions of the statute of the charter and of these by-laws, and to any regulations from time to time made by the stockholders, provided that no regulations so made shall invalidate any prior act of the directors which would have been valid if such regulation had not been made.

17. Without prejudice to the general powers conferred by the last preceding clause and the other powers conferred by these by-laws, it is hereby expressly declared that the board of directors shall have the following powers, that is to say:

To purchase or otherwise acquire, for the corporation, any property, rights, or privileges which the corporation is authorized to acquire, at such prices, and on such terms and conditions and for such consideration as they think fit.

At their discretion to pay for any property or rights acquired by the corporation, either wholly or partially in money or in stock or in other securities of the corporation.

To appoint any person or persons to accept and hold in trust for the corporation any property belonging to the corporation or in which it is interested, or for any other purpose, and to execute and to do all such duties and things as may be requisite in relation to any such trusts.

From time to time to provide for the management of the affairs of the corporation at home or abroad in such manner as they think fit, and in particular from time to time to delegate any of the powers of the board of directors to any committee, officer, or agent, and to appoint any persons to be the agents of the corporation, with such powers (including the power to subdelegate) and upon such terms as may be thought fit.

STANDING COMMITTEES.

18. There shall be an executive committee of five directors elected by the stockholders as provided in the certificate of incorporation, who shall meet at regular periods or on notice to all, by any of their own number; they shall advise with and aid the officers of the company in all matters concerning its interests and the management of its business, and generally exercise the powers conferred by the certificate of incorporation.

The committee shall also have the power:

To appoint and at their discretion remove or suspend such managers, officers, subordinates, assistants, or otherwise, and clerks, agents, and servants, permanently or temporarily, as they may from time to time think fit; and to determine their duties and fix, and from time to time change, their salaries or emoluments, and to require security in such instances and in such amounts as they think fit.

To confer, by resolution, upon any officer of the corporation the right to choose, remove, or suspend such subordinate officer, agents, or factors.

To determine who shall be authorized to sign, on the corporation's behalf, bills, notes, receipts, acceptances, indorsements, checks, releases, contracts, and documents.

Power is hereby given to the executive committee to act by the written consent of a quorum thereof, although not formally convened.

In case of a vacancy in the executive committee, or in the office of the chairman, vice-chairman, or secretary thereof, the vacancy shall be filled by the remaining members of the committee.

The chairman, vice-chairman, and secretary of the executive committee shall be elected as provided in the certificate of incorporation, and shall perform such duties as shall be prescribed by the committee.

There may be a finance committee of three directors appointed by the board, who shall, under the direction of the executive committee, examine and audit all accounts of the corporation at the close of each fiscal year, and at such other times as they may deem necessary.

The standing committee shall keep regular minutes of their transactions, and to cause them to be recorded in a book kept in the office of the corporation for that purpose, and to report the same to the board of directors whenever required.

ORDER OF BUSINESS, DIRECTORS' MEETING.

19. The order of business at the meetings of the board shall be as follows:

- (1) A quorum being present, the president shall call the board to order.
- (2) The minutes of the last meeting shall be read and considered as approved if there be no amendments.

Reports of officers of the company.

Reports of committees.

Unfinished business.

Miscellaneous business.

New business.

PRESIDENT.

20. The president shall preside at all meetings of the board of directors, and he, or one of the vice-presidents, shall, with the treasurer or assistant treasurer, in the company's behalf, sign all certificates of stock. He shall make annual reports showing the condition of the affairs of the corporation, and make such recommendations as he thinks proper, and submit the same to the board of directors at the meeting next preceding the annual meeting of stockholders, and he shall from time to time bring before the directors and the executive committee such information as may be required touching the business and property of the corporation.

THE VICE-PRESIDENTS.

21. The vice-presidents shall, in the order of their rank, be vested with all the powers and be required to perform all the duties of the president in his absence.

THE SECRETARY.

22. The secretary shall be ex officio secretary of the board of directors and of such committees as shall request him so to act, and shall attend all sessions of the board, and shall record all votes and the minutes of all proceedings of the stockholders and of the directors in a book to be kept for that purpose.

THE TREASURER.

23. The treasurer shall cause to be kept full and accurate accounts of receipts and disbursements in books belonging to the corporation, and shall deposit all moneys and other valuable effects, in the name and to the credit of the corporation, in such depositories as may be designated by the executive committee.

He shall disburse the funds of the corporation as may be ordered by the board of directors or executive committee, taking proper vouchers for such disbursements, and shall render to the president and directors, at the stated meetings of the board or whenever they may require it, an account of all his transactions as treasurer and of the financial condition of the corporation.

He shall give the corporation a bond in a sum, and with one or more sureties, satisfactory to the board, for the faithful performance of the duties of his office and the restoration to the company, in case of his death, resignation, or removal from office, of all books, papers, vouchers, money, or other property at whatsoever time in his possession belonging to the corporation.

AUDITOR.

24. The auditor shall have supervision over all the accounts and account books of the corporation, and see that the system of keeping the same is enforced and maintained. He shall direct as to forms and blanks relating to books and accounts in all departments, and no change shall be made without his consent or the consent of the president or executive committee. He shall see that there is kept in the bookkeeping department a set of books containing a complete record of all business transactions of the corporation pertaining to accounts.

He shall, when requested, furnish the executive committee or president a statement

of earnings and expenses of the corporation or any other corporation in which this corporation may be interested for any given time, and shall keep books and records for the purpose of furnishing such statistics.

He shall verify the assets reported by the treasurer or his assistant at least twice a year and make reports of the same to the executive committee.

He shall cause the books and accounts of all officers and agents charged with the receipt or disbursement of money to be examined as often as practicable, or when requested by the president or executive committee, and shall ascertain whether or not the cash and vouchers covering the balances are actually on hand.

He shall render such assistance and advice as the president or executive committee may desire concerning the books and accounts and system of financial transactions of all other corporations in which this corporation is interested, and furnish to the president or executive committee such statements concerning the same as may be requested by them.

In case of a default within his information at any time he shall at once notify the president and the chairman.

DUTIES OF OFFICERS MAY BE DELEGATED.

25. In case of the absence of the president, vice-presidents, secretary, treasurer, assistant secretary, assistant treasurer, or auditor of the corporation, or for any other reason that may seem sufficient to the board, the board of directors may delegate his powers and duties to any other officer or to any director for the time being.

CERTIFICATES OF STOCK.

26. All certificates of stock shall be signed by the president or one of the vice-presidents and by the treasurer or assistant treasurer, and shall have affixed thereto the corporate seal.

TRANSFERS OF STOCK.

27. Shares of the stock of the corporation shall be transferable only on the books of the corporation by the holder thereof in person, or by his or her attorney duly authorized thereto in writing, and upon the surrender and cancellation of the certificate therefor duly indorsed.

The corporation shall have the right to require the endorsement of the stockholder to be proved or acknowledged in the same manner as required by the statutes of New Jersey for deeds of real estate as a condition precedent to transfer.

Whenever any transfer shall be made for collateral security, and not absolutely, the fact shall be so expressed in the entry of said transfer.

The corporation shall not be bound by or recognize any equitable or partial interests in a share or shares, or any interests except the absolute right of the person registered as the owner thereof. The corporation shall not be bound to recognize trusts.

In case of the alleged loss or destruction of a certificate of stock, a new certificate may be issued in its place upon proof of such loss or destruction and the giving of a bond by the owner of such lost or destroyed certificate or his legal representatives in such sum, and with one or more surety or sureties, as the directors shall direct or require, as indemnity against any claim that may be made against the corporation; a new certificate may be given without requiring any bond when in the judgment of the directors it is proper to do, but in no case shall such new certificate be issued except pursuant to resolution or order of the board of directors.

FISCAL YEAR.

28. The fiscal year of the corporation shall begin the first day of January and terminate on the 31st day of December in each year, beginning in 1899.

DIVIDENDS.

29. Dividends upon the capital stock of the corporation, when earned, shall be declared quarterly on the 2nd days of January, April, July, and October of each year, beginning in 1899, or at such other times as the board of directors or the executive committee shall see fit and determine.

DIRECTORS' ANNUAL STATEMENT.

30. The board of directors shall present at each annual meeting, and when called for by the stockholders at any special meeting of the stockholders, a full and clear statement of the business and condition of the corporation.

CONTRACTS AND AGREEMENTS.

31. No agreement, contract, or obligation, other than a check, involving the payment of money or the credit of the company for more than one thousand dollars, shall be made without the order of the board of directors or of the executive committee, duly entered in the minutes.

NOTICE.

32. Any stockholder, officer, or director may waive any notice required to be given under these by-laws.

33. Wherever under the provisions of these by-laws notice is required to be given to any director, officer, or stockholder, it shall not be construed to mean personal notice, but such notice shall, except where provision is made in these by-laws for the giving of such notice by publication in a newspaper or newspapers, be given in writing by depositing the same in the post-office or letter box in a post-paid sealed wrapper, addressed to such director, officer, or stockholder at his or her address as the same appears on the books of the corporation, and the time of the giving of such notices shall be deemed to be the time when the same shall be thus mailed.

ALTERATION OF BY-LAWS.

34. The stockholders, by vote of a majority of the stock issued and outstanding, irrespective of class, may, at any stated meeting of the stockholders, amend these by-laws, provided notice in writing of the proposed amendment shall be sent at least thirty days in advance of the aforesaid stated meeting to every stockholder of record.

The board of directors by a vote of eleven of the members may alter or amend these by-laws, but no alteration shall be made unless proposed at a stated meeting of the board and considered at a subsequent stated meeting.

[Internal-revenue 10-cent stamp—canceled.]

THE AMERICAN STEEL AND WIRE COMPANY OF NEW JERSEY.

CERTIFICATE OF INCORPORATION.

STATE OF NEW JERSEY, ss:

This certifies that we, Joseph R. Ellicott, Robert S. Green, and Theodore S. Beecher, do hereby associate ourselves into a corporation under and by virtue of the provisions of an act of the legislature of the State of New Jersey, entitled "An act concerning corporations," approved April 21st, 1896, and the acts supplementary thereto and amendatory thereof, for the purposes hereinafter mentioned, and to that end we do by this our certificate set forth:

First. The name of such corporation is "The American Steel and Wire Company of New Jersey."

Second. The location of its principal office in the State of New Jersey is at No. 60 Grand street, in Jersey City, county of Hudson, and the company is to be registered with the Corporation Trust Company of New Jersey. The said trust company will be the agent in said principal office and in charge thereof, upon whom process against the corporation may be served.

Third. The objects for which the corporation is formed are to manufacture and trade in steel, iron, and other metals; to make, purchase, and sell manufactured articles made partly or wholly from metals of any kind and all like or kindred products; to acquire and dispose of rights to make and use the same; to make, purchase, and sell such other products or merchandise as may be conveniently or advantageously used or sold in connection with said metals and businesses; and to apply for, purchase, or otherwise acquire, and hold, own, use, operate, sell, assign, or otherwise dispose of any and all inventions, improvements, and processes used in connection with or secured under letters patent of the United States, or other countries, or otherwise, and grant licenses and rights in respect thereof, or otherwise. The corporation shall have power to purchase, hold, sell, assign, transfer, mortgage, pledge, or otherwise dispose of the shares of the capital stock of, or any bonds, securities, or evidences of

indebtedness created by any other corporation or corporations of this or any other State, and while owner of such stock may exercise all the rights, powers, and privileges of ownership, including the right to vote thereon. The corporation shall also have power to have one or more offices outside of this State, and to carry on any part of its operations and business, and hold, purchase, mortgage, lease, or convey real or personal property in any State or Territory of the United States and in any foreign country or place.

Fourth. The total authorized capital stock of the corporation is ninety million dollars (\$90,000,000), divided into nine hundred thousand (900,000) shares of the par value of one hundred dollars (\$100) each. The amount of capital stock with which it will commence business is two hundred and fifty thousand dollars (\$250,000). Of such total authorized capital stock, four hundred thousand (400,000) shares, amounting to forty million dollars (\$40,000,000), par value, shall be preferred capital stock, and five hundred thousand (500,000) shares, amounting to fifty million dollars (\$50,000,000), par value, shall be common stock. The holders of preferred stock shall be entitled to receive in each year out of the surplus net profits of the corporation a fixed yearly dividend of seven per centum, payable quarterly, before any dividend shall be set apart or paid on the common stock, but shall not be entitled to any further dividend or share of profits. The dividends upon the preferred stock shall be cumulative, so that, if in any year dividends amounting to seven per centum are not paid on the preferred stock, the deficiency is payable subsequently, before any dividends are set apart or paid upon the common stock. In case of liquidation or dissolution of the corporation, the holders of preferred stock will be entitled to be paid in full both the principal of their shares and the accrued dividend charge before any amount is paid to the holders of common stock; but after the payment on any such liquidation or dissolution to the holders of the common stock of its par value, the remaining assets and funds shall be divided *pro rata* among the holders of both classes of said capital stock.

Fifth. The names and post-office addresses of the incorporators and the number of shares subscribed for by each, the aggregate of such subscriptions being the amount of capital stock with which the corporation will commence business, are as follows:

Name	Post-office address.	No. shares.
Joseph R. Ellicott.....	Nyack, N. Y.	1,000
Robert S. Green.....	Elizabeth, N.	1,000
Theodore S. Beecher.....	Irrington, N.	500

Sixth. The existence of the corporation shall begin on the fourteenth day of January, 1899, and shall be perpetual.

Seventh. The business of the corporation shall be managed by its directors, who shall respectively be shareholders therein and one of whom shall be an actual resident of this State. Directors of the corporation shall be divided into three classes, equal in number, in respect to the time for which they shall severally hold office. The first class shall be elected for a term of three years, the second class for a term of two years, the third class for a term of one year; and at each annual election after 1899 the successors to the class of directors whose terms expire in such year shall be elected to hold office for three years, so that the term of office of at least one class shall expire in each year. The power to make and alter by-laws shall be in the directors, but any by-law may be altered or repealed by the stockholders. The by-laws shall prescribe the number of directors necessary to constitute a quorum of the board of directors, which may be less than a majority. In case of an increase in the number of directors between the annual elections by the stockholders, the board of directors may elect the additional directors, who shall hold office until the next meeting of stockholders or until their successors shall be elected. The directors shall have power to hold their meetings, to have one or more offices and to keep the books of the corporation (except the stock and transfer books) outside of this State at such places as may from time to time be designated by them.

With the assent in writing or pursuant to the vote of the holders of two-thirds of the capital stock issued and outstanding, the directors shall have power and authority to sell, assign, transfer, convey, or otherwise dispose of the property and assets of this corporation as an entirety on such terms and conditions as the directors shall deem fit, right, and just.

The directors shall, from time to time, determine whether, and to what extent, and at what times and places, and under what conditions and regulations, the accounts and books of the corporation, or any of them, shall be open to the inspection of the

stockholders, and no stockholder shall have any right to inspect any account or book or document of the corporation, except as conferred by statute of New Jersey or authorized by the directors.

In witness whereof we have hereunto set our hands and seals the twelfth day of January, 1899.

JOS. R. ELLICOTT.	[L. s.]
ROBT. S. GREEN.	[L. s.]
THEODORE S. BEECHER.	[L. s.]

Signed and sealed in the presence of—
ALBERT C. WALL.

STATE OF NEW JERSEY, *county of Hudson, ss.*

Be it remembered that on this twelfth day of January, 1899, before me, the subscriber, a master in chancery of New Jersey, personally appeared Joseph R. Ellicott, Robert S. Green, and Theodore S. Beecher, who, I am satisfied, are the persons named in and who executed the foregoing certificate of incorporation; and I having first made known to them the contents thereof, they did each acknowledge that they signed, sealed, and delivered the same as their voluntary act and deed for the uses and purposes therein expressed

ALBERT C. WALL,
Master in Chancery of New Jersey.

[Internal-revenue 10-cent stamp—canceled.]

BY-LAWS OF THE AMERICAN STEEL AND WIRE COMPANY OF NEW JERSEY.

[Incorporated under the laws of the State of New Jersey.]

ARTICLE I.

MEETINGS OF STOCKHOLDERS.

SECTION 1. A regular annual meeting of the stockholders shall be held at the principal office of the company at Jersey City, Hudson County, State of New Jersey, at 11 o'clock a. m. on the third Tuesday of February in each year, beginning with the year 1900, for the election of directors and the transaction of such other business as may come before the stockholders for action.

SEC. 2. Special meetings of the stockholders may be called by the chairman or president or by order of the executive committee or board of directors whenever they deem it necessary, and it shall be their duty to order and call such meetings whenever persons holding one-fourth of the capital stock of the company outstanding shall in writing request the same. Such special meetings shall be held at the principal office of the company in the same manner as the annual meeting.

SEC. 3. At all meetings of the stockholders, each stockholder shall be entitled to one vote for each share held by him, which vote may be given personally or by proxy authorized in writing. The instrument authorizing a proxy to act shall be exhibited to the secretary and inspectors of election at the meeting, and shall be lodged with the secretary if he shall so request. No share or shares of stock which have been transferred on the books of the company within twenty days next preceding any election shall be voted on at any such election.

SEC. 4. The holders for the time being of a majority of the stock issued and outstanding, represented in person or by proxy, shall constitute a quorum for the transaction of business; and, in the absence of a quorum, the stockholders attending or represented at the time and place for which a meeting shall have been called may adjourn the meeting for a period not exceeding twenty days.

SEC. 5. Notice of the annual and of any special meeting of the stockholders shall be given to each stockholder by posting the same in a postage-prepaid letter addressed to each stockholder at the address left with the secretary of the company, or by delivering the same personally at least ten days before such meeting, in addition to any publication or notice that may be required by law. The notice of a special meeting shall state briefly the object of the meeting, and no other business shall be transacted at such meeting. A failure to give the notice for the regular annual meeting shall not invalidate the proceedings of the meeting.

SEC. 6. The stockholders may at each annual meeting choose by ballot two persons (who need not be stockholders) to act as inspectors of election at all meetings of the stockholders until the close of the next annual meeting. In case of a failure to elect

inspectors, or in case an inspector shall fail to attend or refuse to serve, the stockholders at any meeting may choose an inspector or inspectors to act at such meeting.

SEC. 7. The order of business at all meetings of the stockholders shall be as follows:

1. Proof of notice of meeting and report as to stockholders present in person or by proxy.
2. Reading of minutes of previous meeting and action thereon.
3. Appointment of inspectors of election, if the inspectors elected at the preceding annual meeting be not present and ready to serve.
4. Reports of officers.
5. Election of directors.
6. Election of inspectors of election to serve until the close of the next annual meeting.
7. Unfinished business.
8. New business.

The election of inspectors of election to serve until the close of the next annual meeting may be held at the same time as the election of directors and by the same ballot.

The order of business to be followed at any meeting may be changed by vote of the majority in interest of those present at the meeting.

ARTICLE II.

BOARD OF DIRECTORS.

SEC. 1. The property and business of the company shall be managed and controlled by a board of directors, who must at all times be stockholders. The board shall consist of fifteen members and shall be divided into three classes of five members each. The first class shall hold office for three years, the second class for two years, and the third for one year. At all regular annual elections the directors, except when chosen to fill a vacancy, shall be chosen for a term of three years. In case of vacancy in the board resulting from death, resignation, disqualification, or other cause the board shall have power to appoint the members necessary to make up the full number of fifteen, but such appointment shall continue only until the next regular meeting of the stockholders. All directors shall hold their offices until their successors are elected and qualified.

SEC. 2. The directors shall act only as a board, and the individual directors shall have no power as such. Eight directors at a meeting duly called shall constitute a quorum for the transaction of business; but any less number may adjourn any meeting from time to time until a quorum shall be present.

SEC. 3. Regular meetings of the directors may be held at the office of the company in the city of New York, in the State of New York, or elsewhere in that or any other State, as the board of directors may from time to time determine. Notice of regular meetings shall be mailed by the secretary to each director at his last known post-office address at least three days previous to the time fixed for the meeting. Special meetings of the board may be called by the chairman, president, or executive committee, or by request of any three members, made in writing on at least one day's notice to each director, delivered to him personally, or mailed to him or sent by telegraph, or left at his residence or usual place of business.

SEC. 4. The directors may without notice meet at the office of the company in Jersey City at 1 o'clock p. m., or at the office in the city of New York at 2 o'clock p. m., of the day of the regular annual meeting of the stockholders or the next day, and elect the officers of the company for the ensuing year. They shall also at such meeting appoint the executive committee.

SEC. 5. Directors as such shall not receive any stated salary for their services, but shall be allowed ten dollars for attendance at each regular or special meeting of the board, if present at roll call.

ARTICLE III.

EXECUTIVE COMMITTEE.

SEC. 1. The board of directors shall appoint an executive committee of three directors, who shall serve during the pleasure of the board. Vacancies in such executive committee shall be filled by the board of directors.

SEC. 2. The executive committee shall have and exercise, subject to the control of the board of directors, all the powers of the board requisite for the conduct, management, and development of the company's business; and when the board is not in session the executive committee shall have and may exercise all the powers of the

board. The executive committee shall fix the salaries or compensation of all the officers of the company drawing \$2,500 per year or more. It may fill vacancies among the officers of the company, but any officer appointed by the executive committee may be removed by a vote of the board of directors. A majority of the executive committee shall be a quorum for the transaction of business, and the committee shall at all times act by the vote of a majority. If a member of the committee be absent from any meeting, the remaining members of the committee shall have the power to appoint any director to act as a member of the committee for that meeting. The executive committee may hold its meetings at any office of the company or at any place which they may deem proper, and may prescribe and regulate what, if any, notice shall be given of meetings of the committee. The executive committee shall keep minutes of its proceedings, and report the same to the board of directors at each ensuing meeting of the board.

ARTICLE IV.

SEC. 1. The board of directors shall annually elect or appoint the following permanent officers: A chairman of the company, a president, four vice-presidents, a general manager, a treasurer, an assistant treasurer in New York, an assistant treasurer in Chicago, a secretary, an assistant secretary in New York, an assistant secretary in Chicago, an auditor, an assistant auditor, and general counsel. The board or executive committee may also from time to time appoint such other officers, committees, agents, or employees as it may deem proper.

SEC. 2. If any vacancy shall occur among the officers of the company, such vacancy shall be filled by the board of directors or the executive committee, except as to the chairman or president, vacancies in which offices shall be filled by the board.

SEC. 3. The board of directors, the executive committee, the chairman, or the president may from time to time prescribe the duties of the other officers, agents, and employees of the company.

THE CHAIRMAN.

SEC. 4. It shall be the duty of the chairman to preside at all meetings of the board of directors and stockholders. He shall have general supervision of the entire business of the company and of its several officers, subject to the control of the board of directors or executive committee. He shall see that all orders and resolutions of the board and executive committee are carried into effect, and he shall execute all contracts and agreements authorized by the board or executive committee. The chairman shall submit a complete report of the operations of the company for the year, and of the state of its affairs on the 31st day of December, to the directors at their regular meeting in February of each year, and to the stockholders at their annual meetings, and from time to time shall report to the directors all matters within his knowledge which the interests of the company may require to be brought to their notice.

THE PRESIDENT.

SEC. 5. It shall be the duty of the president, in the absence of the chairman, to preside at all meetings of the board of directors and stockholders, and, subject to the powers of the chairman and executive committee, the president shall have general and active management of the business of the company. The president may sign and seal certificates of stock. He shall, subject to the above powers of the chairman and executive committee, have the general superintendence and direction of all the other officers of the company and shall see that their duties are properly performed. He shall, subject to the powers of the chairman and executive committee, have the general powers and duties usually vested in the office of the president of a corporation. He shall freely consult and advise with the chairman and also with the executive committee in relation to the business and interests of the company, and act under their instructions.

THE VICE-PRESIDENTS.

SEC. 6. The vice-presidents shall, in their order, be vested with all the powers and required to perform all the duties of the president in his absence. Each may sign certificates of stock, and shall perform such duties as may be prescribed from time to time by the board of directors or the executive committee.

PRESIDENT PRO TEM.

SEC. 7. In the absence of the president and the vice-presidents the board may appoint a president *pro tem*.

THE GENERAL MANAGER.

SEC. 8. The general manager shall have general superintendence of the conduct of the business of the company, other than its financial affairs, under the direction and control of the chairman, president, executive committee, and board of directors.

THE TREASURER.

SEC. 9. The treasurer shall have charge of the funds, receipts, and disbursements of the company. He shall deposit all moneys and other valuable effects in the name and to the credit of the company in such banks and with such depositaries as may be designated by the board of directors or executive committee. He shall disburse the funds of the company as may be ordered by the board or executive committee, taking proper vouchers for such disbursements, and shall render to the chairman, president, or executive committee, and to the directors at the regular meetings of the board or whenever they may require it, an account of all his transactions as treasurer and of the financial condition of the company, and at the regular meeting of the board in February annually he shall make a like report for the preceding year. He shall keep full and accurate books of account. He shall give to the company a bond in the sum of \$100,000 for the faithful performance of the duties of his office and the restoration to the company, in case of his death, resignation, or removal from office, of all books, papers, vouchers, money, or other property of whatever kind in his possession belonging to the company, which bond shall be an undertaking of a surety company in such form and containing such provisions as the board of directors or executive committee may require. The fees of the surety company for furnishing the said bond shall be paid by the company. Certificates of stock, when signed by the president or a vice-president, shall be countersigned by the treasurer. He shall keep the accounts of stock registered and transferred in such form and manner and under such regulations as the board of directors or executive committee may prescribe.

THE ASSISTANT TREASURERS.

SEC. 10. The assistant treasurers in New York and Chicago shall have power to sign checks and drafts upon the banks and depositaries of the company, and to endorse checks and drafts for deposit with such banks or depositaries to the credit of the company. The assistant treasurer in New York shall also have power to act as a vice-treasurer, and as such to sign certificates of stock in the place and stead of the treasurer in his absence. The assistant treasurers shall perform such other duties as may be from time to time prescribed by the chairman, president, executive committee, or board of directors. They shall each furnish to the company a bond of a surety company in all respects similar in form and amount to that required of the treasurer, and the fees of the surety company for furnishing the said bonds shall be paid by the company.

THE AUDITOR.

SEC. 11. The auditor shall have supervision over all the accounts and account books of the company, and see that the system of keeping the same is enforced and maintained. He shall direct as to forms and blanks relating to books and accounts in all departments, and no change shall be made without his consent or the consent of the chairman, president, or executive committee. He shall see that there is kept in the bookkeeping department a set of books containing a complete record of all business transactions of the company pertaining to accounts, and shall, when requested, furnish to the board, executive committee, chairman, or president, a statement of the earnings and expenses of the company or of any other corporation in which this company may be interested, for any given time, and shall keep books and records for the purpose of furnishing such statistics. He shall verify the assets reported by the treasurer or his assistants at least twice a year, and make report of the same to the board or executive committee. He shall cause the books and accounts of all officers and agents charged with the receipt of or disbursement of money to be examined as often as practicable, or when requested by the chairman, president, or executive committee, and shall ascertain whether or not the cash and vouchers covering the balances are actually on hand. He shall render such assistance and

1254 HEARINGS BEFORE THE INDUSTRIAL COMMISSION.

advice as the chairman, president, executive committee, or board may desire concerning the books, accounts, and system of financial transactions of all other corporations in which this company is interested, and furnish to the chairman, president, executive committee, or board such statements concerning the same as may be requested by them. In case of a default coming to his knowledge at any time, he shall at once notify the chairman and president, as well as the executive committee.

THE ASSISTANT AUDITOR.

SEC. 12. The assistant auditor shall perform all the duties of the auditor in his absence, as directed from time to time by the chairman, president, executive committee, or board of directors, and such other duties as they may prescribe.

THE SECRETARY.

SEC. 13. The secretary shall record all the votes and proceedings of the stockholders and of the directors in a book kept for that purpose. He shall keep in safe custody the seal of the company, and, when authorized by the board or executive committee, affix it to any instrument requiring the same, which seal shall always be attested by the signatures of the chairman, president, or a vice-president, or of the secretary or an assistant secretary. He shall perform such other duties as pertain to his office, or as the chairman, the president, the board of directors, or the executive committee may require. In the absence of the secretary from any meeting of the stockholders or directors the record of the proceedings shall be kept and authenticated by an assistant secretary, or by such other person as may be appointed for that purpose at the meeting.

[Amendment to section 13, Article IV. Adopted at directors' meeting of June 24, 1899.]

SEC. 13. The secretary shall record all the votes and proceedings of the stockholders and of the directors in a book kept for that purpose. He shall keep in safe custody the seal of the company, and may affix it to any instrument requiring the same when authorized or directed so to do by the board of directors, the executive committee, the chairman, the president, or any vice-president discharging the duties of the president, pursuant to the by-laws. Said seal shall always be attested by the signature of the chairman, president, or a vice-president, or of the secretary, or an assistant secretary. He shall perform such other duties as pertain to his office, or as the chairman, the president, the board of directors, or the executive committee may require. In the absence of the secretary from any meeting of the stockholders or directors a record of the proceedings shall be kept and authenticated by an assistant secretary, or by such other person as may be appointed for that purpose at the meeting.

THE ASSISTANT SECRETARIES.

SEC. 14. The assistant secretaries shall be vested with all the powers and required to perform all the duties of the secretary in his absence. They shall perform such other duties as may be prescribed by the chairman, president, executive committee, or board of directors.

THE GENERAL COUNSEL.

SEC. 15. The general counsel shall advise the board of directors, executive committee, and officers of the company upon all points of law arising in the conduct of the company's business, and it shall be the duty of such counsel to advise the board from time to time as to all reports required by law.

TENURE OF OFFICE.

SEC. 16. Each officer shall hold his office during the pleasure of the board of directors; provided that with respect to all officers, except the chairman, president, and vice-presidents, an agreement in writing may be entered into with authority of the board or the unanimous approval of the executive committee fixing a definite term.

ARTICLE V.

CONTRACTS AND AGREEMENTS.

SEC. 1. No agreement, contract, or obligation (other than a check) involving the payment of money, or the credit or liability of the company, shall be made without

the approval of the board of directors or of the executive committee, except that the chairman or the president may in the ordinary course of the business of the company make contracts not involving an obligation or liability in excess of \$50,000.

BANKS, DEPOSITARIES, CHECKS, AND DRAFTS.

SEC. 2. All checks and drafts and all funds of the company shall be deposited from time to time in such banks, trust companies, and with such bankers or other depositaries, as the board of directors or executive committee may designate. All checks shall be drawn out of the regular check books of the company, and upon the stubs of such checks the purpose for which they are drawn shall be specified. All checks, drafts, or orders for the payment of money shall be signed by the treasurer or one of the assistant treasurers, and shall be countersigned by the chairman, or the president, or a vice-president. No checks shall be drawn or funds used for any purpose other than for the corporate objects of the company.

[Amendment to section 2, Article V. Adopted at directors' meeting of June 24, 1899.]

SEC. 2. All checks and drafts and all funds of the company shall be deposited from time to time in such banks, trust companies, and with such bankers or other depositaries as the board of directors or executive committee may designate. All checks shall be drawn out of the regular check books of the company, and upon the stubs of such checks the purpose for which they are drawn shall be specified. All checks, drafts, or orders for the payment of money shall be signed by the treasurer or one of the assistant treasurers, and shall be countersigned by the chairman or the president or a vice-president, or by such other officer or officers as the executive committee may designate. No checks shall be drawn or funds used for any purpose other than for the corporate objects of the company.

ARTICLE VI.

SHARES AND THEIR TRANSFER.

SEC. 1. Each holder of stock shall be entitled to a stock certificate signed by the president or one of the vice-presidents and the treasurer or vice-treasurer of the company and countersigned by the transfer agent of the company, certifying the number of shares owned by him. All such certificates shall be issued in consecutive order from certificate books, and shall be numbered and registered in the order in which they are issued, and on the stub of each certificate issued shall be entered the name of the person owning the shares represented by such certificate, with the number of shares and of which class and the date of such certificate, and in case of cancellation, the date of cancellation. The person receiving any such certificate shall personally or by agent sign on such stub a receipt for the certificate issued to him. Every certificate returned to the company for the exchange or transfer of shares shall be canceled, and pasted in its original place in the stock certificate book, and no new certificate shall be issued until the old certificate has been thus canceled and returned to its original place in such book, except in the case provided for in section 5 of this article.

SEC. 2. The board of directors or executive committee may appoint a registrar of transfers of stock in the city of New York or elsewhere, and after the appointment of such registrar of transfers no certificate for stock shall be binding upon the company or have any validity unless countersigned by such registrar of transfers.

SEC. 3. Transfers of shares shall be made only upon the books of the company by the holder in person or by power of attorney duly executed and filed with the secretary of the company, and on the surrender of the certificate or certificates for such shares; but the board of directors or executive committee may appoint some suitable bank or trust company or agent in the city of New York or elsewhere to facilitate transfers by stockholders under such regulations as the board may from time to time prescribe. Such transfer books shall be closed for such a period as the board shall direct previous to and on the day of the annual or any special meeting of the stockholders. The transfer books may also be closed by the board for such period as may be deemed advisable for dividend purposes.

SEC. 4. Every stockholder shall furnish the secretary with an address at which notices of meetings and all other notices may be served upon or mailed to him, and in default thereof notices may be addressed to him at the office of the company in Jersey City, New Jersey.

SEC. 5. The board of directors may direct a new certificate or certificates of stock to be issued in the place of any certificate or certificates theretofore issued by the

company alleged to have been lost or destroyed, and the board, when authorizing such issue of a new certificate or certificates, may, in their discretion, require the owner of the lost or destroyed certificate, or his legal representatives, to give the company a bond, in such sum as they may direct, as indemnity against any claim that may be made against the company; but a new certificate may be issued without requiring any such bond when, in the judgment of the directors, it is proper so to do. The directors, however, may refuse to issue any new certificate except upon the institution of legal proceedings, as provided in the statute in such case made and provided.

ARTICLE VII.

DIVIDENDS.

Dividends may be declared by the board of directors, from time to time, out of the surplus or net profits of the company, and payable at such times as the board shall determine. The dividend on the preferred stock shall be payable quarterly, if from time to time so declared by the board, and the dividends on the preferred stock shall be payable before any dividends shall be set apart or paid on the common stock, as provided in the company's certificate of incorporation. Any surplus remaining after providing the quarterly dividend on the preferred stock may be set apart and paid on the common stock.

[Amendment to Article VII, adopted at directors' meeting of December 11, 1899.]

Dividends may be declared by the board of directors, from time to time, out of the surplus or net profits of the company, as hereinafter stated, or at such other times as the board shall determine.

The dividends on the preferred stock shall be payable quarterly, viz: On the second days of January, April, July, and October, in each year, if, from time to time, or otherwise, so declared by the board, and the dividend on the preferred stock shall be payable before any dividend shall be set apart or paid on the common stock, as provided in the certificate of incorporation of this company.

After all dividends on the preferred stock for the current dividend year have been paid, or after sufficient of the surplus or net profits of the company shall have been provided or set apart for the payment of all dividends on the preferred stock for the current dividend year, the directors may, in their discretion, from time to time, apply any further surplus or net profits of the company towards the payment of dividends on the common stock.

All dividends on the capital stock of this company may be declared and payable as above set forth, and as the board may, from time to time, direct; provided, however, that no dividend shall be declared except as permitted by law and by the certificate of incorporation of this company.

ARTICLE VIII.

The common corporate seal is, and, until otherwise ordered by the board of directors, shall be, an impression upon paper or wax bearing the words, "The American Steel & Wire Company of New Jersey, Incorporated 1899."

ARTICLE IX.

AMENDMENT OF BY-LAWS.

The board, by a vote of a majority of the directors of the company, may alter or amend these by-laws, but no alteration shall be made unless first proposed at a previous meeting of the board. The stockholders may amend the by-laws at any general or special meeting.

[Article X of by-laws, adopted at directors' meeting of December 11, 1899.]

SEC. 1. The board of directors shall have power, at any regular or special meeting, to fix the sum or amount to be reserved as a working capital of the company, over and above the capital stock paid in.

SEC. 2. The board may fix the amount of such working capital quarterly, viz: For each ensuing quarter beginning, respectively, with the months of January, April, July, and October, or otherwise, as the board may hereafter determine.

SEC. 3. The board may, at its discretion, at any regular or special meeting, either increase or reduce the amount of working capital previously fixed and reserved.

AMERICAN SUGAR REFINING COMPANY--CERTIFICATE OF INCORPORATION.¹

This is to certify that we, F. O. Matthiessen, Jno. E. Searles, jr., H. O. Havemeyer, Wm. Dick, and Theo. A. Havemeyer, do hereby associate ourselves into a company under and by virtue of the provisions of an act of the legislature of New Jersey, entitled "An act concerning corporations," approved April 7, 1875, and the several supplements thereto and acts amendatory thereof, for the purposes hereinafter mentioned, and to that end we do by this our certificate set forth:

First. That the name we have assumed to designate such company and to be used in its business and dealings is "The American Sugar Refining Company."

Second. That the place in this State where the business of such company is to be conducted is Jersey City, in the county of Hudson, in which the principal part of the business of such company within this State is to be transacted; that the principal place of business out of this State is to be situated in the city of Brooklyn, in the county of Kings, in the State of New York; that the States of Maine, Massachusetts, Connecticut, New York, Pennsylvania, Louisiana, Missouri, California, and Maryland are the other States of the United States in which it proposes to carry on operations, and that the objects for which said company is formed are the purchase, manufacture, refining, and sale of sugar, molasses, and melads, and all lawful business incidental thereto.

That the business which is to be carried on out of this State is a part of the purchase, manufacture, refining, and sale of sugar, molasses, and melads, and all lawful business incidental thereto.

Third. That the total amount of the capital stock of said company is fifty million dollars; the number of shares into which the same is divided is five hundred thousand, and the par value of each share is one hundred dollars.

That of this amount one-half will be general stock and one-half preferred stock, and that the holders of such preferred stock shall be entitled to receive from the surplus or net profits arising from the business of the corporation a fixed yearly dividend of seven per centum, payable semiannually on the 2nd days of January and July in each year before any dividend shall be set apart or paid on the said general stock.

Should the surplus or net profits arising from the business of the corporation prior to any dividend day be insufficient to pay the dividend upon preferred stock, such dividends shall be payable from future profits, and no dividends shall at any time be paid upon general stock until the full amount of seven per centum per annum up to that time upon all the preferred stock shall have been paid or set apart. The holders of preferred stock shall be entitled to no dividends beyond the seven per centum aforesaid.

The amount with which said company will commence business is eleven thousand dollars, all of which shall be general stock and which is divided into shares of the par value of one hundred dollars each.

Fourth. The names and residences of the stockholders and the amount of shares held by each are as follows, viz:

Names.	Residences.	Number of shares.
Theo. A. Havemeyer.....	Mahwah, N. J.	(Twenty) 20.
William Dick.....	Brooklyn, N. Y.	(Twenty) 20.
Jos. B. Thomas.....	Boston, Mass.	(Twenty) 20.
F. O. Matthiessen.....	New York, N. Y.	(Twenty) 20.
Jno. E. Searles, jr.....	Brooklyn, N. Y.	(Ten) 10.
H. O. Havemeyer.....	Greenwich, Conn.	(Ten) 10.
Geo. C. Magoun.....	New York, N. Y.	(Ten) 10.

Fifth. The period at which said company shall commence is the tenth day of January, 1891, and the period at which it shall terminate is the tenth day of January, 1941.

Sixth. The directors of said company shall be classified in respect to the time for which they shall severally hold office in three classes. Each class shall contain as near as may be one-third of the whole number of directors. At the first election of directors the first class shall be elected for a term of one year, the second class for a term of two years, and the third class for a term of three years, and at each annual election after the first the successors to the class of directors whose term expires in

¹ A letter accompanying the copy of the certificate of incorporation states that the by-laws can not be sent on request without special vote of the board of directors.

1258 HEARINGS BEFORE THE INDUSTRIAL COMMISSION.

that year shall be elected to hold office for the term of three years, so that the term of office of at least one class shall expire in each year.

In witness whereof we have hereunto set our hands and seals the ninth day of January, 1891.

F. O. MATTHIESSEN. s.)
JNO. E. SEARLES, JR. s.)
H. O. HAVEMEYER.
WM. DICK.
THEO. A. HAVEMEYER.

STATE OF NEW YORK, *City and County of New York*, ss:

Be it remembered that on this ninth day of January, A. D. 1891, before me, Frank K. Runyon, personally appeared Francis O. Matthiessen, John E. Searles, jr., Henry O. Havemeyer, Theodore A. Havemeyer, and William Dick, who I am satisfied are the persons named in, and who acknowledged, the foregoing certificate, and I having first made known to them the contents thereof they did each acknowledge that they signed, sealed, and delivered the same as their voluntary act and deed.

In witness whereof I have hereunto set my hand and affixed my official seal this 9th day of January, A. D. 1891.

FRANK K. RUNYON,
Master in Chancery of New Jersey.

[Endorsed:] "Recorded in Hudson Co., N. J., clerk's office, Jany. 9th, 1891, in Book 11 of clerk's record.

"DENNIS McLAUGHLIN, *Clerk.*"

[Endorsed:] "Filed January 10, 1891.

"HENRY C. KELSEY,
"Secretary of State."

STATE OF NEW JERSEY.

DEPARTMENT OF STATE.

I, George Wurts, secretary of state of the State of New Jersey, do hereby certify that the foregoing is a true copy of the certificate of incorporation of "The American Sugar Refining Company," and the endorsements thereon, as the same is taken from and compared with the original filed in my office on the 10th day of January, A. D. 1891, and now remaining on file therein.

In testimony whereof I have hereunto set my hand and affixed my official seal, at Trenton, this 19th day of August, A. D. 1899.

[SEAL.]

GEORGE WURTS,
Secretary of State.

UNITED STATES DYE-WOOD AND EXTRACT COMPANY.

[10-cent internal revenue stamp, cancelled.]

CERTIFICATE OF INCORPORATION.

[Registered office with the New Jersey Corporation Guarantee and Trust Company, Camden, N. J.]

First. The name of the corporation is the "UNITED STATES DYE-WOOD AND EXTRACT COMPANY."

Second. The principal office in New Jersey is at No. 419 Market street, Camden, New Jersey. The New Jersey Corporation Guarantee and Trust Company is the agent therein and in charge thereof, and upon whom process against this corporation may be served.

Third. That the objects for which and for each of which this corporation is formed are:

To manufacture, buy, sell, deal in and deal with dyewood, extracts, chemicals, and all like or kindred products; to manufacture, prepare for market, market and sell the same and any articles or product in the manufacture or composition of which they, or either of them, are a factor;

To buy, sell, manufacture, refine, manipulate, import, export, and deal in all such substances, chemical or otherwise, apparatus, products and things capable of being

used in any such business as aforesaid or required by any customers of or persons having dealings with the company.

In furtherance, and not in limitation, of the general powers conferred by the laws of the State of New Jersey, and of the objects and purposes as herein above stated, it is hereby expressly provided that the company shall have also the following powers; that is to say:

(a) To do any or all of the things herein set forth as objects, purposes, powers or otherwise, to the same extent and as fully as natural persons might, or could do, and in any part of the world, as principals, agents, contractors, trustees or otherwise.

(b) To conduct its business in all its branches and have one or more offices, and unlimitedly to hold, purchase, and convey real and personal property, both within and without the State of New Jersey, and in all other States, Territories, and colonies of the United States, and in all foreign countries and places, subject always, however, to the laws of the respective States, Territories, colonies, and foreign countries.

(c) To manufacture, purchase, or otherwise acquire, hold, own, sell, assign, and transfer, invest, trade, deal in and deal with goods, wares, and merchandise of every class and description, and to do manufacturing of any kind.

(d) To purchase, or otherwise acquire, to hold, own, maintain, work, mine, develop, to sell, or otherwise dispose of, without limit as to amount, within or without the State of New Jersey, and in any part of the world, real estate and real property and any interest and rights therein.

(e) To acquire the good will, rights, and property of all kinds, and to undertake the whole or any part of the assets and liabilities of any person, firm, association, or corporation, and to pay for the same in cash, stock of this corporation, bonds, or otherwise.

(f) To hold, purchase, or otherwise acquire, to sell, assign, transfer, mortgage, pledge and otherwise dispose of shares of the capital stock, bonds, or other evidences of indebtedness created by other corporation or corporations, and while the holder of such stock to exercise all the rights and privileges of ownership, including the right to vote thereon, to the same extent as a natural person might or could do.

(g) To guarantee the payment of dividends or interest on any shares, stocks, debentures or other securities issued by, or any other contract or obligation of, any corporation.

(h) To make and enter into contracts of every sort and kind with any individual, firm, association, corporation, private, public or municipal, body politic, and with the Government of the United States, or any State, territory, or colony thereof.

It is the intention that the objects, purposes, and powers specified and clauses contained in this third paragraph shall, except where otherwise expressed in said paragraph, be nowise limited or restricted by reference to or inference from the terms of any other clause of this or any other paragraph in this charter, but that the objects, purposes, and powers specified in each of the clauses of this paragraph shall be regarded as independent objects, purposes, and powers.

Fourth. The total amount of the capital stock of said corporation is to be ten million dollars (\$10,000,000), divided into one hundred thousand (100,000) shares of one hundred dollars (\$100) each. Of the said stock sixty thousand (60,000) shares, amounting at par to six million dollars (\$6,000,000), are to be preferred stock, and forty thousand (40,000) shares, amounting at par to four million dollars (\$4,000,000), are to be common stock.

Upon the vote of a majority of the preferred and common stock issued and outstanding, irrespective of class, the directors shall have the power to create deferred-stock debentures which shall be subordinate to the common and preferred stock, both as to dividends and the principal, so that the said deferred-stock debentures shall not be entitled to any dividend or interest whatever until after both preferred and common stock shall have in any one year received, or had set apart for payment, a dividend at the rate of six per cent per annum, and after the payment of a dividend of six per cent in any year to the stock, preferred and common, a dividend at the rate of, but not exceeding, six per cent shall be paid to the holders of the said deferred-stock debentures, but it shall not be entitled in any one year to any further dividend or interest. In the event of liquidation or dissolution of the company, the common and preferred stock shall be paid in full before any payment shall be made upon the said deferred-stock debentures. Said deferred-stock debentures shall have no voting power. The deferred-stock debentures shall always be subordinate also to the claims of general creditors of the company.

The rights, privileges, and conditions following shall attach to the shares aforesaid; that is to say:

(1) The common stock shall be subordinate to the rights of the preferred stock, except that both preferred and common stock shall have equal voting powers.

(2) The corporation shall not be at liberty, without the consent in writing first obtained of the holders of two-thirds in amount of the preferred stock issued and outstanding—

(a) To create or issue any other or further shares ranking in any respect *pari passu* with or in priority to the aforesaid issue of \$6,000,000 of preference shares;

(b) Nor to create any charge, except as herein provided, upon the net profits of the corporation which shall not be subordinate to the dividend rights of the preference shares;

(c) Nor to reserve a surplus fund which shall not be chargeable with the payment of the accrued dividends on the preference shares.

(3) The said preference shares shall carry a fixed cumulative preferential dividend at the rate of, but not exceeding, six per cent (6%) per annum on the par value thereof, and such dividends shall be declared quarterly on the second days of January, April, July, and October in each year, or at such other times as the board of directors or the executive committee shall see fit and determine.

If in any year dividends amounting to six per cent (6%) per annum shall not be paid on such preferred stock, the deficiency shall be a charge on the net profits, and be payable, but without interest, before any dividends shall be paid upon or set apart for the common stock.

(4) The balance of the net profits of the corporation, after the payment of said cumulative dividend at the rate of six per cent (6%) per annum to the holders of the preferred stock, may be distributed as dividends among the holders of the general or common stock as and when the board of directors or executive committee shall in their discretion determine.

(5) In the event of the liquidation or dissolution of the corporation the surplus assets and funds thereof shall be applied in the first place in repaying to the holders of the aforesaid cumulated preference shares the full amount of the principal thereof, and the accrued dividends, if any, charged, but without interest, before any amount shall be paid upon the common stock, and after such payment in full to the holders of said cumulative preference shares the surplus assets and funds shall be devoted to the payment of the principal in full of the common stock, and thereafter to the payment of the principal of any deferred-stock debentures issued and outstanding. Thereafter the surplus funds and assets shall belong to and be divided among the holders of the common shares.

From time to time the preferred and common stock may be issued in such amount and proportion as shall be determined by the board of directors, in accordance with the laws of the State of New Jersey.

Fifth. The directors of the corporation shall be divided in respect to the time for which they shall severally hold office into five classes, equal in number. The first class shall be elected for a period of five years; the second class for a period of four years; the third class for a period of three years; the fourth class for a period of two years, and the fifth class for a period of one year; and at each annual election after 1899 the successors to the class of directors whose terms expire in such year shall be elected to hold office for five years, so that the term of office of at least one class shall expire in each year.

In case of an increase in the board of directors between the annual election by the stockholders, the newly created directorships shall be and be construed as vacancies until the next annual election, to be filled forthwith by the board.

Sixth. The names and post-office address of the incorporators and the number of shares of common stock subscribed for by each, the aggregate of which \$1,000 is the amount of capital stock with which this corporation will commence business, are as follows:

Name.	P. O. address.	Number of shares of common stock.
James B. Dill	27 Pine street, New York City	3
Henry T. Willis	Boston, Mass	4
Frederick W. Garvin	27 Pine street, New York City	3

Seventh. The duration of the corporation is to be perpetual.

Eighth. 1. The corporation shall have no power to mortgage its real property, except upon the assent in writing first obtained of the holders of two-thirds of the issued preferred stock hereinbefore described, or upon the affirmative vote of the holders of a majority of the said preferred stock at a meeting of the preferred stockholders duly called for that purpose, and upon such assent so obtained, or upon such

affirmative vote so had, and not otherwise, the corporation shall have power to mortgage its real property to secure an issue of bonds or otherwise: *Provided, however,* This limitation shall apply only to mortgages other than purchase-money mortgages on the acquisition of property, which purchase-money mortgages shall cover only the property acquired.

2. The board of directors shall have power without the assent or vote of the stockholders to make, alter, amend, and rescind the by-laws of this corporation, and, subject always to the payment of the dividends on the preferred stock, to fix the amount to be reserved as working capital.

3. With the assent in writing or pursuant to the vote of the holders of two-thirds of all the stock, irrespective of class, issued and outstanding, the directors shall have power and authority to sell, assign, transfer, convey, or otherwise dispose of the property and assets of this corporation as an entirety on such terms and conditions and for such consideration as the directors shall deem fit, right, and just.

4. The board of directors, and when the board is not in session the executive committee, in addition to the powers and authorities by statute and by the by-laws expressly conferred upon them, are hereby empowered to exercise all such powers and to do all such acts and things as may be exercised or done by the corporation, but subject, nevertheless, to the provisions of the statute, of the charter, and to any regulations that may from time to time be made by the stockholders: *Provided,* That no regulations so made shall invalidate any provisions of this charter, or any prior acts of the directors or the executive committee which would have been valid if such regulations had not been made.

5. There shall be an executive committee of five members, who shall be elected by the stockholders from the directors, and hold office as hereinafter provided. The said committee shall have and exercise all the powers expressly conferred upon it by this certificate of incorporation, and also all the powers of the board of directors whenever a quorum shall fail to be present at any stated or other meeting of the board, and as well at all times whenever the board shall not be in session, and shall have power to affix the seal of the corporation to all papers which they may deem to require it.

The committee shall have power to make rules and regulations for the conduct of its business and to determine how many members thereof shall constitute a quorum.

The officers of the committee shall be a chairman, a vice-chairman, and a secretary, who shall hold office during the term of their office as members of the committee, and shall be elected by the stockholders.

At all meetings of the committee all questions shall be decided by a majority of votes, and in case of an equality of votes the chairman, and in his absence the vice-chairman, and in the absence of both the secretary, shall have a second and deciding vote.

The stockholders shall, at their first meeting, elect by ballot the said committee of five members from the directors elected at such meeting, and the said officers thereof.

The stockholders shall determine and fix the compensation to be paid to the members of the committee and to any of the officers thereof as such, and the compensation of any member or officer of the committee so fixed shall not be diminished during his tenure.

At every annual meeting after the first meeting, whenever the term of office of any member or officer of the committee shall expire, the stockholders shall elect a successor. Any member of the committee may be elected to succeed himself.

Any director, irrespective of class, is eligible to election as a member of the executive committee.

The term of office of each member of the committee shall be coextensive with the term of his office as director, unless the stockholders, at the time of his election, shall fix a shorter period or term of office, which they shall have power to do. Any member of the committee who shall cease to be a director of the company shall *ipso facto* cease to be a member of the committee.

Neither the directors nor the members of the executive committee nor the president nor the vice-president shall be subject to removal during their respective terms of office, nor shall their terms of office be diminished during their tenure.

All vacancies in the executive committee shall be filled for the unexpired term from the directors by the remaining members of the committee.

6. The directors shall, from time to time, determine whether, and to what extent, and at what times and places, and under what conditions and regulations, the accounts and books of the corporation, or any of them, shall be open to the inspection of the stockholders; and no stockholder shall have any right to inspect any account, or book, or document of the corporation, except as conferred by statute of New Jersey or authorized by the directors.

1262 HEARINGS BEFORE THE INDUSTRIAL COMMISSION

7. The directors shall have power to hold their meetings, to have one or more offices, and to keep the books of the corporation (except the stock and transfer books) outside of this State, at such places as may from time to time be designated by them.

The undersigned, for the purpose of forming a corporation in pursuance of an act of the legislature of New Jersey entitled "An act concerning corporations" (Revision of 1896) and the various acts amendatory thereof and supplemental thereto, do make, record, and file this certificate, and do respectively agree to take the number of shares of stock hereinbefore set forth, and accordingly hereunto set our hands and

Dated Camden, N. J., March 3, 1899.

Ryan, Dennis B., attorney at law	1099
King, Charles N., secretary New Jersey Corporations Agency	1106
Nevins, Andrew P., attorney at law	1111
Smith, J. Ernest, attorney at law	1119
Edgerton, Charles E., Ithaca, N. Y.	1123
Sawyer, W. L., secretary Corporation Trust Company of Delaware	1125
Myers, James J., member of the legislature of Massachusetts	1127
Legislation—Public control:	
Dos Passos, John R., attorney at law	1139
Allen, Charles C., attorney at law	1177
Huffcut, Ernest W., professor at Cornell University Law School	1211
APPENDIX—Charters and By-Laws	1221

GENERAL INDEX OF TESTIMONY.

(See, also, special index for Standard Oil Company).

Addyston Pipe Company:

Page.

Decision concerning, discussed. Dos PARSON, 1175; Allen, 1186, 1196; Huffcut, 1214

Adulteration:

Corn flour, mixture with wheat Mas, 73, 77, 79

Corn oil, mixture with various other oils Mas, 73, 74

Government regulation, advocated Havemeyer, 128

Whiskies, no injurious articles used... Clarke, 171, 180, 185; McNulta, 230, 231

Advantages of combinations. (See *Effects, Economies.*)

Advertising:

Economy in, by combination..... Bradley, 829; Rogers, 1070

Monopoly due to, legitimate..... Smith, 70, 71

Agents of corporations:

Provisions concerning maintenance in State, New Jersey..... Dill, 1077, 1076

West Virginia..... Nevins, 1112-1115, 1118, 1119

Number of corporations represented by, New Jersey..... King, 1106

Methods of appointment, business, etc., New Jersey Ryan, 1100-1105;

King, 1106, 1107, 1111

Methods of business, Delaware..... Sawyer, 1125-1127

Trust companies, New Jersey, description of business..... Wood, 1089-1094;

Hansell, 1094-1096; Marwick, 1096, 1097; Garvin, 1098, 1099

Aggregation of capital. (See *Capital.*)

Agricultural products:

Prices fixed by foreign markets Thurber, 11

Alcohol:

Manufacturing and arts, desirability of increased use..... McNulta, 227, 234;

Rice, 846

Taxation McNulta, 225-227; Bradley, 829; Rice, 846

American Spirits Manufacturing Company. (See *Whisky combinations.*)

American Steel and Wire Company, of New Jersey (sole witness,

GATES):

American Steamship Company, relation to 1007

American Steel and Wire Company of Illinois, relation to..... 1019-1021

Plants and output controlled by..... 1005, 1028

Barbed wire—

Practical monopoly of output through patents 1009, 1010, 1033

Prices 1009, 1033

Capitalization—

Amount and classes of stock..... 1020, 1021

Bonded debt of constituent companies..... 922, 923

Cost of plants, working capital, etc 1020, 1021, 1032

Trade-marks, good will, etc., value of..... 1021, 1022

Carnegie Steel Company, no direct relation to..... 1023

Cause of combination not excessive competition 1033

Coal mines, ownership of..... 1005, 1023

Competition and competing establishments—

Advantage of combination in securing large buyers..... 1024

Excessive, not cause of combination..... 1033

No attempt to prevent..... 1022, 1023

Strength of..... 1015, 1016, 1022

Independent plants, offer to sell out to combination..... 1024

Purchase of material from combination..... 1024

No agreement with 1010, 1011, 1022

Wire fencing, no agreement as to prices 1022, 1031

American Steel and Wire Company, of New Jersey—Continued.

	Page.
Cost of production, reduction during past twenty years	1008, 1033
Waste in rolling, amount of	1008
Debts, bad, reduction in, by combination	1030
Dividends, common stock, reasons for not paying on	1034
Economies of combination—	
Closing of plants, reasons for	1028, 1029
Combination of different branches of industry	1030
Debts, bad, reduction in	1030
Freights, saving by shipments from nearest plants	1030
Officers and salaries, savings in	1029
Superintendence, best former ability retained	1034
Traveling men dispensed with	1018, 1030
Exportation of product—	
Advantages of building up foreign market	1015
Conditions of competition with foreign producers	1013-1018
Combination, tendency of, to increase	1016
China and Japan, amount of trade with	1030
England, large exportation to	1015
Advantages of United States in manufacture	1014
Prices lower than domestic; reasons	1015
Federal Steel Company, no direct relation to	1023
Freights, no special rates or rebates	1031
Rail rates, Lake Erie to Pittsburgh	1007
Savings by shipments from nearest plant,	1030
Germany, conditions of production and exportation	1014, 1016, 1018
Syndicates in iron and steel industry	1017, 1018
International combination, attempt to form	1017, 1018, 1024
Iron and steel industries—	
Combinations, control by	1023
Combinations, relations between	1023, 1027
Export trade, conditions of	1014-1018
Iron ore, output, increase	1025
Prices, recent increase in	1006, 1025
Iron, pig, increase of output	1006
Labor (see also <i>Wages</i>)—	
Amalgamated Association not recognized	1011, 1012
Employees, number of	1012
Lake freights, cost of transportation, estimated	1007
Rates, increase of	1006, 1007
Mines, ownership of	1000, 1005, 1006, 1023
National Steel Company, no direct relation to	1023
Nails, wire—	
Independent manufacturers, no agreement with	1010, 1011, 1022
Output, proportion controlled by combination	1005, 1010
Prices, increase of	1010
Patents, few in manufacture of	1009, 1010
New Jersey, reasons for incorporating in (Pam)	1035
Organization, history and description—	
Certificate of incorporation and by-laws	1248-1256
American Steel and Wire Company of Illinois, relation to	1019-1021
History of movement	1019-1021
Method of acquiring plants	1028, 1032
Plants entering combination, list of	1028
Plants afterwards closed, reasons for buying	1028, 1029
Dissolution of independent companies	1028
Promoters' profits	1031
Stock, exchange of	1019-1021
Output of products—	
Closing of plants, reasons for	1027-1028
Increase during past twenty years	1008
Increase since combination	1028, 1029
Proportion controlled by combination	1005, 1009, 1010
Barbed wire, practical monopoly through patents	1009, 1010, 1033
Patents, control of	1009, 1010, 1033
Saving of law suits, concerning	1030

American Steel and Wire Company, of New Jersey—Continued.

Prices—	Page.
Barbed wire.....	1009, 1033
Decline during past twenty years.....	1008
Difference according to quantity purchased.....	1011
Increase since combination, amount and causes.....	1009, 1010
Iron ore, recent increase in.....	1006, 1025
Contract to purchase, at lower price.....	1006, 1025
Margin between raw and finished product deceptive.....	1008
Steel, high prices paid by Wire Company.....	1025
Reasons for high prices.....	1026, 1027
Products, description of, proportion of output.....	1005, 1010
Promoters, profits of.....	1031
Salesmen, dispensed with.....	1018, 1030
Steel—	
Combinations, control by.....	1023
Prices, high paid by Wire Company.....	1025
Prices, reasons for recent increase.....	1026, 1027
Purchase from other combinations by Wire Company.....	1026
Steel companies, no relation to other.....	1023, 1027
Tariff (see also <i>Exportation</i>)—	
Cost of living in America and Europe.....	1014
Germany, Government assistance to exportation.....	1018
Protection necessary, reasons.....	1013-1016
Transportation, relation to.....	1013
Wages, relative in America and Europe.....	1013, 1014
Transportation. (See <i>Freights, Lake Freights</i> .)	
Wages—	
Fixed by annual agreement.....	1012
Increase since combination.....	1011, 1012
Influences determining.....	1012
Sliding scale, increase under.....	1011, 1012
Wire, barbed. (See <i>Barbed Wire</i> .)	
Wire fencing, no agreement as to prices.....	1031
Wire nails. (See <i>Nails</i> .)	
Wire and wire rods—	
Growth of industry, described.....	1008
Proportion of output controlled, competition, etc.....	1005, 1009-1011, 1022-1024
Prices.....	1006, 1008-1011
Woven wire, control of output, prices, etc.....	1011, 1022
American Sugar Refining Company. (See <i>Sugar combination</i> .)	
American Steel Hoop Company (sole witness, GUTHRIE):	
Amalgamated Association, influence on wages.....	955
Capitalization, amount of common and preferred stock.....	953
Economies—	
Comparison of result in different mills.....	953, 954
Freight, saving of crossing.....	953
Management, younger and more competent men employed.....	953, 954
Office expenses, reduction.....	953
Selling expenses, reduction.....	954
Specialization of plants.....	953
Export trade, possibility of competition over entire world.....	956
National Steel Company, relation to.....	957
Organization and nature of business.....	953
Plants entering combination.....	954
Prices, increase, in comparison with raw materials.....	954
Products, description.....	953
Promotion, profits of, referred to.....	957
Steel, advantage of relation to steel companies.....	957
Steel, increase in prices.....	954
Tariff, necessity of.....	955, 956
Wages, increase under combination.....	954
Fixed by annual agreement, sliding scale.....	955
American Tin Plate Company:	
Black plate (see also <i>Dipping establishments, Jobbers, Machinery</i>)—	
Difference from other sheet iron.....	Griffiths, 890

American Tin Plate Company—Continued.

Page.

Buying of supplies in large quantities, saving.....	Reid, 877; Griffiths, 913, 914
Can manufacturers—	
Injurious effects of combination not yet felt.....	Going, 921
Shortage of tin plate, 1899.....	Going, 917, 918
Quality of tin plate, importance of.....	Going, 917, 921
Canned goods—	
Relation of tin-plate industry to.....	Going, 917-921
Combinations in manufacture of.....	Going, 918, 919
Labor, conditions, wages, unions, etc.....	Going, 919, 920
Competition of glass cans with tin cans.....	Going, 922
Capitalization (see also <i>Organization</i>)—	
Amount of stocks authorized and issued.....	Graham, 850; Reid, 866
Stock issue and disposition of.....	Graham, 857; Reid, 866; Moore, 960-962
Promotion, stocks issued for.....	Reid, 866; Griffiths, 911; Moore, 960, 963
Cost and value of plants, estimated.....	Reid, 886; Griffiths, 911
Preferred and common stock double cash value.....	Graham, 851, 862; Reid, 884; Moore, 963
Good will, relation to cost of plant.....	Wheeler, 864; Moore, 962; Graham, 851; Reid, 884
Price paid for plants, impossibility of statement.....	Moore, 962
Cost of reproducing plants, estimated.....	Graham, 862; Griffiths, 912
Ownership of stock by employees.....	Moore, 961
Running capital, amount necessary.....	Reid, 887
Stock, value of.....	Graham, 860
Causes of combination—	
Excessive competition and losses.....	Graham, 854; Reid, 866, 867, 885; Greer, 925; Taylor, 941
Purpose to restrict cutthroat competition.....	Greer, 929
Unprofitable business, denied.....	Griffiths, 897, 898, 901, 903
No necessity for combination.....	Griffiths, 901; Taylor, 941
Tariff not cause of combination.....	Reid, 881; Griffiths, 912
Closing of plants—	
Proportion of mills idle.....	Griffiths, 907
Dismantling of plants and reasons for.....	Graham, 853; Reid, 876
Irregular operation since combination.....	Griffiths, 899
Injurious effect on labor.....	Griffiths, 904, 906
Discrimination against certain plants.....	Griffiths, 904-906; Greer, 925, 926
Intended to facilitate reduction of wages.....	Griffiths, 906
Reasons for.....	Griffiths, 914; Greer, 924, 926, 927
Competing plants (see also <i>Dipping establishments</i>)—	
Purpose of combination to suppress.....	Griffiths, 896
Difficulty of securing machinery, discussed.....	Griffiths, 888-890; Graham, 852; Reid, 875; Taylor, 936, 939
Griffiths, William, erection of competing plant by.....	Griffiths, 887, 893, 896
Cost of production, relative.....	Reid, 885, 886; Griffiths, 899, 900
Wages not cut by.....	Reid, 886
Cost of plants. (See <i>Capitalization, Organization</i> .)	
Cost of production—	
Elements entering into.....	Greer, 928
Excessive when industry first established.....	Reid, 878
Early statistics, discussed.....	Griffiths, 902; Greer, 923, 924
Increase in cost of materials and labor.....	Graham, 853; Reid, 885; Griffiths, 902
Estimated at different prices of steel.....	Griffiths, 902
Prices of raw material, statistics of.....	Reid, 868, 869
Relative of combination and competitors.....	Graham, 857; Reid, 885; Griffiths, 899, 900
Wages, increase of.....	Graham, 853; Reid, 869-874
Waste in rolling steel.....	Reid, 867
Description of business.....	Graham, 849; Griffiths, 890
Boxes, contents, amount of steel, etc....	Graham, 849; Reid, 867; Greer, 930
Dipping establishments—	
Methods of business.....	Graham, 849
Number of independent plants.....	Graham, 852
Reasons for establishing dipping plant only.....	Taylor, 931
Relation to American Tin Plate Company.....	Taylor, 933, 937, 940

American Tin Plate Company—Continued.**Dipping establishments—Continued.**

	Page.
Attempt to suppress competition of, refusal to sell plates.....	Griffiths, 895
Denied	896, 899
Large sales recently made to, by combination.....	Graham, 850; Greer, 924, 928
Irresponsible, desirability of discouraging.....	Greer, 924, 928
Unable to obtain supply except from combination.....	Greer, 924
Contracts, existing, for supply of material	Griffiths, 894; Taylor, 933
Unable to sell as cheaply as combination	Taylor, 933
Prosperity of business, N. & G. Taylor Company	Greer, 928
Dismantling of plants.....	Taylor, 935
Dividends, number paid, and future prospects.....	Graham, 853; Reid, 876
Economies—	Graham, 856
General discussion.....	Graham, 855; Reid, 886; Greer, 929; Griffiths, 913
Consumer does not profit by.....	Griffiths, 910
Buying of supplies in large quantities.....	Reid, 877; Griffiths, 913, 914
Freights, shipment from nearest plant	Graham, 855, 856;
Reid, 877, 886; Griffiths, 913; Taylor, 942	
Labor, no reduction in amount per unit.....	Graham, 860;
Reid, 876; Griffiths, 899	
Large and improved plants.....	Graham, 855
Six mills limit of economy.....	Griffiths, 915
Patents, slight importance of.....	Graham, 861
Processes, few new methods of manufacture.....	Graham, 860
Selling of goods, agents, etc., saving.....	Graham, 855; Reid, 877
Specialization of manufacture in particular plants.....	Reid, 877
Superintendence, personal, by owner, superiority of.....	Griffiths, 899, 900;
Taylor, 941	
Previous managers chiefly retained.....	Reid, 877; Greer, 929
Exportation, not likely in immediate future.....	Reid, 882
Freights, shipment from nearest plant, economy of.....	Graham, 855, 856;
Reid, 877, 886; Taylor, 942	
Special rates, denied.....	Graham, 856
Good will. (See <i>Capitalization</i> .)	
Griffiths, William—	
Sale of plant and erection of new plant.....	Griffiths, 887, 893, 896
Position as tin-plate manufacturer, discussed	Greer, 923
Importation. (See <i>Tariff</i> .)	
Jobbers—	
Brands, manufacture under special	Graham, 852; Reid, 875
Must be assigned to the combination.....	Griffiths, 891-893
Form of contract concerning assignment and manufacture ...	Griffiths,
891, 892	
Exclusive purchase of goods from combination required	Griffiths,
890-893	
Denied	Graham, 852; Reid, 875
Refusal to sell plates, and discriminations, denied.....	Graham, 850, 851, 854;
Reid, 874, 875, 878	
Unable to obtain supply except from combination	Griffiths, 894
Labor (see also <i>Wages</i>)—	
Number of employees.....	Graham, 858
Unionizing of plants under combination	Greer, 928
Organization of tanners	Griffiths, 908
More idleness than ever before	Griffiths, 904, 905
Discontent and apprehension of employees	Griffiths, 904-906
No reduction in amount per unit....	Graham, 860; Reid, 876; Griffiths, 899
Monessen plant, conditions in	Griffiths, 905, 907
New Castle plant, output in excess of stipulation	Griffiths, 904
Denied	Greer, 924
Ownership of stock by employees.....	Graham, 854; Moore, 961
Dipping plants, union labor not employed	Taylor, 936
Wages and conditions of labor.....	Taylor, 932
Reid, 876; Griffiths, 907, 908	
Strikes, referred to	Reid, 880
Women, employment and wages	
Machinery—	
Contracts by combination for exclusive control, discussed....	Graham, 852;
Reid, 875; Griffiths, 888-890; Taylor, 939	

American Tin Plate Company—Continued.

	Page.
Machinery—Continued.	
No monopoly of tinning machinery	Taylor, 935
Recent patents on tinning machinery	Taylor, 936
Moore, William H., promotion by, described	Moore, 960-963
Companies promoted by	Moore, 959, 963
National Steel Company, relations with Tin Plate Company ..	Graham, 854, 863;
	Reid, 875; Griffiths, 894; Reis, 956
New Jersey, laws complied with	Graham, 857; Wheeler, 864; Reid, 865
Organization of combination (see also <i>Capitalization, Promotion</i>)—	
Certificate of incorporation and by-laws	1240-1248
Description of process	Reid, 866; Moore, 959-962
Early movements toward combination	Griffiths, 903
Plants bought outright for cash or stock	Graham, 850;
	Reid, 866; Griffiths, 887; Moore, 960
Each concern made its own bargain	Graham, 851, 860; Moore, 961
Prices paid increased by anticipated profits	Reid, 884
Plants sold for 25 per cent above cost	Griffiths, 909
Standard price, \$40,000 per mill	Griffiths, 909
Working capital, amount furnished by organizer	Reid, 885; Moore, 960
Stock, methods of allotment	Moore, 961
Mortgaging of property, restriction on	Moore, 961
Plants all free of debt	Moore, 961
Officers selected by promoter	Moore, 962
Output—	
Proportion controlled by combination	Reid, 882, 883
Number of independent plants	Graham, 858, 861
Dismantling of plants and reasons	Graham, 853; Reid, 876
Shortage of supply for cans, 1899	Going, 917
Large consumption of tin plate in United States	Reid, 882
Patents, relatively unimportant	Reid, 875
Prices—	
Statistics and general statements—	
Statistics, by months, American plate, 1888-1899	Reid, 868, 869
Movements since formation of combination	Reid, 867
Early high prices	Griffiths, 898
Brands, special, higher prices for	Griffiths, 898; Greer, 930
Reduction by establishing industry in United States	Graham, 858;
	Going, 916; Taylor, 935
Decline, former, cause of	Griffiths, 901
Changes, according to changes in tariff, etc.	Greer, 927
Sources of statistics	Graham, 859, 862; Griffiths, 908
Variations according to quality	Griffiths, 908; Greer, 930
Foreign product, increase in price	Reid, 869;
	Griffiths, 915; Taylor, 934, 938
Effect of combination—	
American Tin Plate Company practically fixes ..	Reid, 886; Taylor, 938
Increase due to increased cost	Graham, 853;
	Reid, 867, 874, 885; Taylor, 933, 934, 938
Increased demand, effect	Reid, 881; Griffiths, 914
Increase less than in other iron products	Greer, 930
Contracts for delivery at less than quoted prices	Reid, 867;
	Going, 917; Greer, 924
Increase greater than increase of costs	Griffiths, 902, 911
Profits under different prices	Griffiths, 897, 898, 903, 904; Greer, 923
Policy of American Tin Plate Company	Reid, 886; Greer, 930
Reduction not likely in immediate future	Reid, 881; Griffiths, 915
Increase can scarcely affect consumption of canned goods ..	Going, 918
Profits, reduction through increased cost of production ..	Graham, 859
Prices, rates under different	Griffiths, 897, 898, 903, 904; Greer, 923
Promoter's profits, amount of	Reid, 886; Griffiths, 911; Moore, 960-963
Working capital furnished by organizer	Reid, 885
Quality—	
Importance of good plate to can manufacturers	Going, 917, 921
Comparative of American and Welsh product	Graham, 861;
	Going, 916; Greer, 926; Taylor, 932
Decrease in amount of tin used, recent	Going, 916
Denied	Greer, 926
Combination, effect on	Going, 916; Greer, 925, 929

American Tin Plate Company—Continued.

Page.

Selling of goods, agents, etc., saving in..... Graham, 855; Reid, 877

Steel—

Prices by months, 1888-1899..... Reid, 868

Contracts with steel companies..... Griffiths, 894;

Graham, 854; Reid, 875; Reis, 947; Guthrie, 956

Stock. (See *Capitalization*.)

Stockholders, right to examine books properly guaranteed..... Graham, 857;

Reid, 865

Strikes referred to..... Reid, 876; Griffiths, 907, 908

Superintendence, personal, by owner, superiority of..... Griffiths, 899, 900;

Taylor, 941

Previous managers chiefly retained..... Reid, 877; Greer, 929

Tariff—

Amalgamated Association, influence in securing passage..... Taylor, 937

Rates, changes in..... Reid, 878

Effects of—

Beneficial in establishing industry..... Reid, 880; Taylor, 934, 935, 937

Reduction of price by American industry..... Graham, 858; Reid, 878

Early effect of McKinley Act..... Reid, 878; Taylor, 935

Large proportion of tin plate used in United States..... Reid, 882

Quality, comparative, American and Welsh..... Graham, 861;

Going, 916; Greer, 926; Taylor, 932

Combination not due to..... Reid, 881; Griffiths, 912

Need of protection—

Sufficiency of present rate..... Reid, 879, 880

Importation, small amount of.. Graham, 855; Griffiths, 915; Going, 921

Exportation, small amount of..... Graham, 855

Protection still necessary..... Reid, 878, 879, 882;

Griffiths, 909, 910; Taylor, 934

Margin between foreign and domestic prices..... Reid, 878

Removal would destroy tin-plate industry..... Graham, 854

Removal of protection, effects of..... Taylor, 939

Wages, Wales, compared with United States... Graham, 860; Reid, 880

Combinations in British tin trade..... Taylor, 940

Taylor, N. A., relation to American Tin Plate Company.... Taylor, 931, 933, 940

Tin—

Prices, variations, 1888-1899..... Reid, 868

Increase in price and causes..... Graham, 859; Taylor, 941

Sources of supply..... Graham, 859; Taylor, 940

Wages—

Fixed by annual agreement with Amalgamated Association..... Reid, 869

Sliding scale system, described..... Reid, 869

Amalgamated Association scales, 1897-1900..... Reid, 870-874

Output of workmen, limit of..... Reid, 871-873

Increase since formation of combination..... Graham, 853;

Reid, 869-874; Griffiths, 903

Earnings of different classes of labor..... Reid, 879

Tinnern, little skill required..... Reid, 879

Dipping establishment, conditions in..... Taylor, 932

Wages, compared with United States..... Graham, 860; Reid, 880

Antitrust laws (see also *Legislation*):

Desirability of definite application to conditions..... Allen, 1193, 1204

Existing statutes—

Sufficient..... Dos Passos, 1154, 1155

General character and effects.. Havemeyer, 105, 106, 114, 122; Monnett, 329

Ineffectiveness and evasion..... Dowe, 26; Clarke, 187

Illinois, interpretation and effect of act..... McNulta, 217; Pam, 1038

Missouri, act and its interpretation..... Allen, 1186, 1201, 1204

Not likely to interfere with business of corporations..... Moore, 966

Ohio laws, referred to..... Monnett, 329

Interference by, deprecated..... Smith, 69

State can not confiscate property..... Pam, 1038

1274 THE INDUSTRIAL COMMISSION;—INDUSTRIAL COMBINATIONS.

Causes of combination :

	Page.
Competition, excessive—	
General statement	Smith, 71
American Steel and Wire Company	Gates, 1033
American Tin Plate Company	854, 866, 867, 897-906, 925, 928, 941
International Silver Company	Dodd, 1051; Rogers, 1067
National Shear Company	Wiss, 1044-1046
Sugar combination	Smith, 71; Havemeyer, 109, 123; Post, 165; Atkins, 811
Weak competitors, effect on industry	Griffiths, 901
Whisky combination	Luyties, 255; Bradley, 828
Evolution, natural and necessary	Thurber, 3, 10; Archbold, 565; Dos Passos, 1144-1148, 1152
Overcapitalization as incentive to combination	Myers, 1133
Railway discrimination the chief cause	Lockwood, 390; Emery, 643; Rice, 688; Allen, 1190, 1191
Survival of the fittest	Havemeyer, 135
Tariff, excessive protection by	Havemeyer, 101, 102, 113, 118, 133, 137
American Tin Plate Company, not caused by	Reid, 881; Griffiths, 912
Federal Steel Company	Gary, 999
National Shear Company	Wiss, 1046

Chair trust :

Prices, increase through combination	Dowe, 28
--	----------

Charters :

Monopolies granted by special	Dos Passos, 1145
Withholding from trusts, advocated	Dowe, 35; Monnett, 310; Rice, 730

Chicago trust conference:

Conclusions referred to	Dos Passos, 1157, 1158
-------------------------------	------------------------

Clocks:

Prices, increase through combination	Dowe, 28
--	----------

Coal:

Combinations, tendency to depress price	Lee, 278
Combinations of railways controlling	Allen, 1191
Railways, special rates to certain companies	Lockwood, 396

Coffee:

American Sugar Refining Company, competition, prices, etc	Thurber, 6, 22; Havemeyer, 113, 114, 126; Jarvie, 140
Varying qualities, profits due to	Smith, 67

Closing of plants:

American Tin Plate Company	Graham, 853; Reid, 876; Griffiths, 899, 904-907; Greer, 924-927
Sugar combination	Thurber, 5; Doscher, 99; Havemeyer, 110, 124
Whisky combination	Clarke, 170, 191; McNulta, 203

Combinations (see also *Anti-trust laws, Economies, Effects, Monopolies, etc.*):

Acquisition of stocks more common than of properties	Stetson, 970
Laws against, ineffective, early English	Dos Passos, 1152, 1153
Monopolistic intent must be shown to render illegal	Allen, 1200-1202, 1205
Number and importance of recent	Allen, 1189
Power to extend into other fields	Allen, 1191-1193
Railways, interest in	Rice, 743; Allen, 1191
Standard Oil Company, influence in forming other trusts	Rice, 688
Syndicates in Germany	Gates, 1017, 1018
Universality of tendency	Thurber, 8-10

Combs:

Prices, increase through combination	Dowe, 28
--	----------

Commercial travelers (see also *Selling*):

Associations, nature and membership	Dowe, 31, 40, 41

Specialization of manufacture at particular plants.....	877, 953
Trade-marks, common use of.....	1050, 1063, 1065
Transportation, saving in.....	201, 254, 770, 855, 856, 886, 942, 947, 953, 1030
Union of different branches of industry.....	947, 983, 984, 994

1278 THE INDUSTRIAL COMMISSION:—INDUSTRIAL COMBINATIONS.

Effects of combination (see also <i>Economies, Labor, Prices, etc.</i>):	Page.
Banking business, transfer to large cities.....	Clarke, 190
Beneficial, generally Thurber, 18; Smith, 68; Havemeyer, 134; Clarke, 186; Archbold, 565; Gary, 1001; Dos Passos, 1152	
Chicago trust conference, conclusions concerning.....	Dos Passos, 1157
Government, form of, influence of trusts discussed.....	Monnett, 326, 327
Danger of revolution.....	Rice, 746
Menace to democratic.....	McNulta, 240
Individuals injured, public benefited.....	Dos Passos, 1156
Individual character and enterprise 7, 8, 18, 25, 34, 135, 181, 190, 295, 911, 967	
Injurious effects, purely incidental.....	Dos Passos, 1158
Injurious and demoralizing, generally.....	Dowe, 25, 34-38; Griffiths, 910
Injury, possibility of, to general public.....	Smith, 49, 50
Injurious and dangerous where prices are controlled.....	McNulta, 237
Legislative and judicial corruption by combinations.....	Lockwood, 393; Emery, 671; Dos Passos, 1159
Privileged classes created.....	Rice, 741, 746
Small towns, transfer of business from.....	Clarke, 190
Socialism, tendency to foster.....	Dowe, 34, 36
Wealth, immense aggregation by.....	Rice, 742, 746
Subdivision of capital among stockholders.....	Thurber, 7, 18, 24; Dos Passos, 1164
Elections:	
Corporations should not influence.....	Gary, 997
Elevator combination:	
Combination of farmers, advocated.....	Havemeyer, 122
Railway discriminations in favor of.....	Havemeyer, 121; Lockwood, 400
Employment. (See <i>Labor</i> .)	
England:	
Combinations, tendency toward.....	Thurber, 9
Corporation laws, liberality and advantages.....	Moore, 964, 966
Provisions as to publicity, capital, etc.....	Dill, 1082, 1083
Monopoly, early decisions against.....	Allen, 1183
Trade unions, agreements with trust employers.....	Thurber, 9
Export trade:	
Agricultural products; prices, fixed by.....	Thurber, 11
Combinations, extension by means of.....	Clarke, 184; Archbold, 562; Guthrie, 956; Gates, 1016
Education of wants for American products.....	Thurber, 11, 12
Extension necessary.....	Thurber, 10, 11
Manufactures, greater profits than on agricultural products.....	Thurber, 11
Merchant marine, necessity of development.....	Thurber, 10, 11
Silverware.....	Rogers, 1074
Steel products, conditions in.... Guthrie, 956; Gary, 998, 1001; Gates, 1014-1018	
Subsidies to American vessels, advocated.....	Gates, 1016
Subsidies granted to foreign shipping.....	Gates, 1017
Tin plate.....	Graham, 855; Taylor, 934
Whisky, obstruction by Government regulation.....	McNulta, 227-235; Bradley, 824, 828; Rice, 846, 848
Farmers:	
Effect of trusts on, as producers of raw materials.....	Thurber, 22
Federal Steel Company (<i>chief witness, GARY</i>):	
Administration, advantages and economy in.....	983, 985, 991
Bonded debt of constituent companies.....	992, 993
Business, description of.....	982
Capitalization—	
Stock, authorized and issued.....	Stetson, 969; Gary, 986
Value of plants, estimated.....	986, 987
Mining lands, increase in value.....	987
Stock, additional issues must be at par.....	993
Bonded debt of constituent companies.....	992, 993
Coke, amount and proportion purchased by combination.....	985
Competition, no attempt to prevent.....	985, 986, 989
Directors—	
Authorized to increase their own number.....	Stetson, 972
Number, and ownership of stock by.....	994
Purchase of stocks by, discussed.....	987
Relation to constituent companies.....	994

Federal Steel Company—Continued.

	Page.
Dividends, payment on common stock enjoined	993, 994
Payment on preferred stock	993, 994
Sources of profit	994, 995
Economies—	
Diffusion of knowledge of different managers	985
Harmony between different branches of industry	983, 984, 994
Officers, reduction of number and salaries	983, 991
Processes, employment of best from different plants	984, 985
Export trade, amount and character of	998, 1001
Reasons for keeping up	1001
Elgin, Joliet and Eastern Railroad Company, exchange of stocks, etc.	986, 992
Illinois Steel Company, exchange of stocks, etc.	986, 988, 992
Properties owned by	982, 987
Iron, pig, production, amount and proportion by combination	982, 985
Ore, increased cost	990
Labor—	
Amalgamated Association, relations to	983
No political influence exercised upon	997
Number and wages of laborers increased	983, 991
Mines, ownership and value of	982, 987

Purchase of stock, arrangements for	986, 988, 992
Monopoly, not sought by Federal Steel Company	983, 985, 989
Organization—	
History and methods	Stetson, 969, 970
Morgan, J. P. & Co., contract with	Stetson, 970; Gary, 986-989
Ownership of stocks of constituent companies	1003
Profits from promotion	986
Promotion, publicity of	987
Exchange of stocks, arrangements for	986-989
Certificate of incorporation and by-laws	1231-1239
Constituent companies, reasons for not merging	995
Control by election of directors	988
Relation between	984, 988
New Jersey, reasons for incorporating in	Stetson, 970; Gary, 996
Output, no attempt to monopolize	985
Proportion of different classes controlled	985
Politics, no influence exercised in	997
Prices—	
Increase in, of different products of combination	990
Ore, increase in	990
Profits, sources of	994, 995
Properties, description of	982, 987
Rails, steel, increase in price not greater than in raw materials	990
Proportion produced by Federal Steel Company	985
Railways, ownership of	982, 987
Speculation, directors not interested in	997
Suit to restrain payment of dividends intended for	997
Stock, corporation authorized to purchase its own	Stetson, 971, 972
Amount authorized and issued	Stetson, 969; Gary, 986
Additional issues must be at par	993
Tariff—	
Protection needed despite exports	997, 998
Germany, methods and labor in	998
Trust, Federal Steel Company is not a	994
Vessels, ownership by Federal Steel Company	982, 984
Wages, average daily, 1898, 1899	983, 991

Flour: Savings, production on large scale

Smith, 72

Foreign corporations:

Powers of States to regulate	Pam, 1035, 1036
As regards interstate commerce	Allen, 1187, 1188;
Huffcut, 1211-1214; Pam, 1035; Monnett, 330; Nevins, 1117	
Exclusion unless conforming to State laws, advocated	Allen, 1193, 1195, 1207
Discussed	Dos Passos, 1173, 1174
Overcapitalization, prevention of evasion of law, Massachusetts	Myers, 1131
Prohibition of interstate commerce to monopolistic, advocated	Allen, 1194, 1196
Retaliatory laws, justification of	Dill, 1065

Freights. (See also *Railways*):

Saving in by combination—		Page.
American Steel Hoop Company.....	Guthrie, 953	
American Steel and Wire Company	Gates, 1030	
American Tin Plate Company.....	Graham, 855;	
	Reid, 877, 886; Griffiths, 913; Taylor, 942	
National Steel Company.....	Reis, 947	
Sugar combination	Havemeyer, 110	
Whisky combination.....	McNulta, 201; Luyties, 254	

Gas:

New York, bills for reduction of price	Thurber, 16
New York City, combinations in.....	Allen, 1191-1193

Germany:

Combinations, supervision of government	Gates, 1018
Tendency toward	Thurber, 8; Gates, 1017, 1018
Iron and steel production, conditions of.....	Gates, 1014-1018
Competition, excessive, prohibited	Lee, 273, 276;
	Emery, 616, 617, 623; Archbold, 532
Protection of investors and taxpayers.....	Luyties, 257
Sugar, bounty on.....	Smith, 52

Glass:

Prices, increase by combination.....	Dowe, 28
--------------------------------------	----------

Glasgow:

Combination, tendency toward.....	Thurber, 8
-----------------------------------	------------

Glucose sugar:

Beer, use of, in manufacture	Mas, 83
Corn, products derived from, described.....	Mas, 73-81
Extensive use in sirups	Havemeyer, 114
Inferior quality	Mas, 82
Processes secret but not patented.....	Mas, 83
Prices of glucose and by-products.....	Mas, 78-80

Glucose Sugar Refining Company:

American Sugar Refining Company, relation to ...	Mas, 81, 82; Havemeyer, 114
Monopoly, extent of.....	Mas, 78, 84
Prices, effect on.....	Mas, 79, 80
Capitalization, excessive.....	Mas, 81
Contract with Ernest Mas as engineer.....	Mas, 75-78, 86
Formation of trust, referred to.....	Mas, 75, 86

Good will:

Value and capitalization of	110, 118,
	586, 851, 864, 884, 962, 1021, 1022, 1054, 1055, 1059, 1084, 1170

Government ownership (see also *Railways*):

Local monopolies, advocated.....	Monnett, 327; Myers, 1136
Civil service, injurious effect on	Monnett, 327

Great Britain. (See *England*.)**Grocers, wholesale** (see also *Rebate System*):

Competition, reduction of prices to unprofitable basis.....	Smith, 59-61, 65
Sugar Refining Company, relation to.....	Thurber, 13, 14

Grocers' Wholesale Association:

Organization and purposes.....	Smith, 55
Rebate system, movement to secure generally	Smith, 59-65

Hawaiian Islands:

Sugar, production, tariff, etc	-Buynitsky, 54; Havemeyer, 102, 136;
	Atkins, 801, 802, 810

Hotels:

Loss from displacement of commercial travelers by combination...	Dowe, 27, 32
--	--------------

Illinois:

Antitrust law and its interpretation.....	McNulta, 217; Pam, 1038
Taxation of corporation	Pam, 1036

Traffic associations, existing, character	Rice, 743, 744
Public character of	Monnett, 310, 323-325; Lockwood, 392; Rice, 740
Publicity of accounts and business advocated	Stetson, 978
Rates—	
Excessive, instances of	Monnett, 325; Lockwood, 391
Ohio, proposed act regulating, described	Monnett, 322, 325
Reduction and causes	Thurber, 18, 19
State rates at interstate rates, advocated	Monnett, 323
Transportation by water, effects	Thurber, 19; Lee, 269
Unreasonable, not now existing	Stetson, 979, 980
Unreasonable, should be summarily abolished	Stetson, 979
Wheat, excessive charges for transporting	Monnett, 325
Reorganization—	
Cash brought in for improving properties	Stetson, 978
Interest charges usually reduced by	Stetson, 977
Necessary because of reduced rates and profits	Stetson, 977
Sherman antitrust act, applied to common carriers	Rice, 742; Dos Passos, 1158
Sugar combination, apportionment of freights among	Havemeyer, 113
Free storage, discussed	Doscher, 90; Havemeyer, 112
Traffic associations—	
Existing, number and character	Rice, 743, 744
Transcontinental association, contracts for maintaining rates	Rice, 744
Unlawful character	Rice, 743
Water lines associated with	Rice, 744
Railway discriminations and rebates:	
Atchison, Topeka and Santa Fé Railroad, rebates by	Lockwood, 390;
Rice, 733, 754	
Cities and towns, influence on growth	Lockwood, 390
Coal traffic	Monnett, 322, 326; Lockwood, 396
Combinations, harmony between, and railways	Rice, 743
Chief cause of	Emery, 643
Power and profits due to	Lockwood, 390, 391; Rice, 743; Allen, 1194, 1195
Commissions paid to secure freight	Rice, 743
Competition, chief cause of unfair	Westgate, 399

Railway discriminations and rebates—Continued.

Page.

Competition of small concerns possible, where no discrimination.	Lockwood, 392
Cooperative production possible, where no discrimination	Lockwood, 392
Existence of—	
Affect great body of railway traffic	Rice, 733
Baltimore and Ohio receivers' letter regarding	Emery, 637
Complaint, no cause for	Smith, 70
Despite interstate commerce act, asserted	Lockwood, 389; Allen, 1190
Relative rates from Chicago and Pittsburg to New York	Lockwood, 400
Grain, higher freight rates for domestic than export	Rice, 740
"Ghost trains," referred to	Rice, 740, 741
Gross amount, \$100,000,000 annually	Rice, 741
Interstate commerce act, disregard by railways and trusts	Lockwood, 389
Failure to enforce	Rice, 729, 730
Long and short haul, proposed regulation, Ohio	Monnett, 325
Instances of discrimination	Monnett, 322
Privileged classes created by	Rice, 741
Remedies—	
Charters, repeal of, as penalty	Monnett, 324
Compulsory examination of books, advocated	Westgate, 383; Emery, 643
Courts afford no sufficient	Lockwood, 389
Germany, equality of opportunities in	Lockwood, 393
Government ownership, advocated	Lockwood, 392, 393; Emery, 670; Rice, 730, 745, 755
Interstate Commerce Commission, increase of powers	Stetson, 979, 980
Pooling, as remedy, advocated	Thurber, 19; Dos Passos, 1175
Possibility of effectively preventing	Monnett, 310
Prohibition of, effect of, discussed	Monnett, 326
Seizure of goods unlawfully transported	Monnett, 324
Standard Oil Company, originator of system (see also <i>special index</i> , p. 1307)	Rice, 741
Steel and Wire Company, American, receipt by, denied	Gates, 1031
Sugar combination, receipt by, denied	Havemeyer, 110, 112; Jarvie, 142
Tin-plate combination, receipt by, denied	Graham, 856
Whisky combination, formerly received	Clarke, 184; McNulta, 201

Raw materials:

Prices reduced by combinations	Thurber, 12, 22, 23; McNulta, 239
--------------------------------	-----------------------------------

Rebate system (see also *Sugar combination, Whisky combinations*):

Contracts, proposed forms	Smith, 62
Enforcement of agreements, methods	Smith, 62-65

Whisky combinations:

	Page
Historical summary of trust and corporations.....	167
Advantages of combination. (See <i>Economies of combination</i> .)	
Adulteration, freedom of cheap whisky from unhealthful.....	Clarke, 179, 180; McNulta, 205, 230, 231
Aging of whisky, losses by evaporation	Clarke, 182, 183
American Spirits Manufacturing Company—	
Organization and purchase of property of Distilling Company..	McNulta, 235; Rice, 831, 832
Capitalization and value of plants.....	Clarke, 175, 176; McNulta, 235; Rice, 832, 833
Stocks, value of	Rice, 833
No undue secrecy in business.....	Rice, 840
Business never flourishing	Rice, 840
Stockholders nearly unanimous for further consolidation.....	Rice, 840
Barrels, waste and injury by storage in	McNulta, 228-230; Rice, 848
Brands, each distillery continues its own.....	McNulta, 204
Importance as regards beverage whiskies	Bradley, 829; Rice, 845
By-products, relation of cattle feeding to distilling	Clarke, 168
Drying of residue for feed	Luyties, 258
Capitalization—	
Amount of capital of different companies	Bradley, 818; Rice, 834, 835
American Spirits Manufacturing Company	Clarke, 175, 176; McNulta, 235; Rice, 832, 833
Distillers and Cattle Feeders' Trust	Clarke, 169, 170; McNulta, 193-197, 201
Distilling and Cattle Feeding Company	Clarke, 173; McNulta, 195, 238
Distilling Company of America.....	Bradley, 819, 820, 822; Rice, 838
Kentucky Distilleries and Warehouse Company.....	Bradley, 818
Standard Distilling and Distributing Company.....	Clarke, 177; Cook, 249; Rice, 834, 835
Cattle feeding, relation to distilling business.....	Clarke, 168
Drying of residue, advantages.....	Luyties, 258
Causes of combination (see also <i>Economies of combination</i>)—	
Excessive competition	Luyties, 255; Bradley, 828
Competing distilleries—	
Number and proportion of output—	
Number of independent spirits distilleries.....	Bradley, 816, 817
Erection by distillers formerly joining trust.....	McNulta, 197, 218
Construction due to excessive prices.....	McNulta, 207; Luyties, 251
Output, present proportion controlled by	Clarke, 178, 189; Cook, 248; Bradley, 814, 815; Rice, 835, 836
Merchants' Distilling Company.....	Cook, 244; Luyties, 255; Bradley, 815; Rice, 835
Purchase by combination described.....	Clarke, 183, 185; McNulta, 197, 218
Managers, payment of salary to prevent competition..	McNulta, 203, 218, 238
Competition and effects of—	
Prices and profits cut by.....	Clarke, 176, 178; McNulta, 208, 209; Luyties, 254
Advantages of moderate capital	Luyties, 255
Preference of purchasers for independents	Clarke, 184; Cook, 245; Luyties, 253
Competition—	
Purpose of early combinations to control	McNulta, 238, 240; Cook, 246; Rice, 836
Policy of present combinations as to	Bradley, 814, 815, 827; Rice, 847
Cost of production must be reduced to prevent.....	McNulta, 217, 240; Clarke, 189
Prices, cutting by combination.....	Clarke, 170, 181-183
Special cuts to customers of competitors.....	Clarke, 170, 181-183; McNulta, 208; Luyties, 253; Bradley, 815; Rice, 847
Special cuts abandoned at present	Bradley, 815; Rice, 847
Advantages of trust in underselling	Luyties, 253
Compounding of whisky. (See <i>Rectification</i> .)	
Consumption of spirits, increase in prosperous times.....	Rice, 845
Corn, effect of combination on price	Thurber, 12; McNulta, 226
Plan to increase price by developing distilling..	McNulta, 225, 226; Rice, 846

Whisky combinations—Continued.

	Page.
Cost of production—	
Average for distilleries in combination, 1891-1895.....	McNulta, 211-213
Coal, cost of.....	Clarke, 185

Purpose of combination as to control.....	McNulta, 238, 240; Cook, 246; Rice, 836
Rebate system intended to control.....	McNulta, 207
Limitation under pools	Clarke, 168, 169
American Spirits Manufacturing Company, control by.....	Clarke, 176
Distillers' trust, control by.....	Clarke, 176
Control by leasing ground of distilleries.....	McNulta, 216, 218, 238
Sales by trust, monthly, 1889-1895	McNulta, 214
Distilling and Cattle Feeding Company, control by	McNulta, 212, 213, 215
Distilling Company of America—	
Proportion controlled by.....	Clarke, 178, 189; Cook, 248; Bradley, 814, 815; Rice, 835, 836
Kentucky whiskies, proportion controlled by.....	Bradley, 818; Rice, 836
Number of present competing plants	Bradley, 816, 817
Policy of	Rice, 836
Cost of production, cheapening, proper means to control..	McNulta, 207
Pools of distilleries, history and working	Clarke, 168, 169; McNulta, 200; Cook, 241
Prices—	
Average monthly, 1884-1899.....	Bradley, 816
Average quarterly, 1891-1895.....	McNulta, 211
Variation according to price of corn.....	McNulta, 209, 239
Brands, special, influence on.....	Clarke, 189; Bradley, 829; Rice, 845
Control by combinations. (See also <i>Rebate system</i> .)	
Degree and effect, earlier combinations.....	Clarke, 189; McNulta, 207; Cook, 249
Present policy regarding.....	Bradley, 814, 815, 827; Rice, 847
Purpose of trust to control.....	Cook, 246
Distributers, fixing of prices.....	Clarke, 180, 188; McNulta, 210; Cook, 242, 246, 250
Stock speculation, influence in breaking down.....	McNulta, 209, 210
Joint agreement of receiver and competing distilleries..	McNulta, 208, 210
Standard Distilling Company, attempt to secure excessive..	Cook, 248, 249
No discrimination in favor of compounders	Bradley, 828
Cutting of—	
Competing distillers, cutting by.....	Clarke, 170, 176, 178, 181-183; Bradley, 815; Rice, 847
Special cuts to customers of competing distillers..	Clarke, 170, 181-183; McNulta, 208; Luyties, 253; Bradley, 815; Rice, 847
Abandoned at present.....	Bradley, 815; Rice, 847
Effect of changes—	
On dealers and consumers, discussed.....	Clarke, 178, 179; McNulta, 236; Cook, 242-245; Luyties, 256; Bradley, 830; Rice, 846
Special brands, effect of changes in price.....	Cook, 243, 245
Effect of combination—	
Distillers' trust	Cook, 241; Clarke, 171, 186
Variation in proportion to price of corn	Bradley, 827; Rice, 847
Reduction, recent, due to competition	Luyties, 254
Present policy to reduce.....	Bradley, 814, 815, 827; Rice, 847
Kentucky whiskies, possibility of maintaining high.....	Bradley, 829; Rice, 846

Whisky combinations—Continued.**Prices—Continued.**

	Page
Margin of profit, proper amount discussed	McNulta, 238; Cook, 246, 248, 249
Processes of manufacture, described	Clarke, 168
Improvements by combination	McNulta, 202-205; Clarke, 186, 187; Bradley, 826

Profits—

Great fluctuations in	Bradley, 828
Possibility of securing high	Cook, 246
Proper amount per gallon	McNulta, 238; Cook, 248, 249
Distillers' trust	Clarke, 171, 181
Distilling and Cattle Feeding Company	McNulta, 211, 212, 213
Individual distillers have mostly lost by combination	McNulta, 236, 237
Promotion, profits from, Distilling Company of America	Bradley, 820-822; Rice, 838-840

Quality, improved by combination	Bradley, 830
Railways, rebates and special rates	Clarke, 184; McNulta, 201

Rebate system—

History and description	Clarke, 171, 172; McNulta, 210, 211; Cook, 241, 242; Bradley, 813
Form of vouchers	McNulta, 206
Rates allowed	Clarke, 171, 172, 181; McNulta, 207, 210, 211; Luyties, 250; Rice, 834
Total amount by years	McNulta, 210, 211
Standard Distilling Company, system under	Clarke, 181; Cook, 244
American Spirits Manufacturing Company, discontinued by	McNulta, 207; Bradley, 814; Rice, 844
Abandoned by present combination	Bradley, 814; Rice, 847
Control of dealers by means of	Clarke, 172; McNulta, 207; Luyties, 251; Bradley, 813
Objection of rectifiers and wholesale dealers to system	Clarke, 180, 181; McNulta, 207
Advantages to distributors belonging to trust	Cook, 244
Use of rebate fund for buying distilleries	Clarke, 172
Failure of trust to pay rebates	Cook, 242; Luyties, 251
Bonds issued to protect holders of rebates	Clarke, 173

Rectification and compounding—

Processes and profits	Clarke, 179, 180; Bradley, 827; Rice, 835
Character of whisky made by	McNulta, 205; Luyties, 256
Importance of control of business to distilleries	Rice, 835
Proportion of business controlled by combination	Rice, 835

Rectifiers (see also Distributors)—

Objection to dealing with combination	Clarke, 180
Distilling Company makes no discriminations in sale	Bradley, 828

Retail dealers—

Prices, effect of changes upon	Clarke, 178, 179; McNulta, 236; Cook, 242-245; Luyties, 256; Bradley, 830; Rice, 846
Profits, amount estimated	Clarke, 179

Rye whisky—

Source of raw product	McNulta, 202
Importance and number of brands	Rice, 837
Purchase of distilleries by combination	Bradley, 822; Rice, 837, 839
Output, proportion controlled by combination	Bradley, 818; Rice, 837
Shufeldt Distillery, special products and reason for purchase by trust	McNulta, 204

Speculation—

Trust certificates, extensive speculation in	Clarke, 174
Offices of Distillers' Trust, manipulation by	Clarke, 174, 175; McNulta, 198; Rice, 832
Influence on prices of spirits	McNulta, 209, 210

Spirits—

High wines and proof spirits, significance of terms	Bradley, 827
Quantity produced compared with "straight" whisky	Luyties, 255
Marketable immediately, uses	Clarke, 182
Importance of rectification and distribution	Rice, 838

Whisky combinations—Continued.**Spirits—Continued.**

Page.

Character of whisky made from	McNulta, 205
Purity under modern processes	McNulta, 204, 205
Spirits Distributing Company—	
Organization, capitalization, and purpose	Bradley, 814; Rice, 834
Standard Distilling and Distributing Company—	
Organization and relation to American Company	Clarke, 177, 178
Capitalization and value of plants	Clarke, 177; Cook, 249; Rice, 834, 835
Proportion of spirits produced by	Bradley, 814; Rice, 834, 835
Storage and packing, changes in methods advocated	McNulta, 228-230;
	Bradley, 828; Rice, 848

Taxation, internal revenue—

Annual receipts, 1889-1891	Rice, 844
Bonded warehouse system, description and working	Clarke, 182, 183
Capacity tax, injustice of	McNulta, 233
Output per bushel of corn underestimated	Rice, 844
Enforcement and regulations—	
Unnecessary strictness of rules	McNulta, 232
Leakage, adjustment of tax to provide for	Luyties, 252, 254
Time of paying tax	Clarke, 182, 183
Dealers, payment by, effect discussed	McNulta, 234
Barrels, injurious effect on alcohol	McNulta, 228-230; Rice, 848
Handling and transportation in metal tanks, advantage ..	McNulta, 228-
	230; Bradley, 828; Rice, 848

Exportation of spirits—

Remission on alcohol exported	Cook, 246;
	McNulta, 227, 229; Bradley, 824
Hindered by obstructive tax regulation	McNulta, 235;
	Cook, 245-248; Bradley, 824, 828; Rice, 846, 848
Bonds required by Government excessive	Luyties, 259
Bonded warehouse system, description of working	Clarke, 182, 183
Beverage whisky exported temporarily to postpone tax ..	Rice, 848
Germany, rate in	Luyties, 257

Illicit manufacture—

Amount of .. McNulta, 231; Cook, 243; Bradley, 824-826; Rice, 841-844	
Fostered by excessive tax	McNulta, 231;
	Cook, 243; Bradley, 824-826; Rice, 841, 844
Excessive profits from	Bradley, 825
Sale of illicit under standard brands	Bradley, 825, 826
Evasion by large establishments slight	McNulta, 234
Untaxed production by registered stills	Rice, 841, 844
High license necessary to prevent	Bradley, 824; Rice, 844
Government should have officer in every still	Bradley, 825

Manufactures—

Use of spirits in, increase by lowering tax	McNulta, 227; Cook, 243
Remission on alcohol used in arts, advocated	McNulta, 227
Difficulty of remitting tax	Luyties, 252; Bradley, 829
Officers, revenue, removal of judicial functions	McNulta, 232

Rates and their working—

Amount of revenue under different rates	Rice, 843, 844
Consumption, effect of changes of rates	Cook, 247;
	Luyties, 252; Rice, 843
Present rate excessive	Luyties, 252, 256
Increase of rate, effect of	Rice, 841; Cook, 242-245
Prepayment of tax to evade	Cook, 247
Reduction of rate, increase of production and revenue by	
McNulta, 229, 234; Cook, 243, 247; Bradley, 824; Rice, 841	
Effect on dealers and consumers	McNulta, 230-236
Adjustment to proportion of alcohol, advocated	McNulta, 225, 226
United States Spirits Company, organization and purposes ..	Clarke, 188
Western Exporters' Association	McNulta, 200
Wholesale dealers, prices, effect of changes on	Clarke, 178, 179;
	McNulta, 202, 236; Cook, 242-245; Luyties, 256; Rice, 846

Wine:

Taxation in proportion to alcohol contained, advocated	McNulta, 226

1814 THE INDUSTRIAL COMMISSION.—INDEX.

Linseed oil:	Page.
Alleged adulteration by Standard Company.....	Clark, 333, 334; Mathews, 495.
Logan, Emery & Weaver:	
Suit for discriminations	Lee, 287; Emery, 633-635, 639
Lubricating oils:	
Character, value	Emery, 627
Compounding, processes, qualities	Clark, 333, 334; Davis, 356
Different prices for same quality	Clark, 333, 334; Davis, 356
Denied	Mathews, 502, 505
Frauds in branding	Clark, 333, 334
Denied	Mathews, 495, 502
Monopoly, practical, of Standard Oil Company	Davis, 355
Prices and discriminations between customers, discussed	Mathews, 502, 505
Railways, discriminations in purchase from Standard Oil Company	Lee, 268; Davis, 355; Rice, 699, 700
Denied	Archbold, 516; Page, 757-759
Superior quality of Galena oils	Page, 757, 758
Contracts of Galena Oil Company, as to cost of lubrication	Page, 757, 758
Standard's prices uniform to all purchasers	Page, 757, 758
Canada, amount produced and imported	Gall, 683
Matthews—Buffalo Refinery:	
Alleged attempt to blow up	Lockwood, 389; Archbold, 553
Methods of business of Standard Oil Company:	
Suits by stockholders to ascertain condition of business	Boyle, 444
Amount of oil sold at certain stations	Mathews, 499
Inspection of accounts, etc., by local agents	Clark, 342, 343; Mathews, 504
Deductions from salaries of agents for errors	Clark, 345
Letters answered by indorsement	Clark, 348
Oral instructions in place of writing	Clark, 346, 347
Amount of daily deliveries from tanks, etc.	Clark, 342; Mathews, 496
Miners' oil:	
Compounding, adulteration in	Clark, 334; Mathews, 495
Monopoly of Standard, degree of:	
Monopolistic character of Standard Oil Company	Phillips, 600
Standard has no legal advantages	Phillips, 596
Growth of Standard Oil Company, 1870-1879	Emery, 646; Rice, 689
Proportion controlled by Standard, 1870-1879	Rice, 689
Proportion controlled by Standard, 1879	Emery, 646
Proportion controlled by Standard, 1894-1898	Archbold, 560
Proportion of refining controlled by Standard	Lee, 286; Lockwood, 402; Emery, 605
Canada, proportion of oil refined by Standard	Archbold, 572, 573
National Transit Company. (See <i>Pipe lines</i> .)	
Ohio Oil Company:	
Purposes of organization	Monnett, 299
Petroleum Producers' Association:	
Organization and purposes	Boyle, 419, 454, 455
Petroleum Producers' Agency:	
Attempt to maintain prices, 1870	Boyle, 455-458
Pipe lines:	
Buckeye Pipe Line Company—nature and working	Monnett, 298, 299, 311
Business, customs, and methods—	
Described	Lee, 285
Deductions and assessments for losses by fire	Davis, 354
Gauging and deductions for evaporations	Davis, 354
Charges and cost of piping—	
Relative charges of Standard and independent lines ..	Lee, 271; Westgate, 381
Charges excessive	Rice, 734
Reasonableness of charges	Thurber, 23; Rogers, 581, 583, 589
Not reduced by combination	Lee, 280, 284
Ohio, rates in	Monnett, 311
Cost of transporting oil, estimated	Lee, 284; Archbold, 553; Rogers, 588; Phillips, 594; Emery, 606; Rice, 734
Consolidation by Standard Oil Company—	
History—	
Combinations, early, described	Boyle, 424; Emery, 604
Absorption by Standard, described	Lee, 262, 263; Boyle, 424-426; Emery, 630

Pipe lines—Continued.

Consolidation by Standard Oil Company—Continued.

History—Continued.

- Attempts of Standard to control—
 - Purchase of stock by Standard..... Lee, 270; Westgate, 370, 382; Boyle, 442; Archbold, 529, 531, 577, 578; Rogers, 584; Phillips, 590
 - Control sought through buying refineries..... Westgate, 370, 371
 - Combination with Standard, propositions..... Archbold, 530, 531; Phillips, 383; Emery, 659
- Opposition of Standard—
 - Opposition to free pipe-line law..... Lee, 262, 267; Boyle, 474; Archbold, 513; Emery, 605, 659, 660
 - Opposition to laying pipes..... Lee, 264, 267; Lockwood, 397; Boyle, 445, 474, 475; Emery, 651
 - Opposition of Rice to National Transit Company's lines..... Boyle, 486
 - Purchase of wells reached by independent lines..... Westgate, 380
- Railways, opposition to crossing of pipe lines—
 - Described..... Lee, 264, 267; Lockwood, 397; Emery, 650-655; Rice, 739
 - Opposition due to Standard Company..... Phillips, 593
 - Reasons for Archbold, 529
 - Attempt to secure permission of Standard to cross railways. Emery, 659

Pipe lines—Continued.**Independent organizations, existing—Continued.****Refined oil—**

Page.

Transportation by independent pipe lines	Lee, 267; Lockwood, 398; Boyle, 445; Emery, 651
Early transportation of	Boyle, 413
Monopoly. (See above, <i>Consolidation</i> .)	
National Transit Company—	
Charter, manner of securing	Rogers, 585, 588; Emery, 607, 619–622
Charter, character and powers	Emery, 608, 609, 621, 622
Capitalization	Rogers, 587
Agreement with Tidewater Pipe Company for division of traffic	Rice, 738
Contracts with railways for division of traffic	Emery, 663–667; Rice, 701, 702; Page, 759–763
Efficiency in meeting demands of McDonald field	Boyle, 471, 473
Capacity of lines	Boyle, 481; Rogers, 583, 584
Credit balances, outstanding, 1889–1899	Rogers, 583
Residuum, statement of, published monthly	Rogers, 583
Premiums on oil—	
Paid to injure competing lines	Lockwood, 394
Sometimes paid to meet competition	Boyle, 475; Archbold, 576; Rogers, 582
Paid for superior quality	Boyle, 475; Archbold, 576; Rogers, 582
Purchases of oil by pipe lines—effects	Lee, 285; Davis, 352, 354, 362; Boyle, 420, 424
Rebates and discriminations by—	
Early	Boyle, 423, 476–479
Attempt to recover by suits	Boyle, 427, 428, 476–479
Relation to premiums on oil	Boyle, 479
Corning fields, discrimination against	Davis, 352
Refined oil, transportation by United States pipe line	Lee, 287, 268; Lockwood, 398; Boyle, 413, 445; Emery, 651

Press:

Attitude toward Standard generally	Rogers, 587
Unfairness of certain papers toward Standard	Boyle, 487
Oil City Derrick, relation to Standard	Boyle, 404
Suits for libel against	Boyle, 487
Opposition to independent interests	Rice, 754
Subsidizing by Standard	Monnett, 312, 321; Lockwood, 398
* Material furnished by Standard	Monnett, 321

Prices:**Statistics—**

Export prices, average by years, 1870–1898	Thurber, 4; Boyle, 435; Archbold, 547
Variations by months and days, 1891–1899	Boyle, 437–439
Exported oil, relative value for different years	Boyle, 436
Average, New York, Chicago, and Cincinnati, 1885–1899	Archbold, 547, 548
Cincinnati prices of refined oil	Boyle, 447, 448
Statistics based on export oil misleading	Westgate, 371, 372
Foreign prices compared with domestic	Archbold, 546, 559, 560; Emery, 631, 633; Rice, 734; Page, 791
Domestic, difficulty of securing	Boyle, 446–448
Sources of	Boyle, 485
Transportation, early fluctuations due to	Boyle, 419
Causes of recent fluctuations	Lockwood, 395, 403
Restriction of crude output, effect upon	Boyle, 430
Influences affecting—	
Crude prices, relation to refined	Boyle, 446, 447; Archbold, 571; Gall, 674, 689
Relation to price of crude and to competition	Lockwood, 395
Margin made more uniform by Standard	Boyle, 437–439
Domestic prices, influences affecting	Boyle, 448
By-products, influence of	Davis, 355, 360; Westgate, 368, 371; Archbold, 570
Barrels, influence of	Boyle, 437; Westgate, 371
Railway discriminations, reduction by reason of	Archbold, 529, 536; Rockefeller, 755

Prices—Continued.

Effect of combination—

	Page.
Possibility of raising above competitive rates, discussed	Lee, 292;
Control by Standard Company, degree and effects of	Archbold, 569, 570
Lee, 276, 286;	
Lockwood, 403; Archbold, 531, 568-570	
Rates sufficient for profit, stated	Lee, 296; Rice, 735
Relative prices of independents and Standard	Clark, 345, 348
Increase by	Lee, 296, 292; Monnett, 323; Lockwood, 403; Rice, 734-736
Canada, increase through Standard	Gall, 674
Extra profits from Ohio oil	Rice, 735, 736
California, excessive prices in	Emery, 633
Reduction not due to Standard	Lee, 275, 276;
Monnett, 317; Lockwood, 394; Rice, 734	
Reduced through Standard	Smith, 71;
Thurber, 43; Havemeyer, 116; Cook, 248; Archbold, 564	
Policy of Standard to reduce	Page, 792
Destruction of Standard would not lower	Archbold, 531
Excessive cutting of	Lee, 265, 266, 273; Westgate, 365, 370
Sometimes necessary, but deprecated	Archbold, 568, 569
Should be prohibited	Westgate, 383
Special cuts in particular localities—	
Existence of practice and instances	Lee, 277;
Monnett, 313, 317; Clark, 337, 350; Westgate, 365, 367; Lock-	
wood, 402; Boyle, 433, 485; Emery, 629-632; Rice, 704	
Competitive and noncompetitive points, differences in prices	Lee, 265,
266, 269; Monnett, 302, 317; Clark, 350	
Differences in prices according to degree of competition	Westgate, 367
New York City, against Pure Oil Company	Lee, 265, 266;
Westgate, 365; Lockwood, 402; Archbold, 528	
Philadelphia, cuts in	Lee, 266; Emery, 629, 631, 632
Foreign markets, cuts in	Lee, 273; Westgate, 381; Lockwood, 398;
Boyle, 433; Archbold, 531, 570; Phillips, 593; Emery, 616	
Governmental regulation, foreign markets	Lee, 276, 277;
Archbold, 532; Emery, 616, 617, 623	
Threats of cuts	Westgate, 369, 370;
Clark, 337; Archbold, 550, 552	
Usually made by Standard first	Emery, 629, 630, 632
Made first by competitors	Mathews, 506
Discussion of facts	Mathews, 491, 492, 496, 499, 505
Justification in certain cases	Archbold, 569; Boyle, 433, 443
Increase of prices after competition is crushed	Clark, 350; Archbold, 572
Special cuts to customers of competitors—	
Practice, existence, and instances	Clark, 331-345;
Davis, 357; Westgate, 366, 368-370; Rice, 704	
Special agents to reach	Monnett, 313
Agents not allowed to make	Clark, 339; Mathews, 494, 499
Reasons for and amount of differences	Mathews, 499, 500, 505

Producers. (See Crude oil):

Producers and Refiners' Oil Company:

Organization and effects on refiners and producers	Lockwood, 397;
Boyle, 442-445, 462	
Relations to Producers' Oil Company	Boyle, 462
Failure to pay dividends	Boyle, 442

Producers' Oil Company:

Purchase of stock by Standard Company	Lee, 270;
Archbold, 577, 578; Rogers, 584; Phillips, 590	
Carter, Colonel, relation to	Lee, 270;
Archbold, 577, 578; Rogers, 584; Phillips, 590	
Producers and Refiners' Oil Company, relation	to Boyle, 462; Rogers, 584

Producers' Protective Association:

Organization and purposes	Boyle, 428
Restriction of production by, 1887	Boyle, 428-432
Erection of refineries	Boyle, 441, 442
Organization of pipe lines by	Boyle, 462

Producers' Protective Union:

Organization and working	Boyle, 427, 428
--------------------------------	-----------------

Profits of refining (see, also, *By-products and cost of refining*):

Average profit per barrel, Standard Company	Lee, 273; Archbold, 532; Phillips, 591, 592
Ten cents per barrel sufficient	Lee, 269, 271
Not sufficient on refined oil alone	Boyle, 441
Effect of variations of price of crude	Boyle, 452, 456
Influences affecting, by-products, etc	Davis, 355, 360; Westgate, 368; Boyle, 441; Archbold, 571

Profits of Standard Oil Company:

Amount and rate estimated	Boyle, 480; Phillips, 591, 592
Relative, past and present	Archbold, 571
Not reduced by overproduction of crude oil	Boyle, 480
Relative of Standard and independents	Archbold, 532; Phillips, 602
Ohio oil	Monnett, 311; Archbold, 544; Rice, 735, 736
Pipe lines, high profits from	Davis, 360

Prosecutions. (See *Suits*.)**Pure Oil Company:**

History and form of organization—	
Described	Lee, 273; Westgate, 365; Boyle, 463-467; Archbold, 507-513
Capitalization	Phillips, 600
Different classes of shares and regulations concerning them	Boyle, 469, 470
Stock, value of	Phillips, 592
Purpose and nature—	
Purpose of organization	Lee, 273; Westgate, 365; Boyle, 463, 464, 469; Archbold, 509; Phillips, 596; Emery, 657, 659
Trust character of organization	Boyle, 443, 463, 464; Archbold, 507-513; Rogers, 584
Denied	Phillips, 591, 595-597; Emery, 657, 658
No monopoly sought by	Phillips, 597
Relations to other independent organizations	Rogers, 584
Attempt of Standard to control	Phillips, 590
Voting trust described and discussed	Boyle, 464-466; Archbold, 508-513; Phillips, 598; Emery, 657, 659
Object of	Phillips, 590, 596; Emery, 657, 659
Different from "trust" in character	Phillips, 591

Quality, grades, tests:

Canadian oil, relative quality	Gall, 681
Export oil, quality and tests	Lee, 274, 277; Emery, 623-626
English agitation as to test of American oil	Monnett, 319; Archbold, 546
Grades and brands—	
American Refining Company, grades manufactured by	Westgate, 366
Special brands made for special customers	Davis, 357; Westgate, 366
Different grades sold from same tank	Monnett, 313; Clark 331, 333, 338, 341, 342
Denied	Mathews, 492-495
Lubricating oils	Clark, 333, 334; Davis, 356, Mathews, 495
Ohio oil, inferiority discussed	Clark, 346; Gall, 681; Rice, 735, 736; Emery, 624, 625; Archbold, 532
Russian oil, inferior quality	Archbold, 546; Emery, 626, 632
Standard's product, deterioration of	Lee, 275, 291; Westgate, 372; Clark, 346; Archbold, 552

Tests of oil—

Tests of different grades	Clark, 333
Methods and significance of testing	Emery, 624, 625
Relative value and safety of oils of different tests	Emery, 624-626
Fire test does not determine illuminating quality	Mathews, 495
Tests in lamps, deceptive methods	Clark, 346
Denied	Mathews, 500-502

Railways:

Oil regions, first construction in	Boyle, 410, 411
Ownership of railways by Standard	Monnett, 318; Rice, 688, 703
Oil well supplies, excessive rate on	Lockwood, 391, 393
Report of shipments of oil by competitors	Westgate, 367; Emery, 614, 615
Standard agents, local, have no direct dealings with	Clark, 347

Railway discriminations and rebates (see also *South Improvement Company*):

Early history, generally—	Page.
Described.....	Lee, 263, 264, 287; Lockwood, 384, 385, 387, 399; Boyle, 453
Standard originator of system.....	Rice, 741
Rate of rebates referred to, 1872-1879.....	Emery, 647, 660
Violation by railways of contract of 1872.....	Emery, 641, 642
Raising of rates, 1874, letter regarding.....	Emery, 641
Rebate on refined to offset crude transportation.....	Emery, 641
Amounts during 1877-1879.....	Lee, 287; Lockwood, 386, 387; Boyle, 453; Rice, 696, 697
Method of calculating.....	Archbold, 514, 515; Emery, 660, 661
Avowed purpose of railways to maintain.....	Rice, 698, 699
Universality of practice before interstate commerce act.....	Archbold, 517, 526; Page, 756; Rockefeller, 795;
Offers originated with railway companies.....	Archbold, 527
Standard has never fixed rates for other shippers.....	Page, 789
Standard did not receive rebates on competitors' shipments.....	Page, 790; Rockefeller, 795
Rebates received by competitors of Standard.....	Page, 790; Rockefeller, 795
Existing conditions—	
Discussed.....	Lockwood, 396; Boyle, 487
Discriminations believed to exist.....	Lee, 292; Davis, 352; Phillips, 601
Standard Oil Trust dictates tariffs.....	Rice, 717
Denied.....	Page, 768
Pennsylvania Railroad, rebates paid by, up to 1893.....	Emery, 634, 645, 646
Despeaux v. Pennsylvania R. R., testimony referred to.....	Rice, 700-703; Page, 759-763
Baltimore and Ohio Railroad, letter showing existence.....	Emery, 637, 638; Page, 770
Baltimore and Ohio Southwestern, discriminations by.....	Davis, 351, 352
Damages assessed by Interstate Commerce Commission up to 1893.....	Lee, 287; Westgate, 380; Emery, 645, 646
Standard Oil officials, interest in railways.....	Monnett, 318; Rice, 688, 703; Page, 768
Corning field, high rates on crude oil from.....	Davis, 353
Illegality under common law.....	Rice, 708
Discrimination since interstate commerce act denied.....	Archbold, 516-528; Page, 778; Rockefeller, 795
Letters from railway officials denying existence.....	Archbold, 517-526; Rice, 747; Page, 787
Difficulty of securing evidence.....	Emery, 634, 635
Possibility of ignorance of discriminations by high officials.....	Emery, 642, 643
No difference in rates per hundred.....	Westgate, 372
Commission on freight received by Standard.....	Rice, 727
Denied.....	Page, 769
Proportion of oil tonnage to the total railway tonnage.....	Page, 787
Barrel shipments. (See <i>Tank cars</i> .)	
Campbell, R. B.—	
Discriminations in favor of.....	Emery, 635, 636
Contract with Pennsylvania Railroad, 1879.....	Emery, 662
Canada—	
Increase in rates to, and causes.....	Lee, 297; Westgate, 378, 379; Archbold, 573; Rogers, 582; Gall, 675-678, 683-685; Page, 788
Higher charge for shorter haul.....	Gall, 676-678
Difference in rates between American and Canadian oil.....	Gall, 675-677
Rebates believed to be paid to Standard.....	Gall, 676, 677
Appeal to railway committee.....	Gall, 676, 677, 685
Carload lots. (See <i>Tank cars</i> .)	
Competitors, rebates on oil shipped by—	
South Improvement Company, contract.....	Emery, 612-614
Rice case.....	Archbold, 556-559; Rice, 706-709
Payment, denied.....	Archbold, 579; Page, 790; Rockefeller, 795
Effects of discriminations—	
Chief cause of Standard Oil monopoly.....	Lockwood, 384, 394, 400; Phillips, 593; Emery, 609, 644, 645; Rice, 688, 741
Profits of Standard secured from, estimated.....	Lockwood, 386

Railway discriminations and rebates—Continued.**Effects of discriminations—Continued.**

	Page.
Practice, former, injurious to Standard Company	Archbold, 526, 528
Prices to customers reduced by reason of	Archbold, 526, 528; Rockefeller, 795
Competing refineries driven out of business by	Emery, 616, 644, 646
Chief obstacle to competition	Westgate, 382, 383
Fear to establish independent refineries on account of	Lockwood, 400
Differences in rates, effect on profits	Westgate, 378
Crude oil, price diminished by	Monnett, 325
Division of petroleum business—	
South Improvement Company, division among railways	Emery, 610, 611
National Transit Company, division between pipe lines and rail- ways	Emery, 663-667; Rice, 701, 702, 738, 739; Page, 759-763
Emery, Lewis—	
Twice driven out of business by	Emery, 616, 648
Rebates received by, in 1870	Emery, 670
Empire Transportation Company—	
Driven out by discriminations	Lee, 263; Rice, 696
Reasons for purchase by Standard Oil Company	Archbold, 513, 514
Discriminations by, in favor of certain refineries	Archbold, 514
Exclusive transportation of Standard's oil—	
Special arrangements made with railway managers for	Emery, 630, 631
Independent refineries and pipe lines—	
Discriminations in favor of competitors of Standard suspected ..	Archbold, 578
Denied	Phillips, 601
United States Pipe Line, freight rates to New York	Archbold, 529, 530 Phillips, 601; Emery, 655
Interstate commerce act—	
Secured by refiners	Lockwood, 389
Suits and decisions of commission, concerning rebates	Lee, 287; Westgate, 379, 380; Emery, 636; Rice, 714-716, 729
Relation of commission to Standard	Lockwood, 398
Disregard by railways and trusts	Lockwood, 389
Refusal to obey orders of commission	Westgate, 380
Baltimore and Ohio Railroad, letter regarding maintenance of rates, Emery, 637	
Evidence as to New Haven and Hartford underbilling case	Page, 771-774
Strictly obeyed by Standard	Archbold, 516, 527, 579; Page, 756, 778, 787
Logan, Emery & Weaver—	
Suit against Pennsylvania Railroad	Lee, 287; Emery, 633-635
Reasons for settling suit	Emery, 669
Lubricating oil—	
Preference in purchase from Standard ...	Lee, 292; Davis, 355, 364; Rice, 699
Effect on other buyers	Davis, 359
Excessive prices paid Standard for	Lee, 268, 291; Rice, 699, 700
Denied	Archbold, 516; Page, 757-759
Pipe lines—	
Rebates by railways on oil from certain	Boyle, 424 Emery, 641; Rice, 695, 696
Railway rates increased to prevent competition with	Monnett, 317; Rice, 739
Absorbed by means of discriminations	Lockwood, 386, 388
National Transit Company, contract of 1881 with railways	Rice, 701, 702
True character discussed	Page, 759-763
Contract of 1884	Emery, 663-667; Rice, 702; Page, 759-763
Still in force	Emery, 667
Reasons for	Rice, 738, 739; Page, 761
Amounts of rebates paid under contracts of 1881 and 1884 ..	Rice, 701, 702
Purchase of oil (see also <i>Lubricating oil</i>)—	
Preference in purchase of refined oil by railways	Davis, 359
Prices fixed by central railway officers	Clark, 347
Rates—	
Tariff rates changed by numerous circulars, etc.	Rice, 732
Changes made without warning to injure Standard's competitors, Rice, 719-727; Page, 769	
Changes made for convenience of stocking up	Rice, 719-727; Page, 769

Railway discriminations and rebate—Continued.**Rates—Continued.**
